"The Basutos are now said to be rising against the Boers, whom they accuse of having ill-treated them in the gold-fields and of robbing native miners of their wages. Their district is a British crown colony surrounded on all sides by British and Boer territory. There is no certainty that the quarter of a million Basutos would not turn against the British as readily as against the Boers if opportunity favored. Their grievances against both Dutch and English are deep-seated and of long standing. They have had repeated wars with the Orange Free State, which secured a slice of Basuto soil before the remainder was taken under British protection. The attempt of Cape Colony to disarm them resulted in a war that cost the Cape \$30,000,000. The prohibition of liquor, the collection of the hut tax, the suppression of many of the chiefs, are among other causes of discontent that, at times, have led to disorder. Their mountain valleys are most fruitful and the people have made considerable progress in civilization, but, after all, they have the mountaineer's love of independence,

as they have shown in their hard-fought battles with the whites around them. There is no telling how far they may be able to intensify the present troubles, but that they may oppose one or both of the hostile nations is the fact that excites anxiety."—*The New York Sun*.

Boers Not Slaveholders.—"There is one mistaken idea about the Boers that seems to be prevalent in this country and especially among the colored people, and this is that the Boers are slaveholders. Slavery does not exist in the Transvaal, and never did. The nearest approach to slavery in South Africa is in Rhodesia, the territory of the British South Africa Company, and in Griqualand, where the diamond-mines of Kimberley are located. They have there, under the British flag, what is known as 'the compound system,' which is slavery for a term of years. In the gold-mines of the Transvaal the natives work for money wages and are free to come and go as they like, tho since the present trouble the Kafirs have been sent out of the Transvaal—their homes are all outside—for fear of a native uprising against the unprotected homes of the Boers. One of the complaints of the

mine-owners is that the Boers will not allow the compound system in the Transvaal. The Boers, however, do not accord the blacks any political franchises. In Cape Colony the blacks have theoretically the right to vote, but very few of them ever do so. Slavery formerly existed in Cape Colony, but the last of it disappeared there over sixty years ago."—*The Indianapolis Sentinel*.

THE PRESIDENT'S DECLARATION OF HIS POLICY.

PRESIDENT MCKINLEY'S alleged lack of a program has long been a favorite theme of the opposition press. It has been charged that he intended to let the currency problem solve itself, without any definite movements toward either gold or silver; and that he is at a loss what to do when the Filipinos are finally subdued—whether to prepare them for independent self-government, or to retain them permanently under our rule. On his recent Western trip, however, the President has met this

1896. 1899.
—Ohio Republican Campaign Cartoon.

charge of indecision by declaring plainly for the gold standard and for the permanent retention of the Philippines. At Ackley, Iowa, after dwelling on the general business improvement and prosperity, he said: "We are on a gold basis and we mean to stay there." At Cleveland, after speaking of patriotism and the flag as applied

to the military operations in the Philippines, he said: "Peace will come, and I trust and believe, come shortly, and we will be able to give to those people in the Philippines a government of liberty and law—a government which will encourage their best aspirations and their noblest aims—a government under the undisputed sovereignty of the United States." At Minneapolis he said of the Philippines, that they "will be retained under the benign sovereignty of the United States I do not permit myself to doubt."

The President's continual allusions to prosperity and the flag, however, have given the opposition press a new grievance, for, they aver, he is trying to create the impression that any one who is opposed to the Administration is opposed to the flag and to prosperity—a proposition which they are unwilling to admit. The Ohio Republican state committee, as will be seen by two cartoons given herewith, are also bringing into service the appeals of prosperity and patriotism.

Imperialism Announced.—"Congress is likely to do his bidding, for even did he make this important announcement [as to the Philippines] without some assurance that he would be supported by that body, the influence of the Administration is so great that successful resistance to his plans is hardly possible. He has one step more only to take to round out the policy to which his argument leads. He has yet to define the nature of that power of Congress; are our bill of rights and our Constitution to be extended in full to those islands and to control Congress in exercising its powers over them, or are these to be dropped when it is acting as the sovereign of the Philippines? Are they to be with us and of us, or an outside people for Congress to play with? All the argument so far leads to the idea that they are to be our subjects. . . . For the present, we can be assured of the permanent annexation of the islands; and this is an important announcement. It is no longer possible to shut our eyes to the fact that the President's idea is that we are to have under one government two kinds of citizens. Mr. McKinley is launched into imperialism. If he follows the line indicated, we believe it means his defeat in the convention or, if not there, at the polls. It is by no means certain now that it is not too late for him to turn back; that a new policy would not mean a new candidate. We believe that the more President McKinley's announcement at Minneapolis yesterday is studied, the more fully its import is comprehended, the more startling it will appear to

the American people. Governor Scofield did but simple justice to the matter when he summed up the case by saying that such a doctrine carried into effect means the destruction of our republican form of government."—*The Milwaukee Journal (Dem.)*.

Freedom Greater Without the Ballot.—"The one promise which the President makes is that which he has full power to carry out, namely, that under the United States flag in the far-off islands there shall come greater freedom, broader justice, and better government for all the inhabitants. These are the ends for which self-government is instituted, and unless those ends can be reached such government is a farce and a failure; but if they are reached it matters little whether the ballot has much or little to do with the process. There are British provinces and colonies, as everybody knows, in which Crokers and Tammany leaders are unknown, but where justice and real freedom are not unknown. This country has tried in many localities and many forms to manufacture a genuine free government out of ignorant inhabitants by balloting machinery. It knows something of the results attained in some Southern States and in some Northern cities. If it can not make ballots turn out better government than military or executive orders, it is not going to turn over the Philippine Islands to savagery under pretense of making them free. The President not only grasps this distinction firmly, but has profound faith that the great majority of Americans are able to grasp it. His speeches never tell the level-headed voters of this country that we are going to work miracles and to create wisdom and habits of self restraint and respect for order and law among semi-civilized tribes, merely by putting ballots into their hands. Instead, he tells the voters that this nation proposes to create good government and free government by the best and quickest means it can, giving to the inhabitants as large a share therein as they may be found capable of conducting. In that respect these speeches are helping to educate American voters, precisely as American government in the outlying dependencies is helping to educate their inhabitants in the qualities necessary to make self-government a success."—*The New York Tribune (Rep.)*.

Where Does Congress Come In?—"While the President has definitely announced on his Western trip that the question of expansion is no longer open, Secretary Long, who travels on the same train, has explained that the said expansion was accomplished once and for all when the treaty was accepted by Congress. That the Senate itself, however, after voting on the treaty, supposed that the expansion question was not thereby settled was proved when the McEnery resolution was passed to the effect that 'it is not intended' by 'the ratification of the treaty of peace with Spain' to 'permanently annex said islands as an integral part of the territory of the United States.' Later on, the Bacon resolution, pledging the United States to treat the Filipinos like the Cubans, met with a tie vote in the Senate, being supported by Senators who had voted for the treaty, and was beaten only by the ballot of the Vice-President, Mr. Hobart. The truth is—and no one with a memory can dispute it—that a treaty of simple annexation of the Philippines could not have passed the Senate. The Administration knew it, and at the time used the argument that the treaty was a treaty of peace, and should be ratified in order to bring the technical state of war with Spain to an end. Having forced upon the country an annexation which the constitutional majority of the Senate did not want, on the plea that it was no permanent annexation at all, the Presi-

STANDING BY THE FLAG OF ABRAHAM LINCOLN.
—Ohio Republican Campaign Cartoon.

dent now declares that the country has expanded, that the only living issue is one of contraction, while his Secretary of the Navy points to the ratification of the treaty as the act that settled the expansion issue. The country has heard much about the power and 'wisdom' of Congress in this matter, but where Congress comes in, except to be humiliated and led by the nose, is a mystery."—*The Springfield Republican (Ind.)*.

"German Vote All Right."—"One of the most significant decorations in Milwaukee when the President visited that city on Monday was a legend on the front of the residence of a German citizen reading: 'Long live our new possessions; German vote all right.' Other incidents of the President's stay in Milwaukee, such as his reception by the Deutscher Club and the speech of welcome of Congressman Esch, who is the son of a German immigrant and who came out emphatically for expansion, go to show where the German-Americans stand on the Philippine question. It has been the boast of the Democrats both in Ohio and Iowa that a large number of German citizens would vote with them, and it is on the strength of this hope that the Democrats have been claiming Ohio and a largely increased vote in Iowa. Milwaukee, however, is as German a city as there is in the United States, and is as fair a barometer of German opinion as can be found. And the indications given in that city go to show that the Democrats will be disappointed in the hope that the Germans are anti-expansionists and that they will vote with the Democratic Party on that question."—*The Philadelphia Press (Rep.)*.

THE ANTI-EXPANSION CONFERENCE.

THE event of the "anti-imperialist" convention in Chicago that has attracted the most attention was the address of Carl Schurz, in which he gathered together and presented in forcible fashion the principal criticisms urged by the opponents of the President's policy. Most of these have already been brought forward, altho not always so ably, by the daily press; but he did not stop with criticism. Recognizing that the anti-expansionists "have often been taunted with having no definite policy to propose," he proceeded to outline one. He said:

"In the first place, let it be well understood that those are egregiously mistaken who think that if by a strong military effort the Philippine war be stopped, everything will be right and no more question about it. No, the American trouble of conscience will not be appeased, and the question will be as big and virulent as ever, unless the close of the war be promptly followed by an assurance to the islanders of their freedom and independence, which assurance, if given now, would surely end the war without more fighting.

"We propose, therefore, that it be given now. Let there be at once an armistice between our forces and the Filipinos. Let the Philippine Islanders at the same time be told that the American people will be glad to see them establish an independent government, and to aid them in that task as far as may be necessary; that, if the different tribes composing the population of the Philippines are disposed, as at least most of them, if not all, are likely to be, to attach themselves in some way to the government already existing under the presidency of Aguinaldo, we shall cheerfully accept that solution of the question, and even, if required, lend our good offices to bring it about; and that meanwhile we shall deem it our duty to protect them against interference from other foreign powers—in other words, that with regard to them we mean honestly to live up to the righteous principles with the profession of which we commended to the world our Spanish war.

"And then let us have in the Philippines to carry out this program, not a small politician, nor a meddling martinet, but a statesman of large mind and genuine sympathy, who will not merely deal in sanctimonious cant and oily promises with a string to them, but who will prove by his acts that he and we are honest; who will keep in mind that their government is not merely to suit us, but to suit them; that it should not be measured by standards which we ourselves have not been able to reach, but be a government of their own, adapted to their own conditions and notions—

whether it be a true republic, like ours, or better, or a dictatorship like that of Porfirio Diaz in Mexico, or an oligarchy like the one maintained by us in Hawaii, or even something like the boss rule we are tolerating in New York and Pennsylvania."

Mr. Schurz's Proposition Considered.—"There are two essential features in this proposition: the promise to the Filipinos of 'freedom and independence,' and the promise to 'protect them from interference from other foreign powers.' We shall not at the present time consider the very important points involved in the offer to accept conditionally the government of Aguinaldo, or the obvious difficulties accompanying the ascertainment of the wish of the islanders as to that government. We desire simply to call attention to the fact that the President could not make such an offer to the Filipinos except subject to the approval of Congress, and the further fact that the proposed policy involves rather a change of methods than one of avowed purposes. The President in his recent speeches has repeatedly said that the Filipinos will have all the freedom and self-government consistent with the preservation of order and the maintenance of our obligations and duties to other nations. What Mr. Schurz proposes is all the freedom and independence consistent with a protectorate. Now the difference between a protectorate of the Philippine Islands in their present condition, so far as that is known, and an actual exercise of sovereignty for the purpose of giving the people of the islands all the self-government that they can safely use, is really a very difficult one to define, and in practice one that is pretty sure to vanish. If we assume to forbid all interference with the 'independent' government that may be established with our consent and aid, we must also assume the responsibility for the action of that government. If we are to be responsible for its action, we must be in a condition in some degree to control such action. The absolute independence of the government is, in either case, impracticable. In reality, therefore, the proposition of Mr. Schurz does not differ essentially from the professed policy of the Administration. The avowed object of both is substantially the same. Whether the Administration is carrying out its avowed object, and how its methods should be changed in that regard, are important questions that deserve careful consideration."—*The New York Times (Ind.)*.

The True Patriotism.—"The names of the participants in this meeting come almost entirely from the list of those who helped to make Mr. McKinley President. Some of them are of those who have grown old in the service of the Republican Party and the nation. The mainsprings of this meeting are conscience and devotion to the rights of man and the principles of Democratic government. They are fundamental in human life and conduct. The President says that guns have been fired, that war exists, and that all must rally to his support, whether he is right or wrong. But free-born American citizens never have been rallied against the sharp promptings of their better natures, and never can be. Official action becomes impotent to command general assent when it crosses the line from right to wrong, and flies in the face of the dearest national traditions and the higher instincts of the human heart. The organized power of the American state failed when, under the direction of a slave oligarchy, it attempted to compel American citizens to crush their humane feelings and obey the laws denying to human beings the commonest rights of men, because conscience is a mightier power than all statute laws and official acts; and the present very similar attempt must fail for the same reason. The protest being voiced at Chicago is the protest of an awakening American conscience against the efforts to subdue an alien people through fire and blood, to crush their God-given aspirations to nationality, and to tie them in imperial triumph to the car of a perverted democracy. It can not be silenced, and it should and must be heard. . . . The sentiment which this conference represents is well expressed in Mr. Schurz's closing words: 'Our country—when right to be kept right; when wrong to be put right.' True patriotism knows of no other rule of guidance."—*The Springfield Republican (Ind.)*.

"When it is asserted that the war with the Tagals might have been prevented by a temporizing or yielding policy it is a sufficient answer to point to South Africa. Eighteen years have passed since Gladstone adopted that course in dealing with the Boers. To escape further bloodshed he made sweeping concessions, and in the shadow of a humiliating army reverse at that.

The settlement did not settle. . . . Decidedly there are some things worse than war, and a Gladstone peace is one of them. We could have laid in Pandora's box for ourselves by paltering with Aginaldo in the same way."—*The St. Louis Globe-Democrat (Rep.)*.

GROWTH OF AMERICAN CITIES.

DR. ADNA FERRIN WEBER, fellow in economics and social science in Columbia University and deputy commissioner of labor statistics of New York State, has compiled a volume of 500 pages giving the statistics of city growth the world over, in which some interesting facts appear concerning cities in this country. The trend of our times is strikingly shown in a table on the first page, in which present-day Australia is compared with the America of a century ago. Dr. Weber says: "The Australia of to-day has the population of the America of 1790; it is peopled by men of the same race; it is liberal and progressive and practical; it is a virgin country with undeveloped resources; it is, to an extent, politically and socially independent of European influence. But Australia is of the nineteenth, rather than of the eighteenth century; and that is the vital fact which explains the striking difference in the distribution of population brought out by the introductory comparison. What is true of the Australia of 1891 is, in a greater or less degree, true of the other countries in the civilized world." Here is the table:

1790.	
Population of the United States.....	3,929,214
Population of cities of 10,000 or more.....	123,551
Proportion living in cities of 10,000 or more.....	3.14 per cent.
1891:	
Population of the 7 colonies of Australia.....	3,809,895
Population of cities of 10,000 or more.....	1,264,283
Proportion living in cities of 10,000 or more.....	33.20 per cent.

As for the United States, where there were 210,873 persons living in six cities in 1800, we find 18,284,385 living in 448 cities in 1890. While the population of the entire country has increased twelvefold in the century, the urban population has increased eighty-sevenfold. This rapid increase did not begin until 1820; it was then that the era of canals began, followed closely by the era of railways, building up commercial centers, and stimulating industry.

It is a common error to suppose that the rate of city growth has been steadily increasing. This is far from true. The decade ending with 1850 lacked but 1 per cent. of doubling our city population, a record which has never since been equaled. In fact, from 1850 to 1880 the rush to the cities became less and less; after the 99-per-cent. gain of 1840-50, the gain for 1850-60 was but 75 per cent., for 1860-70 but 59 per cent., and for 1870-80 but 40 per cent., rising, however, in 1880-90 to 61 per cent. The acceleration for 1880-90 Dr. Weber explains by a table showing that our manufactures, whose rate of increase had been steadily declining from 1860-80, made a remarkable advance in that decade, the capital, number of employees, and net value of product increasing 100 per cent. over the previous decade. That busy decade saw the number of towns of 8,000 population or more rise from 286 to 448 in number, and increase from 11,318,547 to 18,284,385 in population.

The distribution of our city population is no less interesting. Dr. Weber says:

"One half the entire urban population of the United States is in the North Atlantic States and four fifths in the territory north of the Ohio and Missouri rivers, a fact of considerable social, political, and economic significance, and one that will help to explain the results of election contests and legislative battles where the economic interests of different communities come into conflict."

More than half the city population, again, is concentrated in five States, in the following order of population: New York, Pennsylvania, Massachusetts, Illinois, Ohio. In the District of

(Copyright 1899, by the Columbia Studies in History, Economics, and Public Law.)

DIAGRAM SHOWING THE PERCENTAGE OF POPULATION DWELLING IN CITIES AT THE LATEST CENSUSES.

1. Percentage of total population dwelling in cities of 100,000+; 2, in cities of 20,000-100,000; 3, in cities of 10,000-20,000. The entire length of the bars therefore represents the percentage of city dwellers in the total population of the countries named. Broken ends indicate lack of satisfactory statistics for exact measurements.

Columbia and in Massachusetts, Rhode Island, New York, and New Jersey more than half the people live in cities; twelve other States have more than a quarter of their inhabitants in cities; fifteen have more than a tenth, and twelve, most of them in the South, have less than one tenth. North Dakota, Idaho, Nevada, Arizona, New Mexico, Oklahoma, and Indian Territory have no cities. Iowa has a much smaller city population than the surrounding States, and the Iowa people believe that the growth of their cities has been checked by railway discriminations which have favored Chicago, St. Louis, St. Paul, and Omaha, as against their own commercial centers, "and," says Dr. Weber, "this is indeed the only adequate explanation." He gives a graphic view of our city growth in the following table:

<i>Classes of cities.</i>	—1800.—		—1850.—		—1890.—	
	<i>No.</i>	<i>Population.</i>	<i>No.</i>	<i>Population.</i>	<i>No.</i>	<i>Population.</i>
100,000 +	6	1,303,338	28	9,697,960
20,000—100,000	5	201,416	24	878,342	137	5,202,007
10,000—20,000	36	495,190	180	2,380,110
Total, 10,000 +	5	201,416	66	2,766,670	345	17,280,077

The small towns and rural districts, in spite of the rush cityward, still contain, Dr. Weber estimates, more than 70 per cent. of the entire population of the United States.

COLUMBIA'S VICTORY OVER THE SHAM-ROCK.

COMMENT on the races for the *America's* cup have revealed only the kindest feelings for Sir Thomas Lipton and his boat from the first race to the last—many papers evincing a willingness to let him win any number of races short of the necessary three, or to try again and win some other cup. Every one who had to do with the *Columbia* comes in for a measure of praise, and the general conclusion is drawn that the British are the best sailors the world around—except the Yankees. The dates of the previous races for the *America's* cup, with the names of the yachts and the results may be seen in the following table:

- 1851—On August 22 the yacht *America* won the cup from the English cutter *Aurora*.
 1870—On August 8 the schooner *Magic* won from the English schooner *Cambria*.
 1871—On October 16 and 18 the schooner *Columbia* defeated the English schooner *Livonia*.
 On October 19 the *Livonia* defeated the *Columbia*, the *Columbia* being disabled.
 On October 21 and 23 the schooner *Sappho* easily outsailed the English boat.
 1876—On August 11 and 12 the schooner *Madeline* won from the Canadian schooner *Countess of Dufferin*.
 1881—On November 9 and 10 the sloop *Mischief* won from the Canadian sloop *Atlanta*.
 1885—On September 14 and 16 the sloop *Puritan* defeated the English cutter *Genesta*.
 1886—On September 9 and 11 the sloop *Mayflower* won from the English cutter *Galatea*.
 1887—On September 27 and 30 the sloop *Volunteer* defeated the English cutter *Thistle*.
 1893—On October 7, 9, and 13 the sloop *Vigilant* won from the English cutter *Valkyrie* by a narrow margin.
 1895—On September 7 the *Defender* easily outsailed Lord Dunraven's *Valkyrie III.*, winning by 8 m. 40 s.
 On September 10 the *Valkyrie III.* fouled the *Defender* shortly after the start. The English yacht defeated the *Defender* by 47 s. Because of the foul the *Defender* protested and the protest was allowed.
 On September 12 the *Valkyrie III.* withdrew immediately after crossing the line, and the *Defender* sailed over the course alone.

Congratulations All Around.—"The *Columbia* has won on her merits, and she is the better boat," says Sir Thomas in the frank, manly manner of the genuine sportsman who, defeated, acknowledges the superiority of his rival fully and freely. "My opponents have treated me not only fairly, but generously," he says, and then adds, with the indomitable spirit of a plucky yachtsman whom you may defeat, but can not discourage, "I shall challenge again." Welcome, Sir Thomas, on your return! No challenger has ever come to New York waters who so agreeably impressed not only yachtsmen but the public by his straightforward, manly bearing. The cheers that broke forth from the crowd about *The Herald* office yesterday when the result was announced were first for the *Columbia*. But they were followed by equally hearty ones for the *Shamrock* and her owner. They told a pleasant message to you—that you were going back without the cup, but carrying with you the regards of an American sport-loving public who respect and admire a worthy challenger. The *Columbia's* victory has been so decisive that it leaves discussion of the races open to no ifs and ands and buts. At every point of sailing, in every sort of weather, in the light airs of the first meetings and in the half gale in which the boats rushed home yesterday, the *Columbia* showed her superiority. Her triumph was complete, and by no uncertain, narrow margin, and it was a triumph for her designer, for Mr. Iselin, for Mr. Morgan, for skippers, crew—for every one concerned. . . . Heretofore in the cup contests there have been serious complaints that the course was not kept free of the accompanying fleet of steamboats and that the racers were much interfered with. Captain Evans, U. S. N., who has been in control of the patrol fleet throughout the *Shamrock-Columbia* races, performed the seemingly impossible feat of clearing and keeping clear the course, and deserves congratulations upon the excellent service he rendered. No one can say that 'a fair field and no favor' was lacking in the contests just concluded—thanks to Captain Evans."—*The New York Herald*.

But What about Our Merchant Marine?—"We need not wonder at the zeal with which the Briton pursues the *America's* cup. It is the only aquatic trophy which is not already in his

possession. When George Steers built the *America* and an enterprising 'syndicate,' as we should say now, took her into British waters to 'hunt mugs,' we were already, or still, a maritime nation to be reckoned with. Our tonnage afloat and on blue water was second only to that of Great Britain, and second by a small margin. In 1860, when the era of wood and canvas was about to give way to the era of steam and iron, the British tonnage afloat was to the American, in thousands of tons, as 5,710 to 5,299. It was the year before the *America's* visit and victory that Richard Cobden said in the House of Commons that

"if the spirit of America were once aroused and her resentment excited, her mercantile marine alone—the growth of commerce the result of a low taxation and a prosperous people—her mercantile marine alone would be more than a match for any war navy that exists on the Continent of Europe."

"It seems strange enough to recall those old panegyrics now, when they have so long ceased to be true or plausible, thanks to the Morrill tariff, aggravated by the succeeding McKinleyism and Dingleyism. Thanks to our obsolete navigation laws and the maintenance of them by John Roach and John Roach's successors, who do not desire to be bothered with competition, we have disappeared altogether from rivalry with Great Britain, or with anybody else, for the carrying trade of the world. The contrast of the figures of 1860 with those of 1897 can not be gratifying to any patriotic American. For the figures of 1897, given, as before, in thousands of tons, show that the tonnage of Great Britain afloat is to that of the United States as 13,641 to 4,769. Great Britain is first, and, as was reported to the Queen of the race in the Solent, in which the *America's* cup was won, 'There is no second.' . . . But now that we have shown our ability to compete with Great Britain in British markets in such refined 'manufactures of iron and steel' as locomotives and bridges, the question why we can not compete with them in such manufactures of iron and steel as steamships will more and more perplex the shipbuilders."—*The New York Times*.

TOPICS IN BRIEF.

EVEN the worst enemies of the Hanna administration will not claim that it ever betrayed a trust.—*The Detroit News*.

IT looks as if Sir Thomas would be obliged to go home and do his drinking out of a tin dipper for another year.—*The Chicago Record*.

THOSE "HOME FUNDS."—As for Admiral Sampson, he is evidently expected to go to the Home for the Friendless.—*The Detroit News*.

MR. ROBERTS ought to seek an island, become sultan of something, and ask for an increase of salary.—*The Memphis Commercial-Appal*.

WHY this criticism of Bryan asking \$300 a talk for his talk? Does it not to that extent show he is out for sound money?—*The Philadelphia Times*.

"Who made Dewey admiral?" is a question causing some discussion. Confidentially, the man who did it was Dewey.—*The St. Louis Globe-Democrat*.

IF Kansas farmers can not get help to gather their corn crop they might send over to Sulu and purchase a consignment of slaves.—*The Chicago Record*.

"SHE has a heart of stone," he said bitterly. "Was it cut by union labor?" anxiously inquired the walking delegate.—*The Chicago Evening Post*.

VARIOUS high-minded Senators are advocating the appointment of a "trust examiner" to watch monopolies. Who will watch the examiner?—*The New York Journal*.

AS Otis is a methodical man, the insurgents must know by this time which days in the week he captures certain towns, so that they can act accordingly.—*The Chicago Record*.

IF Mr. McKinley is right and the Almighty is responsible for the Administration's Philippine policy, Mr. Bryan may as well make up his mind to face a heresy trial.—*The Detroit News*.

AT THE CELEBRATION.—"Who are the important-looking men with broad smiles and big badges?" "That's the reception committee." "And who's the modest-looking fellow, off there in the corner?" "Oh, that's Dewey."—*Philadelphia North American*.

HERE is a quotation from the Boers' national hymn:

"Waal hoog nou in ons heldre lug,
 Transvaalse vriedesvlag!
 Ons vijande is weggevlug,
 Ons blink'n blijer dag."

IF John Bull thinks he is going to have a walkover in the Transvaal he had better wear extra-soled boots.—*The Louis-ville Courier-Journal*.

LETTERS AND ART.

ZANGWILL'S "CHILDREN OF THE GHETTO."

MR. ISRAEL ZANGWILL'S novel of Jewish domestic life in London, tho as far removed as a book could well be from the dramatic, has nevertheless furnished the basis for a play that has been received with favor by the public and with praise

by most of the critics. For some weeks an English play called "The Ghetto" has been performed in New York, but Mr. Zangwill's play, for which the public has been expectantly waiting, made its first appearance in New York at the Herald Square Theater on the evening of October 16 before a large and thoroughly interested audience.

In *Harper's Weekly*, Mr. John Corbin gives the following outline of the play:

"Mr. Zangwill's scenes of realism develop a true and inevitable dramatic motive, and develop it with a simplicity of scenic construction comparison with the

drama is between this modern passion of *Hannah's* and her reverence and love for her father and for his austere faith. For the moment the Jewish love of family and religion conquers, and the play ends with the separation of the lovers; but the victory can be only for as long as the aged father lives. Perhaps the greatest distinction of the play, which is in many ways great, is the sense one gets that the rigid purity of Jewish home life and the spiritual majesty of Jewish worship must in the end be defeated before the freedom and amplitude of the life without the Ghetto."

Mr. Clement Scott, whom the British theatergoer regards as a Daniel come to judgment, and who is just at present in New York, takes a rather savage view of the play. He finds in it too much of "the new reforming school that tilts at convention, old established principles," and various other sacred things of society and the drama. It is a combination of "silly farce and occasionally blasphemous pantomime," and Mr. Scott is particularly shocked at the comic allusions to the Messiah. He says (in the *New York Herald*):

"When I read the plot of the Zangwill play act by act and scene by scene, in the newspapers yesterday I said to myself: 'What a magnificent subject! How human, how consistent, and how admirable!' I thought of all the great plays and stories of renunciation that I had seen, and I was persuaded that I was to visit a great play. I delighted to think of the success of my fellow countryman. But instead of finding a great play I had to content myself with one fine scene.

"The author has selected an admirable scheme for a drama, but he does not know how to use the material he has chosen. He fritters away the best part of his play with episodic matter which may be very interesting to a Hebrew audience, but which is wholly uninteresting to a Christian one. He wastes the best part of his last act in showing us how people go in and come out of a Hebrew synagogue; most attractive to the inhabitants of the Ghetto, I am prepared to admit, but a little tedious to those who have not a camera at hand to take snap-shots at the scene of pantomime detail.

"Before I come to the one great scene of the play, profoundly interesting because human and acted with such truth, such pity, and such variety of temperament that it stirred us all to genuine delight, I must have one word to say about the comic Hebrew. I thought we had banished him from the stage forever. Chris-

MR. ISRAEL ZANGWILL.

tion and an inevitability of form worthy of the best plays of Ibsen.

"The dramatic conflict is between the austere vigor of rabbinical law and the romantic freedom of the modern Christian world. A young commercial traveler of exuberant spirits places a ring bought for his intended bride on *Hannah's* hand, and in a spirit of fun pronounces the critical words of the Jewish marriage ceremony. To the surprise of all, it is discovered that the act constitutes a legal marriage, as is also the case in Scotland. The only way out of the difficulty is to procure a *ghet* (I think they spell it so), which, according to Jewish law, makes *Hannah* a divorced woman. Subsequently *Hannah* falls in love with an Anglicized Jew, *David Brandon* (Mr. Frank Worthing), who has come home from a prosperous sojourn in Cape Colony. *Hannah's* father, *Reb Shemuel*, makes no objection to *David's* virtual apostasy, relying on his daughter's character and on the strength of the Jewish religious custom to reclaim him; but when it transpires that *David* is of the tribe of Aaron, and by that fact a priest, the marriage becomes impossible, for a priest may not wed a divorced woman. The Jewish law takes no account of romantic affection; indeed, until late years marriage has been a purely material contract—there is no Yiddish word for what we call love. The great struggle of the

Blanch Bates as *Hannah*, and Wilton Lackay as *Reb Shemuel*.

tians have been reproached with insulting the Hebrew faith, by ridiculing it with the tawdry stage Hebrew.

"It has been reserved for Israel Zangwill to present Pinchas, the Hebrew poet, who is the worst stage Hebrew ever known in farce or melodrama. He outdoes in vulgarity and noise and buffoonery Svengali or the Drury Lane creations of Harry Jackson. At a time when a Henry Irving has shown us a pathetic and poetic Shylock, it has been reserved for a Zangwill to create a Pinchas and to put in his mouth words which made at least one Christian shocked at the profanity that no sense of realistic art can justify.

"It is far more pleasant to dwell on the author's one dramatic moment, when the old rabbi expounds the law, which will separate *David Brandon* from his sweet betrothed *Hannah* forever. It is dearer to me to remember that cold shudder, that dumb blank despair, that horror of desolation expressed by Miss Blanche Bates, when the light of her life is extinguished forever; to recall the passionate indignation, the fierce revolt against the old law, brought into brilliant effect by Frank Worthing; to congratulate Wilton Lackaye on the crowning point of a really magnificent and well-considered performance, natural and dignified, stately and human to the core."

The New York *Evening Post* says:

"As has been explained on a previous occasion, the piece deals only with the first half of the book, which relates to life in the Jewish quarter in East London, and Esther Ansell is shown only in her childhood days of bitter poverty, which are but lightly touched upon, and even then in a semi-humorous vein. . . . The prevailing spirit is one of broad and eccentric comedy, altho the divorce episode is illustrated with much curious and interesting detail which is not in the book. If it were not for this, and the scene between *Hannah* and *David*, these opening acts would be undeniably thin in texture, the humor, altho true enough to nature, being rather trivial, unless redeemed by character-acting of a kind beyond the accomplishment of any known body of the actors of to-day. Still, the performance was sufficiently smooth and lively to avoid anything like positive dullness.

"The situation was saved by the third act, which reflects the spirit and ability of the book with noteworthy fidelity, provides an interesting glimpse into the interior of an orthodox Jewish household, and leads up skilfully to a scene of indisputable strength and pathos, in which the old rabbi shatters the hopes of his daughter and her lover, after raising them to the highest pitch, by his inexorable decision that marriage between them is, owing to the Mosaic law, impossible. From this moment the temporary success, at least, of the play was no longer in doubt."

The New York *Commercial Advertiser* says:

"Mr. Zangwill is not a great dramatist, but he has handled his noble theme well enough to lift the result far above the average level of our stage. Had his theatrical instinct matched his elevated theme and his literary instincts, this guiding motive and the many features which now express it and now depart from it would have had more organization; but even without strong structure the play is something for which to give thanks."

SCULPTURE IN AMERICA.

THE actual accomplishment of a great artistic conception, in the arch recently erected in honor of Admiral Dewey and the American navy, is probably more significant, both as an evidence of a vast present advance of artistic taste and as an augury of the future, than has been generally realized. Mr. J. Q. A. Ward, president of the American Sculpture Society, and the chief originator of the arch, believes that we are at last beginning to evolve a truly national school of painters, sculptors, and architects, and that the American people are showing themselves to be naturally more artistic than any other branch of the Germanic race. He says (in *Ainslee's Magazine*, October):

"The actual progress of sculpture in this country has been most remarkable. It is not so much what we have already achieved, as what is underneath. Seed sown years ago is beginning to sprout. Some taste is being exercised in the erection of

public monuments in our cities. For the first time in our history we have completed a public building decorated in a worthy and comprehensive style. I refer to the National Library in Washington. We have an art committee in New York City which does much toward preventing the erection of statuary unworthy the dignity of our intellectual standard. Best of all, we have art societies powerful enough to arouse public interest, and to give any meritorious work of art good standing by a mere word of approval; and, lastly, there is much encouragement in noting the funds for the maintenance of art scholarships that are springing up throughout the country. The Reinhardt Fund, of Baltimore, now amounts to \$110,000, and out of the income two or three art students are maintained abroad. Then we have here the Lazarus Fund, which amounts to \$25,000 or \$30,000, for painters. Also the Carnegie Art Gallery at Pittsburg has added new dignity to the cause in this country.

"The practical good accomplished by art is that it tends to the spiritual elevation and ennobling of our people. The higher the art the better will be the effect on the masses. No one doubts, for instance, that good books help to make in a nation better men and better women. It may be said, in fact, that a nation eventually becomes like that which it admires. Sculpture, if rightly put forward, will win admiration as readily as literature. It is only a different form of expressing the same ideas that are set forth by printed characters."

THE POE ANNIVERSARY.

THE unveiling of Zolnay's bust of Edgar Allan Poe at the University of Virginia on October 7 was in several ways an interesting occasion. The bust itself, which we reproduced last week, and which brings out the highest features of Poe's character, was the inspirer of the following little poem by Father Tabb:

TO EDGAR ALLAN POE.

Dead fifty years? Not so.
Nay, fifty years ago,
Death, Obloquy, and Spite
To curse his ashes came;
But, lo! the living light,
Beneath the breath of shame,
Indignant, spurned the night,
And withered them in flame.

Mr. Hamilton Wright Mabie, in the course of his address, said:

"It is the first and perhaps the most obvious distinction of Edgar Allan Poe that his creative work baffles all attempts to relate it historically to antecedent conditions; that it detached itself almost completely from the time and place in which it made its appearance and sprang suddenly and mysteriously from a soil which had never borne its like before.

"There was nothing in the America of the third decade of the country which seemed to predict 'The City of the Sea,' 'Israfel,' and the lines 'To Helen.' . . . Poe stood alone among his contemporaries by reason of the fact that, while his imagination was fertilized by the movement of the time, his work was not, save in its originality and beauty, representative of the forces behind it. The group of gifted men with whom he had for the most part such casual connections reflected the age behind them or the time in which they lived; Poe shared with them the creative impulse without sharing the specific interests and devotions of the period.

"He was primarily and distinctively the artist of his time; the man who cared for his art and not for what he could say through it, but for what it had to say through him. Emerson, Lowell, Holmes, Whittier, Bryant, Irving, and, in certain aspects of his genius, Hawthorne might have been predicted; reading our early history in the light of our later development their coming seems to have been foreordained by the conditions of life on the new continent; and later, Whitman and Lanier stand for and are bound up in the fortunes of the New World and its new order of political and social life. Poe alone among men of his eminence could not have been foreseen. This fact suggests his limitations, but it also brings into clear view the unique individuality of his genius and the complete originality of his work.

"His contemporaries are explicable; Poe is inexplicable. He remains the most sharply defined personality in our literary his-

tory. His verse and his imaginative prose stand out in bold relief against a background which neither suggests nor interprets him. One may go further and affirm that both verse and prose have a place by themselves in the literature of the world. . . . In 'The City of the Sea,' 'Israfel,' and the verses 'To Helen'—to recall three of Poe's earliest and most representative poems—there is complete detachment from the earlier interests and occupations and complete escape into the world of ideality.

"It is part of the charm of these perfect creations that they are free from all trace of time and toil. Out of the new world of work and strife suddenly magical doors were flung wide into the fairyland of pure songs; out of the soil, tilled with heroic labor and courage, a fountain suddenly gushed from unexpected springs."

A pleasant feature of the event was the opportunity given to all visitors to examine the original record-books of the university, in order to convince themselves of the fact that the poet's student career was without taint of academic fault. While the names of many fellow students appear upon the same page as his with notes relating to reprimands, suspensions, or expulsions, his stands unblemished.

EMERSON'S LETTERS TO PROFESSOR NORTON.

THIRTY-FOUR letters written by Ralph Waldo Emerson, in the period from 1838 to 1853, have just been published in book-form, having already, in part at least, seen the light in one of the magazines. The letters were evidently written (tho there is no direct evidence of the fact in the book) to Charles Eliot Norton, who, in an introduction to the volume, asserts that in Emerson's letters to his friends, more even than in his poems or essays, are to be found his "most intimate expressions," and "the most vivid illustrations of his essential individuality."

Here is a comparison made by Emerson, in one of the letters, between poetry and painting:

"But there are fewer painters than poets. Ten men can awaken me by words to new hope and fruitful musing for one that can achieve the miracle by forms. Besides, I think the pleasure of the poem lasts me longer. And yet the expressive arts ought to go abreast, and as much genius find its way to light in design as in song—and probably does, so far as the artist is concerned; but the eye is a speedier student than the ear; by a grand or a lovely form it is astonished or delighted once for all and quickly appeased, while the sense of a verse steals slowly on the mind and suggests a hundred fine fancies before its precise import is finally settled.

"Or is this wholly unjust to the noble art of design and only showing that I have a hungry ear but a dull eye? I shall keep your prints a little while, if you can spare them, until I have got my lesson by heart. Will you let me say that I have conceived more highly of the possibilities of the art sometimes in looking at weather stains on a wall, or fantastic shapes which the eye makes out of shadows by lamplight, than from really majestic and finished pictures."

On sending a copy of "Confessions of Augustine" to Mr. Norton, Emerson wrote as follows in disparagement of book-reading:

"What better oblation could I offer the saint than the opportunity of a new proselyte? But do not read. Why read this book or any book? It is a foolish conformity and does well for dead people. It happens to us once or twice in a lifetime to be drunk with some book which probably has some extraordinary relative power to intoxicate us and none other; and having exhausted that cup of enchantment we go groping in libraries all our years afterward in the hope of being in Paradise again. But what better sign can the good genius of our times show that the old creative force is ready to work again than the universal indisposition of the best heads to touch the books even of name and fame."

Here is a characteristic bit about the Vedas, written in Concord in 1840:

"What can I tell you? Not the smallest event enlivens our lit-

tle sandy village; we have not even rigged out a hay-cart for a whortleberry party. If I look out of the window there is perhaps a cow; if I go into the garden there are cucumbers; if I look into the brook there is a mud turtle. In the sleep of the great heats there was nothing for me but to read the Vedas, the bible of the tropics, which I find I come back upon every three or four years. It is sublime as heat and night and a breathless ocean. It contains every religious sentiment, all the grand ethics which visit in turn each noble and poetic mind, and nothing is easier than to separate what must have been the primeval inspiration from the endless ceremonial nonsense which caricatures and contradicts it through every chapter. It is of no use to put away the book; if I trust myself in the woods or in a boat upon the pond, nature makes a Brahman of me presently: eternal necessity, eternal compensation, unfathomable power, unbroken silence—this is her creed. Peace, she saith to me, and purity and absolute abandonment—these penances expiate all sin and bring you to the beatitude of the 'Eight Gods.'"

From Nantasket Beach (1841) Emerson wrote (reminding one of Carlyle):

"My friend shall solve his own question, as I suppose whoever makes a wise inquiry only announces the problem on which he is already busy and which he will be the first to dispose of, and I shall gladly attend all the steps of the solution. But is it the picture of the unbounded sea, or is it the lassitude of this Syrian summer, that more and more draws the cords of Will out of my thought and leaves me nothing but perpetual observation, perpetual acquiescence, and perpetual thankfulness? Shall I not be Turk and fatalist before to-day's sun shall set? and in this thriving New England too, full of din and snappish activity and invention and wilfulness? Can you not save me, dip me into ice-water, find me some girding belt, that I glide not away into a stream or a gas, and de cease in infinite diffusion? Reinforce me, I entreat you, with showing me some man, work, aim, or fact under the *angle of practise*, that I may see you as an elector and rejector, an agent, an antagonist, and a commander. I have seen enough of the obedient sea wave forever lashing the obedient shore. I find no emblems here that speak any other language than the sleep and abandonment of my woods and blueberry pastures at home. If you know the ciphers of rudder and direction, communicate them to me without delay. Noah's flood and the stræ which the good geologist finds on every mountain and rock seem to me the records of a calamity less universal than this metaphysical flux which threatens every enterprise, every thought, and every thinker. How high will this Nile, this Mississippi, this ocean, rise, and will ever the waters be stayed?"

This from an October letter (1841) written in Concord:

"But I have no secrets to tell you from the Old Mother. None have lately been told me. Lone and sad, sometimes husy and glad, I walk under this broad cope and these hospitable trees. They never seem surprised at my thoughts and seldom suffer their own to escape. Sometimes—rarely, I pity them. Often they seem to pity me. They are a great convenience, they hide and separate men who are often much better for being hid and solitary.

"But how absurd to be writing to you on fields green or brown as a counterpart to your city perambulations; as if nature were less present in streets, as if the country were not too strong for the liliput interference that strives to harricade it out; as if it did not force itself into pits of theaters and cellars of markets, as if the air, and darkness, and space, and time were not nature—wild, untamable, all-containing nature. You and I, my friend, sit in different houses, and speak all day to different persons, but the differences—make the most we can of them—are trivial; we are lapped at last in the same idea, we are hurried along in the same material system of stars, in the same immaterial system of influences, to the same untold ineffable goal. Let us exchange now and then a word or a look on the new phases of the Dream."

In a letter written in 1843 from Philadelphia, Emerson duhs that city "a very large granny." "I can not find any city at all, any unit," he says, and continues in a humorous vein:

"If the world was all Philadelphia, altho the poultry and dairy market would be admirable, I fear suicide would exceedingly prevail. I look eagerly for the stars at night, for fear they would

disappear in the dull air. I have verified the fact of a sunrise and sunset; and the sea, tho in a muddy complexion, really finds its way to these wharves. When you see what facts I explore to sustain my faith, you will understand why in these extremes I should convulsively write to you, to try if the high world of man and friend still stands fast."

In another letter a little later on:

"It is strange how people act on me. I am not a pith-ball nor raw silk, yet to human electricity is no piece of humanity so sensible. I am forced to live in the country, if it were only that the streets make me desolate. Yet if I talk with a man of sense and kindness, I am imparadised at once. Pity that this light of the heart should resemble the light of the eyes in being so external and not to be retained when the shutters are closed. Now that I am in the mood of confession, you must even hear the whole. It is because I am so idle a member of society; because men turn me by their mere presence to wood and to stone; because I do not get the lesson of the world where it is set before me, that I need more than others to run out into new places and multiply my chances for observation and communion."

Here is a brief note (1845) entirely about Wendell Phillips:

"Have you ever heard W. Phillips? I have not learned a better lesson in many weeks than last night in a couple of hours. The core of the comet did not seem to be much, but the whole air was full of splendors. One orator makes many, but I think this the best generator of eloquence I have met for many a day, and of something better and grander than his own."

Another bit about books:

"We can like any book so little while! Tho its pages were cut out of the sky, and its letters were stars, in a short time we can not find there, with any turning of leaves, the celestial sentences or the celestial scents we certainly found there once; and I am of opinion that relatively to individual needs, the fiery scriptures in each book either disappear once for all from the context after a short time, or else have a certain intermittency and periodical obscurity, like 'revolving lights.' Perhaps, too, there are cycles of epiphany and eclipse in book-shops."

Emerson's signature was almost as varied as his mental moods. We find once simply "W.," at other times "R. W. E.," "Waldo E.," "R. W. Emerson," "Waldo Emerson," and "R. Waldo Emerson."

"THE AMERICAN LANGUAGE."

MR. WILLIAM ARCHER does not agree with Dean Alford, Ruskin, and other British writers that America is the source of all pollution in the limpid well of English linguistics. Ruskin, it will be remembered, wrote in "Fors Clavigera:—"

"England taught the Americans all they have of speech or thought, hitherto. What thoughts they have not learned from England are foolish thoughts; what words they have not learned from England unseemly words; the vile among them not being able even to be humorous parrots, but only obscene mocking-birds."

Naturally, says Mr. Archer (in *The Pall Mall Magazine*, September), Americans have retorted to this accusation rather acrimoniously. For instance, Mr. Gilbert M. Tucker, in "Our Common Speech," insinuates that a "boldness of innovation" amounting to "absolute licentiousness" is characteristic of the British race. Mr. Archer, however, thinks this a compliment:

"The suggestion leaves my British withers entirely unwrung, for I approve of bold innovation in language, trusting to the permanence of the unfit to counteract the effects of licentiousness. If I could believe that we British were the bolder innovators, I should admit it without blenching; but observation and probability seem to me to point with one accord in the opposite direction. New words are begotten by new conditions of life; and as American life is far more fertile of new conditions than ours, the tendency toward neologism can not but be stronger in America than in England. America has enormously enriched the language, not only with new words, but (since the American mind

is, on the whole, quicker and wittier than the English) with apt and luminous colloquial metaphors; and I know not why Mr. Tucker should disclaim the credit. He then sets forth to show how recent English writers are corrupting the language; and, in doing so, he falls into some curious errors. Dickens was boldly innovating when he made Silas Wegg say, 'Mr. Boffin, I never bargain'—'haggle,' it would seem, is the proper word. But if Mr. Tucker will look into the matter, he will find it extremely probable that this was the original sense of the word 'bargain,' and quite certain that it was a very early sense; for instance—

'So worthless peasants bargain for their wives,
As market-men for oxen, sheep, or horse.'

(*Henry IV.*, V., v. 53.)

And, in any case, is it possible to set up such a distinction between 'bargaining' and 'haggling' as to be worth an international wrangle?"

In the matter of pronunciation it is not to be expected, says Mr. Archer, that an extreme English intonation would be agreeable to Americans—at any rate to Americans not in the "smart set." Englishmen themselves laugh at a "haw-haw" intonation. Mr. Archer refers to the name of the present American hero by way of illustration of one wide difference between prevalent English and American pronunciations of the long sound of "u":

"When I first read the works of the sagacious Mr. Dooley, I thought it a curiously far-fetched idea on the part of that philosopher to talk of Admiral Dewey as his 'Cousin George,' and assert that 'Dewey' and 'Dooley' were practically the same name. I had not then noticed that the American pronunciation of 'Dewey' is 'Dooley,' and that the liquid 'yoo' is very seldom heard in America. In the course of the five minutes I spent in the Supreme Court at Washington, I heard the Chief Justice of the United States make this one remark: 'That, sir, is not *constitootional*.' To our ears this 'oo' has an old-fashioned ring, like that of the 'ee' in 'obleegeed'; but to call it wrong is absurd, and to find it ridiculous is provincial. Very possibly it can be proved that had Shakespeare used the word at all, he would have said 'constitootional'; but that would make the 'oo' neither better nor worse in my eyes. There always have been, and always will be, changing fashions in pronunciation; and the Americans have as good a right to their fashion as we to ours."

Mr. Archer speaks of the commoner British usage, "different to," and remarks that while as a Scotchman he would neither use nor defend it, yet the use of a particular preposition in a particular context is wholly a matter of convention in any language.

Passing from questions of pronunciation and grammar to questions of vocabulary, Mr. Archer expresses a sense of the great indebtedness of the English language, both spoken and written, to America:

"I can only express my sense of the deep indebtedness of the English language, both literary and colloquial, to America, for the old words she has kept alive and the new words and phrases she has invented. It is a sheer pedantry—nay, a misconception of the laws which govern language as a living organism—to despise pithy and apt colloquialisms, and even slang. In order to remain healthy and vigorous, a literary language must be rooted in the soil of a copious vernacular, from which it can extract and assimilate, by a chemistry peculiar to itself, whatever nourishment it requires. It must keep in touch with life in the broadest acceptance of the word; and life at certain levels, obeying a psychological law which must simply be accepted as one of the conditions of the problem, will always express itself in dialect, provincialism, slang.

"America doubles and trebles the number of points at which the English language comes in touch with nature and life, and is therefore a great source of strength and vitality.

That Remarkable Dumas "Discovery."—We have spoken upon several occasions of two manuscript tales by the elder Dumas which Mr. Home Gordon, in the London *Outlook*, alleged were found by M. Apostolides in the Orient, and which he said had never been published either in English or French. The genuineness of this discovery has for some time been doubted,

and altho it is impossible to speak with absolute decision without having seen the manuscripts, there appears to be little or no room for doubt that these "new" tales have been in print for at least thirty years. The American edition of the two tales is a translation by Alma Blakeman Jones, published in 1895. They correspond minutely in plot, local setting, and names of characters with the corresponding details so mysteriously doled out by Mr. Home Gordon in *The Outlook*. They are entitled "The Ball of Snow" and "Sultanetta, or Tales of the Caucasus." A reader of *THE LITERARY DIGEST* also writes to us that he possesses a Spanish edition of the latter tale, published in Paris in 1870, under the title: "Sultanetta, novela escrita en Francés por Alejandro Dumas." "The book," he writes, "was no doubt bound in Mexico"—where it was purchased by him—"and is uniform in edition with other novels of Dumas by the same publishers."

THE STRANGE SILENCE OF AMERICAN POETS.

ATTENTION has been called to the lack of poetry celebrating Admiral Dewey's achievements and the other stirring events in recent American history. Some one has said that if a British admiral had steamed into Portsmouth harbor with such a flawless victory and an Oriental archipelago to add to the national credit, Kipling, Swinburne, and all the singers of England "would be tumbling over each other's heels in the race for the best poem to celebrate the event." Indeed, within the last fortnight we have seen both Kipling and Swinburne piping forth notes of patriotic fervor even before England's new war was begun. But in America it has been wholly different, tho we have with us still such poets as Stedman, Markham, Aldrich, and Stoddard. A writer in *Literature* (October 13) says:

"The events of the past eighteen months have involved greater changes in the American spirit than any other events since the time of Lincoln, but despite the momentous quality of these changing conditions our poets have been silent, and it is wholly proper to ask why. Surely it can not be that there is none among them who approves. We can not believe that the brotherhood of poets is unanimously unappreciative of the great national stride forward that has been made by the American people. The small coterie of Boston statistical sonneteers surely do not voice the sentiments of the whole mass of American poets—yet they are as still as the voice of conscience at a meeting of Tammany braves; as unproductive as tho they had been ordered out on strike by a grand-master poet representing Pegasus Union No. 66.

"It seems inexplicable, and yet if we look over the output of poetry in the United States since 1875, say, perhaps we shall find the reason. Frankly, what really great poems have been published by our home-made singers in the past quarter-century? Barring Mr. Aldrich's 'Wyndham Towers'—in no sense an American poem—what American poet has added to his laurels in that time with or without an American theme? Indeed, have our poets really tried to write anything but highly polished verses reflecting the languor of the drawing-room rather than the vigor of life? We must confess that there is no convincing evidence that any one of them has really attempted anything beyond the establishment of his own technical cleverness. There has been polishing beyond measure; brilliant technic unending; dazzling obscurity past unraveling; but of true poetry, the real thing that sets a man's soul aglow, makes his pulses beat like the tattoo of a drum, and inspires him to feel that the removal of Gibraltar by a movement of the hand is child's play, of this we have had none at all.

"It is a sad condition, but it seems to us to explain the present situation.

"Our poets are thinking not of what they shall say, for that lies close at hand, but of how they shall say it, and meanwhile the tide which leads on to fortune and fame is beginning to ebb, and the opportunity is slipping away.

"It is either this or one other possible explanation that is the true one. In a period of technic and obscurity as the prevailing notes of our current poetry, if the technical care of the poets is not responsible for the oversight of which we have spoken, it

may be that it is obscurity that seems to place our poets in an unfavorable light. It is quite possible that some one has written a great poem of commemoration of these momentous days, but has expressed himself so vaguely, after the prevailing habit, that the reader has mistaken his lines for a poem on spring, hope, immortality, or some other popular abstraction. If this be true, it is to be hoped that the poet in question will hasten to reveal the actual state of affairs and let us have a revised version of his effort written in good, plain, virile, and comprehensible American, which shall fill the crying need of the moment, and vindicate our singers from the charge of being voiceless when their country most wished to hear them sound their clearest notes.

"Even an Alfred Austin would be acceptable at the moment."

An Art Theater for New York.—An art theater is proposed for New York, in which lovers of the literary drama will be given an opportunity of seeing plays for which there is no demand in the ordinary theaters. John Blair, the accomplished young actor who managed the recent fine performance of Ibsen's "Ghosts" in this city, and took the part of *Oswald*, is to have charge of the enterprise. There are to be five monthly performances, the first of which will be a play by the Spanish dramatist Echegaray. Two will be by Hauptmann and Sudermann, the leaders of the German realistic stage, and the remaining two for this season will be selected from the plays of Maeterlinck, Ibsen, or of G. Bernard Shaw, from whose article in *The North American Review* on "The Censorship of the Stage in England" we recently quoted. The seats are to be subscribed for at the rate of two dollars each. The best actors in New York are to be selected from the regular companies, and it is expected that the project will be both an artistic and a financial success, since the interest in Ibsen and in the kind of drama he stands for has grown very rapidly in New York during the past few years, and there are now enough people who like to think rather than accept merely conventional views of life and of the stage to make such an undertaking profitable.

NOTES.

A LONG poem has been written by Mr. Kipling for his new book, "Stalky & Co." It is in praise of famous men, as well as of men who, tho not famous, have done the great work of the world well. The first edition of the book was taken up before publication, and another edition is now in press.

A WORK entitled "Amateur Photography," by Mr. W. I. Lincoln Adams, has just been published. It is a practical guide for the beginner, and besides containing suggestions and directions for field work, printing, and flashlight photography, gives a large number of reproductions of striking photographs in illustration of the various kinds of indoor and outdoor work.

IN *THE LITERARY DIGEST* (October 14) we referred to "Mr. Dooley" as the only American book on the list of thirteen leading books of the year in England. In saying that, we were perhaps unadvisedly regarding Mr. Harold Frederic's "The Market Place" as more a British than an American product. Mr. Frederic had for many years before his death resided in London, and his story is one of London life.

LE FIGARO, in announcing that the French Government confers the badge of the Legion of Honor upon Maurice Grau, warmly commends the act. Coquelin, Mounet-Sully, Jane Hading, Réjane, and Sarah Bernhardt are among the French actors and actresses whom Mr. Grau has led to triumph in America. Coquelin is quoted as follows, speaking of Grau: "I have never had a paper signed by him; he is a man whose word is equal to his bond."

IN reference to a statement made in an article quoted in *THE LITERARY DIGEST* (September 23), that no translation of Ada Negri's poems exists in English, we learn that a translation of her "Fatalita" by Miss A. M. von Blomberg was published in Boston last December, under the title "Fate." Upon this translation Miss von Blomberg was engaged for three years, and it has met with a very favorable reception. The original Italian is rendered into English verse that is itself harmonious and frequently full of charm. Our readers may be interested to know that Ada Negri married a rich Lombard factory owner about three years ago, and now lives in Milan.

DR. R. M. BUCKE, one of the literary executors of Walt Whitman, is compiling a volume which is to comprise hitherto unpublished material selected from Whitman's manuscripts, most of these being odds and ends thrown off by him previously to 1860. The book, which is to be entitled "Notes and Fragments," will, so it is said, shed much light upon his thoughts, aims, and studies during that period. An interesting example of the first impression which Whitman's unique poetry makes upon one hitherto wholly unacquainted with him was lately furnished by one of Dr. Bucke's Canadian compatriots, a resident of Toronto, who wrote: "The most vivid impression yet is of an unending onward rush, a wonderful freshness, force, and vitality that has left me rather breathless as yet."

SCIENCE AND INVENTION.

TREATMENT OF DISEASE BY LIGHT.

A METHOD of treating smallpox by means of red light, used by a Danish physician, Dr. Finsen, has recently attracted some attention. The same physician has now perfected a method of treating various bacterial skin diseases by means of the chemical rays of sunlight and the electric arc. The system, which has been used extensively in Copenhagen, and with considerable success, is described in *The British Medical Journal* (September 30) in an illustrated leading article, by Dr. Finsen's assistant, Dr. Valdemar Bie. Dr. Finsen's smallpox treatment was based on the fact that the chemical rays of light are irritating to the skin, as is shown in sunburn. By straining out these rays and leaving only those at the red end of the spectrum, the light is made soothing. In the new treatment, called by its inventor "phototherapy," the Danish physician makes use of the properties of the discarded chemical rays. Says Dr. Bie:

"The method consists in treating local superficial bacterial skin diseases by the concentrated chemical rays of light.

"The experimentally proved data on which the method is founded are the following:

- "1. The bactericidal property of the chemical rays of light.
- "2. The power of the chemical rays of light to produce an inflammation of the skin (erythema solare).
- "3. The power of the chemical rays of light to penetrate the skin."

After carefully presenting proof that each of these three actions exists, Dr. Bie goes on to say:

"Based as it is on these three experimentally proved facts, this method of treatment is so rational that objections can scarcely be

FIG. 1.—Apparatus for Treatment by Sunlight.

the light stronger and cooler—is attained, in regard to the sunlight, by an apparatus such as is shown in Fig. 1. It consists of a lens of about 20 to 40 centimeters [8 to 16 inches] in diameter. The lens is composed of a plain glass and a curved one, which are framed in a brass ring, and between them there is a bright blue, weak ammoniacal solution of copper sulfate. As one surface of the liquid is plain, the other one being curved, its optical function is that of an ordinary plain convex glass lens. By making the lens of a blue liquid instead of solid glass a considerable cooling of the light will be obtained, because water absorbs the ultra-red rays, and because the blue color excludes a considerable amount of the red and yellow rays. These three kinds of rays have particularly strong heating effect, while their bactericidal power is insignificant. On the other hand, the blue, violet, and ultra-violet rays, which it is important to procure in as great a number as possible, are but very slightly impaired by passing through the blue liquid. The lens hangs on a foot, made in such a way that the lens can be raised and lowered as well as turned on a vertical and horizontal axis; therefore it is easy to place the lens perpendicularly on the sun rays, and at such a distance as to make the light strike the area of skin which it is intended to treat."

In the case of the electric light, a system of lenses enclosed in a tube resembling a telescope is used. This method is shown in Fig. 2. Says Dr. Bie: "An area of skin of about $1\frac{1}{2}$ centimeters [$\frac{1}{2}$ inch] in diameter is treated for one hour every day. The treated skin reddens and swells, a bulla may appear, but necrosis has never been observed.

The results, we are assured, especially in the case of lupus, or tuberculosis of the skin, are quite remarkable. Of course the germicidal properties of sunlight have long been known, but this is probably the first attempt to apply them systematically in therapeutics.

IS THE EARTH ALIVE?

THE answer to this question depends, of course, on the definition given to the last word. The earth, in one sense, is made up of what some philosophers call "dead matter," and yet it is instinct with life. A Russian writer, M. Klossovsky, tells us in the *Revue Scientifique* (September 30) that he chooses to

regard it as a huge living organism, and he believes that this point of view has many advantages. He says that if we should observe our planet from a very distant point, it would appear to us as a system constructed according to a simple plan, whose constituent parts and motions could be determined by the processes of climatology. In reality, its life is much more complicated, and in many respects it may be compared to the life of a living organism, with its numerous functions and individualities. Detailed study shows dissonances in this general plan which the one at a distance might observe. These, however, are only apparent; by continuing our investigations, we perceive that they are not the chance consequences of transitory causes; they are links in an organic chain, united by precise laws not only with one another, but also with universal causes. M. Klossovsky continues:

"In the living organization, we are struck at first sight with a mass of anomalies that, regarded more closely, are reduced to the manifestation of the general laws that govern the life of the whole. It is the same with our system, which is animated with perpetual motion. The term 'dead physical nature' ought never to be used. Two distinctive forms of such movements present themselves at the outset, circulation and pulsation. We have for a long time recognized pulsations of long periods and ampli-

FIG. 2.—Treatment by Electric Light.

raised against it from a theoretical point of view. In the treatment of patients, sunlight is used in the summer, when the sky is bright, otherwise the light of electric-arc lamps of 50 to 80 amperes. As already explained, it is only by concentration that the light becomes so powerful that its bactericidal property can be used in treatment. In order to avoid burning the skin it is also necessary to cool the light. This double object—to make

tudes. But with the progress of perfected methods of observation we are discovering very minute vibrations, with the conviction that these pulsations constitute one of the characteristic peculiarities of the life of our planet. The earth's crust pulsates, the atmosphere is animated with pulsative force. . . . Eschengagen has discovered small vibrations in the movement of the magnetic elements. Some scientists connect these with the electromagnet perturbations that take place in the sun. Julius West, who has observed the alteration of pressure by means of the very sensitive barometer devised by Hefner, has found that the barometric curve is wrinkled with infinitesimal waves. Pulsation has been proved to exist in earth currents of electricity, and it seems to exist in the modifications of intensity of the solar radiation, as the examination of actinographic photographs shows us. The progress of terrestrial phenomena, represented graphically, generally appears in undulatory curves which themselves are made up of finer undulations. It is a sort of pulse-beat of the physical life. These vibrations are but a reflection of the varied pulsations that cause the whole universe to vibrate in all directions and whose presence is a sign of life. . . .

"In the vital system of our planet, as in a living organism, the divers functions and elements are closely connected by certain laws. . . .

"As in the living organism there is constant mutation of the vital forces, so in the organization of our planet we see an uninterrupted exchange of energy, brought about by mechanical, caloric, and electric currents. . . .

"Like a living organism, the earth in its individual life reflects the influence of exterior agents—feels the influence of the cosmos, to which it is united by thousands of ties. . . .

"I refuse to regard the earth as an automatic figure that receives from without the completed forms of phenomena; no! it is animated by an individual existence, it possesses its own personal physiognomy. Most of its processes are born and worked out in the limits of its own atmosphere."

This view of the earth as a quasi-living organism, which its author regards as a new idea, will profoundly affect, he thinks, our ideas of the physical sciences. No one has in particular any right to reproach science, as some have done, with excessive fondness for the investigation of petty details, such as the circulation in a frog's foot. Since the earth is an organism whose minutest parts are in relation with each other and with the whole, none can be too petty for the closest study. "From this point of view," he says, "science has no elements that are uninteresting or unworthy of attention."—*Translation made for THE LITERARY DIGEST.*

Another Edison Invention.—The daily press tells us that Thomas A. Edison has just perfected a scheme, in the shape of a new ore-concentrator, for making old gold-mines pay. Mr. Edison is reported by *The Press*, Philadelphia, to have said of his new invention: "It is the biggest thing I have ever done," but as the details of the machine are to be kept strictly secret, even after it has been set at work, it is not possible for experts to give an opinion on it." *The Press* reporter says: "The Western and Southwestern States, Australia and other parts of the world are liberally sprinkled with abandoned workings—gold-fields which have once been highly productive, but have been worked out until the best part of the deposits are gone and the remaining stratum of gold-bearing gravel have become too poor in the precious metal to be profitably worked by any of the old methods, and the miners have deserted them and moved on to some new and more profitable field. . . . For several years Mr. Edison has been interested in concentrating plans, his efforts having been confined largely to the operation of the big crusher and ore separator built by him at Ogden, N. J., where with his apparatus the iron-mines abandoned a century ago have been again made a scene of activity, and where iron is being profitably produced from ore which could only be handled at a loss under the old methods. About a year ago Mr. Edison was approached by representatives of the Glestco Company, of New York, which had secured the title to the old Ortez Grant, and at their request he turned his attention to a concentrating machine which would do the same with gold. It is this machine which has now been about

completed. . . . The length of Mr. Edison's stay in New Mexico depends upon the success of the machine, for which its inventor claims a capacity for turning out gold to the value of \$10,000 a day from ordinarily rich gravel."

REAL AND IMAGINARY POWERS OF LIQUID AIR.

NUMEROUS companies have been formed to exploit the properties of liquid air, and each has issued its prospectus, setting forth what it proposes to do. In the opinion of the technical press, some of these prospectuses have little in common with sober truth. *The American Machinist* (October 5) asserts that there has been a good deal of unscrupulous "promoting" in connection with the business, and that the selling stock is in many cases the principal object of the concerns about which it writes. As an example, it quotes the following from one of the prospectuses.

"A single gallon [of liquid air] will perform wonders. . . . A tumblerful dipped out and placed in the ice-chest will maintain a temperature of zero in the refrigerator for twenty-four hours. A quart of it placed in the ventilating apparatus will keep the temperature of the whole house at 60° during the hottest summer day. The remainder of the gallon, put into the proper motor, with an electric-dynamo attachment, will generate enough heat to do the cooking, run the electric lights, warm the water for the bath, and in the winter heat the entire house by electric radiators. Its application as a medicine is full of marvelous possibilities."

Such statements as this find ready credence, for they correspond pretty well with popular ideas on the subject. *The Machinist*, to offset this, quotes the following statement by the president of another company, which it regards as much more nearly in accordance with the facts. Says the second writer:

"The refrigerating power of any substance is measured by its capacity of absorbing heat from the surrounding atmosphere and objects near at hand. . . . It has been found by experiment that one pound of ice requires 144 heat-units in order to become completely melted. It is then in the form of one pound of water at 32°, and can absorb 18 additional units in rising to 50° Fahrenheit. Consequently, when ice is used to cool the interior of a refrigerator to 50° Fahrenheit, it has a cooling power of 162 units per pound. In comparison with this let us see what cooling power is possessed by a pound of liquid air. The best scientific authorities are agreed that the heat absorbed in converting one pound of liquid air into ordinary gaseous air is 144 units; and the product then has a temperature of about 312° below zero. A pound of gaseous air, however, takes very much less heat to raise it 1° than does a pound of water; the proportion being only 238 to 1,000. If then, we desire to know how much heat a pound of air will absorb in rising from 312° below zero to 50° above, we have to multiply 362 by 0.238. This gives 86.156 units, which, added to 144, makes 230 as the entire cooling power of one pound of liquid air. Accordingly, one pound of liquid air, considered as a refrigerant, is theoretically equal to 230 ÷ 162, or 1.42 pounds of ice. But as the loss by evaporation in moving and handling liquid air is very great compared with the analogous loss sustained by ice, we are bound to regard the two substances as being practically equal in refrigerating power, weight for weight. A pint of liquid air weighs somewhat less than a pound, and is thus not more effective than a pound of ice in cooling power. A tumblerful is the equivalent of about half a pound of ice. Yet, the before-quoted prospectus says it will maintain a temperature of zero in a refrigerator for twenty-four hours!"

The other statements are regarded as equally illusory, when submitted to the test of figures. To quote again:

"A house of moderate size contains about 1,000 pounds of air. To reduce its temperature by 1° Fahrenheit requires the absorption of 238 heat units. A quart of liquid air is rather less than two pounds in weight, and if used to reduce temperature to 60°, has a total theoretical cooling power of about 450 units. It, therefore, would not lower the temperature of a house full of air

by even 2°; and if we consider that the air in a house is being continually changed, the effect of a single quart of liquid air gradually evaporated would be altogether inappreciable."

As regards the ability of the remainder of the gallon to do what is claimed for it, the writer concludes, after a similar investigation: Five and one-half pints (*i.e.*, a gallon after deduction of a tumblerful and a quart) of liquid air used in a motor with full theoretical 100-per-cent. efficiency will only give us a force of 1 horse-power exerted for thirty-one minutes, or, say, one tenth of a horse-power for five hours."

PHOTOGRAPHING THE STOMACH.

A DEVICE recently invented by Dr. Fritz Lang, of Munich, Germany, enables the inside of the stomach to be photographed so clearly that the result may be used to diagnose with accuracy a class of diseases whose detection has hitherto been attended with great difficulty. The method is thus described in *The Medical Times* (October):

"The camera is constructed on exactly the same principles as all cameras for taking moving photographs, altho, of course, there is no attempt made to combine them so as to project the actual operations of the stomach. It is doubtful, however, if a camera has ever before been fashioned which is as compact as this one, or which has been put to as strange a use.

"This camera is actually swallowed by the patient, and no sooner does it reach his stomach than the walls thereof are illuminated by a small electric lamp attached to the apparatus. At the bottom of the camera is wound a photographic film twenty inches long and a quarter of an inch wide, and one end of this film is fastened to the cord, which runs freely in the tube. Of course the cord and the conducting wires must be swallowed with the camera itself, for, in order to draw the film past the lens, the cord must be pulled.

"As soon as the camera reaches the bottom of the stomach, the work of photographing may begin. All the surgeon has to do is to pull the cord and thus run the film past the lens. The electric light is then turned on, and after the sensitive film has been impressed with the image the current is turned off and another section of the film is brought into play until the requisite number of pictures have been obtained. When this is done the entire apparatus is withdrawn from the stomach, and the films are carefully developed and enlarged."

IS SLEEP EVER DREAMLESS?

LIGHT has just been thrown on the old question regarding the continuity of dreams during sleep, by a long series of investigations made in a French hospital. These support the views of those who maintain that there is no such thing as a dreamless sleep, and that, on the contrary, every one dreams continuously while asleep, altho generally only those dreams are remembered that occur at the moments of going to sleep or waking. We translate below an account of these investigations by Henri de Parville, editor of *La Nature* (Paris, September 30). Says M. de Parville:

"Many persons imagine that they never dream. This is an illusion. It is probable that we always dream, even without knowing it, from the moment when we fall asleep to that when we awake. This idea is an old one, for it was put forth by Descartes, Leibnitz, and L  bet. Descartes said clearly that there was no sleep without a dream.

"We may have some doubts of this, especially as no one of us, when he dreams, has any notion on waking that he has been dreaming all the time he was asleep. Nevertheless, M. Vaschide has taken up the problem at the laboratory of experimental psychology of the Salp  tri  re, and has concluded from his investigations that dreams are certainly continuous. For more than five years he has watched thirty-six subjects, aged from one year to eighty years, and he has checked his own observations by those

of forty-six other persons. The method consists in examining the subjects all night, and noting carefully all changes of expression, gestures, and movements, as well as words spoken in sleep and dreams related by the sleepers themselves, determining each time the depth of the sleep by the well-known methods of Kol-schutter, Spitta, and Michelson. The principal conclusions of M. Vaschide are as follows:

"We dream during all the time of sleep, even during the most profound sleep—sleep that resembles syncope. The true psychic life of sleep, like the true life of dreams, shows itself only when the sleep begins to be profound. . . . Dreams that occur during deep sleep show the processes and the existence of that unconscious brain-work to which we owe, to our great astonishment, the solution of problems that have long occupied our attention, which appear suddenly and as if miraculously.

"Under the name of dreams have been studied the hallucinations that come at the moment when we fall asleep, and those that are produced at the moment of waking. The dreams of deep sleep have quite a different character. The 'chaos of dreams,' as it is called by Gruthuisen . . . is almost absent in true dreams, which seem to be directed by a certain unconscious logic, by attention, and by will; as well as by that indefinable something that escapes the senses and that makes us think of the dream images of which Aristotle speaks. The mental state of these dreams may be compared with the unconscious mental work of waking hours.

"A close relation exists between the nature of the dreams and the depth of the sleep. The more profound the sleep is, the more the dreams have to do with an earlier part of our existence, and the farther they are from the reality. On the other hand, the more superficial the sleep is, the more the sensations of every day appear, and the more the dream reflects the preoccupations and emotions of waking hours. M. Vaschide is quite in accord on these points with the well-known psychologist, Dr. Pilcz.

"The persons who do not dream, or, rather, says M. Vaschide, who pretend that they never dream, are the victims of an illusion of psychic analysis. The subject does not remember or perceive anything, because ordinarily we can exercise self-inspection only when going to sleep or awakening, and with certain persons these phases pass so rapidly that they escape notice completely.

"In the true dream, that of profound sleep, it seems that there is continuity of conception. With a subject who is awakened several times in one night, a certain order of ideas may be remarked in his dreams—a strange correlation connecting dreams that are apparently the most separate.

"To sum up, the investigations of M. Vaschide certainly will not satisfy those who want a good key to dreams, those who 'believe in' dreams; these will learn nothing at all from them. In a matter so difficult we can not be hasty. But even tho limited to some special facts, these experiments have their interest. We may already conclude from them that we always dream—that the brain is always working, and that sleep is not, as Homer calls it, 'the brother of death,' but rather, as this is paraphrased by M. Vaschide, 'the brother of life.'—*Translation made for THE LITERARY DIGEST.*

Danger from Electric Sparks.—Any machine that is likely to give off electric sparks has been considered dangerous for use in localities where those sparks might ignite explosives or gas. *The Electrical Review* tells us, however, that motors have now been constructed that are absolutely free from sparking, so that they have even been installed in a powder-mill. It says: "What a holding up of the hands in horror there would have been ten years ago if anybody had suggested electric motors as the prime movers of a powder-mill! Yet the art of constructing these machines has advanced so far that the induction motor is to-day considered the safest power machine for such uses. The description of the new powder-factory of the United States Navy Department is of interest in showing the feeling of safety that has been engendered by the perfection of the electrical transmission and distribution of power. The induction motor has been said to be 'as simple as a grindstone.' Likewise it is as sparkless as a water-wheel, and in a dangerous place like a powder-factory as safe as a block of ice." Of interest along the same lines is the conclusion of two German experts, Herr Heise and Dr. Theim, that sparking machines or motors are especially dangerous in

coal-mines. It would seem, however, that in the case of motors this danger need no longer be feared; that is, if the confidence of those in charge of the government powder-factory is justified.

PATENTED GERMS.

THE recent discussion over the propriety of patenting diphtheria antitoxin will be remembered by our readers. A step farther in the same direction has now been taken by the granting of patents for a process of cheese-manufacture involving the cultivation of bacteria of a particular variety. It is suggested by *The Hospital* (London, September 16) that all useful kinds of bacteria may thus some day come under the patent laws. Says this paper:

"The idea of a germ is popularly so closely associated with disease that it is seldom realized that some varieties serve useful ends, and are used for commercial purposes and to contribute to man's comfort and enjoyment. Such, however, is the case, and each year the traffic in germs assumes greater proportions. The nitrifying organisms of the soil, and many special varieties which attach themselves to the rootlets of certain plants, and which are essential to the perfect growth of these plants, have been successfully isolated, and are now retailed to agriculturists as fertilizers. Certain yeasts also, and other fermentative germs, are grown in bulk, and have a high commercial value. In America, however, a step farther has been taken, and patents have been granted conferring on certain persons the exclusive right to utilize the services of particular germs. It has long been known that the flavor and aroma of butter and cheese are due to ethers and esters elaborated by micro-organisms, and that the failure to secure a satisfactory article often depends upon the defective growth of these varieties or to the presence of an unfavorable species. Since it has been possible to isolate and grow the required species the manufacturer has been enabled to secure butter and cheese of standard flavor, all extraneous organisms being eliminated by the use of sterilized milk. It is for this process that patents have been granted, and consumers of dairy produce will now be enabled to see that they secure the right brand. The attempt which was recently made to obtain protection for diphtheria antitoxin would point to the fact that bacterial products may some day come under the care of the Patent Office. We doubt, however, whether there is any probability of patents being granted for pathogenic bacteria, tho it is possible that as man's knowledge of and control over these varieties extend these, too, may be found to subserve some useful purpose."

ORIGIN OF ATMOSPHERIC ELECTRICITY.

THE cause of the electricity of the air, which appears in such intensity during a thunder-storm and which is always present in greater or less degree, has long been a mooted question, and the theories about it are almost numberless. It seems probable that the causes are not one, but many. An article by Dr. Foveau de Courmelles in the *Bulletin of the French Astronomical Society*, seems to show that in the African deserts sand friction is an important cause. Says Dr. de Courmelles:

"We have no sense organized to appreciate atmospheric electricity, but it is sometimes very intense. Friction of air or sand, so common in the Sahara, owing to the sirocco, must develop static electricity. The station at Biskra, well known as a sanitarium, owes its success to this production of electricity, and our investigations on atmospheric ozone justify it. A number of phenomena in this line have been observed by M. Fernand Wegler in the extreme south of Algeria and the Sahara.

"In August, 1895," he writes to me, "we were returning from Ouargla toward Ghardaia, and found ourselves in the neighborhood of the bridge of Zelfana, a very sandy spot. It was about 5 P.M.; the day had been very warm, when all at once the sky became dark, large low-lying clouds rolled up, and there was a tempest of wind and rain, so fierce that large pebbles were blown from the ground.

"Not being able to continue our journey, we lay down, enveloped in our cloaks. At the end of two hours, the storm having moderated, we rose. . . . I then perceived at the end of the cross formed by the pommel of our camels' saddles a luminous point of violet phosphorescence—evidently the escape of electricity from a point. Soon I happened to raise into the air the wooden stick that I used to urge on my camel, when I saw a new phosphorescence—a sort of blue flame like that of burning alcohol. When I moved the stick about the flame followed. When I lowered the stick the flame diminished and presently went out. The experiment was repeated by all the party with the same success, and one of them, by shaking his sword, produced a longer and more brilliant flame.

"Shortly afterward there was a very violent and intense flash of lightning, rare even in these regions, which . . . nearly blinded us, and whose effects we felt for nearly an hour.

"The quantity of electricity produced during a violent sirocco can hardly be exaggerated. At the least movement of our woolen cloaks a crackling of sparks was heard, like the noise of very thin glass breaking. If the hand was passed over the surface, actual electric shocks were felt, whose repetition became very painful to the elbow-joint. The tents themselves were electrified. . . .

"During this period of intense friction of silicious particles one with another, from the force of the sirocco, everything becomes electrified. The animals themselves become condensers, so to speak; at the least contact, rubbing a camel's body for instance, there are sparks, crackling, and commotions of variable intensity, generally quite appreciable.

"The odor of ozone is perceived plainly while the sirocco blows and disappears with it."

"It has seemed to us that it would be interesting—the question of atmospheric electricity being the order of the day—to note these phenomena, which have not yet been generally reported by travelers and observers, and which are to be seen only in regions little or not at all explored."—*Translation made for THE LITERARY DIGEST.*

Tesla and Wireless Power Transmission.—A press despatch from Colorado Springs, Colo., on the 19th inst., represents Nikola Tesla as being hard at work at his experimental station just east of Colorado City. "He spends there the daylight hours, not stopping for luncheon, and frequently works after nightfall," says *Electricity*. "He has not yet ascended Pike's Peak, which may become important in his experiments. His time for four months past has been devoted to perfecting inventions for the application of wireless telegraphy. He is also absorbed in working out the problem of transmitting power long distances without the use of wires. He says he discovered several years ago the principle of power transmission. He is now at work to regulate that power. Mr. Tesla is satisfied with the results of his four months' work. He is pleased with the opportunity afforded in the upper-air strata round Colorado City. When he went there he expected to return to New York by September. He now says he will not return for two months or longer, unless on a hurried business trip."

SCIENCE BREVITIES.

"EVERYBODY knows of the important traffic that has been going on since remote ages in elephants' teeth," says the *Revue Scientifique*. "In our own age we see rising a new traffic—that in human teeth. We refer to the artificial teeth that the New World is sending us to fill the voids left in our jaws. According to *L'Odontologie*, May, 1899, from June 30, 1897 to June 30, 1898, there were exported from the United States \$65,242 worth of artificial teeth, \$21,000 to France, \$19,000 to England, and \$14,000 to Germany. In 1896 the exportations were valued at \$88,243."—*Translation made for THE LITERARY DIGEST.*

PHOSPHORESCENCE OF SEA WATER.—"This phenomenon," says *The Pharmaceutical Era*, "can not always be attributed to the presence of lower organisms that cover the surface of the sea in many places. After a storm it may frequently be observed from shore that the waves are covered by a feeble light, accompanied by a peculiar, pungent odor. Closer investigations have shown that ozone plays a part in these manifestations, but it is supposed that even ozone is incapable of producing in absolutely pure water such phenomena as have been observed. It is assumed, therefore, that the phosphorescence is a consequence of the oxidation, or combustion, of the organic impurities contained in the water."

THE RELIGIOUS WORLD.

DEAN FARRAR'S INDICTMENT OF PRESENT-DAY ENGLAND.

THE Dean of Canterbury is not usually set down as a pessimist, but his recent utterance in the British religious magazine *Young Man*, quoted in *The Christian Statesman* (August-September), exhibits anything but a bright view of the immediate outlook for religion and morality in Great Britain. He says:

"I am neither a prophet nor a prophet's son, so I will not undertake the rash task of venturing to make any prophecy about

DEAN FARRAR.

the future. But it has long seemed to me that things are in a state of unstable equilibrium, and that another century can not pass without the occurrence of some great European war, with all its terrible and heart-shaking catastrophes. Nor is it possible to be content with the state of things in England. The alarming spread of betting and gambling among workingmen and the youths of great cities—so that this ruinous vice helps to fill our prisons, and (in the north of England especially) has ruined the healthy influence of our games; the eager love of money, which leads to so much wild speculation and commercial dishonesty; the cruel indifference with which we degrade the helpless childhood of the world by deluging savage tribes with drink, the growth of Hooliganism, and crimes of brutal violence; the dominance of a selfishness which immerses itself in luxury, pleasure, and amusement, while a poverty more and more squalid welters almost at the doors of the wealthy; the growth of a sullen and angry feeling of discontent among thousands of the poorer class; the decay of faith in the deepest and most awfully vital truth; the ever-abiding and infinitely loathsome curse of drink, which seems, among women at any rate, to be gaining rather than losing ground, and as Pope Leo XIII. says, 'drags unnumbered souls to perdition'; the tendency to substitute niggling nullities and fetish-worshipping superstitions for 'religion

pure and undefiled'—all these things give serious ground for disquietude."

The great men in religion and philanthropy and letters, says Dean Farrar, are all dying off, and are leaving no one to take their places:

"We have no poet who can stand for a moment beside Tennyson or Browning; no orator who can be distantly compared to Gladstone or Bright; no painter who reaches the level of Landseer or Millais, no writer nearly so powerful as Carlyle or Ruskin; no novelist—tho novels now flood the world at the rate of five a day—who is worth mentioning with Dickens, Thackeray, or George Eliot; no religious teacher whose influence is half so telling or ennobling as that of Maurice, F. W. Robertson, or Dean Stanley. If our age could not produce one dauntless or far-sighted man—a teacher like Savonarola, or Luther, or Wesley, or Whitfield; a philanthropist like Francis of Assisi, or Vincent de Paul, or Thomas Clarkson, or John Howard; a man who would willingly face bonds and afflictions, and cataracts of calumny, and not hold his life dear unto himself, and would count it a glory, for the truth's sake, to

'Stand pilloried on infamy's high stage,
And bear the pelting scorn on half an age;'

a man whose soul was so ardent with the light of heaven that he could flash conviction and reformation into depths of moral unreality; a man who could fling the fire of God, like arrows of lightnings, into the apparently impregnable strongholds of wickedness and shame—then we should feel a livelier hope for the immediate future."

ENGLISH CONCILIATION OF MOHAMMED'S FOLLOWERS.

THE English Government is apparently striving to gain the loyalty of her hundred and fifty million Mohammedan subjects by a considerate attitude toward their fondly held religious beliefs. One of the first fruits of this policy was the founding of the Gordon College at Khartoum, a Mohammedan institution endowed by the English Government through the advice of General Lord Kitchener.

The most recent indication of the new alliance is the establishment of another Mohammedan school at Sierra Leone, on the west coast of Africa. The institution was opened under the auspices of the acting governor, Major Nathan, C.M.G. Dr. E. W. Blyden, well known as one of the most ardent adherents of Islamism, was also present. The *New York Sun* (September 18) says editorially of this event:

"The ceremony began with a prayer in Arabic offered up by the imaum of the mosque, Alfa Omaru, who afterward gave a short account of the efforts to promote education made by the Sierra Leone Moslems. He referred to the years 1839 and 1841, when the Mohammedan religion was considered as a danger to the colony, when Moslems were persecuted and their mosques pulled down by excited mobs. Thanks, however, to an enlightened policy, matters were set right, and for more than fifty years the Moslems have enjoyed full toleration and the protection of the British Government. In 1872 the festival of the Lesser Bairam had been attended by the governor, Sir John Pope Hennessy, with a military escort, and in 1879 another governor, Sir Samuel Rowe, had entertained seven hundred Moslems at Government House on the occasion of the Bairam Festival of that year. In 1891 Governor Hay handed over a fine property with commodious buildings to the Moslem community for educational purposes, accompanied by a grant for the payment of the teachers. These successive events were important epochs in the history of Islamism in West Africa, and the Imaum looked forward to the day when the present elementary school would become the stepping-stone to a college.

"Major Nathan, in his address in reply, dwelt on the advantages of the education to be given in the school, and particularly on the benefit it would bring to the people if the English language were taught, as it would qualify those knowing it to take part in the administration of the country. He cited as examples

the cases of Mohammedan judges in India and high functionaries in Egypt. At the same time he wished them to perfect themselves in Arabic in order that they might know what real Mohammedanism is. When they understood the Koran, he said, they would see that their religion was one telling them how to live, and not a religion of charms and gewgaws. Knowing English, they would have the literature and wisdom of the white man open to them; and with Arabic, they would be able to read not only the Koran, but the 'Makamat' of El Hariri, known already to some of them, and the 'Alif Lailat wa Lailah,' the translation of which English people read with pleasure. In concluding, Major Nathan urged them not to rest content until they had in Sierra Leone a Moslem college whence wisdom and knowledge might go forth over the whole of West Africa."

The Sun thinks the importance of the incident can hardly be overestimated:

"The news of the official encouragement given to the Mohammedan religion and the culture of its sacred language, Arabic, will in a very short time spread from the Atlantic to the Red Sea, and the wisdom of the policy that dictated it will be justified by the resulting spread of British influence among the Moslem populations of North Africa. In all probability it will lead to a corresponding rivalry on the part of the French, whose hold on the Arabs of Algeria is none too strong, owing to mistakes in policy and the want of character of many of those appointed to office."

"The next century no doubt has many surprises in store, but whatever they may be, not the least strange will be the spectacle of the two Western nations that led in the crusades promoting, for political and territorial reasons, the creed they then tried to crush."

"With the success of this far-seeing policy of the British Government, the doom of the Khalifate at Constantinople may be regarded as sealed, and the day of its restoration to Cairo, the sacred El Kahira of the Arabs, is brought near."

"THE DYING OF DEATH."

DEATH as a motive is moribund, says Mr. Joseph Jacobs. It is dissolving in the sunlight of the modern Zeitgeist, and no longer can be held over the heads of trembling mortals as an incentive to religious orthodoxy. This change constitutes perhaps the most pronounced element in the difference which is to be observed between the modern age and medieval times. He says (in *The Fortnightly Review*):

"There can be little doubt that death was king through medieval Europe, and that he not reigned but governed. The power of the church consisted in large measure of the appeal it could make to this motive. The institutions of the chantry-priest, indulgences, and dispensations were in the most intimate connection with the financial side of the church's organization. In the sphere of art the *Danse Macabre* is almost the only secular subject, if it can be called secular, which attracted the imagination of the medieval artist. The greatest and most Christian poem of the Middle Ages deals entirely with the life after death, and we can see from Dante how vividly a man's fate after death is connected with any survey or reminiscence of his life in the sub-lunary world. Death and the Devil rule over them all; and even the most modern of the medievalists, Villon, expressed his sentiments in fullest detail in his last will and testament."

"With us of the modern world all this has changed, or is changing. The church in all its sections is devoting its attention more and more to this life than any other. Death is regarded no longer as a King of Terrors, but rather as a kindly nurse who puts us to bed when our day's work is done. The fear of death is being replaced by the joy of life. The flames of hell are sinking low, and even heaven has but poor attractions for the modern man. Full life here and now is the demand; what may come after is left to take care of itself. Ever since Spinoza laid down the proposition—'*Homo sapiens de nihilo minus quam de morte cogitat*' [The wise man thinks of nothing less often than of death], the world has become wiser in a Spinozistic sense. Death is disappearing from our thoughts."

"One of the main causes of this remarkable change in senti-

ment is the improvement in modern sanitation and hygiene, and the increased average duration of life. In the Middle Ages nothing was so uncertain as life. Duels and private wars, feuds and bandits, plagues and pestilences, made men uncertain of their lives from hour to hour. When men's position in life depended upon the strength of their right arm they ceased to be effective when they became 'stale' as athletes. Thus old age began for men early in the forties. The average age was younger, yet death came more frequently, so that his visits were the more and more unwelcome. When any day might be one's last it was natural to be always thinking what came after death. Nowadays death comes later, with more warnings of his approach, and takes us less by surprise. We are more willing to go, less eager to stay."

In fact, says Mr. Jacobs, the mass of men no longer attach importance to the subject of death, and the whole question is ceasing to touch in any vital way the ideals and thoughts of man:

"There are signs of this everywhere. The increasing popularity of cremation is one of them. Still more significant is the disappearance of hell from popular theology. 'That is all very well,' said the Scotch Calvinist, when he heard Dean Stanley, 'but gie me my hell.' But few will be found to reecho his cry. And with the disappearance of hell the divergences of the various creeds lose much of their significance; and so we have toleration, which so often wears the garb of indifference."

"The most significant of all, however, is the attitude of the church in all its branches. The old idea of the clergyman was of the man who prepared us for another life. This is being gradually changed to a conception of him as a social regenerator. Acts of corporeal charity are taking precedence of the sacraments. Other-worldliness is giving way to worldliness of another sort. At the root of half the Socialism of the day is the thought that this life is the only one with which men have practically to do. While heaven and hell could act as compensating balances, the inequalities of men's lives could be regarded with something approaching equanimity; it would all be made right in another world. But now this thought fails in efficacy, and as a consequence we are Socialists now."

"Generally speaking, the loss of belief in personal immortality may influence the character in two opposite directions. Either there will be a clutching after the goods of this world for oneself, and feverish activity of enjoyment of them; or, with the higher and better mind, there will be increased social activity and a striving to make things better all round. There are signs of both tendencies in contemporary life. The spread of the decadent spirit marks one form of the tendency. The wide interest in social schemes and regeneration may be regarded as a move in the other direction. How far either of these is consciously based upon what I call the dying of death, or may be traced to other influences, is a question not easy of decision."

"It is perhaps worth while recalling the fact that, once before in the world's history, death lost his power to influence. The nation that gave the conception of righteousness to the world managed to do so without bringing death into the account at all. One of the most striking things about the Old Testament is the complete absence of death as a motive from its pages. Recent research has indeed shown signs of the rise of the doctrine of personal immortality in some of the later Psalms, possibly under the influence of Persian thought. But, on the whole, the Old Testament is without any appeal to death as a motive. Death was dying two thousand years ago, but he revived to rule the world almost to the present day. Shall we see the revival? Who knows?"

The article has excited much comment. Some writers think the change of sentiment toward death should be attributed in a considerable degree to speakers and writers of the agnostic school, who have largely broken down the popular faith in the grisly terrors of hell. On the other hand, a writer in *The Observer* (Presb., New York) appropriates the credit of this change to the progress of Christianity itself. He says:

"We do not see in the suggestions of the writer . . . what appear to us to be reasons for this change of view. We would put first the modifying and ameliorating influence of Christian and general culture, which is no longer inclined to take harsh

views of nature and providence. This is a general tendency, recognizable in all avenues. It is regarded by some as a weakening of the moral and religious instincts, which view the large increase in religious interest would not seem to confirm. Perhaps such considerations as the following make death less terrible: Firstly, that physical death is a universal, and is seen to be a beneficent, law—as all general laws are. The sum of happiness in the world is greatly increased by it, and the sum of life's miseries greatly diminished. Secondly, that a beneficent law is in a large majority of instances beneficent in its operations—that while death is relentless it is not cruel. In nearly all cases it is peaceful and painless. Thirdly, in all classes there is an instinct of continuity and of the absence of violent change. The order of nature and of life proceeds quietly from year to year and from age to age. The intuition of continued existence is nearly universal. Very few, in their unconscious thought, look upon death as a break in the order and succession of their existence. The optimism and hope which render life endurable is always projected into the future. Christianity has taken up this sentiment and given it body and reality. It is reasonable to expect that the future life will be better than the present. All the analogies favor the expectation. Life is progress, a continual unfolding of capacities and powers. The inspired teachers exhaust their comparisons in describing the future life of man, and leave unlimited room for its exaltation when they say that eye hath not seen nor ear heard, nor hath it entered into the imaginations of man. Reason confirms it. Endless progress taxes our best efforts to conceive of infinity. The thought that these generally, the more or less unconsciously, prevalent sentiments may weaken the sanctions of religion, comes of the fact that in a coarser and harsher state of society and of thought the sanctions of fear alone could influence the masses. Fear only restrains the conduct; it does not change the nature. 'Love casteth out fear.'

WHAT WAS CHRIST'S ATTITUDE TOWARD "RELIGIOUS ERROR"?

THE great increase of new religious denominations in recent years has led Mr. W. R. Moody, retiring editor of *The Record of Christian Work* (Northfield, Mass.), to gather a number of expressions from prominent religious teachers as to these new "isms," whose "strange and perverted doctrines," he says, are peculiarly insidious, and "have blighted the spiritual life" of many once useful church-members. Among those who replied to his circular was Dr. Lyman Abbott, who writes:

"Christ never condemned any man for merely holding an intellectual error. He never, so far as I recall, indicated that His disciples should separate themselves from any man because of intellectual error. He never made the intellectual acceptance of any article of belief a condition of discipleship. He never even attacked with invective or rebuke the Sadducees, who were the unbelievers of His day, as He did attack the Pharisees, who were the false pretenders of His day; tho, when the Sadducees attacked Him, He showed with unerring spiritual sagacity their shallowness and shortsightedness.

"The only condition which Jesus Christ made of discipleship was a desire to learn of Him, that the learner might practise what he learned. The only condition of discipleship was that he should desire to be Christ's disciple; the only condition of following Him was that he should choose to follow wherever Christ led.

"I think the unprejudiced study of the four gospels will make good this general declaration."

Bishop Potter, of New York, says:

"In each form of craft and credulity there is the same mixture of some obvious truth with some cleverly disguised error, and the same hysterical following after it of simple souls. These, beguiled by some distorted fragment of a great fact in the history of mental and spiritual forces, soon find themselves harnessed to some alluring cult which involves homage to a new 'prophet,' or 'angel,' or 'mother,' who has learned the art of trading upon the credulity of others, or has been infected by some extravagant hallucination concerning themselves, as the subjects of special revelations, disclosures, or 'endowments' of power. The apostles' rule is the best, 'Try the Spirits'—at the bar of history,

reason, and recognized sciences; and in the process—whether in the pulpit, on the platform, or in print—cultivate, concerning all such things, the judicial temper."

Bishop Vincent, of Chautauqua, writes:

"There is only one way 'to meet error,' and that is with direct, simple, positive truth. Christ did not directly teach His disciples how to deal with 'error,' that is, with theoretical error, unless His example be taken as direct teaching. And, after all, how could He have more effectively told His disciples of all ages to let error in theory alone by teaching and living and illustrating truth? He gave testimony to the truth as applied to life. He wrought wonders of help and healing. He answered questions in such way as to make men think. He used figures of speech that children could understand. He spake with authority. He rebuked sin in men who professed righteousness. He was meek and lowly in spirit, emphatic in the denunciation of wrongdoing, of pretentious piety, uncharity, and hardness of heart. But He had little or nothing to say about human philosophizing and speculation. He preached the gospel of the kingdom, repentance, faith, obedience.

"It is my humble opinion that Christian teachers nowadays have little or nothing to do with 'error' or 'ism.' They should privately know its assumptions, the basal truth that makes it possible, the overemphasis that weakens or annuls that truth; and then they should intelligently, fervently, faithfully, persistently, proclaim *truth*, simple *truth*. Such teaching, by one who understands the real root of the error he would overcome, will do more than volumes of formal argumentation.

"Most 'isms' and 'fads' die of their own feebleness, if let alone. That is, if instead of argument or denunciation, the Christian teacher simply proclaims, and in his life illustrates, the simple truth as it is in Jesus. The best answer to heresy is truth, spoken with authority—the authority of one possessed and dominated by the Holy Spirit of truth. Christ's own ministry and the ministry of His disciples sustain this view."

Mr. Dwight L. Moody takes very much the same view. He writes:

"Statement of error is like dropping a seed. It often suggests what would otherwise never occur to a man. I once heard a man combat the very liberal views of two able men. The men who were supposed to be unsound were so much more able than the one who criticized them that I found unconsciously that my sympathies were being aroused in their behalf. This taught me a lesson that it is always a dangerous thing to attack *men* who hold error.

"It is for this reason that Christ's teaching was always constructive. He gave little attention to tearing down, because He knew that as light dispels darkness, so truth scatters error. His method of dealing with error was largely to ignore it, letting it melt away in the warm glow of the full intensity of truth expressed in love. But most important of all, let us remember the injunction of the Apostle Peter, 'Above all things, have fervent charity among yourselves.' Let us hold truth, but by all means let us hold it in love, and not with a theological club."

It is instructive to observe, says Mr. W. R. Moody, that altho representing many widely divergent religious positions, the writers generally agree that Christ dealt gently with those who differed from Him in their religious opinions, and sought rather to *win* them to Him than to drive them farther away.

Conversion of Nestorian Christians to the Roman Catholic Church.—In a recent number of *THE LITERARY DIGEST* (August 12) we mentioned the conversion of a large body of Nestorian Christians in Persia to the Greek Catholic faith. It is now learned that a still larger body of this sect, principally at Mossul and in districts adjoining Persia, have been received into the communion of the Roman Catholic church. A brief but significant announcement of this event is made in the following letter to the Pope from Mgr. Altmayer, Latin Archbishop of Bagdad and Delegate Apostolic of Mesopotamia, Kurdistan, and Asia Minor:

"Holy Father: I am happy to be able to offer your Holiness

the first news of an event which will fill you with joy and for which your Holiness will join with us in loudly thanking the divine Goodness. The mission which two sons of St. Dominic . . . have been carrying on for the last three months in the midst of the Nestorian population, at the price of great fatigues, has won from Heaven the most consoling results, which will soon he made known to your Holiness by authentic documents. Fifty thousand Nestorian Christians have given their adhesion to the Catholic faith in the hands of these gallant missionaries, Fathers Rhetore and De France, of the residence of Van, while in the region near this city thirty thousand Gregorian Armenians have, thanks to the missionaries, also embraced Catholicism."

WHAT IS RELIGION?

AT a meeting of the Free Religions' Association a few years ago, one of the questions discussed was, "Has religion a scientific basis?" Objection was made to the wording of the question by a member, Mr. B. F. Underwood, on the ground that it would be as legitimate to ask whether society, or love, or language, or any other recognized phenomenon of life, has a scientific basis. Religion is a fact in the world, said Mr. Underwood, and must be recognized by the man of science, the historian, and the sociologist. The scientific basis of certain theories of religion is another matter.

Acknowledging, therefore, the indisputable fact of religion, Mr. Underwood (in *The Christian Register*, Unit., September 7) now asks, What is religion? He says:

"Manifestations of the religious sentiment may be studied by the physician and by the psychologist as well as by the ethical and social reformer. Those who confine their study of religion to the speculative part, to questions of origin and destiny, to theories in regard to the nature of God or the conditions of life beyond this hank and shoal of time, are not likely to have the broadest or most accurate knowledge of religion as a fact of human nature and as a factor in human progress. If the doctrine of evolution is true, it applies to religion as well as to ethics, language, art, society, government. . . . Not until men began to recognize power underlying or manifesting itself in phenomena, and began to feel their dependence upon it, to wonder about it, to fear, admire, and reverence it, could there have been religious belief or emotion.

"According to evolutionary thought, if I mistake not, a correct definition of religion, fundamentally considered, is the recognition of power to which man is subject and upon which he is dependent, with corresponding emotions. Religion is an expression of man's relation to the Ultimate of Being, whether shown in fetishism, henotheism, polytheism, monotheism, or agnosticism."

This definition of religion, however, is too general, Mr. Underwood thinks, to satisfy those who study religion from the present social side rather than from the philosophical side. It is desirable to view religion from many aspects, as it reveals itself to different minds. He gives the following definitions and thoughts on religion from some of the leading thinkers of ancient and modern times, from which one may gain a composite impression of the meaning of religion:

Coleridge defines religion as the union of the "subjective and objective." The subject is the Me; the object is Not Me.

A likeness to God, according to our ability," is Plato's definition of religion.

Religion, according to Kant, is "reverence for the moral law as of divine command."

"The union of the finite and infinite," says Schelling.

"Faith in a moral government of the world" (Fichte).

"Morality becoming conscious of the free universality of its concrete essence" (Hegel). This is interpreted to mean "perfect mind becoming conscious of itself."

According to Schleiermacher, religion is "immediate self-consciousness of the absolute dependence of all the finite on the infinite."

Jeremy Taylor's definition of religion is "the whole duty of man, comprehending in it justice, charity, and sobriety."

"Every man worships a conception of his own mind" (R. W. Mackay).

"Religion is a state of sentiment toward God" (F. W. Newman).

"Religion is the culminating meridian of morals" (Dr. James Martineau).

"Religions are many; reason is one. We are all brothers." This phrase is on the lips of every Chinese, and the Chinese bandy it from one to the other with the most exquisite urbanity" (Huc's "Journey through the Chinese Empire").

"Religion without morality is superstition which deceives the unfortunate with a false hope, and makes them incapable of improvement" (Fichte).

"The Thugs, the religious sect of professional murderers in Hindostan, are very strict in observing the ceremonial rules of their faith. . . . No Thug was ever known to offer insult, either in act or speech, to the woman he was about to murder" (Sleeman).

"Fashionable religion visits a man diplomatically three or four times—when he is born, when he marries, when he falls sick, and when he dies—and for the rest never interferes with him" (Emerson).

"A man is a Christian if he goes to church, pays his pew tax, bows to the parson, believes with his sect, and is as good as other people. That is our religion" (Theodore Parker).

"There is no pestilence in a state like a zeal for religion independent of morality."

"So pious as to be utterly intolerable" (H. W. Beecher).

"Let us with caution indulge the supposition that morality can be maintained without religion" (Washington).

"Atheism leaves a man to sense, to philosophy, to natural piety, to laws, to refutation, all of which may be guides to an outward moral virtue, tho religion were not" (Bacon).

Shelley defines religion as "man's perception of his relation to the principle of the universe."

"The true religious philosophy of an imperfect being is not a system or creed, but, as Socrates taught, an infinite search or approximation" (Mackay's "Progress of the Intellect").

Is there any finer statement of the religious mood than that by Wordsworth in "Tintern Abbey"?

"And I have felt
A presence that disturbs me with the joy
Of elevated thought; a sense sublime
Of something far more deeply interfused,
Whose dwelling is the light of setting suns,
And the round ocean, and the living air,
And the blue sky, and in the mind of man,—
A motion and a spirit, that impels
All thinking things, all objects of all thought,
And rolls through all things."

Absolution by Telephone.—"A curious instance of the modern tendency of the Roman Catholic church to keep abreast of the age," says the *Chicago Tribune*, "may be found in a theological treatise just published in London, entitled 'The Sacraments Explained according to the Teaching and Doctrine of the Catholic Church.' The author is the Rev. Arthur Devine, Passionist, a recognized authority on orthodox Catholic theology. He says it has not yet been officially decided by the Pope whether or not confession can be heard and absolution given by telephone, but he is inclined to believe such action would be valid under certain circumstances. It is one of the requirements of valid confession and absolution that there should be 'a moral presence of the penitent with the confessor.' A written confession sent to an absent priest is not valid, but Father Devine says that 'a priest might give absolution by telephone, under condition, to a person taken suddenly ill, so as to be in imminent danger of death, and when he can not possibly reach the place where the person is,' in which case 'the penitent and confessor may be truly said to be conversing together, and consequently to be morally present to each other.' The idea of grafting a venerable rite upon the most modern of inventions will have a curious interest for Protestants as well as for Catholics."

It is said that a "Bible Trust" is one of the probabilities of the immediate future. The competition in selling Bibles has been so keen that a combination appears to be necessary so that prices will not be cut down beyond the point of a reasonable profit. Upon the whole, this activity is not a discouraging sign in the religious world.

FOREIGN TOPICS.

AS TO THE RESULTS OF THE TRANSVAAL WAR.

SPECULATION is already indulged in as to the possible results of the war in South Africa. Some English papers talk of a campaign of only six weeks' duration. Others are less optimistic, but doubt that the Boers will be able to obtain any but minor advantages, and these in the beginning only. Very few

A HITHERTO UNKNOWN MEISSONIER.

"The Morning of Waatelow (or its South African equivalent), 1900 (or possibly sooner)." Oom-Poleon reviews his "Oude Gaard" before the battle. —*Punch*.

are willing to believe that England could possibly be beaten, and most continental papers share this belief in England's ultimate victory. The reasons given are: Britain's immense resources, superior tactics, greater numbers; and, the British papers add, the inferiority of the Boer in intelligence. Mr. A. J. Wilson, the editor of the London *Investors' Review*, expresses himself, however, as follows to a reporter of the Paris *Temps*:

"Neither the Cape Colony nor Natal will be able to pay interest on its debt, which is in itself a serious loss to Great Britain. And then the gold-mines! Has any one considered how very necessary that gold is to us? Most of the mines will stop work, and the others will furnish the Boers with gold. And what about our trade? The war must disturb it. Moreover, we are morally beaten, however quickly our troops win. And no force we can muster can in future defend us against a dissatisfied people, who will have nothing to do with us. We can not hold far-away South Africa as we hold Ireland; and if we do, it will be a worse Ireland."

Mr. Wilson ridicules the Uitlander grievances, and declares that Cecil Rhodes is at the bottom of the whole business, as the Chartered Company is without any assets worth mentioning, and only possession of the Transvaal gold-fields can save the lords and millionaires who are shareholders from serious losses.

The Boers are hopeful enough. They have been nerving themselves for this conflict practically ever since 1881. The comments of the Afrikaner press on the Bechnana, Chitral, and Sudan campaigns by the British army have been to the effect that that army is little suited for an attack upon white nations. Nor are the Boers conscious of any inferiority to the British in mental qualities. "Daily contact with Englishmen has failed to produce in our people a sense of that intellectual inferiority which we are asked to exhibit," writes J. du Toit in the Bloemfontein *Express*. Another Afrikaner, in a letter to the *Nieuwe Rotterdamsche Courant*, sketches the feeling in the Transvaal as follows:

"We here in Pretoria have never been able quite to understand the cause of your pessimism. To begin with, our frontier is one hundred miles from the British base of operations, and Pretoria is at least one hundred and twenty miles farther. The city is today a fortress which would inspire respect even in Europe. As far as our frontier the enemy can use his railroads. After that,

if they are lucky enough to get farther, they must use ox-wagons and mule-trains. What that means, only men who know South Africa can appreciate. This much I can tell you—the invading army will find nothing, absolutely nothing, in the way of provisions, fuel, etc., on its march. The larger part of the British army should consist of cavalry, and these will have their hands full to defend the infantry and trains. The summer here (from October to April) is better for an advance because there is grass enough for the animals; but the soldiers will suffer demoralization from the effects of the climate.

"But let us suppose the British reach Pretoria. A small force will be left to garrison the city. The rest of the Afrikaner forces will close around the besiegers as waters around an island, and another force will be needed to succor them. But where are the siege guns the English will need? We have fortress artillery, against which their field-guns will be useless. Are they going to load their siege-guns on ox-wagons? Pretoria is full of stores and can snap its fingers at a besieging force.

"We are confident that our German and French cannon are superior to the British guns. Trials have proven that. As for our Mauser rifles, they are decidedly better than the Lee-Metfords. Taken altogether, the struggle is by no means hopeless."

The Pretoria *Volkstem* expresses itself as follows:

"The plain, undeniable fact is that the Germans [in the Transvaal] and the Hollanders have openly placed themselves on the side of the Transvaal, and will stand by her in the hour of trial. The French, the Americans, Scandinavians, Russians, etc., are satisfied with the franchise as it is, and declare that they prefer freedom to the prospect of having to work still harder for the owners of London palaces. But even among the British there are thousands who are well content and desire nothing better than to be allowed to stay even if war should come. These people are workmen. Grievances they have, for our Government is no more perfect than others. But most British workmen in the Transvaal are much more interested in an eight-hour work-day than in British suzerainty."—*Translations made for THE LITERARY DIGEST*.

A serious typographical error is contained in our last number. The Transvaal has 30,000, not 50,000 men. The exact official figures are 29,897.—*Editor of THE LITERARY DIGEST*.

EUROPEAN ATTITUDE TOWARD THE SOUTH AFRICAN WAR.

IN Great Britain, considerable attention is still paid, in the discussion of the South African war, to the grievances of the Uitlanders and to the conventions of 1881 and 1884 and the degree of suzerainty deducible from them.

Gradually, however, both these aspects are becoming subordinate to the naked question: Shall the Boer or the Briton have supremacy in South Africa? Outside Great Britain, too, this is the issue as it now presents itself, and the sympathy is chiefly on the side of the Boers, there are not lacking, even in Germany and Holland, words favorable to the Britons. The *Kölnische Zeitung* (Cologne), for instance, finds excuse for England's course. It says:

"Formally, the Boers are undoubtedly in the right; but, prac-

THE HOLLANDER'S COUNSEL.

UNCLE SAM TO OOM PAUL: Why don't you turn my friend John off the farm, as I did long ago? —*De Amsterdammer, Amsterdam*.

tically, they have put themselves in the wrong by failing to interpret rightly the signs of the times. . . . Measured by naked, merciless historical facts, the situation is as follows: the Boers either were incapable of satisfying the wants of that civilization which stormed in upon them, or they feared to satisfy the demands which were made. The golden treasures of their land should have guaranteed them wealth and power, for the foreigner, hungering after wealth, flooded the little country, and a period of economic life began such as even the North of America has hardly ever witnessed. The Boers had the alternative of managing the new movement or going under before it. The former they failed to do, hence they must witness an early destruction of their political existence. One chance only remains—armed resistance. Trusting to their rifles and their fleet horses, the Boers have made up their minds to throw the invader into the sea. Most likely they will find themselves mistaken."

Professor Delbrück, editor of the *Preussische Jahrbücher*, Berlin, also doubts that the Boer is to be preferred as the pioneer of civilization in South Africa in preference to the Englishman. Other German papers, and even Dutch papers, make similar admissions, tho all unite in saying that by the arrogance of the Briton the happy effects of his ability and intelligence are neutralized. Of course utterances on the other side are to be found in Germany, some of them very impassioned. In the *Gegenwart*, Berlin, an influential and by no means jingoistic weekly, Caliban demands to know whether the German Government has really, as the British assert, permitted Great Britain to take Delagoa Bay, the only outlet of the Transvaal, from Portugal. Boeckel, a member of the Reichstag, in a mass-meeting held in Berlin, expressed himself to the following effect:

Humanity and justice demand that we should come to the assistance of the Transvaal. Where is the sequel to that famous telegram which at one time prevented Ahab-Britain from stealing the vineyard of the Naboth-Boer? Whenever there is threatened a Slav race, Russia comes forward to defend it. Germany, however, apparently sits still while a brave tho small race of Teutonic stock is being crushed. But let no one be deceived. If the Transvaal is crushed, England will attack the German colonies in Africa.

The most jingoistic papers, such as the *Deutsche Tages Zeitung*, *Staatsbürger Zeitung*, *Münchener Neuesten Nachrichten*, demand immediate mobilization. The most that the German Government seems, however, to be doing in behalf of the Boers is quietly to aid her merchants in their efforts to supply the Boers with arms and ammunition. The *Vossische Zeitung*, referring to a cargo of ammunition which the English vainly tried to stop at Delagoa Bay, says:

"The arms and ammunition were sent by the Mauser firm to the address of Mr. Andreae, a German subject. When the British Government undertook to stop this very important cargo of ammunition, the Mausers complained to the German Government. The latter immediately wired to the Portuguese Government, compelling them to let the consignment pass. The Portuguese, indeed, described the cargo as war contraband; but Germany maintained that, as no actual state of war exists, German goods consigned to German subjects must be allowed to pass; and the Reichstag landed her cargo without further interference."

The *Novoye Vremya*, St. Petersburg, declares that Russia may think it worth its while to interfere. The *Journal des Débats*, Paris, says England is in a bad position because the Boer has "called the bluff"; and the *Temps*, a government organ in France, believes that it may be necessary to interfere later on.

The *Revue des Deux Mondes*, Paris, says:

"With all his astuteness, Krüger evidently failed to comprehend tho character of his adversary. With the English, if you are willing to make concessions at all, you must do so at once; for it is their habitual practise to augment their pretensions as negotiations are prolonged. They always take what is offered and ask for more. Nor did Chamberlain fail to do so. He has continually shifted the ground of debate, tiring his adversary, and Mr.

Krüger continually accepted the proposition just preceding the latest one. At length he refused to continue the game."

The British recognize the possibility of foreign intervention, but they expect that the desire for peace which prevails in Europe will prevent any interference. *The Spectator* (London) says:

"But tho it may be admitted that Europe will not actually attack us in combination, it may be urged that Europe may combine to threaten, and that such threats might prove extremely disagreeable and embarrassing if they came at the moment of a temporary reverse. Possibly; but depend upon it if we resolutely refuse to yield an inch to any threats they will melt away. Danger only follows from such threats when they are taken heed of. If they are ignored because the threatened power realizes that they can not, and will not, be carried out, as we must know to be the case if we are not blind, they lose all their force. Let us never forget this. We must do, then, what is right and wise in the Transvaal without any thought as to what the powers may intend, determined, if intervention comes, to resist it to the utmost."—*Translations made for THE LITERARY DIGEST.*

COLONIAL AID TO GREAT BRITAIN.

GREAT BRITAIN recruits her defensive and offensive forces entirely by voluntary enlistment. As the navy alone absorbs 100,000 men, when a war of such magnitude as the present attempt to conquer the Boers occurs, more or less difficulty is encountered in securing the necessary number of recruits. There is accordingly talk of assistance from the colonies. The *London Outlook* says:

"The moment of peril to British interests in South Africa has brought offers of immediate and substantial military help from Canada and Australasia and elsewhere; from these homes of the British race where peace and prosperity have for basis the vital principle of those equal rights between white men of whatever race to secure which England is prepared to draw the sword in South Africa. . . . Why indeed, if they wish it, as they seemingly do, should not our colonial and Indian allies take upon themselves under British direction the brunt of the coming struggle in South Africa? The cause is theirs as well as ours, for without equal rights between the white races the empire is not worth a decade's purchase."

Concerning Australia, *The St. James's Gazette* says:

"Advance Australia! is all the cry nowadays, and at the present moment of war feeling our cousins at the antipodes have come well to the fore with an offer of volunteers for service in South Africa. The six Australian colonies are preparing a scheme for a combined force, and New Zealand has offered a contingent of mounted rifles. Some of our meaner-minded contemporaries are inclined to sneer at the practical benefit that 200 men will be to us. But it may be pointed out that an expenditure of £20,000 in six months is not such a despicable offer after all, that 1,800 men have already volunteered from Victoria alone, that a similar contribution from the other five Australian colonies would give a total of 12,000 men, and that would be by no means an inconsiderable addition to the 50,000 we are sending out ourselves. We do not suppose, however, the Australian total will be so large. But the mass of Englishmen look rather to the spirit that prompts the offer than the actual assistance it will be."

A contingent may also be sent from Canada, and the comments of the Canadian press on this subject are not without interest to Americans. The *Toronto Monetary Times* says:

"South Africa, threatened by the Boers, needs defense now; our turn may come to-morrow; if we do not assist the Cape, Natal, and other British colonies of South Africa, how can we expect them to assist us in the hour of our need? It is no answer to say that the defense of the colonies should be left wholly to the parent state; that is not equitable, and might not always be possible."

The *Toronto World* says:

"In dealing with the United States on the boundary question Canada has the power of the whole empire behind her. Do we

adequately grapple with the significance of this fact? Just imagine where we would stand on that question if we were depending on our own resources. By this time the United States would be in possession of the whole Yukon. We would have little or no status as an independent nation. The United States would treat Canada just as it treats Venezuela, or any other small American state. Let Sir Wilfrid Laurier and the Canadian Government remember these facts when debating whether Canada shall send a contingent to South Africa."

The *Montreal Witness* expresses itself in a similar way. Sir Wilfrid Laurier, however, will do nothing in the matter without the consent of Parliament. The French Canadian papers are not over-enthusiastic in the matter, yet they are not opposed to the sending of the contingent.

The *Montreal Patrie* expresses itself in the main as follows:

Now, what is the good of going to the Transvaal? It is a little country with few inhabitants, and the British empire has immense resources to reduce it. Where is the necessity of interfering with Canadian troops? And why should Sir Wilfrid Laurier be accused of disloyalty? If the present government had decided to send men without consulting Parliament, the Tory organs would have attacked it just the same, declaring that the Liberals draw the country into a foolish business.

The *Presse* thinks the war may be over ere the Canadians are ready. Even the English-Canadian papers are not unanimous in saying that the contingent should be sent. The *Toronto Sun* wants to know whether Canada is in the position of a feudatory Indian prince, who has no voice in the matter, but must send troops when required to do so. It continues:

"When imperial confederation becomes a fact all members of the federation will, of course, be bound in questions of peace and war by the federal vote, and will be required, in case of war, to furnish their contingents; but then each of them will have a voice in the federal councils. Imperial federation, however, is not yet a fact. In the mean time, the subject is in an uncovenanted state, and our people in Canada are in danger of being drawn, by the irresponsible zeal of a few enthusiastic imperialists, into local quarrels with which they have nothing to do and in which, if the question were fully submitted to them, their consciences might lead them to incline to the other side."—*Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON DEWEY'S RECEPTION.

THE comments of the foreign press on the reception given to Admiral Dewey are to the effect that we have rather overdone it. Dewey does not come in for any criticism, but the job he had to do is not regarded as a difficult enough one to justify so extensive a tribute as he has received. The *Saturday Review*, London, says:

"Should the United States in a far future, not very easy to imagine, achieve a Salamis or a Nile, it will puzzle even such experienced and highly trained demonstrators as the Americans to improve on their extravagance in celebrating the destruction of a few wooden ships by American ironclads out of all danger at the time. It is difficult to believe that Admiral Dewey appreciates the honor of being whistled at continuously by factories, and would not prefer to pay for his own house to having one subscribed for on his behalf."

The *Speaker* remarks that "the artistic and emotional side of the American temperament, due mainly to ethnic elements which are not Anglo-Saxon, helps to give to the victor of Manila such a welcome as London never gave to any mere English sailor." The same paper expresses the opinion that the people of the United States, despite their enthusiasm for Dewey, are not very anxious to take upon themselves the "White Man's Burden." It says:

"London is jingo to the end, because the mass of middle-class

Londoners never dream under any conceivable circumstances of having to fight; they pay the poor to do the fighting. New York sent its volunteers to Cuba, and enthusiasm is modified by experience. The indications seem to point to a reaction against imperialism in the November elections greater even than the movement of opinion which carried Mr. Gladstone into power in 1880. . . . Of more importance than any of these sectional manifestations is the strong reaction which British policy toward the Transvaal is causing among sober and representative Americans. The latest and ugliest manifestation of the jingo spirit warns the American people against the danger of close association with those whose polity produces such unlovely results. For all these reasons we venture to think that the Dewey celebration marks the end rather than the beginning of an epoch—or an episode."

The *Journal des Débats*, a paper which reflects more than any other the opinion of those who rule the destinies of France, says:

"We do not mean to say that the banner of the United States must necessarily be withdrawn from the Philippines as well as from Cuba. . . . But the moral results of the victory are not exactly equal to what the prophets promised. . . . One after another the victorious leaders of the war are divesting themselves of their martial clothes to show the politician, but the horse-sense of Brother Jonathan has not been entirely destroyed; he seems to interest himself in his little home ills as much now as before the war. The general impression certainly is that, after a period of high fever, Uncle Sam's pulse will get its normal condition."

The *Schlesische Zeitung*, Breslau, does not think the Spanish fleet at Cavite was formidable enough to justify us in putting Dewey on the loftiest of pedestals, and prints in evidence the following news item from Hongkong:

"The two best vessels of the Spanish squadron at Manila were the *Isla de Cuba* and the *Isla de Luzon*. The Americans raised them, and sent them to the Cowloon wharf for repairs. They told the English captains sent with these vessels that the torpedoes were still in the bows, and advised caution. At Hongkong the dock authorities asked the captain of the German cruiser *Kaiser* to remove these torpedoes. The captain acquiesced, sending his specially trained torpedo men. What they found made them smile. In neither Spanish cruiser were the torpedoes loaded; nor had any attempt been made to prepare them for service. The torpedoes had stuck in the bows of the vessels so long that they could not be fired off. The *Isla de Luzon* did not even have 'war heads'; the *Isla de Cuba* had only two."—*Translations made for THE LITERARY DIGEST.*

THE VENEZUELA AWARD.

THE award given by the Venezuelan Arbitration Tribunal has not attracted much notice outside the two countries directly involved and this country. The Venezuelans, according to their minister in Paris, are not exactly pleased, but tacitly acquiesce in the verdict. According to the *London Standard*, Señor de Royas expressed himself as follows:

"It is, of course, not what we hoped for, but what can you expect in a contest between an elephant and an ant? One thing will result from it, namely, America will accept no more arbitrations with Europe. You will see America lay down a fresh international code, which she will apply to the Old World whether the latter likes it or not. The South American states, including Brazil, will rally round the United States for the purpose of effecting an economic union—a sort of zollverein. We shall try to establish a monetary union on the basis of a gold standard. These projects need not imply a hostile attitude toward Europe, but you should bear in mind that Europe stands in much greater need of us than we do of her. . . . To return to the question of the award, it is due to a great extent to the recognition of the Schomburgk boundary, against which Venezuela ought to have protested at the time. But Lord Palmerston was too strong for us, and we were then under the influence of gratitude toward England for the part she had taken in securing our independence. Otherwise we would have been perfectly justified in ordering that German adventurer and amateur surveyor across the border."

Great Britain is very much pleased with the result of the arbitration. The London *Speaker* points out that the award is of special interest for several reasons. It says:

"In the first place, it was unanimous, tho, perhaps, there is some truth in the not over-gracious comment attributed to the United States counsel that this unanimity was determined by a resolve to compromise rather than by any exact agreement upon a particular theory. In the second place, it is the first international dispute which has been settled by argument and evidence since the Peace Conference at The Hague, and Professor de Martens expressed a natural satisfaction in pointing out that the rules of procedure which Russia had drafted and the Peace delegates had adopted were on this occasion tried for the first time and found completely successful.

The Daily Chronicle does not doubt that the British Government will be satisfied with the award, and waive whatever claims of Great Britain were not recognized. It says:

"We suppose that Lord Salisbury himself, tho he began by naming the Schomburgk line as beyond the limits of dispute, and admitting arbitration only on the districts west and north of the Cuyuni, no part of which has been awarded to us, will be disposed to make the best of a decision which brings a long and tedious controversy to an end. However this may be, there can be no question that the Paris Arbitration, confirming as it does a principle of international conciliation to which the people of this country are becoming more and more attached, and removing another obstacle to the complete mutual understanding of Great Britain and the United States, will be heartily welcomed by the nation as a whole."

Many English papers believe that this happy ending to the Venezuela dispute will prove to the world in general that Great Britain has no desire to outrage weaker countries. Great satisfaction is caused by the news that the gold-fields are now in British territory. *Lloyd's Weekly* says:

"It is also highly satisfactory to note that the great gold-bearing portion of the disputed territory is pronounced to be British, for under our rule we may look for speedy and important trade developments. Last, but not least, the award closes forever the mouths of those critics who have all along insisted that arbitration would show that England had been trying to rob a small and defenseless state. We have got nearly all we claimed, while Venezuela is rebuked for her greediness, and must be content with very much less than was offered her in our many vain attempts to settle the long-standing dispute without appeal to other nations."

The Manchester *Guardian*, the British Mugwump *par excellence*, remarks that "both sides have shown by their actions that they knew there was no true frontier at all."

The Toronto *Sun* points out that Canada can learn a lesson through this affair, especially in the matter of civility. It says:

"At the time of the affair [President Cleveland's message] Toronto jingoism was in a flame. Great Britain was urged to resist in arms so intolerable an affront to the dignity of the empire; furious menaces were hurled at the Yankees, and cartoons, not only insulting, but filthy and disgraceful to our manners, were scattered over the United States and thrust into the hands of American politicians. It was no fault of Toronto jingoism that there was not an international rupture, followed, as it must have been, by an invasion of Canada. Lord Salisbury kept his head. The interest of Great Britain has been secured without detriment to her honor. The Americans, instead of learning to despise her, have been anxiously courting her alliance. Instead of a relapse into barbarism, as a war about a boundary question would have been, there has been a step forward in moral civilization."

The *Journal des Débats*, referring to this possibility of a rupture between the United States and Great Britain, says:

"The elements which aggravated the conflict some three years ago have disappeared. It is certain that in the United States nobody to-day goes off into a passion over the Venezuelan difficulty. The war with Spain, the colonial embarrassments which

followed, have changed the point of view from which the United States regards such matters. It would, of course, be imprudent to suppose that the Pan-American spirit, based upon the Monroe doctrine, has disappeared. There are symptoms which prove that this sentiment will again be uppermost. But for the present, due to the campaign carried on by the English press and imperialistic tendencies, it is overshadowed by another sentiment—the Pan-Anglo-Saxon."—*Translation made for THE LITERARY DIGEST.*

STARTLING DEMANDS OF THE SPANISH CATHOLICS.

THE hierarchy of Spain has attracted wide and unfavorable notice for its recent political demands upon the Spanish Government. These demands are considered by many Catholics outside of Spain to be excessive, and inasmuch as a veiled threat of a Carlist uprising is assumed to accompany the demands, they are open to the charge of being, in spirit at least, a violation of the Pope's injunction to be loyal to the present dynasty. The *Journal des Débats* (Paris) analyzes the demands as follows:

"According to the views expressed at Burgos, the Spanish church, to quote the words of a French king, simply says: 'L'état, c'est moi!' The grave crisis of Spain, we are told, is due to her 'excessive Liberals,' and, further, that 'the chief error of Liberalism is that it substitutes individual discernment for the authority of the church.' The church, therefore, makes the following cardinal demands: Complete independence of ecclesiastical jurisdiction, which means that none of its members, under any consideration whatever, shall be judged by secular courts; re-establishment of all clerical privileges; abolition of the legality of marriages not sanctioned by the church; non-interference of the secular authorities with any legacies or grants obtained by the church; prohibition of religious association to non-Catholics. Thus the church makes demands which are altogether incompatible with modern life. The spirit of these demands is all the more easy to discern when we read that 'the increasing impudence and audacity of Protestantism, which raises its temples and opens its schools in the presence of Catholic sanctuaries and schools, in the capital as well as in other places of Spain, is a direct violation of the constitution.'"

The *Journal des Débats* points out that the church is in all this at variance with a large part of the Spanish people, and is evidently overreaching itself.

The *Epoca* (Madrid) seems to see no chance of successful resistance to the demands. It says:

"A legal, peaceful resistance, prolonged by the Catholic Party for ten years, such as we have witnessed in the famous *Kultur-Kampf* in Prussia, is altogether out of the question in Spain. Civil wars have so accustomed us to deeds of violence that all resort to it, those who wish to be confessors and seek martyrdom (forgetting their own tendency to become oppressors), as well as those who, with excessive shouts for liberty, want to expel the nuns and close the convents."

The attitude of the Spanish clergy is not likely to make the opponents of the church in other parts of the world less watchful than before. Thus, *The St. James's Gazette* (London) says that "one would like to hear Cardinal Vaughan on this conference, considered as an example of Roman Catholic discipline, harmony, and loyalty to the state." The same paper discovers a discrepancy between the opportunism of the Roman Catholic church in every country of the world and the Pope's demand for the restoration of temporal power. It says:

"There seems, to say the least of it, something undignified in the spectacle of the Pope, who claims to be the representative and vicegerent on earth of Him who said, 'My kingdom is not of this world,' sulking by turns, and by turns raising protests and lamentations because he has had, at length, as king, to share the fate of all dynasties which have gone before. If Leo XIII. is prepared, for the sake of peace, to throw over the political claims of others, why should he so persistently cling to his own?"—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

The following, dated June 26, 1899, has been received from Commercial Agent Atwell, of Roubaix:

A new method of treating bronchial and pulmonary diseases has recently been called to the attention of the Academy of Medicine by Dr. Mendel. The treatment is specially recommended for tuberculosis. He injects daily into the bronchial tube essence of eucalyptus, thyme, and cinnamon, held in solution in olive oil. The oil in descending slowly comes into contact with the walls of the tube and the upper lungs. The gas that is set free saturates the air in the lungs and acts on the mucous membranes as far as the air penetrates. Dr. Mendel has thus far treated sixteen tuberculosis patients and two suffering from simple bronchitis. In all these cases he has noted, after a treatment of one or two weeks, a lessening or complete cessation of the cough and expectoration, as well as a return of sleep, appetite, and strength.

The Department has received a note from Ambassador Cambon, dated Washington, July 15, 1899, to the effect that an international congress of public assistance and private beneficence is to meet in Paris from July 30 to August 5, 1900. The French Government is to be officially represented, and foreign governments are requested to send delegates to the congress. A circular issued by the promoters has the following extracts from the general regulations of the congress:

"The questions discussed during the sessions of congress will be the subject of printed reports, which will be distributed to members at least fifteen days before the opening meeting. So far as possible, each question will be treated by French writers, foreign writers, and general writers. These writers will be chosen by the commission of organization. Other questions relating to public assistance and private beneficence may be submitted for discussion. Authors are requested to send papers to the general secretary three months before the opening of the congress.

"The congress comprises four sections: (1) childhood; (2) the sick, the infirm, the incurables, the aged; (3) the able-bodied poor, other relief than that of assistance by furnishing work, general questions; (4) works of assistance by furnishing work. Other subjects to be considered are: The working and efficacy of relief at the home; compromise between public and private assistance; treatment and education of children in reform schools, schools of correction, etc.; character of works of relief by furnishing work;

Turkish Baths for 3 Cents.

THE best of all bath cabinets is now sold at maker's prices direct to the user. Sold even lower than the inconvenient affairs that are advertised for this service. A tight, double-walled room, rubber coated inside and outside, and fitted with a door. Made so that merely tipping folds it into a six inch space. Handsome, convenient and strong.

The Racine Cabinet is guaranteed to be the best one on the market. We sell on approval, to be returned at our expense if not satisfactory. Sold direct to users at from \$5. to \$12., express or freight prepaid; alcohol stove, vaporizer and face-steam attachment included. Send today for our handsome illustrated catalogue, and order from that.

Racine Bath Cabinet Co., Box X, Racine, Wis.

SINGER SEWING-MACHINES.

Every American warship carries a sewing-machine as a part of its regular equipment; besides this there are usually one or more sailors on each vessel who purchase hand machines and act as "ship's tailor," thereby earning a tidy sum by making or repairing clothing for their mates. Here, as in every other occupation using a sewing-machine, The Singer has the preference over all others because of its simplicity, its reliable construction, and its good work under all conditions. While powerful warships and great guns are good things for the Nation at some times, Singer Sewing-Machines are essential to its people all the time, whether afloat or ashore.

SOLD ONLY BY
THE SINGER MANUFACTURING CO.
SALESBROOMS IN EVERY CITY.

should these not be considered works of private beneficence? assistance to indigent consumptives (measures of relief, whatever the medical treatment may be).

"The language of the congress will be French. Only members are permitted to submit communications, to be present at the sessions, or take part in the discussions. The fee for membership is 20 francs (\$3.86). It is to be devoted to payment of the publication of the lectures, etc., delivered in the congress."

The adhesion of all persons interested in relief work, public or private, is requested.

Consul Brittain writes from Nantes, July 10, 1899:

There have recently been many inquiries for the names of the leading firms in the United States that manufacture various kinds of machinery. A number of sales of American machinery have been made during the past year. Heretofore, considerable machinery used by the shipbuilders of Nantes has been purchased in England. English manufacturers have two advantages over those of the United States—first, their nearness to this market; second, the advantages accruing from the minimum tariff rate. For machine tools weighing over 1,000 kilograms (2,204 pounds), the maximum duty is 15 francs (\$2.89), the minimum 10 francs (\$1.93) per 100 kilograms (220.46 pounds); weighing from 250 to 1,000 kilograms (550 to 2,204 pounds), maximum 20 francs (\$3.86), minimum 16 francs (\$3.08); small tools, weighing less than 250 kilograms, maximum 70 francs (\$13.50) and the minimum 50 francs (\$9.65) per 100 kilograms. The difference on structural iron or that used for shipbuilding is not so great, the maximum being 6 francs (\$1.15) and the minimum 5 francs (.96 cents). The recent augmentation in prices and the scarcity of a visible supply of structural iron in this part of France make this an opportune time for the American manufacturer to invade this market. The nearness of the English manufacturer has given him an easy victory in the past, but the shipbuilders of the Loire have come to the conclusion that if the American iron manufacturers can sell iron in England and in English colonies, it is at least worth while to get our prices. I believe if the American manufacturer were on the ground with prices and terms he could capture some orders. There are three shipyards at Nantes, where there were constructed last year forty-two iron vessels, varying in tonnage from 3,000 tons downward. At St. Nazaire, 30 miles west of Nantes, there are extensive shipyards, where some of the largest vessels in the service of the Compagnie Générale Transatlantique were built. About two weeks since, a large war-vessel for the Government of Japan was launched at St. Nazaire. American manufacturers of structural iron would do well to correspond with Julien Lanoe, of Nantes, an extensive dealer, who is anxious to obtain American prices on bar, structural, and plate steel and iron.

LINENE Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

Reversible Collar Co., Dept. S, Boston, Mass.

Reg. Trade Mark.

GENTLEMEN HUNTING

A BEAUTIFUL AND USEFUL PRESENT FOR A LADY WILL FIND

The Augusta-Victoria Empress Shoulder-Shawl

an appropriate Birthday, Wedding, Christmas, or New Year's Gift. They are entirely handwoven, about 40 inches square, with 6-inch fringe, at Bethlehem by expert Saxon weavers. Warp silk and wool wool—in rich light green, delicate pink, cherché red, pure white, or black color.

When ordering, state color wanted.
Postpaid and registered for \$7.50.

The Susacuac Weaving Co.

No. 12 Moravian Church St., Bethlehem, Pa.

POULTRY PAPER, illustrated, 20 pages, 25 cents per year, 4 months trial 10 cents. Sample Free. 64-page practical poultry book free to yearly subscribers. Book alone 10 cents. Catalogue of poultry books free. Poultry Advocate, Syracuse, N.Y.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Libby's Condensed Mince Meat

Fresh and fruity. Made from the pick of the choicest beef—deliciously seasoned. Put up in convenient packages, enough for two big pies.

Drop postal for book, "How to Make Good Things to Eat."

Libby, McNeill & Libby, Chicago

ARTIFICIAL DIGESTION.

Science has made great strides in the last century. The achievements in the science of the preparation of foods are truly wonderful.

A chemist who has been making a series of experiments with a view of rendering cereal foods easy of digestion, has discovered that uncooked, or improperly cooked, cereals were to a great degree responsible for chronic stomach troubles from which countless thousands suffer.

These experiments show that by a certain treatment, the grains can be artificially digested, and the starch which abounds in cereals converted into dextrin, thus not only rendering the combination of grains, which is called Granola, easy of digestion, but giving it that rich, nutty flavor that every one so much enjoys.

This achievement marks a new era in the scientific preparation of foods, and a series of experiments in the greatest laboratory of hygiene in this country convinces the makers that Granola is one of the greatest discoveries in the food line that has been produced in this century.

These experiments not only show that Granola can be digested by the weakest stomach, but that its manner of preparation and the grains that enter into it, give this palatable food three times the nutrition and strengthening properties of beef, making it the most economical and nutritious food in existence.

Granola needs no preparation by the cook, all it requires is the addition of a little milk, and a delicious meal is ready in a second at a cost of one cent a person.

Leading grocers can supply Granola. Each package bears a picture of the famous Battle Creek, Mich., Sanitarium.

PERSONALS.

LORD WOLSELEY, has gained promotion more rapidly than any other British officer. The following are the various steps with dates: Ensign, 1852; captain, 1855; major, 1858; lieutenant-colonel, 1859; colonel, 1865; deputy quartermaster-general, 1867; assistant adjutant-general, 1871; major-general, 1873; quartermaster-general, 1880; adjutant-general, 1882; general, 1883. He received £25,000 for his services in Ashanti, and £20,000 for his conduct of the Egyptian campaign. He was the youngest captain in the army, having reached that rank after only three years' service.

SARASATE, the Spanish violinist, was born in Pamplona, Spain, March 10, 1814. While a very little boy he was taken to Paris, and at the age of twelve was entered to study music at the Conservatoire. In 1859 he began a series of successful tours, visiting all parts of Europe and North and South America. He has composed a number of brilliant fantasies, and has brought out several delightful arrangements of Spanish airs.

SIR THOMAS LIPTON, whose yacht, the *Shamrock*, raced with the *Columbia* for the America cup, is a man who has worked himself up from the very bottom. In his youth he made a trip to America in which he gained nothing but experience. After his return to England he opened up a little provision store with \$400 which his parents, working-people, entrusted to him. He knew how to catch trade, he knew how to keep it, and, what has proved of great value in the winning of his fortune, he knew how to select his assistants. No sooner had his first store proved profitable than this ability became apparent. He obtained capable assistants, and opened another store, and then another and another. He went to London eventually, and opened stores there until he had 60 in London alone, and, spreading over the kingdom, he entered every considerable town until at last there were 420 Lipton stores in Great Britain.

THE VERY REV. CHARLES WILLIAM STUBBS, Dean of Ely, is coming to America. He will deliver a series of lectures and will occupy the pulpit of several Episcopalian churches. Since 1894 the dean has been in charge of the beautiful cathedral of Ely, which is so attractive that it tempts many American tourists from the beaten path between London and Liverpool. As a speaker the dean is remarkable for profound earnestness, exceptional clarity of statement, close and rapid reasoning, and a deep pathos, which alternates with blithe and happy humor. His chief hobby is the condition of the masses, and his pen and voice have always been devoted to the improvement of the condition of British artisans. He is a Christian Socialist, and quite a radical in politics. A fast friend of democracy, he will come to America to investigate the workings of our system of government.

MORE OR LESS PUNGENT.

A Circus.—MRS. KIDDLER: "Why, children, what's all this noise about?"

LITTLE JAMIE: "We've had gran'pa and Uncle Henry locked in the cupboard for an hour, an when they get a little angrier I'm going to play 'going into the lion's cage.'"—*Tit-Bits*.

A Superfluous Suggestion.—"I would lay the world at your feet," he exclaimed. But she looked at him icily and returned: "I see no reason for troubling you, Mr. Doddy. Unless the law of gravity has been unexpectedly repealed, the earth is there already."—*Washington Star*.

Why St. Patrick Didn't Sign.—"O! say, father," said little Timmie O'Brien, "why didn't Saint Patrick sign the Declaration of Independence? Didn't they ask him?" "Yis, Timmie, they asked him all right," said Mr. O'Brien, "but, ye see, he t'ought th' man that brought it to him

YOU
REMEMBER
ME.

I Was Hungry
for my Wheatlet

But it
was so good
when
I got it

That I guess
you know that it
satisfied me
when you look
at this picture.

This is what all children say and all men and women too who use

WHEATLET

It is most satisfactory of all Breakfast Foods because most nourishing, and most palatable because it has all of the rich, nutty flavor of the wheat.

Oats is the natural food for horses; Wheat is the natural food for man.

Wheat contains everything needed for the nourishment of Babies, of Children and of Men and Women.

Wheatlet contains all of the nourishing portions of the wheat.

Sold by Grocers. Write for Free Booklet.

was wan o' these autygraft hunters, an' he chucked him out o' the house."—*Harper's Bazar*.

Why He Died.—INSURANCE SUPERINTENDENT (suspiciously):—"How did your husband happen to die so soon after getting insured for a large amount?"

WIDOW: "He worked himself to death trying to pay the premiums."—*Household Words*.

How He Knew.—HOTEL MANAGER: "I see you have given our finest suite of rooms to a man named Bilkins. Are you sure he can pay the charges?"

CLERK: "Yes, he's rich enough."

MANAGER: "How do you know?"

CLERK: "He is old and ngly, and his wife is young and pretty."—*Cincinnati Enquirer*.

An "Alleged Husband."—CITY EDITOR: "Mr. Strong has been in to-day, and he had murder in his eye. How in time did you come to speak of Mrs. Strong's 'alleged husband' in that paragraph about her accident?"

J. FRESH:—"I did it to steer clear of a libel suit. You know you told me always to say 'alleged thief,' 'alleged murderer,' and that sort of thing."—*Boston Transcript*.

A Dog's Pedigree.—"Has your dachshund a pedigree?" "Pedigree? Look at him; it makes him sag to carry it."—*Chicago Record*.

Current Events.

Monday, October 16.

—The Boers mass their forces around Kimberley, and detachments of burghers cross the border line into Natal.

—General Magbanna, with twelve thousand Filipinos, prepares to attack Iloilo.

—The President makes patriotic speeches in Iowa and Wisconsin, and attends a great reception and banquet at Milwaukee.

—W. J. Bryan begins a stumping tour of Kentucky, in company with William Goebel, candidate for governor.

—The first yacht race for the America's Cup results in an easy victory for the *Columbia*.

Tuesday, October 17.

—The English Parliament meets in response to the Queen's summons, and the members of the Commons are enthusiastic in support of the Government's action in the Transvaal.

—Advice from South Africa confirms the reports of a battle at Mafeking, in which 300 Boers and 18 Englishmen were killed.

—At an anti-imperialist convention in Chicago, Carl Schurz and others attack the policy of the Government in the Philippines.

—The Unitarian National Conference is addressed by Senator Hoar at Washington.

—The second race for the America's Cup results in the disabling of the *Shamrock*, and consequent victory for the *Columbia*.

—Rev. Dr. Faunce is officially installed as president of Brown University.

Wednesday, October 18.

—Advanced outposts of the British and Boer forces engage in action near Ladysmith, Natal.

—General Otis receives messages purporting to come from General Pio del Pilar, offering to sell out his army and deliver Aginaldo into the hands of the Americans.

—The President makes the last speech of his tour at Youngstown, O., and returns to Washington, after a trip of 5,000 miles.

—Dr. Arthur Twining Hadley is inaugurated the thirteenth president of Yale University.

Thursday, October 19.

—The Boers capture Vryburg, on the Cape railway, one hundred miles south of Mafeking. Five British transports leave Southampton for South Africa.

—The Anti-Imperialist League elects George

MACBETH'S "pearl top" and "pearl glass" lamp-chimneys do not break from heat, not one in a hundred.

They are made of tough clear glass, clear as crystal.

They fit the lamps they are made for. Shape controls the draft. Draft contributes to proper combustion; that makes light; they improve the light of a lamp.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

A NEW DELICIOUS FOOD.

The most remarkable discovery in dietetics which has been made in this century is a vegetable meat called Protose. This delicious food product in odor and taste so closely resembles flesh that it is really difficult for a person eating it to convince himself that he is not actually partaking of animal food. It is absolutely pure. It contains no germs or germ poisons; no uric acids or other excretory substances, which are always found in animal meats; and is proof against all possible contamination with disease, —a condition to which the flesh of animals is always liable. Protose may be appropriately used in diabetes, Bright's disease, rheumatism, and other diseases in which flesh-meats must be rejected on account of the uric acid and other poisons which they contain. It is more delicate, agreeable, and satisfying in flavor than flesh-meats of any sort, and contains 25 per cent. more food elements than beef or mutton.

The makers, the Sanitas Nut Food Co., Ltd., 71 Washington Ave., Battle Creek, Mich., will mail a free sample for six cents to pay postage.

Direct from Maker to Wearer.

Service Serges

(Manufactured like Men's)

Are the Best for Ladies' Suits.

THE PRUDENTIAL INSURANCE CO.
Of America.

Johu F. Dryden, Pres. Home Office, Newark, N. J.

Boutwell, of Massachusetts, president, and selects Chicago as headquarters.

W. J. Bryan begins a campaign trip through Ohio, accompanied by John R. McLean.

—Ellis H. Roberts, Treasurer of the United States, reads a paper before the Pennsylvania Bankers' Association.

Friday, October 20.

—The forces of the South African Republic and Orange Free State attack the British at Glencoe Camp, in Natal, and are repulsed after several hours of hard fighting; the losses on both sides are heavy, General Symons, the British commander, being severely wounded.

—The *modus vivendi*, arranged by Secretary Hay and Mr. Towers, British chargé d'affaires at Washington, and providing for a temporary adjustment of the Alaskan boundary, goes into effect.

—The *Columbia* wins her third consecutive victory from the *Shamrock*, thus retaining the America's cup in this country.

—The national convention of the Woman's Christian Temperance Union begins at Seattle.

Saturday, October 21.

—The British forces under Generals White and French carry the Boer position at Elandslaagte, Natal.

—Secretary Long assigns Admiral Dewey to special duty at the Navy Department; the Admiral cancels his engagements to visit Atlanta and Philadelphia on account of ill health.

—The delegates to the International Commercial Congress are received by President McKinley at the White House.

—Governor Roosevelt makes an address at Cincinnati, O., in support of the policy of the administration in the Philippines.

—It is announced at Washington that negotiations for a revision of the Treaty of Berlin are in progress between the three powers interested in the government of Samoa.

Sunday, October 22.

—Further details of the battle at Elandslaagte show that the British won an important victory, the Boer commander, General Kock, being among the killed.

—Two more British transports sail from Southampton, carrying British troops to South Africa.

—Admiral Dewey states that he "would not consent to become a candidate for President, if nominated by both political parties."

—A mass-meeting in aid of the movement to erect a monument to Parnell in Dublin is held at New York, and addressed by the Lord Mayor of Dublin and other prominent speakers.

A NEW RHEUMATIC REMEDY.

A prominent physician writes:

SPOTSWOOD, N. J.

DEAR SIR:—Please send me, by mail, four more bottles of TARTARLITHINE. I will also here state, in justice, that this is the most welcome remedy that has come into my hands since my beginning of the practice of medicine. It has given me, in every case of rheumatism in which I have used it, the happiest kind of results. I have used discretion, perhaps even more than necessary, in its employment; that it be given to patients whose cases do not yield to ordinary treatment, old chronic cases of gouty diathesis, where there is a tendency to calcareous deposits, etc. These are undoubtedly the most troublesome patients to give what might fairly be termed good results. Now these have been the very kind in which I have been using Tartarlithine with the very happiest results to patients and myself. Many valuable remedies come daily to our aid, but this has been the most welcome one to me thus far.

Yours very truly,

J. G. D.—M. D.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.

CAPACITY 35,000 ACATE LINES.

Size of Book, 4 1/2 x 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

Sent to any address on receipt of 90 cents

Postage stamps or money order preferred

36 Kt-B 5	R x Kt (g)	72 R-K sq	Resigns.

Notes (abridged) by Emil Kemy in *The Ledger*, Philadelphia.

(a) The usual play is Kt-K B 3, which is preferable to the text move.

(b) Against Lasker, he played B-K 2, which was answered by B-B 4. The text move is more aggressive.

(c) Had he played Q-Kt 2, then B x B and eventually Q x Q would have left Black with a weak K P. The text move in connection with R-K sq is quite ingenious, but not altogether satisfactory.

(d) He could not play B x P ch followed by Kt-K 5 ch on account of K x B, R x Kt, and B x B, winning a piece. The text move is quite forcible.

(e) Q x Q P could not be played on account of Kt-B 5.

(f) Threatened Q-K 3 and eventually Kt-B 4. Black can not save the K P without moving P-K 3, which, however, isolates that Pawn.

(g) The sacrifice of the exchange was pretty nearly forced. White threatened Kt-Q 6 ch and Kt x R as well as Kt-R 6.

(h) An important move, White having the R-K Kt 2 continuation in view, forcing away the Black Rook from the open Kt file.

(i) P x P would have been answered by R x P, leading to an exchange of Rooks, and White wins the R P.

(k) A powerful move. Black can not afford to exchange Queens.

(l) Q-R sq would have been answered by P-B 6, and Black could not play Kt x P on account of Q-B 4 ch and Q x Kt.

(m) Q-B 2 ch would have been answered by Q-Kt 3. If Black then moves Kt-B 5, White plays R-K 4, and the exchange of Queens follows.

LASKER "PLAYS" WITH MAROCZY.

"A model library of reference, embracing the very widest range of topics."
—J. M. Greenwood, President National Education Association.

THE INTERNATIONAL CYCLOPAEDIA

AND YEAR BOOK FOR 1898

SIXTEEN VOLUMES A practical, usable, up-to-date reference work. It treats satisfactorily every subject whose importance entitles it to a place there; gives information from the earliest period to the beginning of the present year; embraces every branch of knowledge; covers the whole field of

Biography
Geography
History
Races—Nations

Botany
Astronomy
Natural History
Medical Science

Religion
Sports
Electricity
Chemistry

Engineering
Music—Art
Agriculture
Etc., etc.

A LIBRARY FOR ALL PEOPLE The facts are easily accessible. Here the hunting has been done, the wheat separated from the chaff. Just the work required by the student, the professional man, the busy merchant, the public speaker, the school boy or girl. It is a library in itself—touches every subject in which we are interested.

The whole set delivered at once on small monthly payments. Write for terms and sample pages.

NEW YORK DODD, MEAD & COMPANY, PUBS. CHICAGO

(b) Already, Black has the better development.
(c) Notice how Lasker wins the exchange.
(d) If R on Q R sq moves, Kt-Q 7 forking Q and R.

A Blackburne Brilliant.

Apropos of the proposed testimonial to J. H. Blackburne, the distinguished English master, *The Times*, Philadelphia, publishes a "short and sharp" example of his play. Mr. Blackburne has been one of the Masters for thirty-seven years. Here follows what Herr Reichelm calls one of Blackburne's "bits of Morphy":

BURT. White.	BLACKBURNE. Black.

gives the English Master an opportunity for one of his gem game-endings."

8 B x Kt
9 Castles. R x R

"Casting is usually, a very safe proceeding, and one that is recommended by the best authors. There are, however, exceptions to the rules, and when Mr. Blackburne, at this point, announced mate in nine moves Mr. Burt was inclined to pronounce the books very unsafe guides."

The Champion's Challenge.

When La Bourdonnais was the Chess-Champion of the World, the Rev. Horatio Bolton was the Master-Problemist. On one occasion, the problemist challenged the Champion to solve the following problem in one hour's time:

WHITE (10 pieces): K on KR 3; Q on QR 4; B on KR 4 and 5; Kt on QB 5; R on QKt 5; P on K 4, KB 3, K Kt 2, and KR 6.

BLACK (9 pieces): K on K sq; Q on Q 7; B on Q 8; Kt on KR 2; R on QKt 2 and QR 7; P on K 2, KB 4, K Kt 3.

White mates in six moves.

The great Frenchman solved it without touching the pieces, but it took him the stipulated hour. Ambitious solvers, who have not seen this problem, will have a chance to measure their powers against one who, after Paul Morphy, was, perhaps, the greatest genius over the board that ever lived.—*The Times, Philadelphia.*

"Genius in Chess."

Is genius required to produce a Chess-master? To become a Morphy, a Zukertort, or a Lasker

THE truth of the matter is, there are so many mixtures of Zinc, Barytes, Whiting, etc., sold under misleading brands of "White Lead" and "Pure White Lead," that in order to obtain Pure White Lead it is absolutely necessary to make sure that the brand is right.

Those named in the margin are genuine.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

one must be "born," as the Germans say; but there are others; a most notable example being Dr. Siebert Tarrasch, of Nuremberg. Were acquired knowledge the dominant factor in the game, Dr. Tarrasch would be the greatest player that ever lived. In positions that have been handled by the books he is supreme; but let something arise wherein native wit is required, and it is almost a dollar to ninety odd cents that either Lasker, Blackburne, or Janowski would outwit him. Pillsbury has been unwon to do it in a comparatively simple end-game. It is no doubt that this consciousness of inherent lack of Chess wit has resolved the big Doctor not to tempt "Chess fortune" again.—*The Times, Philadelphia.*

Lasker and Janowski.

The conditions of the proposed Championship match have not been definitely settled, as Lasker proposes eight games up, Draws not counting, while Janowski declines to play for less than ten games up, relying on precedent as a right to his claim, Lasker having won the championship under these conditions. The stakes are \$2,000 a side. Reichelm in *The Times, Philadelphia*, says: "The consensus of opinion, like the handle of a jug, points to Lasker as the winner, but he will have to exert himself, as the Frenchman is a very dangerous adversary. In the three tourneys in which they have met the results were:

"Hastings, 1895, Lasker, 1; Janowski, 0.
"Nuremberg, 1896, Lasker, 0; Janowski, 1.
"London, 1899, Lasker, 1½; Janowski, ½."

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

ONLY 115 HOMES CAN HAVE THIS CHOICE LITTLE LIBRARY

Fifty Volumes of Fiction, History, Biography, Science, Literature, and Poetry.

EARLY next month we shall be able to supply to 115 of our patrons a very choice little library of select literature in 50 neatly bound volumes, at particularly advantageous terms of payment. Indeed, the whole library is to be delivered on a payment of \$5. This library includes only works of standard merit, such as would be a most welcome acquisition for any refined home, or any Sunday-school, or circulating library. But the point upon which we are compelled to place especial emphasis just now is that it will be impossible to supply more than 115 of these select libraries, owing to rigid limitations on some of the books. We have made the number as large as possible, but the choice character of the

STANDARD LIBRARY OF SELECT LITERATURE

books and the convenience of the terms suggest the probability that the 115 sets will be speedily called for, and we can only advise prompt action on the part of those who wish to secure one of these libraries. An appreciative critic has already declared that the recreation, enjoyment, and profit to be gained from such a library cannot be measured. "Whether it be merely to while away the long winter evenings, or as a means of study and intellectual development; whether it be simply as a library of choice literature that will be a credit to any home, or as a means of education and culture, assuredly such a library as this was never so attractively selected or so easily obtainable." Our readers should bear in mind that when these 50 volumes come from the press (which will be, probably, within the next fortnight), they will be **sent out immediately to the 115 subscribers whose acceptances are first received.** Do not delay, but send the acceptance coupon below, or a copy of it, at once. **No money need be sent with the acceptance.** When we notify you that the library is ready for delivery, you are to send an initial payment of \$5, on receipt of which the entire library will be sent you. After that, if you are perfectly satisfied with it, you are to pay \$1 a month for 23 months (faster if you prefer), making the total for the 50 volumes **just about half the regular price of the books.** But, note particularly, we **guarantee absolute satisfaction,** and if, after you have received the library, you find that, for any reason, it is not entirely satisfactory, you may return it to us within three days from its receipt, and we will promptly and cheerfully refund the money paid. Can we do more? Remember: there will be only 115 sets. This exceptional opportunity will not last long. Send your acceptance now.

\$5 SECURES IMMEDIATE DELIVERY

TITLES OF THE FIFTY VOLUMES

American Humorists.—A series of essays. By H. R. Haweis, A.M.

The Highways of Literature.—What to Read and How to Read. By David Pryde, M.A., LL.D.

Flotsam and Jetsam.—A yachtsman's experiences. By Thomas Gibson Bowles.

A Yankee School Teacher in Virginia.—A story. By Lydia Wood Baldwin.

An Old Sailor's Yarns.—Fascinating tales from many seas. By Capt. Roland F. Coffin.

Ratherford.—A story of New York Society. By Edgar Fawcett.

"Number One" And How to Take Care of Him. By Joseph J. F. Pe, M.D.

Lives of Illustrious Shoemakers.—By William E. Winks.

The New Womanhood.—By James C. Fernald.

An Unfortunate Woman and Ass'ya.—Two stories. By Ivan Sergeyevitch Turgenieff.

Violet Gray.—A story by Sarah E. Phipps.

The Coming Race.—Also Lelia, or the Siege of Granada. By Sir E. G. E. Bulwer Lytton.

The Life of Maj.-Gen. O. O. Howard.—By Laura C. Holloway.

Himself Again.—A story by J. C. Goldsmith.

The Home in Poetry.—A choice collection of English and American Verse on "The Home."

'49, The Gold Seekers of the Sierras.—Stories of the Western mines. By Joaquin Miller.

The Bowsham Puzzle.—An entertaining story by John Habberton, author of "Helen's Babes."

With the Poets.—Selections. By Dean Farrar.

The Story of the Merv.—A story of the adventures and captivity. By Edmund O'Donovan.

Mum, and The Diary of a Superficious Man.—Two novels by Ivan Turgeneff.

French Celebrities.—Part I. Brief biographies of celebrated Frenchmen. By Ernest Daudet.

French Celebrities.—Part II. Life stories of celebrated Frenchmen. By Jules Claretie.

Our Christmas in a Palace.—Original, racy, and full of interest. By Edward Everett Hale.

Scottish Characteristics.—By Paxton Hood.

Historical and Other Sketches.—By James Anthony Froude.

The Destruction of Gotham.—A graphic story. By Joaquin Miller.

Charlotte Brontë.—An hour with Charlotte Brontë. By Laura C. Holloway.

"True," and Other Stories.—By George Parsons Latrop.

Prince Sarony's Wife.—And The Pearl-Shell Necklace (in one volume). By Julian Hawthorne.

Edwin Arnold as Poetizer and Paganizer.—By Prof. William Cleaver Wilkinson, D.D.

Ten Years a Police Court Judge.—Experiences on the bench. By Judge Wiglittle.

Chinese Gordon.—(General George Gordon.) The story of his life. By Archibald Forbes.

In the Heart of Africa.—Travels of Sir Samuel Baker, F.R.G.S.

The Fortunes of Rachel.—A charming story of American life. By Edward Everett Hale.

My Musical Memories.—A volume of personal reminiscences. By H. R. Haweis, A.M.

Memorie and Rime.—Romantic Poems of early frontier life. By Joaquin Miller.

Successful Men of To-Day and What They Say of Success.—The lives of 500 men of various vocations. By Wilbur F. Crafts, Ph.D.

Science in Short Chapters.—By W. Mattieu Williams, F.R.A.S. Live chats on scientific topics.

The Lady of Cawnpore.—A story by Frank Vincent and Albert E. Lancaster.

The Trial of Gideon.—And "The Countess Almar's Murder." By Julian Hawthorne.

Isabella of Castile.—By Major-General O. O. Howard. Illustrated.

Addison's Selected Essays.—Introduction by Professor Winchester. With Portrait.

Goldsmith's Selected Essays.—Introduction by Edward Everett Hale. With Portrait.

Life of Oliver Cromwell.—His life, times, battle fields. By Paxton Hood.

A Man's Will.—A Strong Temperance Story. By Edgar Fawcett.

The Flag on the Mill.—A story full of dramatic situations. By Mary B. Sleight.

Beneath Two Flags.—The Work of the Salvation Army. By Mrs. Maud Ballington Booth.

A Winter in India.—By Rt. Hon. W. E. Baxter, M. P. With map.

India: What It Can Teach Us.—A course of lectures. By F. Max Müller, K.M.

Sought and Found.—A romance translated from the German of Golo Raimund.

SURPRISINGLY ATTRACTIVE ADVANCE OFFER

The regular price of the Library is \$50.00. To all those who quickly sign and return the acceptance coupon opposite we will supply the \$50 Library complete at about half this price, viz., for only \$5 when we notify you that the books are ready for delivery and \$1.00 per month for 23 months. Terms include boxing and delivery f. o. b. cars in New York. Act quickly and secure one of these choice libraries.

FUNK & WAGNALLS CO., Pubs., 30 Lafayette Place, New York

SPECIAL ADVANCE OFFER COUPON.

GENTLEMEN:—I accept your special advance offer of the STANDARD LIBRARY OF SELECT LITERATURE and I agree to pay \$5 when you notify me that the books are ready for delivery, and \$1 per month thereafter for 23 months, when the library will be paid for in full. It is understood that the complete Library of fifty books is to be sent to me on receipt of my first payment of \$5, and that if I am dissatisfied with the books I may return them within three days and you will refund the money I shall have paid.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

The Literary Digest

VOL. XIX., No. 19

NEW YORK, NOVEMBER 4, 1899.

WHOLE NUMBER, 498

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

SIDE-LIGHTS ON THE TRANSVAAL WAR.

FEWER surprises have developed in the early operations of the South African conflict than other recent wars might have led one to expect. The gallantry both of Boer and Briton has called out the warmest praise, but is directly in line with *ante-bellum* predictions; the deadly accuracy of the Boer rifle fire comes fully up to the mark of previous British experience; the superiority of the British artillery is held to justify the oft-urged claim that a good artillerist must have years, not weeks or months, of training; and, finally, the early successes of the Boer forces, tho they came as a surprise after the first reports of British victories, yet were what nearly every paper in the country predicted when the Transvaal sent its ultimatum to Great Britain. As to results after the British reinforcements reached the front, various surmises are rife. In the mean time, the progress of the war has brought out many facts and reflections of unusual interest, some of which we present below:

Uphill and Downhill Fighting.—"The battle near Glencoe, in Natal, raises once more the interesting question whether an assault on a hill or mountain is really uphill fighting, in the sense of being unusually difficult or dangerous. Many striking facts in history indicate that, except for the mistaken consciousness of advantage which is felt by the force posted on high ground, the army moving up to the assault has decidedly the better position. . . . In the fight at Majuba the British held the strongest kind of natural fortress, hundreds of feet above the camp of the Boers. At Glencoe the positions were reversed. In each case the attacking force won the day, and the army on the summit of high and rugged hills lost more heavily than the soldiers who climbed up to the assault. . . . The same inference may be drawn from other famous fights. At Missionary Ridge and Lookout Mountain the Confederates were much easier to beat than they had proved themselves a little before at Chickamauga. The Union army found its losses lightest and its success easiest when it came

to the scramble up the steep slopes which the enemy had looked upon as a natural defense. . . . At Santiago, where the Spaniards fought well and stubbornly under cover of entrenchments on the crest of a hill, they suffered almost as heavy losses as the Americans who attacked from the valley of the San Juan. In proportion to the numbers engaged on both sides the Spanish had more men killed and wounded. By all theories of the advantage of elevated positions, that ought not to have been possible. . . . The besetting fault of soldiers is to shoot too high. That is the mistake of all armies. It is very difficult to train men to aim low enough, in their excitement and eagerness, to at least be sure of reaching the enemy's lines. For every bullet which strikes too near the man who fires it in battle, twenty or more pass over the foe. That is universal experience. No troops are wholly exempt from the tendency to aim too high. Is it not easy to see how such a fault is made worse by a position on the crest of a hill or mountain? The troops placed there find it harder than ever to resist the inclination to shoot too high. Great pains must be taken to get the bullets down far enough to hit men advancing up the slope. On the other hand, the attacking force, under such conditions, is apt to do less high shooting than it would on a level. An ordinary degree of error, of the usual kind, would tend to place the bullets fired about where they would be most effective. This is the reason, it seems probable, that positions on hills and mountains are evidently no protection against severe defeat and abnormally heavy losses. The rifle makes uphill fighting more effective than firing downward."—*The Cleveland Leader.*

GENERAL CRONJE.
In command of the Boers on the Western Transvaal border.

Points for Our War Critics.—"The two great objects of attack by the critics of the Administration during the war with Spain and since the Aguinaldo insurrection in the Philippines were and have been, first, 'embalmed beef,' and, second, the censorship of news reports from Manila by General Otis. The accusations regarding 'embalmed beef' were made with such a prolonged howl, in which even many deluded Republican newspapers joined, that at one time the enemies of the Administration were rejoicing in the hope that they would destroy all chances of a Republican majority in the Congress elected last year. . . . That was the first accusation. Two commissions disposed of it as false and silly; and now comes the sequel. The British Government has purchased or is now purchasing millions of pounds of that very canned beef which a vast number of the howling newspapers included in the 'embalmed beef,' as a ration for its troops in South Africa. The enemies of the Government followed up this exploded accusation with a loud outcry against General Otis for his censorship of the news at Manila, tho he proceeded in strict accordance with the wise military custom of guarding his operations from the knowledge of the enemy and from misconstruction and misrepresentation at home. How is it now with British military operations in South Africa? Never has there

MICHAEL DAVITT,
Who resigned from Parliament
as a protest against the war

MEN WHO ARE MAKING HISTORY.

been a sharper censorship than that now exercised by the military representatives of the British Government. . . . Suppose, for instance, that as a consequence of General Shafter's first battle in Cuba his army had been compelled to retreat from the strategic position at which it gave battle, and retire so rapidly that the wounded were left in the hands of the enemy, the commanding general himself being among the mortally wounded, and soon afterward dying a captive in the enemy's camp, what would have been the consequence here? What a howl the newspapers would have raised against him and the Government if the full and precise facts as to the battle and the retreat had been kept concealed as to the details of the Glencoe battle and retreat are now hidden by the British censorship in South Africa! We give the English people credit for the reserve with which they accept the cautious silence of their Government, as requisite in view of the exigencies of war. The facts will all come out in due time, but so far as the immediate urgency of the war is concerned it is now requisite only that they should be known to the responsible government. The lesson of this relation is too obvious to make it necessary that we should draw it for any reasonable man."—*The New York Sun*

Scene of the Natal Battles.—"Ladysmith, the headquarters of General White, the British commander, is 119 miles beyond Pietermaritzburg and 3,284 feet above sea-level. It is a small place of only 4,500 inhabitants, but is an important junction. One railroad line branches out here for the Transvaal on the north, another for the Free State on the west. In both directions there is more mountain-climbing. Harrismith, just over the Free State border, has an elevation of 5,250 feet, Van Reenen's Pass an elevation of 5,500 feet. To the south is Mount Tintwa, 7,500 feet, near which is Tintwa Pass. From these places and passes farther north the Free State burghers may advance so as to enclose Ladysmith on three sides. On the other road toward the Transvaal are Elands Laagte, Waschbank, and Glencoe, all centers of recent operations, and Dundee, where the first battle was fought, is about five miles east of Glencoe on a spur. The entire distance from Ladysmith to Glencoe is forty-two miles by

rail, and the height of the latter place above sea-level is 4,303 feet, a rise of 1,019 feet above Ladysmith. Elands Laagte, battle of October 21, is approximately eighteen miles beyond Ladysmith; Waschbank, where a bridge is said to have been destroyed, is about fourteen miles farther, and from Waschbank to Glencoe is about ten miles. . . . It is clear from this survey that the British have had a very difficult position to hold. Numbers, the country, the transportation problem, have all been against them, and in building up an army they have been compelled to rely almost entirely on outside sources. The ordinary defenses of the colony consist of mounted police numbering only 490 Europeans and a volunteer force of 1,391."—*The Chicago Times-Herald*.

Will We Finance the War?—"The South African war is having some effect in all the money markets of the world, New York on the whole faring better than any other great financial center. . . . Abroad, both in London and on the Continent, there has been a very noticeable rise in money rates. The Bank of England, to be sure, shows no intention to raise its rate above the five per cent. now charged; but it is established that rate by two advances in one week—something that has not occurred before in a quarter of a century. The present rate, in fact, is exceptionally high—

Dundee.

higher than it has been before since the Australian crisis in 1893. On the Continent the rise in money has been general and sharp. The Bank of Belgium has established a five-per-cent. rate, having reached it by three successive advances since the first of the month. The Bank of Berlin's present rate is six per cent., which, as that institution always charges one per cent., means seven per cent. for money; and since the first of October the Dutch rate has been put to five per cent., the Swiss rate to five and a half, and the Austrian to six. It is easy to see, then, that the financial situation on the Continent is, to say the least, strained. The pinch will come when the British Government begins to borrow on South African account. That it will have to borrow is a practical certainty. The lowest estimate of what it will cost to reduce the South African Republic is a hundred million dollars; the actual cost might easily be fifty millions more than that. . . . The hope most commonly expressed by the English authorities is that France and Russia will relieve the pressure. It is possible that the former, with some \$385,000,000 on hand and without a very active trade, might do something. But Russia is in no little financial trouble of her own, as Berlin has lately withdrawn large sums that were previously employed in financing the industries of that country. Both St. Petersburg and Moscow have been passing through severe banking crises. All this increases the probability that it is we who will be called upon to furnish a considerable part of the funds needed to carry on the South African war. The relief, in that case, will be through gold exports from New York, and it will of course be

MAJ.-GEN. SIR W. P. SYMONDS,
Mortally wounded at Glencoe,
died at Dundee.

given at our own price. It is but natural, therefore, that our market should be sympathetically affected by the stringency abroad. The relief to be given will be distinctly in the form of a loan, as the balance of trade is still largely in our favor and the cotton-exporting season is beginning to be active; and for that loan we shall be well paid. But it will mean no easing of money rates at home so long as the war continues."—*The Providence Journal*.

"In the event of a European war, no matter who the victor may be and no matter who the vanquished may be, the clearing house for the world will be removed from London to New York, the cotton market from Liverpool to New Orleans or Memphis, the spindles from Lancaster to the Southern States, and the route to the Orient will be from the United States ports through a transisthmian canal via Hawaii, Guam, and Luzon. A European war will merely hasten the inevitable."—*The Memphis Commercial Appeal*

BEST BOOKS ABOUT SOUTH AFRICA.

A SOMEWHAT extensive literature relating to the Boers and British in South Africa has grown up since the convention of 1884 between England and the Transvaal. A list of nearly a score of the most valuable works, given by Mr. Marrion Wilcox in *Literature*, includes the following:

Theal's "History of South Africa under the Administration of the Dutch East India Company" (London: Swan, Sonnenschein & Co., 1897).

Discusses the period which began with the landing of Jan van Riebeeck, April 7, 1652, and extended to the surrender to the English troops, September 16, 1795, with an interesting account of Huguenot emigrants to the colony.

By the same author: "The Portuguese in South Africa" (London: Unwin, 1896) and "South Africa" (New York: G. P. Putnam's Sons, 1894).

Keltie's "The Partition of Africa" (London: Stanford, 1893).

Gives a connected narrative of the remarkable events which have led to the appropriation of the bulk of Africa by certain of the powers of Europe. Maps illustrate the growth of knowledge concerning the central and south-

ern districts, as the continent has been gradually explored, and show at a glance some of the important facts in relation to temperature, vegetation, and population.

Bigelow's "White Man's Africa" (New York: Harper & Brothers, 1898)

Has chapters on Jameson's Raid, Kruger, the Portuguese, President Steyn of the Orange Free State, the Dutch feeling to England, Natal, the British and Boer governments, etc.

Bryce's "Impressions of South Africa" (New York: The Century Company, 1897).

Olive Schreiner's "The South African Question" (Chicago: Sergel, 1899).

Of the early white settlers in South Africa she says: "The bulk of these folk were Dutchman from Holland and Friesland, with a few Swedes, Germans, and Danes, and later there was intermingled with them a strong strain of Huguenot blood from France. These men were mainly of that folk which, in the sixteenth century, held Philip and the Spanish empire at bay, and struck the first death-blow into the heart of that mighty imperial system whose death-gasp we have witnessed to-day. A brave, free, fearless folk, with the blood of the old sea-kings in their veins."

Hillier's "Raid and Reform" (London: Macmillan, 1898).

This author, who fought, hunted, and traveled with the Boers for sixteen years, says: "I know them to be possessed for the most part by kindly if rugged natures. They have much in common, both in its virtues and defects, with the old Puritan side of the English character, and they possess much of that grit which is inherent in the British race. There is, I believe, no European race to-day more nearly allied to the British in strong natural characteristics than the Dutch of South Africa. But the isolation of two hundred years has weaned a section of them from civilization, and ignorance and the prejudices arising from ignorance have been the chief cause of all our troubles with them."

"Sketches and Studies in South Africa," by W. J. Knox Little (Philadelphia: Lippincott, 1899).

Presents a British view of the Boer characteristics.

"Oom Paul's People," by Howard C. Hillegas (New York: Appleton, 1899)

Reviewed in THE LITERARY DIGEST, October 14

Vincent's "Actual Africa" (New York: Appleton, 1895).

"A History of the Colonization of Africa by Alien Races," by Sir Harry H. Johnson (Cambridge: The University Press, 1899)

Brown's "On the South African Frontier; the Adventures and Observations of an American" (New York: Scribners, 1899)

Stratham's "Paul Kruger and His Times" (Boston: Page).

Wilmot's "History of Our Own Times in South Africa" (London and Capetown: Juta)

Brown's "Guide to South Africa"

Knight's "Rhodesia of To-day."

Bent's "Ruined Cities of Mashonaland."

White's "Development of Africa."

More Convicts Wanted.—Georgia has discovered that the same prosperity that produces, in Illinois at least, less criminals, creates a demand for more convicts. As Georgia leases its convicts, this restriction of the supply, with an increase of the demand, reveals one of the ways by which prosperity raises prices. Further explanation of this economic situation is given in *The Social Democratic Herald* of Chicago as follows:

"An Atlanta despatch to the *Macon Telegraph* records a big boom in state convicts in connection with a curious transaction that recalls the days of slavery. It seems that Jim Smith has sold his total 'holdings' of leased convicts to Jim English at a handsome profit. What sum he got for this fine bunch of fifty able-bodied men *The Telegraph* is unable to state, but we are assured it was a good price, and convicts of all kinds are in strong demand. These men have been put to work in the Durham coal-mines, where there are now three hundred convicts, and more are wanted if they can be had. While Mr. Smith has sold out his state convicts, he continues to work his misdemeanor convicts, which he hires from the Oglethorpe county commissioners at reduced rates on account of their short terms. He has about a hundred of these and wants as many more on his plantation. The activity in coal, iron, and lumber has caused an unusual demand for this class of labor, and the present system of leasing the convicts seems to be generally successful. When the new law went into effect the lessees were paying only \$11 a head per annum for convicts, but when the latest bids were opened few of the convicts brought less than \$100. They seem to be profitable as chattels. The convict market is quoted firm."

CANADA'S ARGUMENT IN THE BOUNDARY DISPUTE.

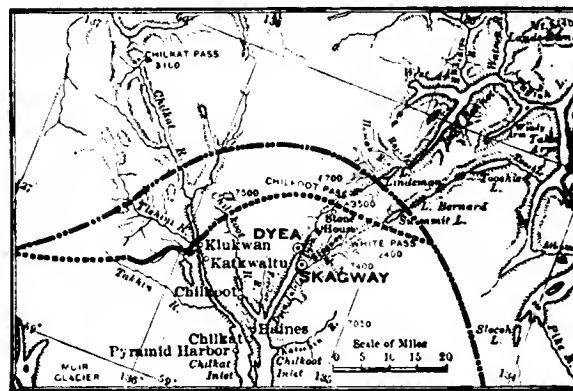

IN view of the report that Secretary Hay and the British chargé d'affaires, Mr. Tower, have agreed upon a temporary Alaskan boundary line, with the prospect of an early effort to mark out a permanent one, it is important to have a clear understanding of Canada's claims (The American claims were reviewed in THE LITERARY DIGEST, June 10). The temporary line, it is reported, runs twenty-two and a quarter miles above Pyramid Harbor, which is regarded under the treaty as tidewater mark, so the Canadians are not allowed to reach any point on the Lynn Canal. Moreover, there is no permission given for a free port, or for the free transfer across American territory of Canadian goods, except of miners' belongings. At Klukwan, too, instead of placing the line directly at the town, which marks the head of canoe navigation, as it is said that the British sought to do, it has been located several miles above, directly at the junction with the Chilkat River of the important tributary, Klehini. This maintains the Indians at Klukwan under American jurisdiction without question, and also provides a natural and unmistakable boundary line in the shape of a considerable river. This arrangement is expected to avert local friction until a permanent boundary can be fixed.

What is considered the strongest and most plausible presentation yet made of the Canadian side of the case is given in a recent interview with a representative of the *Chicago Tribune* by David Mills, Minister of Justice for Canada. Mr. Mills first corrects the impression, current not long ago, that Canada had refused to arbitrate; and insists that it is the United States which refused to arbitrate, and that too in a matter pertaining to the same region involved in the Bering Sea controversy, wherein Canada consented to arbitrate tho she considered her claims as indisputable as we now consider ours.

Canada bases her argument, according to Mr. Mills on the following paragraphs of the treaty of 1825 between England and Russia, defining the Alaskan boundary:

"ARTICLE III.—The line of demarcation between the possessions of the

high contracting parties, upon the coast of the continent, and the islands of America to the northwest shall be drawn in the manner following: Commencing from the southernmost point of the island called the Prince of Wales Island, which point lies in the parallel of 50 degrees 40 minutes north latitude, and between the 131st and 133d degree of west longitude (Meridian of Greenwich), the said line shall ascend to the north along the channel called Portland Channel as far as the point of the continent where it strikes the 56th degree of north latitude, from this last-mentioned point the line of demarcation shall follow the summit of the mountains situated parallel to

PROVISIONAL BOUNDARY LINE.

The upper line is the boundary claimed by the United States. The provisional boundary is shown by the solid line. It will be continued to the present boundary as shown by the dotted line.

the coast as far as the point of intersection of the 141st degree of west longitude of the said meridian, and finally from the said point of intersection, the said meridian line of the 141st degree, in its prolongation as far as the frozen ocean, shall form the limit between the Russian and British possessions on the continent of America on the northwest.

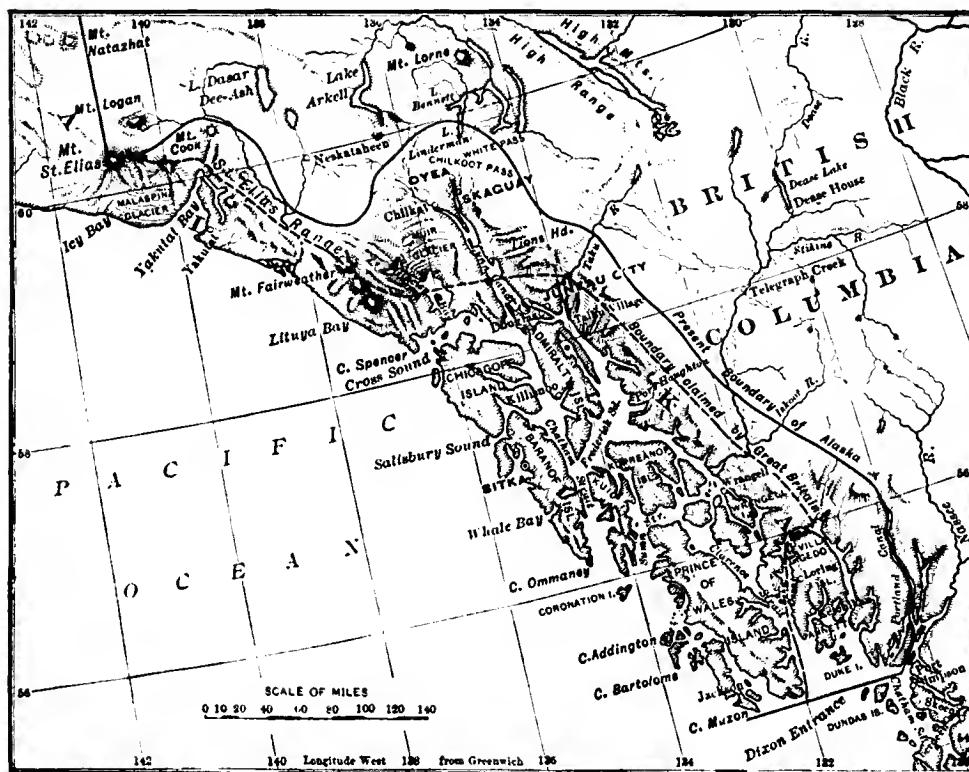

"ARTICLE IV.—With reference to the line of demarcation laid down in the preceding article it is understood

"1st. That the island called Prince of Wales Island shall belong wholly to Russia.

"2d. That whenever the summit of the mountains which extend in a direction parallel to the coast from the 56th degree of north latitude to the point of intersection of the 141st degree of west longitude shall prove to be at the distance of more than ten marine leagues from the ocean, the limit between the British possessions and the line of coast which is to belong to Russia, as above mentioned, shall be formed by a line parallel to the windings of the coast and which shall never exceed the distance of ten marine leagues therefrom."

The first paragraph, Mr. Mills argues, is plainly wrong, for the "said line" can not "ascend to the north along the channel called Portland Channel" to the 56th degree. It would have to go 100 miles east first, which is something the treaty says nothing about; and, again, Portland Channel, Mr. Mills says, does not reach to the 56th degree. Then, too, if the line were drawn according to our claim, Section 1 of Article IV. would be superfluous and meaningless. If the treaty means Clarence Channel instead of Portland Channel, however, it becomes clear and logical at once. The location of the line farther north, however is the principal bone of contention, for if Canada's interpretation of the treaty is right, the thriving towns of Dyea and Skagway are hers; if wrong, they are ours. Mr. Mills says:

"By the third article the line of demarcation is to follow the summit of the mountains, situated parallel to the coast as far as the intersection of the 141st degree of west longitude; and the fourth article provides that whenever the summit of the mountains which extend in a direction parallel to the coast from the 56th

MAP OF THE DISPUTED ALASKAN BORDER.

Pyramid Harbor is at the head waters of Lynn Canal.

degree of north latitude, shall prove to be at the distance of more than ten marine leagues from the coast, the limit between the British possessions and the line of coast which is to belong to Russia shall be formed by a line parallel to the windings of the coast, and which shall never exceed the distance of ten marine leagues therefrom.

"It is too clear to require argument that the limitary line was to follow the coast range, and the summit of that coast range, whether high or low, was to be the boundary when it was not more than ten leagues from the coast. In many places inlets extend through canyons through the mountains, and so much of each of those inlets as would be cut off by a line drawn from the summit of the mountain upon the one side to the summit of the mountain upon the other is Canadian territory. The line can not be removed farther inland, because there may be a gap in the mountains into which an arm of the sea extends. The coast range approaches these inlets on each side in most cases, near the waters of the ocean. When you pass the Lynn Inlet, it will be found that the coast ranges embrace peaks from 10,000 to 18,000 feet high, and it does seem to me preposterous to contend that the provisions of the treaty can be applied by drawing a line in the rear of those mountains, as certainly would be done if the boundary passed around the head of Lynn Inlet.

"It is, I think, manifest that the framers of the treaty assumed that harbors, inlets, and arms of the sea would be found, when the boundary was drawn, within British territory, and certain provisions of the treaty were entered into upon this assumption."

As a proof of this contention, Mr. Mills cites another article of the treaty which proves, he thinks, that its framers considered the heads of the inlets British waters:

"By Article X. every British or Russian vessel navigating the Pacific Ocean which may be compelled by storms or by accident to take shelter in the ports of the respective parties shall be at liberty to refit therein, to provide itself with all necessary stores, and to put to sea again without paying any other than port and lighthouse dues, which shall be the same as those paid by national vessels.

"It is as plain as anything can well be that the contracting parties assumed that when the separating line came to be drawn, under the treaty, that there would be in some places harbors and inlets remaining on the British side of this boundary line, and Russia stipulated for the right of Russian navigators to use them, and for her ships to take refuge in them, as she had conceded a like right to the subjects of His Britannic Majesty. These would, indeed, be strange treaty stipulations, if upon the whole length of this boundary, from the 56th degree of latitude to Mount St. Elias, it never crossed an inlet, and at no point touched the sea. This is, in my opinion, a conclusion which no one who will candidly examine the treaty can reach, and I ask a fair consideration of our side of the dispute by the people of the United States, to whom justice is far more important than success."

As to the temporary line which has been marked out, the agreement is much more favorable to the United States, thinks the *Minneapolis Times*, than Canada's extravagant claims would lead one to expect. That it is fair and satisfactory to both sides, too, says the *Chicago Times-Herald*, is manifest from its prompt acceptance by the representatives of both countries. The *New York Journal of Commerce*, indeed, goes so far as to predict that this temporary line will in the end be accepted as the permanent boundary. Few other papers share this opinion, however. Neither side, the *Chicago Evening Post* points out, has yielded an iota of its theoretical claims, and the prospect of a permanent solution can not be said to be greatly improved. Far from improving with time, the *New York World* argues that the boundary dispute will grow in acrimony as the mineral resources of the disputed territory grow in richness. The American press regard arbitration of the dispute with much favor; but the Canadian demand that before arbitration is begun we shall give Pyramid Harbor to Canada in exchange for Dyea and Skagway, which are held to be ours already, is considered a somewhat staggering proposal. "Instead of conceding Pyramid Harbor as a preliminary to arbitration," says the *Washington Star*, "our Govern-

ment would hardly be forgiven for even assenting to an arbitration which should by any possibility result through the final verdict in the loss by us of this port." The *Philadelphia Inquirer* considers Canada's proposition "so preposterous that it is difficult to believe that those who put it forward do so in good faith, that they have any idea that it will be taken under serious consideration." In view of the fact that quarrels are always possible and that England is the only European nation which has a foothold on this continent, the *Baltimore American* avers that "it would be the height of folly to present that country with a port on our Western border, where she could rally her fleets and send them out to destroy our commerce and wreck our seacoast cities." The *Philadelphia Ledger*, however, takes an optimistic view of the outlook. England must humor the colonies now, says *The Ledger*, because she needs their support in the Transvaal campaign, but the boundary dispute will drag along, as such disputes do, and "when the exigencies of Great Britain are not quite so pressing, it is believed she will find it convenient to abandon the desire to build a naval station on American territory, if such be her present purpose."

DEATH OF BRIGADIER-GENERAL HENRY.

THE loss of so able and well-trained an officer as Gen. Guy V. Henry at a time when the country is in so great need of such men in administering the government of its dependencies is received by the press with many expressions of regret. The *New York Times*, for example, says that the news of his death "is an announcement of public and general concern, because work in the case of such a man means public service of the very highest importance, and especially means this just now, when the combination of qualities which General Henry has shown is more urgently needed than it has ever been before in our national history. 'In such an emergency,' as Burke said, 'the loss of a finished man is not easily supplied.'"

BRIG.-GEN. GUY V. HENRY.

The following events in General Henry's active and efficient career are gleaned from the columns of the daily press:

He was one of the best known and most brilliant of the army officers who have worked their way up to high rank since the Civil War, and was military governor of the island of Puerto Rico for some months in succession to Major-General Brooke, now governor-general of Cuba. He was born at Fort Smith, Indian Territory, in 1839. He was the son of Major W. S. Henry, and grandson of Gov. Daniel D. Tompkins, of New York, who was also Vice-President of the United States. He was graduated from West Point just in time to take part in the Civil War. General Henry began his service as second lieutenant of the First Artillery. He was brevetted captain in 1863 for gallant and meritorious services in action near Pocatoligo River, S. C.; brevetted major in February, 1864, for gallantry in the battle of Olustee, Fla.; lieutenant-colonel in 1864 in front of Petersburg, Va.; and colonel in March, 1865, for gallant and meritorious service during the war. He received a brevet as brigadier-general of volunteers in October, 1864, for his services in the Petersburg

campaign. He was three times mentioned in despatches, twice during the Civil War and once by General Cook, during the Rosebud campaign, in 1876. In the Wounded Knee campaign of 1890 and 1891, as major of the Ninth Cavalry, he rode with three troops of his regiment to Wounded Knee, from Fort Robinson, 118 miles, in a little over twenty-four hours; and on another occasion, by a forced march, rescued the Seventh Cavalry from a very perilous situation, it being surrounded by Indians. At the breaking out of the war with Spain he was made brigadier-general of volunteers and went to Cuha, arriving in time to participate in the final scenes before the surrender of Santiago. When General Shafter meditated a final attack upon Santiago in order to carry the city by storm, General Henry was detailed to command the brigade operating on the west side of the harbor entrance, and which would have had to carry the batteries and trenches west of the Morro. General Henry afterward went with General Miles to Puerto Rico, and upon the occupancy of the island by the American forces was made military governor. His health for the past six years has been precarious, and his death was probably hastened by the exposures of service in Cuba and Puerto Rico.

THE MODERN JEW—HIS STRENGTH AND HIS WEAKNESS.

IN *The Nineteenth Century*, *The Contemporary Review*, *The North American Review*, and *Chambers's Journal*, Mr. Arnold White, author of "Problems of a Great City" and "English Democracy," has discussed with knowledge and conscience the Jewish question, in the light that impartial research has thrown upon the latter-day Israel; and now he crowns his work with his more adequate volume, "The Modern Jew," wherein he presents his case with the equity and the sympathy which were to be expected from the friend of Baron Hirsch and Sir George Lewis.

Mr. White writes of the waxing power of the Jewish race, of their "aloofness" from the nations with whom they dwell, and of the waning patience of the peoples among whom they have established themselves. He concludes that antisemitism is manifestly on the increase, that there are no grounds for anticipating any diminution in the intensity of repugnance displayed by the populations of Europe toward Israel in exile. In France hostility toward the Jew has become synonymous with loyalty to the *patrie*, altho France was the pioneer of Jewish emancipation. In Germany, Hungary, and Austria, where the Jews have acquired, by mortgages over the land, so fast a grip of the national life that nothing but revolution can shake it off, the Jew hatred is as bitter (tho expressed in more measured terms) as in France. In Russia, the government itself organizes and executes an anti-semitic policy. Even in England, "dangers may be predicted from facts which may be unwelcome but can not be denied." Says Mr. White:

"Each immigrant foreign Jew, settling in this country [England] joins, not the English community, as the Huguenots and Hollanders, refugees from the Roman Catholic persecutions of the seventeenth century, joined us—but a community proudly separate, racially distinct, and existing preferentially aloof. . . . Their proudest consciousness lies in the conviction that Jehovah has set them apart among the nations, and destines them to a future more glorious and responsible than any that awaits the less gifted and favored followers of the Nazarene."

"So long," says Mr. White, "as one half of Europe worships a Jew, and the other half a Jewess . . . the Jews will continue to be in the future, as they have been in the past, the most interesting people in the world."

A race that baffled the Pharaohs, foiled Nebuchadnezzar, thwarted Rome, defeated feudalism, circumvented the Romanoffs, balked the Kaiser, and undermined the Third French Republic,

presents ample material for legitimate curiosity. Under secular exposure to the persecutions of ignorant peoples and a sullen priesthood, Jewish tribulations and Jewish triumphs alternately compel the attention of mankind. We quote again:

"Intellectual superiority, Oriental subtlety, and the training of sorrow accredit the Jews with a complex and mysterious power denied to any other living race. They are found in all nations, but, like the Gulf Stream, they remain apart from the ocean around them. . . . Altho the only truly cosmopolitan people in the world, with the exception of the Gitanos, they reflect, like the chameleon, the texture and the tint of the rock on which they rest."

England has a Jewish aristocracy, a type unrepresented in America or in Russia. Mr. White extols the advantages, intellectual and artistic as well as material, that England derives from the presence of this class:

"In America the Jew is . . . caricatured in the comic papers, and excluded from society. The difference between the English and the American treatment of the Hebrew community is almost wholly due to the absence of a wise and capable Jewish aristocracy in America, as devotedly attached to the great republic as the great Jewish houses of England are attached to their Queen and country. . . . The good Anglicized Jew springs from three or four generations settled in England, and is as proud of the traditions of Trafalgar, or of the sovereignty of Shakespeare, as any of the legitimate descendants of the people whose names are enrolled in the Domesday Book."

But in England there is also, according to this writer, the familiarly obnoxious class of Jews—foreign Jews mainly; a class that seems to be impregnable to those considerations which require a certain modicum of refinement on the part of every man and woman who would mix with the decent people about them. These somewhat grotesque descendants of the men who rolled back the invasion of Sennacherib from the walls of Jerusalem, fill the stalls of fashionable theaters, and infest the best rooms in first-class hotels. This is the class, says Mr. White, that presents conditions of social peril, "not because of their enjoyment of life, nor their capture of the good things that are going, but from their hide-bound refusal to discharge the responsibilities as well as to accept the privileges of money-making."

There are few countries in the world where the Jews are hated as they are in Austria; and this aversion is found there in every class of society, from the highest to the lowest. In commerce, and all money-making, the Jew beats the Austrian all along the line. He finds his strength in the Austrian's weakness. He keeps his object in view, and presses steadily on. "It is enough to walk along the street, between eight and ten o'clock in the morning. No Austrian is in a hurry. Business can wait! The office will not run away! If you see a man walking fast, look well at him—he is a Jew." Even in Spain, in the fifteenth century, nothing could be done without the mediation of a Jew:

"It is interesting to note that the cruelty of Spain and the Dominicans toward the Jews in the fifteenth century enlisted the sympathies of pious Jews throughout the civilized world in favor of the United States in the recent Spanish-American war. . . . Jews have long memories, and as a race are not unjust. The capture and destruction of the Spanish fleet appealed to their historical imagination, and satisfied them that tho the mills of God grind slowly, the ruin of Spain was an equitable adjustment of her debt to Israel."

Yet Mr. White is unable to avoid the conclusion that, where the nations are being destroyed by the Jews, they deserve to be destroyed; that weakness, self-indulgence, stupidity, lack of education and of common foresight, and indifference to the trust that each generation holds for its successor, are the real reasons why the Jews are victorious and the non-Jews are vanquished in the field of the world. "There are some states and races against whom the Jew is powerless. On the Yankees of the Eastern

States, the Scotchman, the Armenian, the Auvergnat, the Greek, he makes no impression; he bites a file."

Not less than eight millions of the world's Hebrew population, we are told, drag out an existence of tribulation and anguish. Their numbers are steadily increasing. Extermination is out of date. Exile is impossible to a people who are already exiles, wherever they may live. Yet in contrast to this sea of human misery is the phenomenon of a wellnigh omnipotent community of opulent Hebrews in all the capitals of Europe. Supreme in international finance, no nation can take any serious step without first securing the concurrence of Israel. When Germany demanded the control of Greek finance, the "Concert of Europe," if unanimous about nothing else, were agreed in placing the finances of Greece under what is virtually Jewish control. Cosmopolitan finance is only another name for Jewish finance.

The present author affirms that the march of the great Jew houses toward the capture of the wealth of the world advances in geometrical progression; that the day is not far distant when the nations of Europe may suddenly discover that everything belongs to their Jewish sojourners, "and that democracy has ignorantly labored for Jewish supremacy. The beginnings of modern anti-semitism are due to the new appreciation of the growing financial power of the Jewish race." He says:

"English and American public men are so anxious to avoid the imputation of antisemitism that they never refer to any matter with which the Jews are concerned—such as immigration, education, or charities—without going out of their way to express a sense of the extraordinary value of the Jewish element in the population. . . . Still, the dislike of the Jews, jealousy of their power, and a sense of the appalling vigor of their competition, have already combined to produce a state of hostility in Great Britain, which runs into many channels of the national life."

ILLINOIS AND THE GLUCOSE TRUST.

AN anti-trust law that can survive the scrutiny of the courts has proved to be such a rarity that the recent decision of the Illinois supreme court against the glucose trust has called out considerable remark. The Glucose Refining Company, as the trust is named, had been buying up all the concerns engaged in the manufacture of glucose, the small manufacturers agreeing by the terms of the sale not to manufacture glucose within 1,500 miles of Chicago. As glucose can only be made profitably within the "corn belt," all of which lies within 1,000 miles of that city, it was practically an agreement not to manufacture glucose at all. This was held to be in effect a total or general restraint of trade, void not only by statute but at common law. An interesting feature of the decision was the ruling that "it makes no difference whether the combination is effected through the instrumentality of trustees and trust certificates, or whether it is effected by creating a new corporation and conveying to it all the property of the competing corporations"—so that this method of evading the anti-"trust" laws is, in Illinois at least, unavailing. The court said of the company's attempt to acquire all the glucose concerns:

"The material consideration in the case of such a combination is, as a general thing, not that prices are raised, but that it rests in the power and discretion of the trust or corporation taking all the plants of the several corporations to raise prices at any time if it sees fit to do so. It does not relieve the trust of its objectionable features that it may reduce the price of the articles which it manufactures, because such reduction may be brought about for the express purpose of crushing out some competitor or competitors. . . . The test is whether the necessary consequence of the combination is the controlling of prices or limiting of production or suppressing of competition in such a way as thereby to create a monopoly. Necessarily when corporations thus situated unite together all their properties in one new organization, and permit the latter to operate their properties, competition will be sup-

pressed, and the new corporation will possess the power to limit production and control prices."

The plaintiff in the case was a minority stockholder, who objected to having his property disposed of without his consent. "But," says the New York *Evening Post*, "the language of the court makes it clear that, even if all the stockholders of the minor corporations had consented to the sale of their property, it would have made no difference. The transaction would still have been a fraud on the public, and the State could have had it annulled." This decision, says the Kansas City *Star*, "ought to be a death-blow to all trusts, unless they are invulnerable." The Louisville *Courier-Journal* says: "Its significance is very great, for it strikes at the root of the modern trust." The Chicago *Times-Herald* thinks that the decision is, in fact, so strong as to be dangerous, for it is "so sweeping that it puts in imminent jeopardy every form of combination of capital for business purposes in Illinois." The Chicago *Record*, while admitting the possibility of this danger, thinks that it exists as yet only in theory, and says that "it will be time enough to complain that the decision is a blow at industrial progress when it is actually applied to some aggregation of capital the effect of which is not to limit production but to increase it, to the benefit of all concerned." The Chicago *Journal* points out that in the mean time the court decision has made plain the path of duty for the attorney-general and the State's attorneys of the different counties. "After the supreme court has shown its ability to recognize a trust, even in the guise of a single corporation," says *The Journal*, "they [the prosecuting attorneys] should be able to interfere with a reasonable hope of prevention. Will they do it?"

TOPICS IN BRIEF.

LETTERS AND ART.

THE REWARDS OF LITERATURE AGAIN.

THE controversy started by Sir Walter Besant concerning the rewards offered by literature as a profession (see *THE LITERARY DIGEST*, August 5 and 26) has led to a symposium upon this subject in *The New Century Review* (October), in which nearly a dozen well-known British authors express their views. It will be remembered that Sir Walter was highly optimistic in the view he took of the literary rewards which a writer of fairly good endowment might justly look for, while his opponent, "Author," took an almost opposite view, and claimed that unless the literary aspirant had an assured income for ten years, he was likely to starve or die of blighted hopes. The writers who express their opinions in *The New Century Review* are rather divided in opinion. One of the optimists, Mr. F. Frankfort Moore, says:

"I feel inclined to go quite as far as does Sir Walter Besant in his estimate of the possibilities of writing as a profession. Thanks to the intelligent efforts of Sir Walter Besant himself, literature has now become a profession. . . . The best-informed men find it to their advantage to be associated with journalism. Twenty or twenty-five years ago it would have been ridiculous to compare the people who wrote with the representatives of recognized professions; but now it is perfectly fair to do so, and the results of such a comparison will, I think, bear out all that Sir Walter Besant has said on the subject of authorship. If one spends the same amount of time and money in qualifying for the profession of writing that one spends in qualifying for the church or the bar, one may reasonably expect equal pecuniary rewards. I should like to know how many professional writers there are who, twenty years after taking a good degree at their university, are receiving no higher salary than that of a country curate, or, for that matter, a country rector. And what about the bar? Many are 'called,' but few are chosen as the recipients of briefs within the first six or ten years of their calling. And even all the Q. C.'s in the House of Commons are not made judges, however unconscientiously they may support their own party. I say that my experience leads me to agree with Sir Walter Besant when he affirms that a writer's chances of success in life are quite as great as those of a clergyman or those of a barrister."

Mr. Edwin Oliver gives his opinion "more from the editorial standpoint than from that of the toiler on the cobble-stones of Grub Street." He says:

"From this vantage-ground, I am enabled fully to agree with Sir Walter Besant that literature offers to the educated youth a quicker and more substantial means of livelihood than any of the other reputable professions. It, of course, largely depends upon the aspirations of the youth. If he sets up the income of Mr. Kipling or of Mr. Pinero as his minimum, he has as much chance of reaching his goal as the average curate has of occupying Lambeth Palace, or the ordinary law student of spreading himself upon the woollack; but if he be satisfied to earn a modest two hundred [pounds] a year for the first decade of his apprenticeship, he may start upon his career with every chance of achieving this desideratum. And what is the requisite stock in trade? A facile, grammatical use of his mother tongue, a sublime confidence in his own worth, and the sagacity of the tally-man in gaging the tastes of his constituency. Given these qualities, the market is limitless at the present day, and the rawest salesman is sure of a hearing of sorts, for there is no greater fallacy than the belief that manuscripts from a novice are returned unread. In the majority of cases, the paramount difficulty which besets an editor is that of obtaining the class of matter which his public wants—or rather what he, more or less erroneously, thinks his public wants. With this object in view, he religiously wades through tons of typewritten dross, on the off-chance of finding one small vein of the true metal. Having found it, he may be relied upon to work it out to its fullest capacity."

Mr. G. B. Burgin says that perhaps the mediocre buttermilk man may be able to make a better living than the mediocre writer,

and many die by the wayside; but still this is true in any calling, and the Spartan will in the end usually succeed:

"If authors do not succeed, it is because the luck is against them, or they have not that ineffable something which makes for success. George Meredith did not howl because the world did not read him for many years. He 'stonewalled' and waited. At last the world heard him. I take it, however, that the great gratification of his old age is the fact that he knows his work to be good, and whether the world reads it or not is a secondary consideration. The reward of literature should be the knowledge that the man has done the best that is in him to do. Unfortunately, authors must live. Many of them write to live and do not live to write. Instead of doing their best, they are waiting for the public to say, 'Friend, come up higher.' If the public does not say this, they can always fall back on Mr. Bumble's opinion that 'the public is a hass.' An author's capital is his brains. If the assets are not ample enough to cover his obligations, he fails. Let him try something else. He may be certain of one thing, however. If he starts by thinking of the rewards for his work instead of the work itself, he is certain to fail."

Mr. George Knight thinks that literary success is quite as much nowadays a matter of alert pugnacity and shrewdness in making one's way through the whirling forces of commercialized literature as of mere power to use the pen:

"It is by now the veriest commonplace that the spread of elementary education has set the professional writer face to face with an enormous public of inconsiderate readers, swayed this way and that by doubtful gusts of fashion. The growth of hugely capitalized journals and magazines, with their continuous serial openings and definite requirements, has evolved certain strongly marked varieties of literary production, and, irritating as these may be to the idealistic recruit, they often demand for their creation indubitable qualities of ingenuity, simplicity, and resourcefulness. To the producers of this work—and of its analogs in the book world—goes a notable proportion of the literary wages-fund, a considerable portion of the remainder finding its way into the pockets of the 'star' authors of the moment, who themselves rapidly become as comfortable in editorial fetters as their smaller colleagues."

"In this rush and whirl the novice with a modest talent or two is as much at home as a violinist in a boiler factory."

"Yet it is amid just this stress and struggle that prosperous modern authors are making their incomes. The battle is not one for the weak. Every right is snapped up by the experienced literary tradesman—first and second serial rights, British, colonial, and American; rights of book publication in three continents; rights of translation; rights of dramatization—all are made to yield their annual quota. And be it said that these incomes are gained, as often as not, by sheer overwhelming weight of mental output, arduous, varied, of a sort, skilful. Is it into competition with these giants that Sir Walter would have the crack-brained tyro lightly enter, bearing for gage of battle his 'litle boke,' printed, bound, and published 'at his own expense,' with only too probably borrowed money? . . . He can not blink the economic factor or 'bluff' his publisher with a high hand and a smooth forehead: he must take what he can get. Luck may come to him: it may not. 'Kissing goes by favor,' so do fame and fortune. But if he be a wise man he does not whine for literary protection, or curse his publisher and his rivals. He stands his ground and does as well as he can, if not as well as he would like. In any case he has chosen the life he loves, and has accepted its risks with it, as every son of Adam must. If the chance goes against him he can at least take his gruel without whimpering. It is the fortune of war."

Chief among the pessimists are Mr. W. L. Alden, Mr. Richard Le Gallienne, Mr. H. G. Wells, and Mr. Joseph Hatton. Mr. Alden writes:

"If a man has an income from investments that can be trusted, and if this income is sufficient to keep him from poverty, by all means let him try to write, if such is his inclination. If he has no such income, let him do almost anything that is honest as a means of livelihood rather than meddle with pen, ink, and paper. I am quite aware that this has been said some thousands of times, but it can not be said too often. Sir Walter's advice to the

young man who wishes to become a successful author is sound, so far as it goes, but it might be faithfully followed by a thousand different young men and only one or two of them would find that literature provided them with a bare living. As for the exceptional young man who has positive creative genius, he should shun literature as he would the bubonic plague. For he is the sort of man who would insist upon writing what he believed to be good work. He would pay no attention to the wishes of the public, and he would be neglected for thirty years or so, just as was George Meredith, before fame or fortune could be overtaken."

The young author who is capable of good work should not do it, says Mr. Alden, at least not at the start. Art is something "with which only successful writers can afford to meddle." Let him rather give his days and nights to a close study of the wishes of the public as met in the leading novels of the day that are selling by the fifty thousands.

Mr. Le Gallienne writes in somewhat similar strain, saying that exclusive devotion to truth and beauty is not possible to a literary man with a family:

"To deal cinematographically with the temporary, or grossly with the melodramatic, the moral, or the sentimental—that is the only way to fulfil Sir Walter Besant's dream. If you are a butcher, or a detective, or a popular preacher, or an Adelphi melodramatist, or a hysterical woman, strayed into literature, you will do well; you will rent, even buy, castles, breed bulldogs, refuse (wisely) to have your portrait painted, perhaps even finance North Pole expeditions, and arrange international yacht races like any bacon merchant; but, if you are an artist—you will be saved from these things. The best thing you can do is, either to be something else as soon as possible, or, as 'An Author' says, persuade some kind friend to keep you while you make your beautiful things. Of two evils—the public, or the patron—the patron is the least. Sir Walter would tell us that the public is the patron of our days. Of course, there are many publics, and at least two. There is one small public interested in really good work, but it is too small to support the really good worker; and the other public, the vast mob Sir Walter means—that is, *the public, par excellence*—will only pay for what it cares about—very naturally. It is difficult to see why it should do anything else. Unfortunately, among its needs literature is not included."

Mr. H. G. Wells says that there is no connection whatever between literary ability and the profits and honors of contemporary authorship:

"A man may do the profoundest and the most beautiful writing for years, and if only he neglects a few simple (but to certain sorts of men very difficult) precautions, he may gain neither bread nor fame. On the other hand, a man may have the intellectual qualification of an inferior general practitioner or a small solicitor, and if only he has courage, confidence, and discretion, he may reap abundant wealth and honors from the trade of authorship."

VERESTCHAGIN'S NEW SERIES OF PAINTINGS—NAPOLEON IN RUSSIA.

SINCE V. V. Verestchagin achieved world-wide fame by his great and brilliant paintings of the terrible scenes of the Russo-Turkish war and of the picturesque Indian life and natural environment, he has been engaged in the study of Russian history, searching for material for national pictures illustrative of Russian progress and at the same time in keeping with his artistic designs and peculiarities. According to the *Novoye Vremya*, the artist has painted a series of pictures dealing with the war of 1812 and the defeat of Napoleon in Russia. The paper gives interesting information of the work soon to be exhibited to the world. We condense as follows:

The artist selected from the career of Napoleon that moment when he, ruler of the world, achieved the height of his ambition and might—standing in the Moscow Kremlin. Evidently Napoleon exercised a powerful fascination upon the artist, both as the

omnipotent arbiter of the destinies of Europe and as the most unhappy man in whose life a profound tragedy was embodied.

In a series of pictures, Verestchagin shows us the evolution of Napoleon's genius, obscured by the glamour and fame of victory, confronted by the first serious obstacle and as if by instinct apprehending the approaching catastrophe. In all these pictures, Napoleon's face is tragic. In one, we see him sitting on the Borodino heights, surrounded by a magnificent suit of generals. He is thoughtful and melancholy. In another he is on the Paklan hill, awaiting the delegation of boyars, surprised, greatly annoyed. In a third he is on the walls of the Kremlin, surrounded by flames. In other pictures he is on his way back to France, first in a small hut, then in a poor village church, where fate had prepared for him a fitting halting-place. At no time does his face lose its tragic expression. He stands forth as the merciless personification of the cynicism of the French army, which did not hesitate to turn churches into stables and soldiers' quarters. An ominous, evil-portending light streams from the holy *ikon*. The folly of the usurper, one vaguely feels, had been condemned above, and is about to end.

Finally, we see, in another picture, the "great army" on its flight to Berezina, exhausted, half-frozen, overwhelmed with shame. The epic, opened under the portentous march of conquest and developed under the illumination of the flames, ends in minor chords, in which we hear the howling of the winter storm and the sighs of the enemy's soldiers, buried alive in the Russian snows.

To produce such pictures, say the *Novoye Vremya*, one needs, besides artistic talent, profound erudition and an intimate knowledge of the epoch treated, such as only Count Tolstoy has possessed before Verestchagin. Many years of thought and labor have been devoted by the artist to the task now completed, and we have another triumph for the "free art" and original methods of the greatest Russian painter.—*Translation made for THE LITERARY DIGEST.*

WAR POETRY.

THERE is no lack of verse in England just now to give voice to the national sentiment about the war. Most of it—now that hostilities have begun—is strongly pro-British, altho there is an occasional voice heard in protest against the war. A Cockney canticle on "War," in the *London Chronicle* (October 14), concludes as follows:

War, war, war!
It's 'appened so horfun before;
The man in the street
Knows as we cawnt be beat,
An' thet's all 'e wornts in a war.
'E buys all the speshuls, 'e do—
An' each one's gort lies in fer two—
An' sings "Roal, Britanner,"
An' thumps 'is planner,
An' thet's all 'e thumps in a war.

War, war, war!
Them blokes gort impyshint an' sore,
An' let drop a match
Wheer the powder 'ud catch
Thet flares ter the big mine o' war.
Mad fools? Yes, they're thet, yer kin swear;
But 'ow come the powder jes' there?
We laid the train right,
An' they've set it alight,
An' between us we've kicked up a war.

War, war, war!
Theer's no time fur talkin' no more;
They would 'ave it so,
An' they've gort it, yer know,
A smashin' ole, senseless old war.
We're nuts on a Corn'runce fur Peace;
But when 'ull this warfeerin' cease?
Till 'umanerty cools,
An' we grows fewer fools,
We kin bet, in a menner, on war.

The following appears in the *London Outlook* of the same date:

BRITANNIA.

Be swift and terrible. They crave the sword;
"Come and destroy us utterly," they cry;
"We are a little people and stiff-necked,

And full of venom; Come and win through blood
 Unto the Right ye swear by. Right and Might
 For us were always one, and Right and Might
 Shall serve us until Might may cease to be."
 Thou whose old name is more than armaments,
 Whose frown hath shaken great despots, and whose hand
 Is ever on sore places—to make whole,
 To root out festering tyrannies, and set
 Standards of comely governance for the world—
 Thou, with whom Freedom chiefly loves to dwell,
 Wilt not go haltingly about this work,
 Tho the faint-hearted shiver, and the fool
 Thanks God his palms are clean, and prates of "gain"
 And "inoffensive rustics dragged to war
 So that they may be plundered." Well thou knowest
 Whose is the gain and loss, what price is paid
 In treasure and men for empery of thine,
 What tribute rendered by thy suzerains,
 What profit brought to other than themselves.

Be swift and terrible. They crave the sword.
 Be swift in mercy, terrible to teach
 Rebels against the light that all thy strength
 Is not a figment, but a tangible thing
 Moulded to purposes of righteousness.

The Spectator (October 14) prints the following lines:

OUR ANSWER.

We do not want your Fatherland,
 Your starry veldt, your golden Rand;
 We have an Empire stretching far
 Beyond the evening, morning star;
 And all within it like the sea,
 Majestic, equal, living, free.

Once ye were noble, men who died
 Sooner than crouch to tyrant's pride;
 For desert isle, for Marken sand,
 Content to quit your Fatherland,
 Ye shook the Spaniard's world-wide throne
 One strip of earth to call your own.

Why are you altered? Can it be
 That freemen grudge another free?
 Ye gag our voices, hold us down
 Beneath your fortress' savage frown.
 Was it for this we freedom gave,
 Ourselves to dig our freedom's grave?

What do we ask? To use the tongue
 That Hampden spoke, and Milton sung;
 To shape the statute, share the power
 That clips our freedom every hour;
 Proud of a sovereign right to own
 No liege, no lord, but law alone.

Our hands, once weak! Now one and all
 Are joining. Hark! an Empire's call,
 That says, "Not ours the blood, or race,
 To brook ignoble hireling place."
 A stain on us is stain on them,
 Besmirching England's diadem.

From the United States comes a plea for the Boer, in a poem by Edward J. Wheeler, published in pamphlet form and reproduced in a number of dailies:

THE DUTCHMAN.

His prow was pointed toward the Southern stars;
 He plowed a furrow half-way round the world.
 The winds of many zones tugged at his spars
 And beat his deck before his sails were furled.
 On, on, and on—three thousand leagues of sea,
 Untried, unknown, he traversed to be free.

Stolid and stern, unsightly and uncouth,
 No scented darling he for courtly game;
 But in that slow speech there was steadfast truth,
 And dauntless courage in that stubborn frame.
 On Africa's farthest cape he made his home,
 And thanked the good God he could cease to roam.

Before him lay long miles of arid plain;
 Around him valleys full of plenty smiled.
 He yoked his oxen to the lumbering wain,
 The jambok spoke in menace shrill and wild.
 Each mighty beast, submissive, bent his neck,
 And the Boer started on his long, long trek.

Came days of aching toil. Night after night
 He faced Death, eye to eye, and stared him down.
 With naked fist he met the lion in fight,
 And sent him scurrying to his jungles brown.
 The savage blacks who came to spoil and slay
 Reeled back before the laager's stern array.

The old Colossus spanned the Rhodian Bay;
 A continent, the new one would bestride,
 From Cape to Cairo drive his iron way,
 And a new empire for his Queen provide.
 An earthquake laid the old Colossus low.
 The new one laughs amid the earthquake's throe.

The lust for gold and lust for empire found
 That the bold Dutchman dared their way to block.
 They joined their force to sweep him from the ground:
 Move, said the Sea; I will not, said the Rock.
 For twenty years the Sea has shouted, Go!
 For twenty years the Rock has answered, No!

Now breaks the tempest! now the lightnings leap!
 And Boer and Briton join in final strife,
 And we, afar, bewildered sit, and keep
 Hushing the thoughts that cut us like a knife.
 Are we not Britons, too, in speech and blood?
 Can we curse them and bless the alien brood?

Britons, but not *such* Britons we; for lo!
 These men who goad the patient Boer to-day
 Are heirs of those who struck the insensate blow
 At Lexington and Concord. Tories they,
 Whose hands have smitten Freedom's form, alas!
 In all her strifes with privilege and class.

Not these our kindred! no, we spurn the claim.
 But rather those whose voices have been bold,
 For love of England, to avert this shame
 And break the spell hypnotic cast by gold.
 Oh! for one hour of Gladstone's voice to plead
 The cause of God against the claims of Greed.

In reference to the many unfavorable criticisms that have been made in England upon Swinburne's war sonnet, which we reprinted last week, Mr. William Watson writes thus to the *London Daily Chronicle* in behalf of his brother singer:

"Like several of your contemporaries, you appear to have been disappointed with the quality of a recent sonnet by Mr. Swinburne. In simple justice to that magnificent singer let us remember that the existence of a great theme, not less certainly than of a great poet, is one of the indispensable antecedent conditions of great poetry. The assassination of a state, and the strangling of a people, are not heroic themes, and never while this world endures shall they evoke one note of noble song. Moreover, in all combats between a giant and stripling the Muse must of necessity be at a certain moral disadvantage in the somewhat ludicrous task of enheartening the giant. It is the valor of David with his sling, and not the arrogant bulk of Goliath, that kindles the imagination of poets, and captures forever the sympathies of man."

WILLIAM MORRIS'S INFLUENCE ON HOUSEHOLD ART.

WHILE Morris's influence upon the literature and the social thought of the century is fairly well understood, the results of his art teachings are less fully realized. His is an influence which has come into almost every household in the Anglo-Saxon world, and has touched with the new spirit of art and beauty the barren, uninspiring, and often dismal forms in which the genius of the hearthstone was long clothed. Describing the conditions prior to Morris's advent, Mr. Elbert Hubbard, in *The Philistine*, says, "the housekeeping world seems to have been in thrall to six haircloth chairs, a slippery sofa to match, and a very cold marble-top center-table." He continues:

"In all the best homes there was also a marble mantel to match the center-table; on one end of this mantel was a blue glass vase containing a bouquet of paper roses, and on the other a plaster-Paris cat. Above the mantel hung a wreath of wax flowers in a glass case. In such houses were usually to be seen gaudy colored carpets, imitation laco curtains, and a what-not in the corner that seemed ready to go into dissolution through the law of gravitation. Early in the seventies lithograph presses began to make chromos that were warranted just as good as oil paintings, and these were distributed in millions by enterprising newspapers as premiums for subscriptions. Looking over an old file of *The Christian Union* for the year 1871, I chanced upon an editorial wherein it was stated that the end of painting pictures by hand

had come, and the writer piously thanked heaven for it—and added, 'Art is now within the reach of all.'

"Furniture, carpets, curtains, pictures, and books were being manufactured by machinery, and to glue things together and give them a look of gentility and get them into a house before they fell apart was the seeming desideratum of all manufacturers."

To Morris more than to any other, says Mr. Hubbard, the whole civilized world owes its emancipation from this depressing condition of art and from its love for the tawdry and the cheap:

"I have seen several houses furnished entire by William Morris, and the first thing that impressed me was the sparsity of things. Instead of a dozen pictures in a room, there were two or three—one on an easel and one or two on the walls. Gilt frames were abandoned almost entirely and dark stained woods were used instead. Wide fireplaces were introduced, and mantels of solid oak. For upholstery, leather covering was usually used instead of cloth. Carpets were laid in strips, and not tacked down to stay, and rugs were used so to show a goodly glimpse of hard-wood floor; and in the dining-room a large round table was used instead of a right-angle square one. This table was not covered with a table-cloth; mats or doilies being used here and there. To cover a table entire with a cloth or spread is pretty good proof that the piece of furniture is cheap and shabby; so in no William Morris library or dining-room would you find a table entirely covered."

In answer to the frequent criticism that Morris did not benefit society at large, because his products were so high in price as to be out of the reach of any but the rich, Mr. Hubbard says that Socialism (of which Morris was an apostle) does not deem it desirable to supply cheap stuff to anybody at the expense of the degradation of the laborer by machine processes and the lowering of the standard of merit—"The first thought of Socialism is for the worker who makes the thing, not the man who buys it."

PINERO: THE MAN AND THE DRAMATIST.

SOME new facts about Pinero, the great English realistic playwright, are given by Mr. Malcolm C. Salamon. The dramatist is, it seems, of a singularly modest temperament, inclined to take his honors unassumingly and never assured of the success of his forthcoming plays until they have actually received a triumph. Of his earliest success, "The Second Mrs. Tanqueray," produced in 1892, Mr. Salamon says (*Cassell's Magazine*, October):

"The theme had been in his mind for a long time, and altho there was no indication that the managers and the theater-going public were in the mood to encourage plays dealing thoughtfully and seriously with the stern problems of life, Mr. Pinero set himself to treat his chosen subject in a spirit of unswerving truthfulness and artistic sincerity, untrammelled by the requirements of any specified theatrical company, or the obligation to fit a character to the personality of a particular actor-manager. The splendid result we know; but throughout the composition of that famous and momentous drama, and its subsequent fortunes, his modesty and diffidence were characteristic of the man. I shall never forget the night in the winter of 1891, when, as we sat late over the fire in his old house in St. John's Wood Road, he told me the story of the play, as it had then developed in his mind, and from which he found occasion to deviate in only the most trifling details. . . . From that moment I felt confident it was going to be a great human play. Nevertheless, with all his dramatic impulse quickened, and his artistic aim set laudably high, he was still diffident, modestly amused at my 'flattering enthusiasm,' as he called it, yet as grateful for the stimulus of my humble encouragement as if he had been a novice instead of a master."

"On the morning of the production of 'Mrs. Tanqueray' Pinero called to see me. I remember he was restless, depressed, nervous. 'I'm going to catch it to-night. I fear that the house will not understand me,' he said. I have never known him so despondent about his work as on the eve of his greatest success, nor could he be reassured by the most emphatically expressed conviction that the play must inevitably make a profound impression. And when

the whole house had risen at him, and his triumph was complete, he was as unassuming as ever—feeling, as he said, only an additional responsibility to do still better next time."

Pinero never, we are told, blames the public if he fails to please it, for, as he says, "We must never think of writing *down* to the public, we should always write *up*, and it will rise with us. There are two ways of interpreting that mysterious quality known as public taste; there is interpreting it at its lowest, and there is interpreting it at its highest. Interpret it at its highest, and there is no fear that you will not have a modern drama in England fit to hold its own with that of other countries."

Mr. Salamon gives the following interesting account of the manner in which Pinero approaches his work:

"Let us suppose that Mr. Pinero has, in a serious mood, selected the subject for his new play. He first sets himself to answer logically, according to his observation as a man of the world, his insight as a psychologist, his instincts as a dramatist, and his ethics as a humanist, the leading questions involved in the conflicts of will and clash of circumstances which must constitute the dramatic interest of the theme. Then he invents the particular story that shall illustrate his thesis, and the persons necessary to tell the story in action, allowing these to develop their characters through the situations in which they are placed, while the incidents of the story are naturally introduced through the intervention of character. This has invariably been Mr. Pinero's principle in the composition of, at least, his later plays, for he regards development of character in action as the highest achievement in drama, and indeed the only means through which a play can live."

"In these creative stages, which necessitate a great deal of that 'fundamental brain-work' which Rossetti held to be essential to all good poetry, and which is as necessary to all vital drama, Mr. Pinero is generally in a restless condition, and he does most of his 'thinking out' in motion, either while pacing his study or walking or cycling along the quiet roads of St. John's Wood or Regent's Park, or, perhaps, if it be full summer, amid the mountain beauties of his favorite Maloja. Before he can begin the writing of a piece, he must have realized not only the persons of the play, but the very scenes amid which they live and move. Like the true impressionist painter, he must actually see the thing he is to depict."

Altho Pinero is a thorough Englishman, Mr. Salamon believes that he derives much of the force and beauty of his character from his Sephardim ancestry.

THE PRESENT LITERARY SITUATION IN FRANCE.

LITERATURE in France is just now, says Mr. Henry James, at a parting of the ways, at a watershed between the literary streams that flow in two eras of divergent ideals and aims. The great writers of the century—all but a corporal's guard—have gone, and the new men have not yet shown that they are capable of rising to the plane of their literary forebears. He says (in *The North American Review*, October):

"The great historians are dead, then—the last of them went with Renan; the great critics are dead—the last of them went with Taine; the great dramatists are dead—the last of them went with Dumas; and, of the novelists of the striking group originally fathered by the Second Empire, Emile Zola is the only one still happily erect. The present men, in different quarters, are the younger—so much the younger that Zola, among them, rises almost like a patriarch. This is the case even with the critics—the race which, as a general thing, is least accountable for itself when positively young."

In criticism, however, according to Mr. James, the French intelligence is not yet faltering to any marked degree. The spirit of conversation, he says, is so indefeasible a part of the genius of the people that, however among them the creative gift may flicker, that of criticism will be the last light markedly to pale.

After speaking at much length of MM. Lemaitre, Brunetière, Faguet, and other leading French critics of the day, Mr. James turns to the novelists:

"It is distinctly when we come to the novelists—for I must make a long stride over historians, philosophers, and poets, sustained by the reflection that the best novelists are all three—that we remain rather persistently more aware of what is gone than of what is left. There is in this quarter, evidently, a distinct chill in the air; there are empty places, gaps into space, the look of a field less occupied. Daudet, so individual and beautiful, died but yesterday; Maupassant, as strong—productively speaking—as a young horse, and with a voice all his own, passed away the day before. Emile Zola, of the elder men, alone remains; with Paul Bourget and Pierre Loti and M. Huysmans—with Anatole France, perhaps, too—among the younger; and with MM. Paul Hervieu and Marcel Prévost among the youngest of all. Merely to enumerate these names, however, is to become freshly aware of my inability to take them in turn; the most that, in these conditions, they may help the critic to is some new demonstration, much abbreviated, of the intensity with which, in France, this wondrous form has been worked. At whatever result the serious inquirer might arrive, he would recognize no want of the real energy, the proper passion, in the working of their material by this interesting group."

Of Zola Mr. James says:

"The reporter free to proceed to particulars would, at any rate, to-day find the superficial space occupied by M. Emile Zola not sensibly shrunken during these dozen years. His competitors have in most cases come and gone, but M. Zola has solidly stayed. Perhaps this it is that most makes him difficult to dispose of briefly; he is, at one and the same time, so little a genius of the highest distinction and so little a negligible quantity. He would still be magnificent if he had nothing for him but his solidity—in the contemplation of which I should almost luxuriously lose myself were it permitted to me to treat in summary fashion even one side of his work. He is a large enough figure to make us lose time in walking round him for the most convenient view."

To Mr. James the most notable thing about Zola is his method:

"What he has most vividly created, to my sense, is the process that has seen him through. None of M. Zola's heroes stand so squarely on their feet as M. Zola's heroic system; the evolution of none of his heroines has been so unbrokenly patient. There the system is to-day, supremely representing on his behalf the communication of life. . . . I may not here undertake the business of describing it, and I mention it, indeed, mainly to pay it publicly my respects. For it has been in its way an intellectual lesson. Quite apart from what may be urged to its advantage or its detriment, it has shown, at least, admirably what a method can do. To arrive—as he has arrived—at the goal he began with fixing. M. Zola had to make out his special economy—see it steadily and see it whole. He has seen, moreover, many things besides; not the individual soul, the individual life, perhaps, with any great intimacy—never, indeed, with an inspired penetration; but always, vividly, its happy mean, or general average, of sense; its associated, confounded, scarce discriminated state. He has given us in this way—and the phenomenon is curious enough—an immense deal of life, a big chronicle of tragedy and comedy, action and passion, while giving us, nevertheless, comparatively little consciousness."

A Wife's Faith in Her Husband's Genius.—"Back of Mr. Winston Churchill's great literary success," says *The Society of American Authors* (New York), there is a wife's rare devotion and faith: "Churchill's wife was possessed of means; Churchill himself was poor and toiling away for *The Cosmopolitan* at indefinite duties that ranged from press-room responsibilities to editorial scapegoatishness. Between whiles he wandered over the historic Hudson River, dreaming great things, but prevented by his daily exhausting work from giving them final form. His marriage and his departure from *The Cosmopolitan* were coincident—Mrs. Churchill averring her belief in his powers and insisting that he should drop his mixed duties in order to work out the possibilities that she believed were in him. The investment was a good one and equally creditable to both parties;

for none but a man who was convinced of his own strength to elaborate an idea would have dared to run the risk of appearing to live on his wife's money, and none but a wife who believed utterly in her husband's strength would have dared to place him in such a dangerous position of dependency."

SPEECHES AND THE COPYRIGHT LAW.

IT is well known that the copyright law includes within its scope lectures as well as other forms of literature, provided the requirements of the law have been duly complied with; but the legal status of uncopyrighted lectures has until lately remained undefined. The question of the ownership of such lectures came up in the High Court of Justice in London the other day, and was decided in a way which the *Chicago Evening Post* characterizes as "absurd and inequitable." The writer thus briefly states the facts and comments on them:

"The volume of 'Appreciations and Addresses' recently published by John Lane contains the notable public utterances of Lord Rosebery, the ex-Premier and would-be leader of the British Liberals. Five of the speeches were reported verbatim in the *London Times*, and Lord Rosebery himself furnished these reports to the publisher. *The Times* brought suit for an injunction to restrain Mr. Lane from circulating the volume. It claimed exclusive property in the five addresses taken from its columns, and denied that Lord Rosebery, who had failed to copyright them, possessed any right whatever to their commercial use. If he had no right, he had nothing to transfer to the publisher.

"*The Times*, on the other hand, had copyrighted the speeches, together with everything else in the issues which contained them. They were reported by an employee of the paper, and it was claimed that the property in them belonged to the reporter, whose rights the paper had acquired. In other words, while the orator, by giving his words to the public without prior copyright, lost all title to ownership, the mere reporter who wrote them down in shorthand and subsequently prepared a report for *The Times* became, in virtue of his purely mechanical labor, the owner of the speeches in a commercial sense! This is so absurd, so violent a perversion of common sense, that we can not believe that the decision of Justice North, which fully adopted *The Times's* contention, can be sustained on appeal.

"It was argued that the reporter obtained an exclusive property right by giving the speeches a certain form, and that the copyright law only protects literary form. As a matter of fact, if the report was accurate and authentic, the form was that of the orator himself. The copyright law certainly assumes that there is something original about the literary form it protects, but what is there original about a reporter's faithful reproduction of a speech? Who supplies the literary form, the orator or the mechanical reporter? Ten, twenty, a hundred reporters might 'take down' a speech, and if they were all equally skilled there would be absolutely no difference between the versions. All would have the form provided by the author, the orator. This consideration alone reduces to absurdity the decision of Justice North. The reporter had no right to anything but pay for his mechanical labor. The speeches were public property."

NOTES.

A NEW blank verse tragedy by Mr. Stephen Phillips, "Paolo and Francesca," is to be published in book form in advance of its representation at the St. James's Theater, London.

MR. STEPHEN CRANE's new book, which is to be an impressionistic history of the Cuban campaign, is to appear this autumn. Selections from it will be printed in *The Anglo-Saxon Review*.

"BECKY SHARP," now appearing at the Fifth Avenue Theater, New York, is not the first dramatization of "Vanity Fair." A comedy founded on the story appeared in London in 1882, and still later a one-act play called "Becky Sharp," by Mr. J. M. Barrie, was bought out at Terry's Theater, London.

A VOLUME relating to Balzac never before translated into English has just appeared, called "The Personal Opinions of Honoré de Balzac." It is made up of passages from his correspondence and his miscellaneous writings, and contains M. Brunetière's recent address at Tours upon the occasion of the Balzac centenary. Miss Wormeley is the translator.

SCIENCE AND INVENTION.

EXPERIMENTS ON SAILS.

IT is the opinion of Walter Burnham, who has been experimenting on the subject, that too much attention has been paid to improvements in the hulls of sailing-boats and not enough to the "set" and drawing power of the sails. Some time ago we published an article from a French source showing that the action of sails is materially improved by having holes cut in certain parts. Mr. Burnham is even more radical. He gets good results in some cases by splitting his sails into strips or by making them of lattice-work. We quote an interesting account of his results from *The Scientific American* (October 21). Says Mr. Burnham:

"Supposing four playing-cards be stood vertically in a row, with their edges touching, and the area thus made be regarded as a sail, as represented in Fig. 1. The wind which would pass through a line equivalent to the right-hand edge of the fourth card and the left-hand edge of the first card (that is, the after-leech of a sail and the mast) may be regarded as a column of wind divided into four parts, *A*, *B*, *C*, *D*, moving in the direction shown by the arrow.

"In Fig. 2, *A* is the column of air which strikes on the first card and is turned or deflected by the first card and passes aft over the three remaining cards. This column of wind does not lose its dimensions very much. A little is 'spilled' over the top and bottom of the card, but it turns in bulk. If it does not turn in bulk, that is to say, if the bulk of wind is materially affected, then its pressure must be materially increased or diminished, which is seen at once not to be the case, or the wind must be backed up.

"The column of wind, *B*, is that column which would strike on card 2, but which never reaches the card because the deflected wind, *A*, from the first card is interposed between it and the sail. Similarly so in *C* and *D*. It will then be seen that on the first part of the sail there is a very good wind; on the second part of the sail a mixture between a dead-ahead wind and a favorable wind; on the third part of the sail two dead-ahead currents; on the fourth part, three.

"In investigating this further, the following experiment was tried, shown by Figs. 3 and 4. On a boat a framework was put up that carried six smaller frames, covered with muslin, thus constituting sails. Each of these six sails was pivoted in the center so that they might take any angle. The first plate or sail was set at the angle shown by No. 1, Fig. 4, the course of the wind being shown by the arrow. No. 1 was fastened in this position. Then No. 2 was slowly moved until it was found to be set at the angle which received some wind, that is, 'set so it would draw,' and fastened. Nos. 3, 4, 5, and 6 were similarly and subsequently so set. When it was found that No. 5 was set almost fore and aft, the leech or after part of sail No. 6 was really to windward of the keel. This may seem, when so stated, astonishing, but it will readily be conceded when it is remembered how the jib will 'back' the mainsail as shown in Fig. 5, or how much more in-board the boom of a mainsail must be drawn than that of the foresail, and numbers of other similar experiences."

The writer next calls attention to the fact that if some cotton be saturated with tar and lighted, the smoke can not be made to touch the sail unless held forward of the mast and in line with the wind. As the holder goes to windward of the mast the distance the smoke will remain from the sail increases. This, Mr. Burnham thinks, shows that the bulk of the wind as it is turned by the sail does not materially diminish. He goes on to say:

"For these reasons, attention is called to Figs. 6 and 7. Fig. 6 representing a tall and narrow sail, which is undoubtedly the speediest; Fig. 7 being a low and broad sail, which is undoubtedly the slowest.

"The course of the deflected wind and its unaltered bulk, is without doubt the explanation of why a catboat can outpoint a sloop, and a sloop outpoint a schooner, and a schooner outpoint a ship."

In running before the wind the phenomenon of "dead air" comes into play, as thus illustrated and described by Mr. Burnham:

"In Fig. 16, *A* is the sail and *B B* is the wind, and *C* is the cone of dead air that rests upon the sail. Allow me to liken the sail and the wind and this cone of dead air to one's putting his hand into sand and moving it. It would be found that a cone of sand remains on the hand. Any one who has gone out on the boom of a sail 'running' has found himself in a place of comparative calm, the smoke from his cigar remaining with him. If the sides of the cone are at a correct angle, the wind will be 'split' and pass the sail without exerting its greatest effect on the sail,

ACTION OF WIND ON SAILS.

Courtesy of *The Scientific American*.

whereas if the sail have openings in it they allow the base of the cone to constantly pass through, bringing the apex nearer the base and increasing the angle of the cone. In a sail of 100 square feet area, I have found that 65 per cent. of the area being covered by cloth and 35 per cent. of the area being open, their speed was equal.

"In running before the wind, all sails set at right angles to the wind are materially benefited by having holes in them through which the wind may escape and thereby lessen the height of the cone of dead air that rests on the sail. In beating, the sails are subject to a very much greater windage than they would be if there were no openings in them. Each section may be considered a little sail on the hoist of which the windage is felt. When a large sail is composed of a number of small sails, the 'windage' of the large sail is very materially increased, as has been explained above, and this 'windage' or direct contact of a substantially dead-ahead wind is so material that unless the advantage gained by getting rid of the 'spilled' wind is very great the

'windage' is materially felt, the result being that while any one of the forms that I have tried causes the boat to move at least one half faster on a certain wind (that is, on the wind particularly adapted to the slant of the members and their 'spill') on any but that certain wind it is a trifle slower than an ordinary sail.

"Taking the whole field and sails as they are used, the old form of sail, that is, the sail having no openings in it, is best. . . .

"For a long time I have been convinced that the more individual members in a sail, the speedier it was. (I have asserted above that these sails are very much more speedy when sailed as they are adapted to be sailed, that is, on a certain wind and course only.) These two sails then are exactly of the same dimensions, placed on boats of the same model and sailed the same course, all things being alike but the subdivisions of the sail, in one case into five members, in the other case into six. I always started the sail with five members ahead of the sail with six members, and invariably the sail with six members outsailed that with five. (I have often wondered in view of the above ex-

periments on the hull and sails, if the fastest boat under certain conditions would not be a boat of immense beam and shallow draft, that had a number of sails set on masts, that ran across the boat instead of fore and aft.)

"I feel that the hull of boats is better understood and carried out than is the set and draw of the sails. I suggest that when, as has often been the case, two boats of seemingly the same model of hulls raced, the different results were more attributable to the sails than to the hulls."

The Largest Bronze Casting.—It has been asserted that Barnard's statue of Pan, recently cast in New York, is the largest bronze statue that has ever been cast in one piece. This statue weighs about two and one-half tons. A correspondent of the *Revue Scientifique* (Paris), Frédéric Oom, writes that Portugal did still better than this more than a century ago. He says: "I may be permitted to recall the fact that on October 15, 1774, nearly one hundred and twenty-five years ago, there was cast in one piece, at the cannon foundry of the Lisbon Arsenal, a piece seven or eight times as large as this—the equestrian statue of King Joseph I., which is still standing in this city. I quote Ferdinand Denis's work on 'Portugal' (Paris, 1846, p. 406): 'There were used 656½ quintals [85,000 pounds] of bronze to cast the colossal statue of Don Joseph; after the conduits of metal had been removed it was calculated that there remained only 500 quintals [65,000 pounds]; the interior core of iron, made by Bartholomew da Costa, weighed 100 quintals.' Bartholomew da Costa was a lieutenant-colonel of engineers and director of the

gun-foundry where this memorable feat was accomplished. It took twenty-eight hours to melt the bronze, but only eight minutes to run it into the mold. This distances the New York record, a century and a quarter in advance of it. The statue still stands where it was erected on May 20, 1775, and dedicated on June 6 following. It is 7 meters [23 feet] high and the whole monument, with its pedestal, is artistically very remarkable. Those who do not know the facts generally consider the horse too massive; but it was modeled faithfully from the finest stallion of the royal stables."—*Translation made for THE LITERARY DIGEST.*

WHO INVENTED WIRELESS TELEGRAPHY?

WHEN any process has attained commercial success, the number of claimants for the honor of its discovery is always legion. The introducer or patentee of the process has to bear a good deal of abuse from those who claim priority, and is frequently called hard names. Marconi, the Anglo-Italian expert in wireless telegraphy, is now going through this pleasant experience. He does not claim, of course, to have discovered the principle on which his device works; but he does claim to have perfected the details and to have got the whole system into working order. But now comes Prof. A. E. Dolbear, of Tufts College, Massachusetts, who says that the Marconi system infringes a patent of his, taken out a decade ago. Says *Electricity*, in reference to the matter:

"Such being Professor Dolbear's opinion, it is his intention, as soon as the series of yacht races is concluded, to enjoin Mr. Marconi from exhibiting the working of his system before the naval authorities at Washington as originally intended. Referring to this subject Professor Dolbear's son, Mr. C. E. Dolbear, who is looking after his father's interests in the matter, says:

"In 1882 my father attempted to get a patent from the Government for the invention of wireless telegraphy, but the Government refused to issue one to him

on the ground that the scheme of transmitting intelligence between two points by means of electricity without wires was impracticable. For four years he worked, trying to prove to the Government that he was right and that his process was a success. Finally he convinced the Government by actual experiments, and on October 8, 1886, he received his patent, which was numbered 350,299. His patent was what was then known as an art patent, that is, it covered the entire art or scheme of the invention. In 1890 the Government ceased issuing such patents on the ground that if they were continued there would soon be no chance for inventors to patent small detail work. But our patent is that broad kind, and we propose to enforce our rights under it to the limit.

"My father's application for the patent was couched in substantially this language: 'My invention relates to the establishing electric communications between two or more points without the use of wires or other like connections, and consists in establishing a potential at one point considerably above the normal and a potential at the other point considerably below the normal, and by varying the potential at the first point cause variations of the potential at the other point.'"

We are reminded by *Electricity* that Henry Hertz, the German physicist, has usually been given the credit of demonstrating the existence of electric waves analogous to waves of light, and it has generally been supposed that this discovery laid the foundation of wireless telegraphy. It goes on to say:

"If Professor Dolbear's patent, taken out in 1886, or three years before Hertz's discovery, is as broad as claimed and covers

the whole process of transmitting in signals without wires, then either to Dolbear should be given the credit of having discovered so-called Hertzian waves, or else the principle on which his system is based is entirely different from that made use of by Marconi and consequently there can be no infringement. Furthermore, it is very doubtful if a patent so broad as to cover a well-known principle could be sustained, and in this connection it should be noted that the patents so far taken out by Marconi merely cover details of apparatus such as the coherer, vertical conductor, etc."

Marconi does not appear to be alarmed by the threatened litigation. He said to a reporter:

"I know nothing about any injunction. Nobody has said anything to me about interference with my work. Mr. Dolbear's patent has nothing to do with my invention. Preece in England had a patent dating back to 1895, but it did not affect me in any way in my work in England. My system is entirely different."

"Nothing would please me better than to have Mr. Dolbear begin legal proceedings against me. You may say that I am going right ahead with my work for the Navy Department as soon as the yacht races are over. I have taken advice on the subject and am fully confident of my position. They may bring on their lawsuits. I will welcome them."

Commenting on these facts, *The Scientific American* says, in a leading editorial (October 14):

"It was inevitable that the great success which is attending the Marconi system should have aroused the interest, and in some cases excited the jealousy, of other investigators in the field of wireless telegraphy. Marconi himself, we have no doubt, would be the first to acknowledge that there are others who have done conscientious work in this line of investigation, and he would be perfectly willing to give full credit where it is due. The existence of the Hertzian waves was known long before this young Anglo-Italian harnessed them so successfully to the uses of modern life, and others, both before and after him, have attempted unsuccessfully to do what he has done."

"We regret to note that his arrival in America has unduly excited certain holders of patents on wireless telegraphy, who believe that Marconi is receiving more credit than is strictly his due, and claim that the credit is not his, but theirs. This has been the history of all great epoch-marking inventions, and the recent extraordinary attempts to prove that the Bessemer steel process was misnamed, and that a certain Kelly had actually done the work and should receive the credit, will be fresh in the minds of our readers."

"Whatever may be the merits of this controversy, we are satisfied that it would be as easy to sweep back the tide with a broom as to prevent the system of telegraphy which has just done such good work off New York harbor and with the English fleet from becoming forever identified with the name of the man who first brought wireless telegraphy to a practical and useful consummation."

Effect of Colored Light on the Nervous System.—

It has long been claimed that colored light has a special effect both on men and the lower animals. It has been asserted by some that the lower animals grow more rapidly in violet than in white light. On the other hand, Flammarion has found that silkworms grow least rapidly in the violet rays. Experiments on the nervous system are in better accord. They show, according to Henri de Parville, writing in *La Nature* (Paris), that the red end of the spectrum is exciting to the nerves, while violet, blue, and green are calming. It is well known that turkeys and bulls are excited by red. On the other hand, blue glasses are often used to quiet horses. Wundt noted long ago that the different spectrum rays act differently on our nerves. Dr. Douza has attempted to cure certain nervous diseases by the action of light successfully treating melancholy with red, violent mania with blue, and other cases with violet. Another experimenter, M. Dor, brought on vertigo in certain nervous patients by the use of red light, while green had no such effect. In the photographic establishment of the Messrs. Lumière, in Lyons, France, sensitive plates are prepared in a large room by green light. Formerly, when red light was used, the workmen always sang and gesticulated at their work. Now they are calm, never speak, and assert that they are

much less tired in the evening than they were formerly. Similar testimony comes from the water-cure establishment at Vesinet, where people are put in a violet room to calm them, and in a red room when stimulation is desired. Every sufferer from "nerves" knows that a gloomy day affects him unfavorably, while the first ray of sunlight makes him gay again. It has been suggested that the green of vegetation, the blue of the sky, and the blue-green of the ocean may thus have a powerful influence in calming the spirits. M. de Parville cautions his readers, however, against too sweeping conclusions. All that we can say is that colors certainly appear to affect the organism, and that the subject will bear further investigation.—*Translation made for THE LITERARY DIGEST.*

BOOKWORMS AND THEIR PREY.

THE figurative use of this term is its most familiar use to most people. To the ordinary reader a "bookworm" usually belongs to the human species. There are, nevertheless, numerous book-destroying insects that are known collectively by this name, altho none of them are true worms. Willard Austen, of the Cornell University Library, writes of these as follows in *Appleton's Popular Science Monthly*:

"Research among the literature concerning library pests reveals the fact that no less than eleven different groups have members that are directly or indirectly accused of injuring books and bindings. The number of species in each group ranges from one to eleven, making a total of over thirty different species. In addition to these there are others against which the evidence is at best only circumstantial. It is not necessary to say that none of these bear any resemblance in any period of their existence to worms, and that the term bookworms is a misnomer. The word has become so firmly fixed in literature, both in its figurative and literal sense, that its misuse will no doubt continue."

Some of these various species, which are described in detail by the writer, are the so-called "book-scorpion," the well-known "fish moth" or "silver fish" (*Lepisma*), termites or "white ants," which operate in the tropics, book-lice, certain species of cockroaches, especially the so-called "croton bug," several kinds of moths, and many beetles. The so-called "death-watch" is also fond of books, but the various species of beetles seem, on the whole, to carry away the palm in this kind of destructive work. Says Mr. Austen:

"The largest number of book-destroying insects are found among the beetles of the order *Coleoptera*. To this group belong the 'book-borers.' The species thus far considered have been more or less dilettanti in literature. The beetles, however, seem possessed with a true spirit of investigation, and when they undertake a piece of work in a serious fashion they go to the bottom of it, sticking close to the line laid down. This characteristic distinguishes these insects from all others, and makes it comparatively easy to determine when they have been at work in a worm-eaten volume. No less than sixteen different species of this order have been either detected in this work, or such strong circumstantial evidence has been found against them that there is little doubt as to their guilt. Some insects seem to destroy books for the sheer want of something better to do; some do so in seeking the paste and sizing used in and about the books; others because the leather bindings are desirable material in which to undergo transformation; and, again, others haunt book-shelves and books in search of prey in the form of living creatures. But among the beetles are found tiny little grubs that seem to have a genuine intent to destroy; that set out deliberately to wreak vengeance on man's record of his thoughts, deeds, and discoveries, and, as if knowing the means which man uses to destroy, have sought to imitate him in the effects produced. As a result we find books filled with small, round, shotlike holes strongly suggesting the results which might follow from the use of the family Bible by the restless boy as a target for his first shotgun."

The following "record-breaking" case seems worthy of special notice:

"One of the most famous cases on record of insects boring

through books is that reported by M. Peignot, in which he states that twenty-seven folio volumes were pierced through in so straight a line that a cord might be passed through them and all the volumes raised by means of it. Different writers give the credit of this feat to different members of this group [the *Pinus* group] so that the most that can be said is that it was the work of some member of the *Pinidae*."

Mr. Austen sums up as follows:

"A review of the different families of insects whose habits under favorable conditions lead them to infest books and bindings will show them to be more or less well defined according to their feeding habits. The book scorpions and mite, *Cheyletus eruditus*, which, as we have seen, do not come under the head of insects, are primarily carnivorous, and their presence in books may be due to the fact that they find there animal as well as vegetable food. This is certainly true of the book scorpion, which feeds on mites, book-lice, and other small insects. The 'fish moths' or 'silver fish,' the 'book-lice' and the 'cockroaches' can have no other reason for infesting books than their liking for farinaceous substances such as are used in and about the bindings and labels of books. For this reason the damage done by them is largely confined to the exterior or interior of the bindings, and only so much of the book itself is injured as comes in their way in their search for food. The 'white ants' feed principally on wood, and in and about books there is more or less wood fiber which would be to the liking of these voracious feeders. The moths and beetles are the burrowers and borers. They seek retired places in which to lay their eggs where the larvæ will be surrounded with food for their growth. The moths and some of the beetles are more given to burrowing in the bindings, keeping close to the outer surface for the purpose, it is thought, of making it easy for the imago to emerge after the change is completed; while others bore straight tunnels often from cover to cover."

HOW DOES LIGHTNING KILL A TREE?

"WHAT happens to a tree when lightning strikes it?" This question was asked recently by a correspondent of *Knowledge* (London), and it is answered in the October issue of that paper by Baron Kaulbars, of the Russian military-scientific commission at St. Petersburg. Says General Kaulbars:

"This certainly is a question of general interest, and I have had the occasion to observe the effects of lightning several times in different countries. Before all, I must say that the result of a lightning-stroke on a tree may be of very different character, and depends, firstly, on the species to which the tree belongs, and secondly, on the condition in which the tree is at the time it is struck. If lightning strikes a tree after a long period of heavy rain, when the whole surface of the tree is damp, it generally does very little harm to the tree, and often none at all. On the other hand, if a tree is struck when its surface is dry, it is more severely damaged, because then the electric spark will descend by a line of lower resistance along the damp wood under the bark of the tree. In this case the heat of the spark instantly produces steam of very high pressure under the bark, and the latter is generally blown up in a long band. In such cases, pine-trees, and other trees of that kind, are much less damaged than other trees, because the wood of the pine is much more dry and contains a greater percentage of isolating resin. In a leaf-tree there is no isolating substance, and if the whole interior of the tree is damp, it often happens that a large quantity of steam is produced, and thus the tree is quite destroyed by the lightning. A very old tree with a hole in its interior, if very dry, can even be set on fire by lightning and burned down. In all these cases it is certainly always water-steam of a very high pressure which is the principal cause of the destruction. An interesting proof of the correctness of this explanation was afforded by the destruction by lightning of a monumental column in Gatchina, one of our imperial summer residences, 50 kilometers south of St. Petersburg. From the beginning of this century there stood a column nearly 15 meters high, named the 'Connetable.' It was of stone, and contained in its interior a series of iron angles, which held together the stones. After a period of rainy weather, it seems that much water had got among the stones into the interior of the monument. Then lightning struck it, killing the sentry on guard, and in the same moment the

whole column disappeared from its place, blown up as by an explosion. Its fragments were thrown around in all directions, and some of them were found at a distance of more than one hundred and fifty paces. The column was completely destroyed, and only the pedestal, nearly three or four meters high, remained. In this extraordinary case there is no doubt that the lightning spark, retained by the intervals between the iron angles, instantly produced a great quantity of steam of very high pressure in the interior of the damp column, and the latter was actually blown up by its explosion. In the year 1896 I saw a very curious case in Lapland, where the lightning had struck a *Pinus sylvestris*. In this tree the fibers of the wood form a spiral around the trunk. The spark had taken the same direction, and had blown up the bark on the corresponding spiral line."

Do Comets Ever Shine by Their Own Light?—

"A very important question will perhaps be solved this year," says the *Journal du Ciel* (Paris). "Rather timidly put forth several years ago, when it was remarked that certain comets had a light of their own, apart from that reflected from the sun, it has remained in silence ever since. Spectroscopy alone gave reason for this belief. The first comet of the year 1899 seems, from its appearance in the month of June, to give better evidence on this point than any of its predecessors. When receding from the sun, from May 31 to June 9, it showed, from May 31 to June 3, a diminution of brilliancy followed by an increase during the 4th and the 5th, a diminution again from the 6th to the 8th, and a new increase on the 9th. It is difficult, it would seem, to explain these fluctuations in any other way than by variations of a light belonging to the comet itself."—*Translation made for THE LITERARY DIGEST.*

Speed of Explosive Waves.—It has been shown by M. P. Vielle, as reported in the *Revue Scientifique*, that "the speed of propagation of sudden and intense condensations in a medium at rest may attain three times the normal speed of sound in the same medium. This fact constitutes an indirect verification of the theories of Reemann and Hugoniot, which predicted a discontinuity in wave-motion as a necessary consequence of the variable velocities of propagation of equally condensed waves. Recently M. Vielle, in the course of researches on the distribution of pressures produced in a tube by an explosive charge placed at one of its extremities, has obtained traces that seem to mark the origin of the discontinuity in the course of the wave's propagation, even when the wave is formed at the start, under conditions of evident continuity."—*Translation made for THE LITERARY DIGEST.*

New Uses for the Automobile.—The principle of the horseless carriage is being constantly extended. The latest development, we are told by *The Electrical Review*, is in the form of an invalid's chair. "A Toronto electrician is said to have designed an electromobile for this purpose, carrying a 4 horsepower motor and sufficient battery capacity for a 15-mile run at 4½ miles per hour." The same journal reports that an automobile ambulance is being made for St. Vincent's Hospital, New York City. "It will be propelled by electricity, and will be a model of its kind. Electric power is more advantageous for propelling a vehicle where it is essential to have a very steady motion. The large pneumatic tires, it is expected, will also contribute in no small degree to the comfort of the patient."

SCIENCE BREVITIES.

PROF. ALEXANDER GRAHAM BELL, inventor of the telephone, is now devoting nearly the whole of his time, according to *Electricity*, to experiments with flying-machines, and "is confident that he is not only on the right track, but within measurable distance of success. He is developing the kite idea, experimenting with planes of various sizes and weights. He has discarded the generally accepted principle that the machine must be of extraordinary lightness, and is calculating on securing stability and steadiness from weight."

"A METHOD of producing anesthesia by the direct application of an electrical current without the use of drugs was recently described by Dr. E. W. Scripture, of Yale, before the American Association for the Advancement of Science," says *The Scientific American*. "An alternating current with equal positive and negative phases was made to traverse the nerve. At a proper frequency of about 5,000 complete periods in a second it can be made to cut off all sensory communication by this nerve. Needles can be run into the part of the body supplied by this nerve without any pain being felt."

THE RELIGIOUS WORLD.

CHRISTIAN SCIENCE IN THE CLUTCH OF THE HUMORISTS.

TWO American humorists—"Mark Twain," and "Fra Elbertus" of East Aurora—have within the past month written upon the subject of Christian Science. Mark Twain (in *The Cosmopolitan Magazine*, October) puts his philosophizings in the form of an imaginary narrative of personal experience. Last summer, he says, he was on his way back to Vienna from a certain "Appetite Cure" in the mountains, when by some sad mischance he "fell over a cliff in the twilight, and broke some arms and legs" and a few other things. Some peasants happened to find him and carried him, in anything but a jesting mood, to a picturesque thatched cottage near by. There was no surgeon to be had, and as the horse doctor would not do, there was nothing left but to summon a Christian Science practitioner, who was said to be able to cure anything. She was accordingly sent for; but as she found it not convenient to come at once, she promised to give the sufferer "absent treatment" until the next day, asking him in the mean time to remain tranquil and comfortable, and to remember that there was nothing the matter with him. Mark could hardly credit his own ears, and the following dialog took place between him and his nurse:

"Did you tell her I walked off a cliff seventy-five feet high?" "Yes." "And struck a boulder at the bottom and bounced?" "Yes." "And struck another one and bounced again?" "Yes." "And struck another one and bounced again?" "Yes." "And broke the boulder?" "Yes." "That accounts for it; she is thinking of the boulders. Why didn't you tell her I got hurt, too?" "I did. I told her what you told me to tell her: that you were now but an incoherent series of compound fractures extending from your scalp-lock to your heels, and that the comminuted projections caused you to look like a hat-rack." "And it was after this that she wished me to remember that there was nothing the matter with me?" "Those were her words."

Mark sank back perplexed. But soon he roused himself and asked for "something to eat and smoke, and something hot to drink, and a basket to pile my legs in," and other comforts; but he found that his doctor had denied him the use of all these "delusions." She wanted him "to particularly remember that there are no such things as hunger and thirst and pain." The patient thus proceeds:

"It was a night of anguish, of course—at least, I supposed it was, for it had all the symptoms of it—but it passed at last, and the Christian Scientist came, and I was glad. She was middle-aged, and large and bony, and erect, and had an austere face and a resolute jaw and a Roman beak and was a widow in the third degree, and her name was Fuller. I was eager to get to business and find relief, but she was distressingly deliberate. She unpinned and unhooked and uncoupled her upholsteries one by one, abolished the wrinkles with a flirt of her hand and hung the articles up; peeled off her gloves and disposed of them, got a book out of her hand-bag, then drew a chair to the bedside, descended into it without hurry, and I hung out my tongue. She said, with pity but without passion:

"Return it to its receptacle. We deal with the mind only, not with its dumb servants."

"I could not offer my pulse, because the connection was broken; but she detected the apology before I could word it, and indicated by a negative tilt of her head that the pulse was another dumb servant that she had no use for. Then I thought I would tell her my symptoms and how I felt, so that she would understand the case; but that was another inconsequence, she did not need to know those things; moreover, my remark about how I felt was an abuse of language, a misapplication of terms—

"One does not *feel*," she explained; 'there is no such thing as feeling; therefore, to speak of a non-existent thing as existent is

a contradiction. Matter has no existence; nothing exists but mind; the mind can not feel pain, it can only imagine it.'

"But if it hurts, just the same—"

"It doesn't. A thing which is unreal can not exercise the functions of reality. Pain is unreal; hence, pain can not hurt."

"In making a sweeping gesture to indicate the act of shoeing the illusion of pain out of the mind, she raked her hand on a pin in her dress, said 'Ouch!' and went tranquilly on with her talk. 'You should never allow yourself to speak of how you feel, nor permit others to ask you how you are feeling; you should never concede that you are ill, nor permit others to talk about disease or pain or death or similar non-existences in your presence. Such talk only encourages the mind to continue its empty imaginings.' Just at that point the Stubenmädchen trod on the cat's tail, and the cat let fly a frenzy of cat-profanity. I asked, with caution:

"Is a cat's opinion about pain valuable?"

"A cat has no opinion; opinions proceed from mind only; the lower animals, being eternally perishable, have not been granted mind; without mind, opinion is impossible."

"She merely *imagined* she felt a pain—the cat?"

"She can not imagine a pain, for imagination is an effect of mind; without mind, there is no imagination. A cat has no imagination."

"Then she had a *real* pain?"

"I have already told you there is no such *thing* as real pain."

"It is strange and interesting. I do wonder what was the matter with the cat. Because, there being no such thing as a real pain, and she not being able to imagine an imaginary one, it would seem that God in His pity has compensated the cat with some kind of a mysterious emotion usable when her tail is trodden on which for the moment joins cat and Christian in one common brotherhood of—"

"She broke in with an irritated—"

"Peace! The cat feels nothing, the Christian feels nothing. Your empty and foolish imaginings are profanation and blasphemy and can do you an injury. It is wiser and better and holier to recognize and confess that there is no such thing as disease or pain or death."

"I am full of imaginary tortures," I said, 'but I did not think I could be any more uncomfortable if they were real ones.'"

The patient was told once more that there was no occasion to rid him of his imaginary tortures, since they did not exist, but were illusions propagated by matter, and matter had no existence. The conversation continues:

"It sounds right and clear, but yet it seems in a degree elusive; it seems to slip through, just when you think you are getting a grip on it."

"Explain."

"Well, for instance: if there is no such thing as matter, how can matter propagate things?"

"In her compassion she almost smiled. She would have smiled if there were any such thing as a smile."

"It is quite simple," she said; 'the fundamental propositions of Christian Science explain it, and they are summarized in the four following self-evident propositions: 1. God is All in all. 2. God is good. Good is Mind. 3. God, Spirit, being all, nothing is matter. 4. Life, God, omnipotent Good, deny death, evil, sin, disease. There—now you see.'

"It seemed nebulous; it did not seem to say anything about the difficulty in hand—how non-existent matter can propagate illusions. I said, with some hesitancy:

"Does—does it explain?"

"Doesn't it? Even if read backward it will do it."

"With a budding hope, I asked her to do it backward."

"Very well. Disease sin evil death deny Good omnipotent God life matter is nothing all being Spirit God Mind is Good good is God all in All is God. There—do you understand now?"

"It—it—well, it is plainer than it was before; still—"

"Well?"

"Could you try it some more ways?"

"As many as you like; it always means the same. Interchanged in any way you please it can not be made to mean anything different from what it means when put in any other way. Because it is perfect. You can jumble it all up, and it makes no difference; it always comes out the way it was before. It was a

marvelous mind that produced it. As a mental *tour de force* it is without a mate, it defies alike the simple, the concrete, and the occult.'

"It seems to be a corker."

"I blushed for the word, but it was out before I could stop it."

"A what?"

"A—wonderful structure—combination, so to speak, of profound thoughts—unthinkable ones—~~un~~—"

"It is true. Read backward, or forward, or perpendicularly, or at any given angle, these four propositions will always be found to agree in statement and proof."

After being further enlightened in the mysteries of Matter and Mind, of the Apodictical Principle, the Apocalyptic prophesies, and other occult things, the patient began to feel a wonderful improvement under the influences of the near and the absent treatment:

"The good work took a brisk start, now, and went on quite swiftly. My body was diligently straining and stretching, this way and that, to accommodate the processes of restoration, and every minute or two I heard a dull click inside and knew that the two ends of a fracture had been successfully joined. This muffled clicking and gritting and grinding and rasping continued during the next three hours, and then stopped—the connections had all been made. All except dislocations; there were only seven of these: hips, shoulders, knees, neck; so that was soon over; one after another they slipped into their sockets with a sound like pulling a distant cork, and I jumped up as good as new, as to framework."

But he still was troubled with stomachache and a pain in the head, and for these complaints he thought a common horse doctor would be more fitting. The doctor cured him and charged him only thirty kreutzers. Not so the lady:

"Mrs. Fuller brought in an itemized bill for a crate of broken bones mended in two hundred and thirty-four places—one dollar per fracture."

"Nothing exists but Mind?"

"Nothing," she answered. "All else is substanceless, all else is imaginary."

"I gave her an imaginary check, and now she is suing me for substantial dollars. It looks inconsistent."

In more serious wise Mark Twain thus tells what in his opinion is the truth underlying these manifold crudities and self-delusions:

"No one doubts—certainly not I—that the mind exercises a powerful influence over the body. From the beginning of time, the sorcerer, the interpreter of dreams, the fortune-teller, the charlatan, the quack, the wild medicine-man, the educated physician, the mesmerist, and the hypnotist, have made use of the client's *imagination* to help them in their work. They have all recognized the potency and availability of that force. Physicians cure many patients with a bread pill; they know that where the disease is only a fancy, the patient's confidence in the doctor will make the bread pill effective."

"Faith in the doctor. Perhaps that is the entire thing. It seems to look like it. In old times the king cured the king's evil by the touch of the royal hand. He frequently made extraordinary cures. Could his footman have done it? No—not in his own clothes. Disguised as the king could he have done it? I think we may not doubt it. I think we may feel sure that it was not the king's touch that made the cure in any instance, but the patient's faith in the efficacy of a king's touch. Genuine and remarkable cures have been achieved through contact with the relics of a saint. Is it not likely that any other bones would have done as well if the substitution had been concealed from the patient? When I was a boy a farmer's wife who lived five miles from our village had great fame as a faith-doctor—that was what she called herself. Sufferers came to her from all around, and she laid her hand upon them and said, 'Have faith—it is all that is necessary,' and they went away well of their ailments. She was not a religious woman, and pretended to no occult powers. She said that the patient's faith in her did the work. Several times I saw her make immediate cures of severe toothaches. My mother was the patient. In Austria there is a peasant who drives

a great trade in this sort of industry and has both the high and the low for patients. He gets into prison every now and then for practising without a diploma, but his business is as brisk as ever when he gets out, for his work is unquestionably successful and keeps his reputation high. In Bavaria there is a man who performed so many great cures that he had to retire from his profession of stage-carpentering in order to meet the demand of his constantly increasing body of customers. He goes on from year to year doing his miracles, and has become very rich. He pretends to no religious helps, no supernatural aids, but thinks there is something in his make-up which inspires the confidence of his patients, and that it is this confidence which does the work and not some mysterious power issuing from himself."

Mr. Elbert Hubbard ("Fra Elbertus") takes a similar view of the case. He says (in *The Philistine*, October), referring to a challenge said to have been issued to the Christian Scientists by a Chicago physician, Dr. Wende:

"How can any good ever come out of Christian Scientists accepting the challenge of Dr. Wende?"

"The fact is that this matter of 'healing' and 'curing' is largely in the maze. Men get sick and men get well. If they take Dr. R. S. V. Pierce's Golden Discovery and get well, R. S. V. P. says 'I done it,' and puts their pictures, and his own, in *The Weekly Blizzard*.

"If Dr. Wende's patients survive, Dr. Wende says, 'If you had resorted to incantations you would now be dead.'

"Both Dr. Pierce's and Dr. Wende's patients often 'doctor' until their money is gone and faith, too, and then they turn to C. S.—and get well. Why they get well most Christian Scientists will glibly explain, but I do not believe that the Christian Science people really know—they think they know, and are therefore satisfied."

"I once heard a leading professor in Bellevue Medical College say that there were only three drugs that could be relied upon. And further, while we could calculate the immediate effect of these drugs, no one could say just what their after-effects were.

"Wise and honest fizishuns [Mr. Hubbard's spelling] admit their ignorance concerning the mystery of life. How it comes, makes its own body, wavers, flickers, grows bright again, and at last goes out in rayless night, leaving its outgrown shell on life's unresting sea—does a woman in Concord, N. H., know all about these things?"

A FRENCH VIEW OF TENNYSON'S RELIGION.

TAINE did not find Tennyson's religious nature of much interest, and it has been the view of the average literary Frenchman that Tennyson was great despite rather than because of those feelings that brought forth "In Memoriam." The current number of *Le Correspondant* (Paris) contains, however, a lengthy and able analysis of "The Religion of Tennyson," which the writer finds a subject of much interest and which he treats from a Roman Catholic point of view. We are told that at heart the laureate was a Catholic, tho his mind led him to agnosticism. He remained in the Church of England because he allowed his religious nature so far to rule him; had he given himself up to that nature entirely, he would have joined Newman and Manning. We quote as follows:

"Tennyson was of a religious temperament. This is not rare among the English, but the degree to which religion predominated over the mind of the poet was unusual. The education that he had received in his family, his sojourn in the country up to his nineteenth year, his constant touch with nature, had developed in him this side of his character.

"But this profound religious sentiment was at the same time allied to a sort of idealistic skepticism. Tennyson had an innate tendency to believe in the identification of his being with that of God—he was strongly inclined toward pantheism. Above all, he was inclined to doubt the existence of the body—his own included. In this his philosophy approached to that of Berkeley; but he went further and was often tempted to ask himself if life

was not a great dream: 'Be thou wise in this dream-world of ours.'

With this almost mystic tendency, the writer goes on to say, Tennyson enters life at a time when all England was stirred by religious questions. Philosophy as well as theology had had little place in his studies at Cambridge. When, in order to fill up these *lacuna* in his education, he took up the study of the various systems, he did so at a disadvantage. In studying, he was more of the poet than the philosopher, and, what was a greater disadvantage, he studied alone. He fell into all sorts of sophisms, and out of them came what might be called a religion of his own, one in which his originally religious nature still retained its purity, tho much tortured by his attempt to put things on "a reasonable basis." In 1869 these philosophical studies led him into the Metaphysical Society, of which he became president. There he got more philosophy than he had bargained for. The writer continues:

"After this experience Tennyson let the philosophers discuss as much as they would, taking no part in their interminable and, to him, useless controversies. He adhered to his religion, the religion of his childhood, not because his soul governed him, but because his heart did, not by conviction but by sentiment. He could believe in God, immortality, punishment and reward in a future life; this was enough to admit of his being an Anglican, tho it would not suffice to make him a Catholic. Like many of his friends in the church, distinguished clergymen, too, he laid stress on the 'faith' as distinguished from the 'forms of faith.' But, it must be said, of these men the least satisfied with this theory was the poet. His was too much the 'soul naturally Christian' to be content with a vague, obscure, abstract Christianity, made up of doubts."

The writer points out the great delight that the poet took in the society of his Catholic friends. "Maud," which the writer declares his most passionate outpouring of soul, was written while three distinguished Catholics were his guests, and tho he called the belief of his friend Ward a "blindness," he several times said he would be happy if he too were afflicted that way. The meeting that he and Newman arranged did not take place. If it had, in all probability nothing would have come of it:

"The great obstacle to his conversion, the only one that we know of—he has given it to us himself—was,

He would not make his judgment blind.

"For, to an Englishman, to give up the examination of his religion is to renounce his reason. As Cardinal Newman said, the Englishman's house is his castle, and while this maxim is healthy in politics, it is dangerous when applied to religion and morality. Tennyson was thoroughly an Englishman. It was not enough to him that 'God had spoken.' Moreover, he could not see how false were the ideas he had that in becoming a Catholic he would be obliged to let the Pope think for him."—*Translation made for THE LITERARY DIGEST.*

THE FUTURE OF THE CHRISTIAN RELIGION.

THE Rev. Dr. Henry R. Percival, an Episcopal clergyman of the diocese of Pennsylvania, gives some arguments drawn from his observation of religious forces in this country and abroad to show that the coming religion is to be neither Protestant nor Roman Catholic, but a modified "Catholicism," possessing a dignified liturgy and ritual, and a sacramental system not dissimilar to that of the moderate High-Church body in the Anglican communion at the present time. He says (in *The Nineteenth Century*, September):

"The so-called 'crisis' in the Church of England, which to us on the other side of the Atlantic looks like a very small quasi-political affair, partaking largely of the nature of a 'tempest in a teapot,' seems to me to be but one manifestation of that spirit of which I propose to speak, a spirit which, unless I am entirely misinformed, is sweeping over the whole Western world, America included.

"In taking, then, a careful view of the state of Christianity, three things seem to me to be absolutely certain:

"1. That among civilized nations the form of Christianity nourished by Rome, which is ordinarily called popery, is making no headway.

"2. That the distinctive doctrines of every Protestant reformer are being more and more universally rejected.

"3. That there is in all Protestant Christendom (the Anglican church being, perhaps improperly, included in that category) a distinct movement toward Catholicism and a most evident desire for ceremonialism."

While each of these statements may be doubted and denied by some people, he says, yet for all that they may be true, and he proceeds to give his reasons for thinking so. In relation to the first assertion, he makes use of much the same arguments as did Mr. Walter Bagot in his article on the decline of Roman Catholicism in the *Nuova Antologia* (see THE LITERARY DIGEST, September 16) supplementing them by a consideration of Roman Catholicism among the Latin nations, where, he says, the number of persons who are not only not Catholics but who are actively opposed to Christianity "is positively appalling." As to his second point, the decline of Protestantism, he says:

"Here I need not ask the reader to take my word for anything, for his own experience will bear out the truth of my statements. Where are those who believe, as Luther taught it, that doctrine of imputed righteousness which he called 'justification by faith alone'? The doctrine is extinct. What person calling himself a follower of Luther would dream of advising a penitent to sin all the more in the name of Christ, because 'where sin abounded there did grace much more abound'? Who to-day believes the doctrines of Calvin on reprobation, etc.? Most of these dogmas are as extinct as the famous dodo. And as for Puritanism, that mighty power which for a time overthrew both altar and throne, and founded a religious tyranny in New England in these western lands, what remains of it to-day except a pale, emasculated, swiftly dying sabbatarianism?

"Even old-fashioned orthodox Protestantism is in America on the wane, and while the law of William Penn's own Pennsylvania still by statute fines those who speak against or insult the Holy Scriptures of God, many Protestant ministers in the hundreds of pulpits of Philadelphia find no more interesting and exciting theme for their Sunday preachments than the showing the Word of God to be the erring and often immoral and ridiculous word of man!

"It is no exaggeration to say that Protestantism is rapidly disintegrating, and is losing its hold as a teaching power. And in this connection it must always be remembered that Protestantism was from its inception as distinctly a teaching institution as ever Catholicism claimed to be. To be sure, with a glaring inconsistency, it declared the 'right of private judgment.' But if any one dared in the exercise of that right to arrive at conclusions opposite to those of the Protestant leaders, he must suffer accordingly, and therefore Luther informed Calvin, or Zwingli (which was it?), that because he disagreed with him in regard to the Supper he would go to hell! And Calvin burned Servetus at the stake because he did not agree with the Geneva doctrine of the Incarnation!

"Who to-day holds fast by the Westminster Confession? Or by the Augsburg Confession? Or by the Book of Concord? Who but a handful among old-fashioned Tractarians considers himself bound to accept the Thirty-nine Articles of the Church of England? An American bishop, whose diocese is in the wilds of New England and contains but twenty-seven clergymen all told, has recently written a letter to a church newspaper in which he makes the highly interesting assertion that the clergy are not bound even to believe the statements they make in the prayers of the church service, which they offer out of the prayer-book to the God of truth! The bishop would seem to be a fair match, in this respect at least (altho not in others), to the rationalistic German professor, Adolf Harnack, who made a similar statement with regard to the Lutheran ministers of the state church, who were obliged to accept the Apostles' Creed, which they did not believe!

"It is not too much to say, then, that Protestantism as a system of positive religious belief is dying out, and that its professors are for the most part able to continue in its ministry only through

some device of casnistry, which in any other matter would be considered by themselves, as it is in their case by almost every one except themselves, dishonest and dishonorable. It is manifest that this state of things can not go on, and that the only final result of 'progress' in this direction, so far as faith is concerned, must be unbelief, and, so far as organization is concerned, decay and dissolution."

As to his third point—the existence of a strong movement back to "Catholicism," but not to Roman Catholicism—he says that any one who remembers the common method of conducting service fifty years ago can not fail to be aware of a mighty change. This is not only true in the Anglican church, but among the Presbyterians, Methodists, and other leading Protestant bodies. Even north of the Tweed in Scotland, he says, a large number of ministers in the church of Knox are "out-and-out Ritualists." In Scandinavia and in Lutheran Germany it is the same. Among the Lutheran churches on this side, which two decades ago could hardly be distinguished from those of the Methodists and Presbyterians, we often find now an altar with retable, a cross and flower vases, and sometimes—chiefly in the West—crucifix and candles. A highly developed form of liturgical prayer-book has, he says, been set forth by the two largest bodies of American Lutherans. He continues:

"This wave, however, of which I am speaking is not a mere wave of ceremonialism; it is likewise a great wave of doctrine, bringing back, or at least drawing attention to, the doctrines and practises of the church which had been lost sight of or rejected at the Protestant Reformation. Dr. Harnack has written well and most truly upon this point in his recent little book, which has been translated into English. His conclusion is that orthodox and believing Protestantism is becoming Catholicized: that the un-Protestant idea of the church as an institution with power to control the conscience and teach the intellect is daily gaining ground, and that this inclination, if continued, will end in the overthrow of Protestantism altogether, which of course Harnack looks upon as a great misfortune.

"I have a firm belief that this is God's good way of leading the nations back to Catholicism—not to the Catholicism of medieval and modern popery, but to the Catholicism of primitive prelacy."

WHAT HINDERS THE PROGRESS OF CHRISTIANITY IN JAPAN?

LITTLE more than a decade ago Japan was regarded as the most promising field for Christian missions, and some sanguine people had figured out just how many years would elapse before the whole Japanese nation became Christian. Now it is acknowledged on all hands that the progress of Christianity there has been seriously checked. The reasons for this check have been discussed by the Rev. Dr. Christlieb, who has for years been representing the Evangelical Protestant Mission Society of Germany, a body that aims to send out only the most carefully educated men, and which is controlled chiefly by theological professors. "The Tendencies of Japanese Civilization and Christianity" is the title of Dr. Christlieb's work, and from it we glean the following data:

In Japan is found a remarkable mixture of two radically divergent types of culture and civilization, one based on the old Buddhist Confucianism of farther Asia, and the other on modern Western ideas derived largely from the technical and the natural sciences. This mixture has never really resulted in an organic union. The mechanical ambition of the Japanese appears in almost every phase of public thought and activity, but especially in politics and in education. In many instances the self-conceit inherent in the old type of culture has worked detrimentally to the progress of ideas introduced from the West, and fully 60 per cent. of the children are not in school. In the so-called middle or private schools the utmost confusion prevails. In religious matters, two old schools predominate, namely, the older Shinto-

ism and the younger Buddhism, both polytheistic. In this connection, the current opinion that Buddhism has, of all the religions of the world, the greatest number of adherents, should be corrected. This claim is based on the supposition that the Japanese and Chinese are all adherents of this creed. This is a great mistake. As a matter of fact, the leading religion of the world numerically is Christianity, with nearly five hundred million followers. Next on the list is the Confucianism of China, with about three hundred million; next comes Hinduism with nearly two hundred and fifty million; while Buddhism and Mohammedanism are rival claimants for the fourth place, each with something between one hundred and two hundred millions.

Statistics show that in recent years the progress of Christianity in Japan has been very slow. In fact, the gain from 1897 to 1899 has been little more than four hundred, the number of Christians for the first year being 40,578 and for the latter 40,981. The opposition now generally entertained by the Japanese against the Christian church is due to the changed attitude which they have in recent years developed in so marked a degree to all influences from abroad—a conservative reaction of a pronounced type. This return to nativism is largely due to the easy success in the war with the Chinese. This reaction from the former enthusiasm for innovation has assumed a particularly determined character. The Japanese have reached the conclusion that they had been too hasty in discarding the old in favor of the new, and this spirit has found its way even into the Christian elements of Japan, which aspired to the establishment of a church independent of the churches in countries that have been Christian for centuries. Altho the Japanese have known Christianity only for thirty years and there is scarcely a single adult native who has been a Christian since his childhood, yet they began to regard themselves as more capable to develop a Christian culture and life than those who brought them the new faith.

These ideas and ambitions are largely due to the fact that attempts were made to build up a Christianity wholly divorced from the national character of the people. The reaction is, to a certain extent, the result also of the radical anti-Japanese type of life that representatives of Western Christianity aimed to develop, completely ignoring the many excellent traits that make up the national character of the people.

Still another element that has entered into this reaction is the fact that the Japanese, who is naturally not too deep intellectually and who is but half civilized, has been made acquainted with Western agnosticism and atheism as found in the writings of Schopenhauer and Herbert Spencer. Through these a certain dangerous contempt for the supernatural has been developed, especially among the younger generation. All these factors and others have united to produce the modern opposition to Christianity in the Japanese empire.—*Translation made for THE LITERARY DIGEST.*

RELIGIOUS NOTES.

A NEW religious monthly, *The Northfield Echoes*, is to be established at Northfield, Mass., as the official organ of Mr. Dwight L. Moody's work there and in Chicago. It will represent the Northfield schools, the Bible Institute, the Summer Bible schools, and the Northfield extension movement. Besides containing a general review of religious work, it will offer Bible study helps by some of the leading students of Great Britain and America. The editor is to be Mr. W. R. Moody, who has resigned editorial charge of *The Record of Christian Work* to devote his energies to the new magazine.

SUPERINTENDENT ANDREWS has aroused considerable comment by his objection to the singing of Kipling's "Recessional" in the Chicago public schools, on the ground that it is "strongly theistic" in its teaching and therefore violates the rule for the exclusion of religious teaching in the schools. The *Chicago Times-Herald* and other papers call Dr. Andrews's attention to the fact that "Washington's Farewell Address," "Lincoln's Gettysburg speech," and the national songs "America" and "The Battle Hymn of the Republic" are also tainted by a very strong infusion of "theism," and should therefore consistently be put on Dr. Andrews's black list.

AT the annual meeting of the Roman Catholic archbishops of the United States in Baltimore the second week in October, it was unanimously agreed that the wish of the Christian Brothers to have the teaching of the classics retained in their schools should receive the support of the American hierarchy, and that the Pope should be petitioned to restore the heads of colleges belonging to the order. It will be remembered that these Brothers were deposed by the European head of the order for refusing to give up the long-established teaching of Latin and Greek in their American schools. Archbishop Riordan, of San Francisco, was commissioned by the archbishops as special envoy to the Pope.

FOREIGN TOPICS.

GREAT BRITAIN AND THE OTHER GREAT POWERS.

THE general condemnation by the Continental press of Great Britain's attitude toward the Boer republics has aroused in many directions the hope that other powers will interfere. As yet, no movement whatever toward such intervention is visible. In England an attitude of defiance is reported as the best means of preventing interference. The London *Outlook*, speaking of the part the navy is likely to play in the war, says:

"The lesson of the hour is not to be found in the naval force which might be used to assist the army, but in the fact that, tho the latter is engaged at both ends of the African continent, and India retains sufficient men to deal with any possible native trouble, the strong right arm of the empire, the navy, is still free. This is seemingly forgotten by foreign ministers and foreign journalists, who are just now waiting and watching for the moment when they fancy England's preoccupation in South Africa may give them their chance."

Germany, thinks the same paper, will not interfere, but Russia may. It says:

"The storm center, if storm there is to be, was graphically indicated the other day by an eminent statesman when he said that within eighteen months, and perhaps sooner, the people of this country would know the geography of the Persian Gulf better than they knew the geography of the English Channel. In plain phrase, Russia covets a port on the Persian Gulf—for preference Bandar Abbas—covets it so ardently that, should England display any weakening of the national spirit, or should engage her whole strength elsewhere, it would be astonishing if Russia did not profit by the opportunity to rush on her designs in those waters."

The Berlin *Nation* thinks Russia will exhibit "an almost Nazarene self-abnegation if she does not profit by the occasion." At present, however, nothing certain is known. The general impression is that the powers, if they have any designs inimical to Great Britain, will wait until she is fully engaged in South Africa. Neutrality is the order of the day; but that neutrality is more "benevolent" toward the Boers than toward Great Britain. The *Rossija*, of Russia, casting around for a peg on which to hang a quarrel with England, says:

"It is not yet certain whether the Russian Government would not be justified to advise international arbitration, founded upon the resolutions adopted at The Hague Peace Conference, by which both Great Britain and the Transvaal should profit. Great Britain must realize that public opinion is against her in this quarrel. It is very likely that numerous volunteers will leave Europe to join the Boers, just as Serbia was assisted by many Russian volunteers in her fight against Turkey. Should England attempt to hinder the movements of these volunteers, Russia may be induced to interfere. The South African war certainly offers inducements to Russia to strengthen her position in Persia. England may be compelled to make important concessions."

Persistent rumors are afloat to the effect that the Russian Government is already urging upon the powers of Continental Europe the necessity of intervening, and compelling England to accept arbitration. The Foreign Minister of Russia, Count Muravieff, has been visiting European capitals, and much significance is attached to his movements. The St. Petersburg *Novosti*, however, tho opposed to Great Britain, says that there can be no question of any such intervention. The European powers, it says, indorsing the view of the Berlin official press, "have nothing whatever to do with what is going on in South Africa." But this opinion is not shared by the *Novoye Vremya*, which refers to the matter as follows:

"The warlike British statesmen are being assured that the African trouble will not entail any international complications

and will not impel a single great power to arrest Great Britain's arm, in consequence of which her naval supremacy is in no danger of jeopardy either in the waters of the far East, before Constantinople, or in the Mediterranean. But to guarantee that the sentimental protest of the world will not prompt a single Continental power to arrest Great Britain's arm, the German official organs can do only, with considerable force, in behalf of Germany alone. From the fact that, at this juncture, there is no disposition in other European centers of political activity to intervene in the Anglo-Boer difficulty it by no means necessarily follows that such indifference of attitude will be maintained everywhere to the end, even when the fall of Transvaal independence shall threaten to convert all South and East Africa, from the Cape of Good

IN ACCORDANCE WITH A TIME-HONORED CUSTOM THE BRITISH VOLUNTEER DIVESTS HIMSELF OF HIS UNIFORM AT THE APPROACH OF WAR.

—Kladderadatsch, Berlin.

Hope to Cairo, into one vast British possession, extending at the north to the Suez Canal."

A writer in the Paris *Liberté* suggests that Kaiser Wilhelm will be able to organize the hoped-for coalition against Great Britain. The Brussels *Indépendance Belge* declares that the animosity against Great Britain will certainly produce a better understanding among Continental powers. It says:

"Neither France nor Russia nor Germany can regard the destruction of Transvaal independence with equanimity. Victory on the part of Great Britain would only whet her appetite, and induce her to make an effort for the realization of her dream of an all-British Africa from the Cape to Cairo. Under these circumstances it is quite possible that, before the war is ended, the similarity of interests will bring about that colonial *entente cordiale* between the three powers which has been aimed at."

The Madrid *Epoca* says this war may easily show that the British colossus has feet of clay. In the Paris *Economiste Français* Leroy Beaulieu writes:

"Suppose the Transvaal holds out a few months. Even if Russia does not make use of the occasion to occupy Peking, she can obtain valuable concessions from China, and strengthen her position in Persia. Germany also may obtain advantages in China, and that the differences between the United States and Great Britain will be settled without a quarrel is not at all certain. If the Transvaal holds out a year, Britain is likely to have trouble in India also. The Boers, on the other hand, can only win by the war. Had they failed to make a firm stand, their independence would have been lost. More they can not lose even in case of defeat."

The German Government is evidently determined to remain neutral, but the German people are very restive. The Berlin *Rundschau* expresses itself to the following effect:

If the Boers are beaten, the British aggressors will soon begin to intrigue against our own colonies. It would not be difficult for them to do so, as Bismarck, whose view was not very clear in this respect, allowed the English to hem us in everywhere. That England would never allow reasons of justice and equity to sway her is proven by her conduct against us in Samoa. Unfortunately our fleet does not suffice to attack England single-handed. This consideration has influenced our Government, which makes a virtue of necessity.

Much dissatisfaction is caused in Great Britain by the attitude of the Johannesburg Germans, who have furnished a strong con-

tingent to the Boer army, and have repeatedly declared that the alleged grievances of the Uitlanders are merely a British pretext for annexing the Transvaal. The Berlin correspondent of the *London Times* says:

"The statement of the *Kölnische Zeitung* that some 4,000 Germans will rally to the Boer flag is regarded as a gross exaggeration. The participation of even one half or one fourth of that number of German subjects in a war against England would, nevertheless, be a matter for profound regret in the interests of international comity, and it certainly would not be superfluous for the German Government, which, I have been repeatedly assured, sets the greatest store by the friendship of England, to issue a proclamation calling the attention of German residents in the Transvaal to their duty of neutrality."

The German papers point out that the Chief Witboy, who attempted a rising in Southwest Africa, has confessed that Cecil Rhodes furnished the arms and ammunition—McKenan, Duncan, and Flint, who were afterward punished by the German authorities, being his agents. The alleged attempt of the English to sow distrust between Germany and the United States, their behavior during the Samoan troubles, and the endeavor to picture Germany as the enemy of peace at The Hague Conference, are mentioned with much bitterness as evidences of England's "perfidy," and the papers declare it is time for the German people, if not the Government, to pay off old scores. *The Times* correspondent mentioned above suggests a small peace-offering. He says:

"It is difficult to see why the behavior of the German press should be held to form a factor that ought seriously to influence the deliberations of statesmen and diplomats. In connection with the Transvaal crisis German journalistic opinion is too strongly biased by Anglophobe feeling to deserve serious consideration. There are other and more delicate matters, however, affecting the good relations of the two countries, and in this connection it is believed that the pacification of the German press by an acceleration of the Samoa negotiations would be desirable."

The Hamburger Nachrichten says that a speedy and satisfactory settlement of the Samoan question is only part payment of the debt which Great Britain has accumulated.—*Translations made for THE LITERARY DIGEST.*

PAUL KRUGER'S ULTIMATUM.

THE ultimatum which the Transvaal Government presented to Her British Majesty's Government may be summarized as follows:

- (1) That all points of difference shall be amicably arranged.
 - (2) That the British troops shall be instantly withdrawn.
 - (3) That all reinforcements sent since June 1, 1899, shall be sent back.
 - (4) That the British troops now on the high seas shall not be landed.
- The Transvaal Government pressed for "an immediate and affirmative answer to these four questions" before or upon Wednesday, October 11, "not later than 5 o'clock P.M."

ALBION (to her warrior): "Receive, my brave fellow, the real British thews and sinews."
—Figaro.

the Boers, regard the ultimatum as having constituted an ending of peaceful negotiations and as leaving England no alternative

but to fight. *The Daily Telegraph* declared that "Kruger has slammed the door in Great Britain's face." *The Standard* remarked that "one could wish it were a bad joke, but unfortunately

PLAIN ENGLISH.

JOHN BULL: "As you will fight, you shall have it. This time it's a fight to a finish."
—Punch.

it is a pantomime in which genuine blood will be shed." *The Daily Chronicle* said that no formal declaration of war was needed, nor would such a document, if presented by the Transvaal, receive recognition, "as Great Britain has always denied to the Transvaal the status of an independent state." *The Daily Mail* says, "The Boers and their German and Irish hirelings will now undergo their just punishment." Even the Liberal speakers in Parliament, in commenting more or less critically on the Queen's address, agreed that the ultimatum could be answered by nothing but war. "Such an ultimatum," said the Earl of Kimberley, Liberal leader in the House of Lords, "could not possibly meet with any response but that which has been made by Her Majesty's Government." And Sir Henry Campbell-Bannerman spoke of the demands and language of the ultimatum as "such that it would have been impossible for the government of any self-respecting country even to take into consideration." The Irish speakers did not, however, hesitate to defend the Boers even in the issuing of the ultimatum.

The press of other countries oppose the British assertion that the Transvaal would have gained anything by waiting longer, and not in one instance, so far as we have observed, is the part Great Britain has played defended in a European paper other than British. *The Amsterdam Handelsblad* says:

"This absolute want of dignity and self-restraint with which England's poets and journalists welcome the war is the best proof of England's guilt. It was not thus that Germany went to war with France. Yet here, where no war between equals has been contemplated, where a great power sends its hirelings against a numerically weak people, this small enemy is abused and slandered, and England's poet laureate [a mistake; Swinburne, not Austin, is referred to] describes the liberty-loving, free Boers, who leave home and wife and child and all that is dear to them to give their life for their independence, as 'dogs, agape with jaws afoam!' Now, who are the ones whose 'jaws are afoam,' pray? The plain fact is that the English are incapable even to act as gentlemen while beginning this war."

The *Amsterdam Nieuws van den Dag* remarks that "we are used to the tune of English lyres, both in poetry and prose, but it does not blind our judgment." *The Frankfurter Zeitung* says:

"The threadbare assertion that England has been forced into this war because the Boers refuse equal rights to the Uitlanders has long since been disproven. The British poet-laureate, the Ministers, parliamentarians, and newspapers continue to use the phrase. But that does not make it true, by any means."

The *Vossische Zeitung* declares that "it is impossible to find any other reason for the war than the desire of Great Britain to possess the Transvaal gold-fields. The war is nothing but the continuation of the Jameson raid." Theodor Barth, in the *Berlin Nation*, writes in the main as follows:

I do not mean to say that we Germans are better men than the English when it comes to a question of "fake" patriotism; but we have one wholesome restraint—military service. The "patriotic" Londoner who argues with rotten eggs against peace demonstrations is fully determined to keep his own valued carcass out of harm's way. He pays other people to defend the Union Jack, and enjoys his glory at home and in comfort. The Parisian *épistier* is not half so jingoistic to-day, and even in the United States the fact that the militia was used against the Filipinos has produced a sobering effect, despite the paroxysm of enthusiasm with which Dewey was received. Whether England is strong enough to live through the period of actual isolation which her moral defeat in this quarrel with the Transvaal imposes upon her, remains to be seen. Undoubtedly she is the wolf that accused the lamb of troubling the water. Her friends can not but deplore her degradation. The very first effect of her attitude is that she has lost political credit, and it is doubtful whether even the conquest of the Transvaal will make good this loss. To be of use to England, that conquest must be swift. If England fights with varying luck, other complications are certain. It may turn out that this war was not only criminal, but also foolish.

The *Journal des Débats* describes Mr. Kruger's ultimatum as both dignified and moderate, and the attitude of Great Britain inexcusable.

Many English papers express themselves extremely confident as to the result of the war, and this confidence is reflected in the colonies. Thus the *Toronto World*, regarding the engagement at Glencoe in the light of a decisive British victory, assumes that "the Canadian contingent will not be necessary" and that "the sending out of an immense army corps to South Africa from Great Britain appears ridiculous." *Money*, London, says:

"The Transvaal Republic is committing suicide. In a few months it will probably have ceased to exist, and the Transvaal will be placed in the position it ought to have occupied years since as a British colony. Kafir shares should now be held and the outcome of events awaited. No serious fall in prices is to be apprehended, and a 'boom' will follow when the Boers are reduced to submission."

A careful examination nevertheless reveals that the magnitude of the war is not underrated. "We are the reverse of alarmists," says *The Saturday Review*, "but it is always well to catch your hare before cooking him." *The Westminster Gazette* points out that, tho Swinburne urges England to "strike, and to strike home," there can be no advance until the troops are all assembled in South Africa. *The London Outlook* says:

"Never yet has any army organization in the world been called upon to mobilize, transport, and keep 70,000 men in fighting condition 7,000 miles away. . . . This field force is composed firstly of an army corps, which in the present case consists of 34,000 men; secondly of a cavalry division, and in this case 5,000 men; and thirdly of lines of communication, in this case 10,000 men. Add to these the other forces in the field and you have 70,000 men charged with the occupation of half a continent, and accompanied by ammunition, rifles, machine-guns, clothing, war-balloons, motor-cars, bicycles, and Roentgen-ray apparatus; tinned rations for the body and selected tracts for the spirit; to say nothing of horses and mules and their fodder, both collected from the four corners of the earth."

Commenting on this point the Madrid *Epoca* points out that Spain, tho she did not claim to be a maritime power of the first rank, and tho her resources were small, provided for a much larger force for years.—*Translations made for THE LITERARY DIGEST.*

POBEDONOSTSEFF'S DEFENSE OF RUSSIAN POLICY.

IN Western Europe, K. P. Pobedonostseff, the overprocurator of the Holy Synod of Russia and a leading member of the committee of ministers, is regarded as the incarnation of reaction, intolerance, and bigotry, as the author of all the illiberal legislation adopted in recent years by the Russian Government. He is held responsible for anti-Catholic, anti-Jewish, and anti-German measures, and it is supposed that, but for his powerful influence, the young Czar would have done more to justify the hopes of the cultured and liberal elements of the empire. Recently M. Pobedonostseff passed through Vienna and accorded an important interview to a representative of the *Neue Freie Presse*. All the St. Petersburg papers are commenting upon his significant utterances, which have made a marked impression in Europe.

One of the first questions he was asked was in relation to the persecution of Roman Catholics in Russia. He admitted that he had opposed and fought the proposal to receive a papal representative at St. Petersburg, and he hoped no such official recognition would ever be extended by Russia to Catholicism; but the charges of persecution he denied. He said:

"It is contrary to truth to describe me as the enemy of Roman Catholicism. It is also untrue that I am omnipotent in the government of Russia. In the committee of ministers I have but one vote, and my power is no greater than that of any other member. Catholics are not interfered with in Russia on account of their religious beliefs. It often happens that Russians become converts to the religion of Rome, and they are subjected to no punishment for it, tho they act openly. We fight Catholicism only to the extent and in so far as it is an instrument of Polish agitation. I assert that in Russia every Roman Catholic priest is an agent of 'Polanism,' and of course we cannot allow any propaganda of Polish nationalism. We can not permit the Poles to do as they please, regardless of Russian national interests. We are carrying on our struggle against 'Polanism,' not against Catholicism."

Next the Jewish question was broached, and M. Pobedonostseff denied that he entertained any hatred for Jews, that he had instigated the series of special laws against them, or that he had any sympathy with antisemitism as a general movement. He numbered among his best friends many highly educated and worthy Jews, and, he had admiration for the enlightened and philanthropic among the race. The late Baroness Hirsch, he pointed out, had put a million francs at his disposal for the Russian schools, which she would scarcely have done if he were a persecutor and enemy of her people. Then he added:

"The Jewish question in Russia is no more a religious question than the Catholic one. We Russians are not at all characterized by that bigotry which Europe imputes to us. The Jewish question has always been an economic one with us. In Russia, the Jew is as a rule a sober, law-abiding, moderate man. He marries early, lives properly, and is industrious. In consequence of all this he is enabled to obtain supremacy and exploit the Russians, who can not compete with him. That is why we have had to restrict the Jews to certain sections of the empire. When, thanks to their great expansive power, they overstep the assigned limits, we are obliged to resort to special measures. But the laws of humanity are not disregarded in Russia."

M. Pobedonostseff adverted to the improved relations between Germany and Russia. At one time, he said, German influence in Russian internal affairs, political and administrative, was too powerful and dominant, and it has been necessary to struggle against this predominance. But at present there is no occasion for any unfriendliness. England, he said, was sending emissaries to Finland and trying to spread false and dangerous notions of Russia's designs toward that dependency. There has been no violation of Finnish rights. Recent measures were simply intended to secure military unity and strength. Finally, M. Pobedonostseff expressed the opinion that the trial at Rennes had demonstrated the innocence of Dreyfus. The verdict he believed to have been a deliberate injustice committed in order to shield the implicated generals. He regretted that the case had ever assumed a political aspect.—*Translation made for THE LITERARY DIGEST.*

MAKE YOUR MONEY EARN MONEY

Experience has demonstrated that money wisely invested in Chicago real estate almost invariably pays interest at the rate of from six to ten or fifteen per cent per annum.

Oaklawn, within a thirty-five minute ride of the business center, offers an attractive field for conservative investors.

Forty thousand dollars have been spent in improving its natural beauty before the property is fairly on the market.

Just a little money and the ability to pay a small sum each month will buy a valuable lot in Oaklawn. Fifty dollars down and fifteen dollars per month does not amount to much NOW, but at the end of three or four years it leaves you in possession of a desirable piece of property which may be worth twice as much as you have paid.

Ask for our plan, booklet, and plat of Oaklawn.

We want to make a direct business proposition suited to YOUR means.

Here are a couple of bargains in property outside of Oaklawn.

For double corner lots on Sixty-fifth Street and Clinton Avenue for \$2,000. \$500 cash—balance \$500 per year. The same corners just across the Street sold for \$2,500 two years ago. Since that time an electric line was built two blocks away from these lots. This has increased values 15 per cent. You ought to sell these lots in three years for \$800 each.

Six lots in Ridge View. \$375 each. Can be sold only in pairs. \$50 per lot cash and \$10 per month per lot. This property is near the choicest of improvements and soon to be in great demand.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

The French consul at Manila has sent to his Government a despatch containing a long list of enterprises which Americans are establishing in the archipelago, and warns his own people that they must be up and doing unless they want to be left far in the rear.

"The appearance of Manila is destined to change in a short time. The introduction of a new and powerful factor in the commercial problem of this country will compel Spanish merchants to close their houses or to entirely change their business methods. American competition has commenced, in fact, to assume alarming proportions. What will be the importance of this current when these newcomers are free to direct the commercial destinies of the Philippines—to flood this market with all the products of their industries?"

"The English and German merchants, formerly masters in this colony, watch with keen interest the events now in progress and await, with undisguised impatience, the termination of the struggle between the Americans and the insurgents, that they may discern the turn that things will take. No one, however, doubts that a strong rivalry is about to arise, and they regret the past condition of affairs and the advantages they then possessed.

"Many of the wealthy people, mixed breeds, and Indians have left for Hongkong or suspended business, and, as their expenditures and style of living will be reduced in the future, the value of the market, as an importing center, will diminish. It will be more than ever necessary for the French merchants to study their interests in this market, not by depending upon consular reports, but by sending commercial travelers here to investigate special lines of business. It is probable that under the enterprising and energetic methods of American business men, a new and richer market will soon be opened on these islands, both in imports and exports."

More American barber chairs should find their way into Germany, says Ernest L. Harris, consular agent at Eibenstock. In the large cities, shops of the first class possess many chairs of American make. In the provincial towns a comfortable barber chair is rarely seen. The ordinary chair in Germany has a cane bottom with a wooden head rest. In Germany, barbers shave customers to a certain extent in their own homes. Much time is spent each day in going from house to house. I think one reason may be the poor equipment of the shops. The best way to introduce these chairs is for our manufacturers to secure membership in some one of our export associations which have established sample rooms in the large cities of Germany. The chairs should be put on exhibit, and I am sure some middleman would soon be found who would undertake the task of introducing them into the smaller towns and villages. I might further add that a few months' credit would greatly facilitate sales. Other barber supplies, such as razors, soaps, perfumed waters, mugs, brushes, etc., would, in my opinion, find a smaller market, as these articles are exported more or less from Germany to other countries.

Consul Bergholz, of Erzerum, under date of June 2, 1899, says: "An Armenian merchant here, Missak Venetian, who has recently been ordering goods from the United States, complains that certain shipping agents in New York have added to the cost of his goods by having an invoice sworn to before a notary public and his signature and seal authenticated by the Turkish consul-general. I would ask the Department to notify exporters that consular invoices are not required by the Turkish customs authorities."

Consul-General Gowey, of Yokohama, writes to a New York firm as follows: "Cargoes of Japanese manganese ore do not run evenly, analyses showing a range of fineness from 28 to 70 per cent., the average being 55 or 60 per cent. Some shipments, of course, have exceeded these grades, but the impression here is that there is always uncertainty in placing an order. Details as to prices, etc., might be obtained from the American Trading Company or Messrs. Browne & Co., Yokohama, or Messrs. Howell & Co., Hakodate."

The Wonderful Blue Gum Tree of Tasmania A GIANT AMONG TREES

The Tasmanian Blue Gum Tree

may well be considered a giant among trees, rising, as it does, to the height of 300 feet, and measuring in many instances, forty feet in diameter. The leaves are of a curious form unknown in this country. They are large, sickle-shaped, of a smooth, shining, bluish-green color, thick and leathery. By holding the leaf to the light a number of little bright spots can be seen; these are the glands in which "Hyomei" is found. In Tasmania this tree is called Fever Tree, as when planted in marshy districts it destroys the miasm. It does this, first, by emitting antiseptic odors from its leaves, and by its roots acting as a sponge and absorbing the water from the ground. Thousands of these young trees have been purchased by the English government and transplanted in India during the past five years, where they have almost completely neutralized the marshes.

It is from the fresh green leaves of this wonderful tree that science has succeeded in obtaining.

HYOMEI SOAP

The FIRST and ONLY one ever manufactured without the use of FATS GREASE and ALKALI.

NOTHING LIKE IT

has ever been made before, and if it were not for the beautiful, creamy lather, one would doubt that they were using soap of any description.

**There is no soapy smell
No overpowering perfume
No smarting of the skin results
from its use**

Instead, the skin is thoroughly cleaned and refreshed, every pore is opened and ALL obstruction to perfect circulation removed. The skin soon becomes soft, smooth and entirely free from blemish. In fact, no troubles of any kind with the skin can exist when Hyomei Soap is used daily. Try it once, and no other will ever be found among your toilet requisites.

THE R. T. BOOTH CO.

No. 10, Ave. L, Ithaca, N. Y.

Tailor-Made Suits, \$5.

If you wish something decidedly new in a dress or cloak, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples. There are hundreds of firms selling ready-made suits and cloaks, but we are the only house making fashionable garments to order at moderate prices. Our Catalogue illustrates an exquisite line of ladies' costumes and cloaks, selected from the newest Paris models. Our designs are exclusive, and are shown by no other firm, and the fabrics from which we make our garments comprise only the very latest novelties. Our Catalogue illustrates:

Charming Cos-

tumes and Tailor-Made Suits, faultless in cut and finish, \$5 up. Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up. Jaunty Capes, \$4 up. New Skirts, cut according to the latest French models, \$4 up.

Golf Capes, Newmarkets, Bicycle Suits, Riding Habits, Rainy-Day Suits, etc.

WE PAY EXPRESS CHARGES TO ANY PART OF THE WORLD. If when writing to us you will kindly state whether you wish samples for suits or for cloaks, we will be able to send you a full line of exactly what you desire. In addition to our regular line of samples we have special lines of black goods and fabrics for second mourning.

Write to-day for Catalogue and Samples; you will get them by return mail. They will be sent Free to any lady who wishes to dress well at moderate cost.

THE NATIONAL CLOAK COMPANY,
119 and 121 West 23d St., New York City.

..AN.. ELEGANT GIFT

for Birthday, Wedding or Anniversary—a pair of these handsome Military Hair Brushes. They are of the very finest quality; have rich ebony backs with dainty sterling silver ornaments, and the best stiff white Russia bristles. They are a brush that will please any man of refined tastes. We will send you a pair with initials (three or less) engraved on each script, direct from the factory, by express prepaid, for only \$2.50. At retail they would cost \$5.00 to \$6.00. If they are not absolutely satisfactory, return them at our expense, and we will send back your money in full. For each initial over three add 10c. extra—for monogram, 50c. extra.

PERSONALS.

To visit Christiania and not see Dr. Henryk Ibsen would be like touring Egypt and missing a sight of the Sphinx and pyramids (says Perriton Maxwell in *The Book Buyer*). "He is the most interesting personage in the Norwegian capital—and Ibsen, before any one, is conscious of that, fact. Down the Karl Johann's Gade to the Grand Hotel he walks every day, rain or shine: when the weather is particularly inviting, he pays two daily visits to the hotel. On such days he appears punctually at one in the afternoon and again in the evening. He has his own table in the gallery, overlooking the garden, and the minute he arrives a mute but well-trained waiter places before the shaggy philosopher a bottle of brandy and another of soda. This is the author's favorite stimulant, and two glasses of the liquor his limit at a sitting. These daily libations seem to be the one consolation that life affords to Henryk Ibsen, whose ingrained melancholy impresses itself on all who get near enough to him to converse informally.

DR. LUDWIG LEICHHARDT, one of the most brilliant of Australian explorers, is almost the only prominent discoverer in modern times who has disappeared from view, and of whom no trace has ever been found (says *Harper's Round Table*). Men still living remember the famous journey that this young German made in the interior of Australia, when he and seven comrades tramped for sixteen months from Moreton Bay, near the city of Brisbane, far north through the heart of Queensland, discovering many a mountain range, many a river, and savage tribe that had never been met before. From end to end this journey, which cost only six hundred and twenty-five dollars, was a revelation of the unknown. It was a great journey, and the book in which Leichhardt described it has many readers to this day. The explorer set out on his second undertaking, which he never completed, and the mystery of his fate was never solved.

MORE OR LESS PUNGENT.

Similarity.—"Time is money," quoted Stiles. "Yes," said Giles, "and I haven't a moment that I can call my own."—*Chicago News*.

Surrounded by Splendor.—"Myrtle Gushton writes that she is now living surrounded by splendor." "I suppose she's got a new silk petticoat."—*Chicago Record*.

Is your Brain Tired?

Take Horsford's Acid Phosphate.

Dr. Y. S. THAYER, Memphis, Tenn., says: "It recuperates the brain and enables one to think and act. Makes exertion easy."

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

If you can't play You can still have Music in the home

Surprising improvements and new features in this instrument for home music make it possible to reproduce at any time the choicest musical selections with such delicate expression, rich harmony, and perfectly modulated volume as to satisfy the most refined and exacting musical tastes and to afford delightful entertainment. None of the mechanical harshness or expressionless "tin-kling" noticeable in other instruments are apparent here, but rich, warm tones of perfect quality.

"A wonder to all who hear its sweet music."

The Stella Music Box

It reproduces waltzes, marches, songs, symphonies or hymns as originally written. Its tones are 20 to 25 per cent. longer than those of other boxes. The music is produced from perforated metal sheets without the objectionable pins usually used. The STELLA's marvelous quality of tone is due to its duplex system of keys.

THE SHEETS WILL LAST A LIFETIME
The STELLA Music Boxes are manufactured at Ste. Croix, Switzerland, by a firm with 53 years experience in this business.

"I have tried several sorts of music boxes but the 'Stella' is the best on the market."—Hon. Thomas Watson.

"I had no idea a mere music box could play with such expression."—Chas. E. Murray, Clarendon Springs, Va.

"All remark on its piano-like tones."—John Branch, Hendersonville, Tex.

IDEAL SWISS CYLINDER MUSIC BOXES. Playing from 6 to 600 tunes and changing tunes automatically. From \$28 to \$2,000.

box 166, Madison Square Post-Office, New York City.

would simply put up Jeffries and Helen Gould and beat 'em out in a walk!"—*Puck*.

A Summer Boarder.—FREDDIE: "There's a man out there who says he has not had anything to eat for two weeks."

MRS. COBWIGGER: "Is he a tramp?"

FREDDIE: "No, ma; he says he is a summer boarder."—*New York World*.

A Lost Art.—MR. HENPECK: "I wish, sometimes, I had the knowledge of the ancient Egyptians."

FRIEND: "In regard to what, old man?"

MR. HENPECK: "Perhaps you've seen some of their mummies. They understand how to make a woman dry up and remain so."—*Life*.

Forty Knots.—"What progress does this little girl make in her sewing?" asked the tall and stately patroness, at the charity school, as she stopped before the daughter of a 'longshoreman and noticed that the pupil had her thread hopelessly tangled. "About forty knots an hour," roughly replied the girl, as she looked up.

Not Troubled That Way.—BARBER: "I've got a preparation that will prevent your hair from falling out."

CUSTOMER: "But you are baldheaded yourself."

BARBER: "That's very true; but you overlook the fact, sir, that a baldheaded man is never troubled by hair falling out."—*Roxbury Gazette*.

The Modern Way,
which is to use

Franklin Mills Flour
A FINE FLOUR OF THE ENTIRE WHEAT

as follows:—

One pint water, one pint milk, one-half teaspoonful salt, one tablespoonful sugar, one tablespoonful butter, one-half fresh compressed yeast cake. Stir in enough flour to make a fairly stiff batter, then stir thoroughly; let rise three hours; knead lightly; mould into two loaves; let rise again, and bake about one and a quarter to one and a half hours in a moderate oven.

Easily done, little work, certain success, and the most delicious and beautiful bread ever produced. But be sure you use Franklin Mills Flour.

If your grocer does not have it, send us his name and your order—we will see that you are supplied. THE GENUINE MADE ONLY BY

THE brands of White Lead named in the margin are old friends, tried by many generations of use and proven the best. They are made by the "old Dutch process" of slow corrosion, and, with pure Linseed Oil, there is no other paint as good.

There are other brands made by quick or patent process and numerous mixtures of Barytes, Zinc, Whiting, etc., which are branded and sold as Pure White Lead. Make sure that the brand is right.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint

National Lead Co., 100 William St., New York.

He Couldn't Blow It Out.—An old farmer who had been to the city was describing to his friends the splendor of the hotel he stayed at. "Everything was perfect," said he; "all but one thing—they kept the light burning all night in my bedroom, a thing I ain't used to." "Well," said one of his listeners, "why didn't you blow it out?" "Blow it out?" said the farmer; "how could I? The pesky thing was inside a bottle!"—*Exchange*.

International Disaster.—An exchange says a gentlemen invited some friends to dinner, and as the colored servant entered the room he accidentally dropped a platter which held a turkey. "My friends," said the gentleman, in a most impressive tone, "never in my life have I witnessed an event so fraught with disaster to the various nations of the globe. In this calamity we see the downfall of Turkey, the upsetting of Greece, the destruction of China, and the humiliation of Africa."

Current Events.

Monday, October 23.

—Fighting takes place around Dundee in Natal, with considerable losses on both sides.

—Ex-President Harrison is received by the Prince of Wales at Marlborough House, London.

—The President orders four army officers to South Africa, to observe and report on the military operations.

NEW YORK DODD, MEAD & COMPANY, PUBS. CHICAGO

ton, is presented to Admiral Dewey by the Home Fund committee.

—Governor Roosevelt makes a stumping tour through Maryland in the interests of Governor Louder.

—Grant Allen, the author, dies in England.

Thursday, October 20.

—After an all-night march in the rain, General Yule's command joins that of General White at Ladysmith, which is made the base of operations; the Boers resume the shelling of Mafeking and set fire to several houses.

—An influential petition and resolutions passed at the New York mass-meeting, urging mediation by the United States in the Transvaal war, are presented to President McKinley.

—Plans for a Pacific cable line under control of the United States, to extend from San Francisco to Manila, are framed by officials in Washington.

—The will of Cornelius Vanderbilt is made public; Cornelius Vanderbilt, Jr., gets only \$1,500,000, but his brother Alfred, who gets the bulk of the fortune and is made head of the family, gives him about \$6,000,000 from his inheritance.

—Sir Henry Irving, Miss Ellen Terry, and company arrive in this country.

Friday, October 27.

—Important British successes are reported from Mafeking and Kimberley; Boer reports admit severe losses suffered at the battle of Glencoe; the Cape premier, W. P. Schreiner, joins with Sir Alfred Milner in a loyal proclamation to the Afrikaners.

—The Cabinet holds a meeting of unusual length and importance, at which the situation in the Philippines and the outlook for the coming elections are discussed.

—Carl Schurz, in a letter to the Germans of Cincinnati, says that imperialism is a greater menace to the country than free coinage.

—Brig.-Gen. Guy V. Henry dies from pneumonia at his home in New York.

Saturday, October 28.

—The British and Boer forces are only four miles apart, and a patrol of mounted infantry is shelled by the Boers.

—It is reported that the Philippine commission will probably return to Manila after drawing up a preliminary report; the 47th Volunteer Regiment is ordered to proceed to the Philippines.

—The Lotus Club, of New York, gives a dinner and reception to Sir Henry Irving.

Sunday, October 29.

—The Boers are closing around Ladysmith, and an attack is daily expected.

—Fierce political campaigns are being carried on in Ohio, Nebraska, Kentucky, and Maryland.

—The Civil Service Commission decides that solicitation by letter of federal employees constitutes an offense against the civil service act.

—Lord Rosebery is elected rector of Glasgow University.

THE SLAYTON INSULATION CURE FOR Rheumatism and Sleeplessness.

Most of the readers of this paper are already well acquainted with our treatment, and its theory, based on the discovery of the great DR. BROWN-SEQUARD, of Paris, that these ailments, as well as Neuralgia, Sciatica, Pains in Muscles and Bones, Nervous Weakness and Lost Vitality arise from an excessive flow of electricity from the body to the earth. We do not ask: "Do you believe in our method?" but, "Have you made a *free* trial of

"Slayton's Electric Switch Glass Casters and

"Slayton's Insulating Spun Glass Insoles."

Their use on the bed during the night, and on the feet during the day, have produced most wonderful cures. The Insoles are almost perfect protection against catching cold. These appliances mark a revolution in the treatment of disease, and so confident are we of their merit that we urge all afflicted ones to make a *free* trial of them. Here is a letter, taken at random from hundreds of similar ones:

ESMOND, ILL., March 15, 1899.
THE ELECTRIC CASTER CO., Gentlemen:—I had the inflammatory rheumatism last spring. It left me with stiff joints, lame, could not sleep; lay awake; nervous weakness. I saw your ad. in the *Ram's Horn*. I got the Casters, put them under the bed, went to bed and to sleep. Have not had a pain since; as sound as a gold dollar.
Very respectfully,
FRED GOONRICH.

FREE TRIAL FOR ONE WEEK. We will gladly send any one a full set of the SLAYTON ELECTRIC SWITCH CASTERS and SLAYTON INSULATING INSOLES on receipt of 25c. for postage and packing, or separately, 17c. for the Casters and 8c. for the Insoles. Try them for one week according to directions. If they do not help you, return them by mail and no charge will be made. If they do help you (and they almost certainly will), send us \$3 for the Casters and \$2 for the Insoles. These articles can be used separately with great benefit, but to secure the *greatest* relief both should be used. Be sure to state whether Casters are to be placed on iron, brass or wooden bedsteads, and the size of shoes Insoles are to fit.

Send us your address on a Postal and we will mail you our Illustrated Announcement Number, containing a full prospectus of the Contributors and Contributions engaged for the new volume.

THE YOUTH'S COMPANION, Boston, Mass.

ONE CENT A WEEK

For Ten Weeks' Subscription

PUBLIC OPINION is now a magnificent weekly magazine, comprising, in its 52 issues, a grand total of over 1700 pages of reading matter and illustrations. Its field is as wide as the range of human interests. Its readers, independent of other periodicals, are fully abreast of the times, sufficiently well informed to appear in any company and to discuss with intelligence both sides of every question of the hour, whether political, social, religious, educational, scientific, literary or artistic.

No other publication wields so tremendous a force in the affairs of men; for it reflects the world's thought and action—the basis of present endeavor and future achievement.

In a recent letter one subscriber says: "In its present form it is worth at least \$100.00 per year to any progressive, intelligent reader who wants to keep posted."

This special introductory offer gives you ten numbers (regular price, \$1.00) for the price of one (ten cents)—the cost of postage. It will not be made again. Send at once your name, address, and 10 cents (coin or stamps) to America's Representative Weekly.

PUBLIC OPINION, 19 Astor Place, New York

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

VOL. XIX., No. 20

NEW YORK, NOVEMBER 11, 1899.

WHOLE NUMBER, 499

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

REPORT OF THE PHILIPPINE COMMISSION.

THE preliminary report of the Philippine Commission, signed by President Schurman, Admiral Dewey, Professor Worcester, and Colonel Denby, and indorsed by General Otis, is considered by both the expansion and the anti-expansion press to be the strongest indorsement the Administration's policy in the far East has yet received. The report seems to derive its weight largely from the public confidence in the special knowledge and incorruptible impartiality of the members of the commission, who approved the report unanimously. Admiral Dewey is reported as having said to the Washington correspondent of the *New York Herald*: "I wish you would say for me that I indorse every word of the commission's admirable report. . . . It is an absolutely truthful representation of all that has happened and of the existing situation. There has never been a moment since the first gun was fired that the United States could have withdrawn from the islands, and the reasons set forth in the report as to why permanent American control is essential are, in my opinion, immovable. There is no other alternative." One effect of the report, according to another despatch from *The Herald's* Washington correspondent, was the unanimous agreement of the Cabinet "to urge upon Congress the immediate passage of a joint resolution declaring it to be the intention of this Government to retain the Philippine Islands, to suppress insurrection, and to grant the broadest kind of local self-government to the inhabitants of the islands, under such form of United States civil government as may be expedient."

The following are, in substance, some of the most striking declarations of the report:

Admiral Dewey, in a memorandum given to the commission, says of his relations with Aguinaldo when the latter landed in the Philippines on May 19: "No alliance of any kind was entered into

with Aguinaldo, nor was any promise of independence made to him, then or at any other time." After General Anderson arrived, Admiral Dewey requested Aguinaldo to evacuate Cavite, and he accordingly removed to Bacoor. "Now for the first time," says Admiral Dewey's memorandum, "arose the idea of national independence. Aguinaldo issued a proclamation in which he took the responsibility of promising it to his people on behalf of the American Government, altho he admitted freely in private conversation with members of his cabinet that neither Admiral Dewey nor any other American had made him any such promise."

The Filipinos, in their rebellions against Spanish rule, were not fighting for independence, but for reforms in Spanish administration. When our war with Spain began, there was no insurrection in the islands, the previous one, which was confined to the island of Luzon, having been concluded by the Treaty of Biach-na-Bato.

"Deplorable as war is, the one in which we are now engaged was unavoidable by us. . . . Whatever the future of the Philippines may be, there is no course open to us now except the prosecution of the war until the insurgents are reduced to submission. The commission is of the opinion that there has been no time since the destruction of the Spanish squadron by Admiral Dewey when it was possible to withdraw our forces from the islands, either with honor to ourselves or with safety to the inhabitants."

The strong anti-American feeling is confined to six of the ten Tagalog provinces in Luzon, is not unanimous even there, and is growing noticeably less. The population of the ten provinces is about 1,500,000. Outside Luzon the anti-American feeling hardly exists anywhere except in Panay. Where insurgent rule has been established it has proved worse than Spanish misrule. The island of Negros is prospering under American rule, after an attempt at native rule had failed. The commission draws from this the conclusion that "a large amount of American control is at present absolutely essential to a successful administration of public affairs."

There is no national solidarity in the Philippines. The archipelago is occupied by a large number of tribes differing widely among themselves in language and customs, and often hostile to one another.

The town governments organized under American rule during the commission's stay in the Philippines gave general satisfaction. Much supervision over the town governments was found necessary, as the officials were timid and slow to comprehend. At many of the elections the voters went about "asking whom they were expected to vote for," and it was often hard to persuade them to vote at all.

"Should our power by any fatality be withdrawn, the commission believe that the government of the Philippines would speedily lapse into anarchy. . . . Only through American occupation, therefore, is the idea of a free, self-governing, and united Philippine commonwealth at all conceivable."

The failure of the Filipino peace envoys was due to the fact that the envoys had no powers. Our commission omitted no effort to secure a peaceful end of the struggle, but the opportunities which our commission offered and urged "were all neglected, if not, indeed, spurned."

The expansion press seems to find the report itself the best argument for its acceptance, and nearly all its editorial utterances consist of summaries of the report's chief features, with a few words in regard to the high character of the commissioners. The anti-expansion press refers to it as a "campaign document," and points out alleged inconsistencies between this report and previous official reports from officers in the Philippines. The *Hartford Courant* (Rep.) makes what is perhaps the strongest argument that has appeared for the acceptance of the report when it appeals

to the confidence its readers have in the character of Admiral Dewey. *The Courant* says:

"Mr. Bryan, Mr. Schurz, Mr. Cockran, Mr. Atkinson, all the rest of them, must now make their choice quickly between attacking the character for truthfulness of George Dewey, and standing convicted of deception before the American people. The chance is still open to them to say that they themselves were deceived; but they must say it at once or not at all. There's no time

THE PHILIPPINE COMMISSION.

for shilly-shally. The people at last have the evidence in their hands. The men we have named and their newspaper echoes have been holding forth for months past on the Administration's perfidy in its dealings with Aguinaldo—the broken alliance, the broken promise of independence. Now, in his personal memorandum embodied in the preliminary report of the commission, Admiral George Dewey says: 'No alliance of any kind was entered into with Aguinaldo, nor was any promise of independence made to him, then (May, 1898) or at any other time.' This is testimony from the man who was there and who knows. Any politician or editor who so much as peeps again about 'broken alliance' and 'broken promise' will be saying, in effect, that the admiral of the navy is a liar. That will be inadvisable. To put the fact mildly, it will displease the American people. They are inclined to be fond of him, and all the Bryans and Atkinsons, *New York Posts* and *Springfield Republicans* between Jaalam Point and Calumpit couldn't shake their confidence in his veracity. . . . Which knows more about the matter—George Dewey or the 'anti-imperialist' spouters and ink-splashers? Whose advice is likely to be the sounder and safer for the country to follow—his or theirs?"

The *Washington Star* (Ind.) says: "We have in this paper a

complete refutation of many slanders against the American name, and a thorough justification of what has been done in the Philippine Islands under the American authority. Friends of the truth have every reason, indeed, to rejoice." The *Boston Transcript* (Ind.) rejoices that the report "puts an end to the swarm of rumors which have confused public judgment of the Philippine question." The *Philadelphia Press*

(Rep.) points out that the members of the commission are all "without taint of partizan bias further than the fact that a majority of them were not in entire sympathy with the Republican Party." *The Press* continues:

"When the commission was appointed by the President it was conceded by all to be as fair a commission as could be chosen for the purpose of trying to bring about peace and of investigating and reporting on the situation in those islands. President Schurman was made the head of the commission because he had expressed doubts as to the advisability of carrying on the Philippine war. This non-partizan commission spent several months in traveling about the islands, studying the conditions and the people, and in seeking to bring about peace with Aguinaldo. Admiral Dewey was there from the beginning, and everybody has conceded that his opinion in regard to what should be done in the islands would govern the Administration."

The *New York Journal of Commerce* thinks that the "anti-imperialist" version of the war is discovered to be "fantastic in its variance from the facts," and says that "no one can pretend to be an honest man and any longer misrepresent the Philippine

situation." The *New York Tribune* (Rep.) avers that "if this report is not to be believed, and if its recommendations are to have no weight, then we may as well abandon scholarship, renounce reason and, grant that judgment is 'fled to brutish beasts.'"

The *New York Times* (Ind.) says that the report "will leave no candid mind unconvinced of the sincerity of our procedures and the honorable 'unselfishness of our intent.'" The *New York Sun* (Rep.) thinks that the report "must carry conviction to every reasonable mind," and the *Philadelphia Times* (Ind.) foresees as a final result of the commission's labors that "the flag will stay in the East."

Perhaps the ablest effort to reply to the commission's report is found on the editorial page of the *Springfield Republican*. The *Republican*, like the *New York Evening Post*, regards the report as a campaign document, and says: "There is cause for deep regret that the President's Philippine commission should have been prostituted for political purposes." The fact that the report contains "not the slightest intimation" that the President has "made the smallest mistake" in his course in the far East is proof conclusive, thinks *The Republican*, that the report is a political circular. It proves too much. The *Republican* then proceeds to point out a number of discrepancies between this report and previous official reports of officers in the Philippines. The report, for example, says there was no cooperation between the American and native forces in the capture of Manila; *The Republican* cites passages from General Anderson's report to show that this is incorrect. The report says that when hostilities broke out between our troops and the Filipinos, "immediately after the first shot the insurgents opened fire all along their line"; *The Republican* cites an official report to prove that they did not open fire "immediately," and hence that their attack was not preconcerted. *The Republican* says:

"It may be objected that such criticism is petty, mere quibbling. Yet, in a historical review, these are notoriously important points, and in convicting the commission of misrepresentation concerning them the criticism is justified that the report as a whole lacks the judicial quality and should be regarded as a one-sided campaign document, designed to carry the Ohio election."

The *Hartford Times* (Ind.), another anti-expansion paper, contends that the report missed the main knot in the whole problem:

"It is not true, in spite of all that the commissioners say, that there has been an intelligent attempt to gain the confidence and good-will of the Filipinos by giving them any assurances whatever in regard to their future. The commission dwells at great length on its dictum that the 'war' was inevitable. But a great many things in this world are not inevitable until after we have ignorantly or unwisely made them so. The drunkard who is pulled out of the gutter can truly say that his fall into that place was inevitable. It was so after he had upset his brain with alcohol. Nowhere does the commission deal fairly and squarely with the main fact of the whole Filipino situation—the desire and the determination of the people of the island of Luzon to be free and to govern themselves. For better or for worse we have succeeded in stirring up in the hearts of that people the spirit of patriotism. How are we to exorcise it? Professor Schurman and his associates do not undertake to tell us. . . . With such a spirit fully aroused in the Filipinos it makes little difference whether the 'war' which we are waging with them shall end this month or next year. We can not succeed in making subjects of them. We can never gain their friendship until we promise them the opportunity of at least an attempt to govern themselves."

The *Chicago Chronicle* (Dem.) says:

"When we come to examine this remarkable campaign document we find that it contains the most conclusive proof not merely of ingratitude, but of downright treachery, in the treatment of the Filipinos by the Administration. We find that it contains a sufficient, tho incomplete, explanation of the transformation of the Filipinos from friends into implacable foes."

The *St. Louis Republic* (Dem.) notes with much satisfaction

that the commissioners do not recommend the annexation of the islands, and thinks that if the President is wise he will take it "as a notification that he is not in touch with the people on this question."

BRITISH REVERSES IN SOUTH AFRICA.

THE verdict on the quality of the Boer's courage, marksmanship, and strategy thus far displayed seems to be that he has more than fulfilled the warmest expectations both of his friends and his foes. The list of British losses in the actions where the British are reported victorious is so large as to create the feeling that President Kruger is making good his promise that if the republics must belong to England a price will have to be paid that will "stagger humanity." The opinion still prevails that the British will undoubtedly win in the end, but the early successes of the Boers and the revelation of their splendid fighting qualities have led many to predict a far longer and bloodier conflict than the causes of the war are thought to warrant.

"Playing Horse" with the British.—"A suspicion is beginning to pervade the minds of persons who had expected fine work from the Boers, but have been disappointed in their achievements thus far, that the gentle burghers have been playing horse with the British. There has been something almost disgusting to their admirers in the manner they have run away whenever the British started after them. Why should they have run away from Glencoe? Apparently they had a position of advantage on the hills from which they could have stopped General White's entire army, but they withdrew. It was noticed, however, that the only British troops that followed them—the Hussars—were surrounded and captured. They apparently retreated on Monday when there was no especial reason for it, but again the British troops that were detached and followed them on the flank were surrounded and captured. Everything that has got away from the main body of the British has been taken in, not excepting the mules that stampeded with a battery. Now a light seems to break. Possibly these simple-minded people of the veldt have been playing to separate the enemy and repeat the old trick of Napoleon of whipping them in detail. If this is in fact the game the Boers have been playing it puts the up-to-date military tactics of the British in a rather ridiculous light. There is one thing that goes to confirm this view very forcibly, and that is the singular record that has been made by the artillery, according to the reports. In the Glencoe fight the Boer artillery, which had all the advantage of position, was reported 'silenced' after the British guns had been in action but a few minutes, and then the British infantry moved

JOHN BULL: "Why, hit's a 'ornet nest you 'ave punched. Joseph, my son."—*The St. Louis Republic*.

out for the assault. . . . The Boers knew that the British were accustomed to advance their infantry after the enemy's artillery has ceased firing, and this was practically certain to result in a separation of the forces."—*The Indianapolis Sentinel*.

Weak End of the Anglo-Saxon Alliance.—"The first words that went over the wires from New York to London on the issuance of the Boer ultimatum were that we were all with the British in the struggle to take place. We were for the Anglo-Saxon against all comers in Africa or anywhere else. But what has followed tells another story. First a mass-meeting in New York to voice the feelings of the old Dutch element there in sympathy with the kindred people of the South African republics. Irishmen spoke at the meeting as well as those of Dutch descent, and many other races helped to fill the hall. Next we hear of pro-Boer meetings planned in various parts of the country. Irish and Germans join at Columbus, Ohio, in making an anti-British demonstration. The Dutch clergymen of Chicago are preaching and consulting together for the extension of moral and material sympathy to their kindred across the sea. When Dutch-Americans there proposed a mass-meeting to denounce the imperial Anglo-Saxon design, Germans, Irishmen, Frenchmen, Bohemians, and men of other races came forward and said: 'You get a ball and we will fill it for you.' And they would fill more than one regiment to join Kruger's forces if the way were clear. . . . Our political institutions not alone oppose an imperial career. The composition of our population opposes it, and with a power which politicians who have no regard for the principles and traditions of the republic will be compelled to respect. The Anglo-Saxon conquest of the world through force must proceed without help from this quarter."—*The Springfield Republican*.

Not Fighting Afridis.—"The fundamental error of the British, from the War Office chiefs' down, has evidently been their false estimate of the enemy whom they have engaged. The affair at Glencoe, the battle at Ladysmith, and the intervening skirmishes have been conducted by the British in a manner that might have been employed with some assurance of success against the Afridis in India or the Dervishes in the Sudan. It was apparently believed in the British camp that infantry charges, supported by the fire of a couple of Maxim guns, would stampede the Boers, as the black and brown men whom the British have been accustomed to fight would be stampeded by similar tactics. The victory at Glencoe undoubtedly confirmed the British in this belief; but the capture of their battalions and supporting battery near Ladysmith

should have undeceived them on this point, as the events of the campaign in Natal should have taught the British better than to try in the future to repeat the experiment of holding a line over forty miles long with 12,000 men against nearly thrice that number of Boers. That sort of strategy may do very well in the Punjab or on the Upper Nile, but not against an army of whites who are, man for man, the equals of the best British troops, and who are led and armed in the most approved European manner."—*The Philadelphia Record*.

A Bitter Lesson.—"The British army has been forced to learn the art of war in defeat, and the lesson may be repeated even more bitterly; but harsh a school as it is it teaches endurance to a brave people, as it taught it to us in our vastly severer trial of the Civil War. The British officers have learned that the strategy and tactics which served well against weak foes must be replaced by wiser and more skilful generalship against an enemy like the Boers. They are learning the weaknesses of their military system and organization, and are testing the quality of their officers in the ordeal of stoutly contested war fought on modern principles and with modern weapons. Thus they will be able gradually to sift out the incompetent and discover the really masterful, as we had to do between 1861 and 1865. They will be less boastful; they will not any longer take it for granted that a British uniform simply as such is everywhere irresistible. It is a lesson humiliating to their pride and shattering to their self-confidence, but that it must be learned had long been evident to foreign observers competent to estimate the true value of the British army. For the first time in the experience of this generation of Englishmen they are finding out what war with a well-led army really is, and as they learn so painfully, perhaps they will begin to appreciate more adequately and justly the achievements of American arms in the Civil War, and in the war with Spain where we put in practise the lessons we had been taught in the most gigantic armed struggle in which our race has ever engaged."—*The New York Sun*.

The Price Too Great.—"From the sturdy character and the unexpectedly developed tactical skill of the Afrikanders, in thus defeating some of England's best generals and troops, there rises the dark prospect of a long and bloody and devastating war, with results of doubtful benefit to either race or to humanity. The British will make a stubborn fight to retrieve their loss, since military prestige is at stake, and the Boers seem inclined to fight while life endures, in defense of what they hold as their dearest

rights. Such a war as this threatens to be of doubtful value to the progress of the world, and must have a bad effect on the untutored races of the country. It were better it were stopped now, with mutual concessions on either side, which ought to be easier since each has a taste of the other's quality."—*The Brooklyn Standard-Union*.

BOOKER T. WASHINGTON'S PROGRAM FOR THE NEGRO.

PROF. BOOKER T. WASHINGTON, who has been telling the Southern white people (in an article in *The Independent*) how they can help the negro by impartial franchise laws, writes another article (in *The Atlantic Monthly*) in which he give some advice to the negroes themselves. His advice is, in effect, that if they will reverse the old song and hang up the fiddle and the hoe, and take down the shovel and the hoe, and become independent farmers, the future of the race will hold more promises likely to secure substantial realization. The negro without the hoe, is, in short, in worse condition, both for his own good and the good of the race, than the negro with the hoe. Professor Washington says:

BOOKER T. WASHINGTON.

"American slavery was a great curse to both races, and I should be the last to apologize for it; but in the providence of God I believe that slavery laid the foundation for the solution of the problem that is now before us in the South. Under slavery, the negro was taught every trade, every industry, that furnishes the means of earning a living. Now if on this foundation, laid in a rather crude way, it is true, but a foundation nevertheless, we can gradually grow and improve, the future for us is bright. Let me be more specific. Agriculture is or has been the basic industry of nearly every race or nation that has succeeded. The negro got a knowledge of this under slavery; hence in a large measure he is in possession of this industry in the South to-day. Taking the whole South, I should say that eighty per cent. of the negroes live by agriculture in some form, tho it is often a very primitive and crude form. The negro can buy land in the South, as a rule, wherever the white man can buy it, and at very low prices. Now, since the bulk of our people already have a foundation in agriculture, are at their best when living in the country engaged in agricultural pursuits, plainly, the best thing, the logical thing, is to turn the larger part of our strength in a direction that will put the negroes among the most skilled agricultural people in the world. The man who has learned to do something better than any one else, has learned to do a common thing in an uncommon manner, has power and influence which no adverse surroundings can take from him. It is better to show a man how to make a place for himself than to put him in one that some one else has made for him. The negro who can make himself so conspicuous as a successful farmer, a large taxpayer, a wise helper of his fellow men, as to be placed in a position of trust and honor by natural selection, whether the position be political or not, is a hundredfold more secure in that position than one placed there by mere outside force or pressure."

Trade is the one field of activity in the South that knows no color line:

"While in some other affairs race prejudice is strongly marked, in the matter of business, of commercial and industrial development, there are few obstacles in the negro's way. A negro who produces or has for sale something that the community wants finds customers among white people as well as black. Upon equal security, a negro can borrow money at the bank as readily as a white man can. A bank in Birmingham, Ala., which has existed ten years, is officered and controlled wholly by negroes. This bank has white borrowers and white depositors. A graduate of the Tuskegee Institute keeps a well-appointed grocery store in Tuskegee, and he tells me that he sells about as many goods to one race as to the other. What I have said of the opening that awaits the negro in the business of agriculture is almost equally true of mechanics, manufacturing, and all the domestic arts. The field is before him and right about him."

"But," says Professor Washington, "I may be asked, Would you confine the negro to agriculture, mechanics, the domestic arts, etc?" He replies:

"Not at all; but just now and for a number of years the stress should be laid along the lines that I have mentioned. We shall need and must have many teachers and ministers, some doctors and lawyers and statesmen, but these professional men will have a constituency or a foundation from which to draw support just in proportion as the race prospers along the economic lines that I have pointed out. During the first fifty or one hundred years of the life of any people, are not the economic occupations always given the greater attention? This is not only the historic, but, I think, the common-sense view. If this generation will lay the material foundation, it will be the quickest and surest way for enabling later generations to succeed in the cultivation of the fine arts, and to surround themselves with some of the luxuries of life, if desired. What the race most needs now, in my opinion, is a whole army of men and women well trained to lead, and at the same time devote themselves to agriculture, mechanics, domestic employment, and business."

It is interesting to note in this connection that the Southern negro is showing significant signs of industrial progress, and that his white neighbors are trying to help and encourage his efforts. The *Atlanta Constitution* considers the negro exhibit at the State fair in Atlanta one of the most important features of the exhibition because it shows that a large proportion of the colored people of the State are honest and industrious. The *Boston Transcript* sees a sign of the times in the spectacle of two hundred and eighty colored workmen marching amicably in the ranks of a big labor parade with their white brethren at Richmond, Va., and lines of white people cheering them all along the line of march; and another hopeful indication in the resolutions adopted by the Huntsville (Ala.) Industrial Convention, made up almost entirely of white people. The resolutions declared, in part:

"We recommend the industrial education of the negroes throughout the South, and the opening to them of all avenues of industry, freed from any intimidation from any source whatever and under the protection of just laws for remunerating their services."

The Transcript says: "That is the kind of news that we like to get from the South, for it seems to indicate the dawning of a better day."

The International Commercial Congress.—The close of the Commercial Congress at Philadelphia, after a month's session, attended by delegates from every quarter of the globe, has elicited some comment. The *Philadelphia Ledger* thinks that if a session of the congress could be held there every year, it would result in making Philadelphia the world's greatest commercial center. The *Baltimore American* summarizes and comments on the recommendations of the congress as follows:

"The congress discussed almost every subject relating to trade between the nations of the world, and in conclusion made the following recommendations to this and to other governments: For an international standard in trade-mark laws; for the establishment of a parcel-post system by this Government, and by all others that do not possess such a system; for the assimilation of

trade statistics of all countries for the purpose of comparison; for the establishment of an international bureau for the collection and dissemination of agricultural reports; placing on record the earnest desire of the congress to secure lasting peace among the nations, and advocating the creation of international courts of arbitration; urging the construction of an interoceanic canal on the Western hemisphere at the earliest practical moment. These are all suggestions worth careful consideration by the nations. The increase in the commerce of the world, the establishment of new steamship lines running to almost every port, the demand that each country makes upon some other country for things that it needs, are bringing the nations in closer touch with one another, and give them a common interest in all that pertains to the improvement of the business between them. Obnoxious laws against trade from any country are gradually being repealed, and, while each country may hold tariff views of its own, based upon peculiar conditions existing within its territory, yet the practise of barring out the products of any one land from another is gradually dying out, and must soon disappear altogether."

PRESIDENT HADLEY ON TRUSTS AND GOVERNMENT OWNERSHIP.

WHILE our political economists are anxiously watching the trust movement—some with the hope that the Government will control the trusts, some with the fear that the trusts will control the Government—President Hadley, of Yale University, himself a political economist of note, comes forward with the comforting theory that the whole problem will solve itself. In attempts to stop the present movement toward industrial consolidation he has little faith, believing that such efforts will be as futile in the field of manufacture as they have been in that of railroads. The growth of these enterprises, he points out, gives a new and larger meaning to the word "trust," for the managers of these great concerns have an immense power to injure or aid the public, as they choose. For this reason an increasing number of Socialists are urging that the Government itself enter the field, gain control of these vast enterprises, and conduct them for the general good. President Hadley (who writes in *Scribner's Magazine* for November) finds that many are viewing such a possibility with no little alarm, in the thought that such an attempt will be the signal for "a decisive struggle between the forces of individualism and Socialism, of property and of numbers." To those who see in the trust movement such alarming possibilities President Hadley points out that another movement—the approximation in character between public and private business—will no doubt rob the trust movement of its terrors, and make it pay tribute to the general, instead of to individual, prosperity. He says:

"It is quite within the limits of possibility that many of these enterprises will pass into government ownership in the immediate future; but it is highly improbable that this tendency toward consolidation is increasing the dangers of a conflict between individualists and Socialists. Its net effect is to diminish these dangers by making the question of state ownership relatively unimportant to the public as a whole. This may seem like a surprising statement, but there are a great many facts to justify it. There has been of late years, in connection with these movements toward consolidation, an approximation in character between private and public business. Formerly the two were sharply distinguished; to-day their methods are much closer to one another. Private business can do little more than pay interest on the capital involved, because of the increased intensity of modern competition. Public business can do no less than pay interest on the capital involved, because of the increased vigilance of the taxpayers; for the taxpayers will not tolerate a deficit which increases their burdens. But obviously the position of the consumer toward a private business which pays less than four per cent. is not likely to be very different from his position toward a public business which must pay more than three. The distinction from the financial standpoint is thus reduced to a minimum; nor is it much greater, if we look at the matter from the operating standpoint.

The officers of a large private corporation have almost ceased to come into direct contact with the stockholders; and to a nearly equal degree our public administrative officials who actually do the work have ceased to come into contact with the voters. The private officer no longer seeks simply to please the individual group of investors; the public official no longer strives simply to please the individual group of politicians. The man who does so is in either case charged, and rightly charged, with misunderstanding the duties of his office. The more completely the principles of civil-service reform are carried out, the closer does the similarity become. The responsibility of public and private officials alike leads them to the exercise of technical skill and sound general principles of business policy, rather than to the help of influential private interests. Under these circumstances, the character of good public business and good private business becomes so nearly alike that it makes comparatively little difference to most of us whether an enterprise is conducted by our voters or by our financiers. The one question to ask is, which method produces in any case the fewer specific abuses? We may look with confidence to the time when the question of state ownership of industrial enterprises will cease to be a broad popular issue, and become a business question; which economic considerations may perhaps lead society to decide in favor of public control at one point and private control at some closely related point. There will, of course, always be a conflict between those who have more money than votes, who will desire to extend the sphere of commercial activity, and those who have more votes than money, who will desire to extend the sphere of political activity; but to the great majority of people, who have one vote and just money enough to support their families, it is not probable that this conflict will ever create a general issue of the first importance."

SOME FACTS ABOUT AMERICAN CITIES.

ACTING on instructions from Congress, the Department of Labor at Washington issued in its September Bulletin statistics relating to all the cities in the United States of a population of 30,000 or more. It was found that there were 140 such cities, and the statistics collected throw much interesting light on their status and development.

The oldest city in the United States is Albany, N. Y., which was incorporated in 1686. Philadelphia dating fifteen years later. New York, Chicago, and Philadelphia are the only American cities whose population runs into the millions. Some odd contrasts are presented in the tables which give the area covered by the different cities. It appears that Taunton, Mass., occupies a territory greater than that of either Boston or Baltimore. New Orleans, a city of 285,000 inhabitants, covers 125,600 acres, while Newark, N. J., with a population of about the same size, occupies less than 12,000 acres. One expects to find the manufacturing districts of Pennsylvania, Massachusetts, and Illinois closely packed; but it is surprising to notice that Richmond, Va., covers only 6,520 acres, and Louisville, Ky., 12,800 acres, as compared with Duluth, Minn., and Des Moines, Iowa, which, with much smaller populations in each case, cover respectively 40,960 and 34,560 acres.

The second table in the Bulletin deals with saloons, police force, and the number of arrests from drunkenness. Judging from the arrests made, it seems that Davenport, Iowa, is the most sober city in the United States, while San Francisco and Boston suffer most from drunkards. Several papers tried to find in this table some light that would help to elucidate temperance problems, but found the figures so confusing as to be of very little practical use. The New York *Evening Post*, for example, commenting on this part of the report, says:

"It casts darkness rather than light upon the question. For example, Springfield, Mass., Manchester, N. H., and Utica, N. Y., have each about 60,000 inhabitants. Utica is under the Raines law, Springfield under the high-license system of Massachusetts, and Manchester under nominal prohibition. The New Hamp-

shire city has no legal saloons, while Springfield has 47 and Utica 252. But Manchester has had 1,456 arrests for drunkenness during the past year, while Springfield had 1,431. Still more remarkable is the record of only 765 arrests in Utica, or only about half as many as in Springfield, altho there are more than five times as many saloons. Almost as anomalous is the showing of only 383 arrests in Dayton, Ohio, with 400 saloons and 85,000 people, while Hartford, Conn., with 77,000 people and but 219 saloons, reported 2,460. There is no possible way of reconciling such extraordinary differences, except upon the theory that the police in some cities enforce the laws much more strictly than those of others, and 'run in drunks' when men in the same condition elsewhere would be passed by."

The health statistics that show McKeesport, Pa., is perhaps the healthiest city in this country. Its rate of deaths from consumption is only 1.09 per thousand, as compared with 12 in Boston and New York, and 26 in Denver, Colo.—due, of course, to the fact that consumptives resort to Denver from all parts of the country. The rate of 13.60 deaths per thousand from old age (considerably the highest on the list), is accredited to Salt Lake City, a condition to account for which no theory has yet been brought forward. In Pittsburg and Chicago deaths from old age are only 2 per thousand.

At a time when the extension of municipal functions is occupying public attention, it is interesting to note the figures which relate to city ownership. Ninety-six cities own their water-supply, among the exceptions being Indianapolis, New Haven, New Orleans, and San Francisco. Four have municipal gas-works—Duluth, Richmond, Toledo, and Wheeling—and thirteen own and operate electric-light plants.

Socialism and the Flag.—Amid the many current comments on the Stars and Stripes, seemingly called out by the President's frequent allusions to the flag on his Western trip, is a discussion in *The People* (New York), an organ of the Socialist Labor Party, as to whether a true Socialist should, if forced to choose, wave the red flag of international Socialism or the American Stars and Stripes. The editor of *The People* decides that while a Socialist can consistently swear allegiance to our Government and bear arms against any foreign foe, he must choose the red flag whenever that is opposed to the red, white, and blue. He says:

"Recognizing that the triumph of Liberty and Equality, for which the Stars and Stripes once stood, is inseparable from the triumph of international Socialism; recognizing that the downfall of the states and civilizations represented by the various national flags of to-day is merely a stepping-stone toward a higher and nobler civilization, of which the fathers of this republic could never dream; we say that when it comes to choosing between the red flag of the Socialist commonwealth which stands for the brotherhood of all men, and any national flag which stands for the rights of one nation as opposed to another and for the prerogatives and privileges of one class to the detriment of another, we stand by the former. A man who deliberately chooses the latter says: 'I stand for the system of private property as opposed to collective ownership; I stand for the right of exploitation of the workers, who do not own the means whereby to work, by the idlers who by fraud and robbery have come to own these means; I stand for international strife and internecine war between the toilers of different tongues and races as against the brotherhood and solidarity of the workers of all countries.' No such person can consistently call himself a Socialist."

Foreigners Occupying Hawaii.—*The Hawaiian Gazette*, of Honolulu, notes with regret that the Portuguese and Japanese are taking up the best lands in the Hawaiian Islands, to the exclusion of the Americans, who, it was expected, would go to the islands in large numbers after annexation became a

fact. *The Gazette* cites a typical instance and comments as follows:

"On the southern slopes of Haleakala there is now to be seen, not an experiment, but a demonstration of the course of racial events on these islands. A vast tract of land lies on this slope, rising with gentle grades from the plains of the isthmus occupied by the Hawaiian Commercial Company, up to and above the frost line. The soil is rich. Fruits and vegetables grow with luxuriance. Corn makes excellent crops. With a good road, the owner of only ten acres of such land may sleep every night within the cold belt, and descend every morning to the warmer belt below. This region is ideal for the most satisfactory growth of Anglo-Saxon civilization in the tropics, because, if he wills it, the settler may find only half an hour's ride between the tropics and the temperate zones.

"What is the situation? What is the outlook there? The Portuguese have settled on this tract and are doing well. Many, it is said five hundred, Japanese have taken land in Kula and Makawao, and are making excellent profits out of their agricultural work. Out of some hundreds of settlers are there any Americans? No. Yet the profits of agriculture in that section, to-day, would open the eyes of the small farmers of America. . . . While there is much waving of the flag over the islands with the patriotic shout that the islands must be Americanized, day by day, step by step, the men of other nationalities are becoming the bone and the sinew of the people. One looking upon these prosperous people preoccupying the land, must regard the case of American settlement in this region as almost hopeless. . . . It is simply idle to say that the American farmer can or will supplant the Portuguese or the Orientals."

TOPICS IN BRIEF.

AN UNAPPRECIATED VICTOR.

Who is it, when a war's declared,
That's always on the spot prepared,
To keep his side from being snared?
The censor.

Who keeps the friends of those who fight
Assured that everything's all right—
Who sends them pleasant dreams at night?
The censor.

Who spoils the angry foemen's aim,
Who thwarts their plans and blocks their game,
While they move forward, just the same?
The censor.

Who when the dickens is to pay,
When all the rest are in dismay,
With one stroke bravely saves the day?
The censor.

Who when the fight is over sees
The earth strewn with dead enemies—
Who is it strives so hard to please?
The censor.

And who, despite his happy knack
Of winning while he's falling back,
Is always cursed at home, alack?
The censor.

LETTERS AND ART.

SIR HENRY IRVING IN "ROBESPIERRE."

THE appearance of Sir Henry Irving and Miss Ellen Terry in Sardou's spectacular play of "Robespierre" is doubtless the leading dramatic event of the season and has furnished an opportunity for an extraordinarily cordial greeting to the great actor upon his return to this country. We some time ago gave an account of the production of this drama in London (see THE LITERARY DIGEST, May 13). The consensus of the best American criticism is in agreement with the opinions of the London critics that the play in itself is not great, tho containing elements of strength; but that it depends largely for its success upon the subtle skill of the great actor who takes its title rôle; and to a considerable extent also upon the admirable staging and the magnificent spectacular effects and tableaux. The play is pronounced to be one of the most ambitious and artistically complete stage efforts ever seen in this country, and contains sixty-seven speaking parts, besides twice that number of supernumeraries. The title rôle was written especially for Sir Henry Irving, and is subtle, complex, and full of difficult passages furnishing opportunity for an interpreter of first-rate genius. On the other hand, Miss Terry's part is slight and thankless, and she is decidedly at a disadvantage. The following *résumé* of the plot is given in the New York *Evening Post* (October 31):

"In the opening scene *Clarisse de Maluçon*, a royalist widow of the guillotine, is trying to arrange for her escape from France with her niece and her son, the illegitimate offspring of *Robespierre*, who had ruined and deserted her nearly twenty years before. She confides her history to an old friend, who is in Paris as an emissary from the British Government to *Robespierre*, and their interview is interrupted by the arrival of the 'Incorruptible' himself, who catches sight of her as she retreats, and, fearing treachery, causes her arrest, without the least suspicion of her identity or of the existence of his son, *Ollivier*. The latter, an ardent royalist, maddened by the arrest of his mother, recklessly and furiously denounces *Robespierre* in public, when officiating at the feast of the Supreme Being, and is promptly taken off to prison. In the ensuing act *Robespierre*, believing that the boy is a conspirator, examines him privately, and from papers found in his possession learns the secret of his birth.

"This strong situation is managed with all Sardou's dexterity. *Robespierre*, who dares not reveal the truth, knows that *Clarisse* is in prison and is in agonies of apprehension for her fate, but is ignorant of the name under which she has been arrested, and the lad obstinately refuses to enlighten him, naturally mistaking the object of his inquiries. In the end, however, *Ollivier* inadvertently lets slip a clew, and *Robespierre* succeeds in conveying *Clarisse* and her niece to a place of safety, where he presently joins them. Then follows what is, perhaps, the most moving scene in the play. While *Robespierre* is explaining to his former betrothed his plans for her flight, word is brought to him that his enemies have caused the removal of the boy to the Conciergerie, and at the same moment the noise of the advancing tumbrils with prisoners on the road to execution is heard. Almost frantic, the one with remorse and the other with fear, the father and mother peep furtively through the shutters of the window, to see whether the luckless *Ollivier* is among the victims. The expedient is perilous, but Miss Terry and Irving employ it with wonderful effect, and the suspense is maintained admirably until the last tumbril has passed. The boy is not in it, and the mother falls back with the cry—strikingly effective in its selfish expression of intense relief—'Thank God! They are all women!' It is not often that Sardou strikes so true a note as this.

"The play ends with a view of the stormy session of the National Convention, in which *Robespierre* is howled down by his opponents, and finally overthrown. In his despair he shoots himself and dies in the arms of *Clarisse*, after assuring her of the safety of her son, who had been released by his intervention, and who had attended the convention with the intention of assassinating him."

The same journal thus speaks of the general merits of the acting:

"Sir Henry's performance of *Robespierre* can not be said to display his genius in any new light, being practically an epitome—as Sardou doubtless designed it to be—of nearly all that he has done before in Matthias, Eugene Aram, Louis XI., and kindred parts. Nor does the impersonation do much to realize the ideal suggested by either pen or pencil; but nevertheless it is, from its own point of view, which is set forth with considerable minuteness in the opening scene, a wonderfully vital and fascinating bit of characterization. Perhaps the art of the actor was nowhere exhibited in more striking fashion than in the rapid, delicate, and bold delineation of swiftly changing moods in the interview with Vaughan in the first act. The craftiness, the intense suspicion and nervousness, the native shrewdness, the vengeful jealousy, and the fanatical conceit of the man were depicted with brilliant facility and sureness.

"Ellen Terry returns with unabated personal fascination, and acts with all her former charm and grace; but the character of *Clarisse de Maluçon* does not exhibit her best abilities in the clearest light. Much of the melodramatic emotion of the part was beyond her, but her recital of her betrayal, in the first act, was exquisitely natural, hesitant, and pathetic, and in the later scenes, in the prison and at the window with *Robespierre*, she acted with the unfailing instinct of the accomplished artist which she has so often proved herself to be. But it is not in this line that she has won or ever will win her chief triumphs. Few of the subordinate characters call for special mention."

The New York *Commercial Advertiser* says:

"'Robespierre,' which marked a big social occasion on its opening at the Knickerbocker last night, is a piece of regally attired mediocrity. Filled to the brim with good acting, brilliant management, dexterous dramatic carpentry, the real soul of it is small and comparatively cheap. For this nobody is to blame. . .

"Sardou's latest effort is marked by his usual ability to do with extreme precision a number of things not too well worth doing. He has combined a few tested and successful dramatic episodes with a few generously spectacular scenes, all put together with such a knowledge of the insides of Brown, Smith, and Robinson that the mess of pottage is most surely won. It is the stage, not in the sense in which the stage is the material of a beautiful and enlightening art, the mirror of the depths, beauties and tragedies of life, but in the sense in which it is the equal of other useful and unideal machinery. The playwright has chosen a great subject, capable of being treated as a great tragedy, but he has in himself the soul not of a tragedian but of an artisan. . . . Some of the scenes give us flashes of feeling into the Revolution, that great reality, that great myth, and in the leading rôle, if not the historical Robespierre, we get, less through the playwright than the actor, a creation partly only intelligent, but partly great."

Less severely critical views are taken by Mr. William Winter in the New York *Tribune* and by Mr. Clement Scott in *The Herald*. Mr. Winter says:

"Mr. Sardou has constructed a drama that, for the fulfilment of his purpose, is literally perfect. It contains, indeed, an abundance of scenic spectacle, but its pictures are naturally, intimately, and inextricably twined with its action, and, in each instance, its pictorial effect is deduced from the development of its story and is an indispensable part of its movement. . . . Henry Irving's greatness in *Robespierre* is not simply his even, consistent, and potential assumption of the character, his preservation of the French atmosphere and sustinment of the French manner—conveying, and brilliantly vitalizing, a suggestion, at least credible to fancy, of what Robespierre and his times might actually have been—but his impartment of a massive and universal type of experience, that reaches every conscience and touches every heart. To an actor of his wide culture and splendid skill the execution is comparatively easy; melodramatic execution, indeed, is usually easy to any proficient player. The difficulty is to overwhelm the imagination and the feelings with an irresistible sense of reality and truth—an achievement only possible to the inherent authority and power of genius. Those are the attributes that have given this actor his leadership, and, tho he has acted greater, more imaginative, and more complex parts than *Robes-*

pierre, he has never shown those attributes more decisively than in this performance."

Mr. Clement Scott thinks that the London critics were mistaken in their carping estimate of "Robespierre." "In England," he says, "the sticklers for accuracy in history fall foul of Sardou's play as they always do, altho scarcely two historians ever agree on the simplest matters of fact." Sardou, he thinks, can afford to err with Shakespeare and other great dramatists and novelists. He continues:

"A magnificent stage production, unexampled stage management, and Henry Irving never acted better in his life."

"When he came to the great scene with the son—the first dramatic moment of the play—he astonished us with his variety, his subtlety, and his unaffected pathos. The whole audience rose at the actor, and he was called out over half a dozen times. From this point all was easy sailing. The 'vision scene' was in the true Irving vein—grim and appalling—and when we came to the act of the Convention with *Robespierre* alone in the roaring babel and din I think the playgoers of New York will agree with me that the like of it has never been seen before here or in Germany. I know such a stage picture has never been presented in England."

WITH IK MARVEL FROM COOPER TO POE.

IN his second volume of chatty and "sociable" reminiscences ("American Lands and Letters"), Mr. Donald Mitchell comes to us, bringing his sheaves with him, in chapters of retrospection, at once kind and candid, for the delectation of the gray-beards and the inspiration of the youngsters.

He begins with the time when boys were following the trail of "Leather-Stocking," and ends with the lugubrious note of Poe's "Raven." He recurs to the decade (1820-30) when the mail-carrier between Philadelphia and New York reckoned upon twelve hours as the measure of his "rapid transit"; and when it was accounted a wonder that Cooper, the actor, from his home on the Schuylkill, should undertake to play on alternate nights in the two great cities. Those were the days when the Careys of Philadelphia reprinted, by arrangement with Constable, the Waverley novels, and despatched the early copies, with phenomenal enterprise, by a chartered coach, over hill and dale, for the supply of New York.

It is a pleasant story that Mr. Mitchell tells of the founding of Round-Hill School, when Dr. Cogswell and Bancroft laid their sapient pates together to make, on the banks of the Connecticut, a boys' school that should eclipse the academies of Exeter and Andover:

"A boy might have his garden if he would, or his carpenter-bench, if his tastes ran in that direction. There were native teachers, specially imported, of Italian, French, and German, and an English master of deportment; even the carving of a fowl and other arts and graces of the table were not neglected."

No wonder it was a favorite school. Boys far away sniffed the odors of its larder. But the pace they set was exhausting; expenses were heavy, there was no endowment. After some seven or eight years Bancroft withdrew from the enterprise, worsted in hope and purse. Then came bankruptcy; and Round-Hill School was henceforth but a memory.

From Bancroft and George P. Marsh and Horace Bushnell to N. P. Willis is a far cry—Willis, he of the blue eyes and flaxen locks, of the engaging ways and the *degagé* manners. His was the strong inclination for social life and its festive regalements, toward which his poems opened a flowery path. His diary takes note of a collection he had made of French slippers, "From the prettiest feet in the world (known to me)." Mr. Mitchell writes:

"Few men could have written sympathetically of Willis. Much of his work was brilliant persiflage; it shrank under the critical touch. . . . It might also be said that his accomplishments undid

him. He was overfond of putting his thoughts (or rather his observations and suggestions) into a finical millinery of language."

Willis established *The American Monthly*, where the names of Hawthorne, Rufus Daves, Grenville Mellen, James Percival, and Mrs. Sigourney "hoh up and down"; and he wrote occasionally for the Boston *Recorder*. But there were glances of misgiving "from under critical Cambridge brows," at the flip-pant, frisky measures of this Yale Hyacinth. Even the old Park Church, remarkably free from Unitarian proclivities, was inclined to discipline the young poet of Ahsalom and Hagar, who could not forego his liking for the footlights.

Then the New York *Mirror*, with George P. Morris and Theo-

DONALD G. MITCHELL.

dore Fay, sends him to Europe, where, as *attaché* to the American Legation, he has the run of all good things that are going:

"Mustapha deluges him with attar of roses, and the silken trousers of the Grand Bazar rustle on his ear; nargiles, spice-wood beads, and embroidered slippers complete the tale of delights from which he wends toward Syrian horizons—journeying with Smyrniotes and reveling with gypsies of Sardis."

In 1836 he returned to American drawing-rooms; but his was an impossible figure for the undress of the country. "He impresses one as a bird of too fine plumage for much scratching. His best is only 'By the Way':"

"A corypheus of letters! Always sought after as a patron; always kindly to beginners, and ready with helping words; always cited, yet not noisily insistent, or placarding himself by braggadocio; never exploiting his personality for business purposes; having scorn for all vulgarities—even noise."

In 1840, John R. Bartlett, who made the "Dictionary of Americanisms," had his hook-shop under the Astor House. Hither came George P. Marsh and Dr. Francis, with Tuckerman and Dr. Hawks, and sometimes a spectacled man who had lost a leg, and who was known by certain novels and poems; especially by that jingling song, dear to the hearts of the youngsters of that day:

"Sparkling and bright, in liquid light,
Does the wine our goblets gleam in."

This was Charles Fenno Hoffman, the author of "Greyslaer" and the "Vigil of Faith," who afterward lingered for thirty-seven years in a Harrisburg asylum, "a mind distraught." Mr. Mitchell saw him there, "his physical buoyancy not broken down, living amid a great host of illusions, placid but distraught."

Next we read of William Gilmore Simms, who wrote "Guy Rivers" and "The Yemasee," the typical South Carolinian, brisk and alert, friendly, hospitable, but full of intellectual audacities and combative self-assertion. And John P. Kennedy, of Maryland, genial and gracious, with the courtliness of the old school, who told the stories of "Swallow Barn" and "Horseshoe Robinson." And Dr. Bird, of Philadelphia, who fitted the loud histrionics of Forrest with the bouncing, bawling tragedy of "Spartacus," in the days when Martin Van Buren was President.

When the talk turns upon Emerson, we suspect the presence of a furtive smile here and there between the Mitchell lines, as when he tells us that Emerson's high thought "often reached spiritual altitudes whither the front rank of preachers never climbed." "Hence there was lacking that high fellowship which might have strengthened and stayed him, and the want of which sometimes broke over him with a blighting sense of loneliness." Which inevitably recalls the happy pithiness of Mark Twain—"Be good, and you'll be lonesome!" Hence the sage, as he himself informed Carlyle, just "sat and read and wrote—with most fragmentary result—paragraphs incompressible, each sentence *an infinitely repellent particle*."

Mr. Mitchell confesses himself compelled to question if that delightful biography of Emerson (by Dr. Holmes) was committed to judicious hands. A lithe and witty Montaigne, he thinks, can not interpret for us a broad-shouldered Plato. "His own piquant humor bubbles up through all the chinks of the story, and makes us forget the subject in the narrator."

The Rev. Henry James talks of Emerson's "prim and bloodless friendship." Few could get near him—Margaret Fuller never, Hawthorne never, James never. Most of the people he sees in his own house, he says, he sees across a gulf:

"About the weather, or his neighbor's pigs, or Thoreau's bean-patch, he could warm; but if one dropped such topics to talk about the soul, or immortality, he froze. His own healthy revolt, perhaps, against the desolating tyranny of his own Tall Talk. He implores Thoreau to teach him the use of a hoe, and threatens to write to George Ripley his Views on the subject of Brook Farm."

As for Ripley himself, honest, earnest enthusiast, he did not take kindly to Hawthorne—at least not to "The Blithedale Romance": "I remember once asking him—in that dingy *Tribune* office—after the religious tendencies or utterances of Hawthorne, in those Brook-Farm days. He said bluntly, 'There were none. No reverence in his nature.'"

Of Theodore Parker, we are told, with wholesome candor, that the *élite* of society were always shy of him; that he was not amenable to high social laws:

"Edward Everett, or Prescott, or other such, would have been shocked in their genteel fibers at the spectacle of a man in careless or disordered toilet thundering from the platform of a music-hall, about the Eternal Father—as if he knew Him. . . . They might admire, but they resented his lack of respect for proper formulæ of conduct; and to their ears his heaviest thunders of damnation—whether for a Mexican war or a fugitive slave law—were ugly thunders."

Mr. Mitchell tells us of Margaret Fuller, the sybil of the curled locks and the high forehead, the beautiful arms and the half-closed eyes, "and the overlaced corsage," launching into her rapturous but unmethodical talks. She never ceased to belabor Longfellow, in hystericky fashion, for his allegiance to British traditions, and for setting the nightingale singing where the Bob-o'-Lincoln should have trilled his roundelay; "she foretold

disaster and wreck for the literary reputation of the author of 'Parson Wilbur,' and Mr. Lowell repaid her in kind."

It is funny to read of Bronson Alcott, him of the "Orphic sayings," "with an exceptional aptness for empty pockets," taking lessons in gardening from Thoreau, while his son, following in critical anxiety, cries, "Don't dig your legs, father!"

We read of Hawthorne at fifty:

"Strong, erect, broad-shouldered, alert. . . . No arrogance, no assurance even, but rather there hung about his manner and his speech a cloud of self-distrust, of *malaise*, as if he were on the defensive in respect of his own quietudes, and determined to rest there. Withal, it was a winning shyness; and, when—somewhat later—his friend Ticknor tapped him on the shoulder, and told him how some lad wanted to be presented, there was something almost painful in the abashed manner with which the famous author awaited a schoolboy's homage."

Of Dr. Holmes, we are told that it is not his eloquence, not his wit, not his poetry even, least of all his "fine writing"—but his New England *gumption*, which is to be set atop of all the rest as the arch quality that made the "Autocrat" a book to be followed with Montaigne, and Goldsmith, and Elia, on the handiest shelves of our libraries.

There is no attempt here to follow, piece by piece, the parti-colored patchwork that goes to the making of the pitiful story of Edgar Poe. Whether by prenatal influences or forces of education, the moral sense was never strong in him—nor any harassing sense of the want of such a sense. "He used a helpful untruth as freely, and with as little compunction, as a man astray in a bog would set his foot upon a sound clod, which for a time might help to hold him from the mire." And so he found only admiration—only canny distrust when he looked, through filmy eyes, for welcome and heart's ease:

"I remember well with what gusto and unction the poet-editor (Colton) of the old *Whig Review* read over to me in his ramshackle Nassau Street office that poem of 'The Raven'—before yet it had gone into type; and as he closed with oratorical effect the last refrain, he declared, with an emphasis that shook his flaxen locks, 'That is amazing—amazing!' . . . If the author had been secured to the amount of a couple of pennies for each issue of that bit of verse, all his wants would have been relieved."

We read here of the phosphorescent glitter in all that Poe has touched, of the humanities that are lacking—"even the blood-stains on the robes of the Mme. Madeleine are dreadfully out of place; such phantasms never bleed." Tho' all juggleries of sound are under his hand, all the resonance of brazen instruments, there are no such heart-healing melodies—Miltonian, Wordsworthian, Shakespearian—as bewitch the ear and haunt the heart:

"There are marble memorials of Poe, which will be guarded and cherished, but there is no 'Adonais,' no 'Lycidas,' no murmurous beat of such lament and resignation as belong to 'In Memoriam.' Only 'The Raven,' never fitting, still keeps up from year to year, and will from century to century, that wail of Nevermore!"

The Author of "A Double Thread."—Miss Ellen Thorncroft Fowler, whose story leads all novels of the year in England, tells a number of interesting things about herself and her book through a recent interview in the London *Daily Graphic*. She spent fully a twelvemonth upon "A Double Thread," tho' her previous book, "Concerning Isabel Carnaby," was finished in four months. We quote from the New York *Press* (October 22) the following *résumé* of the interview:

"She can not remember what she calls a 'pre-literary stage' in her life, and says that when she was a mere child she devoted all the time she could spare from play to the writing of stories and of verses. The first of her efforts to be printed was a rimed description of a bazar which she supplied to a local paper solely for the joy of seeing it in print. The first work for which she

was paid was a short poem, which a magazine published. Miss Fowler maintained that even had she met with no encouragement she would have kept on, and said that she would write novels to-day just the same if she knew no better fate than the wastebasket awaited them. She says she seldom puts real people into a book, and if ever she utilizes a character which she knows, it is only a certain side of that character. Choosing her titles, Miss Fowler says, is the hardest work of all. She is working at a novel which, however, will not be published until next year at the earliest.

"Miss Fowler gives it as her opinion that women writers have fewer difficulties to face than men. She says that, after all, men make public opinion, and they are more lenient to women than to each other. When asked if she had traveled much, Miss Fowler replied that she had not, her wandering being limited to tours in England and Scotland. She added a question which sounds like some of those in her books: 'Where is the advantage of being born on an island if you go off it?'"

KIPLING AND THE ENGLISH SCHOOLBOY.

IT can not be said that the critics who have thus far expressed their opinion of Mr. Kipling's latest story, dealing with life at Eton, are unanimously convinced that he has succeeded to any extraordinary degree in delineating schoolboy nature. Of course, it is recognized that the task is a peculiarly difficult one, for the schoolboy is capricious and exists in many varieties. One school type differs from that of another school, and one era of school history from another era. The conditions of life depicted in "Tom Brown's School Days at Rugby," for instance, have already passed away; and no one can fail to observe how great the difference is who compares that book with Kipling's "Stalky & Co."

Among the English literary journals, most of which speak of the book with favor if not with enthusiasm, the London *Spectator* takes rather the most favorable view. It says:

"We are not going to attempt to tell the story of the book before us. We should but spoil its good things in the process. There is, however, one episode in the book which lends itself to the art of the reviewer. It is the chapter called 'The Flag of Their Country.' For sheer insight into the heart of the boy, for subtle psychological analysis, for conception and appreciation of a most delicate and difficult moral situation, we have seldom read anything approaching this fascinating study of the emotions of boyhood. But we despair of giving our readers anything like a true conception of this wonderful study in patriotism. All we can do is to advise our readers to go to the book itself. 'The Flag of Their Country' can not fail to move them, while in the rest of the book they will find abundant food for laughter. Of course, there are faults in the book—a certain metallic clash in the prose-rhythm is the chief—but take it as a whole, we deem it to be entirely worthy of Mr. Kipling's genius. We need not say more."

The St. James's Gazette says:

"The volume is so characteristic of its author that of course everybody will read it. It is in its way, too, a lesson to masters. We can only hope that their lives will not be made much more dangerous by Mr. Kipling's 'tips' in the art of annoying them. If the details of school-life are rather questionable, the 'tone' is that of one who realizes the value of our English system. Virility and resourcefulness, even with mischievousness, are still the ideal; and our Stalkies, while playing resentful pranks on 'Mr. King,' can yet devote some of their energies to making things uncommonly hot for the bullies 'Campbell' and 'Sefton.' The fatuous commonplaces of a self-assertive M.P., who makes a speech about the honor of the flag, are just as much 'rot' to the reserved nature of the schoolboy—the reserve of a boy," says Mr. Kipling, finely, "is tenfold deeper than the reserve of a maid"—as the goody-goody imaginings of 'Eric.' Their capacity for hero-worship is immense; let them, therefore, have real heroes, their Old Boys or their Head, to admire or imitate. These broad effects are brought out by Mr. Kipling with his usual vigor. And some of his incidental characters are excellently drawn; the Ser-

geant and the different types of master. The actual boys, Stalky, McTurk, and Beetle, strike us as being unnaturally articulate, even in their unmixed naturalism of vocabulary. But, then, if they had not been, we could not have had the book."

The Academy, which stands somewhat alone in its severe estimate of the book, says that the impression of school-life conveyed by the story is as false as that of Dean Farrar's "Eric," and that as usual Mr. Kipling's infatuation for might carries him away into an unreal region which is a caricature of actual schoolboy life. The real schoolboy is neither the sentimental "Molly" of Dean Farrar nor the extraordinary mixture of preternatural intellect and daring delineated by Kipling:

"The real boy comes somewhere between the two; you will find more of him in 'Tom Brown' and 'Tom Sawyer' than anywhere else. Mr. Kipling for once is caught tripping. In his endeavor to recapture his youth he has remembered everything but youth's immaturity. The escapades of youth are here, the joy of living, the high spirits; but a cleverness beyond all credence has been superimposed. The attempt to make forcible dialog and successful strategy has been too much for the author, and fidelity to the fact has gone overboard in the interests of the yarn. We can not believe that even at Westward Ho! Mr. Kipling's own school, three boys ever existed with so complete a theory of life, such rapid and accurate powers of deduction, such uncanny sagacity, such unwavering disregard of the feelings of others, and such brutal and unflagging wit, as Stalky, McTurk, and Beetle. Mr. Kipling is entitled to idealize his puppets if he likes, and yet we have for so long come to look to him for genuine efforts to depict people as they are that it is with difficulty that the mind is adjusted to this new phase. We shall express the matter more clearly, perhaps, by saying that in these narratives of the adventures of three boys for the discomfiture of masters or other enemies, and the glorification of themselves, the thought, the arrangement, and the orderly accomplishment are adult; the conditions and language—and that only approximately—alone being boyish. Now altho the child is the father of the man, and all the rest of it, there is yet a vast difference between a boy's ways and a man's ways. Mr. Kipling seems to us to have overlooked that difference altogether."

"He has also so overdone the book that it has to be pronounced his least satisfactory work. There is a piling on of youthful brutality beyond all need, a lack of selective skill. Had Stalky & Co. been a whole-hearted attempt at realism, a genuine effort to portray the boy, we should make no such objections. But it is nothing of the kind; the whole boy, indeed, would no more bear setting down in black and white than the whole man. Realism being, then, out of the question, it remains that Mr. Kipling might have made a far better book. For the moment his instinct for the best stories has left him; he has let in a very flood of the second best."

Mr. Herbert Jamieson, writing to *The Academy* (October 21), says:

"The writer in *The Academy* seem to me to have pronounced a true and sound verdict upon 'Stalky & Co.' One hopes that it is an illusion, and yet the thought comes again and again that Mr. Kipling's later productions are by no means equal to the earlier work which made him famous. With the gain of vitality has he not lost in a serious degree his admirable art of self-restraint? Compare, for instance, these rough, ragged, almost formless sketches of boy life, with their wearying waste of dialog leading practically nowhere, and the crisp, artistic reticence which made 'Plain Tales from the Hills' almost perfect models of short stories."

"Is it a fancy, too, that Mr. Kipling's humanity has waned? Where is now the kindly heart-power which one found so moving in 'The Light that Failed'? Despite the brilliant technical knowledge displayed in 'The Day's Work,' one sighed for a little human nature—something more spiritually satisfying than the superficial mention of things."

The American papers for the most part take a rather less favorable view of the book than that of the English reviews. *Literature* (October 27) says:

"As regards execution and literary quality, 'Stalky & Co.' is

nowhere quite up to Mr. Kipling's highest mark, but sinks rarely below his average. Events move and characters live—even the slightest. . . . The best of the stories are the two entitled 'Slaves of the Lamp'; the worst that called 'A Little Prep.,' which is disfigured by the apotheosis of the Head, who sucks diphtheria through a tube from a boy's throat. Presumably the incident is founded on fact; and, told as a fact with names and places, it would be memorable. But it is not scemly in the guise of fiction. Invention is too cheap, and heroes should not be adorned even with gold that looks like tinsel."

The critic of *The Criterion* (Mr. J. P. Coughlan) is severe upon Mr. Kipling for what he calls his poor judgment in holding up to our admiration such a set of "young cads." He says:

"There is no more delightful boy on the face of the earth than the British schoolboy when he is a clean, healthy, boyish youngster. There is no more exasperating little monster on the face of the earth than the British schoolboy when he is a slangy, caddish, self-stuffed young cub.

"The trio of heroes of Mr. Kipling's latest stories, Stalky, Beetle, and McTurk, are unlicked young cubs. To you, perhaps, in the pages of a book, not knowing the British schoolboy, they may appear pleasing, even lovable, little blackguards; but to one who knows his English college, they are of another sort. So excellently, so artistically, has Mr. Kipling developed one side of their characters, that one who knows intimately the habits of the young Briton at college can not fail to see this other, more unpleasing side.

"I am confident that the schoolfellows of the insufferable Stalky, the McTurk, and Beetle, regarded them as unmitigated young prigs. The pity of it is that Mr. Kipling seems to be sincere in holding them up to a growing generation as models of what sturdy, belligerent youngsters ought to be. He is carried away by their fighting, quarrelsome qualities, by their truly British self-containedness, and neglects to make them mannish boys in other respects. They are full of what in youth stands for what is in later years the imperial idea in its worst sense."

The English schoolmaster apparently ought to know whether Kipling has or has not succeeded in his picture of the English schoolboy; but even here counsel is divided. One assistant master writes to the *London Chronicle* as follows:

"Rudyard Kipling has succeeded to my mind in writing a book which ought to impress upon schoolmasters the two ideas which the nature of their profession renders most difficult for them to grasp—namely, that there is some good even in the 'lout who will neither work nor play,' and that there is a very strong tendency in the mind of a pedagogue to condemn a boy according to more or less enlightened but always arbitrary standards, instead of assuming 'good' in the boy and trying to find what form it takes.

"The average schoolmaster has no need of Tom Hughes to teach him to sympathize with the Tom Brown type of boy, but apparently even Rudyard Kipling is not big enough to teach him to sympathize with the Stalky type."

Still another assistant master says in the same paper:

"After some years of teaching experience, fate has assigned me the position of an assistant master in Mr. Kipling's old school. I may say at once that (luckily for them!) 'Stalkys' and their Co.'s are conspicuously absent from our numbers. The youth who consistently cuts games, cheeks masters and prefects, smokes, swears, and generally behaves like an unmitigated cad in the making, is apt to be liked neither by boys nor masters. He is also apt either to be licked into shape fairly promptly or to be gently but firmly removed from the school lists. . . .

"Mr. Kipling has written a book of school life unlike boys now and equally unlike as regards boys then. 'Beat on us with many rods,' quotha! But if 'Stalky' and his friends had been half what they are depicted, there had not been rods enough in Devon to meet their case."

But perhaps the schoolboy himself should be allowed to decide the dispute between masters and critics. Here is what one (?) says, in the *London Outlook*:

"*The Outlook*, I imagine, is a good sort of paper, which will let a fellow have his say when it's important. I think it's

awfully important that the public should know what schoolboys think of 'Stalky & Co.' We are all reading it. You know, Kipling is a really good writer, with no sort of gibberish about love and fooling and starlight. 'Captains Courageous' was stunning, and 'Barrack-Room Ballads' knocks Chevalier's songs into fits.

"But 'Stalky & Co.' is quite another color. I do not mean to say that the boys are not boys. But what I do mean is that these giddy blighters are unmitigated bounders. I never heard of this wonderful college, nor has any other fellow in my House. But it appears to turn out a rummy set, and I hope our elders won't imagine we are like those howling Lazarites. It's a beastly shame if they do. At Eton we have some *esprit de corps*, and try to be sportsmen and gentlemen. To be a loafer is awful bad form, and this giddy Kipling crew never touch a bat or play footer. Whatever it may have been in old times, it's now *infra dig.* to be 'swished,' while these blighters get caned once a week.

"The beaks [masters] are more second-rate than the fellows, and the Head, who is meant for a hero, is a sarcastic cynic. And that's the sort of Tommy Rotter none of us can stand. When fellows are not allowed to smoke, it's playing it awfully low down for a master to be puffing his pipe when he comes to a chap's room.

"Of course, there's lot that's right-down good stuff in the book and is really not bunkum, if you remember that these are *not* public schoolboys. There's plenty of fun in us, but we don't tell deliberate lies, nor do we care a red cent if our school pays four per cent. I am sure our 'sock' shops [pastrycook's] down-town—Leyton's, Brown's, and the rest—must pay four hundred per cent. If ever I write a book and stick boys like Beetle and McTurk, not to say a 'sop' like Tulke, or a cad like Sefton, I'll let the lot hail from a board school. It's all right giving 'Eric' beans, but 'Tom Brown' is the only true book, and that's forty years out of date. I know I'm rather raw as a critic, but all my division, except a few jossers no one thinks of asking, quite agree with me.

HONEST INJUN (in Lower Fifth).

"ETON COLLEGE, October 17."

The New Harper-McClure Régime.—Wide interest has been shown in the reorganization going on in the establishment of Messrs. Harper & Brothers. The New York daily papers attribute these changes to the new policy consequent upon the business alliance of this firm with that of Messrs. Doubleday & McClure. Among the changes which are reported in the daily press are the discontinuance of *Harper's Round Table* and the transfer of its editor, Albert Lee, to the editorial staff of *McClure's Magazine*. Mrs. Margaret E. Sangster is no longer to be editor of *Harper's Bazaar*, and Mr. Henry Loomis Nelson has relinquished the editorship of *Harper's Weekly*. Mr. John W. Harper, president of the company, denies in the New York *Tribune* (October 27) the rumor that Mr. Henry M. Alden is to retire from the editorial chair of *Harper's Magazine*. Neither, he says, is there any truth in the report that Mr. J. Pierpont Morgan has invested a large sum of money in the corporation of Harper & Brothers. The new *Harper-McClure Magazine*, which is to be edited by James Finley, will make its first appearance in January.

NOTES.

The Academy says of Swinburne's sonnet on the war: "It is not patriotic poetry, it is not poetry of any kind; it is hysteria." *The Times*, however, commends it and adds: "The lyrics of the music-halls and of 'musical comedy' are not behind the poets in the strength with which they express their sentiments on the war." Alluding to this statement, *The Westminster Gazette* says that it decidedly *prefers* the "lyrist" to the regular poets, for the former at least write stanzas that can be comprehended, and that flow easily off the tongue—unlike those of Charles Algernon.

MR. J. M. BARRIE appears to have anticipated in quite wondrous fashion the war news that has appeared in some of the London papers of late, according to *The Westminster Gazette*. Says that journal: "Readers of 'When a Man's Single' will remember a sub-editor who acquired the nickname of Dicky Umbrage. One of the telegrams with which he had to deal concluded with the news that 'the Boers have taken umbrage.' The conscientious journalist searched several atlases in vain to discover the locality of this latest achievement, and then courageously headed the paragraph with the line 'Capture of Umbrage by the Boers.'"

SCIENCE AND INVENTION.

A FLY'S EYES AND WHAT THEY SEE.

IT is difficult enough to put oneself in the place of a fellow man—to try to think as he thinks and to see as he sees; but when we try to do the same for an insect as small as a fly, the difficulty becomes almost insurmountable. The task is essayed, however, by a writer in *La Science Illustrée*, M. Jacques Davia, who, arguing from what entomology and optics tell us of a fly's

FIG. 1.—DIAGRAM OF A FLY'S EYE.

visual organs, proceeds not only to describe what the creature sees, but gives us what we may term a "fly's-eye view" of a man. Says M. Davia:

"If we examine a fly's head with the microscope we shall notice that it has two distinct kinds of eyes: large ones, placed on each side of the face, and little ones or 'ocelli,' disposed in triangular form on the vertex.

"The large eyes form two convex protuberances and are composed of a multitude of juxtaposed hexagonal facets.

"These facets appear to be about four thousand in number; they are not of the same size, those of the upper part being about $\frac{1}{1000}$ inch in diameter and those of the lower part only about $\frac{1}{2000}$ inch.

"Fig. 1 represents one of these four thousand facets that compose a single eye. It is made up as follows:

- "1. Of a cornea C.
 - "2. Of a crystalline cone T, placed behind the cornea and formed of sixteen different segments closely united and surrounded with pigment.
 - "3. Of the retina R, which is in connection with the extremity of the crystalline cone and with a filament of the optic nerve.
- "Each of the facets being immovable, as is also the large eye composed of them, it results that only the rays that are parallel to the axis of the cone can impress the optic nerve.

"Thus, then, to quote the expression of Johannes Muller ('Physiology of the Senses'), the image that a fly perceives, formed of thousands of separate points, each corresponding to a distinct part of the exterior visual field, 'must resemble a mosaic.'

"This is the best idea that one can form of the manner in which objects are depicted on the retina of these insects.

"Let us now examine the ocelli. Each of these is made up as follows:

- "1. A crystalline lens forming part of the general tegument of the body.
- "2. A layer of transparent cells.
- "3. A retina formed of a layer of cells that are like a rod at the front end and connect at the back with the filaments of the optic nerve.
- "4. Pigment.

"The crystalline lens has a very accentuated convex form, it must have a very short focal length, and, the rods being very few, this eye can give a clear image of very near objects only.

"To express our idea better, we may say that the ocelli of the fly are near-sighted.

"It has been proved by experiment that animals instinctively

measure the dimensions of objects that surround them by their own dimensions.

"It is then easy for us to imagine the visual sensations of a fly that is 4 millimeters [$\frac{1}{4}$ inch] high and about 6 millimeters [$\frac{1}{4}$ inch] in average circumference, when it stands on the ground, at a distance of 25 centimeters [10 inches] from a man of ordinary height—say 1.7 meters [5 feet 7 inches].

"The toes of his shoes, about 6 centimeters [$2\frac{1}{2}$ inches] wide, will appear to it as sheds 9 meters [30 feet] wide would to us, jutting out about 6 meters [20 feet] with an approximate elevation of 8 meters [26 feet] above the ground.

"Looking up at the man it will see what to a human being would appear to be a colossal statue 700 meters [2,300 feet] high, diminishing in apparent size from below upward, till its head seems quite minute. The folds of his trousers up to the knee appear huge, while in the distance his hands, his waistcoat, and his mustache are barely visible.

"But when our fly spreads its wings and lights on the man's hand—then the wrinkles of the skin look to it as ditches would to a human being. Here and there are fatty granules that are for the fly so many appetizing morsels.

"It perceives all these things with its ocelli, which then are wonderfully serviceable, while to its larger eyes the man's chest still appears as a high hill. But it is not now occupied with this mass, being busy in exploiting the rich region in the exploration of which it is engaged." — *Translation made for THE LITERARY DIGEST.*

USE AND ABUSE OF THE SENSE OF TASTE.

THIS sense seems to sustain a much more important relation to digestion than is generally supposed. To be well digested, we are told in an editorial article in *Good Health* (October), food must be appetizing, for when it is not the digestive fluids are not properly secreted. Says the writer:

"The sense of taste may be regarded as a sort of regulator of digestion, and perhaps also of nutrition. Hence it is an important property of food that the sense of taste may be stimulated, and that it may have opportunity to exercise its selective and controlling functions.

"When one has eaten a sufficient amount of simple, wholesome food, the sense of taste informs him of the fact by declining to receive more. A perfect rule for mastication would be to chew each morsel of food until there is left only a tasteless remnant. It is useless to swallow such a residue, as it can have no nutritive value. When food is taken in this way, the sense of taste has an opportunity to say 'Enough' before too much has been swallowed, and thus affords a perfect means of adapting the amount of food taken to the needs of the body.

"A careful study of this suggestion will also show that the sense of taste, if allowed to act in a normal way, will select those substances of which the body is in great need; for example, if the blood is impoverished and needs an extra supply of nitrogenous food, there will be a craving for such food as nuts, legumes, and possibly eggs and milk, or some other substance containing nitrogen.

"A curious analogy to this function is found in some insectivorous plants, which, as has been shown by recent experiments, refuse to capture insects or pay attention to fragments of meat placed within their grasp, except when the soil upon which they grow is lacking in nitrogenous elements. By supplying a fertilizer rich in nitrogen, these so-called carnivorous plants cease to be carnivorous and behave wholly like other plants. The same principle applies to the use of fat-making substances, such as starchy and oleaginous foods, as nuts and cereals. The writer has frequently observed in thin patients a craving for fats, which disappeared entirely after the patient had made a gain of twenty or thirty pounds."

The writer reminds us, however, that the sense of taste, altho intended to be a guide to the proper quantity and quality of food, has been too often debased and perverted into a mere means of pleasure. He says:

"Men and women treat the palate as the pianist treats his instrument, touching it in various ways simply for the purpose of

FIG. 2.—A MAN, AS SEEN BY A FLY.

provoking pleasurable sensations, with no regard whatever for the possible needs of the body or the possible damage which may be caused. The sense of taste thus wrongly educated becomes perverted and its indications become confused. Abnormal cravings are developed, which demand satisfaction in the use of tea, coffee, wine, and other intoxicants, mustard, pepper, and other condiments, large quantities of salt, pickles, and rich and savory dishes of various sorts, together with sweets, ices, and tidbits of all kinds. The sense of taste has been dethroned from its high position as governor of nutrition, and has come to be merely the servant of a capricious and insatiable desire for an illegitimate sensation, a purely selfish animal pleasure. This is gluttony pure and simple, and is the apt tutor and hale companion of alcoholic intemperance."

FOREST FIRES AND FOREST GROWTH.

THE study of the part played by fire in modifying the composition and mode of life of forests is one of the newest branches of forestry. That it has not received the attention it deserves is the opinion of Gifford Pinchot, forester of the United States Department of Agriculture, who writes an interesting article on the subject in *The National Geographical Magazine* (Washington, October). Mr. Pinchot says that the records of past fires, written in the forest now on the ground, are often decipherable for more than a hundred years back, and in many cases for more than twice that length of time. The forests which the first white explorers saw on this continent were themselves the successors of others, which, through thousands of years, were burned down at intervals that we can no longer trace. There is but little of all the vast forest area of this country which does not bear, either in actual scars and charcoal or in the manner and composition of its growth, the marks of fire. The records of the Division of Forestry indicate a direct loss to the nation of \$20,000,000 a year due to forest fires, and to this must be added a vast direct loss that is unrecorded and the indirect loss due to destruction of water-supply, etc. Mr. Pinchot believes that, taking into account soil deterioration and destruction of the young growth, the whole loss amounts to more than \$50,000,000 annually. He goes on to say:

"Fires determine the presence or absence of forest in a given region far more generally than is often supposed. A very large part of the prairie regions of the United States is treeless probably because of fire. Such evidence as we have points strongly in this direction, and in addition the behavior of the border forest lands along the eastern edge of the prairies powerfully confirms this view. Where such forest lands have been protected from fire, as they have very largely through the progress of settlement, young trees have usually sprung up in great numbers under or between the scattered veterans which had survived the fires, and a dense and vigorous young growth stands ready to replace by a heavy forest the open park-like condition which the fire had created and maintained. The well-known 'oak openings' furnish an excellent case in point. In a similar way and for similar reasons trees are spreading from the borders of streams in the prairies to the grass lands near by. Such indications as these, joined to the occasional discovery of evidences of former tree growth out on the prairie, where trees no longer grow, go far to prove that trees once grew and may grow again much beyond the limits they occupied when the white men first entered the country. That fire was a restraining cause admits of no doubt whatever, and that it was the principal cause over vast areas is altogether probable."

Speaking of the various qualities of resistance to fire possessed by different trees, Mr. Pinchot says:

"These qualities are of two chief kinds; one, adapted to secure the safety of the individual tree directly through its own powers of defense, the other to assure the continuance of the species, with little regard for the single tree. An example of the first kind is the Western larch, whose enormously thick bark is almost

fireproof, and so good a non-conductor that it protects the living tissue beneath it even against fires hot enough to scorch the trunk fifty or seventy-five feet above the ground. It is to this quality, of their bark, as well as to their marvelous vitality, that the big trees of California owe their power to reach an age of three thousand or four thousand years."

The long-leaf pine has a different mode of protection:

"During the first four or five years the long-leaf seedling reaches a height of but four or five inches above the ground. It has generally been erroneously assumed that this slow growth made it specially susceptible to injury from fire; but while the stem during these early years makes little progress, the long needles shoot up and bend over in a green cascade which falls to the ground in a circle about the seedling. Not only does this barrier of green needles itself burn only with difficulty, but it shades out the grass around the young stem, and so prepares a double fire-resisting shield about the vitals of the young tree."

The second method of protection, which sacrifices the individual, but insures the safety of the species, Mr. Pinchot tells us, is exemplified in the lodgepole pine, which, tho it succumbs readily to fire, is gaining ground in the Rocky Mountains, even replacing thick-barked species like the red fir. How it accomplishes this is thus told by Mr. Pinchot:

"The device to which this curious result is due is similar to that of *Pinus attenuata*, to which John Muir long since called attention. It consists in the hoarding for several years of the ripe seeds in the cones. Fire rarely burns down the lodgepole pine, but in nearly every case simply kills the standing tree and leaves it to be blown down years after, when decay shall have weakened the roots. In the mean time the hoarded winged seeds are set free by the opening of the cones, are distributed and germinate, and the new crop contains a larger proportion of lodgepole than the old. By the repetition of this process great stretches of burned land are finally covered with a pure even-aged young growth where formerly the forest was composed of other and usually much more valuable species."

Another instance of distribution controlled by fire is that of the red fir in the States of Oregon and Washington, where young seedlings are always found on burned-over ground and never under the forest cover. Says Mr. Pinchot:

"In a word, the distribution of the red fir in western Washington, where it is by all odds the most valuable commercial tree, is governed, first of all, so far as we know at present, by fire. Had fires been kept out of these forests in the last thousand years the fir which gives them their distinctive character would not be in existence, but would be replaced in all probability by the hemlock, which fills even the densest of the Puget Sound forests with its innumerable seedlings. I hasten to add that these facts do not imply any desirability in the fires which are now devastating the West."

Falsehoods Told by the X Ray.—It appears that, like its prototype the ordinary photograph, the skiagraph may be made to tell anything but the truth. "A Chicago electrical specialist," says the *Minneapolis Times*, "has been making some interesting experiments at the suggestion of the attorneys of the Chicago City Railway Company and others, and the results are somewhat startling. They tend to show that shadowgraphs may need a great deal of corroboration when introduced as evidence in a damage suit. One of the lawyers exposed his hand before the machine with the muscles relaxed, fingers extended, and the member generally in normal position. The shadowgraph showed the bones to be in perfect condition. The attorney then made a second exposure of the same hand, cramping the first joints of the fingers slightly. The ends of the fingers appeared to have been crushed and the bones were apparently of unnatural size. In another experiment the operator showed that it is possible to arrange an object on the outside of the body and make it appear to be lodged within. Thus a bullet placed in the clothing on the back of the body was shown in the shadowgraph as resting against the spine. The expert stated further that he had learned by long experience that it is possible for the operator himself to

be deceived as to the location of an object disclosed by the X-ray machine. These disclosures as to the ease with which the records of the X-ray machine may be falsified will prove valuable to the defense in damage suits for malpractice, personal injuries, etc. Hitherto the shadowgraph has been regarded as proof conclusive of the nature and extent of injuries. Hereafter the defense will prove the ease with which the X-ray machine may be made to lie and upon the attorneys for the plaintiff will fall the burden of showing the integrity and reliability of the operator. It will be necessary to show also that he is a skilled electrician and possessed of a fair knowledge of anatomy. Otherwise he may have deceived himself, however honest and reliable he might be. When X-ray testimony is introduced hereafter it will be necessary to reinforce it very strongly, or the opposing counsel will build up mountains of doubt as to its accuracy."

COMMENT OF EXPERTS ON MARCONI'S SUCCESS.

THE success of Signor Marconi in his demonstration of wireless telegraphy during the recent international yacht races continues to be made the subject of comment in the electrical press. Accounts of his work are uniformly marked by good-will

currents. After Signor Marconi completes the work which the enterprise of *The Herald* made possible, he will proceed with a series of tests and demonstrations for the Government. Rear-Admiral Bradford is greatly impressed with the possibilities of the discovery.

"With a view of supplementing his own judgment on what is practically an unlearned subject in this country, the correspondent of *The Western Electrician* asked one of the most prominent government experts on board to make a statement, if possible, of the consensus of opinion among the experts on board as to the practicability of Marconi's work. The response, altho the gentleman would not allow his name to be quoted, was unequivocal in its flattering nature as to the practical value of Marconi's researches. The gentleman stated that Marconi had from the start operated not at all like an experimenter, but like a man who knew his system so thoroughly that no matter what contingencies arose he always had at hand the remedies needed. He further stated, as a man familiar with telegraphic methods, that 1,500 words were sent from the *Ponce* at a distance, generally speaking, of from five to twenty miles with the repeating of only a very few words."

The correspondent of this paper gives, in another part of his article, an interesting description of the way in which, in Marconi's belief, the electromagnetic waves set out on their message-carrying errand. To quote again:

"Mr. Marconi during the day was caught 'on the run,' so to speak, and was asked to express in a rough way on paper his conception of the Hertzian wave that comes from the vertical wire hanging from the mast. A card had been prepared by your correspondent with a pencil sketch of the diagram here shown in the figure, supposed to represent an upright pole or mast from which hangs the Marconi vertical conductor. Quick as a flash Marconi seized the pencil and by a single down-and-up stroke made the two 'wave marks' shown in the illustration, and with the words 'Long waves—like that,' was off.

"As Mr. Marconi was not available, Mr. Densham was afterward asked to explain this diagram more fully, and he stated that [the figure to the right of the diagram] gives a more correct idea of the way the Marconi people conceive the theoretical appearance of the wave. But just how the wave might start from the wire was a question. Mr. Densham stated further that practise seemed to prove that the wave was about four times the length of the wire, as indicated in the diagram. Remembering, therefore, that the general standard height of the vertical wire now employed by Marconi is 150 feet, this would make the wave, say, 600 feet as it leaves the 150-foot vertical conductor.

"Mr. Densham was asked what was the effect of an increased spark length or electromotive force; whether the length of a spark gave an increase of the distance reached by a message. His answer was to the effect that it made very little difference after certain points.

"The Marconi people were questioned as to the methods likely to be employed by Mr. Marconi in the line of directing the Hertzian waves, but the answer came with a smile that on this subject they 'had nothing to say.'"

Of the success of the performance, *The Electrical World and Electrical Engineer* speaks editorially as follows:

"With but three 'breaks' in a total of fifty-nine messages, and forty-six consecutive messages received without a flaw, the performance may be considered to practically equal that of ordinary telegraphy. The successful results obtained are the more interesting from the fact that the work was not undertaken as a test of the system, but as a matter-of-fact application of it to practical purposes, not differing in this respect from the arrangements made to transmit the Marconi messages by cable from the receiving-ship to the shore. It is true that the distances were comparatively small through which the messages reporting the stages of the yacht race were transmitted. As we go to press, however, our English exchanges bring accounts of a no less successful operation of the Marconi system between Dover and Boulogne, during the simultaneous meetings at those respective places of

MARCONI WIRELESS TELEGRAPHY SYSTEM.

and by the absence of all national jealousy. *The Western Electrician* (October 14), in reporting the event, quotes the following remarks made by Lieutenant-Commander Qualtrough, U. S. N., on board the *Ponce*, during the first day of the trial:

"If we only could have had this last year, what a great thing it would have been! When we landed marines at Guantanamo the ships were unable to lend assistance, for the reason that the enemy could not be located, and by firing at random our own forces would have been placed in danger. With the aid of the Marconi system the men ashore could have directed the fire, and all would have been well. The English are prepared now to do just what I have outlined. They send a Marconi apparatus ashore with a landing party, and communication with the ship is never lost. In the Philippines the system would right now be of great service to us. It would do away with wires, which are easily cut, and it would enable us to have perfect communication between the islands. The system is certain to be made use of by the army and the navy. Even if to-day's record could not be improved upon it would be of great value. But I have seen enough to know that it is impossible to predict the limit of the wireless

the British and French Association for the Advancement of Science, one of the features of which was the exchange of greetings by wireless telegraphy.

"In view of the tests to which the Marconi system has thus far been submitted, it seems safe to assume that it has reached an entirely practical stage, and is now ready for application to everyday work. The extent of the field for its application is, as yet, however, a matter which awaits determination, but that wireless telegraphy will play a large part in warfare and navigation seems certain. A trial of the system to be made this fall during the naval maneuvers will probably definitely settle the former question, as the installation for communicating with the Goodwin Sands lightship has already settled the latter in the affirmative. Whatever may be the outcome, the greatest credit will attach to the brilliant Anglo-Italian through whose efforts radiant telegraphy has been developed from a useless laboratory stage to a practical system. As an inventor it is probably not too much to say that he has shown qualities which rank his name even among the greatest in the field of invention."

The daily press of October 22 announces that Marconi is now engaged in placing his apparatus on United States war-ships preparatory to making tests for the Government.

CAN INSECTS COUNT?

WE recently translated in this department an account of an observation by Lieutenant-Colonel Delauney, of the French army, in which he inferred from the rhythmical gyrations of a small insect in New Caledonia that it could count up to six. Colonel Delauney's conclusion is regarded by Dr. John B. Smith, of Rutgers College, as having been reached on "remarkably slim evidence." But altho rejecting Colonel Delauney's reasoning, Dr. Smith agrees with his conclusion, for he believes that there is plenty of independent evidence that insects do count. He writes (in *The Scientific American*):

"An interesting illustration came under my notice in July, while collecting on the New Jersey side of the Delaware, at the Water Gap. At the foot of the cliff, along the line of the railroad, all the old sumach canes were used by the little wasp *Odynerus ornatus* for breeding purposes, and from three to six brood chambers were found in the canes. The cells were stored with the larvæ of the locust-leaf beetle, *Odontata suturalis*, then about full grown, and as a matter of curiosity I counted those in the cells of one stalk, finding ten in each store. To ascertain whether this was uniform I cut all that I could find at that spot and invariably ten larvæ were contained in a completed cell. The little wasp begins by putting in one larva and then lays an egg upon or at the side of it. Nine additional larvæ are then brought in, one at a time, for the larva is almost as large as the wasp, and then the cell is capped. Now this insect can not only count up to ten, but it can carry the idea of numbers for some appreciable time. After three or four larvæ have been placed in the cell the bottom one is lost to view and counting from above becomes an impossibility. The insect must, therefore, keep tab on its trips so as to neither over- nor understock its cell. It is not a question of length of cell and simply filling a given space, for the diameter of the stalks varied, and as the diameter became greater the length of the cells became less."

New Color-Printing Process.—"It is well known," says *Cosmos*, "that color-printing is done by printing successively each of the tints, which requires as many different forms as there are colors to be used, and the passage of the paper the same number of times under the press, with very exact adjustments. It is announced that M. Ivan Orloff, head of the imperial printing-office at St. Petersburg, has devised a machine that can print in different colors by a single passage under the press. The few details that are given about the new press are neither very complete nor very clear. It would seem that the result is obtained by an arrangement that enables the colors to be distributed over a roller reproducing the desired outlines; this roller, acting as an inking roller, deposits the colors in its turn on the corresponding places of the form itself. The two surfaces, the curved one of

the cylinder and the plane one of the form, coincide perfectly one with the other. The paper then passes over the inked form. The operation being continuous, and the sheets passing but once through the press, there is great economy of time. More detailed information on the working of this press, and specimens of the results obtained, will be greeted with pleasure in the printing world. It is announced that a company has already been formed in England to exploit the process."—*Translation made for THE LITERARY DIGEST.*

Wireless Telephony.—"Sir William H. Preece has recently been carrying on some interesting experiments on wireless telephony, so called," says *The Scientific American* (October 7): "Four of the poles have been erected near Carnarvon on a sand bank at the southern end of Menai Straits. Half a mile off four similar poles were erected, and half a mile farther on is a high pole supporting a coil of wire, one end being anchored in deep water. Between these points he has succeeded in transmitting the sound of a succession of taps. These taps were made with the view of sending messages by the Morse mode. They were heard at the receiving-station by placing a special telephone to the ear. The system is more rapid than that of Marconi, but the sounds are not as distinct as they might be. As a matter of fact, it is not telephony at all, but a system of telegraphy in which a telephone is used as a receiver."

Golf and the Nerves.—A paper on "Golf from a Neurological Point of View" has recently been read before the Neurological Association by Dr. Irving C. Rosse of Washington. "There is a great deal to be said in favor of golf," says *The Medical Record*, "for those suffering from heart lesions, arterial calcification, or certain hysterical conditions, and undoubtedly as a medical adjunct it is not to be despised. Dr. Rosse, while enjoining moderation, alleges that benefit has been derived in some cases of cough, nervous asthma, and in affections of bladder and prostate, but it is preeminently in functional nervous disease that our great Anglo-Saxon game is to be recommended both as a prophylactic and curative. As to its being a remedy for insomnia, there may be some doubt, as we have met within the last few days a golfer who, despite his golf exercise, suffered from insomnia. A great deal might be said in favor of golf as a mental and nervous tonic, but not to the exclusion of other sports which have many of the same advantages."

SCIENCE BREVITIES.

A NATURAL soap mine and a paint mine have been discovered in British Columbia. Several soda lakes recently found in the foothills near Ashcroft, we are told by *Feldner's Magazine*, have bottoms and shores encrusted with a natural washing compound containing borax and soda, and equal to ordinary washing powders for cleansing purposes. About 275 tons of the compound have been cut and taken out of one lake, being handled exactly like ice. One lake alone contains 20,000 tons.

HIGH altitudes are apt to be dangerous to elderly people, and to all those with weak hearts, we are told by Dr. Findlater Zangger in *The Lancet*. He says: "It is especially the rapidity of the change from one altitude to another, with differences of from three thousand to four thousand feet, which must be considered. There is a call made on the contractibility of the small arteries on the one hand, and on the amount of muscular force of the heart on the other hand, and if the structures in question can not respond to this call, rupture of an artery or dilatation of the heart may ensue."

"THE title of the famous waltz, 'The Beautiful Blue Danube,' contains an assertion that is considerably removed from the reality," says *La Science Française* (October 6). "A scientist has taken observations, during the year 1898, on the different colors presented by the celebrated river. He has shown that on 11 days the waters of the Danube were brown, on 46 days yellow, on 59 days muddy green, on 45 days clear green, on 60 days steely green, on 46 days emerald green, on 64 days yellowish green—but blue, never. Thus it is that we write history—and geography!"—*Translation made for THE LITERARY DIGEST.*

"IT may not be generally known that the by-products of fruit stones are of considerable value," says *The Scientific American*. "The pits of peaches, apricots, nectarines, plums, and prunes which have heretofore been thrown away or used for fuel have a market value. This is specially true of the peach and apricot pits. There is now a strong demand for them at \$8 to \$10 a ton, delivered in San Francisco. The kernel is, of course, what is sought. From the kernel of the apricot Turkish 'nut candy' is made which has almost displaced the almond. The same substance is used for the adulteration of cinnamon, allspice, and nutmeg. Prussic acid and essence and oil of almonds are made from the peach and prune pits, and these flavors are used in many ways. The pits are cracked in San Francisco and the kernels are then sent East."

THE RELIGIOUS WORLD.

A PLEA FOR MORE RELIGIOUS THINKING.

THE ordination of Dr. Briggs in the Protestant Episcopal church, and the recent indorsement of Bishop Potter's action by a large number of bishops of that church, is thought by many to be an indication of a widespread change of attitude not only in the Episcopal church but in almost all the denominations; a change not so much toward any specific doctrine as toward a greater spirit of inclusiveness. In an article on "Christian Liberty" in *The Outlook* (October 7) the writer says:

"Nor is it a menace to the church if its members hold different opinions. The apostles themselves did this. Even on so vital a question as the resurrection of Christ they were not agreed at first. . . . Thomas openly declared his unbelief on the subject, and said, 'Except I shall see in his hand the print of the nails, and put my finger into the print of the nails, and thrust my hand into his side, I will not believe.' And yet no harm was done the church—perhaps because he was not expelled from among their number, nor abused by the rest, but was still their brother in Christ and fellow apostle. Let, then, the members differ as widely as need be. So long as one and the self-same spirit worketh in all, it will not hurt the church. On the contrary, it would be death to it if there were no difference—death from stagnation. Surely, no one would maintain that it already possesses all truth, and that there are no deeper, larger views to be obtained. There must be. But how is it to be done unless we are free to confess that—

Our little systems have their day,
They have their day and cease to be;
They are but broken lights of Thee,
And Thou, O Lord, art more than they."

Commenting on this article, a writer in *The Christian Evangelist* (Christian, St. Louis) under the caption "A Plea for More Religious Thinking," says:

"So long as the idea prevails that it is dangerous for brethren to differ from each other in opinion there is no encouragement to individual thinking, for the exercise of our individual judgments, in an honest effort to know the truth for ourselves on every subject that comes before us, is certain to result in differences of opinion. It soon comes to be, therefore, that thinking for oneself is regarded as a dangerous experiment, and we begin to look around for the most commonly accepted view, and we take that second-hand. There are, of course, many things that most of us are compelled to accept second-hand, because only a few specialists have entered these fields of investigation and are competent to express an opinion upon them. But as soon as the facts they furnish us come within our possession we are to exercise our individual judgment as to the bearing upon the particular question in hand, and he who does not do this is doing grave injustice to his own moral and intellectual nature. In the Roman Catholic church all questions are settled by the *hierarchy*, and the people are saved the trouble of thinking for themselves, but the result of it we all know. The chief distinction between Roman Catholicism and Protestantism has been and is the greater freedom of thought which the latter inculcates; but all Protestants do not act consistently with this distinction.

"We have long been of the opinion that there is more intellectual than physical laziness. There is a constitutional indisposition to mental exertion as well as an inherent reluctance in expending physical energy, and it, perhaps, is more widespread than the latter.

"In the same article referred to above the writer asks, and we think with great reason, 'Is not perchance this the very reason why so much coldness and indifference exist in the church to-day, because so many of us pretend to believe a great deal more than we really do? We pretend to believe every particle of every Protestant creed and every proposition of every orthodox work on theology. We are not wilfully nor consciously hypocrites in doing this. We ourselves believe that we believe them all, simply because we imagine that not to disbelieve is the same as to

believe. After all, is not this all that the complacent orthodoxy of the multitude amounts to? They do not disbelieve! But neither do they believe with anything like positive faith, a real personal conviction, even some of the simplest and most vital truths of the religion they profess. If they did, they could not be the self-satisfied creatures they are, the cold, disinterested men and women we find in our churches by thousands. No wonder their professions have so little relation to their lives and their Christianity to their characters. What we do not disbelieve does not affect us, but what we believe does. I had rather have them disbelieve a great deal they profess if they would also honestly believe a very little."

"That these sentences strike at a widespread evil among professed Christians, we can not for a moment doubt. There is a lack of *reality* in our religious profession that is the chief hindrance to the spread of the Gospel. Let us have more thinking—real, personal, hand-to-hand intellectual encounters with the problems that confront us, and we will probably profess less, believe more, and live a great deal better."

DR. DE COSTA AND THE BROAD-CHURCH MOVEMENT.

THE resignation of Dr. Benjamin F. De Costa, former rector of the Church of the Evangelist in New York, from the ministry and membership of the Protestant Episcopal church, and his subsequent deposition by Bishop Potter, have caused renewed

REV. DR. BENJAMIN F. DE COSTA.

discussion, in and out of the church, of the questions raised by the ordination of Dr. Briggs last spring. Dr. De Costa's action was hastened by the alleged triumph of the Broad-Church party; in the recent New York diocesan convention. It will be remembered that, in spite of the determined opposition of the High-Church party, the Broad-Churchmen succeeded in reelecting the members of the standing committee who had recommended the ordination of Dr. Briggs. In the course of Dr. De Costa's letter of resignation, which was addressed to Bishop Potter, he disclaimed having any personal grievance, but said that his action was wholly due to the increasing dominance in the church of what he regarded as dangerous heresies relating to the Scriptures. He said in part:

"You, right reverend sir, have entered the field at a crucial hour, plainly declaring that the system of denial or negation em-

bodied in the 'higher criticism' forms an allowable method of interpretation, and that the acceptance of the methods and its conclusions does not disqualify candidates for the ministry. You have therefore deliberately received into the denomination, and you have approved as proper teachers for the people, men who declare that the Scriptures are errant and do not form an infallible guide, abounding in myths, fables, scientific and historical errors. Men of this kind plainly declare that what hitherto we have called the Bible is not the Bible, and that the real Bible lies buried underneath the rubbish of ages, waiting to be recovered.

"The former belief in the Bible is no longer required. Candidates of the school to which I refer will indeed continue to sign papers, agreeing to accept the Scriptures as the Word of God, but such subscriptions practically will prove little better than perjury.

"I can understand why the bishop of western Texas is obliged to admit: 'We know that the young men are not in the churches and the laboring classes are entirely alienated.' The president of your standing committee has just reported to convention that the youth of the denomination 'deny any obligations to go to church. They go if they please, but if not, it makes no difference.'

"Indeed, what have they to go for? To listen to the reading of what preachers pronounce myths and fables. Substantially, the battle for the Bible has been fought. The 'cause is lost, and now you can present no inducements for either youth or age to go to church. By a town-meeting process the Bible has been declared 'literature.'

"At this point I regret that it seems necessary to turn and indicate that the long studied scheme to inaugurate Arianism is substantially perfected. The windows of Episcopalianism are now opened, not toward Jerusalem and the fair realms of catholic thought, the range on the contrary being down hill, toward what is called the broad and coveted landscape of deism and dissent. The distinguished rector of the leading parish in Brooklyn declares over his name that 'it is probably true that ninety per cent. of our bishops believe and teach views for which Bishop Colenso was deposed.'

"Still, with all this precaution, the underlying hostility is by no means concealed. The perforated, honeycombed condition of Protestant Episcopalianism is still indicated by agnostic phrase. We all know perfectly well that clergymen in your diocese are assaulting and riddling the faith, and openly circulating Socinian literature. The skeptic is secure, and the revolution wins honor and applause, tho it can not be said of the system carefully sheltered in dioceses by the purple of the Episcopate that 'the scoffer observes a side of it that reduces his sneers to silence.' In reality, it forms the bouleversement of Christianity. . . . You destroy the value of the church; since a body that can not vouch for a written record can not vouch for anything. That, I am sorry to say, is the case with the body you so fully represent. It is the case of the blind leading the blind. . . . While no action on your part could lead me to go out, I recognize a condition that no one man, or any possible combination of men, can now successfully meet. The Episcopalian scheme, based on private judgment, is not only far overshadowed by doubt that will characterize the incoming twentieth century, but it is possessed by the unbelieving spirit. The storm is already here, but the Protestant Episcopal body has no anchors. The future is clear. Your people are hastening to accomplish their evolution. Few will be misled by the pompous diction of that bishop who in his last charge foretells great victories. Fewer still, allow me to say with all kindness, will be persuaded by your own phraseology, where you speak of 'the Book' as 'incomparable and precious,' since it is commonly believed that many churchmen would not now disdain such language if applied to the works of Shakespeare and Homer. . . .

"For myself I can not bow to the guidance of the 'distinguished critics' whom you have set forth as teachers and examples for the faculties in Episcopal seminaries, masters in Israel—who now, side by side with the professional infidel, stand forth to lecture on the 'Mistakes of Moses.' My sense of right would not support me in any such course. I retire from the field, convinced that I am no longer called to struggle with an overwhelming and rapidly increasing force. I can not accept the revolution or drift with the tide. Your school is indeed benevolent, and quite willing to tolerate catholic faith, bestowing upon it from time to time

nothing more severe than ignoble terms. But for myself I ask no favors. I will not remain where doubt commands a premium, and the belief in an infallible Bible enjoys simply the immunity granted to a fallible Koran."

Naturally very diverse views prevail as to Dr. De Costa's action. *The Church Standard* (Prot. Episc.), which represents a conservative type of churchmanship, thinks his position illogical. It says:

"No one will be astonished at that announcement; the surprising thing is that Dr. De Costa should have remained so many years in a church and a diocese which he felt it to be his privilege and duty to hold up to public censure and contempt. A moderate sense of propriety might have suggested to him years ago he ought either to leave the church or to stop fouling the nest in which he still chose to abide; and it requires no supersensitive vision to perceive that his exit would have been more impressive if it had been made at a time when it would have involved the sacrifice of position and emolument. It is odd, too—is it not?—that for fifteen or twenty years past Dr. De Costa should have been hurling perpetual charges of disloyalty against men who were born in the church, who will die in the church, and who would die to-morrow rather than lift an unfilial heel against the Spiritual Mother whom he now renounces and forsakes.

"There is something remarkable in the tendency of radical protestants like Dr. De Costa—after vainly endeavoring to impose their own opinions and policies on other people, and after loud assertions of their individual independence—to lay down their independence, and all their cherished opinions and policies along with it, in abject submission to the Church of Rome! The phenomenon is more than usually peculiar in this case, because the Church of Rome does just exactly the very thing which offends Dr. De Costa in the Episcopal church, and does it systematically. Men of the most advanced critical school hold high place in the Roman church; moreover, strange as it may seem to some people, some of the broadest of Broad Churchmen now living are in the priesthood, the episcopate, and even the *Curia* of the Church of Rome, and she does not cast them out. The fact is that the Church of Rome never casts anybody out that she may possibly have a use for, if it were only after many days; and she regards these men as scouts and explorers from whom she may get valuable service by and by. So she smiles on them benignly, and if they go too far—not in their thinking, but in their public talking—she represses them with a private word, or perhaps puts them into some high place where they will have other things to occupy them. That is the fixed and settled policy of Rome; and when Dr. De Costa goes to Rome he will be no more able to change it than he has been able to control the administration of the Episcopal church."

Church Defense, the organ of the High-Church party, says that Dr. De Costa has "stood so bravely for many years against the Broad-Church movement that it is the more to be regretted that he has allowed the enemy to discourage him." This is not the time, it says, to give up the fight, but it is "the duty of those who believe in the Incarnation and in the fact that the Bible is the Word of God to stand fast in that faith, and earnestly to contend for it to the last." It continues:

"In so far as his letter arraigns with incontrovertible justness the bishop of New York and the Broad-Church party which flourishes under the bishop's practical protection, if not open patronage—thus far we are forced to give a sorrowful assent to the terrible arraignment which they have earned and for which they have themselves alone to blame. But Dr. De Costa, probably overwrought by the vehemence of his grief at the apparent triumph of unbelief, loses heart altogether and upbraids his Holy Mother, the church, for the misdeeds of some of her faithless children. The fact can not be emphasized too strongly that the church and the majority of the bench of bishops are perfectly sound in the faith, and that error exists only in the teachings of rebellious children, for whose misdeeds the church can not be held responsible, and the bishops can not be blamed, unless, indeed, by holding their peace they permit error to flourish unmolested."

The Independent (undenom.) terms Dr. De Costa's letter an

unusual ecclesiastical document, and says that it is not "surcharged with any more than his usual restraint":

"He has long been known for his sensational invectives against whatever he disapproved in his own church or in Protestantism, and his utterances have been the delight of Catholic journalism. But never has he made such a sensational utterance as this in which he commits ecclesiastical suicide and puts himself where he can, for the present, speak only as an individual, with the backing of no representative position. His letter is one long tirade against his bishop and the Episcopal church. The ordination of Professor Briggs against his protest has convinced him that the Episcopal church has gone over irretrievably to the higher criticism, and therefore to Socinianism and infidelity. It no longer holds to the infallible Bible. It has renounced its testimony, and there is no hope for it. It is given over to the world, bishops, and priests, and people. 'The windows of Episcopalianism are now opened, not toward Jerusalem,' but toward 'the broad and coveted landscape of deism and dissent.' Its 'perforated, honeycombed condition' is indicated by 'agnostic praise.' He tells his bishop that his 'own diocese, the central and most important of all,' is 'rapidly approaching the condition of the bloodless heart,' that Trinity Church is 'spiritually falling,' and that, 'if the cathedral is ever finished, it will prove the sarcophagus of Episcopalianism, the coffin of its creed.' Therefore, he parts company with a church which has broken the contract it made with him at his ordination."

The Roman Catholic papers naturally view his letter with favor, and most of them express the hope that he will soon take what appears to them the only logical course, and find a firm standing-ground in the communion of the Roman Catholic church. *Ave Maria* says:

"The letter is a frank, full, and yet most temperate statement of the writer's motives for withdrawing from the ministry of the Episcopal church. It will be unpleasant reading for many besides the bishop, but no candid Episcopalian can question the truth of anything that Dr. De Costa says. He describes a condition that must be plain to every one who has eyes to see—a condition that no man, or any possible combination of men, in the Protestant Episcopal body can now successfully meet.' We have read this letter with mingled feelings, admiring the writer's honesty and charity, and hoping that his words may be attentively heeded and dispassionately discussed by all classes of Episcopalians. Only good can result from this. The resignation of so prominent a clergyman after long years of service in the Episcopal church is an avowal that light and peace are not to be found there. Let us pray that he and all others who have known the religious doubts of the present age may yet realize that there is no rest for the mind and the heart except in the faith of that church which alone speaks with authority and 'has the words of eternal life.'"

The Monitor (San Francisco) says:

"Dr. De Costa can not continue longer in the Episcopal ministry consistently with his opinion of what believes to be the radical departure of the sect from 'Catholic' principles and traditions. As a matter of fact, the eyes of this reverend gentleman, who is evidently both earnest and sincere in his professions, are opening to the truth. He perceives the fallacious character of the Anglican 'branch' theory and the instability of the faith and teachings of the system with which he has been so long identified. His course resembles that of hundreds of his ministerial brethren of the Protestant Episcopal church in this country and England. It may lead him where it has led them, into the true fold of Jesus Christ. For his own sake, we hope that Dr. De Costa may prove so fortunate."

The New York *Freeman's Journal*, under the caption "No Briggsism in the Catholic church," controverts the view of *The Church Standard* already quoted, that Dr. De Costa will find men as advanced as Dr. Briggs in the Roman Catholic church. He says:

"The charge here is that the Roman Catholic church compromises with error, permits her members to hold doctrines contrary to her teaching. This charge is absolutely false. One of the

leading objections of Protestantism to the Catholic church is that she tolerates no opinions contrary to her doctrines, and that on this account she is opposed to progress. Even *The Church Standard* admits that the Catholic church requires what it calls 'abject submission' to her teaching. How can it accuse the church in one sentence of requiring 'abject submission' and in another that she tolerates in her members opinions contrary to her teaching? We leave *The Church Standard* to reconcile its two contradictory statements."

THE UNITARIAN CONFERENCE.

THE annual session of the "National Conference of Unitarian and Other Christian Churches" took place this year at Washington, in the historic All Souls' Church. The opening address (October 17) was delivered by Senator Hoar, of Massachusetts, president of the conference, and notable addresses were also made by Carroll D. Wright, United States Labor Commissioner, by Dr. Edward Everett Hale, and others. Senator Hoar said, among other things (we quote from the report in the *Boston Transcript*, October 17):

"Every Unitarian, man and woman, every lover of God or His Son, every one who in loving his fellow men loves God and His Son even without knowing it, is welcome in this company.

"We are sometimes told, as if it were a reproach, that we can not define Unitarianism. For myself I thank God that it is not to be defined. To define is to bound, to enclose, to set limit.

"The great things of the universe are not to be defined. You can not define a human soul. You can not define the intellect. You can not define immortality or eternity. You can not define God.

"I think also that the things we are to be glad of and to be proud of, and are to be thankful for, are not those things that separate us from the great body of Christians, of the great body of believers in God and in righteousness, but the things that unite us with them. No five points, no Athanasian creed, no thirty-nine articles separate the men and women of our way of thinking from humanity or from divinity.

"But still, altho we do not define Unitarianism, we know our own when we see them. There are men and women who like to be called by our name. There are men and women for whom faith, hope, and charity forever abide; to whom Judea's news are still glad tidings; who believe that one day Jesus Christ came to this earth, bearing a divine message and giving a divine example. There are women who bear their own sorrows of life by soothing the sorrows of others; youths, who when duty whispers low, 'Thou canst,' reply 'I can,' and old men to whom the experience of life has taught the same brave lesson. There are examples of the patriotism that will give its life for its country when in right, and the patriotism that will make itself of no reputation, if need be, to save its country from being in the wrong. They do not comprehend the metaphysics of a trinal unity nor how it is just that innocence should be punished that guilty may go free. They do not attribute any magic virtue to the laying on of hands, nor do they believe that the traces of an evil life in the soul can be washed out by the sprinkling of a few drops of water, however pure, or by baptism in any blood, however innocent, in the hour of death. But they do understand the Ten Commandments and the Golden Rule, and they know and they love and they practise the great virtues which the apostle tells us are to abide."

Senator Hoar also repeated his well-known views on expulsion. He did not believe in fatalism or in blind force, and he did believe that nations must work out their own salvation.

Dr. Hale followed with a report for the council of the conference. The increase of the Unitarian church was, he said, particularly within the ranks of other denominations, and Unitarianism was often ably proclaimed from Presbyterian and other orthodox pulpits. He predicted that the extension of "free and undefiled religion" would depend in the next half-century largely upon lay efforts and influence. He deplored the prevalent listlessness of

many ministers and laymen and their lack of interest in the church.

The Outlook (undenom.) thus comments on the conference:

"Some papers were rather high-pitched in intellectual tone for the average hearer. It was splendid faith in human receptivity, blending with fidelity to fundamental needs of modern thought, to give the opening evening to two such subjects as the personality and immediacy of God, and anthropomorphism in religious thought. Practical matters, however, came in turn when religion was exhibited in its relation to education, to citizenship, and to sociology. After the philosophers the field missionary, the border campaigner, and the industrial-school mistress had their say, and the Unitarian Temperance Society its prized and conspicuous hour. As in the other churches women count for much, and the Women's National Alliance met with a full house gladdened with reports of an expanding constituency and work. A meeting of great significance in its forward look was that of the Young People's Religious Union, largely attended, and in its spiritual tone notably high. Perhaps the most salient feature of the conference was the attitude of the younger men—a class that has been criticized for a tendency to radicalism. The Rev. Paul Frothingham, of New Bedford, declared that the great need of the time, now that the work of criticism has gone thus far, is religious reconstruction. 'We need,' said he, 'a new theology and a new worship. It is the duty of Unitarians to bring order out of the chaos to which creeds have been reduced.' On 'Our Relation to Jesus' the Rev. W. H. Pulsford, of Waltham, said: 'Through Jesus all our divinest thoughts have historically come to us, and He must be more to us than any other man. The voice nearest, tenderest, truest to us is that of the Nazarene.' The Rev. James Eells, of Boston, said: 'Back to Jesus' is the cry in the orthodox churches; but to realize that is to take hold of Jesus's consciousness of sonship to God, till it is as real to us as it was to Him. We can wrap Him round the heart as manhood's ideal, and know that we do no violence to absolute truth.' With full appreciation of this, it is not an unfair criticism to note that in the references made to the medieval theology still current there was no fair recognition of any but Unitarian improvers of it. Neither was there any call made to emulate the example set by others in spreading the Gospel of Jesus among the non-Christian peoples."

THE UNIVERSALIST CONVENTION.

THE biennial convention of the Universalist church, which was held at Boston beginning with October 23, was notable for its ratification of the new platform of principles which was first proposed two years ago by a conference of Boston Universalist ministers under the leadership of Dr. George T. Knight, of Tufts College. The new declaration, which takes the place of the Winchester Confession of Faith adopted in 1803, and is called "the Chicago convention," is as follows:

"The essential principles of the Universalist faith are the Universal Fatherhood of God; the spiritual authority and leadership of His Son Jesus Christ; the trustworthiness of the Bible as containing a revelation from God; a certainty of retribution for sin; the final harmony of all souls with God."

This ratification of these principles was carried by a vote of 132 to 10. The new confession has been referred to as a "creed of forty-eight words."

An interesting feature of the conference was the reception of a delegation headed by Dr. Edward Everett Hale representing the Unitarian church in the United States, to confer upon the subject of a union of the two denominations, a subject that has already attracted much discussion. Dr. Hale, in the course of his address, said that the leading feature of Unitarian life had been described by Dr. Lyman Abbott as "the forward look, combined with the determination to keep fast our historical relation to the leader of Christianity." Said Dr. Hale:

"In these words is the distinction between our great religious bodies and any of the ecclesiastical corporations. These corporations are trying to translate the past into the methods of the

present. It is your business and it is ours to take the work of religion, upon the industries of our time, upon its pleasures, and upon all the work of our time in the next fifty years, and to illustrate the lessons in the voices of to-day."

Referring to this proposal for union, *The Mirror*, St. Louis, says:

"There is no reason why they should not do so. Unitarianism must be Universalism or it can be nothing but black pessimism. The plain truth is that the world is growing Universalist, growing away from the doctrine of eternal damnation and all that. Evolution everywhere shows betterment, and why should not man grow better? Why should any immortal soul be sent to eternal hell? The observation of man shows that sin has results which serve as punishments here. An eternity of pain is abhorrent, for it means an eternity of sin by myriads of immortal souls. Orthodox Christians everywhere are dropping eternal punishment. They can't conceive of it for their own kin and friends. Kinship is widening. Some day Universalism will be the dominant cult of the world. And then every one will believe in a good God, not a jealous, vengeful God, a Father who will love all His children, and cast none away for things they were punished for in the doing."

The Chicago *Inter Ocean* remarks that to the lay mind the distinction between the new and the old creed of Universalism is not apparent. The latter was as follows:

I. "We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God, and of the duty, interest, and final destination of mankind.

II. "We believe that there is one God, whose nature is love, revealed in one Lord Jesus Christ, by one Holy Spirit of grace, who will finally restore the whole family of mankind to holiness and happiness.

III. "We believe that holiness and true happiness are inseparably connected, and that believers ought to be careful to maintain order, and practise good works, for these things are good and profitable unto men."

In both these creeds the essential doctrines set forth appear to be the same. Says *The Inter Ocean*:

"In other words, the Universalist church has not drifted, but merely has taken a firmer, because a clearer, bold on its faith. The new creed, moreover, in itself is less liable to perversion or misunderstanding than the old. With the exception of the distinctive doctrine of the church, as expressed in the concluding words in regard to 'the final harmony of all souls with God,' there is, perhaps, nothing in this terse declaration to which all churches might not subscribe.

"As to the correctness of this distinctive doctrine, Rome, Canterbury, and Geneva hold different opinions. The question, therefore, is one for individual judgment and belief. The Universalist church has done a good service, at least, in setting forth its cardinal tenets in the briefest, simplest, and clearest form. There can be no longer, if there ever were, any doubts as to what it holds. Perhaps this is all that can be done by the different churches—to make their creeds as simple and clear as possible—and then leave men to judge for themselves till—

The Shadow cloaked from head to foot
Who keeps the keys of all the creeds—

shall determine which is the nearest approximation to eternal truth."

RELIGIOUS NOTES.

At the state convention of the Pennsylvania colored Baptists in October, the chairman of the National Baptist Association, the Rev. L. G. Jordan, reported that there are 1,800,365 colored Baptists in this country, with 14,771 churches and 14,000 ordained ministers. The church supports 12 missionaries in Africa. It is expected that good results to the race will flow from the war. At present, it was said, a native is not allowed to walk on the foot pavements of their cities, or to be seen after dark without permit, and no government efforts are made to elevate the colored men.

THE New York *Sun*, which recently opened its columns to letters discussing the question of the immortality of the soul, has been inundated by the communications which it has received from men and women of all shades of belief and all walks of life. These have included a number of well-known men, among them Goldwin Smith, Prof. Hiram Corson of Cornell, and others. The letters as a whole have, says *The Sun*, been of marked literary ability and have shown capacity for thought of a high order. It is proposed to print them in book form.

FOREIGN TOPICS.

CAN THE BOERS WIN?

THE South African war has hardly begun in earnest, and will not attain its more serious proportions until General Buller reaches the scene of strife; but already it has become apparent in England that the reports allowed to pass the censors must be subjected to searching criticism to distinguish between fact and fiction. The majority of British papers seemed at first to exercise no such caution, but subsequent developments have awakened them to its need. Of the ultimate result of the war, however, no doubts are expressed in the British press. The *Newcastle Chronicle* says, for instance:

"There will be no repetition of the maganimous mistake which Mr. Gladstone committed. It is the British, and not the Boers, that will dictate terms of peace next time. When the forces of General Joubert have been scattered and the capital of the Transvaal has fallen into other hands, President Kruger will have leisure to lament the blind folly of rejecting the overtures that were made to him at Bloemfontein. As for President Steyn, he, too, may have occasion to lament that he interfered in a quarrel that did not concern him. The war which the Boers have had the madness to provoke and precipitate will, we must all hope, be swift and short."

LONG SPOON AND HOUR-GLASS.

—*Westminster Gazette*.

The *London Outlook* believes that it is none too early to decide what shall be done with the Boers after they are beaten. It says:

"What shall be done with the republics when they have been brought to their knees? Here is no case of selling the hide before the bear has been killed. The Transvaal and the Orange Free State have cast themselves into the melting-pot, and the shape in which they shall emerge is wholly for the paramount power to decide."

In the English journals coming to hand last week, there were still numerous statements to the effect that the Boers are "arrant cowards," "nothing but a mob," "their artillery is bad," "their rifles useless," etc.

The more responsible of the English papers admit, however, that the task undertaken by Great Britain is a very serious one. *The St. James's Gazette* heads a critical article on the condition of the British army with the title "Unready, aye, Unready!" *The Speaker* trusts to the difficulties before the Boers rather than to the readiness of the British troops. It says:

"Their [the Boers'] difficulties of supply and of movement in any strength will be very great. Their total numbers in arms can not exceed 35,000 men. The long weeks which must elapse before they can be effectively attacked must be eminently dispiriting. They are not soldiers, but armed farmers whose means of existence are at stake, while they are inactive and ill-fed in camp or occupied in desultory raids. The test will unquestionably be severe, and the strain upon the resources of the two states must tell heavily. And during these weeks of waiting the black specter may appear. Already the Kafirs in Johannesburg seem to have committed excesses. With the closing of the mines, the worst native elements in the Transvaal will be set free. Whether the Basutos, the Zulus, and the Swazis will remain quiet, we do not know."

The Army and Navy Gazette expected British reverses at the first. *The Broad Arrow* fears much rising *en masse* of the Cape Colony Boers. *The Westminster Gazette* points out that the Boers, by taking the initiative, have gained substantial advantages. We quote as follows:

"There used to be several maxims held by all military men about Boer warfare. One was that the Boers were to be prevented at all costs from occupying Laing's Nek, a position which Mr. Garrett in his *Contemporary* article tells us is 'worth perhaps five thousand men.' Another was that there were on no account to be any initial reverses, even of the slightest, for fear of the moral effect in South Africa as a whole. We are now told that Laing's Nek is unimportant, if it is not even advantageous to us that the Boer forces should occupy it; that initial reverses are unimportant, and that the War Office is quite easy in its mind about the rapid and successful nature of the operations when the campaign begins in earnest. We hope profoundly that these calculations are well founded, and we are relieved to know that Sir Redvers Buller, in whom the country properly has great confidence, approaches his task with cheerful courage. Nevertheless, observers who do not profess to be experts have in the course of these transactions had so many assurances from those who do, which have turned out to be miscalculated and ill-founded, that they may well be chary about expressing any opinion of their own. Any opinion, indeed, except one which is that the despatch of the army corps which is to enable us to take the aggressive ought to be expedited by the straining of every nerve, the every clerk and every mechanic has, from this time forward, to work night and day."

AN ORCHID BUTTONHOLE.

—*Westminster Gazette*.

Continental critics regard the position of the British as anything but satisfactory. From 60,000 to 75,000 men are promised Sir Redvers Buller, but, it is suggested, he may get a large portion of his army in dribbles. The British troops in South Africa at the beginning of the war were not regarded, even before the recent reports of Boer victories, as adequate to the task of making a vigorous stand. *The Temps*, Paris, points out that Kimberley has hardly more than 1,400 men in the garrison, and thinks that is unlikely to hold out long. *The Frankfurter Zeitung* declares that the mobilization of the British forces has not thus far justified the high expectations raised by the commander-in-chief. *The Pester Lloyd* fears that England stands to lose more than she can gain, unless the war is ended speedily. *The Amsterdam Nieuws van den Dag* does not think it improbable that Great Britain may be driven out of Natal. Then she must carry on the war from the West, and that will be much more difficult.

A LITTLE PRO-BOER (MR. LABOUCHERE).

—*Westminster Gazette*.

On the other hand, the fighting power of the Boers is regarded as very formidable, when compared with the strength Great Britain can put forth so far from home. *The Hamburg Fremdenblatt* says:

"England claims to be the 'paramount' power in South Africa. The very wearisome repetition of this claim shows that the wish is father to the thought. No doubt England intended to become paramount, either by a war or by mere bluff and loud rattling of the sword. But for the present the real 'paramountcy' belongs to the two republics. These are an eminently peaceful and defensive power, but they have the status of a great power in South Africa. They hold the balance of power by reason of their excellent military organization. . . . The plain fact is that they defend even German Southwest Africa, for Germany can not meet Great Britain with her present navy."

In the Berlin *Deutsche Tages Zeitung* a cavalry expert declares that the German cavalry may in future be modeled after the Boer army, *i.e.*, as mounted sharpshooters. A comparison between the Boer forces and the British army in the Amsterdam *Handelsblad* is not very flattering to the latter. The *London Times* has declared that the Boers will not attack; but Mr.

Edmund Garrett, in *The Contemporary Review*, thus describes the confidence of the Boers in their own prowess:

"Coming into collision with the might and majesty of the British empire has meant, so far, for the Boers, certain skirmishes between small bodies of troops, in which, as it happened, they beat us whether they were at the top of a hill and we at the bottom, or they at the bottom and we at the top; whether they outnumbered us or were outnumbered by us; whether our men were British regulars or colonial irregulars. Sometimes our men showed their usual pluck, and sometimes they didn't; but in either case they hardly shot a Boer. Taking Bronkhorstspuit, Laing's Nek, Ingogo, Majuba, and Doornkop all together, the Boers lost about one man to our twenty. . . . No Boer speech is complete without the tag about shedding their blood for the country. This patriotic phlebotomy is invoked to settle every question. Considering the political fruits of Majuba and Doornkop, which cost exactly three Boers between them, it must be admitted that the Transvaal has laid out the blood of its devoted sons at a better bargain than any people in history. Hunting the *rooibatte* has been simply the most exciting form of big-game shooting. If the simpler sort of Afrikaner is a little inflated with his prowess, who shall blame him?"—*Translations made for THE LITERARY DIGEST.*

OUR FILIPINO WAR.

OM PAUL has for a while, even in this country, overshadowed Oom Francisco Aguinaldo. An examination of the mass of material from foreign sources which has accumulated on the latter subject is not very encouraging. To the foreign beholder, at least, the resistance of the Filipinos appears to be getting stronger rather than weaker. "The Filipino," says the *St. James's Gazette* (London), "is like camomile. The more it is trodden on the more it grows." This paper criticizes General Otis in the following manner:

"He talks of dissension, demoralization, and disintegration among the insurgents, and apparently believes in allowing the unhappy provinces to stew in the juice of their own freedom until they become tired of cutthroat 'liberators,' and fall thankfully into the arms of the great American republic. 'If the insurrection is not ended too soon,' says he, 'the Filipinos will be so heartily sick of independence that there will never be any more trouble on that score. Independence was a craze with them.' Unless the gallant officer has been reading Mr. Dooley, these be strange sentiments for an American. What with the Chinese question, and the malaria problem, and the recruiting difficulty, and the encouragement given to the rebels by the 'anti-imperialists' of New York, it would seem to the ordinary man that General Otis has a hard row to hoe. But he takes it smiling."

To the average foreigner, the sufferings of our troops seem very considerable. The *Hongkong Telegraph* says:

"Probably no better example of the effects of the Philippine campaign on the American troops exists than the men who arrived to-day in the *Tartar*. They may have been a fine-looking lot of fellows when they first left the United States for service in the Philippines, but to-day they can not be so classed. Here and there a man is to be met who looks as tho matters had agreed with him, but the greater proportion are thin and attenuated and show evident signs of the ravages of the Philippine climate. The men state, too, that they are returning about fifty per cent. short of their original complement, so in all probability we only see the pick of them here, it being a case of the survival of the fittest."

Up to the end of September—according to the foreign papers—no administration able to convince the Filipinos of the advantages of American rule had been established. Manila is governed by martial law, but the protection offered to the inhabitants is altogether inadequate. The troops do not impress the Filipinos favorably. In the city of Manila itself women and girls of tender age are said to be outraged by our negro troops. What money is obtainable from taxation and the customs (both being much more oppressive, it is charged, than under the Spanish *régime*), is used for the army. The *Hongkong China Mail* says:

"All these causes serve to prolong the war by keeping the natives, who have lived in hope of the high-sounding promises of good government being carried out, in a constant state of irritation. The recent reports concerning the losses of the insurgents can hardly be accepted with confidence, as the information is purely hearsay, and is obtained from frightened natives, and the desire of the natives for American rule officially reported is not borne out by facts."

That the Filipinos will surrender is thought extremely unlikely. "So far as we can gauge public opinion among them," says the last-named paper, "they are extremely unlikely to treat with General Otis." The *Epoca* (Madrid) nevertheless believes that the Filipinos must go under as soon as General Otis has all the troops which were promised him—"partly because their fight against one of the most powerful nations seems hopeless, partly because they can not long remain united," says the paper. The latter assertion may not hold good, according to the opinion of the *Vossische Zeitung* (Berlin). Germany, too, it remarks, was regarded as a country in which provincialism, aggravated by a marked difference of dialects, would forever prevent united action. Yet the Germans did unite under foreign pressure. The Manila correspondent of the *London Times* enumerates the following points in favor of the Filipinos:

"1. Steady and creditable resistance to American advance on Tarlac; no appreciable loss inflicted on Filipinos.

"2. Steady and increasingly important attacks on the American line of communications. Colonel Bell, who is the most active and energetic of men, even if his critics do accuse him of hunting after notoriety, says that he will not be surprised at any moment to find that the rebels have succeeded in cutting his and the co-operating regiments off from Manila. And the transport and commissariat department say much the same—'We don't know what minute one of these attacks may succeed, and then. . . .

"3. Steady and permanent strengthening of the Filipino position in provinces that were doubtful until recently. Several very important sections of country were on the verge of going over to the Americans, and were only waiting for a word of encouragement from General Otis; but Aguinaldo heard of it and got his little word of encouragement first, *plus* a substantial reinforcement of all shaky garrisons and a prompt shifting of all wavering officials. Those sections are now lost instead of being won.

"4. Most important of all, Aguinaldo has got lately a lot of money from somewhere and has been using it diligently and judiciously in Manila itself, and has effected a good deal of work toward bringing about a repetition of the outbreaks of last February. To-day every officer in the police force says the danger is fully as great as it was in those terrible days of blood and fire. It is not a matter of opinion. I learn that General Otis has instructed the police to call in all the passes that have been issued, whether for crossing the line of outposts or for going about the streets at night; and that he is contemplating the advisability of ordering every house closed and every street cleared at 7 P.M. instead of 8:30 as it is now."

The writer admits that the Filipinos are tired of the war, and that the peasantry will quietly obey the conqueror. The trouble is that Otis does not conquer. Nor does he seem to understand the judicious expenditure of money. He offered \$30 for every Filipino rifle. The Filipinos answered by offering \$60 for every American rifle, and now the American rifles are frequently stolen. No charge of personal corruption is made against General Otis. He is described as narrow, as wanting in tact and military ability, and he is accused of dividing his attention too much; but there is not a trace of doubt of his personal integrity. His failure to succeed where others would, perhaps, be equally unlucky, causes the *Hamburg Correspondant* to think that perhaps the American Government will modify its views. That paper says:

"The American people may become convinced that it was a mistake to attempt the forcible establishment of American 'freedom' in the Philippines. The Filipinos have their own ideas of liberty. . . . At any rate, whoever attempts to rule there must do so with due consideration of the civilization, customs, and

habits of the Tagals. Nothing will come of the attempt to enforce by the sword what the American commanders are pleased to consider as American civilization. But the American authorities have learned nothing. They are trying to run their heads through a brick wall."

THE MARCH OF THE PLAGUE.

A SILENT enemy, worse than an invading army in its ravages, has gained a foothold in Europe, and hundreds of the best intellects are engaged in combating it. The bubonic plague has landed in Portugal, and is undoubtedly making headway. All attempts to stamp out the disease in India have so far been fruitless, altho the British authorities are showing great zeal. According to a report in the *Deutsche Tages Zeitung*, the situation in Britain's richest possession is as follows:

In Puna, for some weeks, five hundred to one thousand people died from plague. That means that, if it were equally virulent throughout the whole year, the population would be reduced one half. Great numbers of dead rats are found in the quarters of the employees of the Mahratta Railroad. The authorities fear a general panic if the actual number of sufferers were known. As it is, a large number of people have fled. It is impossible to obtain a sufficient number of nurses. An English report says, hor-

AN UNCANNY VISITOR—THE PLAGUE.
—*Kladderatsch, Berlin.*

rible scenes are enacted daily when the bodies are burned. The worst is that there is not enough fuel, as wood is very scarce and expensive in Puna. In Hyderabad the plague also has reappeared, and the mortality is high. Many streets are entirely deserted. From Mysore, and especially from Bungalow, the news is equally disquieting. In Bombay and Calcutta, the plague is less in evidence just now, but nobody believes that it has been effectually destroyed, as past experience has been very disheartening. The white regiments are spared so far, but there is an alarming increase in the number of cases of gastric fever, which seem to be more prevalent among the whites than among the native contingent.

Clean, airy quarters and good food are in the case of the plague, as in all other epidemics, the best protection. In Hong-

kong the authorities, tho they have not been able to stamp out the disease, keep it within reasonable bounds. The Hongkong *Mail* says:

"A filth disease must be fought with the weapon of cleanliness, and altho it is very much to be regretted that we in Hongkong, with all our cleansing operations, do not succeed in killing or stamping out the disease, that furnishes no reason why we should relax in our efforts toward sweetness and light. Indeed, it is an argument in favor of a forward movement. The Government has not gone far enough in its crusade against dirt and darkness. . . . A house-owner is under obligation, to humanity, to the community, and to the Government, to provide light and air within reasonable proportions inside any tenement for which he charges rent. If any grasping landlord disobeys this law, then the Government must make short work of him and his human or inhuman 'pig-sty' without any particular regard to compensation. . . . The necessity of going full-speed ahead on this crusade now, and before the next plague season comes round, is only too apparent."

The British troops at Hongkong are now prohibited from visiting certain unsavory quarters, much to the dissatisfaction of the saloon-keepers.

In Russia the disease seems to have been stamped out for the present; but its probabilities are suggestively illustrated by a report in the Russian *Government Gazette*, from which we take the following items:

The disease was discovered in the village of Kalobowka, District Zarew, Province Astrackhan. Of twenty-four patients, twenty-three died. The one survivor appears to be doing well. A military cordon isolated the village, medical aid was amply provided, and the whole province examined; but the village mentioned was found to be the only one infected.

The Madrid *Epoca* declares that in the Portuguese village of Silvarco de Toudella, fifty of the four hundred inhabitants are down with plague. In Oporto, the population is giving the authorities much trouble in the carrying out of sanitary precautions. Dr. Calmette, director of the Pasteur Institute at Lille, reports as follows:

The plague is more virulent in Oporto than in Bombay. Rats and mice pricked with a needle dipped in the blood of a plague patient die. So far only the poor have suffered; but now the servants of the wealthy are also beginning to catch the disease. A walk through the filthy quarters of the poor explains why they suffer most. They herd together with pigs, poultry, and rabbits, and rats abound. Rats and fleas are chiefly responsible for the spread of the disease. Two to four cases are reported daily, but the real number is much higher. Many die without having seen the physician. Inoculation is very successful in saving life. Of the patients who are not thus protected, 33 per cent. die.

In England a possible visit of the dread specter is taken into consideration; but it is likely that the most highly civilized countries will be spared the worst ravages of the plague, as an organized service for isolating the patients is the best protection. "In Germany we have the necessary organization," says the Berlin *Tageblatt*; but whether this optimism is justified, in view of the ravages of the cholera some years ago in Hamhurg, remains to be seen. America, with the exception of a few seaports, where dark and ill-smelling tenements abound, should be fairly safe, as the London, Ont., *Advertiser* points out. That paper says:

"In Bombay, where the plague has carried off thousands of victims, only one or two genuine Europeans suffered, and that through carelessness or undue exposure. Numbers of those who died were registered as Europeans, but investigation has revealed the fact that they were Eurasians, who always call themselves Europeans. Let it be known, too, that like cholera, dirt is always the breeding-place of this pestilence, and without it the plague can not thrive. In the large cities of the East there is unfortunately a field for every dirty disease, such as is not to be found in any Western city, however ill-kept."—*Translations made for THE LITERARY DIGEST.*

Dollars Earn Dollars...

Money prudently invested in Chicago suburban property is far safer than in a Bank, and at the usual rate of increase in Chicago realty values, will net from 6% to 10% or 15% per annum for years to come.

Fine building lots are always in demand, and command higher prices with each succeeding year.

Our booklets and folders telling you how we are spending \$100,000 in Oaklawn, and our plan whereby you can become the immediate owner of a valuable lot by paying \$50 down and \$15 per month, absolutely without risk to yourself will be mailed on request. This does not amount to much now, but it fills the future with possibilities of an independence.

Here is an illustration which may be of interest to you:

In October, 1898, a client of ours bought an Oaklawn lot—paid cash for it without having seen us or the property. This Summer he came to Chicago, saw us, visited Oaklawn, and bought the property adjoining his at an advance of \$200 over the price he would have paid at the time he purchased the first.

WE THINK WE CAN DO AS WELL FOR YOU.

Oaklawn property is rising rapidly in value.

It is not what a man saves that makes him rich, but what he invests.

Special bargain this week.

Three lots on a South Side business street, facing one electric line into the heart of the city, and half block from intersecting business street with another electric line.

Property at two sectional lines just East of this has risen 400% in value in the past eight years.

Price \$1000 per lot, separate or together; \$200 cash and \$15 per month, payable quarterly on each lot. Purchaser gets benefit of a \$497 payment already made if all three lots are taken.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

The Province of Ontario is becoming alarmed over the seeming decadence of the Welland Canal, and strong pleas are being made for harbor improvements at Port Colborne, its Lake Erie terminal. It is urged that the lack of harbor facilities at that port is largely responsible for the loss in traffic. The harbor is in the same condition that it was seventeen years ago, when the Welland Canal was opened. The lake vessels now require such a depth of water that none of the larger class attempt to enter Port Colborne.

The Welland Canal is 26 1/4 miles in length, connecting Lake Erie and Lake Ontario by cutting through the narrow Niagara peninsula. There is a fall of 326 1/2 feet in the 27 miles of canal, necessitating twenty-six locks. These locks are 270 feet in length by 45 feet in width. The canal has a depth of 14 feet, and when it was opened it was supposed that provision had been made for the largest lake craft. But the deep Sault Ste. Marie Canal has permitted the construction of such immense freight carriers that most of the vessels which could navigate the Welland Canal have been driven out of the carrying trade. When the vessels became too large to enter the Welland Canal lightering was resorted to. The Grand Trunk Railway built a branch line parallel with the canal, and then the cargo was transferred to the railroad to enable the vessel to pass through the canal, and then the cargo was taken on again at the other terminal. This expedient has worked fairly well until recently; but in the mean time the lake vessels have been growing in size each year, and with each increase came lower freight rates, driving the smaller vessels out of competition. Steamers with 200,000-bushel capacity now control the grain-carrying trade, and these can not enter Port Colborne harbor. The vessels that can enter are growing less in number each season, and soon even the expedient of lightering vessels will not suffice to bring traffic to the canal. While the Government admits the necessity of a better harbor, it seems unwilling to take immediate steps toward providing one. It is urged that this will prove of only temporary value unless the canal is enlarged as well; and if the canal is enlarged so as to admit the largest lake craft, there would still be heavy expenditures required on the St. Lawrence route, which does not even have a 14-foot channel for its entire length, altho that depth is expected to be secured this season. The Welland Canal, up to date, has cost the Government \$24,173,352. Its best year in tonnage was 1893, when 1,294,823 tons of grain and merchandise passed through it east and west. Since then, the decline in grain shipments has been especially marked, altho the grain traffic on the lakes increases every year. In 1893, the grain that passed down the Welland was about 16 per cent. of the grain receipts at Buffalo; in 1898, it was about 9 per cent., or a loss of 43 per cent. as compared with Buffalo. The grain that passed down the Welland last year was less than five years ago, while the grain receipts at Buffalo was nearly three times what they were ten years ago.

PERSONALS.

DURING the proceedings of the recent conference of the Library Association in England, a characteristic story of John Ruskin was told in connection with the subject of village libraries. A library for the laborers of a lake-country village had been established, and just before the opening Mr. Ruskin was asked to inspect it. He cordially consented, and upon leaving expressed his admiration of the arrangements and promised to send a present, which came in the form of a sumptuous set of Scott's novels. The wife of the founder

thought the edition much too splendid for the purpose, and at the earliest opportunity told the donor so. "Madam," said Ruskin, "if the money the books cost had been spent in floral decorations or wines for a dinner, nothing would have been said against it; but because it has been laid out for the enjoyment of the simple villagers it is thought extravagant."

WILLIAM ASTOR CHANLER, the new millionaire Congressman from New York, has little in common with W. J. Bryan, yet he bears so striking a likeness to that person that he is frequently mistaken for him. He, however, wears his hair shorter and dresses in a manner more peculiar to New York than Nebraska.

DR. RICHARD J. GATLING, inventor of the Gatling gun, has just celebrated his eighty-first birthday. He is tall, broad-shouldered, of erect carriage, and stately figure. He looks twenty years younger than the average man of his years. He is well read in literature, delights in Dickens, Scott, and Thackeray, and can quote freely from American and foreign publications. Of course, his guns are his hobby, though he shows none of the eccentricities commonly ascribed to men of genius. He is a North Carolinian by birth, but has made his home in Cleveland, O., for many years. He comes honestly by his title of doctor, being a medical man by training and profession, but as a boy he took to mechanics naturally, and thirty-seven years ago conceived the idea which resulted in the wonderful gun which bears his name. Altho the inventor of such a murderous weapon, the doctor is one of the mildest-mannered, most kindly dispositioned men on earth.

Tailor-Made Suits, \$5.

If you wish something decidedly new in a dress or cloak, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples. There are hundreds of firms selling ready-made suits and cloaks, but we are the only house making fashionable garments to order at moderate prices.

Our Catalogue illustrates an exquisite line of ladies' costumes and cloaks, selected from the newest Paris models. Our designs are exclusive, and are shown by no other firm, and the fabrics from which we make our garments comprise only the very latest novelties.

Our Catalogue illustrates:

Charming Costumes

and Tailor-Made Suits,

tailless in cut and finish, \$5 up.

Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up.

Jaunty Capes, \$4 up.

New Skirts, cut according to the latest French models, \$4 up.

Self Capes, Newmarkets, Bicycle Suits, Riding habits, Rainy-Day Suits, etc.

We pay EXPRESS CHARGES TO ANY PART OF THE WORLD. If when writing to us you will kindly state whether you wish samples for suits or for cloaks, we will be able to send you a full line of exactly what you desire. In addition to our regular line of samples, we have special lines of black goods and fabrics for second mourning.

Write to-day for Catalogue and Samples; you will get them by return mail. They will be sent FREE to any lady who wishes to dress well at moderate cost.

A LADY WILL FIND

The Augusta-Victoria Empress Shoulder-Shawl

an appropriate Birthday, Wedding, Christmas, or New Year's Gift. They are entirely handwoven, about 40 inches square, with 6-inch fringe, at Bethlehem by expert Saxon weavers. Warp silk and wool wool—in rich light green, delicate pink, recherche red, pure white, or black color.

When ordering, state color wanted.
Postpaid and registered for \$7.50.

The Susacuac Weaving Co.

No. 12 Moravian Church St., Bethlehem, Pa.

HAVE YOU CONSIDERED

the unsanitary system of heating in most houses; the danger caused to health from breathing impure air and also drafts and sudden changes in temperature which result from venting by opening windows.

THE JACKSON VENTILATING GRATE

overcomes these faults of the furnace and steam heater by admitting pure, warmed, outdoor air. The Ventilating Grate is not only the most sanitary, but consumes less fuel than any other kind of heating apparatus. It can be fitted in any ordinary fireplace, and burns either coal, wood, or gas.

Write at once for illustrated catalogue "O," which contains our guarantee.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Current Events.

Monday, October 30.

—A severe engagement is fought near Ladysmith; the British, reinforced by a naval brigade, succeed in repulsing the Boers.

—In the Philippines, Colonel Bell's regiment encounters a force of the insurgents and kills four officers and eight men.

—Admiral Dewey takes possession of his new home at Washington, and announces his engagement to Mrs. William B. Hazen, sister of John R. McLean.

—Vice-President Hobart lies dangerously ill at his home in Paterson, N. J.

Tuesday, October 31.

—Despatches from General White received in London announce that two regiments, the Gloucestershires and the Dublin Fusiliers, and a mountain battery, were captured by the Boers; General Buller lands at Cape Town.

—President McKinley attends the launching of the torpedo-boat *Shubrick*, at Richmond, Va., and makes an address there.

—President Schurman of the Philippine commission gives his views on the Sulu treaty.

—The report of Gen. George W. Davis, military governor of Puerto Rico, is made public.

—Gen. Benjamin F. Tracy testifies before the Mazet committee regarding the Ramapo Water Company.

Wednesday, November 1.

—An artillery duel takes place near Ladysmith; General White in further despatches attributes the British disaster to the stampede of battery mules.

—General Young makes a rapid move northward in Luzon, and many insurgents flee to the hills.

—The International Commercial Congress, in session in Philadelphia since October 12, concludes its meetings.

—Sir Thomas Lipton sails for Europe.

Thursday, November 2.

—General Kock, second in command of the Transvaal forces, dies from wounds received at Elandslaagte; General White is hard pressed by the Boers, and much anxiety is felt in England.

—The Philippine Commission submits a preliminary report to the President, reviewing the situation in the islands at great length; the members unite in saying that the Filipinos are unfit for self-government.

—Prominent educators meet in Washington and discuss the project of establishing a national university.

—General Fannin is enthusiastically received

YOU can buy a chimney to fit your lamp that will last till some accident happens to it.

Macbeth's "pearl top" or "pearl glass" is that chimney.

You can have it—your dealer will get it—if you insist on it. He may tell you it costs him three times as much as some others. That is true. He may say they are just as good. Don't you believe it—they may be better for him; he may like the breaking.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Sandow's OWN COMBINED Developer

Every Man.... Woman and Child

who wants strength and health should know of this invention of Eugen Sandow, the most successful teacher of physical culture. Far superior to any other system of home exercise in simplicity, scientific correctness, convenience, and efficiency—officially chosen from all others by the *Imperial Government in Great Britain* for training in army, navy, and police.

It is a wall exerciser, weight-lifting machine, chest-expander, and dumb-bells all in one, yet occupies less space than a coat hung on the wall. Practically indestructible. No pulleys, no weights, no oiling, no danger. Adjustable to strength of man, woman, or child.

Price \$5.00 delivered, including anatomical charts with full directions in Sandow's celebrated system of physical culture, and free course of instruction at our exercising rooms. Send for free illustrated Booklet L.

SANDOW DEVELOPER CO.,

A. LEWIS, MGR.

Dept. "D" 125 West 37th Street,
Cor. Broadway. NEW YORK.

in Kansas, and a sword is presented to him at Topeka.

Friday, November 3.

—Grave apprehension is felt in London over the situation of the British army; communication with Ladysmith is cut off; General Joubert protests to General White against the use of lyddite.

—Active operations against the insurgents in Luzon continue; Lieutenant Boutelle is killed in an engagement.

—Secretary Gage selects Cass Gilbert as the architect of the New York custom house.

—At a Cabinet meeting the question of a civil government for Cuba, which is soon to be established, is discussed.

—John W. Foster lectures on the Alaskan boundary question before the National Geographic Society at Washington.

Saturday, November 4.

—The Boers renew the bombardment of Ladysmith; Colenso is evacuated by the British.

—A loving-cup is presented to Rear-Admiral Schley by the city of Atlanta, and a parade and dinner take place in his honor.

—General Ludlow, military governor of Havana, returns to the United States, in connection with the proposed change in the government of Cuba.

—The Automobile Club of America holds its first parade in New York.

Sunday, November 5.

—News from Ladysmith reports continued hard fighting; a Boer laager at Bester's Hill is captured by the British; the South Wales lancers arrive at Cape Town.

—An important expedition leaves Manila on a transport under command of General Wheaton.

—Ellis H. Roberts, Treasurer of the United States, and Perry S. Heath, first assistant postmaster-general, make public their reports.

—Ex-President Harrison returns to America on the *St. Paul*.

For Indigestion

Use Horsford's Acid Phosphate.

DR. GREGORY DOYLE, Syracuse, N. Y., says: "I have frequently prescribed it in cases of indigestion and nervous prostration, and find the results so satisfactory that I shall continue it."

You Can Learn How VIOLETS For Profit or for Pleasure to Grow

Commercial Violet Culture, by Prof. B. T. Galloway, U. S. Dept. Agriculture, Washington, D. C. The only comprehensive work on the subject, gives every detail necessary to success. Superbly illustrated with over 60 plates, plans, diagrams, etc. Bound in flexible covers of royal purple and gold. 224 pages. Price, postpaid, \$1.50. Prospectus free.

THE HOME GROUNDS

Cultivated people desire tasty, attractive out door surroundings for their houses, be they 25x100 ft. plots or broad acres. To attain this by natural means is neither hard nor expensive. If you consult Johnson's

"Residential Sites and Environments,"

a practical work by a practical man, easily read and assimilated, it will give you a knowledge of the essentials and possibilities of landscape gardening that will enable you to avoid costly errors and make your Home Grounds a "joy forever." Over fifty complete plans, diagrams, etc., from villa to large residential grounds. Royal quarto; heavy enameled paper, full cloth, gilt edges. Price, \$5.00. Prospectus free.

THE WATER GARDEN

The cultivation of the Lotus or Water Lily, and other aquatic plants, is easily the most fascinating of all pursuits, and the hobby can be indulged in by all. This is the only book ever published on this subject, and the writer (Mr. Wm. Tricker) is the standard authority for America. Every detail is covered, all water plants described, and the amateur needs no other guide. Magnificently illustrated; large octavo; enameled paper; elegantly bound. Price, \$5.00. Prospectus free.

SUCCESS WITH HOUSE PLANTS

Scores of books and booklets there are on this subject, but it has been reserved to our author to write a text-book, the result of her own practical experience, that, faithfully followed, will enable every lady to keep her home delightful with dainty and fragrant flowers all through dreary winter. 12mo, 228 pp., cloth; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, \$1.00.

Any of above books, postpaid, on receipt of price. Agents wanted.

**TIME AND TROUBLE SAVED
LAWYERS, PHYSICIANS, MINISTERS**

J. W. HIDE, Brooklyn, N. Y., says:
The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the "reaper" over the old-fashioned "sickle."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

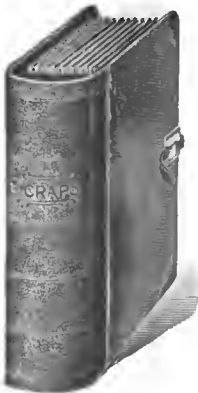

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

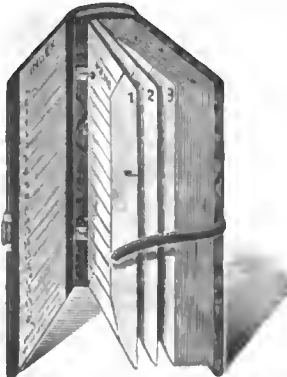

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled. Send for price list and circulars. Mention this advertisement. THE BURR INDEX CO., Sole Mfrs. HARTFORD, CONN.

The Globe Scrap Book

Substantially and handsomely constructed, with cloth covered binders' board sides, Russia leather back and trimmings. Twenty heavy manilla envelopes, numbered consecutively and ruled on both sides for memoranda, are attached in book by means of two safety holders running through eyelet holes as shown. The holders are easily opened permitting the adding or removing of envelopes as desired. Additional envelopes may be purchased when wanted. An index sheet is pasted on inside of front cover for recording contents of envelopes. The book is kept closed by a self-adjusting strap fastening. From cover to cover the *Globe Scrap Book* is a sample of thorough workmanship and artistic finish and is without exception the best scrap book ever made. A suitable holiday present. Outside dimensions $11\frac{1}{2} \times 7\frac{1}{4} \times 3\frac{1}{8}$ in. Envelopes will accommodate papers $5\frac{1}{2} \times 10\frac{1}{2}$ inches. Mailed, postpaid to any address in U. S. for \$2.00.

THE GLOBE-WERNICKE CO., Cincinnati, O.

CARTERIAN Adjustable Expanding Document Envelope...

The simplest, strongest, and best envelope ever invented for filing legal papers or documents of any description. By means of a slot it adjusts itself perfectly to fit any enclosure from a single sheet of paper to a package an inch thick. Remove a part of the papers and envelope will adjust itself to remaining contents.

SIZE	PER BOX 125
4 x 9	\$3.00

Sample package of
1 Dozen any size, or as-
sorted sizes, sent post-
paid for 45 cents in
stamps.

Ask your stationer for them. If he does not carry them in stock or cannot get them for you send to the manufacturers.

CARTER, RICE & CO. (Corporation) 246 Devonshire St., Boston, Mass.

**READY REFERENCE SCRAP BOOK**

For Newspaper Clippings.
CAPACITY 35,000 ACATE LINES.
Size of Book, 4-1/2 x 10-1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Sir Morell Mackenzie says:

Moisture of the mucous membrane of the nose is as essential to the sense of smell as that of the tongue is to taste.

For twenty-five years the most successful treatment of nasal and throat catarrh has been in the New York and Philadelphia Nose and Throat Hospitals. Years of careful observation and experiment led them to put supreme confidence in the treatment of cleanliness and antiseptics.

Eucalol

is a treatment based on antiseptic cleanliness as used in these hospitals. No catch-penny quack remedy but the essence of the combined knowledge of the greatest physicians of the world. It is pleasant to use, the effect instantaneous, and is a sure cure for Nasal Catarrh, Dry Catarrh, Grippe, Colds in the Head.

FREE OFFER EUCALOL has cured thousands and will cure you. To prove its merits we will send free, on request, a large package of EUCALOL. Don't delay, write at once.

Libby's Mince Meat

Makes a Pie That Melts in Your Mouth

Those who know Libby's delicious Mince Meat never bother with the labor of making a winter's supply of home-made.

Libby's is so convenient, wholesome, pure.

Put up in packages enough for two large mince pies.

Ask your grocer or write

Libby, McNeill & Libby, Chicago.
Drop a postal for booklet, new edition,
"How to Make Good Things to Eat."

THE COOK RESPONSIBLE.

Investigators who have made a study of foods and their proper preparation state that stomach troubles originate in a large number of cases from the improper preparation of the food.

There is a right and a wrong way to prepare each article of diet. How many cooks take the trouble to properly prepare the oatmeal or other breakfast food for the morning meal? In most homes a little water is poured over the cereal and allowed to cook a few minutes and then served. Prepared in this manner, they abound in starch, and form a starchy, sticky mass in the stomach, which is not only difficult to digest, but retards the assimilation of other foods.

To render oatmeal and other cereals easy of digestion and in proper condition for the stomach, the starch must be converted into dextrin. This requires five hours' constant cooking.

The average housewife has not the time or patience to prepare her oatmeal in this manner; and to meet the demand for a palatable and nutritious cereal food that contains all the elements of nutrition in a digestible form, Granola was manufactured.

Granola is thoroughly cooked; the combination of the grains and the process they are submitted to give the food a rich, nutty flavor.

A chemist has analyzed this pre-digested food, and finds that it contains three times the food elements of beef. It only requires a few teaspoonfuls of Granola and the addition of a little milk to make a delicious meal.

Readers of THE LITERARY DIGEST who will send the name of a grocer who does not sell Granola to the Sanitarium Health Food Co., Battle Creek, Mich., will receive a free sample.

Each package bears the picture of the famous Battle Creek, Mich., Sanitarium.

Notes (abridged) from *The Field*, London.

(a) Janowski's favorite variation, the intention being, if 4 P-K 3, to continue with 4... P x P; 5 B x P, P-Q Kt 4; 6 B-Q 3, B-K 2, etc.

(b) To prevent the line of play pointed out, White takes the Pawn (see the Pillsbury-Janowski game).

(c) Forced, because of the threat, 16 P-K 4. For the same reason, he can not now play P-B 6.

(d) With due deference we suggest 23... P-K Kt 4, in spite of its appearing somewhat venturesome. It is, however, justified, since White has also loosened his King's-side Pawns, and at present he has also a weak K P. If White replies 24 P x P, then 24... Q x P; 25 R-B 4, Kt-B 3; 26 K-B 2, P-K R 4, followed by doubling Rooks.

(e) White has the better game, but he should not exchange Queens. 25 Q-Kt 2 would be a good move instead.

(f) There is no necessity for the check. 27 Kt x P is preferable.

(g) Janowski plays this difficult ending with his noted skill. From this point every move is well judged, and probably the only valid ones at his disposal.

(h) Again the best move. If 57 R x P, then 47... Kt-R 5 ch; etc.

Rheumatism...

gout, catarrh, uric acid troubles all arise from defective action of the kidneys and digestive organs; the kidneys do not properly remove the waste products. Uric acid and chalky deposits accumulate in the muscles and around the joints.

Tartarlithine...

regulates the action of the kidneys, dissolves and removes the uric acid and chalky deposits, and reduces inflammation. It does not upset the stomach, and can be taken by the most delicate. Prescribed by many leading physicians.

If your grocer does not keep it, send us his name and your order—we will see that you are supplied.

THE GENUINE MADE ONLY BY THE
FRANKLIN MILLS CO., LOCKPORT, N. Y.

Strange indeed that
A PLAIN THING
like **SAPOLIO** should
make everything so bright, but
"A needle clothes others, and is itself
naked." Try it in your next house-cleaning

Dyspepsia

One of the many causes of dyspepsia is the use of cereal foods improperly prepared. People fancy that grain food is simple, and consequently healthful. Whole grains, wheat, oats, etc., contain quite largely an element as indigestible as wood and no more nutritious.

CREAM OF WHEAT

being entirely free from indigestible matter is peculiarly adapted to such as require an easily digested diet.

When buying Cream of Wheat ask for our beautiful gravures of north-western scenery. Your grocer gives one with each purchase of two packages.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE ELECTIONS.

ALTHO not a vote was cast either for Mr. Bryan or Mr. McKinley last week, the most important result of the balloting, as viewed by the press of the country, seems to be that these two men have been chosen to lead the Democratic and Republican forces next year. It has come to be accepted as a political rule that a man who can carry a doubtful State by his personal influence has an almost invincible claim to a nomination for the Presidency, and the Republican victory in Ohio and the fusion victory in Nebraska, therefore, make practically sure another contest between McKinley and Bryan. The voting does not seem to have determined the campaign issues quite so plainly as the standard-bearers; but the Republicans seem content to make the fight on expansion and the gold standard, and the Democrats who follow Mr. Bryan seem disposed to reaffirm the Chicago platform (with a stronger plank on trusts) and to oppose expansion. Not less important are the foreshadowings of next year's result as found in last week's returns, and it is here that the prophets who are reading the signs of the times begin to diverge.

Each party, happily, succeeds in finding comfort for itself in the returns. "It is plain to be seen," says the *Atlanta Constitution* (Dem.), "that the general tendency and drift of popular approval is toward the Democratic Party." The sustained Democratic majorities in Virginia and Mississippi, the Democratic gains (over the last prior election) in Ohio and Massachusetts where the Republicans won, and the Democratic victories in the doubtful States of Maryland and Nebraska lead the *Indianapolis Sentinel* (Dem.) to the belief that "the verdict of the people is a scathing rebuke to the Administration, amounting to a repudiation of McKinleyism." The *Springfield Republican* (Ind.) notices that in Ohio itself the successful Republican candidate fell far short of receiving an actual majority, and thinks that if the Democrats had been led by a more popular candidate and

Mayor Jones with his 100,000 votes had not been in the race, as next year he may not be, Ohio would probably have gone Democratic. *The Republican* concedes that the expansionists can find reasons for encouragement in the returns, but believes that the sentiment against imperialism is steadily rising and in the end will win.

Not all the opposition press, however, hold that the Administration has sustained a defeat, or anything like one. Few papers have attacked the President more often or more fiercely than the *New York Evening Post* (Ind.), but *The Post* reads in the returns an overwhelming vote of confidence in the Administration. "The country's support of the President," says *The Evening Post*, "is now an accomplished fact." The *New York World* (Ind. Dem.), which opposes both McKinley and Bryan, says that the elections "mean a victory for imperialism in a majority of the States voting. There is neither honesty nor profit in denying this. They mean also a triumph for Mr. McKinley." The Republican press agree pretty unanimously with the sentiment which the *St. Louis Globe-Democrat* (Rep.) voices when it predicts that "on the basis of yesterday's figures in the twelve States which had elections, the Republicans will sweep the country in 1900."

Mr. Bryan's Prospects.—"A traveler setting out from Portland, Me., might traverse the entire continent to Portland, Oreg., without putting his foot upon the soil of any Democratic State or Territory, save that in passing from Iowa to Kansas he would be obliged to cross the southwestern corner of the State of Nebraska—Bryan's State—which has just been carried by Populist and Democratic candidates representing his principles. Our neighbor *The World* publishes a map of the Union with those States and Territories which at their most recent elections have been carried by the Republicans printed in dark shading, the Democratic States being white. As Democratic there appear only the old Southern States, minus West Virginia and Kentucky, but reinforced by Missouri, Nebraska, Colorado, Utah, Nevada, Idaho, and Montana. Nineteen States are Democratic; the rest, including all the most populous States, are Republican. Put in tabular form, with the electoral votes of each State given, the account stands thus:

Rep. States.	Electoral Votes.	Dem. States.	Electoral Votes.
California	9	Alabama	11
Connecticut	6	Arkansas	8
Delaware	3	Colorado	4
Illinois	24	Florida	4
Indiana	15	Georgia	13
Iowa	13	Idaho	3
Kansas	10	Louisiana	8
Kentucky	13	Maryland	8
Maine	6	Mississippi	9
Massachusetts	15	Missouri	17
Michigan	14	Montana	3
Minnesota	9	Nebraska	8

New York	36	South Carolina	9
North Dakota	3	Tennessee	12
Ohio	23	Texas	15
Oregon	4	Utah	3
Pennsylvania	32	Virginia	12
Rhode Island	4		
South Dakota	4		
Vermont	4		
West Virginia	6		
Wisconsin	12		
Washington	4		
Wyoming	3		
Total	285	Total	162

"This is a terrific showing of the country's want of confidence

on the party of Bryan. And it does not tell the whole story, for it is not open to question that Maryland would vote against him should he be again nominated. Montana and Idaho, even, following the example of Wyoming and South Dakota, might return to the Republican column. On the other hand, should Washington, Wyoming, and South Dakota give their votes to Bryan, as they did in 1896, the defection of those States would be nearly offset by Maryland; so that the table we give above represents the full strength of Bryan in the Union. The wildest dreamer, the most irresponsible visionary that ever invaded a political headquarters, could not take the map of the Union as the States stand to-day and figure out a majority, or anything like a majority, of the Electoral College for Bryan."—*The New York Times* (Ind.).

The Bosses Won.—"It is difficult to find in the election returns much discomfiture for the bosses of American politics. One may interpret the results as he pleases regarding trusts, silver, or imperialism; the fact remains that Croker and Platt in New York, Quay in Pennsylvania, Hanna in Ohio, and Gorman in Maryland will see no rebuke for themselves in the figures. New York City was strongly for Tammany, and the interior of New York gave Platt a tighter grip upon the State legislature. In Pennsylvania the opposition to Quay, which last year found expression in the gubernatorial [?] candidacy of Rev. Dr. Swallow, seems to have disappeared. The carrying of Hanna's own city and county by Jones is a stinging reflection upon the Ohio boss, yet the general result in the State was not such as to impair seriously his control of the party machinery. In fact, Hanna is claiming that Nash's plurality is due to the efforts and popularity of Hanna. Maryland certainly gave no rebuke to Gorman by defeating for governor a man who deserved reelection on state issues and replacing him with one of Gorman's creatures. In New Orleans the old corrupt Democratic municipal ring, which was thrown out of power a few years ago, has been returned to power. Only in Kentucky was there a real rebuke to bossism, but even there the bossism of Goebel was less a present reality, perhaps, than a threat of a bossism to come in case he were elected governor of the State."—*The Springfield Republican* (Ind.).

OHIO, NEBRASKA, AND MARYLAND.

Ohio's Republican plurality of 55,000, Nebraska's plurality of 12,000 for the fusion (Democratic and Populist) candidates, and Maryland's return to the Democratic column by a margin of 30,000 votes are considered significant results. The Democratic press think that in a national election the conditions in Ohio might be so different that their party would carry the election, and the Republican press think that Maryland, in a similar way, is likely to be found Republican next year. Nebraska, it is

conceded, will probably continue to support her "favorite son," Mr. Bryan.

Party Lines Broken in Ohio.—"There seems to have been more independent voting in Ohio on Tuesday than was ever before seen in that State. The fact that Jones received a support twice as large as was ever given a third candidate is only one sign of the disregard of party lines. Even more striking evidence of the same disposition was the great difference between the plurality of 50,000 for Nash as the head of the Republican ticket and that for Caldwell, the candidate for lieutenant-governor, who was cut by so many thousand voters of his party that he is barely elected. Caldwell was opposed by the Anti-Saloon League, because he has been the counsel for liquor organizations, and the movement against him, whether well founded or not, developed a strength which surprised the managers on both sides. The high-water mark of independent voting was reached in Cleveland, where Hanna suffered the worst blow ever administered to a boss in his own city by the cutting down of the vote for his candidate, Nash, to ridiculously small proportions, while at the same time McLean was rebuked by many thousands of Democrats, who abominated his boss rule in their party and followed *The Plain Dealer* in opposing him at the polls, the 'usnfruct' in each case going largely to the benefit of Jones as a harmless candidate who could not possibly be elected."—*The New York Evening Post* (Ind.).

Nebraska's Tribute to Mr. Bryan.—"The verdict in Nebraska is a significant tribute to the personality of Mr. Bryan. It means that the State is loyal to her distinguished son, even the nature and the laws of supply and demand have nullified his teachings. Early in the campaign it became plainly manifest that Bryan was the issue in Nebraska. With no important state office to be filled, it became generally recognized over the country that his political future was at stake in the contest. There is not the slightest ground for assuming that the people of Nebraska took any stock in the issue of 'imperialism.' In fact, there have been grave doubts whether Mr. Bryan took himself seriously upon this question. In his remarkable canvass of Nebraska Mr. Bryan has simply furnished fresh evidence of the fact that he is capable of commanding a great personal following, regardless of any issues. It is idle to deny the captivating elements of his personality, neither is it profitable to disparage his abilities. He has traits of character and a winning plausibility of utterance that appeal to the plain people. Mr. Bryan was the only issue in Nebraska. *The Times-Herald* will not evade the logical conclusions of the contest. It means that Bryan will be the Democratic nominee in 1900—a fact that should be highly gratifying to the friends of sound money all over the Union."—*The Chicago Times-Herald* (Rep.).

Why Maryland Went Democratic.—"The general result of yesterday's election in Maryland, while not unexpected, is even

"WE, US AND COMPANY."—*The New York Herald*.

BRYAN: "He always has all the luck. Well, I got the one I went after hard, at any rate."—*The New York Herald*.

THREE NEW GOVERNORS.

more emphatic in its character than the most sanguine Democrats had anticipated. The Democratic victory derives special significance from the fact that the excellent official record of the Republican gubernatorial nominee and his high personal character gave his party the advantage of a candidate who seemed likely to be more acceptable to independent voters than any other whom it could have put forward. Governor Lowndes's defeat, therefore, can in no way be considered as a reflection upon him personally or as a rebuke to his administration of public affairs. A variety of causes contributed to Democratic success. In the first place, Maryland is, under normal conditions, a Democratic State, and Democratic voters this year were practically united in the support of a ticket which was conceded to be unobjectionable in its *personnel*, and which represented the untrammelled will of the party. Apart from all other influencing causes, the State this year would have swung back into its natural moorings, because there was really no sound reason why Democratic voters should support the Republican ticket. While the Democrats were united and enthusiastic, the Republicans were disturbed by dissensions in Baltimore and other sections of the State, and were handicapped by the prominence of certain individuals and elements which disgusted and alarmed respectable members of their own party as well as decent citizens of all political persuasions. Even had the Republican Party been thoroughly harmonious and united, it could not have triumphed in the face of the profound distrust excited by some of its adherents and factions and of the no less profound conviction that the public interests, all things considered, would be safer in Democratic hands than in those of their opponents."—*The Baltimore Sun (Ind.)*.

KENTUCKY, IOWA, AND OTHER STATES.

THE result in Kentucky, it seems likely, will not be accepted without a contest, so that the early comments are premature; but enough opinion has appeared, both before and after the election, to show that Mr. Goebel, the Democratic candidate, has not the united sympathy even of the Democratic press, and that if he is declared elected some disposition will be shown to attribute it to the peculiar election law, passed, it is charged, to secure his election. As in Maryland, the fight in Kentucky was made on local, rather than on national, issues. In Iowa, however, the campaign issue was expansion, and the Republican margin of 60,000 or more is taken to indicate that Iowa will be Republican next year, as, indeed, it has been for many years. Kansas, which voted for Bryan in 1896, appears with a Republican majority of 12,000; New Jersey, Democratic until 1896, stays Republican by 20,000 margin; New York is Republican by 17,000

majority; and South Dakota, which supported Bryan in 1896, has a Republican majority of 4,000 this year. Virginia and Mississippi remain Democratic strongholds, and Pennsylvania and Massachusetts as strongly Republican.

Everybody Satisfied.—"A peculiarity of Tuesday's elections is that so many parties profess to find comforting things in the returns. The various 'isms' loosely classed under the name of 'Socialism' are elated over the vote given to Mayor Jones in Ohio. The Bryanites are jubilant over the fusion victory in Nebraska. Old-line Democrats declare that they see in Maryland's action the return of better days for their party. The Republicans find not only comfort in the results in Ohio, Iowa, New York, Pennsylvania, New Jersey, Massachusetts, and South Dakota, but an indorsement of their policy and authorization to proceed on the lines they are now following. Of all the professions of satisfaction, those of the Republicans can alone be re-

WHOA BOY!!

Another mule stampedes with the heavy artillery.

—*The Minneapolis Tribune*

garded as sincere or well founded. There were two issues plainly put before the people—expansion and free coinage of silver. To expansion the Democrats put themselves in opposition, and in their platforms in several States reasserted their faith in the 16-to-1 heresy. Having stood on these planks in the campaign, the Democrats can not blink the conclusion that the popular verdict was against them on both issues. In no State that voted on Tuesday were both of these issues more emphatically presented than in Iowa. There the Republicans renominated Governor Shaw, who two years ago was elected by a plurality of 30,000 as an uncompromising advocate of the single gold standard. To oppose Governor Shaw the Democrats nominated a prominent free-coinage man who endeavored at first to limit the campaign to the currency controversy. Finding that he was not making votes by talking 16 to 1, the Democratic candidate took another tack and made the welkin ring with denunciations of 'imperialism.' Governor Shaw met him on this issue and the contest waxed hot. The Democrats appealed to the great German vote for support against 'militarism,' and trotted out the bugaboo of conscription, but all in vain. The Germans are the best posted people in the world on military matters, and those in Iowa knew the difference between an army of 100,000 recruited by voluntary enlistment and the great host of their fatherland kept up by forced military labor. Iowa on Tuesday gave Governor Shaw more than 60,000 plurality. The Republicans got an overwhelming indorsement for their legislative ticket. But seldom in the history of the State has Iowa given such a plurality for the Republicans as was recorded Tuesday."—*The Boston Transcript (Ind.)*.

A Democratic View.—"The returns from New York show that some Democrats would rather defeat their party than let certain leaders have the glory of victory. Ex-Senator Hill directed the forces in the country and Croker the forces in Greater New York. The country lost and the city won. It has been known for a long time that Croker wanted to extend his boss-ship all over the State, but whether that had anything to do with the losses in the country remains to be seen, but the result certainly eliminates Hill from the list of state leaders. The turning down of Mazet was brought about by decent Republicans joining with the Democrats. The 'Mazet commission' was a Platt scheme to besmirch the reputation of prominent Democrats, and, if need be to accomplish its purpose, reflect upon the commercial, financial, and social integrity of the city. Platt intimates that he will have Mazet seated when the legislature meets, whether he was fairly elected or not. The result in the other States was what was expected. The sum of the influence that the election of last Tuesday will exert next year is that Maryland, before a doubtful State, is now safe for the Democracy in 1900. Nebraska, which was more or less doubtful, can be counted for the Democratic nominee. So the Republicans have strengthened their hold on States that could be counted upon with certainty in any event, and the Democrats have made two doubtful States absolutely certain for their candidate in the Presidential contest. On the whole, therefore, the Democratic Party is the winner, and it is a substantial victory. It secures sixteen electoral votes that were before in doubt."—*The Kansas City Times (Dem.)*.

The World's Commercial Language.—The constant and irresistible advance of the English language, while other tongues, notably in Austria, have to make desperate struggles for a chance to exist at all, is brought to mind by the remarks of the Chinese Minister—himself representing a tongue spoken by a quarter of the globe's population—before the International Commercial Congress in Philadelphia. The *New York Journal of Commerce* says of his remarks:

"He expressed regret that there was no universal commercial language, and suggested the designation of one as one of the most proper duties of the congress. But the natural and inexorable process of the survival of the fittest has already selected a universal commercial language, and the Chinese Minister has mastered it, for he addressed the congress in very good English. A dozen years ago Robert Louis Stevenson found that the Polynesian crew of his schooner could communicate with each other in English, tho they belonged to different nations, or tribes, and did

not speak each other's language. Even the French officials of Tahiti spoke some English. The two nations that speak English are decidedly the foremost commercial nations of the world. England's commercial and political power is far more widely extended throughout the world than that of any other nation, and the United States has been teaching English to people from every nation on earth who have come here, and is now pushing its foreign commerce into every country of Europe besides the regions of Asia and Africa that European nations have long supposed were their property commercially. English is already more extensively spoken than any other language, and it is distinctively the commercial language of the world. It may yet become the diplomatic language."

THE PARTITION OF SAMOA.

LITTLE protest has been aroused by the reported agreement which is to give Germany two of the three largest islands in the Samoan group, with an aggregate area of 1,000 square miles, and leave to the United States the island of Tutuila, which covers one twentieth of that area. The general feeling seems to be that the less of Samoa we have, the less trouble we shall have. By the new arrangement, about 40,000 of the islanders will be under German and 3,500 under American rule—a fact which is also taken as an omen of more peaceful times for our Government than when we tried to help rule the entire population. As a large number of the white inhabitants of the islands are Germans, it is thought that they will be better content, too, with German than with British or American rule; and as the British Premier has said in a public speech that England is satisfied with the islands that Germany gives her elsewhere in exchange for her rights in Samoa, the agreement is accepted as a happy solution of a most vexing problem. So much for the troubles we are rid of. As to what we retain, the 50 square miles of islet under our flag contain Pago-Pago, said to be the best harbor in the entire Pacific archipelago; and harbors for coaling and cable facilities (so Rear-Admiral Bradford has just explained in his report to the Secretary of the Navy) are what we now need. What the Samoans themselves think of the new plan, no one seems as yet to have taken the trouble to inquire; but several papers have remarked that the partition of the islands is a rather curious outcome of what was originally an international combination to preserve the native government. The *Philadelphia Press* thinks, however, that there will "probably be no great regret" over the agreement, and the *Washington Star* agrees that "the chances for friction have been reduced to a minimum." The plan "will rid this country of its preposterous Samoan entanglement," says the *New York World*, "excusing it from the duty of periodically shooting the natives into openly bowing before one clouted king while they secretly conspired for another." If Apia were in British instead of German hands, thinks the *New York Journal*—

"we should have had free trade and less friction than we are likely to have with the Germans. The natives, too, would probably have had a pleasanter time. Still, as the Samoans of late have shown a disposition to turn from their British and American protectors and ally themselves with the Germans, we are under no particular obligation to preserve them from the sort of rule they seem to want . . . Our new possession is undeveloped and thinly settled as yet, but if we have a liberal trade policy and an honest and intelligent government we may build up a port on the harbor of Pago-Pago that will overshadow Apia in commercial importance."

The *New York Times* is glad that we have dissolved our partnership with Germany:

"We may cheerfully accept the proposals of Germany as 'a good riddance.' This is not diplomatic language, but it is accurate. We have proved, to our own dissatisfaction and to that of everybody else concerned, that we can not safely or peaceably carry on a 'condominium' of anything with Germany. Our offi-

cial ways of looking at things are altogether too different. With the best will in the world on both sides, the arrangement would be unworkable. So an international commission has decided, voicing the results of experience. Even with England alone there would be friction, but with Germany there has been and can be nothing else than friction."

The Philadelphia *Ledger* and the New York *Sun* do not agree as readily as the rest of the press that the arrangement is all that could be desired, and remark that it might be well to examine the plan with considerable care before accepting it.

OUR INTEREST IN CHINA'S BREAK-UP.

THE widely credited report that our Government has called upon the governments controlling "spheres of influence" in China, asking them for written guaranties that they will respect our treaties with China, and not make discriminating tariffs against our goods, has brought to the public attention a development of world politics and international commerce that has been little thought of in this country. American attention is so occupied, in the far East, with the somewhat unexpected result of the break-up of Spain's colonial empire that comparative little thought is given here to the other and more extensive disintegration in that part of the globe. The partition of China seems to be popularly considered an Old-World affair, outside the sphere of American interest; and Lieutenant Hobson's prophecy, made in a recent report, that Manila will some day rival Hongkong as a great trade center may have added to this feeling, on the ground that if the European nations do secure China's trade we know where there will be plenty more just as good.

While we are waiting for Manila to reach that predicted eminence, it is worthy of note that even five years ago the value of the direct sea-borne trade between China and the United States, as reported by Consul-General Jernigan, was greater than between China and the European continent, Russia excepted; that it was more than double that between Russia and China; and that it amounted to nearly five eighths of the direct trade of Great Britain with China. For the year ending with June we sent exports to the British island of Hongkong to the value of about \$7,730,000, most of which was probably reshipped from that port into the Chinese empire; and for the same fiscal year our direct exports to China were about \$14,500,000, as against about \$10,000,000 for the year before. Mr. A. R. Colquhoun, in his recent book on "China in Transformation," says:

"The volume of the United States trade with China represented more than one seventh of the entire foreign trade of the empire in 1896. While the import trade from China has increased slowly, the export trade to China has increased one hundred and twenty-six per cent. in ten years, and is more than fifty per cent. larger than the German exports."

China's break-up would, it seems probable, cripple our trade there seriously. The province of Manchuria, for example, lies within the Russian "sphere of influence," and altho Russia has announced that the port of Talien-wan, the terminus of the Siberian Pacific Railway, will be a "free port," it is not thought likely that the Czar will long continue to let American trade push Russian trade out of his own territory. Mr. John Barrett, formerly our Minister to Siam, says of Manchuria (in *The North American Review*):

"The growth of the demand there for certain classes of American cotton goods has been phenomenal. It was not many years ago that the market was very limited. There are even on record reports of consuls and of special agents of cotton firms which said that there was no field for the expansion of American trade. To-day the marvel of business interests in northern China is the development of the market for American cotton goods in Man-

churia. When I first visited New-chwang, the gateway to Manchuria, American imports were not over 15 per cent. of the total; on my last visit they were more than 50 per cent., with the proportion increasing every day! Notwithstanding this marked growth, only a small proportion of Manchuria's millions has been reached. If the great northern provinces of China now require \$7,000,000 worth of our cottons, there is no valid reason why they should not in ten years from now consume \$20,000,000 worth. A few years ago \$3,000,000 represented the value of the trade. When we consider that the cotton-mills of New England and the South are supplying this demand in Manchuria, and that they have even been kept running when other mills have been closed, there is every reason why those two sections should join together in insisting that the open door shall always apply to Manchuria."

As the United States is one of the great wheat-raising countries of the world, it is a matter of great moment to us that the Chinaman is cultivating a taste for the many dishes that can be made from flour. Some statistician has estimated that if each person in one of China's densely populated provinces could be induced to buy one biscuit a day from us, all the biscuit factories in the United States would have to run day and night the year round to fill the demand. Mr. Barrett records that the appetite for American flour is rapidly growing:

"Some of our consuls and trade experts declared, but a few years ago, that wheat flour would never be accepted in large quantities by the Chinese. It was contended that they did not want it, did not need it, and could not be induced to take it. The exporters of California and Oregon were even advised to spend no more money in an effort to build up a market. And yet the development of the flour trade is even more marvelous than that of cotton. The shipments, for instance, from Portland, Ore., to Hongkong have increased 1,600 per cent. in the last ten years, and, taken with those of San Francisco and the Puget Sound ports, aggregate many millions of dollars per annum! Considering what a small portion of China's millions has commenced to use flour, it is difficult to place any reasonable limit on the future demand."

Basing his argument on our present exports of \$40,000,000 value to the far East, Mr. Barrett predicts a rich future for our Chinese trade, and sees no reason why it should not expand soon to \$300,000,000. To reap this golden harvest, however, aggressive action is needed. We must hold the Philippines and stand firmly for the open door in China. These accomplished, the necessary measures to clinch our hold as "the paramount power of the Pacific" are set forth by Mr. Barrett as follows:

"I would say that the most important step . . . is the early construction of the Nicaragua canal. Every year's delay in carrying out this great enterprise will cost us ten times as many millions of dollars in trade as would its immediate digging. . . .

"The second important point is the laying of a cable across the Pacific Ocean, from some central Pacific-coast point, like San Francisco, Portland, or Puget Sound, to Hawaii and thence to the Philippines, Japan, and China, with possibly a branch to Australia. The tremendous monopoly of the present telegraphic connection between the far East and America is a great handicap to the development of trade with the United States. . . .

"The third great necessity is the immediate improvement of the passenger, freight, and mail steamship service of the Pacific. Vessels equal to those crossing the Atlantic should be placed on this route, and as many as possible should fly the American flag. . . .

"Fourth, the Government should bear in mind, in its appointment of ministers and consuls to Asiatic capitals and ports, that only men suited to the peculiar Asiatic conditions and demands, both political and commercial, should be sent there, and when once good men have made a record for themselves they should be kept in their places. . . .

"Fifth, there should be established at such main points as Yokohama, Shanghai, Hongkong, and Singapore American banks to handle the exchange with the United States. At present there is not a single American banking institution from one end of the coast to the other.

"Sixth, American firms should make a practise of sending only the very best men to represent them in the far East. They should be men of tact and diplomacy, as well as of energy."

As to our policy as a nation toward China and the powers, Mr. Barrett says:

"First, we should stand firmly and persistently for the integrity of the Chinese empire, and use our influence for the inauguration of reforms of government; second, we should insist on the 'open door' and absolute freedom of trade, in accordance with the stipulations of the old Tientsin treaties, from Canton to Newchwang; third, we should direct our political and moral influence against the delimitation of alleged 'spheres of influence,' or actual 'areas of operation,' and withhold formal recognition thereof until, or unless, fourth, seeing the inevitable development of such spheres and the consequent break-up of the empire—without willingness to resort to war—we should demand and insist upon the open door and freedom of trade with and in these areas of quasi sovereignty; fifth, we should consider the advisability of securing a port in northern China, but only in the event of the break-up of the empire, or by legitimate purchase and treaty; and sixth, the United States as far as possible should work in harmony and on the same lines with other powers having similar commercial interests, to protect them from further limitation."

Our Government's reported interrogation of the powers controlling Chinese ports is viewed by the press generally as a prudent move, necessary, indeed, if we wish to keep our Chinese trade. The *Richmond Times* says: "This is a pretty serious business and it has no proper relation to the mouthings we hear every day about imperialism and the like. But imperialism or no imperialism, our trade must be protected, and our Chinese trade is of too much consequence to this nation for it to allow any other nation to forcibly oust us of one dollar's worth of it. That is what the people of the cotton States demand." In the first nine months of this year cotton cloth worth over \$7,500,000 (an increase of \$2,000,000 over the average of the last two years) was shipped from this country to China. It will be too late to save this trade, several papers point out, if we wait till these powers actually annex what are now only spheres of influence, for then our treaties with China will have no force in the transferred territory, and they can make whatever tariffs they please. The preservation of the open door for our goods, therefore, says the *New York Press*, can be "secured only by arresting the dissolution of the empire." Several other papers see that our interest lies in keeping the empire intact; "but," says the *St. Louis Globe-Democrat*, "in the present decrepit condition of that nation there will be great difficulty in preventing the seizure of segments of it by some of the big European countries." While we might find ourselves alone in defending China in the final crash, there is a widespread opinion that in our present demand for the open door "there is reason to believe," as the *Chicago Evening Post* says, that we "will have the cooperation of both England and Germany in this humane and civilized undertaking." Indeed, the Kaiser's visit to England, the Anglo-American era of good feeling, and the smooth settlement of the Samoan question have caused some talk of a new Triple Alliance, to be made up of England, Germany, and the United States. All these rumors have led the anti-expansionist press to renew their protests against "imperialism" to which they think our country is tending. The *Springfield Republican* foresees certain war in the next century over the Eastern question, and predicts that the United States will be dragged into it. The *Baltimore Sun* says that "we have no desire to be mixed up in the tangle of the conflicting ambitions of the powers in that quarter of the globe." The rumors of an alliance, thinks the *Baltimore Herald*, "seem rather designed to force us into one than to convey information of an accomplished fact. All approaches which aim at making us one of the arbiters of China's future should, at least, be most carefully considered before they are favorably received."

COLLEGES AND FREEDOM OF SPEECH.

PROF. GEORGE D. HERRON'S letter to the trustees of Iowa College resigning the chair of applied Christianity in that institution has attracted almost as much attention as Dr. Andrews's resignation from the presidency of Brown University three years ago, or the somewhat similar positions in which Professor Ely at the University of Wisconsin and Professor Bemis at the University of Chicago were placed on account of their economic views. Professor Herron relieves the trustees from any imputation of having forced him to resign. The chair was especially endowed for his occupancy, with a full understanding that his views were such as would bring attacks upon the college; and for six years his teachings there have been the subject of much public controversy. His letter reads in part:

"When you established this department I came to it in all good faith, thinking you were prepared for whatever might come, and hoping that in time my academic work might take its normal and organic place among other departments of the college, and I be held individually responsible for my public words, through books or from the platform.

"So far as the interior workings of the college are concerned, the end sought for has been achieved. The department of applied Christianity has now a perfectly organic and even incidental place in the life of the college. It has not hindered the steady growth of the college, both in the number of its students and in the quality of its work. Nor can I conceive of a more harmonious or cooperative faculty—a faculty made up of wholesome and self-sacrificing Christian men and women.

"None the less your position as trustees is made more serious and difficult each year by the recurring demands for the removal of the chair of applied Christianity and its occupant. These demands come not only from the press and from public men who feel indignant at my teachings concerning property, but from old and sincere friends of the college, who feel that its well-being is being put in jeopardy because of the lack of support from men of financial means and of influence among the churches. . . .

"The reports of the secretary and of the faculty committee, at the last annual meeting of the board of trustees, seem to verify this opinion. The college is outgrowing its equipment; its needs are rapidly increasing; yet the money to supply these needs can not be had while I continue to teach in the college. At least, this is what men of means almost universally say when approached, and it is what you, as trustees, are given every reason to believe. . . .

"It is certainly true that the doctrines of property which I hold are subversive of the existing industrial and political order. I do believe that our system of private ownership of natural resources is a crime against God and man and nature; that natural resources are not property, and can not be so held without destroying the liberty of man and the basis of the religion of Christ. This common and equal right of all men to the earth and its resources, as their common inheritance from God, I expect to always and everywhere teach.

"The faith that it is true and that it must ultimately be applied is dearer to me than my bread or life. But I recognize that the constituency of this college is equally sincere in believing such teaching to be dangerous and untrue. I recognize fully the right of men to support only such freedom as they believe in, and I am unwilling to force them to even seem to support such freedom and teaching as they do not believe in. . . .

"Educational institutions, as now organized and supported, dependent as they are on gifts of money from the existing social order, afford no place for the teaching of disturbing social ideals, tho it can not be said that human truths that are new will always be outcast and vagabond upon the earth, even when rudely spoken, until accepted and made a part of the past.

"As college education is now organized, however, I question any man's right to teach that which the college constituency does not want. He may as an individual teach the people who care to hear him, but not as a member of an educational institution which he does not represent. In any case, I am as sure of the right of men of wealth and of conservative political and religious opinions not to want me there as I am of my right to want to stay. And

tho I can not remain in Iowa College in peace, I leave it in peace, and my deepest love will abide with it."

Even those who hold views opposed to those of Professor Herron commend the spirit of his letter. The Chicago *Evening Post* (November 3) says his words do him "great credit" and "compel a tribute even from his severe critics." It continues:

"Dr. Herron admits that his convictions are not such as existing educational institutions can properly be expected to teach. The doctrines of property, Dr. Herron holds, are subversive of the existing industrial and political order. Christianity as Dr. Herron 'applies' it forbids private ownership of land and other 'natural resources.' In other words, Dr. Herron is a Christian Socialist, if not a Communist like Count Tolstoy. His beliefs are dear to him, and he has a perfect right to advocate them on his own responsibility. But an educational institution which regards such beliefs as false, impossible, and anti-social is bound to dissociate itself from the men who propagate them. Dr. Herron himself says: 'I question whether an existing college or university is any place for the sort of work I am trying to do. I do not know that a present-day educational institution can rightly make place for the mere apostle of an ideal, whether he be right or wrong. Institutional education has chiefly to do with what has been said and done rather than with what is to be said and done in the future.'"

"The resignation has relieved the college from embarrassment and disturbing controversy, and it has not impaired Dr. Herron's freedom to teach his peculiar doctrines. Both are to be congratulated on an inevitable divorce."

The Chicago *Times-Herald* (November 4) calls his letter of resignation "a most manly letter," and adds: "The manner in which Dr. Herron has taken leave of Iowa College will add greatly to the respect in which he is held wherever sincerity of thought and unselfishness count for more than the particular doctrines any man may hold on the political and social problems that vex and perplex mankind."

The Boston *Transcript* (November 3) says: "His whole letter, in which he broadly discusses all the aspects of the case, is characterized by a manly and gentle spirit which commands at once

sympathy and admiration. . . . It is hardly necessary to state that Professor Herron's views, as he puts the case, tend to be 'subversive of the existing industrial and political order.' But few who read his letter will be disposed to question his entire honesty and sincerity. He is true to his leadings, but he refuses to let what he considers the truth embarrass others with equal rights to their opinions and with responsibilities in this particular case much greater than his."

TOPICS IN BRIEF.

THE best General Buller can do is to give the Ladysmith situation absent treatment.—*The Detroit News*.

THE open door in China is designed to let other nations in, but not to let the Chinese out.—*The Philadelphia Ledger*.

FIRST COLORED CITIZEN: "Whut you think 'bout dis here Filipino policy?" SECOND COLORED CITIZEN: "Dunno; I neber played it."

WHEN a man goes into Ohio politics hereafter he should first take the precaution to have his leg amputated.—*The Memphis Commercial-Appeal*.

A MAN in Admiral Dewey's position could scarcely be expected to care much about a small prosaic matter like the Presidency.—*The Washington Star*.

THE *Ohio State Journal* says, "McKinley's record is an open book." The sultan of Sulu is ready to admit that it is an open pocketbook.—*The Omaha World-Herald*.

IN future, Great Britain should begin sending reinforcements several weeks before she picks a quarrel with distant farming settlements.—*The Kansas City Journal*.

HUMANE.—The Boers may at any rate be depended on to go back to farming after the war is over, instead of flooding the market with magazine articles.—*The Washington Star*.

IT might be construed as an unfriendly act if Uncle Sam should send a representative to South Africa who knows something about the art of war.—*The St. Louis Globe-Democrat*.

IN view of the general result, it is about time for Senator Mason to step into the vestibule and inflame his countenance with a few more incandescent blushes for his native land.—*The New York Mail and Express*.

IF Senator Mason and Senator Pettigrew would arrange to blush alternately, instead of simultaneously and all the time, the strain on their blushing powers would not be so great.—*The Milwaukee Sentinel*.

Admiral Dewey has acquired the last piece of furniture for the new house.—*The Minneapolis Journal*.

KRÜGER: "If this thing keeps up much longer I'll have to pass an anti-immigration act."—*The Detroit Journal*.

CURRENT CARTOONS.

LETTERS AND ART.

"THE CHRISTIAN" ON THE LONDON STAGE.

ALTHO Hall Caine's play has been seen in America for nearly a year and is still a great popular success, the English public has just had the opportunity of judging of its merits. The opinion of the London critics appears to be that, viewed by dramatic standards, it is far from possessing the qualities of a great play, whatever elements of ephemeral popularity it may possess. Mr. Malcolm Watson, in *The St. James's Gazette* (October 17), says:

"There can be no doubt whatever that the play produced last night at the Duke of York's is but an indifferent piece of work, regard it as you may from the ethical, the literary, or the instructive standpoint. Like most plays adapted from novels, it is ill-constructed and constantly presumes upon the listener's knowledge of the original book. The scenes are episodic rather than sequent, the development of character abrupt and spasmodic, and the general motivation of the piece lamentably inadequate. Mr. Caine insists that 'the professional critic too often finds that it is not only hard for him to be generous, but that it gives him a great deal of trouble to be just and honest.' Mr. Caine is wholly and irrationally wrong upon this point. The business of the 'professional critic' is to judge the thing presented to his notice by the canons of art; the public is content if it be entertained, and not infrequently finds its amusement in laughing at, rather than with, a playwright. Frankly, 'The Christian' is not a play to be taken seriously by any thinking man. It offers at every step a distorted picture of life; it appeals only at rare intervals to the true emotions; its sentiment is tawdry, its power for good or evil *nil*. In its essence it is melodrama covered with a cheap veneer of bombastic rhetoric, capable of deceiving few, however, as to the quality of the material beneath. One or two fairly powerful scenes, it may be admitted, the play contains, but even the effect of these, and particularly of that famous one which takes place in *Glory's* room between her and *John Storm*, is largely neutralized by the difficulty in which the audience finds itself of grasping its real significance. In the book the author has time and opportunity to explain *Storm's* attitude toward the woman he loves; in the drama his conduct is wellnigh incomprehensible. The art of the playwright is, above all things, to prepare the spectator for what he is about to witness; to make it clear that the catastrophe shown is inevitable—the necessary outcome of antecedent events or a specified train of thought. Mr. Caine, on the contrary, suddenly throws a tragic incident upon the stage and leaves the audience to make the best or worst of it. He forgets 'you must not pump spring-water upon a gracious public, full of nerves,' as Elizabeth Barrett Browning once eloquently phrased it."

The Westminster of the same date remarks that if the "problem play" is dead, the "program play" has taken its place:

"The 'program play' is a modern, blatant revival of the didactic. It is announced—despite, of course, the modesty of the authors—that it is going to illustrate and enforce some noble theme; it is hinted that the stage, even if it do not usurp the functions of the pulpit, will at least preach a powerful lesson to weak and sinful humanity. This, perhaps, may be well in its way. Certainly, I, for one, will never suggest that the influence of the stage for good ought to be neglected merely because its influence for evil is so great as to cause some of the undiscerning to denounce it altogether. At the same time one must remember that one can not praise a piece as a play merely because it has merit as a tract. That 'medicated fiction' is permissible one may not doubt; but, while we are willing to take a little powder in a lot of jam, we are not prepared to swallow a little jam accompanied by a great deal of powder. Now, 'The Christian' undoubtedly is a program play. Mr. Hall Caine has put such a pressure upon his modesty as to enable him to declare in advance a good deal about the object and character of his piece, which a wiser man would have left the public and the critics to discover for themselves. 'The Christian,' we understand, is intended to teach us the beauty and force of religion, and in some way to en-

courage the weaker brethren to strive for righteousness. Possibly there is a colossal subtlety in Mr. Hall Caine's scheme. He may believe that the theater is essentially a pernicious place, and, acting the part of a stern reformer, is endeavoring to keep people away from the theater by showing them how prodigiously dull a play may be. Certainly in no other way can one consider 'The Christian' effective as a tract, and if it be not effective as a tract it is naught, since it is nothing as drama."

GRANT ALLEN.

THE death of Mr. Charles Grant Blairfindle Allen, who attained popularity as a scientist, as a novelist, and as a philosopher, is especially regretted because he was still in the prime of life.

The following particulars of his career are given in a London despatch of October 25:

"Grant Allen was born in 1848 in Kingston, Canada, and his boyhood was passed on the banks of the St. Lawrence River. In his veins ran French, English, Scotch, and Irish blood, and the mixed blood and the wild life of his boyhood perhaps gave him his versatility. He loved nature. Every tree, rock, hill, and flower he loved.

"The groundwork of his education he got at a famous school in New Haven, the middle part

he acquired in Dieppe, France. He completed at Oxford, England, winning many prizes and honors, and gaining his degree in 1871. He spoke French so well by that time that he was often taken for a Frenchman, even by Frenchmen.

"And then Grant Allen began to write. At the same time he began to earn his livelihood as a lecturer at Brighton College. Next he became professor of classics at Queens College, Jamaica, but relinquished the pleasant post in 1876 because of ill health. Small pay and lesser honors finally forced him to forsake learning for letters. 'Physiological Esthetics' was his first book. He paid for its publication himself and got neither fame nor money in return. But it attracted the attention of many scientists, including Darwin. Then came a great period of depression for the author. He wrote one hundred articles for magazines and publishers before he succeeded in having one accepted. That one was on natural history. He took the cue and wrote inimitable articles on popular science.

"In 1883 he went to live in Dorking, and his health gradually began failing, so that he was forced to spend his winters in warmer climes. But with failing health came splendid mental efforts. He commenced writing novels. Book after book fell from his pen with machine-like regularity, all of much excellence. Some of those novels turned things upside down. Young persons of fifteen, he admitted, could not read all of his novels.

Yours very sincerely,
Grant Allen

His essays in *The Fortnightly* were also startling, but carefully thought out.

"'Babylon' and the 'Devil's Die' were instant successes. 'Philistia,' 'What's Bred in the Bone,' 'The White Man's Foot,' 'Dumaresq's Daughter'—all were highly favored. 'The Color Sense,' a scientific study, showed infinite pains of research and attracted wide attention in scientific quarters. But it was his 'The Woman Who Did' that created the greatest furor. It was denounced in a thousand pulpits. It was barred from many libraries.

"The heroine sought to regenerate humanity by stepping outside social custom. She would not have a lawful husband for the father of her child, and she sought to train her daughter to those same principles. But the upshot of it was that the daughter when grown denounced the mother, and this broke the mother's heart.

"With all his success, Grant Allen advised against letters as a career. 'Don't take to literature,' said he once, 'if you've capital enough in hand to buy a good broom and energy enough to annex a vacant street-crossing.'"

The funeral of Mr. Grant Allen at the Woking Crematory was most simple. "There was no religious service," says the *London Chronicle*, "no chanting of hymns, no invocations of any creed, no appeal to any doctrine." In the presence of a few friends, mostly men of letters, Mr. Frederic Harrison spoke a short eulogy and then committed the body to the flames. We quote a portion of his address as reported in *The Chronicle* (October 28) :

"Grant Allen's life, said Mr. Harrison, was a continuous protest against the creeds and conventions of the world around him, and it would be to dishonor his sincerity and courage if, in any weak compliance with prevalent habits, they were to impose any conventions on his lifeless body; it would be to do him wrong to impose on him any of the hopes and invocations, not only of the churches, but of any form of religious community whatever. Those present were plain laymen, taking a final leave of a lay thinker whom they had known in life, and not pretending to do more than soldiers did when, on the battle-field, they laid a dead comrade in the ground where he had fought and bled. . . .

"To those who knew the man, as well as his books, the most dominant feature of his life, said the speaker, was his lively sensitiveness to the varying aspects of nature, and to the many variations of human ideas. He had that susceptibility to impressions that was so rare in our English strain and race, and was only to be explained by his Celtic birth, cosmopolitan training, and his intense activity of mind and great receptivity to all impressions, and the sincerity of spirit which was his deepest moral characteristic. They need not to-day rehearse the immense roll of his public works, or the list of Grant Allen's many-sided literary undertakings. It would be a long catalog if he were to deal with his writings in science, theology, botany, metaphysics, history, paleontology, archeology, physiology, sociology, ethics, art, criticism, fiction. He claimed to be a popular expounder, not a final authority in science, and to him (Mr. Harrison) his most important achievement was his last great work on 'The Evolution of the Idea of God.' But neither with that nor with his multiform activity in other ways had they now to deal; enough for them that they were laying to rest forever that inexhaustible and versatile brain. Of his fiction he (Mr. Harrison) knew nothing: nor need he speak; he himself treated it as hy-play."

Not every one would agree with Mr. Harrison in his light dismissal of Grant Allen's work in fiction, especially of the novel by which he will always be best remembered—"The Woman Who Did." The book is referred to by nearly every serious writer upon the theory of sex relations and constitutes one of the most prized volumes of the radical social reformer. A reviewer in *The Critic* some years ago said that a certain book, "for rank indecency, leaves Mr. Grant Allen's far behind." This called forth from Mr. Andrew Lang the following statement:

"Now it is not possible to put in words how much I differ from the opinions of Mr. Allen, as set forth in 'The Woman Who Did.' My sense of humor, my theory of life, my conception of the evolution of society, are all equally repelled, and up in arms against

Mr. Allen's ideas. But as to 'indecency,' the charge seems to me idiotic. A man and woman (from motives which strike me as absurd) live as married people without any legal or religious ceremony. So do Adam and Eve in 'Paradise Lost.' But if either author is 'indecent' (which neither is), Milton, not Mr. Allen, must be blamed for that offense."

It may be added that Mr. Grant Allen himself considered this his "best possible work." "I have," he said, "written what I consider a work of art, and I am ready to stand or fall by it."

Mr. Richard Le Gallienne, writing in the *Boston Transcript* (November 4) shortly before Grant Allen's death, calls him "one of the most original and fascinating personalities in modern letters." He says:

"Grant Allen means more than many people imagine. He has written too much for it all to be his best. His has been the tragic—even the well-paid—existence of the literary temperament working for its living against many odds, odds of taste and fashion and superstition. According to his light, he has always stood for the civilized man against the—imperialistic—barbarian. The superficially antagonistic to Christianity and actually at variance with it in certain directions, he is, by virtue of his deep and tender sense of pity, his sense of the strife in man between lower and higher, and some mysterious necessity of choice between the two, his ardent advocacy of all we mean by true civilization—he is, perhaps, the truest, and certainly the most influential Christian in modern English letters. The literary quality of his work may be cheaply criticized—tho the average excellence of it, in relation to its bulk, is astonishing—but his significance as a force in many directions is beyond denial. When the mists of contemporary misrepresentation clear away from his name, he will be seen to have been one of the most original and important and beautiful personalities of our time."

LITERARY SWEATSHOPS.

AN account lately given in a New York paper of the way short stories are turned out by the piece—or yard—in New York Grubdom, to supply the voracious appetite of "literary syndicates," furnishes instructive reading, and is, altho humorously told, no doubt substantially true. It appears that these syndicates furnish light, very light, fiction to thousands of daily and weekly newspapers throughout the country. The writer of this account (in the *New York Evening Post*) tells of meeting a friend who was one of the workers in this literary mill, and the following details are furnished by him. He says:

"The stories are, as you say, very simple. The prices paid by the Blank people would not compensate the wear and tear on one's brain of more complicated plots. And then they are short—never much more than two thousand words. Practise is what does it. The first time I tried one, I had to walk about the streets for a couple of hours to construct the story in my head—or I thought I had—and it took me three hours more to write it. That was a severe lesson. I soon found, by inquiry and calculation, that carrying packages to customers from a small grocery would be more paying work than this, because the consumption of energy entailed by the making of one story would exhaust me for nearly two days. That was before I hit on the 'trickling' plan.

"When you write a two-thousand-word piece of fiction by the 'trickling' plan, you first get your paper and pen, then you think of a girl's name. The name is pretty sure to bring some sort of phantom into your mind. Try it yourself, and see if it doesn't. You do something to your phantom's hair, or eyes, or figure, to give her individuality. You must, because these phantoms are naturally indeterminate. Then you put her somewhere where a nice girl would look well—a sidewalk of a country town, or her boudoir, in front of a dresser, or her parlor. Writers of this type of fiction should never say 'dressing-table' or 'drawing-room.' Then you let the story trickle. I found some difficulty, at first, in keeping it from slopping over the limit; but that can be done by finding out how many pages of your paper will hold two thousand words of your writing, and numbering the pages beforehand. If you write one hundred words to a page, you have to

begin getting things happy when you see 'seventeen' on the left-hand upper corner of your paper. Because, you know, of course, you must get things happy at the finish.

"I found that, after a little practise, I could trickle out two thousand words in this way in about two hours and forty minutes. Later, when my phantoms became familiar to me, the 'trickling' increased in speed, and the Blank people still seemed quite satisfied with my product. That was in the early days, when they used to read the stories before paying me for them. Out of about thirty stories they rejected only three; one of those three was a story in which I had allowed myself to become interested and forgotten to make the happy ending; in another there was half a page of broken English spoken by an old Frenchman—broken English counts in the trade as 'dialect,' which is tabooed. In the third there was a negro, described as such—the Blank syndicate either deny the existence of negroes, or are agnostic about it, I don't know which.

"I could tell you of other methods which I discovered for myself later. One was a variant on the primitive 'trickling' method; instead of calling up a phantom character in your story, you call up a phantom storyteller, and let the whole thing trickle out in the first person. When I had got that plan into thorough working order, it reduced the time of production to a very few minutes over two hours. The plan of making a note of some incident and working out from it, when the time came to write the story, was very fast, but it may surprise you to hear that I found there was danger of complication in it. You have to look out sharp for complication, not only because it increases the strain of the work, but also because it carries you over your space limit.

"But by this time I had got beyond submitting stories for approval. The syndicate would simply order so many stories a week—three at first, then five—and I was to hand in a story and receive cash down, without waiting to have the stuff read. That was when I began to discover my own multiplicity. Oh, yes. Behold in me Elaine Cartwright, F. M. Dash, Cobb, and, I have no doubt, many others whose names I have never seen. I don't mean to assert that Elaine, or any other of these, is I and no other. Other writers may at times have figured as Elaine, or as Cobb, or as Dash. I only say that my work has appeared under these names, as well as, probably, under others which I have never seen."

As to the people who read this species of sweatshop literature, the modest author says that it has often puzzled him to think "who on earth could read that sort of stuff":

* "I have seen specimens of it clipped from Arkansas, Colorado, and Kentucky papers, and I have reason to believe that it has obtained currency in Connecticut and western New York. One 'timely' piece of drivel was reprinted in the New York ——. And the worst of it was that this particular rot was a selection to which it had pleased the syndicate to affix my own name. I rather think that the syndicate had reasons of its own for not wishing me to see my babies again after they had left my hands and been paid for. Once I begged them to let me have the proofs to look over in case the printers might nod here and there; this request was not refused, and, yet, somehow, I never saw those proofs in that office. Altogether, the behavior of the syndicate in regard to the names on those stories struck me as remarkably smooth and even wily.

"I think I must tell you about the 'Clarence' series," he continued with a chuckle. "I was turning them out at that time on the method of trickling in the first person, with incidents or thoughts to serve as germs. This Clarence of mine was supposed to be a man whom everything reminded of something that had happened in his own experience, which extended over a long life in many lands. Some of his stories were really not half bad, I must say. I thought it would be a good idea to keep him going through a series, keeping his identity throughout. I will not say that I had no idea of making my syndicate print a number of my stories under one name or else under no name at all. Certainly, that was just what my Clarence would naturally do for me; if one of the series appeared under the name of Cobb, say, the next could not appear as the work of some one else. But I never saw one of the 'Clarence' lot in print—and they certainly did tell me, as courteously as they could, that Clarence must stop. The reason they gave me was, that when a constant reader of one paper, say, in Buffalo, picked up some other paper, and found Clarence

telling a story in that other paper, then the reader would probably suppose that this story was a reprint of the same story he had read last week in his own paper; editors objected to this risk, and their objections lowered the market value of the plates. It was a bitter aspersion on Clarence's reputation as a *raconteur*, and he did not survive it. Yes, that was the end of poor Clarence."

Altogether, it is a marvelous revelation of human nature and of literary tastes, remarks the writer in *The Evening Post*. "Who are the readers of F. M. Dash and of Elaine Cartwright?" he asks. And what would Macaulay's New Zealander say if by chance a thousand years hence he should cross the Atlantic and in the ruins of an office building near the crumbling pillars of the Brooklyn Bridge find the stereotype plates of the great Blank syndicate?

TOLSTOY'S "RESURRECTION."

THE first impression made upon the reader by Tolstoy's new story appears to be its extreme simplicity, even naiveté, of style. Nothing is hidden, nothing is qualified. Everything is straightforward, emphatic—even, it is needless to add, dogmatic. This quality of decisiveness is, says a writer in *The Academy*, increased by a certain air of grim irony—the irony of the old man who has experienced all that life has to give, and who sees with straight, keen vision beneath the trappings of civilization, and with a smile thrusts them aside. To the understanding of old age, even the court of law with its pretentious gravity has no glamour. It is Tolstoy's task in this book to tear the mask from things; and he does it gravely and without haste or bitterness, but with iron hands. *The Academy* thus refers to the account of a murder trial which occurs early in the book, as an illustration of this grave iconoclasm:

"At the moment one does not perhaps notice what is happening, but by the time the scene is over, and Maslova has been sentenced to Siberia for a crime she did not commit, the full force of the author's saturnine device is felt, and we know in a score of ways that no one sitting in judgment upon her is more honest than this prostitute, and most are less so. Here is an example:

The president, who had to take the chair, had arrived early. The president was a tall, stout man, with long gray whiskers. Tho married, he led a very loose life, and his wife did the same, so they did not stand in each other's way. This morning he had received a note from a Swiss girl, who had formerly been a governess in his house, and who was now on her way from South Russia to St. Petersburg. She wrote that she would wait for him between 5 and 6 p.m. in the Hotel Itália. This made him wish to begin and get through the sitting as soon as possible, so to have time to call before 6 p.m. on the little red-haired Clara Vasilievna, with whom he had begun a romance in the country last summer. He went into a private room, latched the door, took a pair of dumb-bells out of a cupboard, moved his arms twenty times upward, downward, forward, and sideways; then holding the dumb-bells above his head, lightly bent his knees three times.

"As the trial proceeds, with its terrible issues, we now and then observe the president glancing at the clock. To take another passage—the judges are entering the court. Every one rises as they come in, Justice incarnate:

Last came the third member of the court, the same Matthew Nikitch who was always late. He was a bearded man, with large, round, kindly eyes. He was suffering from a catarrh of the stomach, and, according to his doctor's advice, he had begun trying a new treatment, and this had kept him at home longer than usual. Now, as he was ascending the platform, he had a pensive air. He was in the habit of making guesses in answer to all sorts of self-put questions by different curious means. Just now he had asked whether the new treatment would be beneficial, and had decided that it would cure his catarrh if the number of steps from the door to his chair would divide by three. He made twenty-six steps, but managed to get in a twenty-seventh just by his chair.

"After this whatever is august about the tribunal has evaporated. Those keen eyes have pierced the 'glamour.' How very real it all becomes!

"Among the jury who have to return a verdict on the case and vote for Maslova's innocence or guilt is Count Tolstoy's hero, Nekhludoff. Upon this circumstance and the fact that he recognizes the prisoner as his aunt's quondam *protégé*, whom years before he had seduced, the story rests. Nekhludoff is a character with whom readers of Tolstoy are familiar—a mixture of good and evil, or rather, strength and weakness, in an aristocratic framework. He is rich and idle, but he is capable of thought, and the voice of duty can still be as a trumpet-call to him. As he sits in the jury-box and sees before him what he believes to be the result of his sin, anguish settles on his soul, and the turning-point of his life is reached. He determines to amend the past as far as possible. That night he takes his resolution:

'I shall tell her, Katusha, that I am a scoundrel, and have sinned toward her, and will do all I can to ease her lot. Yes, I will see her, and will ask her to forgive me.

'Yes, I will beg her pardon, as children do.' . . . He stopped—'will marry her if it is necessary.' He stopped again, folded his hands in front of his breast, as he used to when a little child, lifted his eyes, and said, addressing some one: 'Lord, help me, teach me, come and enter within me, and purify me of all this abomination.'

He prayed and asked God to help him, to enter into him and cleanse him; and what he was praying for had already happened; the God within him had awakened in his consciousness. He felt himself one with Him, and therefore felt not only the freedom, fullness, and joy of life, but all the power of righteousness. All, all the best that a man could do he felt capable of doing.

His eyes filled with tears as he was saying all this to himself, good and bad tears; good because they were tears of joy at the awakening of the spiritual being within him, the being which had been asleep all these years, and bad tears because they were tears of tenderness to himself at his own goodness."

Tolstoy's new work. *The Academy* thinks, should please both those who "want a story" and those who ask only for a message from the master. Into it the traits of both his earlier and later periods have been fused. It is, *The Academy* remarks, as the Count Tolstoy said to us: "The novel pure and simple I have lost heart to write; the sermon pure and simple you have no interest in reading; you shall have the two inextricably mixed." Thus the story is as truly a part of life itself as tho it were without moral intent.

WAS SCOTT SOLE AUTHOR OF THE WAVERLEY NOVELS?

A STARTLING surmise is made by Mr. James Hay in his new book on Sir Walter Scott. He hints, says *The St. James's Gazette*, that it was to James Ballantyne that much of the credit belonged for the literary finish of the Waverley novels. Mr. Hay writes:

"Indeed, the peculiar nature of the connection between James and Scott has never yet been thoroughly understood. This is proved by a strange entry in the old cash-book of James Ballantyne & Co. of £3,600, being James's share of eight novels, which was paid by the publishers direct to Ballantyne in the same way as Scott himself was. Strange, is it not, that Ballantyne's arrangement should receive such a large share? Equally strange that Lockhart should be so silent regarding it. Could it be for literary work rendered to the author of 'Waverley'? . . . I believe that James Ballantyne, a man of consummate taste and literary ability, corrected and polished the Waverley MSS., which Scott, who at his best was never immaculate in style, wrote at a whirlwind pace. Probably the world will never know how much indebted Walter Scott was to James Ballantyne."

It will be remembered that at a public dinner in Edinburgh on February 23, 1827, Scott announced for the first time that he was the author of the Waverley novels, and altho this may seem to leave no room for controversy, the statement can not be reconciled with Scott's previous denials that he was the "Great Unknown." *THE LITERARY DIGEST* (July 25, 1896) calls attention to a yet more explicit statement from him to this effect than any recorded by Lockhart. It is in a letter written by Sir Walter on

August 3, 1823, and now in possession of the Rev. Dr. E. Walpole Warren, rector of St. James's Church, New York. It was written to Dr. Warren's father, Samuel Warren, author of "Ten Thousand a Year," and began as follows:

"SIR: I am favored with your letter of the twenty-sixth, which some business prevented my sooner replying to. I am not the author of those novels which the world chooses to ascribe to me, and I am therefore unworthy of the praises due to that individual, whoever he may prove to be."

THE TWO POEMS ON THE MAN WITH THE HOE.

THE question to what extent, if any, Mr. Edwin Markham is indebted for his "Man with the Hoe" to Miss Cora E. Chase (see *THE LITERARY DIGEST*, October 21) still arouses discussion, tho it seems to be a very one-sided discussion. Miss Chase's poem on the Millet painting was published in August, 1893 (not 1883), and Mr. Markham's did not appear until January, 1899. Genevieve Lucile Farrell, who was assistant editor of *The Californian* when Miss Chase's poem was first printed in its pages, writes to *The Critic* (November) as follows:

"There can be little doubt that Mr. Markham saw Miss Chase's poem in *The Californian*, for he was, at that time, in close touch with the magazine, being a contributor and subscriber to it, and being personally well acquainted with Prof. Charles Frederic Holder, the editor, and myself. He often visited the offices. Besides, Mr. Markham frequently attended the meetings of a club called the 'Practical Idealists,' to which I belonged. Miss Chase was a 'P. I.,' and the poem was written during her membership. David Lesser Lezinsky, one of the members who made it a point to discover good work, secured this poem of Miss Chase's, read it before the Practical Idealists, then turned it over to me for publication."

But, Miss Farrell asks, what if Mr. Markham did read Miss Chase's lines?

"He has taken up the theme where Miss Chase left off, and with all due appreciation of the strength of the young lady's poem, the fact that it was brought out in a Western publication long before Mr. Markham's, and caused no widespread comment, while the work of the latter seemed to take hold of and shake the critical East, shows that Mr. Markham's work stands alone upon its own individuality, direct from an original source."

Writing in *The Democrat*, of Grand Rapids, Mich., Mr. G. E. Archer, of San Francisco, states that the process of conception of Mr. Markham's poem began fourteen years ago, and that he talked frequently with his friends about the feeling which the picture aroused in his mind. Miss Chase, it is said, was among these friends, tho she was but a schoolgirl when Mr. Markham first saw the picture. (Mr. Melville Upton, now of the New York *Evening Telegram*, was, so we are informed, the one who first suggested to Mr. Markham that he put his feeling for the Millet picture into poetry.) Mr. Archer quotes Ambrose Bierce, Joaquin Miller, and other writers of the far West, who scout the idea that there is any striking similarity between the two poems, except such as would almost inevitably appear from the identity of subject. "Miss Chase's poem," says Mr. Miller, "is a little dell here in the foot-hills, but Edwin Markham's poem is the whole Yosemite, the thunder, the might, the majesty."

The claim is also urged with force that Mr. Markham's poetical power has been shown in an almost equal degree in many other poems, tho none have struck the popular fancy as "The Man with the Hoe" struck it. On this point a letter written by Dr. Max Nordau to Mr. John H. Johnston, of this city, which is now going the rounds of the press, is pertinent. Dr. Nordau says. "Mr. Markham is a great poet. I place him higher than Walt Whitman, as his form is more artistic and beautiful. There is sometimes a Miltonic ring in his verses and Swinburnian richness in

his rimes and rhythms. And as to his philosophy and emotions, they are of the noblest kind. I owe you lasting gratitude for having been the means of my knowing such a fine artist."

WOMEN IN LITERATURE.

THE larger conception now prevalent of women's place and work in the world has been traced by many thinkers to the great impression made upon Europe by the mental strength and forceful rule of Queen Elizabeth. Since her reign, women have slowly but with increasing frequency taken a share in the arts and in literature. Of the twenty-five hundred names of authors recorded in a fairly representative catalog of the standard writers of ancient and modern times, it was lately noted that four hundred were names of women, and that of these nine tenths lived during the present century. In *The Independent* Kate Upson Clark gives some of the causes which she thinks have prevented and which still deter most women from authorship. She says:

"The reasons why women have been so late in entering upon the literary life are many. Of course the great fact that education was not considered proper for women until, broadly speaking, the present century is the chief one.

"In the next place, at least four fifths of our women are married at an early age. They are so constituted that, when they are once the possessors of husbands and children, these become the paramount interest of life. It is doubtful whether great achievement in any intellectual pursuit is possible when it is made a secondary interest. The first impulse of a man also is to work for his loved ones, but his work must be outside, while the woman's is inside. He has every incentive to excel in his profession, in order to preserve the lives and promote the happiness of his family. His work must therefore take the first place with him, in a sense in which a woman's usually can not. Lord Bacon, however, considered it a misfortune for even a man with high ambitions to marry. 'He that hath a wife and children,' he says, 'hath given hostages to fortune.'

"The unmarried woman, therefore, the unhappily married, the woman whose children have grown up before her force has abated, or the widow, we find excelling in many forms of literature, while the happily married woman rarely figures in such exalted activities. Let the young woman choose between the muse and matrimony. She can hardly ever have both."

Miss Clark finds another drawback to the success of women in their sensitiveness, which environment and possibly nature have made keener than that of men. The ordeal of criticism and oft-defeated hopes is too trying a one for any but the hardest spirits among them. Still another drawback to their success, she says, is their modesty. Many of the brightest women have been the inspirers of men, and they have been content to let their genius shine through that of another. St. Augustine of Hippo, Herschel, Daudet, Renan, Rossetti, Lamb, Wordsworth, and Browning—or, to mention newer lights, Hardy and Hall Caine—have all been deeply indebted to women, either mothers, sisters, or wives. How far the names of these self-effacing women should have been inscribed upon the title-pages of their works the world will never know.

Most Popular Books of the Month.—The books most in demand in October, according to *The Bookman*, show some slight changes over those of the early autumn. "Richard Carvel" now leads "David Harum," and some new works appear. The fifteen leading books in New York are as follows:

"Richard Carvel," by Winston Churchill; "David Harum," by Edward Noyes Westcott; "When Knighthood was in Flower," by Edward Caskoden; "No. 5 John Street," by Richard Whiting; "Children of the Mist," by Eden Phillpotts; "Prisoners of Hope," by Mary Johnston; "The Orange Girl," by Walter Besant; "The King's Mirror," by Anthony Hope; "The Lion and the Unicorn," by Richard Harding Davis; "The Market

Place," by Harold Frederic; "Red Rock," by Thomas Nelson Page; "Ione March," by S. R. Crockett; "That Fortune," by Charles Dudley Warner; "The Man with the Hoe, and Other Poems," by Edwin Markham; "The Fowler," by Beatrice Haraden.

In London, Miss Fowler's "A Double Thread" continues to lead, and the two books which lead in America are still at the foot of the list in the British metropolis. The English list is:

"A Double Thread," by Ellen Thorneycroft Fowler; "No. 5 John Street"; "The Market Place"; "The Fowler"; "Ione March"; "Mammon & Co.," by E. F. Benson; "The Orange Girl"; "The King's Mirror"; "Kit Kennedy," by S. R. Crockett; "Trooper 3,809," by Lionel Decle; "A Solitary Summer"; "Elizabeth and her German Garden"; "Kipling" (6s. edition); "The Individualist," by William H. Mallock; "Works on Dreyfus, (various); "The Human Boy," by Eden Phillpotts; "Richard Carvel"; "David Harum."

International Activity in Bookmaking.—So much has been said about the "overwhelming flood of new books" at the present day both in this country and in Great Britain that it is rather surprising and rather agreeable to learn how low both these countries stand in the statistics of international book production. *The St. James's Gazette* (October 21), alluding to the ingenious advertisement of the *London Standard's* "Library of Famous Literature," remarks:

"According to the diagrams which head the advertisement, Great Britain produces less than a third of the new books produced by Germany, and not very many more than half of the new books produced by France, and considerably less than the total produced by Italy. The numbers given are: Germany, 24,000 new books per year; France, 13,000; Italy, 9,500; Great Britain, 7,300; United States, 5,300; Netherlands, 2,500. If, however, England is thus low in the general production of new books, she leads in the production of novels, heading the list with 2,438, Germany leads in educational works with 5,442, arts and sciences with 2,938, *belles lettres* with 2,453, and travel with 1,139; while Italy leads in political economy with 2,994, and France in history with 1,164. However, one would like some further and better particulars about these statistics."

NOTES.

MARK TWAIN has returned to London and will remain there some time. He is busy with literary work.

AT the age of seventy-four, Maurus Jokai, the Hungarian poet and novelist, has decided to take a second wife. The young lady is only three-and-twenty, and is a pretty actress named Bella Nagy. The pair went to Venice for the honeymoon.

THE death of Mr. William H. Appleton removes one of the oldest bookmen in America. For sixty years he had been connected with the house of D. Appleton & Co., for many years past as its head. He had personal or business relations with Thomas Moore, Halleck, Bryant, Thackeray, and scores of other authors of England and the United States during the last half century. He was one of the leaders in the fight for international copyright.

OMAR KHAYYAM is soon to attain to the exalted dignity of a concordance, along with Shakespeare and the Bible. It has been prepared by Mr. J. R. Tutin. Edward FitzGerald's literary executor, Mr. Aldis Wright, of Cambridge, England, is shortly to bring out another volume of FitzGerald's letters, as an addition to the "Eversley Series." We have noted in announcements for fall publication in America no less than seven new editions of the *Rubāiyāt*.

A PERFECT copy of the first folio of Shakespeare was recently sold in London for \$8,500—the record price for this always dear book. Mr. Sidney Lee, author of the recent important "Life of Shakespeare," says in *The Athenaeum* that until its appearance in Christie's salesrooms its existence was practically unknown. For two centuries it had been owned by a Belgian. It is an absolutely perfect copy. Many interesting manuscript notes are scattered through the volume.

THE chairman of the Citizens' Committee for Perpetuating the Dewey Arch, Colonel William C. Church, has announced the names of the executive committee which will have special charge of this work. They include Levi P. Morton, William C. Whitney, Chauncey M. Depew, Dr. Morgan Dix, Howard Gould, J. Pierpont Morgan, Benjamin F. Tracy, John D. Crimmins, and many other well-known citizens, each representing some business interest. Subscriptions are sought from the people of the State and nation. The money will be deposited with a trust company and will draw interest until it is used. Each subscriber's name will be preserved in the arch.

SCIENCE AND INVENTION.

CREATURES THAT LIVE UPSIDE DOWN.

THAT we call a certain position normal and its opposite abnormal is probably due chiefly to the fact that the latter is only exceptional; otherwise the matter seems largely one of convention. Still, we are so accustomed to see animals and insects stand or walk back upward that it is something of a shock to learn that there are some that reverse this position. In *La Nature* (September 30) M. Henri Conpin enumerates the very few creatures that thus live, as we should consider it, upside down. He says:

"They say that there is no rule without exception, and this adage is nowhere more applicable than in natural history. Nature loves the unforeseen, and this is what makes her study so attractive. One of the oddest exceptions to her general rules is certainly one that relates to the position of certain insects. The rule, almost universal among animals, is that the ventral side is turned toward the earth and the back toward the sky. Now there are some species—very few in number, it is true—where this position is reversed, without any clear indication of the reason why.

"The clearest example that can be cited, and also one of the most interesting, owing to the ease with which it can be verified, is that of the larva of the floral beetle, a beautiful beetle with bronze-metallic colors that lives near the finest blossoms, especially roses. The perfect insect is very beautiful, but its grub has no esthetic value, being a fat worm . . . with the disagreeable habit of eating the roots of potted plants and of often causing disaster in gardens and strawberry-beds. Each of its segments is divided on the back into three parts covered with yellow hairs like those of a brush. On the ventral side also are some shorter hairs and three pairs of legs, normally developed. There are

many other larvæ that are not so well provided with means of support.

"This larva, which seems formed to walk like other insects, has the curious custom of moving on its back, belly upward, its feet waving in the air. It progresses by the contractile movements of its seg-

NOTONECTÆ SWIMMING AND ON LAND.

ments, aided by the hairs, which take hold of the ground. There is nothing stranger than this gymnastic feat when it is seen for the first time; the beholder can not help believing that the larva is suffering from momentary dementia; but if it is placed right side up, it turns over at once and moves off at full speed, not on its legs, but on its fur.

"This reversal of ambulatory movement," says J. H. Fabre, 'is so peculiar that by it alone the larva of the floral beetle can be

distinguished by the most inept. Turn up the mold in the decayed trunks of hollow trees; kick up the soil with your foot—if you find a fat worm that walks on its back, you may be certain that you have discovered one of these larvæ. This upside-down walking is quite rapid, and not slower than the movement of an equally fat worm that walks on its legs. It is even faster on a polished surface, where pedestrianism is obstructed by continual sliding, while the numerous hairs on the back of the larva find the necessary purchase by multiplication of the points of contact. . . . In one minute, on a wooden table, these grubs can go two decimeters [about 8 inches] and on a sheet of paper as far again. . . . On a sheet of glass the distance traversed is halved.' . . .

"The aquatic world would be jealous if it had not also some upside-down insect. . . . The *Notonecta* [water-boatmen], whose form is somewhat like that of a boat, always swim back downward. . . . Since nature, which often seems to sport in producing odd exceptions that bear witness to the immensity of her resources, has condemned this creature to pass its life upside down, it was necessary to give it an organization in harmony with this attitude; with this intent its head is bent over toward its belly; its eyes, of oval form, can look forward or backward; its forelegs and intermediary legs, intended only for prehension, can in a certain degree be unbent, so that their prey may be grasped the more firmly. The *Notonecta* breathe by the lower extremity of the abdomen, which they protrude above the surface of the water. Placed on the ground, they leap, but in a normal position; that is to say, back upward.

"The larvæ of the *Notonecta* have the same habits as the adults; their color is yellowish-green and their wings are absent. They change their skin often and the cast-off hide preserves the reversed position that gives them so singular an aspect.

"Finally, we should mention the mammals of the group of Edentates, the sloths notably, which pass most of their lives suspended from the branches of trees by their claws, their backs turned downward. These terminate the catalog of creatures that live upside down."—*Translation made for THE LITERARY DIGEST.*

HEALING AND GROWTH IN LOWER ANIMALS.

SOME interesting experiments on the power of healing and growth of injured parts in certain worms have just been described by Professor Hallez, of the University of Lille, before the French Association for the Advancement of Science, at Boulogne. They relate to the curious phenomena known as regeneration and heteromorphosis, of which the first relates to the power of rapid healing and replacement of parts, and the latter to the occasional replacement of an injured part by a part of a different kind, as when a worm is cut in two and a head grows out on the rear section. The way in which this curious form of replacement takes place leads M. Hallez to believe that in some worms there is a polar arrangement of cells, so that their bodies may be compared to a magnetized bar of iron. When such a bar is divided, as is well known, each part becomes a perfect magnet by itself, having two well-developed poles. So, when one of these worms is cut in half, each becomes a perfect worm, with head and tail complete. The worms experimented upon are those known as polyclades and triclades. We translate a few paragraphs from an account of Professor Hallez's paper in the *Revue Scientifique* (Paris, October 14). Says the writer:

"The polyclades, when wounded, remain quiet, and cause the two edges of the wound to approach, when they heal rapidly. Only long and sinuous cuts are mortal. With the triclades, the tendency to heal is equally marked, but the ability to keep the edges of the wounds together is less developed.

"Speaking of the tendency to regeneration among the polyclades, M. Hallez sums up his experiments thus: 'Every fragment of the body that includes the brain, wholly or in part, can give rise to a new worm. Every fragment that does not include at least a part of the brain can not complete itself.' . . . His conclusion is that the brain of the polyclades forms a center of nourishment and growth as the centralizing point of the exterior impressions and the seat of coordination of the movements.

"With the triclades, any part of the body whatever is fitted to produce a new individual, the only exceptions being the end in front of the eyes, and the rear end."

Of the curious phenomenon of "heteromorphosis," described above, which M. Hallez has observed in this connection, the writer in the *Revue Scientifique* speaks as follows:

"Cases of bicephaly [double-headedness] and polycephaly [many-headedness] are not rare. The author indicated in 1886 the process necessary to obtain heads or tails at will in any part of the body whatever. Every fragment of a triclade keeps on walking in the same direction as the entire body of the animal, as if every aggregate of cells had been polarized, as it were, by the influence of the whole system. Considering this fact and the facts that in every fragment in process of regeneration the head always appears at the forward end and the tail at the opposite end, M. Hallez observes that such fragments act like eggs in process of development, which are also subject to what has been called the law of orientation of the embryo. 'Thus,' he says, 'the triclade organism may be compared to a magnetized bar of iron. If it is cut across, there develops at the point of section a cephalic pole on one side and a caudal pole at the other, just as in a broken magnet there is a north pole on one side of the break and a south pole on the other. In the magnet, the quantity of "magnetic fluid" decreases from the center toward the extremities. It seems as if something similar takes place in the bodies of triclades, whose two extremities alone are deprived of aptitude for regeneration.'"

There is one case, the writer goes on to say, that can not be explained on this "magnetic-pole" theory. In an experiment tried by Morgan, a divided body gave rise to a head at each extremity. This would seem to be fatal to M. Hallez's theory, but he will not admit this, altho he says that the fact can not at present be accounted for because we do not know the conditions under which it took place. The whole series of investigations is extremely interesting, as being on the borderland between physics and biology.—*Translation made for THE LITERARY DIGEST.*

SNAKES THAT SWALLOW EGGS.

SOME snakes are noted for the ease with which they will swallow their prey whole; but in most cases of this kind the victim becomes elongated in the process and hence better adapted in form to the reptile's throat. The python and the boa crush their prey before swallowing it and thus render that feat comparatively easy. But a small African snake known as the "rough anodon" lives exclusively on eggs and does not resort to any assistance of this kind, for it bolts them whole, without breaking the shell. In an article translated for *Popular Science News*, the following description of this reptile and its habits is given:

"It is an innocuous colubiform snake, 70 centimeters [27 inches] long and but 10 millimeters [$\frac{1}{2}$ inch] in diameter—

about the thickness of one's finger—which was captured in the very act of swallowing an unbroken duck's egg, not less than 45 millimeters [nearly 2 inches] in transverse diameter. The extraordinary appearance of the animal while accomplishing this feat of gluttony is well shown in our illustration. *Dasypeltis scabra* (known as the 'rough anodon'), is the name of the species, and it is found throughout a large part of the African continent, from Abyssinia to the Cape, and from Sierra Leone to Mozambique; our specimen comes from the upper Kongo region, near Lake

TWO ROUGH ANODONS, IN THE ACT OF SWALLOWING DUCK'S EGGS. Beneath them to the right, another, in a normal state. In the upper left-hand corner, a row of vertebrae with their dental prolongations for cutting up the shells. Courtesy of *Popular Science News*.

Tanganyika. In these latitudes it is not uncommon, and was long ago described as feeding exclusively on eggs.

"Now, how does it manage to get down its throat such a thing as a duck's egg, not only so much larger than itself, but also hard and perfectly smooth? We know that a common snake is aided in swallowing a toad by its hook-like teeth, which hold the prey while the upper and lower jaws glide over it alternately, and thus push it backward. Lizards, boas, the *Heterodon* of Madagascar, etc., are said to place the egg—of a canary or other small bird,

that is—against an irregularity of the ground, or within one of their own folds, which enables them to ram it into their mouths. In the case of our *Dasypeltis* and its duck's egg, however, these explanations do not suffice, this genus being destitute of true teeth. We can, therefore, only suppose that a couple of membranous folds which have been discovered, one on each side of its mouth, lay hold of the shell like cupping-glasses, and thus work it into the throat.

"But here we meet with another difficulty. After the egg has passed safely between the prodigiously distended jaws and upper esophagus, it would seem as if its bulk and solidity, when lodged in a comparatively inelastic portion of the digestive tube, whose juices are unable to dissolve the shell, must quickly prove fatal to the animal. A remarkable instance of natural adaptation is afforded by the manner in which this danger is provided against. The rough anodon, as already observed, has no true teeth. So-called gular teeth, however, are present (see the upper left-hand corner of the illustration), these being really the tips of the long inferior spines of the first eight or nine vertebrae, protruding through the esophageal wall. When the shell is broken by the gular teeth, it is ejected from the mouth, and the fluid contents pass, with little or no waste, into the stomach."

A Drawback to Wireless Telegraphy.—From the outset it has been pointed out that wireless telegraphy, successful as it has been, has the disadvantage of a lack of privacy. Just as a speaker is heard by all within the sound of his voice, so the "wireless" transmitter sends its waves to every appropriate receiver within the sphere of its influence. Much work has been done toward the remedying of this trouble, but apparently without practical success. A device invented by Marconi to isolate pairs of stations from other stations surrounding them has been represented as nearly perfected, but, *The Electrician* (London) notes, it has not yet been used in practice. During the recent experiments in England the best that could be done in this direc-

tion was to send a special call to the desired station, all the others receiving it, but taking no notice. *The Electrician* goes on to say:

"Altho we know of no really satisfactory apparatus that would enable two stations in a scattered group of, say, twenty or more stations to signal exclusively, there are several well-understood principles that, with skilful development, might be applied to that end. The simplest method would seem to be that in which the ether waves would be cut off by metallic screens from every other direction than that straight to the desired goal. Another conceivable, but, as yet impracticable, plan would be to focus the rays by means of reflectors or refracting pitch lenses, after the manner of a searchlight. It is by no means certain, however, that Marconi waves once started on a well-defined straight course would pursue 'the same straight line.' Most of the intervening objects of large dimensions, such as a hill or a large block of buildings, would probably exert an appreciable deviating influence."

IS HIGH-SPEED TELEGRAPHY PRACTICAL?

FROM time to time the daily press reports some new system of telegraphy that enables a very large number of words to be transmitted per minute. That these systems do not come into general use is due, if we are to credit *The Electrical Review*, to the fact that this high speed can be attained only after some special preparation of the message. The time employed in this preparation is usually not reckoned. *The Review*, which devotes a leading editorial to this subject (November 1), illustrates it by reference to a recent account of a new Austrian system of high-speed telegraphy, which, it is stated, showed the very remarkable record of 100,000 words per minute over a single wire. Of this it says:

"While this figure is astonishing, it by no means follows that it indicates that such a system has the least practical utility. Indeed, the usefulness of any very high-speed telegraphic system is open to grave question, because all of them that have been invented so far involve no less than three distinct operations in the sending of the message; they require the preparation of the message to be sent, its actual transmission, and the translation of the result, when received, into a form proper to be sent to the recipient. Let us assume, for purposes of argument, that a system capable of sending 100,000 words an hour should be installed between New York and Chicago, say. It is exceedingly unlikely that any expert operator would be able to prepare over 1,500 words an hour for transmission by a tape-punching or other mechanism. Hence, to feed such a line would require not less than sixty-six operators constantly working at the sending end. Similarly, at the receiving end, allowing a speed of twenty-five words per minute for translation and transcription, sixty-six more operators would be required to turn the messages as received into English for transmission to those to whom they are addressed."

These 132 operators, says the editor of *The Review*, might be employed in working twenty wires on the present quadruplex and duplex systems. In this case the messages received at the one end would require no translation, but would be immediately ticked off upon the wire by operators, and sent to their recipients. The so-called high-speed service would introduce two elements of delay—in preparation and in translation, and would in all probability be slower than the present system. To quote again:

"The method employed by the system described last week included a photographic apparatus for receiving the messages, consequently necessitating the development and fixing by photographic processes of the record as received. Nobody who has had to do with telegraphy and photography can fail to recognize that this would introduce an altogether impossible delay and a very great expense. It may therefore be argued that such a system as that described has no single advantage over ordinary telegraphy, while it introduces numerous complexities and points of weakness which are entirely unnecessary. The saving on the

wires required would not pay for the photographic films if the system were worked steadily at any reasonable proportion of its capacity."

DANGER FROM THE IMPORTATION OF ANIMALS.

HE who thinks of introducing into his country an animal that has hitherto been found in foreign lands alone, whether he intends to do so for purposes of sport, to provide a household pet, or to cope with some animal or insect plague, should think twice before carrying out his plan. Animals brought in thus have often inflicted incalculable injury on their adopted land, and when they have once obtained a foothold it is almost impossible to get rid of them. In a recent essay on "The Danger of Introducing Noxious Animals and Birds," Mr. J. S. Palmer, assistant chief of the United States Biological Survey, gives an interesting review of this subject. An abstract of his article appears in *Our Animal Friends* (New York, November).

The introduction of a new animal, we are told, may so upset the existing balance of animal life as to overthrow a settlement which it had taken many ages to establish. If, for instance, the American people had known what the English sparrow was to be and how numerous his progeny, it would not have been introduced into these States if its introduction could have been prevented. There are several societies in this country for the express purpose of purchasing and importing European birds. One society at Cincinnati, Ohio, has expended about \$9,000 for that purpose; another society at Portland, Ore., has been organized for the "Introduction of European Song-Birds," and has imported quite a large number of birds at a cost of about \$2,000. While *Our Animal Friends* hopes the results may be pleasing, it thinks that it would be well that all such experiments be made under the sanction of the government experts of the Department of Agriculture.

Besides these voluntary importations it often happens that animals are brought into a country unintentionally. Thus trading-vessels have carried the European house-mouse all over the globe, and are continually distributing in like manner rats, snakes, small mammals, and insects. The introduction of rabbits into Australia is perhaps the most striking example of the danger of unconsidered importations. The common species was introduced for purposes of sport and was liberated near Melbourne in 1864; shortly afterward it was imported into Tasmania and New Zealand. Within twelve years the rabbits had spread over the country and become a veritable plague. Millions of dollars have been spent for bounties, poisons, and various other methods of destruction; thousands of miles of rabbit-proof fences have been built, and hundreds of schemes for destroying the animals have been suggested, but nothing has yet been found that is effectual. In 1887 no less than 19,182,539 rabbits were destroyed in New South Wales alone, but despite the efforts of the Government and private land-owners the rabbits seem to be still increasing.

Another striking experience was that of the Jamaicans with Kipling's "Rikki-tikki"—the little Indian mongoose—which was imported into that island to cope with a plague of rats. It was effective; but, after it had destroyed the rats, it turned its attention to domestic animals and poultry, so that now the islanders would be glad to be rid of it.

A British Engineer on American Machinery.—

A recent report, sent to the State Department by the United States Consul at Edinburgh, Scotland, contains an interesting interview with an intelligent machinist who had worked both in this country and Great Britain, and who was especially competent to compare conditions in the two countries. He was first struck,

he says, on coming to America, with the fact that our workmen could, or at any rate did, work faster than their brothers across the sea. We quote from the report, from which extracts are given in *The American Machinist* (October 26) :

"The average employee was able to turn out fully twice as much work in a given time as his fellow workman across the sea in Swindon. This remarkable result was accomplished largely through the use of improved machine and other tools. I afterward found much the same difference in the rate of production existing in many other branches of manufacture. This was a number of years ago. Meantime, and especially during the past two years, the proprietors of engine and machine works in this country have been, by foreign competition, awakened to the necessity of discarding some of their British machinery in favor of American labor-saving apparatus. The result is that few well-organized works in the United Kingdom are now without a considerable proportion of such apparatus, and the proportion is constantly increasing."

The Scotch machinist believes that our high wages have had a direct influence in bringing about this state of things.

MOUNTAIN AIR AND MOUNTAIN SICKNESS.

MOUNTAIN-CLIMBERS and halloonists continually report great suffering and prostration at high altitudes. This is due, of course, to the rarefaction of the atmosphere; but the old explanation that referred it to a direct mechanical effect of the diminution of pressure on the body is now discredited. In the *Revue des Deux Mondes* (Paris, September 1) M. A. Dastre, in a review of recent literature on the subject, thus criticizes the old theory and indicates the truth as brought out by modern investigators. He says :

"In his report to the Academy of Sciences, Bouguer says : 'The atmosphere, having less weight, did not, by its pressure, assist the blood-vessels so well to retain their blood.'

"This purely mechanical explanation is not only contrary to the reality, but also to the very principles of physics, tho it has been put forward by physicists and accepted blindly by physicians. The atmospheric pressure represents the effect of a weight of about one kilogram on each square centimeter of the body [15 pounds to the square inch]. On the entire surface of the body, this is a total pressure of about 15 tons. A barometric variation of 1 centimeter [$\frac{1}{2}$ inch] thus adds or takes away a weight of about 157 kilograms [350 pounds]. We are, it was said, in equilibrium with this great compression. 'If it is diminished, there is, as it were, a huge cupping-glass applied to the whole surface of the body; the heart's action is not sufficiently counterbalanced; hence congestion and hemorrhage of the mucous membrane and the skin,' etc. The error of this reasoning is evident. The tissues are semi-liquid or liquid; the organism is in reality an incompressible fluid mass, which is consequently subject to the law of Pascal; pressures are transmitted through it in all directions.

"These mechanical explanations were accepted until the investigations of Paul Bert. It is not the least of this scientist's merits that he showed so well that the effects of the change of barometric pressure, as shown, for instance, in mountain-climbing or halloon ascensions, depend on two different conditions—the rapidity of the change (the suddenness of the barometric variation, which alone can cause mechanical effects), and the change itself, the direct barometric variation, which is of quite another nature."

According to Bert, the principal symptoms of mountain sickness are due to the diminution of oxygen in the rarefied air. Yet this is only temporary, for he shows that the body guards against it by an immediate increase in the number of red corpuscles in the blood—what is known technically as "hypercytemia." Some of the most violent symptoms, however, and those that are most often mentioned by climbers, such as flow of blood from the mucous surfaces, pain in the head, "hulging" of the eyes, etc., are caused by the excessive dryness of the air at high altitudes. This dryness, as well as the lack of oxygen before referred to, is

due to the rarefaction of the atmosphere, so that this rarefaction is primarily responsible for the trouble, altho it does not act in any such direct way as that indicated by the old explanations. Its effects are more beneficial than otherwise in the long run, M. Dastre tells us, for to it are due the lightness and purity of mountain air that make this air the most healthful in the world.—
Translation made for THE LITERARY DIGEST.

Action of Anesthetics on Seeds.—It is well known that anesthetics, especially chloroform and ether, are fatal to living beings, acting slowly when they are used in small quantities for a long time, and rapidly when they are given in large doses. This is true both for animal and for vegetable life. M. Henri Coupin has been experimenting to see whether this action extends also to organisms that possess only latent or potential life; seeds, for instance. These, says the *Revue Scientifique*, "are very favorable for study, since in them protoplasm has an extremely slow form of vitality. From the investigations that M. Coupin has undertaken, it appears that anesthetic vapors, even when saturated, are without effect on protoplasm when it is in this condition. We may draw, he says, from this fact, a practical conclusion regarding the destruction of the insects that attack grain. It is only necessary to evaporate a little chloroform in the place where the grain is stored, to kill the noxious insects without injuring the grain. Sulfid of carbon, which it has been proposed to use in similar conditions, and which is very effective so far as the insects are concerned, has the inconvenience of injuring certain kinds of grain, wheat, for instance. M. Coupin has also investigated how wet grain behaves under the same conditions, as compared with dry grain, and has proved that grains whose vitality has been revived by moisture are very sensitive to anesthetic vapors, which retard their germination or kill them, even when the dose is very feeble (about .037 of one per cent.). This latter result, he says, makes the first seem yet more striking."—
Translation made for THE LITERARY DIGEST.

A New "Air-Ship."—A so-called "aerial steamship"—a huge dirigible balloon, or rather, "battery" of balloons—is building in Germany, and will shortly, we are told, have its trial trip. The following description is from the London *Spectator*, October 21 : "It is in appearance 'a huge bird-cage' of aluminum, a skin being stretched over the 'wires,' while within are several balloons. The gallery and the coaches, all of aluminum, are fixed below, as is the engine, which is to drive the entire machine at twenty-two miles an hour. The lifting power of the aerial steamer is about ten tons, and the cost has already amounted to £70,000 [\$350,000]. The experiment excites intense interest among all aeronauts, and the idea among them is that it may be successful. We do not see why it should not, on a calm day. If a condor can carry itself and a lamb at high speed across a valley, there seems no reason why a machine with wings as powerful, and equal power of rising, should not, allowing strength for strength, do as much as the bird. But what is to happen in a high wind? A ship or a bird folds its wings out of the way of the blast, but the aerial steamer can not do that. The cost, too, is rather tremendous—say, £10,000 [\$50,000] per ton of lifting power."

The Duke of Argyll, whose interesting chapter on the flight of birds, in his book "The Reign of Law," will be remembered by many, writes to throw discredit on the new air-ship, maintaining that the principle is wrong, it being necessary, in order to guide an air-ship, that it be heavier, not lighter, than the atmosphere.

THE term "wireless telegraphy" is objected to by *The Electrical Review*, which calls it a "horrible misnomer, in the same category as the expression 'horseless carriage.' 'Wave telegraphy' is considered 'an equally insufficient title' because there may be so many kinds of waves. It is not yet in the least certain how the messages are transmitted; that is, whether the agency is Hertz waves, electrostatic or electromagnetic induction, or what not. 'Ethereic telegraph' is a vague and meaningless term, while 'space telegraphy' can only apply to the systems which can not be directed—soon, it is to be hoped, to be replaced by those that can be. What shall we call it?"

THE RELIGIOUS WORLD.

NEW LIGHT ON BIBLICAL CHRONOLOGY.

THE most telling arguments made of late against the radical Biblical critics have been based on the archeological finds, especially those made in the Nile and the Euphrates valleys. The use made of these discoveries by Hommel of Germany, Sayce of England, and Halévy of France, has done much to strengthen belief in the historical reliability that formerly by general consent was accorded the Scriptures. The recent discovery of a number of papyri in the old stamping-ground of Egyptian archeologists, the district surrounding Heracleopolis, the modern Ahnas-el-Medineh, has brought to light data that seem to show that the Biblical chronology of the Exodus and the sojourn of Israel in Egypt are in harmony with non-Biblical sources. A full account of this find and its bearings on Egyptian and Biblical history we have from the pen of the famous Arabian traveler, Dr. Eduard Glaser, in the "Beilage" of the Munich *Allgemeine Zeitung* (No. 213), from which we glean the following particulars:

One of the perplexing problems of Egyptian chronology has been the date of the opening of the era generally known as the "Middle Kingdom," which included the famous eighteenth dynasty and covered the period which runs parallel with the beginnings of the Israelitish people, especially the times of the Patriarchs. As Egyptian research had all along maintained that this period antedated the events described in the chapter in Genesis referring to these times, a conflict has been supposed to exist between Egyptian and Biblical chronology. The new papyrus find shows that the trouble all along has been an incorrect computation on the part of the Egyptologists with reference to this historic period. Professor Meyer has maintained that it began in 2130 B. C.; Brugsch, in 2466; Petrie, in 2778; and Unger, in 3315, so that the difference between the highest and the lowest was one of about twelve hundred years; yet not one could be brought into agreement with the Biblical records. The new papyrus shows that the beginning of this famous period is to be placed between 1996 and 1993 B. C., and its close between 1783 and 1780, or fully one hundred and fifty years later than even the low computation of Meyer puts it; and a space of less than fifty years now exists between the current Biblical chronology and that of the Egyptologists, where formerly there was a difference of centuries, and a reconciliation seemed impossible. The near approach of the two chronological systems has been caused entirely by the discovery of errors in the Egyptian calculations, and not in the Biblical.

The way in which the readjustment of these chronological data has been effected is deeply interesting and instructive. The papyri in question consist of temple archives found in the ruins of a sanctuary erected by King Usertesen II., and include letters, official documents, etc., of all kinds. With the information here secured is also the statement that in the twenty-fifth day of the seventh calendar month of the seventh year of King Usertesen III., the "early ascension" [*Frühaufgang*] of the dog-star Sirius would take place on the sixteenth day of the following or eighth month. It so happens that on the basis of similar astronomical statements in other documents and on the basis of an exact knowledge of the beginning and end of the Egyptian year, the commencement of the preceding era of Egyptian kings, the so-called Older Kingdom, has been carefully calculated. Dr. Brix, an authority on this subject, in accordance with the method of Oppolzer, has calculated the beginning of the Middle Rule and reached the later conclusions mentioned above, which must be regarded as reliable.

On these premises, the whole early history of Israel, including also the period of the Patriarchs, assumes quite a natural place among the ups and downs of that remarkable age. It appears now, because of the readjustment of the chronology, that the mysterious Hyksos or Shepherd Kings, reported by Manetho, made their appearance in Egypt shortly before the rise of the Israelites. From many sources in Egyptian documents it is reasonably certain that at this time the Phenician power was extending its borders wonderfully, aiming practically at the acquisition of a world-supremacy, the traces of this being found in Babylon

in the East and in Egypt and Northern Africa, and even in Southern Europe, in the West. The Hyksos episode was included in this general movement. Within the limits of this great political upheaval, the Hebrews, who in reality were little more than a Phenician tribe in their primitive history, take a natural and easy place, and from this new perspective the chronology of the Biblical accounts concerning the Egyptian sojourn agree in a most unexpected manner with the data taken from other sources. "There can be no doubt that now the oldest period of the history of Israel has been placed in a clear light by the Berlin papyrus." —*Translation made for THE LITERARY DIGEST.*

"THE CANDY-PULL SYSTEM IN THE CHURCH."

THE Rev. John Watson ("Ian Maclaren") not only finds the church of to-day in America too secular and given to the worship of material things, but he believes the evangelical churches both here and in England at fault in what he terms their attempt to make the church a sort of social club. He mentions the recent receipt of a card from a Young Men's Christian Association as an instance of this singular mixture of religion and entertainment in an institution closely allied to the church. It is as follows, verbatim:

"DO NOT FORGET

"The next Social.
"The next Candy-pull.
"The next Entertainment
"The next Song Service.
"The next Gospel Meeting.
"The next Meeting of the Debating Club.
"The next Chicken-pie Dinner.
"The next date when you ought to make the secretary happy with your cash."

Upon this cheerful document he remarks (in *The Ladies' Home Journal*, October):

"This remarkable list of operations, combining evangelistic zeal, creature comforts, and business shrewdness, requires no commentary; the items give us a convincing illustration of an up-to-date religious institution—a veritable hustler of a Y. M. C. A.

"The Christian church and a Y. M. C. A. are of course very different institutions, and the latter is free from any traditions of austere dignity, but one is not surprised to find that the church has also been touched with the social spirit and is also doing her best to make religion entertaining. One enters what is called a place of worship and imagines that he is in a drawing-room. The floor has a thick carpet, there are rows of theater-chairs, a huge organ fills the eye, a large bouquet of flowers marks the minister's place; people come in with a jaunty air and salute one another cheerily; hardly one bends his head in prayer; there is a hum of gossip through the building.

"A man disentangles himself from a conversation and bustles up to the platform without clerical garb of any kind, as likely as not in layman's dress. A quartet advances, and, facing the audience, sings an anthem to the congregation, which does not rise, and later they sing another anthem, also to the congregation. There is one prayer, and one reading from Holy Scripture, and a sermon which is brief and bright. Among other intimations the minister urges attendance at the Easter supper, when, as is mentioned in a paper in the pews, there will be oysters and meat—turkey, I think—and ice-cream. This meal is to be served in the 'church parlor.'

"No sooner has the benediction been pronounced, which has some original feature introduced, than the congregation hurries to the door, but altho no one can explain how it is managed, the minister is already there shaking hands, introducing people, 'getting off good things,' and generally making things 'hum.' One person congratulates him on his 'talk'—new name for a sermon—and another says it was 'fine.'

"Efforts have been made in England also to make church life really popular, and, in one town known to the writer, with some success of its own kind. One church secured a new set of communion plate by the popular device of a dance; various congregations gave private theatricals, and in one case had stage property of their own. Bible classes celebrated the conclusions of

their sessions by a supper; on Good Fridays there were excursions into the country accompanied by a military band, and a considerable portion of the congregational income was derived from social treats of various kinds. This particular town is only an illustration of the genial spirit spreading throughout the church in England. One minister uses a magic lantern to give force to his sermon; another has added a tavern to his church equipment; a third takes up the latest murder or scandal; a fourth has a service of song; a fifth depends on a gypsy or an expugilist.

"If this goes on the church will soon embrace a theater and other attractions which will draw young people, and prevent old people from wearying in the worship of God."

Dr. Watson draws the following contrast between the spirit of public worship in the old days and at present:

"Perhaps it may be the perversity of human nature which is apt to cavil at new things and hanker after the good old times—which were not always good, by any means—but one is not much enamoured with the new departure, nor at all convinced that what may be called for brief the 'candy-pull' system is any improvement on the past. After a slight experience of smart preachers, and church parlors, and ice-cream suppers, and picnics, one remembers with new respect and keen appreciation the minister of former days, with his seemly dress, his dignified manner, his sense of responsibility, who came from the secret place of divine fellowship, and spoke as one carrying the message of the Eternal. He may not have been so fussy in the aisles as his successor, nor so clever at games, nor able to make so fetching a speech on 'Love, Courtship, and Marriage.'

"There are no doubt many points in which the congregation of the present has advanced on the congregation of the past, but it has not been all gain, for the chief note in the worship of the former generation was reverence—people met in the presence of the Eternal, before whom every man is less than nothing. And the chief note of their children, who meet to listen to a choir and a clever platform speaker, is self-complacency."

Dr. Maclaren suggests that if this state of things continues another kind of a minister will be needed—not an expounder of the Bible or a trainer of human souls, but a "manager," who will sit in his "office" with his typewriter amanuensis, and dictate his vast parochial correspondence and his thirty-minute "talks," while the telephone is continually tingling and messenger boys rush in and out. But, he says, the church should pause well before it decides to give over the pulpit to "managers."

"THINGS WORTH KNOWING IN PSYCHICAL RESEARCH."

ON account of statements which have been made by the press concerning Prof. James H. Hyslop's views regarding the question of the immortality of the soul—statements which, he says, are enormously exaggerated and which put him in a false light—he has found it desirable to correct these erroneous impressions and state the precise nature of the problem presented to students of psychical research at this time. It has been said in most of the papers of the United States that Professor Hyslop has promised that he would "scientifically demonstrate the immortality of the soul." This he absolutely denies, and refers to his article in *The New World* for May, from which we have already quoted, for a true statement of his views. He says (in *The Independent*, October 12):

"If the public expects my results to be in any respects different from what has already been published on the Piper case, it may prepare itself for disappointment. Those who have not been impressed by Dr. Hodgson's report may as well let mine alone. I pretend only to confirm his conclusion, not to do anything better, unless, because of the improved conditions under the Imperator régime, the sittings can be said to be better. But it is absurd to hope for any miracles that will convince presumably intelligent men over and above disappointment with such an astounding piece of work as Dr. Hodgson's report represents. The

trouble is that the public and 'scientific' men alike read that other work of the Society for Psychical Research with a *a priori* preconceptions of what ought to be obtained in 'communications,' and do not study the problem carefully enough to know what it is, and what the inherent difficulties are likely to be in such a thing as real or apparent communication between two worlds. They have wholly forgotten the slow development of invention and discovery, as in electricity, the telephone, graphophone, etc. If we are scientific we have no right to expect anything involving our *a priori* theories about the matter. What scientific men mean by saying that what has already been published is disappointing I can not understand. If they mean that they are still skeptical I can appreciate their state of mind, as that is very healthy when you have not had a long experience in all aspects of the subject. But to complain of disappointments is to acknowledge preconceptions of what ought to be that should never infect the spirit and methods of any man who lays the slightest claim to being scientific. There seems to be a general demand that 'spirits' should show a very lofty estate and engage in the most elevated conversation, without defining what that conversation shall be. People demand that they shall show superior intelligence, tell the conditions of life in which they live, and perform all sorts of miracles. The messages are supposed to be unattended with any difficulties that should make them incoherent. Now there is not a shadow of excuse for all this, and a thousand other equally absurd things. To start with, there is no reason to suppose scientifically that there are spirits of any kind, much less that they have any 'high state.' The scientific man has no business whatever in expecting or demanding that 'spirits' shall satisfy his preconceptions of what a transcendental existence shall be, or of what communications shall consist in. His sole business is to see whether the facts force the explanation to choose between a belief in the *continuity of consciousness* and an *inconceivable* amount of *telepathy*. Whether spirits are sane or insane, coherent or incoherent, has nothing to do with the problem, and a man only makes a fool of himself when he repudiates the case because his preconceptions are not realized, and because his illusions about a transcendental world are not proved to be true. Nor is the question one whether supernormal phenomena represent more intelligence than can be attributed to the brain of the medium in its normal action. But it is solely whether the facts acquired can be attributed to any normal means of acquiring them, and whether they are evidence of *personal identity*, or the *persistence of the consciousness once known to exist*."

Dr. Hyslop states a few facts concerning the Piper experiments conducted by the Psychical Research Society. These facts, he says, while they do not prove anything in favor of spiritualism, leave both the general public and scientists without a shadow of excuse for their "presumptuous and supercilious attitude" toward these investigations. He makes the following statements:

"1. None of Mrs. Piper's experiments are conducted in the dark. All are in broad daylight.

"2. There is no cabinet or mechanical apparatus, as is so common in 'spiritualistic' performances.

"3. There is no slate-writing with its inevitable accompaniments connected with the affair.

"4. Mrs. Piper's life and conversation show none of that theoretical and personal interest in the subject that characterizes the professional 'medium' with his doctrine of magnetism and electricity.

"5. Mrs. Piper has nothing to do with the arrangements for the experiments and sitters. These are all managed by the officers of the society that has her under contract.

"6. All the slate-writing that I ever witnessed was done out of sight and not ostensibly by the hand of the 'medium,' while Mrs. Piper's automatic writing is done in clear sight with her own hand, and on paper and with a pencil of your own furnishing.

"These facts and differences will not make phenomena genuine for any theory, whether secondary personality, telepathy, or spiritism, but they dispose of the assumptions that are usually made when this subject is mentioned, and which are too well supported by general experience against the genuineness of anything that claims to be supernormal. You may insist upon more rigid conditions still, if you like, and if it be possible to do so. But as I am not contending for the genuineness of the case in this statement of its characteristics, but only the difference between it

and the usual instances which give the popular conception of 'spiritualistic' phenomena, I am not concerned with the question whether they are valid or not. They force the public, however, to consider the Piper phenomena with more patience than it is accustomed to do, whatever the explanation that may recommend itself in the end. And we must remember also that the whole case for supersensible knowledge does not depend solely upon this single instance of significant facts. There are thousands of other experiences, such as apparently very important coincidences, apparitions, and mediumistic phenomena, that are on record and many of them exceedingly well authenticated. But they generally lack in the features which give the Piper case its great value. They are: (1) The care taken to exclude all the ordinary reasons for suspecting fraud. (2) The long and sustained period of experimentation with the case, involving hundreds of persons under the strictest conditions of secrecy and care. (3) The completeness of the record made of the facts at the time of the experiment and without any dependence upon memory alone. (4) The fact that the results in this case are experimental, and, to some extent at least, under our control. (5) The knowledge of the antecedent circumstances and conditions connected with the phenomena.

"As Professor James has remarked, not one breath of fraud has ever yet been able to sustain itself. You may still think that this is possible, and I for one shall enter no complaint if only intelligent and scientific reasons are given for this accusation."

FUTURE OF ROMAN CATHOLICISM IN THE UNITED STATES.

ONE of the most forcible essayists now contributing to American magazines is Mr. H. D. Sedgwick, Jr. We have had occasion from time to time to reproduce his trenchant utterances, generally on subjects pertaining to literary criticism. In a late number (October) of *The Atlantic Monthly* he appears as a student of religious tendencies, especially as these manifest themselves in this country in relation to the Roman Catholic church. He writes, apparently, as one outside that church, but he sees for it a future of great power. The question of the attitude of the new democracy of America toward Catholicism is, he thinks, one of the most momentous we shall have to answer. He then proceeds as follows:

"The great opposition to the Roman church in the sixteenth century was an opposition of race, of nationality. The Reformation was the awakening of the Teutonic races to the great differences that separated them from the Latin races; Northern nations felt the swelling of national instincts, and the bonds of the Universal Church were broken. From then until to-day the sentiment of nationality has been predominant; that sentiment reached its zenith in the end of this century, and is already beginning to wane. Cosmopolitanism is establishing; hereafter other bonds than those of a common country will group men together.

"Signs appear that the breaking up of nationality will begin in the United States. There will be in this country three principal parties, those of English, German, and Irish descent; but there will be many other stocks. The motto *E pluribus unum* will be more true than ever. But the whole so formed will not have that unity of inheritance, of habits, of pleasures, of tradition, of imagination, which makes a nation. The United States will be the one great cosmopolitan country. In such a country, with no purely national feeling to be stirred to opposition, a proselyting church, prudent and bold, will have great opportunity. Most of the German element will be Protestant, but it will hardly strengthen the Protestant cause, because it will not unite with the English Protestant section. The Irish will be Catholics almost to a man; and they have an ardent loyalty of nature which will naturally turn them to the support of their church. In the midst of cosmopolitan indifference and disagreement the Church of Rome will be then, as she always has been, the one church which draws to herself men of all European races. There is but one church whose priests visit every people and hear confession in every language. There is but one cosmopolitan church."

Two decades ago, says Mr. Sedgwick, agnostics and evangeli-

cals would have banded together to oppose the Roman Catholic church, believing that they were fighting against gross ignorance and grosser superstition. But now Protestant prejudices are decaying:

"Calvin and Knox are losing worship. Jonathan Edwards has become a signboard of obsolete notions. Our old jealousies of the Roman church were part of our inheritance from England. That inheritance has lost its relative consequence, and in the changing character of the United States those jealousies are disappearing. Old feuds between Protestant and Catholic have ceased to be as important as their united battles against moral decay. Churches of all kinds draw closer together as they feel that their fight is to be against cynicism, gross pleasures, the cruelty of greed. More and more churches separate religion from their own individual tenets and associate it with what all hold dear, the dignity of labor, the sanctity of self-sacrifice, the holiness of marriage, the preservation of noble purposes. They begin to regard religion as a bulwark to guard the spirit from the wastes of shame. There is a feeling everywhere that rich and poor, educated and ignorant, should band together to safeguard the riches of civilization; and that the common refuge for defense and starting-point for conquest must be a united church. Even the strong Protestant sects of the Methodists and Baptists are growing less antagonistic to the Church of Rome. The Presbyterians show signs of conciliation toward the Episcopalians; they build churches in the likeness of Magdalene Tower; they put stained glass in their windows; they are less rigorous to heresy."

The Episcopal church—nearer to the Roman See than any other—is performing a great work in breaking down this prejudice to Catholicism and in preparing the way to a complete understanding, says the writer; and every Anglican plan for union paves the way ultimately to Rome. The agnostics, too, have greatly changed their attitude, and have "spent their passionate youth," their joyous elation in the great principles of intellectual and moral liberty. Mr. Sedgwick does not believe that the spirit of American independence will find a stumbling-stone in Roman Catholic authority, when it can abrogate so docilely its commercial and social independence to the great trusts and corporations. One camel is no harder to swallow than another. Further, says Mr. Sedgwick, the church's lack of modern form and spirit is more than counterbalanced by the firmness and enduring strength which its long life has brought to it.

Neither does Mr. Sedgwick think that the dogmatic teaching of the church will prove a real barrier:

"To an outsider the separate dogmas of the Roman Catholic church are no more difficult of acceptance than the dogmas which she shares with Protestant sects. The fall, the atonement, the divinity of Christ, the Trinity, the clauses of the Apostles' Creed, are larger and more exacting beliefs than the authority of the fathers, the immaculate conception of Mary, the infallibility of the Pope in matters of faith and morals. To the outsider the dogmatic Protestant seems to strain at a gnat and swallow a camel."

After referring to the many indications occurring in the pontificate of Leo XIII. which prove the Roman church's vital interest in progressive movements of the day, and the power it still exerts to help or to modify these movements, Mr. Sedgwick continues:

"All these matters are signs which show that the Roman church is conscious that the world is changing; that she recognizes that new modes of life alter men's habits, opinions, and beliefs; that the church must change too. She must not fight against science, she must recognize that truth is of God. She must not coddle the weak, but cheer forward the strong. Who is so bold as to predict the future of the Catholic church in America? At present she is the church of the ignorant, but her ambition seeks to extend her influence over the whole nation. There are but three classes of citizens which, as classes, we are sure will not come under her sway: Men of scientific knowledge; men of independent character who are resolute to manage their own affairs, a class which is on the wane; and third, the negroes, with whom the Catholic church has not been successful, but who, as a class,

will never have a share in guiding our national life. Set these classes aside, and divide the remainder into thirds. One third, composed of the educated, will be divided among disagreeing Protestant sects; but the remaining two thirds will be a great flock, now scattered and wandering, ready for a wise church to guide. The danger to the world from priestly intolerance and greed is practically past; the danger to the world from oligarchs, free from religious influences, is far greater. The church may well have the sympathy of the unbiased.

"There is one great source from which the church will be able to draw strength. The tide of reaction against the materialistic beliefs of the passing generation is rising fast, and there is a vast army of persons now calling themselves by strange names, healers, faith-curers, Christian Scientists, who have a mighty power of enthusiasm. The church must open her arms to these hundreds of thousands of persons who are seeking to come nearer to God, and are spelling out new words for old supernatural cravings and old supernatural beliefs. In times past the church would have been their refuge, and they would have strengthened the church. Even now, the next Pope, like him who saw in his dream St. Francis propping the falling walls of St. John Lateran, may see that among those enthusiasts is the power to establish the church."

THE TEACHING OF OAHSPÉ.

SOME account of the singular religious community of "Faithists" at Shalam, N. Mex., was lately given in THE LITERARY DIGEST (August 26). An interesting and curious episode in their early history has since been brought to our attention by a reader. It appears that early in the last decade a suit was begun against the community in one of the lower territorial courts by a former member named Ellis, who claimed that he had been wilfully deceived by the community and by their Bible called "Oahspe," and demanded substantial damages in the sum of \$10,000. The lower court rendered a decision in favor of the plaintiff, granting \$1,500 damages, and overruled a demurrer asking that the verdict of the jury be set aside. The case was then taken on appeal to the supreme court of New Mexico by the defendant, Dr. Newbrough, representing the colonists of Shalam, and judgment was finally rendered in their favor in August, 1891, by Justice Freeman, reversing the judgment of the district court. In his decision, the Justice gave the following summary of the teaching of "Oahspe" (27 Pac. Rep.):

"It gives a plain and unvarnished story of the origin of the Christian's Bible. It is this: That once upon a time the world was ruled by a triune composed of Brahma and Buddha and one Looeamong; that the devil, entering into the presence of Looeamong, tempted him by showing the great power of Buddha and Brahma, and induced him [Looeamong] to take upon himself the name Kriste, so that it came to pass that the followers of Kriste were called Kristeyans; that Looeamong or Kriste, through his commanding general, Gabriel, captured the opposing gods, together with their entire command of 7,600,000 angels, and cast them into hell, where there were already more than 10,000,000 who were in chaos and madness. This Kriste afterward assembled a number of his men to adopt a code. At this meeting it is said there were produced 'two thousand two hundred and thirty-one books and legendary tales of gods and saviors and great men,' etc. This council was in session four years and seven months, 'and at the end of that time there had been selected and combined much that was good and great, and worded so as to be well remembered of mortals' (Plaintiff's Exhibit A. p. 733, verse 55). The council, or 'convention,' as it would now be termed, having adopted a platform—that is, agreed upon a Bible—then proceeded to ballot for a god. 'As yet no god had been selected by the council, and so they balloted in order to determine that matter' (Plaintiff's Exhibit A. p. 733, verse 36). On that first ballot the record informs us there were thirty-seven candidates, naming them. This list includes the names of such well-known personages as Vulcan, Jupiter, Minerva. Kriste stood twenty-second on this ballot. 'Besides these, there were twenty-two other gods and goddesses who received a small number of votes

each' (Plaintiff's Exhibit A. p. 733, verse 37). The names of these candidates are not given, and therefore there is nothing in the record to support the contention of the counsel that the list included the names of Bob Ingersoll and Phoebe Coussins. The record tells us that at the end of seven days' balloting 'the number of gods was reduced to twenty-seven.' And so the convention or council remained in session 'for one year and five months, the balloting lasted, and at the end of that time the ballot rested nearly equal on five gods, namely, Jove, Kriste, Mars, Crite, and Siva'; and thus the balloting stood for seven weeks. At this point Hataus, who was the chief spokesman for Kriste, proposed to leave the matter of selection to the angels. The convention, worn out with speech-making and balloting, readily accepted this plan. Kriste who, under his former name of Looeamong, still retained command of the angels (for he had prudently declined to surrender one position until he had been elected to the other), together with his hosts, gave a sign in fire of a cross smeared with blood; whereupon he was declared elected, and on motion his selection was made unanimous (Plaintiff's Exhibit A. p. 733). We think this part of the exhibit ought to have been excluded from the jury, because it is an attack in a collateral way on the title of this man Looeamong, who is not a party to this proceeding, showing that he had not only packed the convention (council) with his friends, but had surrounded the place of meeting with his hosts, 'a thousand angels deep on every side'; thus violating that principle of our laws which forbids the use of troops at the polls."

Ober-Ammergau's Peril.—The approaching performance of the famous "Passion Play" at Ober-Ammergau, which will be begun on May 23, 1900, has drawn attention once more to that unique event. Many will be grieved to learn, from the accounts given by several travelers who have lately been in the little Bavarian village, that the artless simplicity which has previously characterized this play is seriously threatened by too much popularity and nineteenth-century commercialism. The Rev. E. J. Helms, writing from Munich to *Zion's Herald*, says:

"After four hours we reached Ober-Ammergau, quietly nestled under the cross-crowned peak of an overtowering mountain, and apparently taking its noonday nap to the music of the purling, clear Ammer River that flows through the center of the town. The rattle of a few pieces of coin quickened a gasthaus proprietor to provide a very palatable meal (after the usual much waiting of this country), and, let it be said, at a very moderate price. We were glad to eat out on the sidewalk, that we might avoid the fumes of poor tobacco and beer that filled the dining-room.

"Dinner being over, we eagerly sought the place of the 'Passion Play.' What was our disappointment to see that the grassy plot where the pious country people formerly came and watched this religious festival in reverent wonder was all dug out, and over the same a large steel framework was being erected, reminding one of a gigantic camp-meeting tabernacle or theater. The old stage is all that remains of the former place. This may be used again, and it may not. The talk of the town is, how many foreigners, *i.e.*, how many dollars, will be brought to the place next year. That their anticipations are great is evident from the extensive preparations which are being made to accommodate the guests."

The names of the actors in the drama were not yet made known, but probably Joseph Meyer, the former Christus, will be able to appear for the third time next year.

A SERIES of exceptionally beautiful short prayers has for some time been printed by *The Christian Register*, Boston. Following is one which has been commended as both simple and profound:

Dear heavenly Father, I am not strong; and the burdens of my life weigh heavily. I am tired, and sometimes it seems easier to die than to live. Therefore, I turn to Thee with my shamed confession of weakness, asking Thy forgiveness for my cowardice. I seek from Thee strength to bear the results of my own folly and blundering, that I may go on more bravely to the duties that await me. Thou alone art my refuge. Comfort me and sustain me. Let me learn something of the loving patience made perfect in thy saints and heroes; and may I, even if it must be through suffering, enter into the fellowship of true, undaunted souls. Amen.

FOREIGN TOPICS.

MILITARY STRENGTH OF GREAT BRITAIN
AND THE SOUTH AFRICAN REPUBLICS.

COMPARISONS of the military strength of Great Britain with that of the South African republics continue to be made, and many observers begin to conclude that the case of the latter is not hopeless. A factor left out in many earlier calculations was Britain's unreadiness, as now revealed. Altho war was foreshadowed in August, no force adequate to cope with the Boers is yet on hand, tho the original garrisons were raised from four or five thousand to about ten thousand early in September. According to the London *Broad Arrow*, the necessary contracts for the shipment of troops were entered into early in July, and the War Office had by that time made its plans, altho Lord Salisbury still hoped for peace. But despite these preparations the country was not ready for the war, and but for the mobilization of some 6,000 men from India, due, it is said, to the exertions of Lord Curzon and his staff, Sir George White's position would be even more serious than it is. Lord Lansdowne, the Minister of War, confessed that "the military preparations did not keep time with diplomatic negotiations in the Transvaal difficulty." It is more and more evident that the resources of the War Office may be taxed to the utmost. *The St. James's Gazette* says:

"The calling out of the militia reserve, for example, is the kind of measure which we really ought not to be driven to unless a great war was at hand. Our organization is so confused, so much made up of odds and ends and makeshifts, that the proclamation has revealed the existence of this army reserve, which is also in ordinary times a part of the militia, for the first time to most Englishmen. It was never counted as liable to be called out when we were sending one full army corps over sea to fight a colonial campaign. If it is drawn upon now to meet the calls of this African war, then the summons amounts to a tacit confession that our system is not adequate to deal with the obligations of

the empire, which will most assuredly increase and not diminish in coming years. This is not a state of things for which the present Ministers are responsible. We all have our share in the blame. But the politicians now in office, and the country, will be responsible for not understanding the real meaning of what is put before their eyes, and for not drawing the proper deductions."

Sir Charles Dilke puts the case very frankly in an article in *The Speaker*, from which we take the following:

"Not only had confidential cir-

THE KHALIFA "By the beard of the Prophet, I'll have some one to sympathize with soon."
—Witness, Montreal

lars been issued to warn the authorities concerned, but several weeks in advance the newspapers had named with accuracy the very day on which the mobilization was likely to take place. Yet after this day was reached a far longer period was still taken for what was termed mobilization—namely, for the com-

pletion of mobilization arrangements—than the maximum period allowed in the case of other powers. It is understood that Germany and France have convinced themselves by their experiments that within six days the last item of each corps may be perfectly complete for war and on its way to the place of concentration; and France would be able to treat in this fashion at least nineteen out of twenty ordinary corps of her front-line army, and Germany a still larger number. Our mobilization concerned a corps and a half, additional to a division previously despatched; and another corps would apparently almost exhaust our efforts. Behind the twenty-one first-line corps of France (including Algeria), and the larger number of German front-line corps, there are trained troops ready for mobilization—the mobilization of which would be proceeding concurrently with that of the front line, altho it would be slower. Behind our own first two home corps is the vestige of a third corps, insufficiently supplied with those essentials of an army—cavalry, artillery, and military train; and, of trained troops—nothing else."

The Admiralty is severely censured for engaging comparatively slow vessels as transports. The defense is, according to the *Liverpool Journal of Commerce*, that the ships employed are better fitted than the swifter ones. Moreover, there was a desire to disturb commerce as little as possible. The *Berlin Neuesten Nachrichten* says:

"The confession that England is not ready either implies that the army and the diplomacy of Great Britain are not equally balanced, or that both are inefficient. If comparisons are needed, it will be sufficient to recall to mind the preparations made by Germany in 1870, when Graf Moltke was found reading a novel on the first day of mobilization. Lord Lansdowne's statement only shows what numerous critics have long asserted, that the British army is no longer an efficient tool for politics on a large scale. Perhaps England's experience in South Africa will convert Britons to a radical change in their military system."

The quality of the troops is discussed in many papers, sometimes with more animosity than knowledge of the subject. We select the following from a German officer's view, in the *Hanover Courier*, as it, more than any other criticism we have seen, was written with special reference to the present war:

During the Napoleonic wars, the British infantry was a very good force, especially on the defensive, when regiments fought in close order. Modern engagements, however, require individual training in each man, and in this the British infantryman is not as good as his fellow in the great armies of the Continent. He is slow, and not trained to act for himself. For the barbarous or semi-civilized nations against which England's military power is exerted almost exclusively, English tactics nevertheless suffice, as these enemies are badly armed and worse led. That the British infantry will prove to be formidable against the Boers is not certain. Military experts throughout Europe are inclined to doubt it.

PATIENCE REWARDED.

THE ENGLISH BULLDOG (as Uncle Paul climbs over the fence): "Ere's the hold duffer as 'it me on the 'ead at Majuber 'Ill, and 'as been a firm of 'arf bricks at me hever since. Say, I ain't a-goin' to do a thing to 'im—Oh! bless you, no."

—Toronto World.

The British cavalry is in itself rather a smart body. But in South Africa it is not likely to show to advantage. European horses generally give out there. Nor is there much chance for a regular cavalry attack, as the formation of the country prohibits it, especially in Natal. That the British cavalryman is of much less value than the Boer as a scout and on patrol may be regarded as certain.

The English artillery forces are good, remain cool during engagements, and handle the guns well. But the British guns are hardly equal to the far-reaching, quick-firing guns of Krupp and Creuzot.

Once on the battle-field, the British soldier behaves creditably enough, but otherwise his character is not irreproachable. In 1897 no less than 3,500 men were sentenced for desertion, and 12,000 for drunkenness. One of the greatest difficulties will be in the organization of an efficient commissariat. The capabilities of the British soldier depend very much upon the way he is fed, as he is pampered somewhat in the piping times of peace.

The consensus of opinion regarding the officers is perhaps best expressed in an article in the *Paris Revue de Revues*, from which we summarize the following:

The British officer is physically a fine, healthy, strong, athletic specimen of humanity. Of his courage there is no doubt. But as an officer, in the Continental sense of the word, he is a failure. He takes little interest in the men under him, and puts off his uniform as often and as soon as he can. He does not study tactics or strategy, and trusts to chance. Why should he exert his brain, anyhow? It is customary to promote him after a certain number of years in each rank. Hence the enormous number of staff officers and generals, as compared with Continental armies. The British officer is, nevertheless, generally a handsome fellow, and a great social success.

There are plenty of attempts to describe the Boer forces, but most of them indicate but little knowledge of the Boers or slight acquaintance with military subjects. The following is a brief summary from a former member of the Boer army:

Infantry there is none, as yet, broadly speaking. The foreigners who are to serve as such (chiefly because they are not sufficiently used to horses to be enrolled in the veldcornetries) are at

WHICH IS THE REAL KRUGER?

—*Westminster Gazette*.

present in training under Captain v. Albedyll, with an efficient staff of German officers.

The cavalry, the main body, can not really be called "irregular," so far as field service is concerned. They have too much practise in field drill for that. The nearest approach to a veldcornetcy of Boers were the American scouts, trappers, and other border men in the days of Indian wars. Their discipline in everything connected with actual warfare is excellent. But there is no attempt at outward show. The men are punished if their arms and accoutrements are not in order, and the veldcornet has full

power over the horses, often assigning them to riders other than their owners, to assure uniformity of carrying power. The men have great confidence in their officers, and carry out orders with amazing promptness. Individually, the Boer on the warpath is too different from the Briton for comparison to be made. His only weapon is his rifle. A bayonet charge against him can not even be imagined, for by the time it becomes possible he has already retired before the infantry or artillery fire of the enemy, and the charge and rush of the infantry are executed against the air. His excellent training in rifle-shooting nevertheless insures a deadly aim even under excitement and unusual exertion. Hence his mode of charging consists of a rush forward from cover to cover as soon as the enemy becomes confused. Cavalry attempting to charge the Boers stand no more chance than a herd of buffaloes.

The artillery is exceptionally good. It is, however, a mistake to suppose that this is due entirely to the presence of foreigners. The gunners are Boers, young men who serve three years with the colors, and belong afterward to the artillery reserve. The officers are chiefly Boers also. The German experts act chiefly as instructors, the Boers being wonderfully apt pupils.

The commissariat is certain to show much greater mobility than that of the British, as it is better adapted in its organization to the country. Boer camps are rarely surprised. They are generally many miles in the rear, as each man has a little bread and dried beef with him on the saddle.

Of the officers, it must be said that they are the best men the Boers have. Their duties are very arduous, and they take their responsibilities very seriously. The ranks are few, and elective. From thirty to a hundred men may elect a veldcornet, whose acceptance is compulsory. If he refuses, he is fined heavily. He appoints his assistant veldcornet and the corporals. The veldcornets of the district elect a commandant, who also must accept. The officers of a "laager," i.e., a camp, of the men of three or four districts appoint a general. Chief of the forces is the commandant-general, who is elected by the people. Social distinction does not exist, party politics are only in embryo, wealth has no influence. The people are slow to make a choice, but a man once appointed generally serves as many terms as he chooses, and almost patriarchal deference is paid to him.

Drunkenness, blasphemy, and lewdness are punished with floggings, if the offender be a young man. Older men are heavily fined. Incurable fellows are expelled from the camp, and sometimes sent to jail. Attendance at religious services is not compulsory, but morning and evening groups of stalwart Boers may be seen gathering around some weatherbeaten, grisly old warrior, listening bareheaded to the reading of a chapter from the book, and joining in a verse of one of the most wonderful collections of poems the world knows—the Dutch version of King David's Psalms.—*Translations made for THE LITERARY DIGEST.*

Norway's "Pure Flag."—A change affecting no considerable number of the vessels which visit our ports may be noticed December 15. The Norwegian ships will then, for the first time, hoist the "pure flag," i.e., without the Swedish "jack." This marks an important stage in the struggle of Norway for complete independence. The King has not sanctioned the

WANTED—RESERVES.

JOHN BULL: "Help! help! or I'm undone."
—*Weekly Freeman, Dublin.*

change, but it has been adopted by the Norwegian Parliament over his veto. The *Stockholm Post Tidning* says:

"In the resolution by which the King officially notifies the world of the approaching change, His Majesty declares that he disapproves and deploras every alteration of the regulations adopted by his father in 1844, regarding the flags of Sweden and Norway. The King still believes that both sections of the realm, Norway no less than Sweden, would be benefited by retaining these outward signs of union. But the law does not permit him to refuse his signature to the decree of the Storting."

The London *Spectator* points out that another important step has been taken by the Norwegians to procure their entire separation. It says:

"The popular party has just drawn up its program, and its essential point is 'independence,' to be brought about by means of a separate Norwegian ministry for foreign affairs, and a separate Norwegian consular system. This leaves the King the only bond of union between the two states, and will be strenuously resisted by him on the reasonable ground that it may compel him to sanction two directly opposed lines of policy. If England and Russia, for example, were at war, the King as a Swede might be an ally of Great Britain, and as a Norwegian her enemy. The probability, therefore, is that he will continuously veto the bill ordering the separation, and will at last be confronted with the declaration that Norway is a republic. It is then, and, we think, not till then, that the Swedes will have seriously to consider whether they will fight, or whether they will acquiesce in a separation which will be more galling to their pride than hurtful to their interests."

—Translation made for THE LITERARY DIGEST.

THE GERMAN AND THE CZECH.

THE Austrian Government, after a long struggle which has cost several prime ministers their position, has at last repealed the "language ordinances" by which German was deposed from the position it had occupied for hundreds of years as the language of the state. That the new Premier will have a quiet time is, nevertheless, to be doubted, as the Czechs will agitate as much against Clary as did the Germans against his predecessor. Some bloody riots have already taken place. The Prague *Narodni Listy* says:

"With much trouble, the Czech people obtained some years ago a privilege which is their right—the equality of their language with German. And now we have again been robbed of it! We are now told to appeal to the *Reichsrath*. But Parliament has no jurisdiction in the matter. We protest against attack upon our national rights in Bohemia and Moravia. The entire race must assist in the struggle against the new cabinet and the Germans."

The Germans assert that they offered full equality to the Czechs, but that this was immediately followed by demands for superiority. The Vienna *Fremdenblatt* says:

"The ordinances which have so long disturbed the empire were, after all, of very academic value to the Czechs, as the opposition of the Germans prevented the Czechs from obtaining that amount of power and influence which they sought so eagerly to establish. If only the majority in Parliament had been willing to adopt the resolution of the Germans, the quarrel would long since have ceased; for the Germans were quite willing to support a demand for official recognition of the Czech language in Czech districts. That is more than could have been obtained under the Taaffe ministry."

The *Ostdeutsche Rundschau* says the demands of the Czechs are anything but fair. They want "equality" for their language even in purely German districts. That meant, practically, subordination of the Germans under Czech officials. For while the Czechs all learn German, a German, if he wishes to learn another language, prefers French or German. The Paris *Journal des Débats* admits "that under pretense of equality the Germans were everywhere to be subjected to the Slavic element," but doubts that the Czechs will now be satisfied.

The London *Spectator* believes that such quarrels are much more difficult to settle in constitutional countries than in lands ruled by autocrats. It says:

"And yet what was the Emperor to do? The problem before him may well be absolutely insoluble. It is easy for the English to say, as they do say, that, being in a minority, the Germans in Austria should act on the principles of Liberalism, and obey the larger vote; but the Germans have something to say on their side too. They declare that they are bound not to obey, because men are never justified in degrading themselves, and if they accept the lower position permanently they will degrade themselves. . . . The Germans are certainly at present the higher race in Austria, or if that adjective begs the question too much, the race which has of the two advanced further in civilization. The Czechs, however, while denying the fact, declare that even if it is true for this minute, in them and in all Slavs are the greater potentialities, that they are more receptive than their rivals, and that their inferiority, such as it is, arises from having been kept down through many ages. . . . In the old times, of course, the decision would have been left to the sword, and as the German minority has more coherence, more capacity for organization, and more energy, it would probably have won; but at present the object is to end the struggle without a civil war, and how is that to be effected? . . . That the Germans of Austria are a higher people at present than the Slavs of Austria we concede at once; but that if the Germans were compelled or allowed to govern as a caste, ruling a majority by force, they would remain a higher people, is more than doubtful. At all events equality of rights, which must include equality of rights in the use of the tongue they think in, is the only possible basis of the freedom which both races affirm that they desire."—Translations made for THE LITERARY DIGEST.

British Comment on the Yacht Race.—Owing to the South African trouble, English interest in the yacht race was below zero. People rejoice, however, that the unpleasant experiences of a former contest were avoided. The London *Times* says: "The contest has presented one marked feature on which both nations may be equally congratulated, and that has been the complete absence of any of those elements of disagreement by which a former one was unfortunately characterized. The victory will leave no sting behind, and will place no difficulty in the way of a renewal of the challenge." The *Speaker* points out that even Lord Charles Beresford recognized the superior lines of the *Columbia*. Says *The St. James's Gazette* good-naturedly: "There is absolutely no beating an American. We knew it. In fact, we knew it all the time. But we are just as disappointed as our readers to find that we were right." Rather more interest was shown in Canada, where people were not so engrossed by the situation in the Transvaal. The Toronto *Globe* says: "The British yachtsmen must build a hull strong enough to bear the stress of a sail across the ocean, while the defenders of the cup are under no such necessity. They can build with the single object of winning the race. When we consider how near the contestants approach one another in build and rig, the advantage of this immunity becomes apparent. The British yacht must be built to secure a certain amount of strength not needed in the race, and which can be secured only at the expense of speed. . . . The rule was designed to suppress the aggressive enthusiasm of Canadian yachtsmen, who sent a yacht from Belleville by way of the canals to sail for the coveted trophy."

Anglo-Saxon Colonies in France.—That the so called English and American colonies in Paris constitute a serious danger to French institutions is maintained by Pierre Conrhet. He says in *Cosmos* (October 14): "A serious danger to our nationality results from these colonies of Anglo-Saxons that have been established more or less permanently at Paris and in most of our seaside resorts. By their national feeling, their care to retain their own habits, customs, and language everywhere they go, by the contempt that they show for our country and its inhabitants, by the propaganda that they make in favor of Protestantism, they contribute more than regular immigration to compromise the future of our race, for they do not amalgamate with us. The great danger for France lies in this kind of hidden invasion, in this intrusion of a race so different from ours, of a religion so contrary to our spirit and our national traditions. But this is too vast a subject to be treated in a few lines."—Translation made for THE LITERARY DIGEST.

Suitable for Gifts

AMATEUR PHOTOGRAPHY

THE BAKER AND TAYLOR CO.,

A revised and enlarged edition, with many half-tones and line engravings. This little book has become the standard handbook and guide for the beginner in photography, and has safely guided thousands of photographers through the first difficulties of the art. 12mo, cloth, \$1.25; paper, 75c.

"A revelation of all the latest processes from the choice of subject and posing to the mounting of the finished picture."—*Columbus Dispatch*.

"A valuable little text book for amateurs."—*Public Opinion*.

"We can conceive of no more appropriate gift than this beautiful book."—*Central Christian Advocate*.

By the same author:

SUNLIGHT AND SHADOW

12mo, cloth, profusely illustrated, \$2.50. For amateurs who wish to advance in pictorial photography. Treats landscapes and outdoor subjects principally.

IN NATURE'S IMAGE.

Uniform with above, \$2.50. Written largely from the point of view of portraiture and figure composition.

The Beacon Prize Medals

The fortunes of boy and girl heroes, setting forth their trials and victories with sympathy and understanding. By ALBERT BIGELOW PAINE. 12mo, cloth, illustrated, \$1.25.

"An almost ideal holiday gift for a boy or girl."—*Acme Journal*.

"Not only fascinating but pure and uplifting."—*St. Louis Evangelist*.

THE GENTLE ART OF PLEASING.

By ELIZABETH GLOVER. 16mo, cloth, decorated, gilt top, \$1.00.

"An unusual little book."—*Review of Reviews*.

"Told in the form of a narrative. Should be read by parents who are conscious that their children come short of the degree of friendly favor which they easily might secure. The young people themselves will gain much help from its pages."—*Congregationalist*.

BUFFALO JONES'S FORTY YEARS OF ADVENTURE

Compiled by Col. HENRY INMAN. 8vo, cloth, illustrated, 500 pages, \$2.00.

A volume of facts gathered from the experience of an eventful life devoted to the preservation of the American Bison and other wild animals, and including an expedition to the Arctic regions.

"Thrilling incident and the vigorous life led in remote regions among savage men and wild animals alone with nature. Far more interesting than any tale of Cooper's or Mayne Reid's."—*Albany Press*.

AMATEUR PHOTOGRAPHY.

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. HYDE, Brooklyn, N. Y., says:
"The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the 'reaper' over the old-fashioned 'sickle'."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled. Send for price list and circulars. Mention this advertisement.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Gihhs, of Tamatave, says: "Referring to my report dated February 3 last, relative to the temporary putting into execution of the regulations for the formation of an 'octroi de mer' in the colony of Madagascar, I have to state that a decree of the governor-general has repealed this law by instructions from the French Minister of Colonies. The decrees establishing a municipal tax on goods imported into Tamatave, Majunga, Vatomantry, Diego-Saurez, and Mananzary will continue to be enforced without interruption."

Under of June 1, 1899, Minister Newel sends from The Hague a translation of an article in a law relating to mining operations in the Dutch East Indies, which has recently received royal sanction. The article prohibits the carrying on of mining operations except by citizens of the Netherlands, persons domiciled in the Netherlands or the Dutch East Indies, or companies of which the majority of the managers satisfy one of the preceding requirements.

Consul Skinner, of Marseilles, under date of June 6, 1899, says: "The Chamber of Commerce of Marseilles informs the commercial world, upon the authority of the Minister for the Colonies, of the organization of a colonial office. The administrators of this office hold themselves in readiness to respond to inquiries made verbally or in writing on the following points: (1) Upon territorial concessions that are obtainable in the various French colonies, the regulations which govern the concessions, the capital necessary to exploit them, the nature of crops suitable for them, the cost of common labor, the climate—in a word, to all that concerns the exploitation of any portion of the French domain. (2) Upon the materials and products that European France should obtain from various localities in its several colonies for its own agriculture, manufactures, or commerce. (3) Upon

"When you wish the latest styles write to us."

New Winter Suits \$5.00.

WE have just received from abroad some exquisite designs in tailor-made suits and cloaks for winter wear. They are the most advanced styles that have yet been produced, and we have illustrated them in a Supplement to our new Winter Catalogue. We have also added many new Winter fabrics to our line of materials for both suits and cloaks.

To the lady who wishes to dress well at moderate cost, we will mail *free* this attractive Winter Catalogue and Supplement, together with a full line of samples of the materials from which we will make these garments to select from. These new styles and

fabrics are the very latest that have been produced and are shown by no other firm.

Our catalogue illustrates:

Charming Costumes and Tailor-Made Suits, faultless in cut and finish, \$5 up.
Handsome Jackets, lined throughout, entirely different from the ready-made ones, \$5 up.
Jaunty Capes, \$4 up.
New Skirts, cut according to the latest French models, \$4 up.
Golf Capes, Newmarkets, Bicycle Suits, Riding Habits, Rainy-Day Suits, etc.

We keep no ready-made goods, but make every garment to order, thus insuring the perfection of fit and finish. Why buy an ill-fitting ready-made suit or cloak when you can have a perfect fitting one made to order at such reasonable prices? We pay express charges everywhere. All orders filled promptly. A suit or cloak can be made in one day when necessary. Write to day for Catalogue and Samples; you will get them *free* by return mail. Be sure to say whether you wish samples for cloaks or for suits, and we will then be able to send you a full line of exactly what you desire.

THE NATIONAL CLOAK COMPANY,

The colonial office is established at the Palais Royal, gallery of Orleans, Paris."

PERSONALS.

GUNNER LEONARD J. G. KUHLEWEIN, now at the Brooklyn navy yard, was on the *Olympia* during battle of Manila Bay and for some time afterward. In answer to the question, "When did Dewey seem at his best to us who were at Manila with him?" he said, the other day:

"All the time. Dewey was never anything but at his best; yet I have three special memories of him when he was at better than his best. While I was on deck trying to get a torpedo in shape for Spaniards during the battle, I saw him on top of the chart-house, in the most exposed place he could possibly find, directing the proceedings. 'Uncle George' was well worth seeing then. After the battle was over and we knew we had the Spaniards licked, he was so happy his face fairly shone when he thanked the men of the *Olympia* for their part in the fight. He was pretty well stirred up then, I tell you, and so was everybody else, and the cheers we gave him just lifted us off our feet. Dewey's face shone again the day the first lot of Yankee transports, bringing thousands of blue soldiers, steamed into Manila Bay. He wasn't well that day, but the arrival of the transports made him better. Some time later a boat brought a cablegram to the *Olympia*. Soon after he had read it, all hands were called on deck. We expected something highly important, but we couldn't guess what. We'd never seen Dewey so stirred up but once before, and we knew him too well not to be certain that he had great news. He must have seen that we were eager, and I guess he was willing to make us wait a little. He looked out upon us and smiled a hallelujah smile, and then he said: 'Now, men, I want you to listen to the best news we've had since the first of May. I was ill this morning, but it made me well. Now listen.' Then he had the despatch read. It told how Cervera's ships had been done up as completely at Santiago as Montezuma's had been at Manila a little over two months before. It was like an electric shock to the men on that ship. They yelled enough to lift the sky in their cheering, and then they laughed and hooted and shook hands with each other and jumped up and down and danced. Everybody was pretty well stirred up that day, from the admiral down to the stokers."

Broadway and 17th Street

ORIGINAL BEEF.

A vegetable beef tasting like flesh foods, containing twenty five per cent. more food elements than beef, that can be served in the same manner as beef or chicken, is the new food product called Protose. It is purely vegetable in character, containing no trace of animal substance. It is original beef. Its discovery was as great a surprise to those conducting the investigation from which it resulted as it has been to all who have become acquainted with its marvelous properties. It is more easily digested than any flesh-food. The digestibility of vegetable proteids is always increased by cooking, whereas the reverse is true of animal proteids; hence Protose may be eaten freely without risk of indigestion, biliousness, gastritis, or any other of the grave ills which not infrequently follow the free use of flesh-foods.

Six cents to pay postage, sent to the makers, the Sanitas Nut Food Co., Ltd., 71 Washington Ave., Battle Creek, Mich., will secure a sample can.

EUROPEAN TOURS.
10th Year. Select parties. Terms reasonable. Conducted by DA. & MRS. H. S. PAINE, Glens Falls, N. Y.

Current Events.

Monday, November 6.

—Ladysmith is completely surrounded by the Boers; the situation remains unchanged.

—Further military operations in Luzon result in the defeat of the insurgents; the first autonomous government of the Filipinos is installed on the island of Negros.

—President McKinley goes to his home at Canton, O., in order to cast his vote.

—Final tests of the Holland boat show that she is remarkably successful in all the tests imposed by the Government.

Tuesday, November 7.

—Further engagements result in severe losses to the Boers; a Boer force invades Zululand, and their lines are drawn closely around Kimberley.

—The representatives of the United States, Great Britain, and Germany in Washington sign a treaty providing for arbitration of claims for damages in Samoa, and naming King Oscar of Sweden and Norway as arbitrator.

—Elections are held in twelve States; Nash (Rep.) is elected governor of Ohio, Taylor (Rep.) of Kentucky, Smith (Dem.) of Maryland, and Crane (Rep.) of Massachusetts; Democrats carry New York City, Republicans New York State; in Mississippi, Longins (Dem.) is elected governor, and Nebraska, Bryan's home State, goes Democratic.

Wednesday, November 8.

—General White still holds his position at Ladysmith; no fresh news is received.

—An agreement, by which Great Britain cedes her interests in Samoa to Germany, and the United States gets Tutuila and other small islands, is officially announced in Berlin and London.

—A meeting of the Czar and Emperor William takes place at Potsdam.

—The Government asks European powers to give definite assurance that its trade rights in China will not be interfered with.

—Signor Marconi sails for Europe, en route to South Africa; tests of wireless telegraphy by the Government were entirely satisfactory.

Thursday, November 9.

—Lord Salisbury, at the Lord Mayor's banquet in London, discusses Samoan and South African questions, and predicts that England has nothing to fear from the hostility of Continental nations; first British transport reaches Cape Town.

—The wedding of Admiral Dewey and Mrs. Hazen takes place at Washington.

—Goebel disputes the election figures in Kentucky, and much excitement prevails in that State.

—Monuments in honor of Jefferson Davis and his daughter are unveiled at Richmond, Va.

—Lord Pauncefoot and Andrew Carnegie arrive in this country.

Friday, November 10.

—A pigeon-post message from General White reports continuance of the bombardment of Ladysmith, without serious harm to the garrison; another transport arrives at Cape Town.

—Active operations in Luzon result in the driving back of the Filipinos into a smaller territory.

—Joseph H. Choate, the American ambassador, is entertained by the Walter Scott Club at Edinburgh, and speaks in favor of the Anglo-American harmony.

—The election returns in Kentucky are still disputed by Goebel, tho the figures show a small Republican plurality.

—The Industrial Commission resumes its investigation of trusts.

Saturday, November 11.

—A smart skirmish near Kimberley results in the death of Col. Keith-Falconer; a vigorous bombardment of Kimberley is carried on by the Boers; four more troopships arrive at Cape Town.

—General Brooke issues a proclamation for the observance of Thanksgiving Day in Cuba.

—Justice Betts, of the Supreme Court, grants an appeal made by David B. Hill to open action for the dissolution of the Ramapo Water Company.

—John M. Hall is elected president of the New

Systematic Saving

leads to a comfortable old age. Fifty dollars down and fifteen dollars a month don't amount to much in a year, but if wisely invested this small nucleus accumulates dollars at an astonishing rate.

We are spending \$100,000 in what will surely be Chicago's most popular residence suburb. We want to make you a special proposition by which you get the benefit of the inevitable rise in values. Our folder "MAKING YOU SAFE," and our booklet "OAK-LAWN," together with "OUR PLAN," tell all about it. They're yours for the asking.

Special bargains this week:—Two corner lots, one block from electric line with 9-cent fare into the heart of the City. Lots worth over \$1,400. Sold for this one year ago. Owner, through failure of savings bank, compelled to lose his equity of \$300. Can sell for \$1,100, \$500 cash, balance—three yearly notes of \$250, \$250, \$250.

Beacon Lights of History.

"Every realm of activity has already had its giant workers, every problem its colossal thinkers, every germinal question its superb students."

These are the "Beacon Lights" that glow with life under the genius of Dr. JOHN LORD, who could perceive and portray the very spirit of an epoch; grasp and interpret the complex life and literature of a people; analyze and characterize a great representative man or woman, some of whom

"perplex ages with their fame."

"Many owe their enthusiasm in the study of history to Dr. LORD."—FRANCIS L. PATTON D.D., President Princeton College.

"He has inspired large numbers of thoughtful young men to historical study."—HON. ANDREW D. WHITE

"The clearest statement of the greatest men and epochs that have made our civilization."—Prof. S. D. FESS, Ohio Normal College.

"Every sentence from the pen of Dr. LORD is worth attention."—Prof. G. K. MORRIS D.D., Boston University.

"Here epochs are men and history is life."—S. D. FAUST, D.D., Prof. Church History, Union Biblical Seminary.

"A stimulating historian."—JOHN FISKE.

"It is read as eagerly as a work of fiction, and at the same time is absolutely authentic."—F. W. GUNSAULUS, D.D.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

IT CAN'T BE DONE.

No One Can Remain Well, No Chronic Disease Can be Cured Unless the Stomach is First Made Strong and Vigorous.

This is plain because every organ in the body depends on the stomach for its nourishment. Nerve, bone, sinew, blood are made from the food which the stomach converts to our use.

How useless to treat disease with this, that and the other remedy and neglect the most important of all, the stomach.

The earliest symptoms of indigestion are sour risings, bad taste in the mouth, gas in stomach and bowels, palpitation, all gone feeling, faintness, headaches, constipation; later come loss of flesh, consumption, liver and heart troubles, kidney diseases, nervous prostration, all of which are the indirect result of poor nutrition.

Any person suffering from indigestion should make it a practice to take after each meal one of Stuart's Dyspepsia Tablets, allowing it to dissolve in the mouth and thus mingle with the saliva and enter the stomach in the most natural way. These Tablets are highly recommended by Dr. Jennison because they are composed of the natural digestive acids and fruit essences which assist the stomach in digesting all wholesome food before it has time to ferment and sour.

Stuart's Dyspepsia Tablets are sold by druggists, full sized packages at 50 cents. They are also excellent for invalids and children. A book on stomach diseases and thousands of testimonials of genuine cures sent free by addressing F. A. Stuart Co., Marshall, Mich.

THE HUNGARIAN BEATS HIMSELF.

Queen's Gambit Declined.

JANOWSKI. White.	MAROCZY. Black.	JANOWSKI. White.	MAROCZY. Black.
1 P-Q 4	P-Q 4	13 Kt-B 3	P-B 4 (d)
2 P-Q 4	P-K 3	14 Kt x Kt P x P	
3 Kt-Q B 3	Kt-K B 3	15 R-R 8ch(e) K x R	
4 B-B 4	B-Q 3	16 Kt x P Ch K-Kt sq	
5 B-Kt 3	Castles	17 Kt x Q R x Kt	
6 P-K 3	P-Q Kt 3	18 Kt-Kt 5 P x P	
7 R-B sq	B-Kt 2	19 Kt-B 7 P x P ch	
8 P x P	B x B (a)	20 K x P Kt-B 3	
9 R P x B	P x P	21 Kt x R B x Kt	
10 B-Q 3	P-K R 3 (b)	22 Q-R 4 Kt-K 4	
11 P-K Kt 4	R-K sq	23 B-B 5 Kt-K 5 ch	
12 P-Kt 5 (c)	P x P	24 K-Kt sq Resigns (f)	

Notes (abridged) from *The American Chess Magazine*.

(a) Very risky and, as a matter of fact, disastrous. The move is not at all in accordance with Maroczy's conservative style. Presumably Black feared Kt-Q Kt 5; if he played P x P at once; but this would not have been as dangerous as it looked.

(b) Because White threatened 11 B x P ch. Kt x B; 12 Q-R 5, etc.

(c) As is his wont, Janowski dashes right ahead without regard to consequences.

(d) Reckless of danger, evidently, else he would not thus leave the King to his own resources.

(e) A pretty stroke and decisive, yet not so deep that a Maroczy should not foresee it.

(f) This game shows a decided falling-off in form on the part of the young Hungarian, whose defense gave the Parisian no more trouble than that of a Pawn-and-move player.

The Jews and Chess.

It is a significant fact that the "greatest players of modern times, like Kolisch, Horowitz, Lowenthal, Zukertort, Steinitz, and Lasker, have been Jews." A writer in *The Jewish Chronicle* finds a reason for the superiority of the Hebrews in Chess from the fact that certain "traits of mind" characteristic of the Jews have made them great Chess-players. These are summed up as "quickness of apprehension, tenacity of purpose, readiness in the application of resources, and an intuition which enables them to seize the opportune moment for developing action," and also "a mathematical turn of mind."

The Dutch Arms Chess-Club.

This club, having won the Championship of the Brooklyn Chess-League (1898-99), and as the prospect for a League Tournament this season is not favorable, claims the Championship of the minor Chess-clubs of Brooklyn (excepting the Brooklyn Chess-club), and is ready to consider a challenge for the championship from any Chess-club in Brooklyn. The "Dutch Arms" would also be glad to play team-matches with Chess-clubs of the five boroughs of New York City. Chess-clubs in the borough of Manhattan with championship yearnings should write to Mr. E. C. Yates, 760 Carroll Street, Brooklyn, N. Y.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

A Card to Subscribers.—THE LITERARY DIGEST wishes to secure a business representative, man or woman, in every city of five thousand or more population in the United States and Canada. The right kind of persons can earn \$25 a week. Subscribers who can assist us in securing such representatives will confer a favor upon us that will be appreciated, besides helping worthy persons to remunerative employment.

TOPICS OF THE DAY.

THE FORWARD MOVEMENT IN LUZON.

THE vigorous campaign now on north of Manila is accepted pretty generally by the press as likely to end any serious or well-organized resistance to our rule in the Philippines. Guerilla warfare by small detachments of native troops, or at least forays from the mountains by armed bands of robbers, will continue, it is expected, for an indefinite period, perhaps for years; but by far the greater part of the islands, it is confidently predicted, will soon be ready for whatever form of civil government Congress may provide. The loss of the cruiser *Charleston* on a reef, off the north coast of Luzon, that was not down on the Spanish charts has led to some comparisons between Spanish and American methods of coast surveying, and has led the paragraphers to remark that Spain's neglect has hurt our navy far more in times of peace than ever her skill did in war. The anti-expansion press, now that Aguinaldo's army appears to be completely routed and civil government seems likely soon to succeed military rule, have turned their attention from the White House to the Capitol, and are urging that Congress provide that the Filipinos, like the Cubans, be trained for independent self-government.

Aguinaldo About Done For.—"Aguinaldo, 'the modern George Washington,' seems to be in a pretty bad way. If he has any government at all, no one knows where it is. His grand Filipino republic is still a dream, and if he has subjects they are not to be found. If he has even an army it has not materialized. His

troops seem to have been split up into small parties, and some of these parties have been scattered or captured. The campaign that has started out so briskly gives every promise of a successful termination before long. We have about come to the end of Aguinaldoism. Those who have been the severest critics of General Otis are beginning to find out that Otis knows something of the situation, after all. Too much was expected of him at the start. When Aguinaldo began his vicious campaign Otis had few troops, and all that those troops could do was to chase after the Aguinaldo forces, scatter them, take their towns, and then abandon the towns because we had not strength enough to hold them. But Otis has his troops now, the season for active campaigning has begun, and he has planned a series of movements that promise great results. . . . Before the campaign of next year shall have come we shall be in undisputed possession of the island of Luzon, and we shall hear very little more of 'imperialism' as a political issue."—*The Philadelphia Inquirer (Rep.)*.

How Long Will the Tagalos Fight?—"Now that organized warfare on the part of the Filipinos has been suppressed, it is an interesting question how long it will be before Luzon may be considered absolutely pacified—how long, that is to say, before an American may walk in safety anywhere without his gun, and a writ of a justice of the peace acting under American authority can be executed in any part of the island without the help of a company of soldiers. Some of the insurgents have said that they would keep on fighting as long as they had a man left to fire a rifle, and their friends in this country have drawn dolorous pictures of an eternal guerilla warfare, with desperate Tagalos lurking behind every rock, and insurrection, stamped out in one spot, perpetually springing up in another. Of course such an outcome is conceivable. If the Tagalo had the tenacity and the fierce blood-thirst of the Iroquois, we can conceive of him nursing forever a vengeance that did him no good. And yet even the Iroquois has been tamed, and squaws sell beads where once they tortured prisoners. But the Filipinos are not like Indians. From all accounts they are a docile race, considerably advanced in civilization, and much preferring peace to war. Most of those who have submitted to Aguinaldo have done so from terror. They ask nothing better than to be allowed to cultivate their fields in quiet. Even Aguinaldo's soldiers, as a rule, are by no means irreconcilable. Many of them have deserted at the first opportunity. When it becomes thoroughly understood that resistance to the Americans has ceased to be fighting for independence, and has become mere aimless brigandage, it is likely to stop. Few people persist in fighting without an object, unless they love fighting for its own sake, which the Filipinos do not. The Scotch Highlanders did love fighting for its own sake, and their country was admirably adapted to that form of amusement, and yet they were ultimately pacified, altho by methods which we should not like to see repeated in the Philippines. It seems reasonably safe to predict that by the time the next Democratic national convention meets Luzon will be as quiet as Connecticut, and a good deal more quiet than those parts of Long Island served by the Brooklyn Rapid Transit system. And Aguinaldo will not be potting American soldiers from behind a tree. He will be in Hongkong, in jail, or hunting an office under the American Administration."—*The New York Journal (Dem.)*.

Our Indian Fighters are There.—"Those who look upon an Indian campaign in Luzon as a terrible affair, and who are distressing themselves as to the outcome, forget that General Otis, Generals Wheaton, Lawton, Young, MacArthur, Bates, and Schwan, and the colonels and captains of nearly every regiment in the field in the Philippines, are Indian fighters. General Wheaton served in the Twentieth, Twenty-second, and Second infantry in the Indian campaigns; Lawton in the Twenty-fourth Infantry and the Fourth Cavalry; Young in the Twelfth Infantry and the Eighth, Third, and Fourth cavalry; MacArthur in the

Thirteenth, Twenty-sixth, and Thirty-sixth infantry, and again in the Thirteenth; Bates in the Eleventh, Twentieth, Fifth, and Second infantry. In fact, there are a hundred or more officers of experience in the Philippines who served for years on the frontier fighting Indians, participating in the campaigns against the Cheyennes, Arapahoes, Comanches, Modocs, Apaches, Nez Percés, Utes, Sioux, and the Piutes. Several of these Indian campaigns extended over months and years, but in the end the hostile Indians were utterly defeated or captured. General Otis himself was one of the most persistently active of our Indian fighters, and he has in the field officers who, brought up in the school of fighting an evasive enemy, will pursue the rebel Filipinos just as relentlessly as they pursued the Modocs and the Apaches. The end will come just as it did in the Indian campaigns, in the triumph of the army and of civilization. It is not probable that when this fact is realized by the puffed-up, crack-brained egotists of Aguinaldo's army there will be resort for any great length of time to Indian tactics."—*The Chicago Inter Ocean (Rep.)*.

An Anti-Expansion View.—"That this is the end of native resistance can not be presumed. But it may readily be supposed to be the end of any very serious organized insurgent effort for the present. The bright little dream of native self-government and independence under the protection of the great exponent of liberty among the nations has been shattered, and shattered by the very nation which was expected to help on its realization. We have not only done this. We have destroyed the beginnings of self-government, and are sweeping away to exile or death those among the Filipino people who were best fitted to build up a native government. If our purpose were to wipe out every vestige of native possibility in this direction we could not proceed on better lines than we have done, and in effecting the destruction which has been wrought we have implanted a hatred of ourselves in the native breast which years will not efface. The storm of alien conquest which is sweeping over the islands has left behind it desolate but apparently clear and peaceful fields, but beneath the surface lurk the unsmothered fires of hate which must break out in intermittent and sporadic revolution. This is the work of a man chosen by the free suffrages of the American people to conserve and extend the principles and blessings of liberty, and charged with the duty of prosecuting the Spanish war within those bounds. It is a work in the future contemplation of which no pleasure can come; for nothing that can be done hereafter will avail to shake off the weight of human sacrifice that must burden the memory of these days."—*The Springfield Republican (Ind.)*.

South African Dutch Words.—"To abate somewhat the havoc that ensues when the average reader encounters a despatch filled with Boer names and expressions, the New York *Tribune* has explained the meaning and pronunciation of the Boer words

most frequent in the news reports, some of which we quote below:

Oom Paul means Uncle Paul and is pronounced Ome Powl.
Bloemfontein means Bloom Spring, and is pronounced Bloom-fone-tine.
Majuba, a Kafir word, is pronounced ma-yoo-ba.
A veldheer, or field lord, is a Boer general.
The veld is the field.
The veldwachters are the field watchers or military police.
Kloofs is pronounced klofes and means clefts or ravines.
Joubert, the name of the Boer general, is pronounced Yow-bert.
The Jonkheeren, pronounced yonkhairren, are the young lords or members of the first and second orders of the legislature.
The Raad Huis, pronounced Rahd Hovs, is where they meet.
Uitlander is pronounced Oyt lahn-der.
The rand, where so much gold is found, means the border.
Witwatersrand means Edge of the White Water.
Kopje means little head, and is used to describe a hill or small eminence.
A laager, pronounced lah-her, means a camp.
A trek is a journey.
Boer means a rustic.

SOME CITY ELECTIONS.

AS the smoke of battle clears from the field of state politics, the significance of the municipal elections in several of our large cities becomes more apparent. Philadelphia has attracted the most attention, where alleged gigantic election frauds, perpetrated by the Republican machine, have been exposed by *The North American* (owned by John Wanamaker, Postmaster-General in President Harrison's Cabinet) and *The Press* (owned by Charles Emory Smith, the present Postmaster-General). Tammany's sweeping victory in New York City has called out the usual amount of moralizing, and the defeat of the reform element in New Orleans by what *The Times-Democrat* calls "the ring" has elicited not a little comment. These are offset in some degree by the inauguration as mayor of Baltimore of Thomas S. Hayes, who has made a declaration of independence from the politicians; and by the result in San Francisco, where Mayor Phelan, who is credited with an excellent record, was reelected. An illustration of the diversity of our political currents is afforded by the city of Ansonia, Conn., which elected its new mayor, Lockwood Hotchkiss, Jr., solely, it is said, on his record as hero of the wreck of the *Nutmeg State*, a Sound steamer which burned just before the campaign began.

Where Good Government Won.—"Altho New Orleans failed at the late election in the battle for municipal reform, and went back to the old system of partizan government, the contrary was true of nearly all the other cities holding elections; and, with the rarest exception, they placed themselves in line with that great political movement which aims to free American municipalities from the bad government which has fastened on so many of them

—*The St. Louis Globe-Democrat*.

LESLIE M. SHAW,
Re-elected Governor of Iowa.

TWO MORE GOVERNORS.

in the name of political parties. We have already spoken of the case of San Francisco. There Mayor Phelan has been reelected, receiving the support of both Democrats and Republicans, because he has proved so competent a mayor for the last four years. As the San Francisco ring has been beaten twice in succession, it may now be considered as dead beyond all hope of recovery; and the California metropolis, which suffered probably as much as any city in America from ring rule and what always goes with it, spoliation by corporations, is now safe for all time to come.

"In the State of New York no less than three of the larger cities similarly threw off the thralldom of local rings, Albany, Rochester, and Troy. In all three, party lines were loosely drawn in the municipal elections, and the result was political revolutions. In Troy a considerable faction of Democrats threw off the boss-ship of United States Senator Murphy and defeated the machine Democratic ticket named by him; while in Rochester the good-government organization held the balance of power, got rid of the administration which had dominated the city for six years, and won a signal victory for practical municipal reform. It was the same in Providence, R. I., where, despite the fact that the city is Republican on state and national issues, it gave a good majority for a Democrat for mayor, because he was the better man; and its new city government is divided almost equally between Democrats and Republicans, the best men being selected in all cases. . . . The fight for good government and municipal reform has not, it will be seen, grown weaker. On the contrary, it is being conducted as vigorously as ever, and is winning victory after victory. Here and there an outpost has been lost, as at New Orleans, but that the cause is stronger to-day than it ever was before no one who looks over the field can doubt. And the good fight will be kept up until every American city is redeemed and enjoys the blessings of good government and freedom from ring or boss rule."—*The New Orleans Times-Democrat (Dem.)*.

A Glimpse of the Philadelphia Election.—"The boldness of the plan of attack upon the ballot is its most striking feature. Men were hired in Washington to come to Philadelphia and act as election officers in the thirteenth division of the Seventh Ward, vacancies having been provided for them. This matter of the neglect of elected officers to serve should also be investigated, as it apparently forms part of the conspiracy. The hired men from Washington, according to the statement of one of their number, were taken to the house of a public official, instructed in their duties, and given 200 ballots to put into the box to begin with. At the close of the polls they had fifteen ballots left over, which, according to the testimony, were also stuffed into the box. The returns showed a total of 357 votes, altho, it is alleged, only about 140 were cast, and some of these may have been fraudulent. The election over, these bogus officers started for Washington, and if they had managed to get out of the city there would have been no one to call to account for the crime. Even as it was, these unknown men from a distant city, charged with a crime against the ballot, managed to get the heavy bail demanded, Republican office-holders becoming their bondsmen! . . . There is good reason to believe that there are at least 100 out of the 1,000 divisions in Philadelphia the returns from which bear no necessary relation to the vote cast."—*The Philadelphia Ledger (Ind.)*.

CONGRESSMAN ROBERTS OF UTAH.

AS the time for the assembling of Congress draws near, the agitation against Representative Brigham H. Roberts has been waxing more vigorous, until there is now hardly a newspaper outside the city of Salt Lake that seems willing to express the opinion that he should take the seat to which he was elected. The discussion that immediately followed his election was by no means unanimous in the opinion that Congress should refuse to admit him (see *THE LITERARY DIGEST*, December 10, 1898); but the vigorous action since that time of various organizations of women, and the declarations of several religious organizations, including the Ministers' Association of Salt Lake, against the seating of Mr. Roberts, seem to have had considerable effect. Individual defenders of Mr. Roberts, however, have not been entirely wanting, altho their

defense consists largely of attacks upon the characters of other Congressmen and upon the domestic relations of the much-assailed Sultan of Sulu. The anti-Roberts storm has, indeed, reached such a pitch that it has been rumored that the authorities of the Mormon church will persuade Mr. Roberts to resign at the opening of the Congressional session, and will try to have another representative of the church, not a polygamist, elected to the vacant seat. In this way, it is said, the church authorities hope to escape the storm of damaging criticism. Mr. Roberts, however, has disclaimed any intention of giving up his seat, and if he adheres to his determination, some interesting scenes at the opening of Congress are predicted.

The Case against Mr. Roberts.—"There are three objections to Mr. Roberts's admission to the House of Representatives: (1) that he has rendered himself legally ineligible to office under the United States by his violation of the law of 1882 [forbidding bigamy], and that ineligibility has not been removed by the subsequent amnesty because he has not complied with its conditions. (2) He has again rendered himself ineligible by living in polygamous relations subsequent to the amnesty and prior to the admission of the State. (3) He is now living in open violation of the statutes of the State which he claims to represent—statutes passed to carry into effect a clause in the constitution which was made a condition precedent to the admission of Utah as a State. In view of these facts, it seems to us clear that, under the Constitution, the responsibility for determining whether Mr. Roberts is eligible to represent his State rests with Congress, and that it can not avoid that responsibility; that it has a clear moral duty, in the exercise of its constitutional powers, to refuse him admission; and that it is even doubtful whether it has the legal, and certain that it has not the moral, right to overrule an act of Congress, adopted by both Houses and approved by the President, as it will have to do if it admits to a seat a convicted criminal still continuing in the perpetration of a crime which Congress by solemn act has declared makes him ineligible to any office in the United States."—*The Outlook*.

What Mr. Roberts Says.—"Religious fanatics are trying to defeat the will of the people. If the same condition occurred wherein another church was placed in the position of the Mormon church, there would be such an uprising as has never been witnessed here. I wish to designate the attitude of these people, my detractors, as a piece of unwarrantable interference on the part of religious bigots. Mine is the voice of one against the multitude, and I had not intended to say anything about the slanders that have been circulated about me until I had a chance to meet my vilifiers face to face and then to refute their statements. I intend to bring them before Congress or a committee of Congress, and after stating my side of this question, fully

make those of my accusers prove whatever charges they may have against me. I feel confident that when I have done this and made my answer to the allegations against me the American people will see that I have been a much maligned man. . . .

"Say this for me: There is not a State in the Union where polygamous marriages are so entirely under the ban of law as in Utah. Plural marriages are prohibited by the edict of the Mormon church, and have been so since President Woodruff's manifesto in 1890. In addition to that, they are inhibited by constitutional provision, with the same definition of the crime and the same penalties affixed as a punishment that obtained in the Congressional enactment for the Territory of Utah, generally known as the Edmunds-Tucker law. That constitutional inhibition is made unrepeatable without the consent of the United States, and I know of no State that has that subject so completely under condemnation of law as has Utah. All the polygamy that exists in Utah to-day is simply that some men who entered plural-marriage relationships years ago, under sanction of the teachings of the Mormon church, considered themselves under moral obligations to fulfil the conditions of the marriage covenant, and refused to cast off the women who trusted them. It will be interesting to know just what moral or religious benefit will result to the community by turning adrift these plural wives or disowning their offspring. And yet, even the continuation of those relations are prohibited by legislative enactment, and if men fulfil what they regard as their moral obligations to these plural families, they must do it at the risk of coming under punishment provided by law. There is, however, and has been no public sentiment in the State of Utah that has been so unreasonable as to demand that men, fulfilling what they have regarded as moral duties, shall be punished as violators of the law. . . .

"There is another phase of this question that I would like to put before the people of New York. What business is it of the people of New York whom the people of Utah elect to Congress? What would be the feeling in a Congressional district in this State if the Mormon church got up an agitation against one of its representatives on the ground of alleged immoralities and unfitness? Would not there be a strong feeling among the people here that it was none of the business of the members of the Mormon church whom they elected? Do not the people of Utah have the same right to elect a man of their choice to represent them in Congress that the people of any Congressional district of New York have?"—*Interview Printed in the New York World.*

Views of the Mormon Church.—"The moral crusaders will have to wage their war outside the Constitution of the United States. Under that, the member-elect has a perfect right to his seat. If he is excluded, it will be on the ground of 'morals and of Christian ethics.' But what has Congress to do with either? If the question of morals is to enter into the right of one member to the seat to which he has been duly elected, should it not enter into the right of all the other members-elect? The question of morals would cover a tremendously wide and awkward stretch of ground. And is Congress empowered to discuss and decide questions of 'Christian ethics'? If so, from whence did that body derive such authority? And if it should be assumed, is it only to cut one way? What is to stop it from slashing in all directions, and establishing such standards of Christian ethics as the majority may favor? . . . For consistency's and morality's sakes, turn, O ye Christian people and journals, to the huge, devouring and awful evils that fester all around you, right where you live, and do not worry about the 'Mormon' people in distant Utah, who are filling the desert with moral, virtuous homes where God is worshiped in the name of Jesus Christ His Son, and practical religion is the chief business of a peaceful and contented people!"—*The Deseret Evening News, Organ of the Church of Jesus Christ of Latter-Day Saints.*

The Sultan of Sulu and Mr. Roberts.—"Governments, like sensible men, do the best they can when they are not free to be as good as they would like. Polygamy is not tolerated in the Sulus because it meets with the Government's approval, but for the reason that expediency demands this unpleasant concession. We can not afford to have the Sultan join forces with Aguinaldo; therefore we have bought him, and part of the necessary price paid is the stipulation that we shall not meddle with the domestic institutions of his Mohammedan realm. We are under no such compulsion in the case of Congressman Roberts. Should he be excluded from the House he would not draw his sword and flee to

the standard of Aguinaldo; and even if he did it would not matter. Neither is there any danger that the people of Utah will resent the correction of their morals by rushing to arms. That is where the American polygamists are at a fatal disadvantage in comparison with the polygamists of the Sulus. These sneers at the Administration for its treaty with the polygamous and slaveholding Sultan are shallow. Statesmen who are managing a war can not be expected to go on untimely moral crusades that would inevitably result in extending the area of hostilities. It is wrong to blow a man's house up with dynamite. When taken by itself there is no disputing that proposition. But firemen often do blow up houses to prevent the spread of conflagrations. Their justification is perfect, and is the same in principle as that of President McKinley for making his Sulu treaty."—*The Philadelphia North American.*

From a Grandson of Brigham Young.—"Why, if the Mormon people have abandoned polygamy, should President Snow say, in an interview in September: 'I believe in the revelation given to Joseph Smith on celestial marriage, and that under certain circumstances Latter-Day Saints would be doing no moral or religious wrong in practising plural marriage under divine sanction and religious regulations?' Why should Angus M. Cannon, president of the powerful Salt Lake stake in the church, say only last year, 'We still believe in the principle of plural marriages, as we believe in the practises of the patriarchs. You can't change a people's beliefs?' Why should Apostle Woodruff, youngest member of the highest church quorum, say in June, 'The belief in polygamy is as much a part of the Mormon faith to-day as it ever was,' and that the young people could not 'deny this part of their belief without denying the prophet Joseph Smith'? Why should Mrs. Freeze, a leading woman of the church, say polygamy was a divine command of God? Why should Apostle Rudger H. Clawson, as late as October, declare he had been sent to the penitentiary as a 'testimony for Jesus,' when he had been sent for polygamy? Why should Apostle Heber J. Grant, who is living in polygamy and who was Mr. Roberts's most influential supporter during the campaign, say in an address to the Young People's Conference in Logan, Utah, on November 13, 1898, that he felt to 'sustain the principles of the Gospel even to the extent of taking more wives, if necessary'? Why should Mormon-church publications and Mormon-church meetings in Utah ring with a defense of those who 'live their religion'?"—*Eugene Young, in an Address in New York City.*

"The public is aware that the Mormon church already holds the balance of power in local politics in the Territory of Arizona. Its inroads in other directions are not so generally advertised. Mr. [Eugene] Young states that the Mormons in Idaho have been for some time able to return eleven members to the state legislature, and through them to control two senatorial elections. He adds: 'It will not be many years before the Mormon priesthood will have a potent voice in the politics of Wyoming, Colorado, Nevada, Oregon, and Montana.'"—*The Washington Times.*

"I did hope this subject would not come up in the convention. I should hate to see this federation going on record as asking Congress to do something unconstitutional. Congress has not the power to seat or unseat a man. He was elected to his office by the voters from his State, and the Constitution does not give Congress the power to throw him out. I think we had better let the men fight out this question among themselves. When I think of the double lives the men of the East are living without protest from any one, that they are not true to their marriage vows, it does seem unfair that the whole country should rise up in arms because one poor Mormon man from Utah has been elected to Congress."—*Miss Susan B. Anthony before the New York State Federation of Women's Clubs at Rochester.*

"According to the statements of missionaries who have returned from Utah, women are taught that their only salvation is through their husbands. In the resurrection they can only be lifted from their graves out into the eternal life by their Mormon husbands, who, if they are displeased with them for any cause, can threaten to leave them in their graves forever, so that they will not be able to see their children in the hereafter. Surely this is the worst sort of heathenism and slavery for women. Shall not we men and women of these free United States combine and do all in our power not only to have Mr. Roberts expelled from Congress because he has three wives, but also let us strike at the

root of the matter in enforcing if possible severe penalties against those who practise polygamy and who inculcate it as a God-ordained law necessary in attaining the highest glory possible to man."—*Miss Helen Gould, in an Address at Irvington, N. Y.*

"It is in the power of the House, by a majority vote, to declare his seat vacant. There would be an excuse for this extreme action in the fact that Utah was admitted into the Union only on condition of the abolition of polygamy. To thereafter send a confessed polygamist to represent her in Congress is a practical breach of faith upon the part of the electors of that commonwealth. . . . It can not be deemed a serious denial of the right of representation to refuse to allow a man to sit as a legislator who ought instead to have been sent to represent his constituency in the penitentiary."—*The Philadelphia Record.*

A PARSON'S PUBLIC HOUSE.

THE Rev. Osbert Mordaunt, rector of Hampton Lucy, in Warwickshire, England, is proprietor of a unique monopoly: a public house administered according to regulations laid down by him, the profits being devoted to local improvements, and incidentally to the purchase of ornaments for the village church. In *The Outlook* (November 4), the rector himself thus tells of his establishment, which has been conducted on the present plan since 1876:

"The principles of the system are: 1. The sale of *pure* beer (upon the meaning of 'pure' I comment further on). 2. The person who sells the beer must have *no interest* in the profits. When this 'public' came into my hands, I consulted several temperance reformers as to the advisability of closing it altogether, or of endeavoring to conduct it 'respectably' in the strictest sense of the term. My more extreme friends said, 'Close it altogether.' Others of the moderate section were of opinion that I should be wiser in keeping it open, subject to strict regulation, rather than risk another being started over which I should have no control. I chose the latter alternative, and results for nearly twenty years have amply justified my choice.

"The first step was to find a trustworthy tenant, who would accept a fixed sum annually for transacting the business, leaving the responsibility of profit or loss to my account. An outdoor servant gladly accepted the situation, with his wife, on condition of occupying the house rent free, a small sum being allowed for the management and for dispensing the beer, the profits on the eatables and stabling of horses being left to him. The sale of spirits was discontinued—no great hardship to the inhabitants, considering the opportunities afforded for buying them from grocers' traveling carts. I believe that much less spirits are drunk now that bottles have to be bought entire than when it was so easy to send to the 'public' for three or six pennyworth at a time; but I am no advocate of grocers' licenses. The abolition of the spirit license was a most unpopular measure; at first I received a good deal of abuse for it. Among other things, I was frequently told that people would die if they could not be supplied with a drop of spirits in times of cold or sickness. Providentially, however, for sixteen months after the license was canceled only one adult death occurred at all, in a population of (then) nearly five hundred; so I heard no more complaints on that score. . . . I have reason to believe that on account of the liquor being pure and wholesome, and therefore satisfying, less is consumed than formerly. Low wages may have had something to do with a decrease of consumption. But when wages were higher, some years ago, I noticed that less beer was purchased, with a good quality of liquor, altho the price remained the same. Before the 'public' changed hands, perhaps drunkenness was no worse here than in many places; but cases were common enough. I am thankful to say that now they are comparatively rare, and seldom occur, except when people have come

in from other places the worse for liquor, and have been accidentally served with more. Of course if such a condition is perceived, they are declined any at all. The usual public-house hours are observed, and no limit as to the quantity supplied to sober people is ever attempted; but no credit is allowed."

When the rector took charge of the public house, the people were told that all profits, after deducting the rent and current expenses, would be returned to them in clothing, food, and other charities. Thus those who drink the most are taxed for the benefit of their neighbors.

OUR NEW SAMOAN ISLAND.

TUTUILA, the islet which the United States will acquire if the proposed partition of Samoa becomes a fact, is regarded as deriving practically all its value from the splendid harbor of Pago Pago. The island is said to be of no importance as to local production or consumption, and as its population is small, it is not thought likely that its trade will ever cut much of a figure; but the harbor, it is calculated, will be an aid to our ships plying

PAGO PAGO HARBOR.

the long routes of the Pacific. The Washington correspondent of the New York *Tribune* inventories the good points of our new bit of the earth's surface as follows:

"With a small area, which according to the Treasury Bureau of Statistics is only fifty-four square miles, and with only four thousand population, it possesses the most valuable island harbor in the South Pacific, and perhaps in the entire Pacific Ocean. A representative of the London *Times* recently in Washington, who had visited and was thoroughly familiar with not only the Samoan Islands, but those of the Pacific generally, pronounced the harbor of Pago Pago, in the island of Tutuila, the best in all the Pacific, and Pearl harbor, in the Hawaiian group, the next in value as a harbor, the United States thus being the possessor of the chief island harbors and ports of call, supply, and repairs in the Pacific Ocean. Commercially, the Samoan Islands, singly or as a group, are unimportant, so far as their local production and consumption are concerned, but extremely important in their relation to the commerce of any nation desiring to cultivate transpacific commerce. Mr. Goward, who was sent by the United States Government to the Samoan Islands to arrange for a treaty with reference to the harbor of Pago Pago, said:

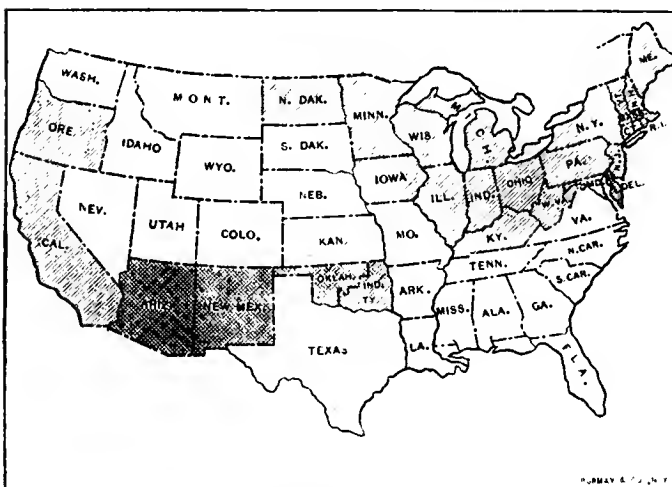

"The capacity of this harbor is sufficient for the accommodation of large fleets; landlocked, it is safe from hurricanes and storms, and could easily be defended from land or sea attack at a small expense. In a naval port:

of view it is the key position to the Samoan group, and likewise to Central Polynesia, and is especially well located for the protection of American commerce. The Samoan archipelago is, by reason of its geographical position in central Polynesia, lying in the course of vessels from San Francisco to Auckland, from Panama to Sydney, and from Valparaiso to China and Japan, and from being outside the hurricane track, the most valuable group in the South Pacific. Situated half-way between Honolulu and Auckland, Pago Pago would be a most convenient stopping-place or coaling-station for vessels or steamers, either for supplies or for the exchange of commodities. With the Pacific mail steamers making it a point for coaling it would necessarily become the controlling commercial place in that part of Polynesia.

"The above statement, made by Mr. Goward in 1887, applied simply to the harbor of Pago Pago, and its importance increases with the occupancy and complete ownership of the entire island by the United States, and it becomes additionally important in view of the control by the United States of the Hawaiian and Philippine groups, the prospective construction of an isthmian canal, and the rapidly growing commerce between the United States and the great markets of Asia and Oceania, which buy annually more than \$1,000,000,000 worth of goods, and nearly all of this of the class of merchandise which the people of the United States desire to sell."

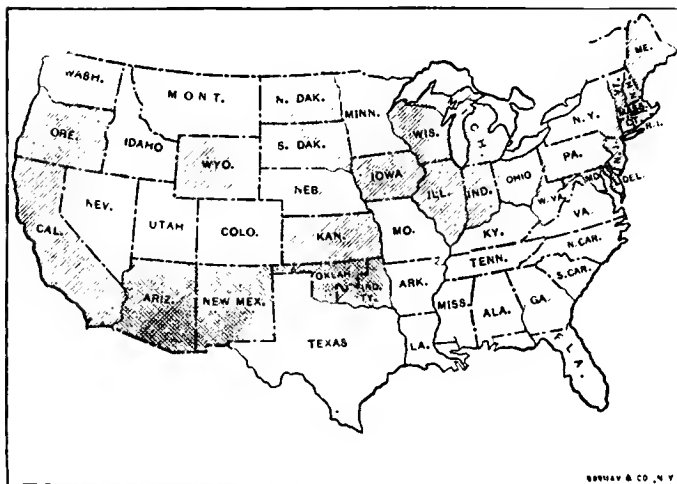

ELECTION RESULTS IN DIAGRAM.

THE accompanying outline maps give a clear representation of the progress of the political struggle since 1896. In that year, it will be remembered, McKinley received 271 votes of the Electoral College, and Bryan 176. Since that time, as the diagrams show, the Republicans have lost Maryland and possibly Kentucky, with a total of 21 electoral votes, and the Democrats have lost Washington, Wyoming, South Dakota, and Kansas,

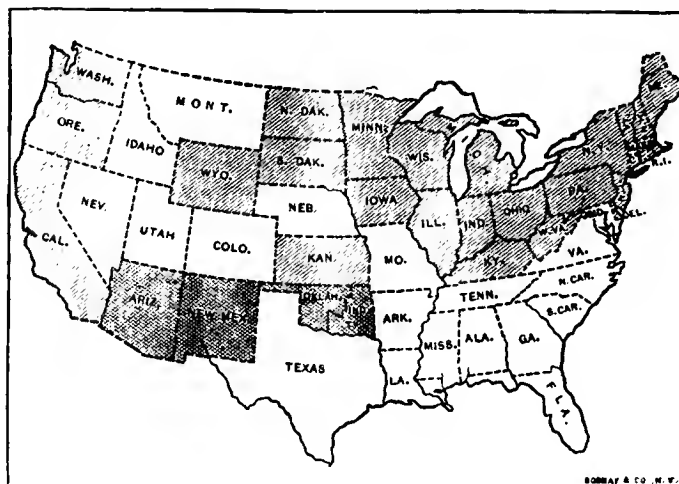

ELECTION RESULTS IN 1896.

Democratic States in white, Republican shaded, Territories cross-lined.

ELECTION RESULTS IN 1898.

Democratic States in white, Republican shaded, Territories cross-lined.

ELECTION RESULTS IN 1899.

Democratic States in white, Republican shaded, Territories cross-lined.

with a total of 21 electoral votes. Kentucky casts 13 electoral votes, and if it is found in the Republican column this year it will be the third Republican victory in over twenty-five years, so that its doubtful position makes it a center of considerable interest. Not all the States held elections in 1898 or 1899, and where they did not, the complexion of the map shows the result at the last previous election. The States which elected governors of one party and Congressmen of another are classed as voting for the party to which the Congressmen belong, as the purpose of the diagrams is to show how the States voted on national, rather than on State issues. The table below gives the electoral vote of each State:

Alabama.....	11	Nebraska.....	8
Arkansas.....	8	Nevada.....	3
California.....	9	New Hampshire.....	4
Colorado.....	4	New Jersey.....	10
Connecticut.....	6	New York.....	36
Delaware.....	3	North Carolina.....	11

		Total.....	447

The first two diagrams appeared in the *New York Herald* after the 1898 election, and the third diagram in the *New York World* after the 1899 election.

DECREASE OF CHILD LABOR.

FRIENDS of the children will be glad to note that child labor, the evil that came with modern machinery and which has been the target of humane legislation ever since, is now rapidly decreasing; and friends of the *laissez-faire* theory will be glad to note that this decrease is due less to law than to the discovery by the manufacturers that child labor does not pay. The *New York Journal of Commerce* says:

"The amount of child labor employed has been diminishing very much, partly as the result of legislation, but in considerable part because the low-priced labor of children has not been found to be economical. Indeed, it is not uncommon to find employers complaining that the parents falsify the ages of their children in order to get them into the mills when they are too young to be

profitable. Whatever share of the diminution of child labor is to be attributed to legislation, it may be seriously questioned whether the legislation would have been obtained had the child labor been really profitable. Tending machinery at the speed at which it is now customarily operated involves some strength and a great deal of attention, and carelessness is almost inseparable from childhood. The shortening of the working day has resulted in part from legislation, but in much less part than has been supposed, for it has rarely been attempted to prevent men from working ten or twelve hours if they are willing to. The main reason why the working day is not fourteen or fifteen hours is that even in factories with steam-driven machinery it has been found that such hours are not economical.

"The Southern States have been attracting the envious attention of New England mill-owners because they have little or none of that labor legislation of which the manufacturing States have acquired too much. But in spite of this lack of restrictive laws, and of the rapid extension of manufacturing in the South, the State Labor Commissioner of North Carolina has lately reported that, comparing this year with 1896, there has been an increase of 100 per cent. in the number of men employed in cotton factories, of 50 per cent. in the number of women employed, and a decrease of nearly one half in the number of children employed. That in three years the number of men employed should have increased 7,128, which is more than 100 per cent., the number of women 5,320, which is almost exactly 50 per cent., and the number of children should have declined 2,606 is a very remarkably rapid change in the direction of the higher-priced grade of labor, for it is to be observed that not only did the number of children decline but the number of men increased much faster than the number of women. In 1896 the men were 41 per cent. of the women and children; in 1899 they were 72 per cent.

"The last national census gave the following percentages of men, women, and children in industrial employment in 1880 and 1890:

	1880.	1890.
Men.....	74.48	80.40
Women.....	18.97	16.92
Children.....	6.55	2.68
Total.....	100.00	100.00

"The percentages of child labor at the two dates in seven States were as follows:

	1880.	1890.
Connecticut.....	7.43	2.10
Massachusetts.....	4.92	1.84
Rhode Island.....	12.00	6.95
New York.....	5.41	1.49
Illinois.....	6.17	1.83
Virginia.....	13.11	5.71
Maryland.....	8.73	4.02

"... In Germany the decrease in child labor is attributed to the law of 1891, and the amount has lately been increasing slightly, but is still small compared with ten years ago. The total number of children in German factories in certain years was as follows:

1886.....	21,053	1894.....	4,259
1890.....	27,458	1897.....	6,151

"The number of women employed nearly doubled between 1882 and 1895."

THE ELECTIONS AND THE CARTOONISTS.

LETTERS AND ART.

SOME TENDENCIES OF CONTEMPORARY FICTION.

IN the concluding chapter of his new work on "The Development of the English Novel," Mr. Wilbur Cross gives a suggestive and interesting consideration of the chief contemporary schools of English novelists. Leaving out Meredith, who has been treated in a foregoing chapter on "The Psychological Novel," Mr. Cross deals with the subject under four groups: "Henry James and Impressionism"; "Philosophical Realism: Mrs. Humphry Ward and Thomas Hardy"; "R. L. Stevenson and the Revival of Romance"; and "Rudyard Kipling." A writer in *The Spectator* (London, October 28) thus summarizes and comments on this concluding chapter:

"In the section on Mrs. Humphry Ward, who is described as the inspirer of a popular group of novelists who have turned to current speculations for the purpose of open didacticism," Mr. Cross points out how she differs from George Eliot in her freedom from the scruples against propagandism possessed by the elder writer, and how this school, like the revolutionary novelists at the close of the eighteenth century, have 'embellished the political treatise for people who would not read it without the story of passion.' Mr. Hardy he regards as the best English representative of the realist school, by whom naturalism is pushed to determinist lengths, differing, however, from Zola in his attention to style. Mr. Cross insists with much force on Mr. Hardy's essential paganism, his 'love of the dark and sinister in nature and his feeling of the nothingness of human life in the presence of the everlasting death,' and his deep-seated pessimism: 'The Immortals would appear to have become enraged at Tess, and to have predestined her hard career.' He adds, however, in one of the most striking passages of the book, that Mr. Hardy, like all the other philosophic realists since George Eliot, has failed to realize the important distinction between science and literature. 'It may be granted that, so far as science can throw any light on the subject, our conduct is determined for us. And yet there is a voice from the depths of consciousness which says this is not the whole truth. Human nature is not comprehended by formulas and theorems. . . . Toward the close of the last century a group of novelists experimented with determinism; the reading public revolted, and turned to the Gothic Romance and then to Scott and Cooper. Something very like this, in a smaller way perhaps, is happening to-day.' Thus by a natural transition Mr. Cross is led to examine into the revival of romance, with Stevenson as its chief hierophant. 'What he did at first—and this is one of his innovations—was to awaken delight in adventure for its own sake, just as Defoe did. Chance and Circumstance, which to the philosophers are at best unlovely, he writes with initial capitals, and says they are the divinities whom he adores. Events, which Hardy marshals so that they seem endowed with spite and cruelty, Stevenson made sing together as the morning stars.' Mr. Cross rightly dwells on the superlative quality and delightful rhythm of Stevenson's prose; his fondness for 'quaint and smooth-sounding words,' which were to him beautiful for themselves; his wholesome morals, spite of his dictum that romance should be 'a-moral'; and holds him chiefly responsible for the recrudescence of historical romance. 'Just as in the case of Scott,' he continues, 'Stevenson has been accompanied and followed by several historical romancers, among whom are Conan Doyle, S. R. Crockett, Stanley Weyman, Anthony Hope Hawkins, and S. Weir Mitchell; and by a group of Scotch emotionalists and humorists, among whom are J. M. Barrie and John Watson.' Lastly, Mr. Cross singles out Rudyard Kipling as the most striking figure in our fiction since the death of R. L. Stevenson. 'Of the new India of the Queen-Empress and Lord Roberts of Candahar, Kipling is the first worthy interpreter.' For the rest, he dwells on Mr. Kipling's invariable nearness to his subject—he does not write from the outside of it, but as one who is a part of it—the penetrating insight most signally displayed in the 'Jungle Books,' and his supreme gift of seeing romance in the 'actualities' of the present."

Mr. Cross's fourfold division of living novelists does well enough for practical purposes, says *The Spectator*, but place in it will hardly be found for all writers. For instance, in which class can Mr. H. G. Wells, the author of "The War of Worlds," be put? Notwithstanding Jules Verne, whose art was but crude and schoolboyish compared to that of Mr. Wells, we may well call the latter the founder of a new school of scientific romance. Mr. Cross takes no account, either, of the class of books which may be designated as "life histories," often only autobiographies masquerading under the name of fiction: "A superlatively artistic instance is to be found in Tolstoy's 'Souvenirs,' perhaps the most attractive book he ever wrote; but the modern type of life-history is almost always written by women, is lavish of realistic and even repulsive details, and animated by the unfilial desire to represent the heroine's parents in a most unpleasant light."

Women now form a large majority of the novelists, says *The Spectator*, and there is noticeable a reaction from the earlier manner of Ouida and Miss Broughton. In those good old days, man was regarded as a creature of irresistible attraction. Now, especially in the "emancipation novel," a decided note of *misandria* or man-hating is observable. Feminine fiction has still other failings, tho none quite so extraordinary and unaccountable as the one just mentioned:

"Many women write fluently, lucidly, even picturesquely, but the antiseptic of style is still almost a monopoly of the male sex. It is notable, too, that while women have long since invaded and distinguished themselves in the domain of sensationalism and melodrama, they have, with rare exceptions, left the fields of adventure unexplored, altho in real life the exploits of travelers like Mrs. Bishop and Miss Kingsley prove them to be under no disabilities in the matter of gaining experience."

VICTOR HUGO'S "SCRAP-BOOK."

WILLIAM ERNEST HENLEY, the English critic, has said of Victor Hugo as a poet, "He found French poetry a place of brick and stucco, and left it a palace builded of jewels—a palace of the Arabian Nights"; but Victor Hugo's prose masterpiece, "Les Misérables," Henley sums up as an "immense stupidity," and expresses the further opinion that the great poet could no more write sane prose than such writers as Thackeray could write great poetry.

After reading much of the fragmentary matter left in manuscript by Victor Hugo by way of Memoirs, many of the critics seem inclined to agree with Mr. Henley. The egotism of the man as exhibited in these sketches, diaries, and reported interviews is pronounced "insufferable." The book contains all sorts of odds and ends—finger-nail sketches so-called, essays and short stories that do not bear directly on the author's life, but which are thrown in anywhere, without any order of arrangement.

The London *Chronicle* says of the book:

"Here and there are vivid pictures of men and events; but the rhodomontade, the heroics, the welter of gaudy words, the incorrigible bounce and the sentimentality at any price of the Bombastes Furioso of French literature are here also; and one reads with mingled feelings of admiration and disdain. If there is a little of the best Victor Hugo, there is all too much of Mr. Bur-nand's Fictor Nogo."

The London *Academy* finds fault with the title under which the book is published, rather than with the contents. It says:

"From 'The Memoirs of Victor Hugo' one expects more than an odd assortment of scraps from his note-book, jotted down from time to time as the mood took him, jumping from period to period with enormous gaps between. Reminiscences here, moralizings there, a *chose vue*, a conversation with Louis Philippe, a mordant anecdote of an actress, a diary kept during the siege of Paris—these are not enough to be styled 'The Memoirs' of the most

picturesque and restlessly vigorous intellectual force that this century produced, of a life lasting from 1802 until 1885."

The Academy terms the book a scrap-book, "entertaining almost without cessation," "very readable, very good fun," but "not 'the' memoirs of Victor Hugo."

In the sections of the "Memoirs" entitled "Theater," the date of the jottings is 1830. "Hernani" was being played at the Français, the house was being filled every evening; but, we are told, "the public hisses all the verses," actors "are abashed and

VICTOR HUGO.

hostile, most of them ridicule what they have to say," and every morning the newspapers repeat "as silly, false, bombastic, pretentious, extravagant, and nonsensical as 'Hernani.'" Nevertheless, the author had his reward. He drove with Joanny, who was playing "Ruy Gomez," and here are Joanny's words:

"M. Victor Hugo, the old man, now unknown, who two hundred years ago filled the rôle of *Don Diego* in 'La Cid,' was not more penetrated with respect and admiration in the presence of the great Corneille than the old man who plays *Don Ruy Gomez* is to-day in your presence."

The author of "Hernani" was satisfied.

There is a most amusing sketch of the great Frederick Lemaitre living in retirement with his mistress and his children. "cross, morose, and kind":

"He is greatly feared by all his household. His domestics live in a state of terror at table; if he does not speak, no one utters a word. Who would dare to break the silence when he is mute? One would think it was a dinner of dumb people, or a supper of Trappists, except for the good cheer."

Here is a poetical bit:

"M. de Chateaubriand, at the beginning of 1847, was a paralytic; Mme. Récamier was blind. Every day at three o'clock M. de Chateaubriand was carried to Mme. Récamier's bedside. It was touching and sad. The woman who could no longer see stretched forth her hands gropingly toward the man who could no longer feel; their hands met, God be praised! Life was dying, but love still lived."

Much of the book is devoted to King Louis Philippe and the

Revolution of 1848. The King inquires whether Victor Hugo has ever been in England:

"No, sire."

"Well, when you do go—for you will go—you will see how strange it is! It resembles France in nothing. Over there are order, arrangement, symmetry, cleanliness, well-mown lawns, and profound silence in the streets. The passers-by are as serious and as mute as specters. When, being French and alive, you speak in the streets, the specters look back at you and murmur with an inexpressible mixture of gravity and disdain: 'French people!'"

In the accounts of Louis Philippe and of Louis Napoleon, the author is constantly reverting to himself. The court revolves around Victor Hugo. We read: "The King told me that Talleyrand said to him one day"—"Yesterday the King said to me"—"Yesterday, the 15th, after having dined at Villemain's, who lives in a country house near Neuilly, I called upon the King"—"As he [the King] passed by, he said to me: 'Wait until I have gone my rounds. We shall have a little more time when everybody has left,'" and so on. As *The Academy* says: "Hugo, the friend of kings and patron of princes, is the kernel of the book."

Hugo during the Revolution harangues the mob, dodges bullets, scales barricades, takes Lamartine by the hand, weeps, shudders, and is epigrammatic. He hears that his house has been burnt down:

"What does that matter?" said I.

"Negrier warmly pressed my arm. 'I understand you. Let us think only of one thing. Let us save the country.'"

When Jerome Napoleon, the King of Westphalia, was permitted to return to Paris after the fall of Louis Philippe, he goes directly to Victor Hugo:

"He came to thank me for the permission that had been accorded him to return to France, which he attributed to me, and begged me to get him appointed governor of the Invalides. He told me that M. Crémieux, one of the members of the Provisional government, had said to him the previous day:

"If Victor Hugo asks Lamartine to do it, it will be done. Formerly everything depended upon an interview between two emperors; now everything depends upon an interview between two poets."

"Tell M. Crémieux that it is he who is the poet," I replied to King Jerome with a smile."

Then follows what Hugo says of Thiers, whom he never liked:

"M. Thiers wants to treat men, ideas, and revolutionary events with parliamentary routine. He plays his old game of constitutional tricks in face of abysses and dreadful upheavals of the chimerical and unexpected. He does not realize that everything has been transformed; he finds a resemblance between our times and the time when he governed, and starts out from this. This resemblance exists in point of fact. But there is in it a something that is colossal and monstrous.

"M. Thiers has no suspicion of this, and pursues the even tenor of his way. All his life he has been stroking cats, and coaxing them with all sorts of cajoling processes and feline ways. To-day he is trying to play the same game, and does not see that animals have grown beyond all measure, and that it is wild beasts that he is keeping about him. A strange sight it is to see this little man trying to stroke the roaring muzzle of revolution with his little hands."

Of Sully Prudhomme he says: "He speaks badly and writes well. . . . Sometimes he becomes irritated and froths, but it is cold slaver."

Louis Napoleon took his seat in the National Assembly on September 24, 1848. He read his speech from the tribune on September 26. He pronounced the word "compatriots" with a foreign accent. When he was proclaimed President of the French Republic, "the President of the assembly invited the committee to accompany the President of the Republic to his palace and have rendered him the honors due to his rank. The word caused the

Mountain to murmur. I shouted from my bench: 'To his functions.'

Hardly had Louis Napoleon installed himself at the Elysée before he invited Victor Hugo to dine there. At the dinner, the guests called the President of the Republic, "citizen," "mon-sieur," "monseigneur," "his highness," "prince"—in fact by anything but his real title. Napoleon after dinner took Hugo aside and asked him for his opinion of the situation. He gave it by telling Napoleon that he must hope to make his rule illustrious by setting a high example of place. Two months later, Hugo sums up the situation by saying that Napoleon is a man of intelligence, but that France is a closed book to him. The author closes with these remarks:

"There is nothing of the Bonaparte about him, either in his face or manner. He probably is not a Bonaparte. The free-and-easy ways of Queen Hortense are remembered. 'He is a memento of Holland,' said Alexis de Saint Priest to me yesterday. Louis Bonaparte certainly possesses the cold manner of the Dutch."

Victor Hugo's account of the siege of Paris is very vivid, but there is nothing new in it. He says that a cannon christened "Victor Hugo" was bought to defend the city, but the patriots would not put it to such a common use as to fire it. Then they gave a balloon his name, and he sent letters out of the city by this means. The author declares his intention of sallying forth from Paris in company with a battery of the National Guard; but the Guard will not suffer him to be in peril, and he presents us with the address read to him by the major of the battalion:

"The National Guard of Paris forbids Victor Hugo to go to the front, inasmuch as everybody can go to the front, whereas Victor Hugo alone can do what Victor Hugo does."

Yet he had opponents: "September 8—I am warned that it is proposed to assassinate me. I shrug my shoulders." "September 9—The generals are asking me for commands." The Parisians were reduced to straits for food, but the directors of the *Jardin des Plantes* kill elephants and antelopes to supply Victor Hugo with food. The Minister of Finance solicits an "audience," and Lemaitre calls to kiss his hand and weep.

The first of the notes is written in 1825, when he is twenty-three; the last in 1871, fourteen years before his death.

Irving's New Play of Charles IX.—The next important new dramatic production which Sir Henry Irving will take up after Sardon's "Robespierre," upon his return to London, will be a romantic drama of the time of Charles IX. of France. A writer in *The Westminster Gazette* (October 9) thus describes it:

"It is a very thrilling period of French history, and on the spectacular side the play will deal largely with the massacre of the Huguenots on the evening of St. Bartholomew (August 24, 1572). A vivid and lurid picture of this ghastly crime is given in the elder Dumas's 'Marguerite de Valois,' from which a good deal of the color, atmosphere, and characterization of the new play has been taken. The same subject, and indeed much the same set of characters, are, it will be remembered, used in Meyerbeer's opera, 'Les Huguenots.'"

"In the new play—tho it is really not a new play, having lain dusty and neglected on Sir Henry's bookshelves for years, and only now been dug out and handed to Mr. Comyns Carr for revival—Sir Henry will himself appear as the treacherous and cold-blooded King Charles IX. This is a character which from its absolute indifference to the sacrifice of human life resembles not a little the time of Robespierre, but Charles was young, con-rageous to ferocity, and supremely cynical. Tho Charles was only twenty-five at the time of his death, he was uncommonly old for his years, so that Sir Henry will not be obliged to affect the airs or habits of five-and-twenty. Miss Ellen Terry will, of course, assume the rôle of the beautiful *Marguerite de Valois*—*ma sœur Margot*, as Charles in occasional moments of tenderness

called her—and among the other historical characters who will figure in the play will, we believe, be *Henry of Navarre*, the young *Prince of Condé*, the *Duke of Guise*, *La Rochefoucauld*, the venerable *Admiral Coligny*, and, of course, the Queen-mother, *Catherine de Medicis*."

A WAR OF POETS IN ENGLAND.

THE lyre is still vigorously strumming in England. Tommy Atkins never in the course of British history had such jets of poesy poured over him as he has had since he marched off to fight Uncle Paul in South Africa. Kipling's first and to many inscrutable poem, "The Old King," has been followed by his popular music-hall ballad, "The Absent-minded Beggar," which even the sweep on the street-crossing can understand and take joy in, and which has called down not only a rain of silver for the benefit of the departing Tommy, but a chorus both of praise and detraction from the critics. It has been set to music by Sir Arthur

THE PEN IS MIGHTIER THAN THE SWORD.

England might send this squad of warriors to the front.—*Minneapolis Journal*.

Sullivan, and is recited nightly in one of the London theaters by Mrs. Beerbohm Tree. Its swing and vigor find ample recognition, but its colloquial diction has repelled others. The *Chicago Times-Herald*, for instance, speaks of it as "Kipling's ignoble ditty," and says that nothing, not even charity, will excuse "the low tone and tommy-rot" of this appeal to pass the hat. "The man who has written 'The Recessional,'" it adds, "has no right to father stuff that leaves a bad taste in the mouth of the reader, even for \$1,250 for a deserving charity"—that being the sum he received from *The Daily Mail* and which he passed over to the fund.

Mr. Alfred Austin, whom some American newspapers still persist in calling "Sir Alfred," has maintained silence, poetically speaking, until very lately; but in a copyrighted poem in the *London Times* he also gives vent, in ultra-classic style that contrasts strongly with Kipling's, to his warlike thoughts. It reads thus:

INFLEXIBLE AS FATE.

"*Tu ne cede malis, sed contra audentior ito.*"—Æneidos vi. 95. [Give not thou way to evil men, but go forward the more boldly.]

When for a passing hour Rome's manly sway
Felt the sharp shock of Cannæ's adverse day,
Forum, and field, and Senate-House were rent
With cries of nor misgiving nor lament.

Only of men contending then who should
 Purchase the spot on which the Victor stood.
 Legion on legion sprang up from the ground,
 Gleamed through the land, then over ocean wound,
 Till Scipio's eagles swarmed on Afric's shore,
 And Carthage perished, to insult no more.

Not less resolved than Rome, now England stands,
 Facing foul fortune with unflinching hands.
 Through her vast Realms is neither fear nor feud,
 But, calm in strength, and steeled in fortitude,
 She fills the gaps of death with eager life,
 That will nor lag nor haggle in the strife,
 Till, having backward rolled the lawless tide
 Of trusted treason, tyranny, and pride,
 Her flag hath brought, inflexible as Fate,
 Charter of Freedom to a fettered State.

Thomas Hardy is another of the notable Englishmen who sing of the war. The following poem by him appears in the *London Chronicle* (October 25) :

THE DEPARTURE.

SOUTHAMPTON DOCKS, OCTOBER, 1899.

Here, where Vespasian's legions struck the sands,
 And Cerdic with his Saxons entered in,
 And Henry's army leapt afloat to win
 Convincing triumphs over neighbor lands,
 Vaster battalions press for farther strands,
 To argue in the self-same bloody mode
 Which this late age of thought, and pact, and code
 Still falls to mend.—Now shipped each war-troop stands,

Yellow as autumn leaves, alive as spring;
 And as the host draws out upon the sea,
 Beyond which lies the tragical To-be—
 None dubious of the Cause, none murmuring—

Wives, sisters, parents, wave white hands and smile,
 As if they knew not that they weep the while.

The following lines in the *London Times* (November 4) by Mr. J. J. Rooney show that a deed of heroism, even if upon the opponent's side, has power to arouse ardent admiration and chivalrous recognition from an Englishman :

THE EIGHT OF ELANDSLAAGTE.

DURBAN, Natal, Oct. 27.—The Natal *Mercury* relates an incident of the battle at Elandslaagte. The fire of the British guns was getting too hot for the Boers. Eight Boers suddenly ran forward out of cover, and coolly opened fire on the Imperial Light Horse, evidently for the purpose of drawing the British fire while their companions changed their position. Seven of the eight men were instantly killed.—*Press Dispatch*.

Thunder of hoofs and a bugle's cry
 And down through the veldt came the British horse—
 Down with a rush on the burgher ranks
 With a whirlwind's sudden force.

Maxim and shrapnel had done their worst—
 Only the charge was needed now—
 Only the Light Horse sweep and dash
 To clear the kopje's brow.

Shouting of men and neighing of steeds,
 Beating of hoofs like an angry sea,
 And on, in one long wave of red,
 Came England's cavalry!

An instant yet and the knoll is theirs—
 An instant yet and the little band
 Will be swept and whirl'd by the red simoom
 Like a breath of desert sand—

When, sudden, stepped from the shelter-rocks
 Eight burghers—eight in their hero might—
 And there they stood, as a single man,
 To meet the awful fight.

Down came the thundering mass of horse—
 But see! where the eight are standing there,
 Eight rifles gleam, eight rifles flash
 Red death upon the air!

Ah, little thought they—eight mortal men
 To stay that onward surging tide—
 Only, for one brief moment's space,
 To turn its rage aside;

To turn its rage while their comrades slipped
 (Through fate of numbers, tho' not of will)
 Back to the laager, stanch and grim,
 Where Joubert held the hill.

A mighty crash from the charging troop—
 For the burgher eight a sheet of flame—
 And, where they stood, but one was left—
 Sole hostage unto Fame!

Yet now you know—yea, all men know
 That—live or die—the great Veldt breeds,
 As did the Switzer crags of old,
 Old Freedom's Winkelrieds:

Undaunted sons who scoff at fate,
 Rough children of the Afric rand—
 Yet firm as are the eternal hills
 For God and native laud!

An exceptionally curious evidence of the wide prevalence of the war spirit—which has reached even high ecclesiastical circles—is a lengthy poem that appears in the *London Times* by the Anglican primate of Ireland, Dr. William Alexander, Archbishop of Armagh. It is in part thus :

They say that "war is hell," the "great accursed,"
 The sin impossible to be forgiven—
 Yet I can look beyond it at its worst,
 And still find blue in heaven.

And as I note how nobly natures form
 Under the war's red rain, I deem it true
 That he who made the earthquake and the storm
 Perchance makes battles too!

The life he loves is not the life of span
 Abbreviated by each passing breath,
 It is the true humanity of man,
 Victorious over death.

Methinks I see how spirits may be tried,
 Transfigured into beauty on war's verge,
 Like flowers, whose tremulous grace is learned beside
 The trampling of the surge.

And now, not only Englishmen at need
 Have won a fiery and unequal fray,—
 No infantry has ever done such deed
 Since Albion's day!

Those who live on amid our home to dwell
 Have grasped the higher lessons that endure,—
 The gallant private learns to practise well
 His heroism obscure.

His heart beats high as one for whom is made
 A mighty music solemnly, what time
 The oratorio of the cannonade
 Rolls through the hills sublime.

Yet his the dangerous posts that few can mark,
 The crimson death, the dread unerring aim,
 The fatal ball that whizzes through the dark,
 The just-recorded name—

The faithful following of the flag all day,
 The duty done that brings no nation's thanks,
 The Ama Nesciri of some grim and gray
 A Kempis of the ranks.

These are the things our common weal to guard,
 The patient strength that is too proud to press,
 The duty done for duty, not reward,
 The lofty littleness.

Mr. Kipling's ballad (copyrighted, but being widely reprinted by permission) is as follows:

THE ABSENT-MINDED BEGGAR.

When you've shouted "Rule Britannia"—when you've sung "God Save the Queen"—

When you've finished killing Kruger with your mouth—
 Will you kindly drop a shilling in my little tambourine
 For a gentleman in khaki ordered South?

He's an absent-minded beggar and his weaknesses are great—
 But we and Paul must take him as we find him—
 He is out on active service, wiping something off the slate—
 And he's left a lot o' little things behind him!

Duke's son—cook's son—son of a hundred kings—

(Fifty thousand horse and foot going to Table Bay!)

Each of 'em doing his country's work (and who's to look after their things?)
Pass the hat for your credit's sake, and pay—pay—pay!

There are girls he married secret, asking no permission to,
 For he knew he wouldn't get it if he did.

There is gas and coals and vittles, and the house-rent falling due,
 And it's more than rather likely there's a kid.

There are girls he walked with casual, they'll be sorry now he's gone,
 For an absent-minded beggar they will find him,
 But it ain't the time for sermons with the winter coming on—
 We must help the girl that Tommy's left behind him!

Cook's son—Duke's son—son of a belted Earl—

Son of a Lambeth publican—it's all the same to-day!

Each of 'em doing his country's work (and who's to look after the girl?)
Pass the hat for your credit's sake, and pay—pay—pay!

There are families by thousands, far too proud to beg or speak—
 And they'll put their sticks and bedding up the spout,
 And they'll live on half o' nothing paid 'em punctual once a week,
 'Cause the man that earned the wage is ordered out.

He's an absent-minded beggar, but he heard his country call,
 And his regiment didn't need to send to find him.
 He chucked his job and joined it—so the job before us all
 Is to help the home that Tommy's left behind him!

Let us manage so as later we can look him in the face,
 And tell him—what he'd very much prefer—
 That, while he saved the Empire his employer saved his place,
 And his maies (that's you and me) looked out for *her*.
 He's an absent-minded beggar, and he may forget it all,
 But we do not want his kiddles to remind him,
 That we sent 'em to the workhouse while their daddy hammered Paul,
 So we'll help the homes our Tommy's left behind him!

*Cook's home—Duke's home—home of a millionaire.
 (Fifty thousand horse and foot going to Table Bay?)
 Each of 'em doing his country's work (and what have you got to spare?)
 Pass the hat for your credit's sake, and—pay! pay! pay!*

A particularly good parody appears in *The Outlook* (London), which contains the following lines:

THE ABSENT-MINDED MULE.

"The battery mules stampeded. With them went the mules, carrying the small-arms ammunition, so that when actual fighting began the two battalions had nothing to depend on but a few rounds of rifle cartridges. Hence capitulation."—*Daily Paper*.

When you're walking out your Gloucesters and your Irish Fusiliers,
 And you feel like slapping Kruger in the mouth,
 Don't forget to keep an optic on a little chap with ears,
 A gentleman in floor-boards, just come South.
 He's an absent-minded beggar, and his style is pretty high—
 Tho, of course, we've got to take him as we find him—
 He is here on active service, and he's been and done a guy,
 And left a lot o' little things behind him!

Old mule—bold mule—mule of the hairy tail—
 Mule of spirit and swift hind-hoof and flabby scornful lip—
 Each of him doing his country's work (how when he happens
 to fail?)

Never go nap on an army mule, 'cause he'll skip! skip! skip!

He'd been trained to smell blank cartridge and wink the other eye,
 He delighted in the music of the band,
 But he'd never seen no boulders and he didn't want to die,
 And shot and shell were more than he could stand:
 He's an absent-minded beggar, tho he heard his country's call,
 And his reg'ment didn't need to send to find him;
 He chucked his job and bolted—and the job before us all
 Is to get the men he's went and left behind him!

Rough job—tough job—job for Buller & Co.
 Job for fifty thousand men (that's the bloomin' tip!).
 Each of 'em doing his country's work, each of 'em having a go;
 Each of 'em 'ware of the army mule what'll skip! skip! skip!

ZOLA'S "FÉCONDITÉ."

THE novel written by Emile Zola during his English exile has already made its appearance in book form in French, but as yet no English translation is ready. Mr. Ernest Vizetelly, who with his father has translated Zola's chief works hitherto, announces in *The Athenæum* (October 21) that altho urged to undertake the Englishing of his friend's latest story, he has decided not to do so. M. Zola and his English publishers gave Mr. Vizetelly *carte blanche* to adapt the text to English canons of taste; "but," says Mr. Vizetelly, "I found that no 'toning-down' process would suffice for 'Fécondité.' It appeared to me, after most careful consideration, that I should have to sacrifice at least a quarter—perhaps a third—of the book, so mangling and amputating it that whatever might remain would be utterly unworthy of either M. Zola or myself." Mr. Vizetelly, altho he says that he "adores 'Fécondité,'" and that it deals, to his thinking, "in a masterly way with a crying evil," still can not run the risk of being ruined, as was his father, by the translation of a work that so violates prevailing moral standards. English fiction, he remarks, probably has "moved" much since the days of "La Terre," and an outspokenness "then universally censured has now largely become permissible"; but such a degree of outspokenness as characterizes "Fécondité" is, he thinks, "still far in advance of us."

The Athenæum (October 14) reviews the book in a tolerant and even appreciative spirit. It says:

"Anybody who has read the 'Three Towns' ('Lourdes,' 'Rome,' 'Paris') knows the part which Pierre Froment plays in all this series. In the last of the three Pierre unfrocks himself and marries. Now the hero of 'Fécondité,' Mathieu Froment, seems to be the offspring of this marriage; but before the end of the book, and, in truth, just at the time of the appearance of

Dominique upon the scene, Mathieu has completed his ninetieth year. That would throw back the date of 'Lourdes' pretty nearly a hundred years—long before the vision of Lourdes, in fact. The only alternative is to suppose that the end of this new work takes place some time in the future—in the twentieth century. It would be a method of constructing a plot not without interest to have the beginning contemporary, the end in the future. It is to be noticed that M. Zola does not commit himself as to the form of government under which France is supposed to be.

"The book has as a sub-title 'Les Quatre Évangiles.' Is it part, then, of a new social gospel? Certainly one interest in it—an interest not precisely literary—lies in the fact that M. Zola has evidently set himself up of late as the champion of ideas opposed as much as possible to those which Tolstoy is preaching. And we have thus two of the most celebrated contemporary romancers in the lists one against the other. Not that Tolstoy is ever mentioned here. But it is impossible not to recognize in the pessimism, mingled with half-pietism, of the Séguins, and of Santerre their friend, a picture of his doctrine as M. Zola sees it after it has filtered through French brains. In contrast to the Séguins' and half a dozen other people's pleas for sterility or the strict limitation of families (on half a dozen different grounds), we have the courage and the fruitfulness of Mathieu and Marianne his wife, a true pair of Biblical patriarchs (with the Bible left out), who before we have done with them can count their offspring by the hundred.

"All the other people in the book whose career we follow represent the idea of infecundity. And the long history of the Froment family tells not only of the growth of Chantebled, Mathieu's territory (he buys it little by little), but how Mathieu's sons gradually oust the fruitless people from their places and reign in their stead—the Froments are to inherit the earth."

The London *Chronicle* (October 27) remarks that M. Zola is nothing if not audacious, and that in this volume he has carried plain speaking to a pitch to which it was never carried before in genuine literature. *The Chronicle* says that it would be hard even for an enemy to say that "Fécondité" was not well meant. Altho the writer says that the book is "hideously outspoken" and that its pictures of vice and crime are "so brutal . . . that it will find few readers in England," it deals with a question to which genuine lovers of social reform can not shut their eyes and which demands discussion. The question is the one raised by the Malthusian theory that population increases in a geometrical ratio, while food increases by arithmetical progression, and that there is a consequent necessity of limiting in some way the increase of the race. *The Chronicle* combats the idea that even working people will be bettered by small families, and presents arguments to show that the better sort of worker is not hindered but helped "by the natural growth of his family." It then proceeds:

"By being wholesome, and natural, so far as in us lies, we may help to make the race always more healthful and effective. But if we fall into the slough wherein so much of the French population is sunk, even the great vigor and resisting power of the Anglo-Saxon stock will not be proof against decay.

"We speak of these things, ugly tho they be, not merely because this startling novel is before us. The cynic of the story replies to all arguments that it is idle to talk as if France stood alone. All civilized nations, he says, England and America included, are going the same way. The charge, in that broad sense, is certainly not true. But it is idle to forget that those who scan the census statistics of births in our own London, and in certain classes of the American population also, have discerned a falling-off which does not seem to be accounted for wholly by natural causes. Is the evil coming to live among us? But for these statistics we should have hoped that here it existed only in isolated cases. If it has begun to seize on any class of our society, whether it be the rich and idle ladies of society or the more selfish and self-indulgent of the working-class, then serious questions are before us, and serious plain speaking will be inevitable."

Not all critics of the book, however, agree that there is any such "moral problem" involved as M. Zola claims. It is pointed out that a high birth-rate, as for instance in Ireland, does not imply, necessarily or generally, a permanent rate of increase in population nor a virile and prosperous national life; and that France, in art, literature, and science, need fear no comparison with any European power.

SCIENCE AND INVENTION.

SURGERY TAUGHT BY THE CINEMATOGRAPH.

THE kinetoscope, which is almost as well known by its French name, cinematograph, and by various trade names, such as the biograph, the vitascope, etc., has already justified its existence as a means of amusement; but it is probable that it has a more useful future than that of mere entertainment. Photography itself, now the adjunct of so many scientific processes, passed at first through very much the same stage. The kinetoscope will doubtless be largely used in the teaching of technical processes. It is already about to be so used in surgical instruction in Paris, and Dr. Doyen, who claims to have suggested and originated this use, tells in *La Science Française* (Paris, October 27) of some of the benefits that his profession, as well as the public at large, is to reap from the plan. Dr. Doyen says that several years ago he was desirous of applying cinematography to the teaching of surgery, but the obstacles were then insurmountable. These obstacles no longer exist, and moving pictures of an actual operation performed indoors may now be obtained. Books can not take the place of such pictures. The most detailed descriptions, accompanied by diagrams and photographs, are insufficient. But if a typical operation be photographed with the cinematograph, it may be made clear in less than a minute to a thousand people where otherwise a whole lecture would be needed to explain it to a small number of students seated close to the professor. The doctor continues:

"Medical literature has been loaded, little by little, with useless discussions and insufficient descriptions that make it impossible for us to appreciate new methods at their proper value. Even surgeons who are able to travel and visit the principal centers of learning can not always profit by their experience as they might desire to do.

"The unfavorable conditions in which persons who witness a great operation are situated do not enable more than fifteen or twenty of them to follow with profit the technical details that are of chief interest to them.

"It is necessary for the security of the patient to place the spectators at a distance of at least 2 meters [$6\frac{1}{2}$ feet]; the hands of the surgeon and his assistants hide a part of the field of view, and the most delicate maneuvers can be seen only by the operator himself.

"Finally, it is not sufficient, if we wish to understand an operative process, to see the operation performed by a surgeon who has studied under the originator of the process; we must be present at one or several operations performed by the practitioner who has devised the technical details; in a word, we must see the master himself. The surgeon is judged by his work, and the best illustrated publications can not reproduce the personality of the operator, which is his most important quality.

"It is with the aim of filling this regrettable need in surgical instruction that I have studied the question of cinematographical reproduction."

The first demonstration of the teaching of surgery with the cinematograph was made before the members of the British Medical Association at their Edinburgh meeting in July, 1898. This demonstration, says Dr. Doyen, was conclusive, and the new method met with the approval of all the physicians present. Since this first demonstration he has made many others successfully at other scientific gatherings. There has just been announced, moreover, the establishment, under the Paris Faculty of Medicine, of a course in technical operative surgery with cinematographical illustrations. This course is not under Dr. Doyen's superintendence, but is to be managed by other surgeons who claim priority in the application of his idea. This claim he indignantly repudiates, and the customary contest will doubtless enliven French medical circles for some time to come. At any

rate, the method seems to have come to stay. Some of the benefits that will result from its adoption, according to the writer, are the ease with which students in far-off countries can familiarize themselves with the practice of the masters of surgical science; the possibility of preserving the films indefinitely as records, forming a pictorial history of surgery; the information that surgeons can derive regarding their own operations, enabling them to correct errors and improve methods; and the possibility of giving the interested public, whom it would be injudicious to admit to the operation itself, general ideas on the subject of surgical procedure. — *Translation made for THE LITERARY DIGEST.*

A PROPOSED CENTRIFUGAL RAILWAY.

A SOMEWHAT startling proposal has been put forth by a man in Toledo, Ohio, in the way of a device for furnishing excitement at pleasure resorts. It is yet in the preliminary stage, and as it seems possible that the excitement it will furnish may not be altogether productive of pleasure, the plan may never be carried out practically. The following description and comments are from *The Engineering News* (November 9):

"An elevator takes the car with its passengers to the top of a very steep 'toboggan slide.' The car plunges down this and

A "CENTRIFUGAL CYCLE" RAILWAY.

acquires such velocity as to run up and around the inner side of the loop of the vertical circle, and on emerging from this it runs down an incline to the foot of the elevator again. The centrifugal force will hold the car to the track and the people in their seats while they are scooting around the inside of the loop with their heads downward, according to the theories of the inventor; and no doubt it would do so if all went well. If the car should not reach the required speed in passing around the curve, however, the guide-wheels would prevent the car from falling, but the passengers might yield to the superior attractions of gravitation. A computation for centrifugal force, assuming the loop to be 40 feet in diameter, shows that the car would have to reach a velocity of at least 20 miles per hour at the top of the loop to keep its passengers from falling. Add to this the velocity it would acquire in running down the other side of the loop, dropping a vertical distance of 40 feet, and the speed at which it would strike the sharp curve on the level stretch would probably furnish another instalment of 'amusement' to the passengers. Very likely the apparatus might be so arranged that the trip could be made without very great risk; but he would be a sanguine man who would build one and take the chance that the public would pay for the 'amusement' of riding over it and under it; and so far as we can ascertain none has been actually constructed.

"It is of interest to note that the idea of this 'centrifugal railway' is not wholly new. Something of the sort was suggested in the very early days of railways, and it is our impression that one was actually constructed and was illustrated in one of the technical periodicals of that day. The reasons why the system did not attain popularity may be readily imagined."

THE GREAT GERMAN AIR-SHIP.

THE great dirigible balloon now being built in Germany by Count von Zeppelin has already been referred to in these columns. A complete description of it was recently given by the inventor to a representative of *Ueber Land und Meer*. The count's air-ship, as will be remembered, is a combination of numerous separate balloons contained in a huge aluminum cage. Our quotations are from a condensed translation in *The Scientific American Supplement* (November 11). The air-ship is housed in a floating structure 500 feet long, 80 feet wide, 70 feet high, which contains offices, store-rooms, and sleeping apartments. It is anchored on Lake Constance, that the trials of the air-ship may be made in a large open space free of obstruction. Being anchored at but one end, the structure shifts position like a weather-cock and the ship will thus, when it ascends, avoid collision with the sides of the house. Owing to the violent storms prevalent on the lake, special precautions have been taken to secure the float. It broke loose several times, and has now been anchored to a block of cement weighing $4\frac{1}{2}$ tons, by steel hawsers 250 feet long. We quote the following description of the great air-ship itself:

"The air-ship now in the course of erection within this structure is 410 feet long. The supporting body is a cylinder 39 feet in diameter, the ends being tapered so as to offer the least possible resistance to the air. The skeleton frame of this cylinder is composed of aluminum. Sixteen rings separated from one another 26 feet hold the framework together. These rings are not circular, but form a twenty-four-sided polygon; their shape is determined by numerous strong aluminum wires radiating from a central circle like the spokes of a bicycle-wheel. Horizontal bars are used to hold the rings together. The entire framework will be surrounded by a netting of ramie-fiber cord, remarkable for its great toughness and tensile strength. Within the framework and on each side of the rings a similar netting will be disposed.

"The sixteen rings divide the cylinder into seventeen compartments, as it were, each of which will contain a balloon or gas-bag. If one of these seventeen independent balloons be injured, the others will remain intact and will still support the air-ship. The principle evidently resembles that of the water-tight compartments of a steamship. But the system is far safer than that employed in vessels, for no connecting doors or openings are used.

"The balloons are made of a light, but tough and impenetrable, cotton fabric covered with a gas-tight rubber composition. The aluminum framework is still further protected by an outer water-tight envelope which serves chiefly to protect the balloons from the direct rays of the sun and from rain. The ramie netting serves the purpose of separating the balloons from one another and from the outer envelope.

"The balloons will have a capacity of 351,150 cubic feet, and will be filled with hydrogen gas kept under pressure in cast-iron cylinders, each of which contains 175 cubic feet. Two thousand cylinders will, therefore, be required. The cylinders will be stored on a float which will be towed to the housing when the balloons are to be inflated."

Since a cubic meter of gas (1.3 cubic yards) will raise not more than a kilogram (2.2 pounds), the balloons when filled should have a buoyancy power of about 20,000 pounds.

The inventor is confident that this huge body can be properly controlled and that it will not prove unwieldy. Says the writer:

"This, in brief, is the general construction of the supporting part of the contrivance.

"Every moving body, such as a ship or bicycle, can be steered. That it has hitherto been impossible to direct an air-ship is due partly to the form adopted in the construction, partly to insufficient motive power, and inadequate steering appliances. Count von Zeppelin claims to have remedied all these faults. He will drive his air-ship backward or forward by four aluminum propellers, a pair of which will be mounted at each end of the cylindrical body, somewhat below the central axis. The ship will be steered by rudders placed at the front and rear ends.

"Rigidly connected with the balloon cylinder are two aluminum cars, each located beneath a pair of propellers. These cars are 21.32 feet long, 5.96 feet wide, 3.28 feet high, and taper from top to bottom. Beneath the bottom of each car are wheels provided with coiled springs which deaden the shock when the air-ship strikes the ground and set the wheels in motion. In each car is a benzine motor, developing from 12 to 15 indicated horsepower, by means of which the propellers are driven. The connection between the propellers and the motors consists of gearing and of driving-shafts passing through Mannesmann seamless steel tubes. Variations in the position of the framework can be compensated for by means of two movable joint couplings.

"Benzine is the most suitable motive power for aerial navigation. Electricity can not be used, for the necessary accumulators are far too heavy. Hydrocarbon vapors, to be sure, are highly inflammable, and their use in air-ships provided with gas-bags is therefore attended with much danger. But the benzine motors, in the present instance, have been so carefully constructed that there is no danger of fire. Moreover, the lower side of the balloon-cylinder immediately above the cars has been covered with fireproof material. The cars are connected by a passage two feet wide which rest on T-rails and which are tied together with aluminum wire. The crew of five men can thus pass from one car to the other. Beneath the cars and connecting passage a cable is loosely suspended, to which a sliding weight is secured. By adjusting the position of the weight the ends of the ship can be raised or lowered. When the weight is shifted to the rear, the forward end of the air-ship is raised, and the air pressing on the under surface, as in a kite, will force the vessel upward. When the weight is shifted to the front, the rear end is elevated, and the ship will descend owing to the pressure of the air on its upper surface.

"The first trials of the ship are soon to be made. The supporting cylindrical body is almost completed; and only the pointed ends are still to be placed in position. The cars, motors, propellers, and accessory apparatus will be shipped to the housing ready to be mounted, an operation which will require but a few days."

Church Bells of Steel.—The word "bell-metal," which has always signified the type of bronze generally used for casting large bells, will have to receive a new definition if the popularity of cast-steel bells continues to increase. According to M. L. Reverchon, who writes of them in *La Nature* (Paris, October 28), cast steel is growing in favor, even for large church-bells, being superior to bronze in sonority and solidity, and withal much less expensive. Says M. Reverchon:

"The papers have recently noted the installation, at the Lutheran Church of St. George at Berlin, of three cast-steel bells of a total weight of 17,634 kilograms [about 19 tons] and a price of 25,200 francs [\$5,040]. In France, where we have not ventured to use steel except for very small bells less than 100 kilograms [220 pounds] in weight, this seems somewhat extraordinary. It is nevertheless a long time since the 'Bochumer Verein' began to make these bells, and they are found everywhere except in France. . . .

"During the forty-five years that have passed since the date of this invention, the Bochum bells have been sent over the world by thousands. Their success has been the greater in that they harmonize perfectly with their bronze neighbors and predecessors in the same bell-towers. Add to this the not less appreciable good quality of cheapness, and also that their tone carries farther and that they are more solid, and we should not be astonished that they were selected by the Berlin church."

Steel bells, we are told by the writer, are of almost exactly the same shape as the ordinary bronze bell, but from the table that he gives it may be seen that of two bells giving the same note the steel one is always of greater diameter and generally heavier. With the larger bells, however, the two types are more nearly equal, and the steel bells may even weigh considerably less than their bell-metal brothers.—*Translation made for THE LITERARY DIGEST.*

RECENT TRIALS OF THE HOLLAND BOAT.

DURING the war with Spain the Holland submarine boat and its achievements were objects of very wide public interest. Since that time the boat has been somewhat lost sight of; but its owners have been busy in perfecting and testing it. An account of the recent performances of the craft in Peconic Bay, Long Island, appears in *The Electrical World and Engineer* (November 4). The Government's inspectors have since recommended the purchase of the boat and declared that it has satisfactorily met the tests.

"The prolonged trials over the measured course at Peconic Bay and in the waters of that vicinity have, it is stated, yielded results beyond those anticipated. It has been ascertained that she can remain twenty-four hours submerged without danger of asphyxiating her crew of six and the torpedo-man, and that her radius of action under water at five miles an hour is easily six

months. Those born from June to November are taller, but the tallest are born in August. The investigations of Wahl, in Denmark, and Wretling, in Gothenburg, and especially those of Malling-Hausen in Copenhagen, on the deaf, show that the length of body of boys from March till August increases greatly, but very little from September to February." Dr. Macdonald attributes this fact to some extent to economic conditions, for a child born in summer has generally better food and air.

WIRELESS TELEGRAPHY TESTS FOR THE UNITED STATES NAVY.

FOLLOWING closely upon Signor Marconi's noteworthy success with wireless telegraphy during the Dewey celebration and the international yacht races, comes an official test of his system by the Navy Department. The official report of the board appointed to supervise the test has not yet been published,

TRIAL RUN OF HOLLAND BOAT OVER TWO-MILE COURSE, PECONIC BAY.

hours. The most interesting tests have been made at depths of twenty feet, the deepest obtainable in the bay. The diagram herewith, the first that has been given out for publication, shows her run of October 11, over the two-mile course, and the scale in feet indicates also the degree of submersion at each stage of the test. The officer in the conning tower having submerged her about ten feet and taken his bearings, carefully brought her to the course at 10:11.10. It will be seen that by the time she had reached the buoy at the end of the first mile there had been a slight deflection. This being instantly rectified by a momentary rise to the surface, she plunged under again, made an absolutely straight run for the second mile, reaching the two-mile buoy at 10:36, when she discharged her torpedo at the circular mark ahead, made her turn, and was well on the homeward run by 10:41. As the mark in actual warfare would be a huge vessel, probably broadside on, our readers can judge for themselves the likelihood of a hit under these or analogous conditions."

Influence of the Time of Birth upon One's Height.—The children that first see the light in summer are taller than those born in any other season; so we are told by Dr. Macdonald in *Child Study*. "According to Combe," he says, "boys born in the months of September, October, November, December, January, and February are not so tall as those born in other months. Those born in November are the shortest. Those born in July are the tallest. Girls, according to the same authority, born in December, January, February, March, April, and May show a less length of body than those born in the remaining

but the following account of some of the results appears in *Electricity*:

"The war-ships employed were the cruiser *New York* and the battle-ship *Massachusetts*. Aboard the former were Lieutenant-Commander Newton, the senior officer of the commission, and Mr. Marconi, while Lieutenant Hill was on the *Massachusetts* and Lieutenant Blish had charge of a wireless telegraphy station at the Highlands of Navesink. The apparatus made use of was that brought over by Mr. Marconi, or the same that was employed in reporting the international yacht races. The vertical wires were in each instance about 150 feet in height, and on the first day of the trial messages were exchanged between the two war-ships up to a distance of thirty-six miles; further than this the wireless messages failed to carry. An interesting feature of the test was the interrupting of messages sent between the war-ships by messages sent from the Navesink Highlands' station. As was to have been expected, when messages were sent simultaneously from Navesink and the *Massachusetts* to the *New York* the Morse signals recorded on the tape of the receiver were indiscriminately ticked off and were absolutely unintelligible. In a recent communication to the Navy Department Mr. Marconi, referring to the interference test as well as to other matters, said:

"With reference to the tests of my system which are now being carried out under your supervision, I wish to state:

"First—That the installation fitted up at the Navesink Highlands Lighthouse has been installed to meet the wish expressed by various members of your board in order to facilitate their investigations, but I want it to be understood that the instruments

now at the station are not as efficient (being of an earlier type and intended for short-distance demonstrations) as those installed on the *New York* and *Massachusetts*, and results obtained at that station can not be taken as a test of the system in its present state.

"Second—Having consulted with my partners, I regret to be unable to give a demonstration of the devices I use for preventing interference, and of the system employed for tuning or syntonizing the instruments. The reasons why I can not give such demonstrations are:

"(a) The means employed are not yet completely patented and protected.

"(b) Insufficient material and instruments here with me to give full demonstration.

"(c) No detailed information from the United States Navy Department was received by my company prior to my departure from England, as to the extent of the demonstrations required.

"Since I last had the pleasure of meeting you, I have received advices from London to the effect that the British Government has decided to make use of my system in the present South African war and also on the fleet. This necessitates my company supplying to the British Government a large number of instruments and expert assistants, and also further necessitates my early return to Europe. I shall therefore be unable to continue the tests for the United States Navy Department after Wednesday."

From what precedes, it will be seen that the tests were not altogether complete, altho, perhaps, as satisfactory as could be expected as far as they went. *Electricity* believes that the system will be adopted in the navy. It goes on to say:

"The Board of Experts appointed by the Navy Department to conduct the trial met on November 3 at the Brooklyn Navy Yard, and drew up a report which has been forwarded to Washington and which is said to be highly favorable to wireless telegraphy as a means of signaling between vessels at sea. In view of this fact it will not be surprising if the system is ultimately adopted by the Navy Department, providing, of course, satisfactory arrangements can be made with Mr. Marconi or the company he represents for its use."

According to *The Call* (San Francisco, November 11), the success of the Marconi system is about to bear fruit in at least two different directions. One of these is a plan to arrange for communication among the islands of the West Indies, and the other is for opening communication along the coast of Labrador. It is said that some twelve thousand fishermen of Newfoundland embark every year in the fleet that goes to that coast, and there has long been a demand for some means of communication between them during the fishing season. By means of wireless telegraphy communication can be established and notice given where the best fishing is to be found, and where shipwrecks occur and men are in need of assistance.

SCIENCE BREVITIES.

IT is to be hoped that none of the British army officers who have been criticizing the conduct of the Americans in Luzon were in Ladysmith when it happened.—*The Chicago Record*.

A NEW substance has been discovered that gives off in large quantities the curious rays called from their discoverer "Becquerel rays," which have much in common with the electrically excited "X-rays." As announced by M. Violle before the Paris Academy of Science (October 16) the new metal, like polonium and radium (two other newly discovered "radiant metals") is obtained from pitchblende and is allied to titanium. "It has," he says, "a radiating power incomparably more intense than that of uranium."

"POTATOES contain a poison known as solanin," says *The Sanitary Home*, Fargo, N. Dak., November. "New potatoes contain comparatively little of this poison unless they grow above the surface of the ground and have a green skin, when they are generally known to be poisonous. It is not, however, generally known that old potatoes contain much more of this poisonous principle—solanin—and many cases of serious poisoning have occurred in late summer, when old potatoes are used. In 1892 and 1893, there was almost wholesale poisoning among the troops of the German army. The symptoms were frontal headache, colic, diarrhoea, vomiting, weakness, and slight stupor and in some cases dilatation of the pupils. Meyer investigated the case and found in old potatoes, kept in a damp place, and beginning to sprout, twenty-four times as much solanin as in new potatoes. When using old potatoes in June and July, it will be well to keep this fact in mind."

THE RELIGIOUS WORLD.

"IS THE ARMOR OF GOD WEARING OUT?"

ATTENTIVE readers of the religious press can hardly fail to note a general lament over the decrease in conversions and in admissions to membership in the various evangelical denominations. The commonest of the many reasons suggested for this is that old methods and old theology have worn out—some even say to tatters—and a new style of church life is demanded, an "up-to-date Gospel." Dr. Theodore L. Cuyler, however, is not

one of those who take this view. He thinks the "old lights" are the best, and that a Gospel that could convert the Roman empire and subdue the barbarian hordes of the North can subdue the Vandals and the Philistines of to-day. He says (in *The Independent*, November 2):

REV. DR. THEODORE L. CUYLER.

"No one can read the New Testament honestly without seeing what the methods of the early Apostles were. They believed in prayer-meetings;

they preached a simple but very rousing gospel of repentance of sin and faith in Jesus Christ; they had a baptism of the Holy Spirit; they strove to save souls and to bless their fellow men by deeds of practical beneficence. In fighting sin and error and human misery, their greatest leader exhorted them to 'put on the whole armor of God.' The weapons of that panoply were 'truth' and 'righteousness' and a 'shield of faith' and 'the sword of the Spirit, which is the Word of God'; and these were to be backed up by prayer and supplication in the Spirit. Eighteen centuries have rolled away; but the Holy Spirit has not changed, the Bible has not changed, human nature has not changed; and yet we are told that the methods and weapons of these successful early Christians have worn out, and this age of advancement demands something new."

Dr. Cuyler calls attention to the fact that the Wesleys in England, Edwards and Whitefield and the Cumberland Presbyterians in America, and all the great evangelical movements of the past hundred years have obtained their great successes through the apostolic method of "widespread prayer and widespread preaching of the great central evangelical truths." Dr. Cuyler does not question the great usefulness of "institutional churches," with their practise of what he calls the Christian Socialism of the Apostolic church. Indeed, he calls attention to the fact that the chief pioneer in institutional methods was the prince of old-fashioned Gospel preachers, Charles H. Spurgeon. But he did not offer these benevolent adjuncts as substitutes for the Gospel; he strictly subordinated the physical ministry to the spiritual. Dr. Cuyler continues:

"No one who carefully observes the state of things in our land will seek to belittle the difficulties which evangelical religion has to contend with. Worldly prosperity has demoralized multitudes of rich church-members, and the gulf between wealth and poverty is widening. Brains and culture in our colleges are increasingly drawn into other pursuits than the pulpit. There is a lowering of the observance of God's day, and hundreds of thousands of im-

mortal beings bury their souls every Sabbath morning under the unclean blankets of a godless Sunday press. I fear, too, that household religion is at a lower ebb than formerly, and family worship is too much neglected or made an empty form. The atmosphere is charged with skepticism and the young breathe in the malaria.

"This is no time for a blind and boastful optimism; neither is it a time for a blear-eyed and blasting pessimism. Let us face painful facts—not as cowards or as compromisers with error or as carelessly content to see things grow worse. If the artful adversary can persuade Christ's churches that the old Gospel-armor, wielded with such mighty power by the Wesleys, the Whitefields, the Guthries, the Finneys, the Lyman Beechers, and the Spurgeons, is *wearing out*, then there might well be a jubilee in hell over our suicidal folly! May God in His infinite mercy forbid!"

THE CHURCH OF HUMANITY.

COMTE'S philosophical and religious ideas have been able to enlist the sympathy and to a great extent the adherence of such bright minds among the English as George Eliot, John Stuart Mill, Frederic Harrison, the recently deceased Congreve, and others; and for this reason, if for no other, an outline of Positivist teachings and form of service is of interest. Such a description is given by the German theologian, Dr. Gerhard A. Wauer, in the *Welt* (Leipsic, No. 40) from which we take the following details:

On a recent visit to London the writer, Dr. Wauer, attended the services in the Church of Humanity, the meeting-house of the Positivists. Their temple is a small hall, on one side of which are found large cases of books, and on the other, near an altar-table, a picture of the Sistine Madonna. To the right were a reading-desk and a small pulpit, near which was a marble bust of Comte. Around the room, on brackets, were pictures of men—and in one case that of a woman, namely, Heloise—who had been conspicuous for their services to humanity. Above the fireplace were the words: "Let us praise only famous men"; and by the side of it the date according to the Positivist calendar, namely, 22 of Cæsar, in the year 111, the beginning of the era of these people being the French Revolution, and each month, week, and day being dedicated to the memory of some friend of humanity.

The services opened with a prelude and were conducted by Dr. Congreve, as the priest of humanity. A simple but rather complete liturgy was used, in which the sacred formulæ of Positivism opened, namely, Love as an impelling motive, Order as the foundation, and Progress as the aim of the society. Then followed an address in which the service of humanity was held up as the highest aim for the ambitions of mankind. This was followed by the reading of Acts xxv., and by three prayers, for the family, for the state, and for the Western nations. Another address followed discussing the merits of Cæsar, to whom the month was dedicated; of Trajan, to whom the week, and of Augustus, to whom the day was sacred.

Comte, the founder of this philosophy and religion, was born in 1798 in Paris, and received his first training in an atheistic college. In 1826 he began to deliver his lectures on philosophy. He regarded as the chief corner-stone of his system the discovery of the "sociological law" that man engages in theological schemes only in the first and lowest stage of his development; that in the second or metaphysical or abstract stage, he puts abstract ideas in the place of supernatural things; and that only in the last or third stage does he throw aside all speculations on matters that do not fall within the province of his experience. This Positivist stage, for mankind as such, began with the era of the French Revolution and was definitely inaugurated in the year 1855, when Comte authoritatively declared his teachings to be a religious system. With the exclusion of all speculation on matters outside of experience, naturally all such sciences as logic, metaphysics, theology, etc., fall away. The basis for everything is mathematics, or the science of space and time, followed by the sciences of the material and the inorganic world, such as astronomy, physics, and chemistry; then by those of humanity, such as biology, sociology, and morals, the whole resulting in a hierarchy of the sciences upon which Comte laid great stress.

The religion of Comte is only indirectly connected with his

philosophical scheme, and is probably best expressed in the "Catechisme Positiviste." By the term religion, the author understood merely the harmonious relation among mankind in love and faith, the latter implying the subordination of reason to outward order. The humanity, both of the present, the past, and the future, constitutes the "great being," which is the only existing reality. All individual existences are but an abstraction from this and have an objective existence only here upon earth; while, after death, the subjective, immortal existence begins for at least those creatures who serve the essence of mankind for the purpose of perfecting it. All individual mistakes and errors will be forgotten in an eternal death, but all the existences will find their importance in their relations to that one true being; and the purpose of our thought should be to recognize that and to love it, and through such a cultus to ennoble and elevate ourselves. The religious relation of the individual to this great being is that of absolute dependence. The whole of humanity is best personified in woman, so that the first object of the cult in detail is the mother, and secondarily the sister and the daughter. The last sacrament, that of incorporation into subjective mankind, into the great being, is performed seven years after death, at the side of the coffin. The public cult includes the adoration of all the great representatives of the cause of humanity, and the thirteen months of the Positivist calendar (each of twenty-eight days) are dedicated to such men as Moses, the founder of theocracy; St. Paul, founder of Catholicism; Charlemagne, founder of feudalism; Frederick the Great, founder of modern political systems, etc.—*Translation made for THE LITERARY DIGEST.*

RELIGION AND EDUCATION IN THE PHILIPPINES.

THE religious situation in the Philippines, says *The Outlook* (November 11), reminds one of conditions in Europe during the fifteenth century. There is one predominant church, and the ancient orders of monks, whose active influence on society has almost wholly passed away in other parts of the world, flourish to such a degree as almost to constitute a theocracy, limited of late, however, by the bitter hostility of the Filipinos. Indeed the latter's chief political idea, says the writer, has been the expulsion of the monks, though President Schurman has borne testimony to the sincere adherence of the Filipino leaders to the Roman Catholic church.

A recent writer to *The Outlook*, Mr. W. A. Chester, of Manila, makes the statement that the Jesuits—who are neither monks nor friars—have been the only religious order prominent in instituting efforts in behalf of education in the archipelago, and to this order belongs the Astronomical Observatory, which is of high rank. *The Outlook* continues:

"It may surprise some of our readers to learn that a college was founded in Manila before Harvard or Yale—earlier, indeed, than the common school of New England. St. Joseph's College was established in 1595, and graduated its first class in 1601. Prior to 1768 it was in charge and under the control of the Jesuits, who were made trustees of the institution by its donors at the time of its creation. When the Jesuits were expelled from Spain and its colonies, the governor-general declared the property of the college forfeited, and converted the buildings into barracks for his soldiers. An appeal being taken to the crown, the action of the governor-general was reversed, and the college placed under control of the Metropolitan Church of Manila. At the present time this most ancient seat of learning in the new America is largely devoted to medicine and pharmacy."

"The first Protestant service," we are further told, "ever held in Manila was on the morning of Christmas, 1898, conducted by Chaplain Pierce, who ever since, except during the outbreak in Manila, has read the Episcopal service twice every Sunday. On Sunday Presbyterian services are held in the Young Men's Christian Association's tent. At all the Protestant services the singing is especially noteworthy. The Filipinos are natural musicians, and they already sing our hymns with a refreshing enthusiasm."

THE RELIGIOUS QUESTION IN PUERTO RICO.

REV. DR. H. K. CARROLL, late United States special commissioner to Puerto Rico, writes in *The Independent* (November 2) of the religious problems presented by the new régime in that island. The course of the government, which, he remarks, is fortunately neither Catholic nor Protestant, was clearly marked out for it from the first. The priests have hitherto relied on the state for support, but the church must at once be disestablished, not because it is Catholic, but because the constitution permits no union of church and state. The administrator of the diocese indeed pleaded for a delay until a transition could be effected to a voluntary basis; and while his zeal was natural and proper, says Dr. Carroll, the disestablishment had already taken place the moment the American Government had assumed control. He says:

"General Brooke's first order as governor-general did not name the church; but in declaring that the existing system of laws would be retained in so far as it was not in conflict with the Constitution of the United States, it virtually disestablished the church and nullified all those laws which give it exclusive privileges. The Insular Advisory Commission has brought upon itself the criticism of the Catholic press of this country for proposing that priests and nuns be allowed to marry. It had in mind, doubtless, the provision of the civil code in the chapter on marriage, which prohibits priests and *religieuses* from marrying. The prohibition was a natural one under a Catholic government. The marriage of such persons would be a scandal to all good Catholics, and no government representing both church and state could tolerate it. It would bring reproach upon the state as well as upon the church. Under our system celibacy is simply a matter of church regulation. Ecclesiastical authorities can enforce it or not, as they see fit; but our Government can make no law commanding either obedience or disobedience to it. That provision of the Spanish code is, therefore, really of no effect; neither is that other provision, changed by General Henry, requiring all Catholics to be married according to the ecclesiastical form. No one can be debarred from civil marriage in Puerto Rico by reason of any church connection, vocation, or regulation."

These and similar questions are settling themselves without act of Congress, says Dr. Carroll; but there are other problems involving property which are not so easy of solution. The church, tho it does not claim any property rights in the cemeteries, which were purchased and maintained by the municipalities, does claim control over burials in the consecrated portions, basing its right on immemorial usage. What is the right of the church and what is the right of the state under the new conditions? As this and similar problems are likely to arise in other outstanding possessions of the United States, the question assumes more importance than would otherwise be the case. Says Dr. Carroll:

"The cemetery is not only the place where those who die may be buried, but where they must be buried. Persons may or may not use the church while they live. They can exercise choice and stay away from it, if they prefer, but there is no choice as to burial. That is compulsory. Here is a cemetery created and maintained at the expense of all taxpayers in the district. It is admitted that the title is vested in the municipality. Can it be lawful to refuse burial to any inhabitant, simply because the parish priest will not certify that he is entitled to ecclesiastical sepulture? General Henry was satisfied that the claim of the church was good, and issued an order instructing municipalities to allow the priest to indicate those entitled to burial in consecrated ground. He also obliged the municipalities to keep the cemeteries in proper condition. This would seem to be contrary to the principle of our Constitution. If the cemeteries are civil property, should the church be allowed to intervene and forbid some to be buried within their walls? If the church, on the other hand, has the right of control over burials, over, in fact, the only use which a cemetery can have, ought it not to provide for its maintenance? In answering these questions the peculiar circumstances must be fully considered. I am not sure as to the right answer. The city receives all the burial rents and returns, which

are sufficient to keep the grounds in condition. But I am doubtful as to the expediency of dual control."

The maintenance of separate burial-grounds will not solve the problem, says Dr. Carroll, for the obvious reason that it would not be lawful to turn the cemeteries over entirely to the church:

"They are public property and can not be alienated, tho they might possibly be sold. If this were done, burial might be left to church or corporate or private initiative; but Spanish people are not accustomed to this system. The municipalities could gradually provide new grounds open to all, leaving existing cemeteries chiefly to Catholic use. If neither of these solutions is accepted, the opening of municipal cemeteries to all, allowing individual Catholic graves to be consecrated, might conserve all interests and rights. This is the plan substantially adapted by the Mexican Government."

The most important religious issue which the Government has to face in Puerto Rico—as in the Philippines as well—is the question of church property. At the outset Dr. Carroll hastens to correct the common misimpression that the Roman Catholic church in Puerto Rico is rolling in wealth. There is but little ecclesiastical property in the island, he says. The church has no profitable lands, and the church buildings would not be regarded as costly in America. The furnishings of even the cathedral in San Juan are very modest. The church, however, has no recorded titles to either the lands or buildings, since registry of titles is not obligatory under Spanish law, and it was never thought necessary to certify an ownership which was universally understood. The churches, however, were built in nearly every instance by public money, raised through taxation by the municipality. Under the law, a citizen was not at liberty to refuse to provide in this manner for the church. Thus there is a quasi-municipal or a quasi-religious ownership—according to which horn of the dilemma is chosen—involving a problem very difficult to solve with absolute justice to all the interests involved. Vituperation, prejudice, and rash, one-sided judgment of the delicate issues involved will not help forward the question to a true solution. Says Dr. Carroll:

"In the disposal of these churches a legal question is involved. They are claimed both by the church and the municipal corporations. The latter seem inclined in some instances to demand rental for the use of the churches. The legal claim of the church is based by some of the priests on a provision of the religious constitution of Spain, which, it is said, makes all churches, no matter by whom built, the property of the church when dedicated. The Treaty of Paris requires the United States to respect the claims of individuals, ecclesiastical and other corporations to property in the island. Manifestly the legal question can not be settled without careful investigation by a judicial commission or properly constituted court.

"But the equity of the case seems to me perfectly clear. These churches were built for Catholic worship, and for no other. They were built by Catholic communities; they were dedicated to Catholic worship; the state made annual appropriations for ministers to serve them; the municipalities kept them in repair; the priests were employees of the state, under the control of their bishop, and conducted the services according to the rules of the church. To deprive the church of this property now that the relations of church and state are dissolved, in face of the fact that it was not lawful to register it while church and state were united, would be, as it seems to me, a virtual act of confiscation. This property was unquestionably consecrated by the church for church purposes; it was so designed by the state; formal transfer was not made because it was thought unnecessary; those who paid the money were Catholics either by profession or preference, with very few exceptions, and they expected that Catholic worship would always be celebrated in these churches."

A Doukhobor Prayer.—The sufferings and exile of the interesting people called the Doukhobors, and the fact that Count Tolstoy has made them the beneficiaries of the proceeds of his new novel "Resurrection," have brought them prominently before

the eyes of the world. One of them, named Nicholas Posniakob, was recently flogged most cruelly by the Cossacks (says *The Advance*, November 9), not for any misdeed, but simply as a Doukhobor. Like Paul and Silas after their scourging at Philippi, the physical pain and humiliation only served to make more clear the light within, and the following prayer, so beautiful that it was taken down by one of the disciples, was sung by him three times while the cruel scourge was falling on his bleeding back:

"Lord, my Savior, Thou art my light! whom shall I fear? The Lord Himself watches over my life; of whom shall I be afraid? Tho they bring my flesh to harm, my enemies shall be put to shame. Let mine enemies rise up against me, yet will I not fear this; tho a host should rise up against me, my trust is in the Lord. My father and my mother deserted me in my infancy. My Savior took me up and gave me life and prosperity. Place me, O Lord, in the way of truth by Thy holy law. Let not mine enemy trouble me! I trust in the life to come, but do not leave me in this life, O Lord, to the hands of the ungodly. Cover me, O Lord, with Thy right arm from all lying slanderers. Let my head now be lifted up against all terrible enemies. I offer with my heart a sacrifice. I call upon Thee, O Lord, in the psalms of those who serve. With my heart and soul I cling to Thee; let me in truth not be confounded, for my trust is in God! To our God be glory!"

Why does God permit such suffering as this? asks *The Advance*. And it finds a sufficient explanation of this and the multitudinous tribulations of life in the spirit displayed in the prayer itself—the heroic discipline of being made perfect through suffering.

WHY DR. LYMAN ABBOTT IS NOT A UNIVERSALIST.

AT the recent General Convention of the Universalist Church in Boston, Dr. Lyman Abbott, in the course of an address delivered on the "Interdenominational Evening," gave his reasons for not believing in the doctrine of universal salvation. Speaking as a liberal Congregationalist, he said that modern Congregationalism does not accept the doctrine of eternal punishment as preached by Jonathan Edwards in the last century. Personally he himself absolutely disowned it. He says (we quote from a reprint of his address in *The Independent*, November 11):

"I do not believe that any one of God's creatures will be kept by God in eternal existence simply that he may go on in sin and misery forever. The proposition has long since become spiritually unthinkable to me. I might perhaps believe that a soul could suffer eternally; but I can not believe that any being that God ever made will be kept in existence by God that he may go on in sin eternally.

"What was the old doctrine of eternal punishment? The Savoy Confession, up to about the middle of this century, was the recognized expression of orthodox Congregationalism. Not that it was binding on orthodox Congregationalists; but it was the only historic creed they possessed. Except in the matter of polity, and one or two minor matters, it was identical with the Westminster Confession of Faith; and this was the substance of its statement: It declared that our first parents fell by eating the forbidden fruit; that, they being the root of all mankind, their guilt was imputed and their sinful and corrupted nature was conveyed to all their posterity; that as a result we are 'utterly indisposed, disabled, and made opposite to all good'; that from the race thus lost and ruined in the Fall, 'by the decree of God, for the manifestation of His glory, some men and angels are predestined unto everlasting life, and others are foreordained to everlasting death'; that those not effectually called, God was pleased, 'for the glory of His sovereign power over His creatures, to pass by, and to ordain them to dishonor and wrath for their sin, to the praise of His glorious justice'; and that those 'not elected, altho they may be called by the ministry of the Word, and may have some common operations of the Spirit, yet they never truly come to Christ, and therefore can not be saved.'

"Specifically, and clause by clause, I disown that statement. . . . This doctrine is inconsistent with the character of a righteous God. I might fear such a God; I might tremble before such a God; I might, because I was a coward, obey such a God; but I could not reverence such a God. It is inconsistent with the faith that Jesus Christ is God manifest in the flesh, for it was not His nature to pass any by or to ordain any to dishonor and wrath. It is inconsistent with the Scripture; inconsistent with the parable of the prodigal son, which is Christ's epitome of the Gospel; inconsistent with the declaration of Paul that 'every knee shall bow and every tongue confess Jesus Christ to be the Lord, to the glory of God the Father'; inconsistent with the very chapters of Romans on which it is supposed to be founded, for they close with the declaration that 'God hath concluded all in unbelief, that he might have mercy upon all'; inconsistent with the splendid picture John paints, of the time when every creature that is in heaven and on the earth and under the earth, and such as are in the sea, shall give praise and glory to the God of their salvation."

And yet, says Dr. Abbott, he is not a Universalist. With most liberal Congregationalists, he believes that "the ultimate fact in human life is the freedom of the individual will":

"I know that I can choose the good, and therefore I can choose the evil. What I find true in myself I believe to be true in every other man; he can choose the good, and therefore he can choose the evil. And while I wistfully desire—yea, and sometimes devoutly hope—that when the great drama of life here and hereafter is ended, all God's creatures will have chosen the good—I do not know. If I were a Calvinist, I should be a Universalist. If I believed that God could make all men righteous, I should be sure that He would make all men righteous; otherwise He would not be a righteous God. But I start from the other pole. I begin with my own absolute freedom. I recognize as a fact, in my life, in my philosophy, and in my preaching, that, in the last analysis, the destiny of every man is in his own hands. Father may persuade, mother may entice, influences may environ, God Himself may surround with all possible persuasions, but in the last analysis the destiny of every man is in his own hands. And what he will do with it I do not know.

"Why, if God be good, has He made a world in which there is sin? Why has He not made a world sinless? Could He not? Certainly; He not only could, He has. The birds are sinless. But He could not make a world in which are free moral agents able to choose the good without giving them at the same time power to choose the evil. Power to choose the one is power to choose the other; and a world in which there are some men who choose shame, dishonor, sin, and death, is a better world, I dare to say, than a world made of machines that could choose neither the good nor the evil."

RELIGIOUS NOTES.

THE Northfield Extension Movement has secured control of *The Record of Christian Work*, and after January that monthly will be issued at Northfield, Mass., as the official organ of the movement, under the editorial charge of Mr. W. R. Moody. *The Northfield Echoes* will be continued as the organ for reporting the summer meetings at Northfield. This is due to a change of plans on the part of the management of the movement, and supersedes the announcement lately made by authority in these columns.

THE "jubilee" convention of that rapidly growing body of Christians known as the "Disciples of Christ" was held in Cincinnati in the latter part of October. The city was thronged with visitors. The great communion service was particularly impressive, and was said by Dr. Clark, president of the Christian Endeavor Society, to be the largest he had ever attended. The reports showed gains from all quarters both as to membership and practical church equipment. The Disciples now number almost 1,200,000 communicants, and the value of their church property is in excess of \$8,000,000. The rate of increase in membership is twice the rate of increase of population in the United States.

THE case of Dr. McGiffert, which was referred back for decision to the New York Presbytery by the General Assembly of the Presbyterian church last spring, is still causing embarrassment. Dr. McGiffert was asked by the Presbytery to withdraw quietly from the Presbyterian ministry, but this he has been unwilling to do. He is said to have met the committee in the frank and kind spirit which characterized his letter to the Assembly, but on each occasion he has asserted that his utterances have been misunderstood and that they do not constitute heresy as has been charged. The general opinion is that the Presbytery will refer the case back to the General Assembly which meets next May at St. Louis, and that that body will order a trial for heresy.

FOREIGN TOPICS.

THE CONTEST BETWEEN EVOLUTIONARY AND REVOLUTIONARY SOCIALISM.

NO phase of European political life offers more interesting subjects for study than those afforded by the attitude of the Socialists in the different countries. In Germany, France, Spain, and Austria, the revolutionary character of the party is to-day merely nominal, as a high degree of prosperity prevents the gathering of a sufficiently strong force to overthrow authority. In Russia, true Socialism hardly exists, but Communism prevails among the peasant farmers. What passes for Socialism in the Russian cities is merely an attempt to organize trade-unions. In Italy, the revolutionary character of the Socialists is still very much in evidence, for Italy has not yet emerged from her state of economic depression. In England the radical tendencies of Liberalism prevent the acceptance of revolutionary ideals. The tendency of the educated workingman to interest himself in practical politics is becoming stronger and stronger in Germany. Rosa Luxemburg describes the situation as follows in the *Leipziger Volks-Zeitung*:

"In 1891, Vollmar was practically isolated in his endeavors to use the power of the Socialist Party for practical purposes by combining, when the opportunity offered, with other radical parties. Since then, every succeeding party congress has shown important desertions to Vollmar's side; and not only must the quantity of these opportunists be considered, but their quality also arouses concern. Many of those comrades who warmly advocate the so-called 'practical policy' occupy important offices in the party. They are able to air their views as editors and legislators. Among the very men who should do most to combat the ruling classes and enlighten the laboring masses, opportunism is most strongly represented."

In the congress of Hanover this year, Eduard Bernstein boldly put his theory of evolution as against revolution to the vote, maintaining that the old doctrine that the masses are getting poorer and poorer can not be upheld. The program of the party and even its name should be changed. The "Party Pope," as Bebel is called, defeated Bernstein in a speech of six hours' duration, and the revolutionary character is still outwardly maintained, for the present at least. But the "Reformers" are very hopeful. Dr. David said:

"We really need not be afraid to give up the theory of increased and increasing misery. It does not affect our doctrine that the workers must become the rulers. On the contrary, the better the condition of the proletariat, the sooner we will reach our goal."

And he indulged in the following bold statement:

"According to Kautsky, the adherents of practical politics forget that many parts of the world, where the great industrial establishments are wanting, contain much misery. Now, this is most astonishing. We suddenly hear that the misery theory applies to the districts not touched by highly capitalized industries (*Gross industrie*). Yet our program says that the misery of the masses is the result of the establishment of such industries. Kautsky, therefore, disproves his own views."

Most German papers believe that the split in this most powerful proletarian organization has only temporarily been averted, and the German correspondents of papers in other countries also hold that opinion. The most significant fact is that the opponents of "Pope Bebel's infallibility" are not, as formerly, ejected from the party. They have become too formidable for that. *Justice*, the English *Vorwärts*, thinks this leniency dangerous, and is deeply hurt because Bernstein admires British advanced Liberalism and Radicalism. "In England," says *Justice*, "the education of the masses in the doctrines of pure Socialism is certainly necessary." It adds: "It is really very strange what a corroding

effect our political institutions and social arrangements have on many well-meaning and intelligent Socialists of the middle class from the Continent who settle among us. It all seems so free, after the drill-sergeant and blucher-boot methods to which they have been accustomed, that they overlook the truth that nowhere in the world is the class war carried on more relentlessly than in England by the dominant class. . . . Bernstein's notion that Socialism is the logical outcome of Liberalism is so utterly absurd that we are surprised that a man of his ability should have accepted it even for a moment."

In France, as the *Journal des Débats* points out, the "Reformers" have already the upper hand, as they have managed to place some of their partisans in the ministry. Skilful attention to the German Emperor's wish to become the Laborer's Emperor (*Arbeiter Kaiser*), and adroit handling of the Socialist vote on the coming navy bill may give to the German Socialists also real political influence. The Spanish Socialists certainly mean to imitate their French brethren. The Madrid *Epoca* says:

"The opportunism of the Socialist leaders at the congress of Madrid may be due to Spanish impatience. They may want a share in the administration before they are ripe for it. Again, they may regard the old bourgeois parties as crumbling, and may hope to replace them in the near future. In principle, of course, a fusion between the old parties and the Socialists is impossible. But in practise the congress has authorized alliances and coalitions with other parties whenever advantages may be obtained thereby."—*Translations made for THE LITERARY DIGEST.*

SOME FINANCIAL ASPECTS OF THE SOUTH AFRICAN WAR.

THE Transvaal war is of no little financial interest. Great Britain's enormous wealth precludes all probability of her being hampered or even seriously affected by the necessity of providing the necessary funds. Still, the sums required are formidable enough to have some effect upon the financial world. The Chancellor of the Exchequer has suggested a temporary increase of taxation, to enable Great Britain to "pay as she goes." But even Conservative papers object to this. The Transvaal, they think, whether annexed or not, can be saddled with the costs as soon as the Boers are beaten. The London *St. James's Gazette* says:

"The *Times* hints that, in spite of all the manifest objections, the Chancellor of the Exchequer has insisted upon raising the £10,000,000 already asked for by levying additional taxation to that amount so as to pay our way out of current revenue. All we can say is that Sir Michael will have to be very persuasive indeed if he is to convince us, and the British taxpayer, that this is either necessary or wise. . . . The pro-Boers have said all along that this would be an 'unpopular war,' and tho we do not go so far as to say that the taxpayers will object to war merely because they must pay for it out of current revenue, we have no doubt that this aspect of the matter will be 'rubbed in' for all it is worth by the Little Englanders when they once more go on the stump. . . ."

"The obvious way of raising the money required is by treasury bills, thus increasing temporarily our floating, in contradistinction to our funded, debt; this borrowing to be liquidated in accordance with the result of the war. The Transvaal can well afford to pay an indemnity, and nothing should be done, at present at any rate, except with that end in contemplation. A large issue of treasury bills is not only a convenient and easy way of obtaining the money, but it is also desirable in itself. . . . Some indirect taxes there are indeed which might be raised without much trouble, and it may be that the Chancellor of the Exchequer simply wants to make the war an excuse for doing what ought in any case to be done for the sake of revenue and equalization of the incidence of taxation. But an addition to the income-tax would be resented, we are convinced; and we should be unable to defend for a moment such a preposterous proposal unless there were European complications in prospect."

The London *Economist* expresses itself in the main as follows:

The increase of the income-tax by something like one-half per cent. is out of the question, as this would affect only one section of the population. The liquor and tobacco duties might, however, be increased without injustice to any one. But there is no need for extra taxation. It is not the British taxpayer who has to pay for this war, but the Boers, whose ultimatum forced the war upon England. It may be said that, if the Transvaal is heavily taxed, the Uitlanders also will be made to pay. But why should not the persons pay in whose interest the war is carried on? We have always been told that the mining industry would improve if the oppression of the Boer were removed. Moreover, of the \$22,000,000 income of the Transvaal, a great part is wasted on utterly unnecessary armaments. This may be put aside to pay the war debt. There must also have been much stealing on the part of the officials in this rotten Boer oligarchy, while it goes without saying that an English administration is free from corruption. Taken altogether, the Transvaal can well afford to pay a debt of \$50,000,000 to \$100,000,000.

The *Westminster Gazette*, on the other hand, warns against such schemes. Referring to a letter signed "Financier," in *The Times*, it says:

"The Transvaal," he tells us, 'is a rich state; the Uitlanders whom we are interfering to protect include a rich class who can well afford to pay for their deliverance; an enormous amount of plunder is in the hands of the Boer oligarchy which the Uitlanders have a right to, and which may properly be used to pay the debt which they are incurring to the British Government.' If we want to persuade the world that we are seeking to lay hold of Naboth's vineyard we shall use language of this kind. The Uitlanders, it will be observed, are to pay nothing. It is to be assumed that the Boers owe them money, and payment by the Boers is to be taken in lieu of payment by them. Not only so, but individual Boers, according to this egregious correspondent, are to be treated as rebels and their private fortunes confiscated to the uttermost farthing. President Kruger and President Steyn are to be made responsible in their purses and in their persons. . . .

"Tho it may not be wise, when we are at the beginning of a campaign, to anticipate any of the fruits of victory, it is certainly lawful to contemplate a settlement in which the Uitlanders shall contribute their fair share to the cost of their emancipation. But it is not lawful—it would, on the contrary, be outrageous, to regard the Transvaal as rich booty which the Boers will be made to hand over."

The Vienna *Neue Freie Presse* points out that the excessive taxation of the gold-mining industry, which is customary in British possessions, would not be permitted by the powers of the Transvaal is annexed, as more foreign capital is engaged on the Rand than British capital. The paper regards England as financially a loser in this war. It says:

"The South African Republic should not be underrated as a customer. In 1897, her imports had already reached \$67,000,000, of which nearly \$45,000,000 went to Europe. England had the largest share in this, and British merchants will suffer no inconsiderable decrease in their business. Other nations are less seriously affected. France and Germany have invested largely in gold-mines. But cool judgment will reveal that these are not for long affected by the war. The war only changes South Africa politically, not economically. The miners will not be confiscated whichever side may be the winner. It is not even certain that all the mines will lie idle during the war, and that the export of gold will cease."—*Translations made for THE LITERARY DIGEST.*

Lèse Majesté and the Prussian Constitution.—The subject of *lèse majesté*, and the laws in Germany concerning it, have excited in this country some interest, and the large number of sentences imposed for the offense have occasioned surprise that the German people submit to such laws. The reason therefor is set forth in a recent article in the Berlin *Deutsche Tages Zeitung*, from which it appears that it is not so difficult as has

been sometimes supposed, to keep within the limits of the law and yet to criticize the policy of the Government and the recommendations of the Emperor. We summarize the article as follows:

We do not want in Prussia a shadow king, a royalty which merely serves as an ornament for the state ruled by Parliament. We want a king who rules, tho within the limits of the constitution. Now, it is unquestionable that the wearer of the crown has not only the right to make known his views and his will, but that, in questions of great importance, it is his absolute duty to do so. Even so retiring a monarch as Wilhelm I. did this, with the desired effect. The position of a monarch commands reverence, and this reverence in turn forces the king to be very reserved. But if we want a king who really rules, we must remember that it is at times necessary for him to make himself heard. When and where he should do so, however, is a question for him alone to decide. He is responsible to God only.

The only thing necessary for the king is to obtain the consent of his ministers, whom he for this reason appoints without restriction. The king must not be made responsible. If he expresses himself on matters of far-reaching importance without the concurrence of his ministers, the people are tempted to reply to him direct. This is not likely to strengthen the influence of the crown, but rather to weaken it. Be that as it may, if the monarch chooses to express an opinion, we will receive it with due respect. But we will not enter into polemics with him. Whatever we may have to say, we will address to the responsible ministry. This line of conduct is plainly laid down in the constitution, and the duty of all is to honor that constitution.—*Translation made for THE LITERARY DIGEST.*

THE PROGRAM OF ANTISEMITISM.

ALTHO public opinion throughout the world, as voiced in the press, was overwhelmingly in sympathy with Captain Dreyfus, there is, nevertheless, a revival of antisemitism in Europe. It appears in its mildest form in Great Britain, where many people seem to hold the Jews responsible for the Transvaal trouble. H. Quelch, in *Justice* (London), the Socialist organ, while defending himself against the charge of partiality, declares that without a doubt Jewish influence was most prominent in bringing about the South African war. He says:

"We have denounced this as a Jew-capitalist war, and seeing the prominent part Jew-capitalists have taken in the Johannesburg agitation, and seeing their intimate relations with cabinet ministers here at home and the vituperative fury of their organs in the press, we consider the term fully justified. . . . The facts support us in saying that the Jew-capitalists have been specially prominent in this scandalous business and that their conduct in stirring up the jingo mob in London, after their denunciation of the same mob in Paris, was indecent and disgraceful. Had they behaved no worse than the other capitalists or other 'leaders of public opinion' it would have been bad enough, but we could not then have singled them out. But their wolfish fury overstepped the bounds even of the ordinary capitalist press. That is the fact, and that being so, is it race prejudice to say so? . . . We agree with our Jewish comrades that anything in the nature of an antisemitic movement would be an injury to Socialism. Therefore we point out that these unscrupulous wealthy Jews, by their ferocious pretense of jingoism and their greed for gold, are going the right way to stir up antisemitism in this country as they have succeeded in doing in other countries. To suggest that we are stirring up this feeling by calling attention to the facts is as ridiculous as the charge of our opponents that we make the class war by calling attention to its existence."

In Austria the old blood-superstition has been revived, which, so the London *Speaker* tells us, first began in 1144 at Norwich, England. It originated through a renegade Jew, who said that the Jews thought the sacrifice of Christian maidens and youths necessary for their ultimate reunion in Jerusalem. The superstition has been stamped out in most countries, but it now and then crops up among the Russians, Czechs, and Poles. Several Jews have been murdered and many plundered in Moravia and Bohe-

mia during the present year, in consequence of the murder of a young girl supposed to have been sacrificed for the Passover.

In Germany alone is real political importance attached to the antisemitic movement. The platform of the antisemitic party in the Reichstag runs in the main as follows:

"1. It is the program of the antisemitic party to spread the deeper knowledge of the real character of the Jewish people. Only the conviction that there is an impassable gulf between the ideas of this race and those of other peoples in intellectual and moral respects can awaken the conviction that the Jews as a race are not capable of participating in the development of modern civilization as integral factors, but that they are essentially hostile to the best interests of national and general culture.

"2. The Zionite movement is one of the results of the antisemitic agitation. This new propaganda contains the confession of what has so often been denied, namely, that the Jews are still one nation no matter among what peoples they dwell, and their leading interests are those of the Jews as one people. The ambitions of the Zionites would deserve the recognition and cooperation of other peoples only if the certainty existed that the state to be organized as New Ziou would really become the gathering place of all the Jews of the earth, which can not, unfortunately, be expected. It would not be lawful or allowable to recognize as a representative of the Jews living among Christian people any external power, nor can the Alliance Israélite be regarded as sovereign or be represented at the imperial court of Berlin.

"3. On account of the excellent modern facilities of intercommunication, it is probable that in the course of the twentieth century the antisemitic question will become a world's problem, and as such will be decided by all the nations cooperating in this way in such a way that the Jews will be compelled to sever their connection with the existing states. The true peace congress will be that convention which devotes itself to the problem of ridding mankind of the presence of the Hebrews. Until that time, it will be the duty of each individual nation to do the best it can in the matter.

"4. One of the first requirements of this propaganda is that the law must determine who is to be regarded legally as a Jew and who not, and that the descent from Jewish stock must determine this question and nothing else. We rejoice that a beginning has been made in this direction by the legislation of 1898 in Berlin.

"5. Full statistics of the Jews must be collected, giving exact data as to their numbers, occupations, wealth, etc. Such statistics were extant in Prussia down to 1861, but the Emperor has done little in this matter.

"6. The party convention asks of its representatives in Parliament to push legislation on the Jewish question with all vigor, and to test the various parties as to their standing on this important problem."

These propositions are, however, considered too sweeping even by those who do not love the Jew. The Cottbus *Neue Kirchen Zeitung*, which may be regarded as representative of Protestant opinion, says:

"It is apparent from these official resolutions that this section of the antisemites are filled with the most unchristian hatred of the Jews. The decisions read like the statements of a Tacitus concerning this people. In fact, they remind the reader of a Haman in the days of Esther. It must, indeed, be acknowledged that the Jews have deserved the hostility of Christian nations in modern times; but nothing can justify such unchristian opposition and methods. Antisemitism began in Germany because Pastor Stöcker was compelled to lash the immoral and anti-Christian Jewish press in Berlin, and because in the money markets they were the sharks of modern society. Mommsen, the great historian, called them 'the disintegrating element' in modern society. But a solution of the Jewish problem will be found only when it is approached in the spirit of the Savior, and love and evangelical truth will accomplish what hatred and oppression will never bring about."

In France, where the movement is only a "side issue" of the monarchist agitation, antisemitism appears to have spent its force for the present. Max Regis, one of the leaders of French antisemitism, is reported to have gone to South Africa; but among the South African Dutch a violent agitation is very improbable,

as it is almost impossible to gather a mob among them.—*Translations made for THE LITERARY DIGEST.*

Wanted: A Consul.—People who are "out of a job" at present might apply for the position of British vice-consul in Finland. There were fourteen such officials there a short time ago, and eleven of these have recently, according to *Free Russia* (November 1), resigned, and it will be difficult to fill their places. The trouble grows out of the recent action of the Russian Government in abrogating privileges which Finland has for many years enjoyed. As one of the consequences of the feeling this measure excited in the latter country, complaint was made a few weeks ago by the (Russian) governor-general of Finland that the British vice-consul in Wiborg had been "taking an active part in political agitation," and requesting his removal "in the interests of public order." Mr. Wolff, the vice-consul, was called on to explain, and he did so, to the effect that there was no "political agitation" in Finland, and he had had no part in it if there was; but that there was "a feeling of disquiet and sorrow" in which every Finn shared. If this feeling, and the protests against the manifesto causing it, are "political agitation," then, he said, "every man and woman in this country is an agitator, and will remain so until the manifesto is recalled." His own action consisted in serving on a deputation elected to lay the protest of the Finnish people before the Czar.

Without waiting, however, for his explanation, the British consul-general in St. Petersburg wired to Mr. Wolff: "Your resignation has been accepted." Upon learning of this, ten of the thirteen other consuls (all being Finlanders, as is Mr. Wolff) sent in their resignations, and there is likely to be difficulty in filling the vacancies. Mr. Wolff, according to *Free Russia*, has since become "the object of patriotic ovation" in England, and even the London *Times* censures the manner of his removal, saying:

"We should be glad to think that some explanation may be forthcoming to attenuate the painful impression which the procedure of the British Embassy in this matter can not fail to produce. Otherwise we should be driven to the regrettable conclusion that a British ambassador can not cultivate friendly relations with the power to which he is accredited, or show the necessary deference to its wishes, without copying its methods, however un-English they may be."

It is reported in London, according to a cablegram received by the New York *Commercial*, that the British Admiralty will use American pneumatic riveters, and other tools driven by compressed air, in government shipyards. This is creating commotion among English trade unions, as it is possible that these labor-saving devices may throw many men out of work. There is reason to believe that within a short time a great number of such tools may be added to our exports to the older countries. Inquiries made in New York City by *The Commercial* show that the British War Office has already purchased many tools of this sort, that the Midland Railroad has just ordered them for its car-works, and that many private shops are also buying them. The German Government also has adopted them in its shipyards and railroad shops. American air-compressors have been recently ordered for use in Paris in connection with the municipal sewage system; for use in the Lancashire and Midland districts in England; for shops in Berlin, and to operate tools in the oil-fields of Bahia in Brazil.

MISCONCEPTIONS OF YESTERDAY.

Thus the *Amsterdamer* of Holland represents the Englishman (as seen from Pretoria) and the Boer (as seen from London).

MISCELLANEOUS.

CORRESPONDENTS' CORNER.

WHY BRAIN POWER IS DETERIORATING.

MR. GLADSTONE was free to confess that, in his opinion, the brains of the modern generation of Britons showed a deterioration of power, as compared with the brain-power of the Elizabethan period. It is generally agreed, moreover, among scholars, that the ancient Greek brain represented the high-water mark of the human intellect, from which the tide is now steadily receding. The world's stock of knowledge is of course enormously increasing, but the brain-power itself is decreasing. Such is the view of a recent writer in *The Nineteenth Century* (H. Elsdale), who does not stop to argue the point; but, accepting this conclusion as inevitable from any competent examination of the facts, proceeds to inquire into the reasons for such deterioration.

He finds four such reasons. First, is the tremendous increase of knowledge, and the consequent increased demand upon the receptive faculties, which are developed at the expense of the creative faculties. He illustrates this at length by comparing the accumulations of knowledge in mathematics, through which the student must now find his way before he can begin to do original work, with that in the days of the ancient Greeks, when Euclid represented the farthest limits of teaching, beyond which the student had to depend upon his own researches and reflections. The same consideration applies to other forms of learning, and our modern system of education has perforce become one of constant cultivation of the receptive powers and the constant neglect of the creative powers, tending to develop clever, ready, and shallow wits at the expense of real original talent and self-reliant brains.

The second reason for brain deterioration is "the mental impatience of the age," indicated by the small sale of serious solid books and the increase in reading of newspapers, novels, and various other forms of hop-skip-and-jump literature; indicated also by the unpopularity of sermons that call for any sustained attention. As the habit of steady and sustained thought is a fundamental requisite of real brain-power, this tendency in our reading is destructive. Probably 99 per cent. of our Anglo-Saxon race ("emphatically a race of workers rather than thinkers") do not to-day cultivate the mental habit of sustained thought and resist the temptation to mere brain dissipation. The leveling and democratic spirit of the age is also responsible for the decrease in original power. The monarch must lean upon his ministers and people; the ministers must reckon with badly enlightened constituencies; the members of Parliament are bound to the caucuses and party leaders. Personal judgment and individual opinion are at a discount. The centralization of industrial and commercial power operates in the same way for business men and workmen. Even artists and professional men are hampered by the hard conditions of hurry, worry, competition, and overpressure which the democratic spirit has imposed.

And, lastly, the steadily increasing mammon-worship of the age, and the growing love of luxury and opulent ease, are unfavorable to the production of master-minds. This is the root cause of "the scanty development of really first-rate and commanding intellect" in the United States; and the same cause prevails largely, tho not to the same extent, in Great Britain.

In conclusion, the writer expresses a not very vivid hope that great world-movements are even now in progress under the surface which will in the future eventuate in a new order of things, set up worthier ideals of sacrifice and devotion, and produce a new race of greater exponents and apostles.

What the Lutherans Believe.

EDITOR OF *The Literary Digest*.

In your issue of November 4, in the article on "The Future of the Christian Religion," there are several statements relative to the Lutheran Church so unqualifiedly erroneous that I respectfully request space for a denial.

1. "Where are those," the writer asks, "who believe, as Luther taught it, that doctrine of imputed righteousness which he called justification by faith alone?" In reply, this has been the teaching of the Lutheran Church from the Reformation of the sixteenth century until this, the close of the nineteenth. It is continually heard in our pulpits throughout the world, and in a tone as positive and unequivocal as was preached by Luther himself. That man is saved "by grace through faith without the deeds of the law," and alone by the meritorious obedience of Christ, has always and everywhere been regarded by Lutherans as "the doctrine of a standing or of a falling church." It is held to be the clear doctrine of Holy Scripture, and the Lutheran Church stands by it as firmly now as when confessed at Augsburg in 1530.

2. "What person calling himself a follower of Luther would dream of advising a penitent to sin all the more in the name of Christ, because when sin abounded there did grace much more abound?" The sufficient answer to this slander is the denial. Luther never gave any such advice to a penitent, nor taught it anywhere in his sermons or writings. It had its source with his defamers in the sixteenth century, as there are those who still seek to give the slander currency in the nineteenth.

3. "Luther informed Calvin, or Zwingli, that because he disagreed with him in regard to the Supper he would go to hell." I am not ignorant of the bitter controversy among the Reformers concerning the doctrine of the Holy Supper. But that Luther used the language applied to him by the Rev. Dr. Percival is denied. If it can be quoted literally, and reference made to the page of Luther's writings where it may be found, I will be glad both to confess my ignorance and also to repudiate the severity of Luther's language.

4. "Who to-day holds fast by the Augsburg Confession?" We reply that, with certain insignificant individual exceptions, every Lutheran synod in these United States, embracing more than 1,500,000 members; and also, in general, the Lutheran Church of the world, numbering above 55,000,000 of confessors of the faith contained in that confession. Not only does the Lutheran Church "hold fast by" the Augsburg Confession, but there is clearer and stronger grasp of the faith it contains and sets forth. Even in our own time, characterized by such general doctrinal laxity and growing unrest among many of the churches, "the followers of Luther" are standing nearer together and are uniting as one man in the maintenance of this form of the faith delivered to the saints. Were a Lutheran clergyman to openly teach or preach any other doctrine, he would be dismissed, and promptly, from the church whose doctrines he repudiates.

ALLENTOWN, PA.

A Remedy for Bad Shooting in Battle.

EDITOR OF *THE LITERARY DIGEST*:

Referring to the article reproduced in your issue of November 4 from the *Cleveland Leader* entitled "Uphill and Downhill Fighting," I beg to concur in the statements that the besetting fault of soldiers is to shoot too high in the excitement and eagerness of battle. My observation as a soldier in our Civil War was that a great majority of the bullets fired in battle went above the mark. Many times have I seen men in battle holding their heads unconsciously above the level of the barrels of their guns and aiming across the "muzzle sights" instead of along the barrel, and thus shooting above their objects.

I suggest a simple and obvious remedy for this false aim, namely, to make the stocks of the guns more "crooked"—that is, attach the stock to barrel at a more acute angle—so that when a soldier puts his gun to the shoulder his eye will be on a plane with the barrel. If any one will take a rifle or musket as ordinarily constructed and raise it to his shoulder, he will find that in order to bring his eye on a level or plane with the barrel so as to take effective aim he will have to bend his head down close to the stock. This he will probably fail to do in the excitement of the chase or of battle, and he will therefore shoot too high; whereas if the piece were so constructed that when raised to the shoulder and pointed the eye would be on a level or plane with the barrel (which he must aim along to shoot accurately), his aim will be much lower and truer. I learned when a boy shooting hares and other "ground game" that a "crooked" stock was best; that and four years of war taught me that the guns of soldiers ought to be so constructed as to make it unnecessary to incline the head to any inconvenient or considerable degree.

OLD CONFEDERATE SOLDIER.

Even the Cowboys Could Not Do Without It.

EDITOR OF *THE LITERARY DIGEST*:

As the travels of our copy of *THE LITERARY DIGEST* are quite extensive, perhaps you would like to hear of them. When we are through with your invaluable publication we send it to our Presbyterian minister, he afterwards sends it to a brother clergyman in Helena, Mont. From there it goes to another minister still more isolated. An interesting thing occurred in connection with this last-mentioned man. Some time ago a couple of cowboys came to him asking for reading matter. Not having anything else just then, he decided to give them some back numbers of *THE LITERARY DIGEST*, at the same time feeling that they were utterly inappropriate. Several months went by when to his surprise the same men again visited him saying that he and his friends wanted to subscribe for a copy, as they couldn't do without it.

MRS. I. W. HASTINGS.

MORRISTOWN, N. J.

LINENE Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Hill sends from Santos, under date of April 18, 1899, tables showing the trade of the United States with the various South American countries during the last ten years. There has been during the decade, comments Mr. Hill, a steady decline in our imports from South America in value and quantities; for, with the single exception of coffee, the staples constituting our imports from that section (india-rubber, wool, sugar, hides, etc.) are higher in price to-day than they were ten years ago. Coffee, which has greatly increased in quantity, has fallen tremendously in value. Rio Standard No. 7 sold July 1, 1893, at 16½ cents; December 1, 1894, at 15½ cents; January, 5, 1895, at 16 cents; January 4, 1896, at 14½ cents; January 2, 1897, at 10½ cents; December 4, 1897, at 6½ cents; the last-named figure being about the prevailing price at New York at the present time. The most notable expansion in our export trade during the last ten years, adds the consul, has been with Europe; but there has been a greater increase with every part of the world than with South America. He continues: "The United States should employ the agencies adopted by European nations in attaining their supremacy in these markets, viz., steamships under our own flag, banks under our own control, and business houses under distinctively American management. Once we are placed upon terms of equality in these particulars, our merchants can be left to their own initiative. No one acquainted with their resourceful, enterprising, and adaptable character need doubt that, with our present capacity to manufacture largely and cheaply, we shall gradually assume our proper place as a competitor in South American trade." Consul Hill mentions the good effects of the cruise of the *Wilmington* to the upper reaches of the Amazon. He says: "In addition to the labor of exploration that formed such an important object to the cruise, the display of a modern steel vessel so perfectly adapted to river work as the *Wilmington* is a fit exhibition of the capability and preparedness of our domestic designers, steel plants, shipyards, and ordnance works to turn out products equal to the best. Nothing that comes within the actual purview of foreign folk, whether native or merely domiciled denizens, is so emblematic of a nation's industrial power or weakness as the government vessels that fly its flag in foreign parts." During the years succeeding Admiral Walker's visit of congratulation to Brazil in 1890, he continues, when the vessels of our new navy took the place upon this coast of the *Tallapoosa*, *Essex*, and *Yantic* types—which were neither ornamental nor useful and were in constant danger of being run down by non-militant coal barges—the increased respect commanded by the appearance of our vessels has been, I believe, a real and constant, though inappreciable commercial factor.

Consul-General Lincoln writes from Antwerp that an exhibition of the works of Van Dyck is to be held in that city beginning with August 12. There will be a loan collection from various galleries in Europe, and the event will be celebrated by a festival. The program of the festival, transmitted by Mr. Lincoln, has been filed for reference in the Department of State.

PERSONALS.

WHEN Sir William Harcourt entered upon official life some twenty-seven years since, and relinquished his private practise, he was earning at the bar an annual income of £14,000. His official salary for the entire period has been about £50,000. He is therefore, as *The Independent* points out, the poorer by more than £30,000 by reason of his devotion to public life.

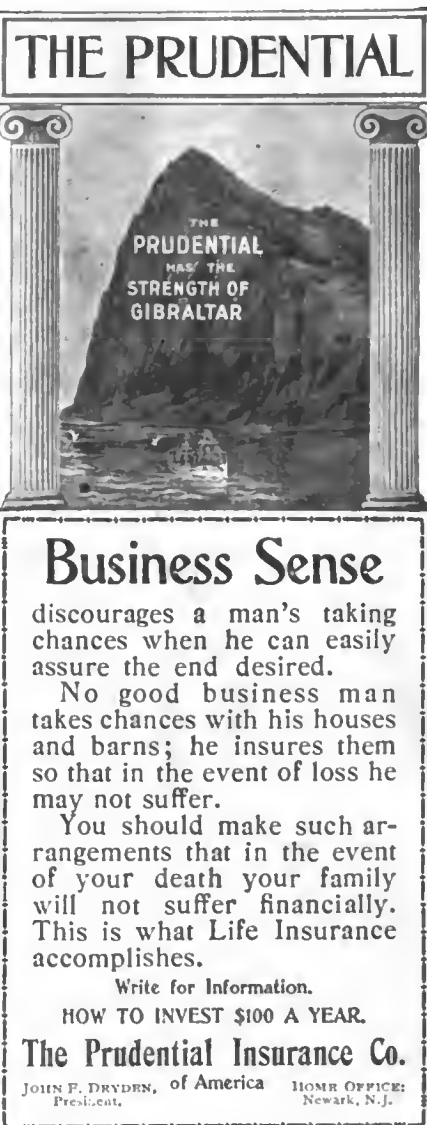

It was on March 28, 1879, after the retreat from Isandwala, says *The Westminster Gazette*, that Sir Redvers Buller gained the Victoria Cross. He had been making one of his intrepid reconnaissances, when his men were suddenly surprised by the approach of a large number of Zulus. It was necessary to retire. But never for a moment did Buller lose his coolness and calmness. The Zulus came down the hill in hot pursuit. Man after man fell before their assegais, or were buried under the dislodged boulders. Captain D'Arcy was one of the first to fall. Buller rescued him from his assailants, placed him on the back of his horse, and galloped off with him to a place of safety. Scarcely had he returned when Lieutenant Everitt was dismounted, and once again he snatched him from the ground and bore him to the rear. And yet again, seeing a wounded trooper whose doom seemed assured, he also carried him off the field when the enemy was within a hundred yards of their prostrate victim. For this almost superhuman feat he now bears the coveted bronze badge.

THE following amusing story is told by Mr. Peter Rylands at one time a member of the British Parliament: Mr. Rylands had many solid qualities, but he was not an inspiring speaker, and on one occasion in the House, when he was on his legs and appeared likely to remain there for some time, this was brought home to him in a somewhat unkind manner. As he proceeded with his indictment of the Government a slip of paper began to travel along the benches, and in its course aroused a good deal of merriment. At length it reached the orator, and on looking at it he was confronted with the following doggerel:—

"Preposterous Peter, prithe cut it short;
That Dizzy doeth what he didn't ought
We know. Yet life were sweeter,
Which gaveth Dizzys and dispensed with Peter."
The cruel part of it was that the effusion emanated from from his own side of the House.

A MOST amusing anecdote in connection with Disraeli is one which Mr. Raikes, late postmaster-general of England, used to tell at his own expense, says the London *Spectator*. He had conceived the idea of buying a certain picture at a public auction and presenting it to Disraeli, and to this end he had invoked successfully the sympathy and assistance of some of his colleagues. Unfortunately the picture had already been sold before his arrival on the scene, and still more unfortunately he took a well-known picture-dealer into his confidence as to the ultimate destination of the picture if it could be secured. The dealer took the most kindly interest in the affair, and by his mediation the obdurate buyer was at last induced to relinquish his purchase for more than six times the sum he had paid for it. The picture was presented to Disraeli; but months afterward Mr. Raikes received an enigmatical letter from the dealer, telling him of another possible purchaser of the canvas, and suggesting that he, Mr. Raikes, might make as good a bargain as the dealer himself had done. Thus he learned for the first time that not only was the kind dealer and the obdurate buyer one and the same person, but also that his own explanation of his reasons for acquiring the picture had been regarded as a mere device to get it cheap.

The Washington and Chattanooga Limited for New Orleans, California, and Mexico. Excursion tickets now on sale. Through sleeping-cars to New Orleans from New York. Observation dining-cars. Current Events.

Monday, November 13.

—The British garrisons at Mafeking, Kimberley, and Ladysmith continue to hold their own against the Boers; several more troopships arrive at the Cape.

—A despatch from Shanghai states that the differences between Russia and Japan have been accentuated by Japan's refusal to grant Russia a foothold on the sea front of Korea.

—The United States cruiser *Charleston* is wrecked off Luzon; all on board are saved.

—Fierce fighting takes place at Puerto Cabello, Venezuela; the insurgents are defeated.

—Governor Roosevelt considers plans for correcting reformatory abuses in state institutions; he entertains at Albany Lord Mayor Tallon of Dublin and John E. Redmond, M. P.

Tuesday, November 14.

—The situation in the Transvaal remains unchanged.

—A sharp encounter at San Pabian, in Luzon, results in the defeat of the Filipinos and the death of Major John A. Logan.

—The annual report of General Miles pays tribute to the efficiency of the army under special circumstances.

—The situation in Kentucky is still very strained, both sides claiming a plurality of votes.

Wednesday, November 15.

—More English reinforcements arrive at Durban.

—The Hamburg-American liner *Patria* is burned off Dover, England; all her passengers are rescued.

—The Secretary of the Treasury announces the willingness of the Government to purchase in the next two weeks \$25,000,000 of bonds of the issues falling due in 1904 and 1907.

—Proposed plans for the modification of the House rules, under which the powers of the Speaker are considerably curtailed, are given out.

—Prof. Dean C. Worcester, of the Philippine Commission, speaks in Chicago on conditions in the Philippine Islands.

—The National Municipal League opens its sessions at Columbus, Ohio.

Thursday, November 16.

—An armored train is ambushed by Boers north of Estcourt, and many of the British troops, including Lieut. Winston Churchill, are captured.

—An abstract of the annual report of the Secretary of Agriculture is made public.

—Plans are made by W. J. Bryan to campaign during the winter in Massachusetts and Eastern States.

—General Ludlow, governor of Havana, speaks in New York City on conditions in Cuba.

Friday, November 17.

—The Boers in force prepare to attack Estcourt, in Lower Natal; four more British transports reach Cape Town.

—The Khedive dedicates at Port Said a monument to Ferdinand de Lesseps, the engineer of the Suez Canal.

—The Navy Department makes public the account of a gallant exploit performed by Ensign W. R. Gherardi in Puerto Rico.

—Dwight L. Moody, the revivalist, is stricken with heart trouble at Kansas City, and returns to his home.

—The New York Civil Service Commission prepares to open to competition all the political appointments in the eleven largest counties of the State.

Saturday, November 18.

—Despatches from General White announce the safety of Ladysmith; a heavy bombardment of Kimberley is carried on by the Boers.

Great Business Investment.

Because of the rapid growth of New York City, which is over 100,000 annually, nowhere in the United States is there a better opportunity afforded to make money than by an investment in real estate anywhere in the city or its suburbs. \$1 to \$3 a week will buy you a choice lot in a most beautiful, no saloon section of the city. See page 2.

ASTHMA

FREE. If you suffer from any form of Asthma we want to send you free by mail, prepaid, a Bottle of the famous Kola Plant Compound. It is Nature's Sure Kola Cure for the disease, and we guarantee that it will forever stop all your suffering. We are sending out 50,000 bottles free by mail to Sufferers, to prove the wonderful power of this New Discovery, and we will be pleased to send one to you. Send your name and address on postal card. Address, **THE KOLA IMPORTING CO.,** No. 1161 Broadway, New York.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

THE LARKIN SOAPS

THE LARKIN PLAN saves you half the regular prices, half the cost. You pay but the usual retail value of the soaps after thirty days' trial and all middlemen's profits are yours in a premium, itself of equal value.

Our Great Combination Box.

Enough to last an Average Family one Full Year.

This List of Contents Changed as Desired.

100 Bars "Sweet Home" Soap . \$5.00

Gold Medal Winner. For laundry and household purposes. It has no superior. Large bars.

10 Bars White Woollen Soap70

A perfect soap for flannels.

12 Pkgs. Boraxine Soap Powder . . . 1.20

Full pounds. An unequalled laundry luxury.

5 Bars Honor Bright Scouring Soap .25

1-4 Doz. Modjeska Complexion Soap .60

Perfume exquisite. A matchless beautifier.

1-4 Doz. Old English Castle Soap .30

1-4 Doz. Creme Datmeal Toilet Soap .25

1-4 Doz. Elite Glycerine Toilet Soap .25

1-4 Doz. Borated Tar Soap25

Unequalled for washing the hair.

1-4 Doz. Sulphur Soap25

1 Bottle, 1 oz., Modjeska Perfume .35

Delicate, refined, popular, lasting.

1 Jar, 2 ozs., Modjeska Gold Cream .25

Soothing. Cures chapped hands.

1 Bottle Modjeska Tooth Powder .25

Preserves the teeth, hardens the gums, sweetens the breath.

1 Stick Witch Hazel Shaving Soap .10

The Contents, Bought at Retail, Cost \$10.00

The Premium, Worth at Retail . . . 10.00

All for \$10. . . . \$20

You get the premium you select, gratis.

The Larkin Plan
GIVES You the Beautiful Desk

The Whole Family supplied with Laundry and Toilet Soaps for a year at Half Price. Sent Subject to Approval and Payment after Thirty Days' Trial.

THE FIRST AWARD OF THE OMAHA EXPOSITION WAS GIVEN THE LARKIN SOAPS.

THE "CHAUTAUQUA" DESK. Solid Oak throughout. Hand-rubbed finish. Very handsome carvings. Beveled plate mirror. Desk is 5 feet high, 2½ feet wide, writing bed 24 inches deep. Drop leaf closes and locks. Brass curtain rod.

It is Wise Economy to Use Good Soap. Our Soaps are sold entirely on their merits, with our guarantee of purity. Thousands of Families Use Them, and have for many years, in every locality, many in your vicinity. Ask us for your neighbors' testimonials.

AFTER 30 DAYS' TRIAL, if the purchaser finds all the soaps, etc., of excellent quality and the premium entirely satisfactory and as represented, remit \$10; if not, notify us goods are subject to our order. We make no charge for what you have used.

If you remit in advance, you will receive in addition a nice present for the lady of the house, and shipment day after order is received. Money refunded promptly if the Box or Premium does not prove all expected. Safe delivery guaranteed. The transaction is not complete until you are satisfied.

Many boys and girls easily earn a "Chautauqua" Desk or other premium free, by dividing the contents of a Combination Box among a few neighbors who readily pay the listed retail prices. This provides the \$10.00 needed to pay our bill, and gives the young folks the premium as "a middleman's profit." The wide success of this plan confirms all our claims.

Booklet Handsomely Illustrating Twenty Premiums sent on request.

THE LARKIN SOAP MFG. CO., Larkin St., Buffalo, N. Y.

See Notes Below.

Established 1875.

Capital, \$500,000.

The Independent, New York, says: "The Larkin Soap Mfg. Co. make our readers a wonderful offer. Not only do they give you a box of excellent laundry soap and toilet articles of great value, but they also give each purchaser a valuable premium, and we personally know they carry out what they promise."

From the Northeastern Christian Advocate, Chicago: "For the Soaps manufactured by the Larkin Soap Mfg. Co. we have heard many expressions of satisfaction and commendation. Knowing what we do we recommend the Company with confidence."

Wishers and woulders are poor house-holders.

Don't Wish

for a clean house. Make it clean with **SAPOLIO**.

SAPOLIO is a solid cake of scouring soap.

—The columns of **Generals Lawton and MacArthur** continue to advance in Northern Luzon, and occupy several towns.

—The President appoints ex-Congressman **William D. Bynum** a member of the Board of General Appraisers at this port.

—The resignation of **Chief Justice Chambers** of Samoa is accepted by the President.

Sunday, November 10.

—The Boers seize several towns in Cape Colony south of the Orange River, but are repulsed around Ladysmith.

—The report of **William A. Jones**, Commissioner of Indian Affairs, is made public in Washington.

—The Inspector General of Chinese Customs reports that there is a large increase in the importations of American goods.

LIFE'S PRIZE.

Who would not live a hundred years, if at that ripe old age the health was good and the mental faculties sound?

People die young in many cases because nature's laws have been disregarded. If our food and habits are correct, we should be strong and healthy at eighty instead of crippled and infirm.

What an important part the food plays in one's health!

If we eat that which the stomach rebels against, indigestion and a long train of diseases follow. When the stomach is out of order, the whole system is wrong, the brain can not be active and the mind clear. The food must be properly selected and skillfully prepared. This is essential to a sound, healthy stomach, clear mind, and active brain.

It is claimed by a physician who has been making a series of investigations that so much chronic stomach trouble in this country is due to the improper preparation of cereal foods. Investigation shows that in most families where oatmeal and other cereal foods are served, that they are only cooked a few minutes, and when prepared in this manner, abound in starch, which taxes the stomach and retards the digestion of other foods. Cereals contain large amounts of starch, but this starch should be converted into dextrin to make it easy of assimilation and fit for the stomach. It requires about five hours' constant cooking to make this change.

A most palatable food, called Granola, is offered to those who would use care and judgment in their diet.

This food is a combination of grains, carefully cooked, the starch being converted into dextrin, giving it a rich, nutty flavor and three times the food elements of beef.

Those who enjoy a rich, delicious meal will find that the addition of a little milk to a few teaspoonfuls of Granola will make a dainty and appetizing dish.

Granola is supplied in pound packages by leading grocers. Each package bears the picture of the famous Battle Creek, Mich., Sanitarium.

Readers of THE LITERARY DIGEST, who will send the name of a grocer who does not sell Granola to the Sanitarium Health Food Co., Battle Creek, Mich., will receive a free sample.

EUCALOL CURES Catarrh Grippe Colds

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. HYDE, Brooklyn, N. Y. 1893.
The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the "reaper" over the old-fashioned "sickle."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled.

Send for price list and circulars. Mention this advertisement.

OFFICES IN EVERY CITY IN THE WORLD.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.
CAPACITY 35,000 ACATE LINES.
Size of Book, 4-1/2 x 10-1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

Notes.

- (a) While White, evidently, has an object in view, he is losing lots of time.
 (b) We don't like this move, for White can play B x Kt, followed by P-B 4, giving him a strong center.
 (c) This permits Black to gain a move at a very important time. Better B x Kt, followed by P-B 4.
 (d) To allow this P to thus advance is suicidal. Better was 17 B x Kt, P x B; 18 P x P, P x P; 19 R-K Kt 3.
 (e) Forced; but puts White's game in a boxed-in condition. Here is a sample of a player keeping the other from doing anything.
 (f) Another lost move. Worse than this, he places the R where he can not use it when needed.
 (g) Note the fact that P-R 4 would win a piece.
 (h) P x Kt wouldn't help matters.
 (i) If K x Q, Kt-K 6 ch; K-R 2, R-R sq, mate.

A Brilliant Ending.

In a game between Mr. Amos Burn and an amateur, the following position occurred:

WHITE (Mr. Burn): K on K R 2; Q on K B 3; B on Q 5; R on K 2; Ps on K B 2 and K B 6, K Kt 3, K R 3, Q B 4.

BLACK (Amateur): K on K Kt sq; Q on Q R 8; B on Q 3; R on K B sq; Ps on K B 2, K Kt 3, K R 3, Q R 4.

Mr. Burn, having the move, played R-K 7. It is quite evident that if B x R, P x B and Black must lose his R, or Q x P ch, etc. The moves were 1 R-K 6, P-R 5; 2 B x P ch, R x B, and White mates in seven moves.

For a Nerve Tonic

Use Horsford's Acid Phosphate.

Dr. H. M. HARLOW, Augusta, Me., says: "One of the best remedies in all cases in which the system requires an acid and a nerve tonic."

MASSAGE
At Home

Massage means beauty, health and strength. Every beautiful woman on the stage makes regular use of massage. It is of vital importance in all athletic training. It forces the waste matter out of the body through the

pores of the skin. It invigorates the flow of the blood. Its vitalizing effect is instantly shown in a feeling of vigor and refreshment. Massage is the finest of tonics (with no after depression)—the truest of beautifiers—a blessing and a luxury now within the reach of all.

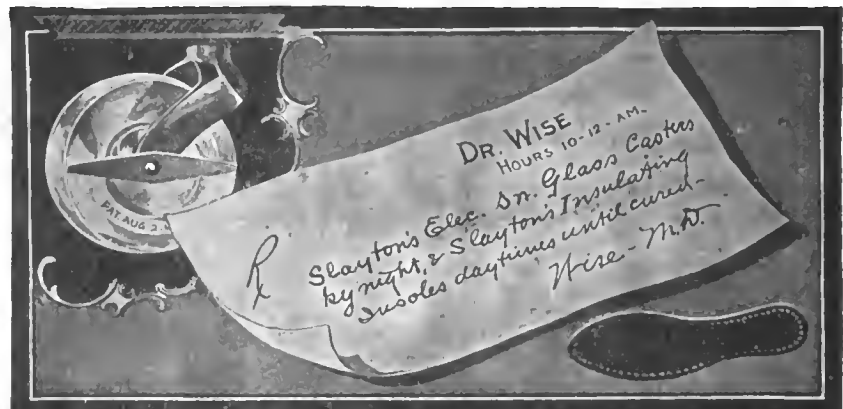

MacFadden's Massage Exerciser

give perfect massage at your home, by your own hands. It builds muscle, removes fat, and cures numerous diseases. It consists of polished wooden balls, between elastic cords (see cut). Rolled swiftly over the flesh it gives all the essentials of massage. A complete elastic exerciser, by means of which every part of the body may be built up, beautified, and strengthened.

FREE TRIAL OFFER.

SENT ON TRIAL.—We send it on request by express, if you promise to send us either the regular price (\$1.50 woman's strength; \$3.00 men's) or return the EXERCISER within three days of receipt. Complete book of instructions how to obtain greatest increase of health and strength with every EXERCISER, also directions for use in various diseases.

THE MacFADDEN CO., 25th Street and Broadway, New York.

THE NEW SLAYTON INSULATION CURE FOR
Rheumatism and Sleeplessness

To all who suffer with these ills, or with pains in muscles and bones, with neuralgia, sciatica, nervous weakness or lessened vitality, we offer a free trial of the simplest and best treatment yet devised—one which is drugless and harmless, yet which is, by proof of strongest testimony of hundreds of intelligent and educated persons, daily bringing wonderful relief to severest cases of these ailments. The principle of The Slayton Electric Switch Glass Casters and the Slayton Insulating Insoles is the discovery of the great Dr. Brown-Sequard, that these diseases arise from an excessive flow of electricity from the body to the earth. This is the theory, and it has been found correct; we know, too, that our Insulation Treatment works great and astonishing good, and we urge every afflicted one to take a free trial of it.

THE ELECTRIC CASTER CO.,

ESMONO, ILL., March 15, 1899.

Gentlemen:—Please find enclosed \$3.00 for Casters. I had the inflammatory rheumatism last spring. It left me with stiff joints; lame; could not sleep; lay awake; nervous weakness. I got the Casters, put them under the bed, went to bed and to sleep. Have not had a pain since; as sound as a gold dollar. My neighbors go limping along and laughing at me. I have not had the least bit of stiffness since I put them on the bed. Very respectfully, FRED GOODRICH.

FREE TRIAL FOR TWO WEEKS. We will gladly send any one a full set of the SLAYTON ELECTRIC SWITCH CASTERS and SLAYTON INSULATING INSOLES on receipt of 25c for postage and packing, or separately, 17c for the Casters and 8c for the Insoles. Try them for two weeks according to directions. If they do not help you, return them by mail and no charge will be made. If they do help you (and they almost certainly will), send us \$3 for the Casters and \$2 for the Insoles. These articles can be used separately with great benefit, but to secure the greatest relief both should be used. Be sure to state whether Casters are to be placed on iron, brass or wooden bedsteads, and the size of shoes Insoles are to fit.

THE SLAYTON ELECTRIC CASTER CO., Ltd., 25 High Street, Tecumseh, Mich.

Three Centuries of Scholarship

FOR nearly three centuries great scholars have been studying Shakespeare. The results of their labor—condensed, simplified, and added to by Richard Grant White—are to be found in this edition.

"Mr. White has given us the best extant text, while the fullness of his notes gives his edition almost the value of a variorum."

—JAMES RUSSELL LOWELL.

Notes—plenty of good notes—are an absolute necessity in reading Shakespeare. In importance they are second only to an accurate text. By notes are meant glossaries, analyses and comments on the plays, index of topics, the history of the drama—in short, whatever will help reveal the inner meaning of Shakespeare's plays, and color-out his finer shades of thought.

IT IS SHEER ABSURDITY for a reader who wants really to know Shakespeare to buy simply the text of the plays. If you buy Shakespeare, why not buy the best?—Richard's Grant White's Shakespearian Library.

Writing before 1600 Shakespeare constantly refers to events and "fads" of his own time and of former times. These need explanation. The English language too is somewhat altered since 1600. Shakespeare uses words in special senses requiring comment.

Every line of Shakespeare is weighted down with thought, but the thought is not all or usually on the surface. Whoever will obtain the richest intellectual inheritance from Shakespeare must mine out the deeper meanings. Notes supply the axes, shovels, and maps of direction.

WILL YOU THROW AWAY THE SCHOLARSHIP OF THREE CENTURIES?

WHITE'S SHAKESPEARE INTERNATIONAL EDITION

Not Simply the Text, but a Complete Shakespearian Library

The text is founded on the best authorities. The **introductions** to each play, the **notes**, **analyses**, and **glossaries** are full and scholarly. The life of Shakespeare and the history of the older English drama are probably the best ever written. One volume is given to a complete **Topical Index of Shakespeare**. The illustrations are photogravures.

A **limited edition** is issued in thirteen volumes, bound in half leather and in cloth with gilt tops and offered for about **half the regular subscription price, our low club prices being \$19 for the half leather and \$16 for the cloth binding. Books may be returned if not satisfactory. We pay expressage.**

A Souvenir

Portfolio, consisting of 4 large photogravure reproductions of

Celebrated Paintings

pertaining to Shakespeare and made especially for framing, will be sent

THE UNIVERSITY SOCIETY,
78 FIFTH AVE. NEW YORK

Young People's Weekly.

It is the kind of paper that is accepted by every conscientious parent feeling the moral responsibility and duty of giving to the son and daughter reading material that will build a good character. The favorite story paper is an index of the reader's future and **YOUNG PEOPLE'S WEEKLY** readers are not being educated in the ways and means of crime. It is a foe to the trashy, sensational reading that undermines so many young lives. Its eight to twelve pages, all handsomely illustrated, whet the appetite for the best in fiction, and develop a strong love for the traits that enoble and make good men and women great and famous. Every line is read, because every line is interesting. Among many other good treats for the coming year are several new serials of exceptional worth and interest, by Edgar Simpson, Mary Almira Parsons, Ida Reed Smith and others.

Excellent short stories by popular authors, special papers on special subjects by special writers, and a score of other attractions will continue to make the **YOUNG PEOPLE'S WEEKLY**, price considered, the best paper of its class. Subscribe now and get special Christmas issue **FREE**. Three month's trial for 20 cents or one year for 75 cents.

An Art Gift.

All who subscribe for one year and remit the price will receive absolutely free and ready for framing, a magnificent reproduction in colors (size 13x18 inches) of that most beautiful of paintings, "THE SOUL'S AWAKENING." We send free the same picture that you will have to pay \$1 for at any art store.

MORE OR LESS PUNGENT.

Fond of Children.—Extolling the merits of a dog be offered for sale, the owner said: "He will eat anything, and is very fond of children."—*Exchange.*

Not Seasick.—"No, sir," said a passenger on a steamship to the captain, "I am not seasick, but I am disgusted with the motion of the vessel."—*Ohio State Journal.*

Providential.—SIMPKINS: "Funny that a woman can never throw anything straight."

JENKINS: "Not funny, exactly, rather providential, isn't it?"—*Boston Traveller.*

"Don't leave the table," said the landlady, as her new boarder rose from his scanty breakfast. "I must, madam; it's hardwood, and my teeth are not what they used to be."—*Tit-Bits.*

He was Touched.—"I suppose you were touched when your wife gave you that \$50 easy chair?" "Of course! How else do you imagine my wife could come by \$50?"—*Detroit Journal.*

The Chickens Raised Them.—"FRIEND: "Do you raise vegetables?"

SUBURBANITE (saddy): "No, I only plant them my neighbor's chickens raise them."—*Exchange.*

Thought it was a Proposal.—(Scene Cabstand near London): Lady, distributing tracts, hands one to cabby, who glances at it, hands it back, and says, politely: "Thank you, lady, but I'm a married man." Lady nervously looks at the title, and reading, "Abide with me," hurriedly departs, to the great amusement of cabby.—*Spare Moments.*

Thoughtful.—Excitement is often the cause of strange telegrams, as well as other queer manifestations. A man who had been one of the passengers on a shipwrecked vessel was rescued almost by a miracle. On arrival at a place from which he could send a telegraphic message, he forwarded the following despatch to his brother: "I am saved. Try to break it gently to my wife."—*Tit-Bits.*

NEW INVENTION A \$12 Bath Cabinet For only \$5.00.

Our New 1902 Style Square Quaker Folding Turkish Bath Cabinet

GUARANTEED TO BE THE BEST OF ALL CABINETS

at any price, or your money cheerfully refunded.

Engraved from Photograph.

Ready for use when received.
No frame to set up.
No trouble; No bother.
WE HAVE BEEN MAKING
GENUINE BATH CABINETS
FOR YEARS.

**COULD NOT BE BETTER MADE,
MORE CONVENIENT,
MORE DURABLE, MORE HANDSOME,
MORE SATISFACTORY,
IF YOU PAID FOUR TIMES THE
PRICE WE ASK FOR IT.**

27,000 physicians and 1,000,000 happy users recommend our Cabinet in the highest and strongest terms.

We are the largest manufacturers of Bath Cabinets in the world. Our annual sales, 300,000 Cabinets. Value \$1,500,000.00. Hundred times more than all other firms.

IT IS THE ONLY GENUINE CABINET MADE.

HAS A REAL DOOR, opens wide—hinged to frame. Other Cabinets with so-called doors are simply a hole or slit to crawl through. FRAMEWORK strong and rigid, made of best steel, galvanized to prevent rusting. EIGHT PRIGHTS support it from top to bottom. Some affairs on the market have no supports whatever, Cabinet rests on shoulders—others have 2 or 3 flimsy supports, shaky and unsatisfactory. DEATHLY COVERING MATERIAL—very best, antiseptic cloth—100% RUBBER LINED. TOP CURTAINS open on top for cooling off—Cabinets that do not do this are said to be dangerous. LARGE and ROOMY INSIDE. Knees, arms and body do not touch the sides. Plenty of room for hot foot bath, and, in sponge, towel and cool the body while inside. FOLDS FLAT like a screen in 1-inch space—others crush together and damage the goods. WEIGHTS complete only 10 lbs. Easily carried.

There is no Man, Woman or Child in the World Whom Turkish and Vapor Baths will not Benefit.

Seated on a chair (with the head outside breathing pure air) one enjoys at home for 3c. each, all of the cleansing, curative, invigorating and purifying effects of the famous Turkish, Hot Air and Vapor baths, perfumed or medicated if desired. Better and cheaper than any treatment at Turkish Bath Rooms, Sanitariums and Hot Springs.

SO SIMPLE TO OPERATE.

Before retiring, light stove, step in Cabinet, close and lock door, sit down and you enjoy a temperature of 100° to 150° F. according to how you regulate stove. All done in one minute. Stay in 15 to 30 minutes—open top curtains, cool off gradually while you sponge and towel the body. Impossible to catch cold or weaken the system. Perfectly safe and harmless.

DON'T BE DECEIVED

by imitations. We do not make it our business to find fault with other people's goods, but as there are a number of unreliable, irresponsible concerns who have sprung up in the past few months, know nothing whatever of the laws of hygiene, and have no regard for the public health, are trying to market so-called Cabinets which are inconvenient, unreliable and dangerous to use, on the strength of satisfaction given, and the enormous demand created for our genuine Quaker, and as we have many letters from persons who have bought such goods, are unable to use them, and obliged to throw them away and secure a genuine Cabinet from us, we feel it our duty to warn the public so that no one else may be imposed upon. If our Cabinet is not the best in every way we do not want you to keep it.

Don't use a Cabinet which has no door, no frame, no rubber lining.

Remember a wooden frame Cabinet is ten years behind the times, is worthless, and about as valuable as a wooden stove would be. Do not pay \$7.50, \$12.50 or \$18.00 for inferior, bunglesome and inconvenient affairs when the best costs only \$5.00.

Place your order with us and you have the satisfaction of knowing you are doing business with a responsible and reliable firm (capital \$100,000.00) who know the requirements of a first-class Cabinet, do exactly as they agree and furnish you a genuine Cabinet guaranteed to be the best in every particular.

Write to-day for full information and our valuable book, also testimonials from thousands of customers. Or, better still, order a Cabinet. You won't be deceived or disappointed as we guarantee every one, and refund your money after 30 days use if not just as represented. We ship the same day your order is received. DO NOT FAIL TO SEND FOR BOOKLET, as it will prove interesting.

AGENTS AND SALESMEN WANTED—We will spend \$350,000.00 advertising this Cabinet. This will create an enormous demand right in your locality. You carry small stock and supply it. Most liberal terms and commissions. Be your own boss. Any energetic man or woman can make \$5.00 to \$10.00 clear daily. WRITE FOR OUR NEW PLAN, TERMS, ETC., FREE. Send your address anyway.

The World M'f'g Co., 774 World B'ld'g, Cincinnati, O.

CORPULENCE.

We want to send every stout person a little book concerning the most successful harmless treatment of this trouble. It is the method conceived and perfected by the best known specialists in New York. A valuable book of scientific common sense. Sent for 2c. stamp.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

A Card to Subscribers.—THE LITERARY DIGEST wishes to secure a business representative, man or woman, in every city of five thousand or more population in the United States and Canada. The right kind of persons can earn \$25 a week. Subscribers who can assist us in securing such representatives will confer a favor upon us that will be appreciated, besides helping worthy persons to remunerative employment.

TOPICS OF THE DAY.

THE CAMPAIGN IN SOUTH AFRICA.

RENEWED interest in the struggle in South Africa has arisen in America with the advance of the newly arrived British troops. "The British avalanche," as the *Providence Journal* says, "is in full motion," and what the result will be is the subject of considerable speculation. A London correspondent of one of the New York papers said a few days ago that if General Joubert could see all the strategic plans with which the press credit him, he would have serious doubts of his own sanity. No doubt he has some plans, however, and a few guesses at what they are form an interesting part of the war comment. The *Rochester Herald*, for example, believes that Joubert has been able to capture Ladysmith at any time since the battle of Glencoe, but has held off to draw General Buller's forces up into the "neck of Natal," where the Boers can most easily defend their frontier. Generals Clery and Hildyard, therefore, who are trying to relieve Ladysmith, are, according to this theory, marching right into Joubert's trap. The *New York Press*, however, has a different theory, by which it appears that the old Boer commander himself is the one who is in a trap. General Methuen, the despatches tell us, is rushing a large force northward to the relief of Kimberley and Mafeking, while Generals Gatacre and French are to invade the Orange Free State from the south. If these forces are successful, *The Press* points out, General Joubert will find that a big British army is hurrying to Johannesburg and Pretoria while

he is down in the "neck of Natal," 350 miles away. Whatever may be the Boer and British plans, it is agreed that critical times for the Boer forces have begun, and that what they are to do at the beleaguered cities they must do quickly.

Boer Prospects Dark.—"In spite of the frequent successes the Boers have met with we can not see that indications so far hold

GENERAL METHUEN,
Commanding relief of Kimberley.

out the smallest prospect of final success to them. As a matter of fact, the campaign so far has been a complete failure upon their side. The theory upon which they went into the war was that they would rush the British garrisons in the country before they could receive succor from home, and overwhelm them with superior numbers and make them prisoners before any relief could reach them. But the stubborn and obstinate defense that has been made by the English at each point attacked has upset all of the Boers' plans and nullified all of their calculations. They have made a dead failure of what they started out to accomplish.

They have not taken a single point besieged, and, except for the looting forays they have made into undefended territory, the military situation is just the same to-day as it was when they threw their ultimatum in Queen Victoria's face. . . . We think we should risk but little in predicting that Buller will march straight to Pretoria when he does start, with but little serious opposition, that he will occupy the capital of the Boers, and, after that, little will remain but for him to disperse the separated organized bodies as they appear, and the war in the Transvaal will be over."—*The Richmond Times*.

President Kruger and Consul Macrum.—"If a London report be true, President Kruger is making a serious mistake in his attitude toward the United States in this crisis. It is asserted that he has refused to permit the United States consular agent at Johannesburg to act as the British agent during the war. It is said that Kruger objects to Mr. Macrum on the ground that the claims of this country to neutrality are prejudiced by its evident friendship for England. One result of this attitude is that it is impossible for the English authorities to secure information about their men held by the Boers as prisoners save through military channels, which is an awkward method and not reliable. It is fairly incredible that the President of the South African Republic should take this absurd ground. . . . During the war between Spain and the United States the former country was represented at this capital by the French ambassador, whose people at home had shown the most virulent sympathy for Spain throughout the preliminary proceedings and continued to do so even throughout the war. Nevertheless, M. Cambon was cordially accepted as the Spanish diplomatic agent, and his services in the formulation of the preliminary peace terms were gladly utilized. At the

CHARLES E. MACRUM,
United States Consul at Pretoria.

same time the American interests in Spain were cared for by the British ambassador there, and his status was never questioned

MAJ.-GEN. H. J. T. HILDYARD,
In command at Estcourt.

because of the well-known fact of England's leanings toward the United States in the quarrel. 'Oom Paul' shows his failure to appreciate the true nature of governmental rights and obligations if he thus rejects the credentials of the American consular agent as the representative of British interests in the Transvaal. A verification of this London report would go far toward lessening whatever degree of esteem for him and sympathy for his cause may exist to-day in the United States. For his own sake his traveling representative in Europe, Dr. Leyds, should send him word to desist

from this foolish suspicion and act according to the established customs in time of war."—*The Washington Star*.

The Scandals Have Begun.—"That the British commissary department is under suspicion, that rotten transports have been purchased or chartered at the highest market price, that the army contractor has a latchkey to the ministerial quarters in Downing Street—these and similar statements have a familiar sound recalling the flush times of 1898. . . . And there is good reason to believe that the stories thus far told have a substantial foundation. It is only three or four months since it was charged and not denied in the House of Commons that most of Her Majesty's ministers were interested in private enterprises which depended directly upon government patronage. One noble lord was connected with a gun foundry; another was chairman of the Peninsular and Oriental Navigation Company, which furnishes many transports to the War Office; still another belonged to a firm which manufactures uniforms—and so on throughout the list. The statement, as we have said, was not denied. On the contrary, Sir Michael

MAJ.-GEN. J. D. F. FRENCH,
To invade Orange Free State.

Hicks-Beach arose and defended the noble lords and right honorable gentlemen on the ground that their interest in these profitable enterprises was 'an innocent and proper form of relaxation from public duties.' Sir Michael himself recently relaxed long enough to sell to the Government, for the purpose of military maneuvers, a tract of waste land on Salisbury Plains for which he exacted something like \$100 per acre. Its real value, according to local estimates, was from 75 cents to \$1.50 per acre. With statesmen like these, therefore, relaxing themselves in time of peace, what may we not expect when the stress of war affords opportunities for

recreation tenfold more profitable? Is it not likely that the tales thus far told are a mere foretaste of what is to come? May we not confidently expect to see Alger, Hecker & Co. thrown in the shade, while the odor of 'canned roast beef' will appear like attar of roses compared with the emanations wafted from the British commissariat?"—*The Chicago Chronicle*.

Crushing Blow Necessary.—"The necessity of once and forever crushing the Boers will now come home to the English authorities; for they must, if from no other motive than their own political safety, redouble their efforts to concentrate in South Africa an army which shall bear down resistance by mere force of numbers. This has been their purpose all along, but, despite the resources at Great Britain's command, she has been late in assembling on the ground a force adequate to the task appointed for it. Great Britain has, however, either in South Africa now or on its way thither what is pronounced by a competent authority 'the largest purely British army' that has ever left British shores. Reckoning the local force in imperial pay, the regulars already on the ground, etc., it was estimated a week ago that the British force to be employed in South Africa would not fall far short of 80,000 men. In employing such an army the British Government has been sharply criticized as overestimating the enemy, but the result of the campaign thus far has more than justified its opinion that opponents of courage, skill, and activity were to be reckoned with. The employment of so large a force is a humane measure, too, for it will correspondingly shorten the war by making its issue depend upon one or two actions in which real armies, not detachments, shall be used."—*The Boston Transcript*.

Boer Lessons for the British.—"It is an excellent thing for the finality of a settlement at the end of a war, that the conquered shall have a wholesome respect for the prowess of the conqueror, tho the conqueror may be Mr. Chamberlain himself and the conquered but a backward Boer; that the conqueror shall, in his definitive treaty of peace, be forced to bear in mind that the conquered can shoot extremely straight with a rifle, even tho he appear at a disadvantage, in spite of his German tuition, when it is a question of artillery practice. He may still have a contempt for him, as a 'rude Carinthian Boer,' when the question is of social amenities, but that he is an unpleasant person to go to war with not even Mr. Chamberlain can any longer dispute. . . . And upon the whole we can not regret that even so one-sided a war should be prolonged long enough to show the victors that, in more ways than one, they have found foemen worthy of their steel. It is of good augury for the future of South Africa that it should be so."—*The New York Times*.

One Charge Disproved.—"It need hardly be said that the British estimates of the losses of the Boers have been overdrawn. That is evident in many ways. It is true that the Boers have been handled far more roughly than they ever were before in fighting the troops of Great Britain. The old virtual immunity from punishment in actions with British regulars has passed away. And yet the Boers come on for more battles. . . . 'Kill five hundred of the Dutch,' one British jingo paper insisted, 'and there will be no need of anything more but sending in the coffins. That will be the end of the war, and the bubble of Boer military prowess will be pricked forever.' If there is any one thing which

GENERAL GATACRE,

the war in South Africa has already proved it is the utter falsity of such statements. The Boers have not gone unscathed in the battles fought. They have suffered severely in many actions, both in attack and defense. All the world knows how far they have been from running or giving up their unequal struggle for independence. They will never be called cowards again, even by their most vindictive and reckless foes."—*The Cleveland Leader*.

ADMIRAL DEWEY AND HIS HOUSE.

WHAT appeared on the surface to be two strong and sudden reversals of public feeling toward Admiral Dewey within the space of a few days have called out some interesting reflections on hero-worship, and have led to some serious inquiries whether our national spirit is not deteriorating and becoming as fickle as that of the French. A careful examination of the newspapers, however, shows that the "wave" or "storm" of disapproval (to use a mild term) which assailed the admiral was confined (in its public expression at least) almost entirely to the city of Washington, D. C., while the return "wave" of sympathy and

MORE DEADLY THAN SPANISH GUNS.

—*The New York Herald*.

esteem has come from practically all the rest of the country. Many papers outside Washington, it is true, admit that the admiral made an error of judgment in giving away the people's gift even to his wife; but they do not consider it sufficient cause for abating one jot of their admiration for his character and proved abilities. The *New York Journal* expresses the feeling found in many papers when it says:

"Admiral Dewey may undo the deed to the house presented him by a small portion of his fellow countrymen, but he can never undo the deed of May 1, last year. He asked no favors of his country or of his countrymen. He asked no favors of Montojo. He asked no favors of foreign fleets anchored at Manila. He asked for no demonstration in his honor, and, lastly, he did not ask for a house. But what he does ask at present is to be let alone. He has spent almost all his life at sea, and the least this country can do is to allow him to enjoy his 'shore leave' to the end of his days. Suppose a war were to break out to-morrow. Ah! there is where the shoe pinches. It would be, 'For God's sake, send Dewey to the front'; 'By all means, hurry Dewey after them'; 'Let the country rely on Dewey.' Wall Street would go down on its marrow-bones and perform rites to him. The persons who regret their miserable contributions would turn to Dewey with prayers. Then do you know what this grizzled old sailor would do? Newly married, and with almost the only domestic happiness he has ever known before him, he would buckle on his sword, hoist the four-starred flag of Farragut, and go to battle for the honor of his country and the welfare of his selfish countrymen."

Other papers recall the fact that General Grant and General Sherman sold outright houses that had been given them in recognition of their services, and no one thinks the less of them for it. "It is too bad," says the *New York Times*, "for our own sake and for Dewey's sake, it is too bad, not merely because it makes us appear ridiculous in the eyes of foreigners, but because these alternating currents of emotion, this most abrupt substitution of the cold shoulder for the warm heart, argue a want of steadiness in our make-up." To forget Dewey's services in making possible a new era in our national life "even overnight, for some petty mistake in his private life," says the *Chicago Inter Ocean*, "is to shame the name of gratitude and to discredit the intelligence of the American people." The *Brooklyn Eagle* thinks that the transaction, instead of being a mistake, was, after all, a wise arrangement. Says *The Eagle*:

"Let us all learn charity, while also learning a little law. When held in the name of the admiral, the house was subject to lower rights. Since deeded to the son by the gracious woman to whom the admiral lovingly gave it all, the house has had an indivisible Dewey title. This not only perfects the intent of the gift in the present but secures that intent for the future. The result is better than the case was before the incident began, which is now so happily closed. Out of the bitter has come sweet."

A number of papers have remarked that no doubt the great majority of the Washington people who hissed the admiral's picture at a biograph entertainment and expressed their indignation in the cafés, and wrote the letters published in *The Evening Star*, never gave a dollar toward buying the house whose transfer now rouses their resentment. Several letters have appeared offering to refund the subscriptions of any dissatisfied contributors to the Dewey home fund, but none of the contributors seem to have responded. The *Chicago Tribune* compares some of England's gifts to her heroes, and says that those who are vilifying Admiral Dewey only show their own contemptible littleness:

"After Marlborough had routed a French army and captured a French marshal and his command, Parliament appropriated nearly two and a half million dollars to build for him Blenheim, which is still one of the most imposing and splendid edifices in England. The English nation, feeling grateful to Wellington for services at Waterloo, gave him Strathfieldsaye, costing about \$1,300,000. Prior to Waterloo he had been made a duke, given a pension of \$50,000 a year, and voted nearly a million dollars in money. When England makes presents to heroes it is on a grand scale, so the world may know the services of those heroes are fully appreciated. It would be humiliating and belittling for this nation of 75,000,000 people, with vast wealth, enormous resources, and a limitless domain, were it to be understood that it had manifested its gratitude to a naval hero by giving him a \$50,000 house in Washington and then censuring him because he felt himself at liberty to make a present of it to his newly wedded wife."

As to the suggestion that the Dewey Arch in New York be called the "Navy Arch," the *New York Sun* says that the names of those who made this suggestion "should be posted somewhere in imperishable brass."

"Ten Per Cent. a Week."—The collapse of "The Franklin Syndicate" in Brooklyn, where an immense number of poor people had been induced to deposit their savings with an irresponsible young man on the promise of ten per cent. a week interest, has drawn a number of exclamations from the press. The number of depositors and the amount of deposits are not fully known, but the office was crowded with depositors up to the last moment, and it is said that the last day's receipts were about \$15,000. Some of the papers think that the total deposits must have reached a million or more. The *New York Herald* says of the incident:

"The press learned of the affair and warned the gullible portion of the public of the risk they were running, or, rather, the cer-

tainty there was that the proverbial 'fools and their money' were being parted at the Miller residence and office. The banks heard of it and threw the young man out, metaphorically, neck and heels, and the fact was published in the newspapers. Even the church which he attended took a hand in to utter warnings. What was the result? A mob at the door of the syndicate to demand their money back? Not at all. A greater crush than ever of depositors, after that golden-hued will-o'-the-wisp, 520 per cent. ! As long as that sign was hung out as the bait there were gudgeons to be caught. Really, since the South Sea Bubble nothing, in a comparatively small way, seems to have so bedeviled the common sense of a metropolitan community. Tho the folly of the offer was apparent on the face of the proposition to pay enormous profits that could not possibly be earned, the men and women had gathered their savings through years of sweating toil, nothing seemed able to stop them from pouring funds into the cash drawer of the little frame house in Brooklyn where Miller was doing business 'in his hat,' as the saying is. The Kings County Grand Jury, however, has come to the rescue of these poor, deluded mortals who have been flinging their dollars into this financial bottomless well on the promise that they would come up again five-hundredfold in quantity—or, at least, the jury has barred the way to others who were rushing in. Miller was indicted yesterday for conspiring to procure money under false pretenses, and a warrant issued for his arrest. The end of the game was bound to come, and the finish was sure to be just that which has wound up the doings of the Franklin Syndicate. But the wonder is that the game lasted so long and that so many dupes were found to plunk down good money against the loaded dice of vain promises."

The "country cousin," remarks *The Herald*, has the laugh on the "city folks" this time.

GERMAN-AMERICANS AND THE ELECTIONS.

IT was no secret during the recent campaign that the "anti-imperialists" in Ohio and elsewhere relied not a little on the German-American vote, on the theory that the men who had left home and come to a strange land to escape militarism and its burdens would vote against a supposed similar danger here. What the German-American voters actually did when election day arrived, however, according to reports in the Republican press, was just the opposite. If these reports are correct, the national campaign plans for next year will have to be revised. The German-American papers admit that many of the Germans voted the Republican ticket; but, they explain, it was in opposition to free silver, not in indorsement of expansion. Now that the German-American press is taking a more active part in political discussions than formerly, the Republican contingent are rallying to the defense of the President and express themselves as convinced that there is no longer any fear of a decided anti-German tendency in the McKinley Cabinet, and that German-American Republicans need not fear that their adherence to their party will be regarded as an indorsement of the so-called Anglo-Saxon policy. But many Democratic papers still regard the McKinley Administration as violently anti-German. The St. Louis *Abend-Anzeiger* (Dem.) says:

"The Republican victories are not great enough to boast of, but they are important enough to insure McKinley's renomination, and unless the Democrats thoroughly revise their policy, the reelection of McKinley can not be prevented. . . . Even the dislike of McKinley's expansionist policy is not strong enough to overcome the fear of the free-silver movement and its results."

The Louisville *Anzeiger* (Dem.) fears that President McKinley will regard the late election as an indorsement of his "imperialistic" policy, and the Evansville (Ind.) *Demokrat* (Dem.) expresses itself in a similar manner. The Pittsburg *Freiheitsfreund* (Rep.) says: "If the results of the elections in Maryland and Nebraska satisfy Mr. Bryan, he is easily pleased indeed, for no national questions were settled." The Detroit *Abendpost* (Dem.) thinks the people chose of the two evils—expansion and

free silver—the least harmful. The St. Louis *Westliche Post* (Rep.) says: "The Republican plurality in Ohio has not been obtained for imperialism, but in spite of it. The fear of the expansion swindle was not as great as the dread of a financial panic." The same paper, referring to a remark by *The Globe-Democrat* to the effect that the German-American voter has given up his opposition to the annexation of the Philippines, says that *The Globe Democrat* "evidently thinks a lie well stuck to as good as a truth." The Pittsburg *Volksblatt* (Rep.) says:

"The people have once more indorsed the Administration's financial and economic policy, but it is a frightful piece of 'cheek' on the part of our imperialists when they claim that their expansionist policy has been approved. When we remember that Nash in Ohio obtained 50,000 more votes than McLean, while Jones got altogether 100,000, there is a majority of 50,000 against expansion. The joy of the Republicans is not genuine. The truth is that the craze for conquests as well as the silver swindle have been given a serious blow."

The Cincinnati *Volksfreund* (Dem.) figures in a like manner, as does also the Philadelphia *Demokrat* (Dem.). The New York *Morgen-Journal* (Dem.) considers the Maryland vote as an answer to the Administration's treatment of Admiral Schley. The Chicago *Abendpost* (Ind.) thinks that prosperity as an issue will be much used up between now and the next Presidential election, and that McKinley is not sure of his second term. The Chicago *Freie Presse* still warns against McKinley as an enemy of the Germans. The Chicago (Ill.) *Staats-Zeitung* denies this, and says:

"It has been shown that the McKinley Administration is anxious to be on good terms with Germany, and the opposition to expansion has certainly decreased among the German-Americans since men like Atkinson carried their agitation so far as to approach our soldiers in the Philippines and to encourage Aguinaldo. All this, coupled with the dislike of the silver swindle, has caused many Germans in Ohio to vote Republican."—*Translations made for THE LITERARY DIGEST.*

EMPEROR WILLIAM'S VISIT TO ENGLAND.

ALTHO the German press insists that the Kaiser's trip to England is merely a "family affair," the American papers refuse to view it in that light. "The 'family visit,'" says *The Outlook*, "is doubtless the cover for the transaction of some of the most important state business of our time." Some of the papers point to the presence of Joseph Chamberlain, British Colonial Secretary, at Windsor Castle, where the German Ambassador to England and the German Minister of Foreign Affairs also were visiting the Emperor, and remark that such a meeting could not take place unless some business of world-wide significance were afoot. It is pointed out, too, that whatever else the visit may mean, it does not portend war; and the Emperor's recent conference with the Czar of Russia, his evident desire to keep the peace with France, and his present visit to England are thought to be as full of good omen as the Czar's conference at The Hague. The good omen, however, may not seem so bright to the Transvaal burghers, for the Emperor's visit, as the Philadelphia *Press* says, "is naturally intended to set at rest forever any hopes the Boers may have of European interference, and to demonstrate his personal interest in the British side of the controversy." Considerable speculation is rife as to why the German Emperor is doing all this. Has he conceived a sudden inexplicable love for Great Britain, or is he inspired by a wholesome respect for the "Anglo-Saxon Alliance"? According to the Boston *Transcript* the latter view is probably the true one. *The Transcript* says:

"Unless Germany gets back to friendly relations with both Great Britain and the United States she may find herself in an 'isolation' by no means 'splendid' when great questions of policy in the far East arrive. The Kaiser made a great mistake when,

after the Chino-Japanese war, he associated himself with the coalition which was hostile to both Japan and Great Britain. He got nothing for his assistance save a Chinese harbor nobody else wanted, and by his attitude helped Russia appropriate almost an empire out of Chinese territory. Not foreseeing the scope of a war between this country and Spain, the Kaiser finds, after four years of anti-British scheming in the far East, Great Britain more powerful on the Chinese mainland than ever before; the United States in possession of the Philippines, and himself with nothing to show for his labors but the shallow harbor of Kiao-Chow. He has driven the United States and Great Britain to a close understanding; has not placated France, and has obtained nothing from Russia. He has acquired all of Samoa that we do not care for, and even this has been granted him on the 'a-vote-is-a-vote principle' by Lord Salisbury. Whether the German people like it or not, the Kaiser may before long find himself in company with the United States, Great Britain, and Japan to the extent of at least public assurance of sympathy with them in their desire to preserve the open door to trade in China."

DEATH OF VICE-PRESIDENT HOBART.

MR. HOBART'S death calls out a large number of comments, not only on his life and public acts, but on the peculiar features of the office which he held. While remarking upon the anomalous position in which a Vice-President is placed—in which his principal function is that of waiting for another man to die—the press almost unanimously agree that Mr. Hobart added new dignity to the office and demonstrated that a Vice-President could be a force in the Government. The *Philadelphia Press* (Rep.) says:

"Under his administration of the office of Vice-President it became of more weight and importance than under the great majority of his predecessors. He was not only an able and popular presiding officer, but his counsel was constantly sought by the members of the Senate, something unusual in that body, and he performed similar service at the White House. No Vice-President was ever on more cordial terms with the head of the nation than was the case between Vice-President Hobart and President McKinley."

The strong and mutually helpful friendship between the President and Vice-President has been indeed the subject of wide remark, as such friendships between President and Vice-President have heretofore been noticeable principally by their absence. As president of the Senate, too, Mr. Hobart is considered to have exerted unusual power. "No Vice-President in recent years," says the *New York World* (Ind. Dem.), "has been at once so acceptable to and influential in the Senate." Mr. Hobart cast the deciding vote that defeated the Bacon resolution declaring that

the Senate in ratifying the treaty with Spain purposed to have the Filipinos treated as the Government had pledged itself to treat the Cubans. His tact was well illustrated when he advised Secretary Alger to resign the war portfolio. "There could scarcely have been a more unpleasant task," says the *Baltimore American* (Rep.), "and yet he discharged it in such a way as to retain the friendship of the late Secretary."

It is a peculiar fact that November seems an unfavorable month for Vice-Presidents. Six Vice-Presidents of the United States have died in office," says the Washington correspondent of the *New York Tribune* (Rep.), "and four of the six died in November"; and, as shown by the list he adds, between the 21st and the 25th:

"Those who died in office were George Clinton, of New York, April 20, 1812, at the age of seventy-three years; Elbridge Gerry, of Massachusetts, November 23, 1814, at the age of seventy years; William R. King, of Alabama, April 18, 1853, at the age of sixty-seven years; Henry Wilson, of Massachusetts, November 22, 1875, at the age of sixty-three; Thomas A. Hendricks, of Indiana, November 25, 1885, at the age of sixty-six years, and Garret A. Hobart, of New Jersey, November 21, 1899, at the age of fifty-five years."

Senator Frye, the president *pro tempore* of the Senate, will take Mr. Hobart's place as presiding officer, and John Hay, Sec-

retary of State, now stands next to President McKinley in the line of the Presidential succession, with the Secretary of the Treasury, Secretary of War, Attorney-General, Postmaster-General, Secretary of the Navy, and Secretary of the Interior following in the order named. This leads the *New York Evening Post* (Ind.) to argue that the office of Vice-President is superfluous:

"Since the method of selecting a Vice-President no longer has reference to the special qualifications of the man chosen, and since the chief places in the Cabinet are given to the men who, of the whole mass of citizens, are most nearly in accord with the policy and purposes of the Presi-

dent, the question recurs with force, whether the Vice-Presidency is not now a superfluity, and a rather dangerous one. The cases of Tyler and Johnson are too familiar to call for more than a reference. Even so conservative an Administration as Arthur's caused a political convulsion which, under some other conditions easily conceivable, might have put a perilous strain upon our institutions."

Mr. Hobart was born in 1844. The main events of his career up to his nomination for the Vice-Presidency in 1896 are sketched as follows by the *Philadelphia Press*:

"Mr. Hobart was a typical American. Like so many of our successful men he was the architect of his own fortune. A clerk in a country grocery store, then a school teacher, he finally started

Copyright, 1899, by Pach Bros., New York.

PRESIDENT MCKINLEY AND VICE-PRESIDENT HOBART.

out with a capital of \$2.50 and a letter of introduction to find an opening where he could study law. He fell into good hands, and his progress, when once admitted to the bar, was phenomenal. Five years later he was city attorney of Paterson, then he became a member of the lower branch of the New Jersey legislature, served as its speaker, became a member of the upper branch and then its presiding officer, and did magnificent work in relieving New Jersey from the rule of the corrupt ring of gamblers, ballot-box stuffers, and public contractors which so long held that State in its grip. . . . His life was one young men can well study with profit. Honesty, ability, and perseverance carried him next to the highest seat in our Government."

CLERGY AND THE HALF-FARE PERMIT.

A CURIOUS case was recently referred for decision to the Interstate Commerce Commission by the Rev. William Bohler Walker, of Joliet, Ill. This clergyman, who was in the habit of using the half-fare permits usually granted to the clergy, made some public remarks relative to certain evils in railway management. His permit was at once cut off by the railway officials. Mr. Walker then made an appeal to the Interstate Commerce Commission, contending that the reduction in fare was not a private favor, but a clergyman's privilege regardless of his individual opinions. Commenting on this case, the *Springfield Republican* says:

"We need not say that this contention raised an interesting issue. To combat it the railroads would have to maintain that the half-fare permit was a donation to the individual simply, and that it could fairly and should be used to reward those who spoke well of the roads and punish those who dared to say that the railroad in its relations to the public was not a perfect institution. And this is what the roads did not quite like to maintain. They did not care to say openly that the permit was a bribe. . . .

"So a half-fare permit was quietly sent to Mr. Walker, in the hope, apparently, of hushing him up. But he wanted a ruling from the Interstate Commerce Commission. He wanted to know whether he was taking a permit as a bribe or for the church—whether he could accept a permit and still call himself a free man. He was finally advised by the commission to accept the permit and drop the case, and then the commission said that as the railroad people had withdrawn from their position, there was

nothing to decide and the case was dismissed, leaving Mr. Walker in full possession of the field."

The right of the Christian minister to accept his permit, without feeling that his opinions were bought and paid for at the same time, was thus apparently established. Nevertheless, *The Republican* considers the practice of giving clerical concessions a harmful one:

"It is a class discrimination, and hence is out of harmony with the essential character of a common-carrier system. Established under the law, the concession partakes of the nature of a government subsidy to the church, which is out of harmony with American institutions. The church is able to stand alone. It can much better afford to do this than to travel on public charity."

VARIOUS CENTERS IN THE UNITED STATES.

THE accompanying map, sent to the New York *Herald* by a correspondent who signs himself "Statistician," shows at a glance where various sociological phases of our national life find each its balancing point. The center of crime at Columbus, Ohio, has, of course, no reference to the criminal character of its citizens, but indicates that there is just as much crime east of Columbus as west of the point, and just as much north of it as there is south.

The direction and distance of each center from the center of population shows also in what general section of the country the condition illustrated predominates and to what extent. The statistician explains his diagram as follows:

"The Government is about to mark a latitudinal center by placing a monument on the parallel of 45° north, midway between equator and pole, which runs through the hamlet of North Perry, Me. Such a monument as a permanent fixture is possible, but there are other interesting 'centers' which are by no means permanent. The geographical center of the United States, 3,602,990 square miles, excluding Alaska and our new possessions, is in northwestern Kansas, midway between Wakeeney and Hill City. The center of population is, however, far east of this, being fifteen miles west of Columbus, Ind., having moved to that point by easy stages from near Baltimore, where it was in the closing years of the last century, and it is still traveling. If it moves through the coming century as in the present, the year 2000 may find the cen-

LETTERS AND ART.

VICTOR HUGO'S FIRST INTRODUCTION TO SHAKESPEARE.

TO the author of "Hernani," more than to any other Frenchman, is due the liberation of the French drama from the restraints of classicism; and to him, also, as the leader of the *Romantiques* in the early decades of this century, was due much of the revival of Shakespeare study in France which has continued to the present day. At that time, the enthusiasm for the English dramatist which had been aroused by Garrick and had continued during the Revolution had evaporated, and Voltaire's hostile influence prevailed. In the *Revue de Paris* (October 1), some phases of this Shakespeare revival are touched upon in the new memoirs by Victor Hugo entitled "At Reims: 1825-38," which have been appearing serially in that magazine. Victor Hugo says:

"The first time that I heard the name of Shakespeare was at Reims, from the lips of Charles Nodier. It was in 1825, during the coronation ceremonies of Charles X.

"That name people then did not usually pronounce very seriously. The raillery of Voltaire still was law. Mme. de Staël, a very noble spirit, had adopted Germany, the great land of Kant, of Schiller, and of Beethoven. Ducis was in full triumph; and he was seated, side by side with Delille, in an academic glory not unlike that of the opera. Ducis had succeeded in *making something* of Shakespeare—he had made him possible to the French mind, and had given a rendition of the tragedies. Ducis seemed in effect a man who had molded an Apollo into a Moloch. This was the period when Iago was named *Pizare*, Horatio *Norcestre*, and Desdemona *Hélémone*. A charming and intellectual woman, the Duchess de Duras, exclaimed, '*Desdemona*—what a villainous name!' Talma, 'Prince of Denmark,' in satin lilac tunic bordered with furs, cried, 'Rest, perturbéd spirit!' The poor ghost, in fact, was not tolerated even behind the side scenes. Had he permitted the smallest ghost, M. Evariste Dumoulin would have been severely censured. The verse of Boileau would have been hurled at his head:

"The spirit is not moved by what it credits not."

"For the ghost in this famous scene, an 'urn' had been substituted, which Talma carried under his arm: a *ghost* is ridiculous; '*ashes*' are in high favor. Do we not even now say the '*ashes*' of Napoleon? Do we not call the removal of the coffin from St. Helena to the Invalides 'the return of the *ashes*!'? Then, too, the sorceries in 'Macbeth' were frowningly eliminated. The porter of the Théâtre Français has his orders, and it was with his broom that they were swept away.

"I deceive myself perhaps in saying that I had never known Shakespeare. I had known him, like the rest of the world, merely to misunderstand him, or to smile. My youth had commenced, as it does always, in prejudgments. Man finds prejudgments almost at the cradle; he throws them aside a little during his manhood, and then, alas! they return in his dotage."

Hugo, in company with his friend Nodier, was present in January, 1825, at the coronation of Charles X. in the old city of Reims, and watched with curious interest the gorgeous ceremonies which celebrated the commencement of his short and stormy reign. He goes on to say:

"The compartment where we were—Charles Nodier and I—touched the benches of the deputies. In the midst of the ceremony, at the instant when the king set his foot on the ground, a deputy of Doubs, named M. Hémonin, turned to Nodier, whom he stood near, and putting his finger on his lips to indicate that the former should not disturb the prayer of the archbishop, placed something in his hand. That something was a book. Nodier took it and opened it at the title-page.

"What is it?" I asked, speaking very low.

"Nothing very precious," he replied. "An imperfect volume of Shakespeare, published in Glasgow."

"One of the tapestries from the treasuries of the church, suspended just in front of us, represented an historical scene—King

John, called 'Lackland,' and Philip Augustus. Nodier fingered the leaves of the book some minutes, then called my attention to the tapestry.

"Do you see that tapestry?"

"Yes."

"Do you know what it represents?"

"No."

"John Lackland."

"Well?"

"John Lackland is also in this book."

"Indeed, the volume, at a place where the corner of a page was turned down, contained 'King John.'"

"M. Hémonin turned to Nodier:

"I paid six sous for that book," he said."

That evening the friends, declining an invitation to a ball at the house of the British Ambassador, the Duke of Northumberland, stayed at home, and having nothing else to do, read aloud from the volume which had come into their hands through this curious chance. That apparently trivial incident, however, was the potent cause which introduced new and far-reaching influences into French literature; for before the reading was finished that night, the spirit of the bright new star just rising above the horizon of France was touched and vivified by the soul of the great English bard, who thenceforward exercised a powerful sway over his mind and his literary ideals, so that we may justly regard "Hernani" (which was acted in 1830) and the literary revolution it wrought, as one of the first fruits of this incident. Victor Hugo goes on to tell of how he and Nodier began their incursion into the new realm of the real Shakespeare. Nodier understood English, and, reading in his usual high voice, translated as he went on. In the intervals, while he was resting, Hugo read aloud from the Spanish of the *Romancero*, translating it into French. He says:

"We compared the English book with the Castilian book; we confronted the dramatic poet with the epic. Each vaunted the merits of his own volume. Nodier rendered from Shakespeare what he could read in English, and I from the *Romancero* what I could read in Spanish. We brought the characters into court—he the bastard Falconbridge, I the bastard Mudarra. And little by little, in our dispute, we vanquished each other, and enthusiasm for the *Romancero* overcame Nodier, while admiration for Shakespeare overcame me.

"We had auditors, too—for in a little provincial town, on the day of a coronation, when one does not go to the ball, one passes the evening as best one can—and finally there came to be a little circle of listeners. There was an academician, M. Roger; a man of letters, M. d'Eckstein; M. de Marcellus, a friend and country neighbor of my father, who laughed at his royalistic feeling and at mine; the good old Marquis d'Herbouville, and M. Hémonin, donor of the book which had cost six sous.

"It wasn't worth it!" exclaimed M. Roger.

"The conversation developed into a discussion. We sat in judgment upon 'King John.' M. de Marcellus pronounced the assassination of Prince Arthur improbable. Another told him it was historical. He resigned himself with difficulty; for kings to murder one another—that was impossible. To M. de Marcellus, the murder of kings commenced on the 21st of January. Regicide was a synonym for the year '93. To kill a king was a thing unheard of except for 'the populace,' who alone were capable of such a monstrosity. No king but Louis XVI. had ever been violently put to death. He reluctantly admitted, later, that Charles I. was another. That was also the populace. The rest was all fiction and demagogic calumny."

And so they passed on to the details of the drama, to the situations, scenes, and *dramatis personæ*, taking different sides, and bringing out hidden meanings in character and dramatic action. Hugo continues:

"This revelation of Shakespeare deeply moved me. I found him great. 'King John' is not a masterpiece, but certain of its scenes are elevated and powerful, and in the motherhood of *Constance* there is a vision of genius.

"The two books, open and face down, rested on the table. The

company had ceased to read in order to jest. Nodier at last was silent like myself. We were beaten. The company broke up and the last burst of raillery had ceased. We were left alone, Nodier and I, pensive, and reflecting upon the great works that had been revealed to us, and astonished that the intellectual education of civilized nations and even our own had advanced no further than this.

"Finally Nodier broke the silence. I remember that he sighed. He said to me:

"People forget the *Romancero*!"

"I replied to him:

"And they rail at Shakespeare!"—*Translation made for THE LITERARY DIGEST.*

MORE CHANGES AT THE HARPERS.

THE former plans made by Messrs. Harper & Brothers for an alliance with the Doubleday & McClure Company have been set aside by new developments which have attracted general interest among bookmen. According to an interview in the *New York Evening Post* (November 17), which is in substance the

COL. G. B. M. HARVEY.

same as accounts in other leading New York papers, Mr. George B. McClellan Harvey, who for the past half year has been editor of *The North American Review*, has been elected president of the house of Harper & Brothers, and a new policy is foreshadowed. Altho only thirty-five, Colonel Harvey has already had a brilliant career as a business man and a journalist. Besides holding big editorial positions on the *New York World* and the *Newark*

Journal, he has made himself widely known by his management of one of the Staten Island electric railway systems, and by similar enterprises at Long Branch, Asbury Park, and Havana. It is said that in his six months' incumbency as editor of *The North American Review* that journal has doubled in circulation. Some of the facts relative to this change of policy are thus stated in the *New York Times* (November 17), in the course of an interview with Mr. J. Henry Harper:

"The organization as completed at the meeting was as follows: President, G. B. M. Harvey; first vice-president, John W. Harper; second vice-president, J. Henry Harper; third vice-president, Clarence W. McIlvaine; secretary, James Thorne Harper; treasurer, Henry S. Harper, and directors, in addition to the officers above named, H. R. Harper and James Harper.

"The changes consist of the substitution of Mr. Harvey as president in place of John W. Harper, who becomes first vice-president, and the retirement of John Harper, whose condition of health renders it impossible for him to attend to business.

"The stockholders of our company," Mr. Harper added, "have felt for some time the desirability of obtaining as the active head of our company a strong, energetic man, who, while having experience, should also be young enough to handle effectively a large organization."

"Mr. Harper declined to state the terms under which Mr. Harvey becomes the head of Harper & Brothers. It is said, however, that shareholders sold a large block of stock, which was

appraised some time ago at \$237 a share, to Mr. Harvey at \$150 per share. The exact amount of stock purchased by him could not be ascertained, but was said to be in the vicinity of \$1,000,000 par value.

"It was reported some months ago that a consolidation of Harper & Brothers and Doubleday & McClure had been practically completed. It was found, however, when the time came to put the suggested consolidation into effect that the lines of publication of the respective companies differed, so widely that the plan was impracticable. It was abandoned with the consent of Mr. McClure as soon as several members of Harper & Brothers, who were not within reach at the time of the negotiations, returned to the city."

From the side of Mr. S. S. McClure the following statement was made in *The Commercial Advertiser*:

"It is a fact that Mr. S. S. McClure and his associates—Messrs. Phillips, Brady, and Doubleday—withdraw from Harper & Brothers about a week ago. It is stated that the agreement made last summer looking toward an alliance was a conditional one, and left many plans open for later arrangement.

"Mr. McClure and his associates found it impossible to adjust some of the questions left open by the preliminary arrangement, and withdrew a week ago. It is needless to say that this action is the result of the mutual and friendly conclusion of both parties. It is suggested in the papers this morning that some of the Messrs. Harper disapproved of the preliminary arrangements last summer. This is a mistake; every member of both firms was acquainted with the conditions of the arrangement before it was made. There was a cordial and friendly spirit existing between the parties to the agreement, and there has been no change in their friendly relations.

"Mr. McClure and his associates will carry out the plans for an encyclopedia and other enterprises which Mr. McClure had hoped to undertake in connection with Harper & Brothers. The plan for the encyclopedia was entered upon by Mr. McClure some months before the Harper negotiations arose, and when Mr. McClure withdrew from Harper & Brothers, Mr. Page, who had been secured by Mr. McClure to edit the encyclopedia, joined the S. S. McClure Company, and will carry on the development of the encyclopedia."

THE FIRST LITERARY REVIEW.

THE first literary review ever published was the *Journal des Sçavans*, established in Paris toward the close of the seventeenth century, in the reign of Louis XIV. Up to that time scholars relied, for their information concerning new works, upon the annual catalogs printed at the chief book marts, and upon correspondence among themselves. A writer in *The Home Journal*—Miss F. E. Barnett—gives some particulars of this review and of its founder, Denis de Sallo, a scholar who had turned from the pursuit of the law to literary studies. Says Miss Barnett:

"De Sallo had the excellent habit of making extracts which he found worthy of being preserved from the books he read, and in this way collected such a quantity of material that he could write an article on almost any subject proposed to him at a moment's notice. Not only did he himself make extracts, but he employed a number of copyists to help him. Camusat saw these records and admired the good arrangement and praised its usefulness. M. de Sallo found in these extracts, which he called his 'pot-pourri,' the material for his memoirs which the king or Colbert had asked him to write. In his zeal for the advancement of literature, he wanted others to enjoy the benefit of his labors, and in this way conceived the idea of the *Journal des Sçavans*, which should accomplish for the literary world what *The Gazette*, the first journal worthy of the name, was doing for the political world.

"The enterprise of M. de Sallo, which to-day seems to us so simple, had in his time all the importance of a discovery. It was also accompanied by unanimous applause; one is astonished even that they went so far as the middle of the seventeenth century without devising a project so useful in hastening the progress of science. During the first year it had many imitators and translators in all parts of Europe."

The first issue was published on Monday, January 5, 1665, by Jean Cusson, Rue Saint Jacques, in Paris, and was thereafter published weekly in duodecimo form, each number containing from twelve to sixteen pages. The book which had the great distinction of being the very first one ever reviewed was an edition of the works of Vitensius and Vigilius Tapsensis, African bishops of the fifth century, by Father Chiflet, a Jesuit. In addition to book reviews, the magazine contained political memoirs, medical consultations, theological discussions, on all kinds of questions of physics and astronomy; while religious controversies were not forgotten.

The authors of that day were disposed to resent De Sallo's criticisms; but he could probably have survived their animosity. A more formidable enemy appeared in the Inquisition at Rome, and it was the religious question which proved the most difficult to deal with. De Sallo was a Gallican in church politics, and his defense of De Marca's famous book, "*De Concordantia Sacerdotii et Imperii*," and of another Gallican treatise by De Launay caused the suppression of the *Journal des Sçavans* by order of the Sacred Congregation of the Index on March 30, 1665. The blow, which even Colbert was unable to avert, affected De Sallo so profoundly as to result in his death soon after. But the *Journal des Sçavans* was very shortly revived, and has passed through many vicissitudes triumphantly to the present day.

DECAY OF LITERARY ALLUSION.

IT has been remarked more than once how much more important a part literary recollection and quotation played a generation or two ago than they play at present. The gentlemen of the old school not only had read Homer, Virgil, Shakespeare, Byron, Lamb, Wordsworth; they relished allusions to those writers and illustrated their conversation with frequent apt and striking quotations from them; neither were they afraid of the implication of pedantry if they occasionally used a Latin phrase or spoke of some name great in the annals of Greece or Rome. As *The Nation* (November 16) remarks, "there rested in their minds, as at once a pleasant background for thought and a help to refined expression, an orderly mass of literary reminiscence; and they carried it, not as a burden, but as a natural accompaniment of a cultivated taste." Yet in our present conception of culture, all this has been very largely changed. Says the writer:

"If there is one thing in the way of distinctively intellectual acquisition which educated youth of the present day conspicuously lack, it is a knowledge of literature. To be sure, boys and girls who now fit for college have to read with some care a few English classics, and pass examinations on their subject-matter; but they rarely give evidence of having read much of anything else. Reference to the prominent characters or striking situations sketched by such makers of English as Thackeray, Scott, and George Eliot often evokes no answering sign of recognition. The wealth of allusion drawn from Greek and Roman authors is rapidly disappearing; only a pedant dares quote Virgil, and only a specialist knows enough of Virgil to quote. The heroes and heroines of modern novels, deeply versed as they are in science, and philanthropy, and psychology, are rarely found talking about literature. With the market flooded with inexpensive reprints, and with elaborate critical editions of nearly every 'classic' under the sun, the knowledge of the great writings of former times, even among persons apparently most likely to have it, seems to be in inverse proportion to the ease of obtaining it. Literary interest of a certain sort we have, undoubtedly; but it is only too obvious that much that passes under that name makes no vital connection with the literary life of the past."

One striking and serious manifestation of this change is the present widespread ignorance of the English Bible—not so much among those professedly religious as among people who are ranked as the cultivated class: "Among writers and speakers, the

use of its superb sentences tends more and more to be restricted to purposes of hortatory effect. The greatest literary landmark of the English tongue threatens to become unknown or else to be looked upon as of antiquarian rather than present worth."

The Nation finds it not easy to assign reasons for this decay of literary knowledge and allusion, but thinks that it may partly be attributed to the absorbing interest in physical science, the growth of the great magazines, and the use of literature for philological purposes, which "has turned into a dead body what was once a living soul."

IS PERPETUAL COPYRIGHT DESIRABLE?

THE movement to which we have already referred (see *THE LITERARY DIGEST*, September 3) for effecting a change in the present limitation of copyright does not meet with the unanimous support of American authors and publishers. *The Literary World* (October 28) prints a number of letters which apparently indicate that the preponderance of opinion is against perpetual copyright privileges, tho not against some extension of the present rather short limitation. Mr. Thomas Wentworth Higginson writes thus:

"I am sorry to say that I have never been quite convinced of the propriety of perpetual copyright. It still seems to me that the argument against perpetual patent rights applies to this higher form of patent; the argument based, namely, on the needs of the public and on the debt owed by every inventor to the community which has educated him; and also on the pleasurable quality of all inventive or literary work itself. I never could see why a copyright should be legally provided in two successive instalments instead of once for all; and the total period ought perhaps to be somewhat lengthened; but it is not clear to me that more than this is to be desired."

Mr. William Coolidge Lane takes a similar view:

"The claim for perpetual copyright presents an appearance of abstract justice that is attractive, but would, I suspect, in practice, work some injury to the interests of learning and letters, be inconvenient in application, and not of much real value to the author. The present term of forty-two years more than covers the life of most books. The few which are likely to be reissued after that period are mainly of two classes, books of reference and books of pure literature which have become classic and attained a kind of immortality.

"Books of the first class need no protection, for every such work, to retain its value, requires extensive revision at intervals far under forty-two years, and every new issue establishes a fresh claim to copyright.

"In the case of the second class the claim certainly has stronger reasons in its favor, but it is plainly for the public advantage that literature of permanent value—that which has taken its place and should have its place as part of the common intellectual possession—should be reproduced as freely and distributed as widely as possible. A perpetual copyright could not fail to hamper the republication of such work. This might, it is true, prevent the issue of incorrect and incomplete reprints, but, on the whole, it would diminish the frequency and variety of editions, increase their cost, and discourage fresh editing and annotation. Such disadvantages would increase from year to year, while the injustice of the protection would appeal less and less to the public conscience."

Mr. George H. Mifflin, of Messrs. Houghton, Mifflin & Co., says:

"The proposition to make copyright perpetual is, to my mind, so impracticable as to render its consideration useless. The present copyright law, however, seems to me to require radical amendment. Its defects are three in number, as follows:

"1. It requires several conditions with which an author must comply before he can gain a legal title to the literary product of his mind, and failure to comply with any one of them prevents his gaining such a title.

"2. The needless requirement of a renewal at the end of twenty-

eight years. Evidently the granting of fourteen additional years concedes the justice of copyright running forty-two years—why should it not be granted in one unbroken term?

"3. The requirement of renewal, and the restriction of the right of renewal to the author's immediate family, may work great injury to any person to whom he has assigned a valuable copyright, if he die before the expiration of the twenty-eight years and leave no wife or child who can renew the copyright.

"A change which would render our law somewhat like the English law of copyright seems to me very desirable. Let there be no difficult, vexatious, and possibly unjust conditions; let there be a single term of (say) fifty years, and during the lifetime of an author if he shall outlive the fifty years."

Mr. George Haven Putnam says in part:

"It is my belief that such perpetual control of literary productions would not prove of sufficient advantage to the producers of literature to offset the serious detriment to the community. This is the judgment that has been arrived at by the legislators who have framed the copyright laws of the civilized states of the world, in connection with which laws the question of perpetual copyright has, during the past century, received a very thorough discussion.

"The American term of copyright is shorter than that now in force in any one of the literature-producing states of the world, and it ought assuredly to be lengthened. It is my judgment, however, that the prospects of securing the legislation required to extend the term to that of Germany, life and thirty years, will be materially hampered if our legislators should now be confused with discussions concerning the inherent right of an author to ownership in perpetuity."

Only two defenders of perpetual copyright appear among the writers quoted by *The Literary World*. Florence Earle Coates says:

"I am unable to see why copyright should not be perpetual. Property in thought is as real as property in land or money. I once discussed the subject with a company of smart criminals within prison walls. They denied that the fruits of the mind were ever real property, but they brought forward no satisfactory argument to substantiate their denial."

"THE OLDEST POEM IN THE WORLD."

THE progress of archeological research in Egypt during recent years has been so rapid and so far beyond the most sanguine expectations of the *savants* of a quarter of a century ago that the statement is commonly made to-day that the life, manners, and society of Thebes in the eighteenth and nineteenth centuries before the Christian era are better known to us than are those of English cities in Anglo-Saxon times. The district surrounding Heracleopolis (now Ahnas-el-Medineh) has proved especially rich in finds of the period of the twelfth dynasty (B.C. 2778-2556). Here several of the Pharaohs of this era had their summer residence, and a number of their pyramids and other monuments render the district of special interest to archeologists. In the course of his explorations near the pyramid at Illahun in 1838-40, Professor Petrie found the remains of the extensive town occupied by the workmen employed in building the pyramid of Usertesen II. In the record hall of this town were discovered a large number of papyri, most of them official documents relating to the building, accounts of money, food, and provisions issued to the men, census figures, etc., which in spite of their dryness are full of details of the greatest value to the student of Egyptian history. Scattered among them were found works of another nature—upon general medicine, obstetrics, veterinary surgery, and mathematics. But most interesting of all is a royal ode or hymn of welcome addressed to Usertesen III. by his subjects. A writer in the London *Standard* thus tells of this important specimen of early literature, which antedates by almost two millenniums the Homeric poems, and is more than fifteen centuries older than the earliest books of the Hebrew sacred canon:

"After long and patient work these broken and torn fragments have been arranged, and are now published with autotype reproductions, transcripts, and partial translations by F. Llewellyn Griffith. The poem to Usertesen III. is written in a fine, bold, hieratic hand upon a papyrus measuring 46 inches in length and 12 in width, and consisted, when complete, of six stanzas of 10 lines each. Its value lies in its being certainly the oldest poem in the world, nearly fifteen centuries before the time of Moses; and also in the wonderful way in which it describes, in most figurative language, the great work that the king had done in the expansion of the Egyptian empire. To understand the historical references we must glance briefly at the military achievements of the kings of this dynasty. The great source of trouble to Egypt prior to the rise of the Theban dynasties was the Nubian invasions from the Sudan. Usertesen I. fixed the military frontier at Bohani, opposite Wady Halfa, and a century later Usertesen III. enlarged this stronghold, and set up an inscription in which he says: 'Here is the southern boundary fixed in the year eight, in order that none of the black people may cross it except for trade.' Far beyond this line the Egyptian troops marched, certainly as far as Dongola, where outposts were established; and the making of Greater Egypt was realized. The conquest of Khartoum was but a fulfilment of the policy of Usertesen III., who discerned centuries ago that the natural frontier of Egypt was the meeting-place of the two Niles. How this policy was received in Egypt we see in this ancient address.

"Thus the first stanza reads, quoting a few lines:

Homage to thee, our Horus, divine of beings,
Protecting the land and widening its boundaries.
Enclosing the two lands within the compass of his hands, and seizing the
nations in his grasp.
The tongue of his Majesty bindeth Nubia, his utterances put to flight the
Bedouin.
Sole one of youthful vigor, guarding his frontier; suffering not his sub-
jects to faint; but causing all the people to repose until daylight.
As to his trained youth, in their slumbers, his heart (mind) is their pro-
tection.
His decrees have formed his boundaries; his word maketh strong the two
regions.

The next three stanzas are more poetic, as each line in the stanza often commences with the same initial phrase. In other Egyptian poems the refrain is common, but the initial phrase is rare. This method is used, however, as Mr. Griffith points out, in the poetic stela of Thothmes III. at Karnak.

"The beneficent character of the king's rule, and his fatherly attention to all, form the subject of the second stanza, which has for its initial phrase the words, 'Twice joyful are':

Twice joyful are the gods; thou hast established their offerings.
Twice joyful are thy forefathers; thou hast increased their portions.
Twice joyful is Egypt in thy strong arm; thou hast protected the ancient
régime.
Twice joyful are the people in thy policy; thy mighty spirit hath taken
upon itself their welfare.
Twice joyful are thy paid young troops; thou has made them to prosper.
Twice joyful are thy veterans; thou hast made them to renew their youth.

The last two phrases are of interest, as they show the Egyptian military system of paid troops—in many cases, as we know from the inscription of Uni, troops from the conquered Sudan, who formed then, as now, the backbone of the Egyptian army. They were paid, and the older men past service were rewarded with grants of land. The third stanza relates to the general happiness of the land under the protecting rule of the king:

Twice great is the lord of his city; he is, as it were, a dike damming the
stream in its water floods.

"Here we have, no doubt, a reference to the reclaiming of the Fayoum:

Twice great is the lord of his city; he is, as it were, a cool shelter, letting
every man repose unto daylight.
Twice great is the lord of his city; he is, as it were, an asylum; delivering
the frightened one from his enemy.
Twice great is the lord of his city; he is, as it were, a verdant shade and
cool place in the time of harvest.
Twice great is the lord of his city; he is, as it were, a corner warm and dry
in time of winter.
Twice great is the lord of his city; he is as it were, a rock barring the blast
in the time of tempest.

"The poetic similes of these last lines remind us of the Old Testament, and show how to the Egyptian poets, as to the Hebrew, nature was a storehouse of symbolism. The fourth and last complete stanza, which space will not allow us to quote in full, has for its initial phrase the words, 'He hath come.' A

pretty phrase occurs in one line, 'He hath united the two lands, he hath joined the Reed to the Bee,' that is, Upper to Lower Egypt, the two hieroglyphic signs being played upon by the writer. We may quote the closing lines of this stanza :

He hath come ; he hath made the people of Egypt to live ; he hath destroyed its afflictions.

He hath come ; he hath made men and women to live ; and hath opened the throat (voice?) of the captives.

He hath come ; we nurture one ; we bury our aged ones (in peace).

"Such is the poetic address which welcomed the victorious Pharaoh to his city over forty-five centuries ago. It is a wonderful type of the pure Egyptian literature, untainted by foreign influence, and may be classed with such beautiful works as the 'Maxims of Pthah-hetep,' or the 'Instructions of Amen-em-hat.' As, after the Norman conquest, Gallicisms spoiled the simplicity of Anglo-Saxon literature, so the contact with Asia introduced foreign words and foreign styles of composition, which detracted from the beauty of the old Egyptian style."

POE COMING TO HIS KINGDOM.

"TO one who tries to study literature in the large, it seems as if we were just now passing through one of those irritating transition periods in which all standards are lowered or confused, in which conglomeration reigns, taste gets freaky or fantastical, and true art hides her head or goes to sleep," so writes Mr. Henry Austin in *The Dial* (November 1). Yet the present period has its cheering omens too, he thinks, and one of the most important of these is the final rendering of complete literary justice to Edgar Allan Poe in the land of his birth. Europe has long ranked him as the greatest of American writers, but in his own country he was called "that jingle-man" by Emerson, while Lowell spoke of him as "three fifths genius and two fifths fudge." Says Mr. Austin :

"When the University of Virginia, the alma mater from which he was not expelled, and where he was never censured even for alleged vices then common among the sons of Virginian gentry, honored his memory, but chiefly itself, by celebrating on October 7 the fiftieth anniversary of his untimely death, and by unveiling, with fitting ceremonies of prayer, poem, and address, a fine bust by an excellent sculptor, this long-delayed rendition of poetic justice, this formal recognition in America of his world-wide fame and genius, was made complete.

"But more convincing still as to Poe's position at the present day were the letters which arrived from all parts of the country, in which many of the most justly distinguished men and women of the literary craft paid cordial tribute to the great man whom his own day and generation kept close on the brink of starvation and stimulated to seek solace in those occasional excesses to which, most unfortunately, he appears to have had a terrible pre-natal bias. It was clear from those letters, too, that not only has the silly old sectional animosity, at the bottom of so much general mischief and operant to a considerable degree against Poe in his life, entirely vanished, but that an almost absolute unanimity of opinion as to his literary merits has come in the literary world. Few names of any importance or promise of permanence were missing from the illustrious list of those whose letters hailed Poe as America's most illustrious writer and most luminous literary influence. Thus, indeed, was verified by example Professor Minto's apt dictum years ago : 'The feelings to which Poe appeals are simple but universal, and he appeals to them with a force that has never been surpassed.' Mr. Minto should have written 'power' instead of 'force.' The distinction is infinite, tho fine, and was never more applicable than in the case of Poe's writings. There is no blare of trumpets, no firing of rockets, in the main and mass of Poe's work. Nearly all are developed in the calm of a sure elemental energy. Even his 'pot-boilers' bear traces of this power and of that splendid conscientiousness on which Mr. Mabie did not harp any too much."

After alluding to the "vast amount of twaddle" which has been circulated about Poe's personal character, habits, and alleged lack of moral perceptions, and remarking that it is not worth while keeping such misconception alive by dignifying it with serious attention, Mr. Austin concludes :

"There has been, it seems to me, considerable mischief done to Poe and the cause of truth by the overzeal of some of his champions. The medial sound fact of this whole matter appears to be that Poe, tho an almost perfect artist, scarcely deserved that any man should pray to him every morning as Baudelaire used to do ; that Poe, tho possessed of many winning and gracious attributes when sane, did some dreadful and dreadfully strange things when not in his sober senses ; that as he happened to be a man of genius and temperament combative at all times, his flaws and failings, which would have passed comparatively unnoticed in an ordinary person, got blazoned broadcast to the world."

The Novels of 1899.—Prof. Harry Thurston Peck thinks that a critical study of the fiction published during the year just closing will lead one to reverse, or at least to readjust, the order of merit as registered by the test of comparative sales. He thinks that of the six most popular books only one—or at most two—is likely to be read by any one in a year from now. He says (in *The Independent*, November 23) :

"One may serenely disregard the test that is commercial and misleading, and confine oneself to a consideration of just how far each of them approximates in merit to those works of genius which, in the different departments of pure fiction, afford us an accepted and enduring standard of comparison.

"If we extend the term 'novel' so as to let it include collections of short stories, I should say that there is just one work of fiction belonging to the present year which is equal to the very best in its own class ; and this is Mrs. Edith Wharton's 'Greater Inclination.' The class which it represents has to do with the psychological study of social conditions and of the problems that arise in the more intimate relations of men and women of the world. . . . Such perfect literary workmanship is seldom seen in books that are written in the English language ; and Mrs. Wharton's pages never lose their fascination even tho they may be read a score of times. The book has met with much appreciation from the critical portion of the public ; a widely popular success it could not have ; for its beauties and felicities, which give so much pure joy to the discriminating, are far too delicate and subtle for the perception of the unenlightened.

"Three novels have run neck and neck in the race for popular favor. These are Caskoden's 'When Knighthood Was in Flower,' Mr. Winston Churchill's 'Richard Carvel,' and Mr. Ford's 'Janice Meredith.' It is rather difficult to decide upon the relative merit of each. 'When Knighthood Was in Flower' moves swiftly and surely along to its finish, never dragging and never disappointing. 'Richard Carvel' is admirable and even distinguished in its style, tho some modern locutions occasionally filter through into the author's assumed eighteenth-century style, and the first half of the novel is undeniably too slow in its development. Mr. Ford's 'Janice Meredith' is well-knit and firmly compacted, and its narrative carries one along easily and surely, tho the style is sometimes slipshod and unfinished. The popularity of all three of these books has been very great and shows a healthy tone in the public mind.

"If I were asked to group the best six novels of the year in the order of their true importance from a literary point of view, I should set down the list as follows :

- "1. The Greater Inclination. By Edith Wharton.
- "2. David Harum. By E. N. Westcott.
- "3. The Maternity of Harriott Wicken. By Mrs. Dudeney.
- "4. Richard Carvel. By Winston Churchill.
- "5. The Market Place. By Harold Frederic.
- "6. When Knighthood Was in Flower. By Edwin Caskoden."

A VERY interesting new development in wood-carving has recently attracted notice in New York. It consists in relief work upon a species of fungi which grows upon oak- and maple-trees. Great care has to be exercised in removing and drying the fungi so as to preserve the delicate white surface ; and the light and shades of the bas-relief are attained by a careful manipulation of the surface and of the dark interior. The process requires great persistence and skill, but when successful presents a species of art effect which is wholly new and unique. Some very exquisite specimens of carved fungi, ranging in size from four inches to two feet in diameter, comprising some surprisingly perfect forest scenes, war groups, and other *genre* effects worked out in black and white, are on exhibition at the various art exchanges in New York and at Brentano's. The inventor and developer of the process is Miss I. M. Musselman, of Somerset, Pa., an artist who received much of her technical training in the art schools of Pittsburg and Philadelphia.

SCIENCE AND INVENTION.

A FRENCH ESTIMATE OF EDISON.

EMILE GAUTIER, the editor of *La Science Française* devotes a signed leading article (November 3) to an estimate of Thomas A. Edison. From this we learn that in France there is a popular impression that Edison personally invented about everything that makes for modern progress, especially in electricity. M. Gautier strives to correct this idea, and in doing so he has gone rather far in depreciating Edison as an inventor, but credits him with almost superhuman powers as an organizer and exploiter. We translate below the principal paragraphs of Gautier's article. He writes:

"Edison is a genius. What do I say? He is Genius itself (with a big G), the Only, the True; he is the Wonder-worker, the Master of masters, the greatest and most glorious figure in all the history of science."

"I know well that this is the legend that has been going the rounds of the earth for the last fifteen or twenty years. But I may be pardoned for not sharing this enthusiasm. . . ."

"Certainly I am far from contesting the superior intellect—the genius even, if that pleases his devotees better—of Edison, any more than I should deny the importance of the rôle that he has played and the services that he has rendered. I simply maintain that they are not worth so much incense and so many laurels, and that his genius (since genius it is) is of an order quite different from that which is attributed to him."

To the eyes of the common herd, continues M. Gautier, Edison has appeared as the inventor *par excellence*, or rather as Invention made flesh. Without Edison electricity would be yet in its infancy. No matter what miracle, no matter what enormity—it is sufficient for Edison to be in it, for universal suffrage to believe in it blindly. Hurrah for the wizard! The writer continues:

"The truth is slightly different.

"Doubtless Edison has had something to do with the prodigious evolution which, during the past twenty-five years, has transfigured the face of the world, the conditions of work, our customs, and our habits—in short, our whole civilization. But altho he has contributed more and better than others to this fertile evolution, it is much less as an inventor or investigator than as a man of affairs—a business man.

"From this point of view (which is neither to be misconstrued nor despised), Edison defies all competition. Having incomparable business ability, and an appreciation of public feeling that amounts to genius, he knew how to foresee, by a kind of divination, the formidable movement that was about to revolutionize the world. Then, having thrown himself into the torrent, he knew how to direct it for the best interests of his country, his associates, and himself. Thanks to the legend that represents him as a kind of omnipotent wizard, he has succeeded in getting into his hands, during the past quarter of a century, not only in America, but elsewhere, the threads of most of the great industrial businesses, and particularly of the electrical industries, to which, it must be acknowledged, his intervention has been able to give a marvelous impulse.

"In this line Edison has been really an incomparable factor in modern progress, and it is not improbable that numerous feats, really performed by less adroit or less fortunate rivals, have added to the prestige of this astonishing stage-manager. . . ."

"To sum up, Edison's work is not without merit. Quite the contrary. It is the work of a yeast that has leavened the dough of science. It is the work of a Barnum of colossal enterprise. It is the work of a breeder of inventions. But it is not, properly speaking, the work of a creator.

"We see attributed to Edison the paternity of more or less likely chimeras, such as the photography of thought, the industrial utilization of wave force, the cure of blindness by the X rays, the construction of electrical engines of war and of other infernal machines that terrorize only innocent minds. We should not be surprised to find him mixed up in the artificial gold business with Dr. Emmons, and we await to hear that Tripler, the man who

pretends that he has achieved perpetual motion by means of liquid air, has obtained the use of his name. Any other than Edison would hazard his reputation by connection with such projects; he, sustained by the myth of his omniscience and omnipotence, would only gain prestige and popularity.

"He always marches to glory in some one else's shoes. No matter what may be said or believed, he did not invent the telephone, nor incandescent electric lighting, nor wireless telegraphy, not even the phonograph.

"We may recall, in closing, that we had among ourselves a man of the same kind and of exactly similar career, in a measure. I mean Cornelius Herz, to whom, tho he personally invented nothing, we owe in great part the development of the electrical industries in France, and who—leaving out Panama, politics, and disease—was of the timber to make a European Edison."—*Translation made for THE LITERARY DIGEST.*

HOW DOES THE SENSE OF SMELL ACT?

WHAT are the physical processes that underlie the sense of smell? This particular sense is probably less understood than any of those that are regarded as higher in rank. We can study the functions of the lenses of the eye, and of the retina, in any book on physiological optics; but a description of the processes that accompany the perception of an odor is not so easily found. Experiments and investigations on the subject are all very recent, and are contained for the most part in detached papers. In a recent address before the American Pharmaceutical Association, Dr. W. C. Alpers, in discussing "Odor Standards," found it necessary to go over a good deal of this ground, and that part of the address in which he does this we quote below from an account in *Merck's Report* (November). Says Dr. Alpers:

"We all know that the irregular cavities that form the nasal fossæ are divided into a number of chambers and lined by the Schneiderian membrane. This membrane contains glands which secrete mucus for the purpose of keeping the membrane constantly moist, and a number of epithelial cells of various kinds. Whenever odorous particles are present in the inspired air, they are carried by the suction of the expanding lungs through the lower nasal chambers into the upper chambers, where they fall on the olfactory epithelium and produce sensory impulses, which, communicated to the brain by means of the olfactory nerves, give rise to a sensation of smell. The question that interests us in this physiological function is, how are these impulses caused and what relation exists between the volatile substance and the serum secreted by the glands? For it is well known that without this serum no impression on the nerve is made. If the mere shock of a volatile substance on the nerve-ends would produce the sensation, there could be no variety of odors, and the introduction of a substance of greater aggregation than a gas, a liquid, or even a solid particle of dust, would also produce this sensation. Again, if the various glands and membranes in the nasal cavity are removed or their functions arrested by some injury or disease, there is no smell, showing that the nerve alone does not allow us smell. Nor are the glands, by their mere presence, productive of the sensation; they must perform a certain function, namely, the secretion of the serum which covers the cup-shaped ends of the nerves. This secretion, too, must go on continuously, as can be shown by a simple experiment. When a volatile substance dissolved in water—for instance an aqueous solution of an ethereal oil—is brought into the nostrils and kept there, by reclining the head, it will first produce the sensation, but the odor will soon disappear, in spite of the presence of the odorous solution in the nostrils. The explanation for this is simple. The secretion on the nerve-ends is affected by the volatile substance, but as no new serum can take the place of the one that has been acted upon on account of the pressure of the liquid on the membranes, the sensation naturally ceases, to begin again after the liquid has been removed and a new serum secreted by the glands."

It has been suggested, Dr. Alpers tells us, that the sensation may be due to the impulse given to secretion by the mere touch of a peculiarly constructed molecule, but he considers this theory untenable, for it presupposes an impossibly complex molecular

structure for the serum. The sensation must, therefore, be due to actual chemical action, and this the author regards as the true theory. It has been demonstrated, he thinks, by the experiments of Dr. Wolff, of Dresden, on the serum of the bee. Says Dr. Albers:

"He found the serum to consist of a clear liquid, in which a great number of white oil-like globules floated, resembling in all appearances, except color, the blood with its corpuscles. All efforts to find a preserving liquid for this secretion in order to prepare it for microscopical examination failed, for as soon as it was brought into contact with any chemical or solution an instantaneous change would occur. The addition of water alone would retard the decomposition long enough to allow a quick microscopical examination, altho the floating corpuscles would gradually swell and then burst, following the laws of osmosis. But by patient and careful experiments, in which, as Dr. Wolff states, thousands of bees lost their lives, he positively proved that a chemical change takes place. If a small object dipped into a volatile liquid be brought near the drop of serum under the microscope a sudden motion of the corpuscles is observed, varying with the nature of the volatile substance. A molecule of the vapor preceding the object evidently entered the liquid and produced the change. The small globules gradually take a different color, mostly gray or brown; they become wrinkled and sometimes expand, until they suddenly disintegrate and disappear. Ammonia gas seemed to have the strongest influence, the globules assuming a violent motion even at a considerable distance of the gas, and by sudden approach disappearing as if by magic. Dr. Wolff also observed that when the effect of a slowly acting substance, for instance, a but slightly smelling oil, was interrupted by withdrawing the substance before the globules had disappeared and then ammonia vapor brought into proximity with great care, the motion and behavior of the corpuscles were different than when ammonia had acted on them at first. The partial decomposition of the first substance changed therefore the influence of the ammonia gas, showing that a chemical change had taken place. No other explanation for the behavior of the corpuscles under the influence of vapors can be given. Even should there still exist any doubt that the process in man is similar to that in the bee, another proof of the chemical reaction in the serum of the nose can be brought forth by different experiments and methods of reasoning."

There are, we are told by the doctor, numerous points that still need clearing up, but it seems certain that we smell by means of chemical action between the odorous substance and the serum secreted by the glands of the nose.

Vanilla as a Poison.—Ordinary vanilla extract is poisonous in some cases, we are told by *The British Medical Journal*. It says: "A certain fearful interest attaches to accounts of poisoning by substances in common use, and the interest becomes almost painful when we learn how difficult it is to provide against its occurrence. Vanilla is a case in point. Fortunately, thanks apparently more to luck than anything else, cases of poisoning from this cause are rare. Nineteen persons, one of whom subsequently died, suffered severely, Wassermann tells us, from the effects of eating some vanilla 'cream.' This was composed of milk, eggs, sugar, and flavored with vanillin (the commercial article prepared from coniferin). The dish had been cooked in the evening and allowed to stand, uncovered, in the dining-room till noon next day. Investigation showed that the eggs and sugar were good, that the milk alone was harmless, and that the vanillin was pure. The fact that the cook and landlady, who had merely tasted the dish, had also become seriously ill, suggested the idea that the poisonous agent might have undergone further development after being swallowed—that is, that it was bacterial. Wassermann boiled three flasks containing respectively plain milk, milk flavored with vanillin, and a solution of vanillin in water, then let them stand eighteen hours at a temperature of 37° C. (98.6° F.). Some of the contents of each flask were injected into mice. The milk flavored with vanillin was poisonous, the other two harmless."

THE INVENTOR OF THE LINOTYPE MACHINE.

ON October 28 died Ottmar Mergenthaler, whose services to the art of printing are regarded by some authorities as second only to those of Gutenberg, the inventor of movable type. The linotype machine, whose work has so largely superseded that of the ordinary compositor, is the child of Mergenthaler's brain. It is, as every one knows, a device whereby its operator casts, in type-metal, a whole line of letters at once, whence the name. Tho not strictly a type-setting machine, it is often classed with

OTTMAR MERGENTHALER.
Courtesy of *American Machinist*.

such machines, since the result achieved by it is the same. The comparison of its inventor with the father of printing is made by *The American Machinist*, which justifies it thus:

"The invention of Gutenberg was comprised in a single idea, and one easy enough to work out when once thought of, that of the use of movable type; while that of Mergenthaler, altho also apparently easy to conceive, involved the invention and the construction, by tedious experiment and evolution, of one of the most ingenious and complicated machines that has ever been devised by man and brought to complete success. His invention has revolutionized the art of the printer, and has created a new line of construction for the machinist."

The same article in *The Machinist* furnishes the following data concerning Mergenthaler's life and work:

Ottmar Mergenthaler was born in Wurtemberg, Germany, May 10, 1854. He was apprenticed to a watch and clock-maker when fourteen years old. At the age of eighteen he came to the United States, and two years later was the leading workman in a shop in Washington, manufacturing electrical instruments and apparatus. This business was removed from Washington to Baltimore, and Mergenthaler went with it.

His attention seems to have been directed to typesetting and printing devices in 1876, when he was employed in attempts to perfect the "rotary lithographic" machine of Charles Moore, a West Virginian. This machine was intended to produce by type-writing a print that could be multiplied by the lithographic process. The machine was a failure, as was also a rotary electrotypic system, in which characters were impressed into papier-mache,

and castings of type-metal were made by the usual stereotyping process.

To quote again :

"Mergenthaler went into business for himself in 1883, again considering the printing problem. He received financial aid from parties in Washington. A small machine was made which marked a great advance upon all previous attempts, but there was still an unsurmounted difficulty in the paper matrix, the speed at which the machine was to work precluding the possibility of drying the molli upon the type, as the conditions required. Only after this was struck the real keynote of the final linotype machine. To the inventor came the query: 'Why can I not stamp matrices into my type-bars and cast type-metal into them in the same machine?' Two machines were built on this new principle; and one was tested in the summer of 1884.

"Of the story of the successive improvements of the machine after this, and of its rapid adoption by the best printing-offices of this land and abroad, and of the change and improvement it has wrought in the production of printed matter, it is unnecessary to speak.

"In the summer of 1894, the number of machines either sold or on lease at the close of the business year was 1,500, and was then increasing rapidly."

THE DANGERS OF COMMUTING.

THE "commuter" and his daily journeys to and from the city have long been subjects for jesting in the comic papers, yet the army of those to live in the country and spend the day in the city—ten, fifteen, or twenty miles away—is daily increasing. This mode of life involves some features that are rather tragic than comic, according to a writer in *The British Medical Journal*. We all recognize the danger of "sprinting" for a train, but the life of a commuter involves other dangers that are as real, tho not so evident. Chief among these is the worry caused by unpunctual trains. Says the writer :

"Common experience affords to every one of us ample familiarity with the ordinary trials of the railway traveler. The rush to the station to catch the train, which may perchance be punctual; the weary wait on drafty platforms or in the stuffy waiting-rooms; the dilatory journey—all these add seriously to the labor of the day even in the best of times; but when the weather is cold and damp they are still more injurious, in that they are largely responsible for those 'colds,' as they are called, those conditions of depressed vitality which are the starting-points of most of the acute diseases from which men suffer, and from which the elderly and the feeble die. But outside and beyond these well-recognized evils, the unpunctuality of a railway service does a daily injury to those who depend upon it as a means of reaching their place of business by adding to that nervous strain which is the really hard part of a business life. An unpunctual railway, in fact, hits a business man in his most vulnerable spot. It is on the crisp activity of his mental processes that his livelihood depends, and the evil effect of the unpunctual morning train is not merely that it makes him arrive late at his office, but that it causes him to begin his work weary and annoyed. People talk about the 'nervous strain' of railway traveling, which many folk, even medical men, attribute to 'vibration' and high speed. Perhaps in long journeys in third-class carriages, where there is no rest for the head, vibration may have something to do with it; and as to high speed, if people persist in looking out of the windows, of course they suffer in consequence of the visual disturbances produced. But it is to be noted that experienced travelers always rush to quick trains, and especially to those that stop as seldom as possible. It is the worry of delay and the anxiety as to the time of arrival which is the great cause of nervous strain, that 'tired feeling' with which most suburban-dwelling business men arrive in London. This, repeated day after day, undoubtedly has an evil and wearing effect on the nervous system. But it does harm in other ways, which are less obvious, but none the less effective, and this especially to people beyond middle life. The two great causes of high arterial tension in such people are worry and chill, and the one great remedy—practically the only remedy which can be got away from home—is alcohol. Thus it happens that when the city man arrives from his suburban home,

chilled, worried, and late, with the stopcocks on all his blood-vessels so that his brain is starved and he can not think, the craving for a 'nip' of alcohol—the only available vasodilator—becomes overwhelming, and this morning drug is too often the beginning of the end."

The Color of Gems.—The formation of the color of precious stones and other minerals is not easily explained in the majority of cases. According to a German technical paper quoted by *The Scientific American Supplement*, the dye-stuff contained in them may belong to an organic, as well as inorganic compound, but almost always its quantity is so small that it does not suffice for a chemical analysis. "In the mineral zircon, which is much used as a gem, especially under the name of hyacinth, the yellow, green, red, or brown color can be ascribed to the presence of nitrogen, and the same thing has been proven for the well-known smoky quartz, which is very often erroneously called smoky topaz. The origin of the coloring of the amethyst has not been determined as yet, but the opinion that it was due to the presence of a compound of sulfocyanid with iron has been found to be wrong. In many minerals the color is caused by the presence of chrome. This has been a long-established fact as regards a certain variety of garnet, spinel, and diopside (a variety of augite). But other highly prized gems owe their color to chrome, e.g., the red and violet spinel, the ruby, the sapphire, the Oriental amethyst, the green zircon, and the topaz of Villarica, Brazil. In the ruby and the sapphire, it is true, chrome could not be discovered direct; but it was established in the opposite way that the combination of the elements constituting the said gems and potassium bichromate produces colorless metals on the one hand, but also red, blue, yellow, and green ones. Thus, numerous other examples might be cited, in which the cause of the coloring of minerals might be ascertained, but a much larger number of colored minerals remain, whose color the chemists have not yet explained."

Submarine Boats Abroad.—The success of the recent experiments with the Holland submarine boat, as recently reported in these columns, lends interest to the subject of submarine boats abroad. "It is from the repeated failures of different types of submarine boats constructed in Europe," says *The Marine Review*, in discussing the subject, "that the sentiment hostile to submarine craft of all kinds, now so prevalent among British engineers particularly, has emanated. France has been the one European nation to keep steadily pegging away at the submarine-boat idea despite frequent and numerous failures. The events of the past year or two demonstrate this conclusively. It was not so very long ago that there was an immense outburst of enthusiasm over the *Gustave Zede*, but later investigations proved that the range of action of the vessel was limited in the extreme. The French authorities got some consolation, however, out of the fact that the *Zede* had at least demonstrated the practicability of the submarine boat. After the Goubet boat, to which they next turned their attention, had been proven thoroughly impracticable, they pinned their faith to the Morse. Now that more complete trials of the Morse have been made, it is found that her range of action is quite as restricted as that of the *Zede*. The next submarine vessel with which experiments will be made is the *Narvel*, which was launched a few weeks ago at Cherbourg."

SCIENCE BREVITIES.

"The rural telephone service," says *The Electrical World*, "is said to be far advanced in northeastern Ohio, and particularly in Geauga county, which is strictly an agricultural county. Not only is there an office in every township, but hundreds of farmers have telephones in their homes. One of the companies in the county named is strictly a farmers' company, it being operated by eight farmers, who own everything from franchise to switchboard. The primary object in constructing the lines was not to build them for an investment, but as a help in the transaction of business, and to give the families some of the social privileges that are too often lacking on the farm."

The law recently passed in North Dakota prohibiting the marriage of persons afflicted with hereditary disease is quoted with approval by the *Revue Scientifique* (Paris, October 14). It says: "Science makes great efforts, often without effect, to cure and correct diseases and abnormalities. It would be much simpler to prevent their occurrence. Is not prevention in all things a better method than cure? Our era is not accustomed to the radical customs of the Spartans, but they certainly contained much that was good, and without cruelty it is perhaps impossible to arrive at the same result." The trouble with such laws is, of course, that their passage by a single State is ineffective and merely drives diseased persons into adjoining States for the performance of the marriage ceremony.

THE RELIGIOUS WORLD.

THE CHRISTIAN ATTITUDE TOWARD WAR.

THE Rev. Dr. Alexander MacKenna, one of the British representatives at the recent International Congregational Council, in his address (reprinted in the *Hartford Seminary Record*, November) took a survey of the question of international relations in the light of recent history. At the opening of the first International Industrial Exposition on May-day, 1851, in London, he says, the nations were apparently learning the great lesson of their interdependence, and that for one nation in the universal brotherhood to wage bloody war on another people is as tho the right hand of a man were stabbing the left hand. The eve of the fulfilment of Tennyson's prediction seemed near:

"Till the war-drum throb'd no longer, and the battle flags were furled
In the Parliament of man, the Federation of the World.
There the common sense of most shall hold a fretful realm in awe,
And the kindly earth shall slumber, lapt in universal law."

"It was a generous forecast," remarks Dr. MacKenna, "but it left human nature out of the account. The girders of the Crystal Palace were hardly removed from Hyde Park when the Crimean war broke out; and that war has left behind it fears and anxieties and a mutual distrust that have not since allowed Europe a tranquil year." The end of the century finds us confronted by "signs in the sun, and in the moon, and in the stars; and upon the earth distress of nations with perplexity; men's hearts failing them for fear and for looking after those things which are coming on the earth."

In spite of the generous motives from which war often arises, its results upon public and private ideals are unfortunate. He says:

"War squanders and degrades the noble impulse which gave it being. If the impulse could go at once to its object, as when a father boxes a troublesome boy's ears, or a passerby knocks down a scoundrel who is insulting a woman, there might be some justification for militarism in a civilized community. But this is just what never happens. Months and years intervene between the honest indignation and the declaration of war, and a still longer period drags on until the end of the fighting. Not many persons can bear the strain of a noble purpose again and again thwarted, its fulfilment indefinitely, hopelessly delayed. History tells us that the martyrs can; it also tells us that the soldier can not, the politician can not, the people in public meeting can not. We have seen the process of deterioration more than once. The nation is sincerely enthusiastic; but the conduct of the war passes into the hands of men with whom war is a profession; and it gives opportunity to the unscrupulous speculator to make his gain. As the months go on, there is great searching of heart among Christians; with those who are not Christian the generous impulse becomes an ignoble necessity of finishing what has been begun. Then, as the opposition is prolonged, the determination is come to use any and every means to put down the enemy; something like malignant temper may appear where the original motive was so good. If there is a marked inequality between the combatants, or if one side has roundly beaten the other, the conquerors do not stop with righting the wrong, they aim at punishing the beaten party. The cry *Va victis* has a pagan sound; have we altered the fact when we talk of 'indemnity'? If the nations are fairly matched, both are weary of the struggle long before it is ended; terms are proposed and accepted far less satisfactory to either than could have been arrived at without fighting; but there is no grace in the proposal or the acceptance—only a rankling sense of humiliation and necessity; forbidding concord between the nations.

"Recent events, moreover, have shown us that war fails conspicuously where its pretensions have been the loudest—it does not inspire and sustain the loftiest courage. Bravery in fighting is one of the primary animal instincts; the tiger has it, so has the dog, so has the Norwegian lemming, a little creature you could cover with the palm of your hand, and which has not the sense to

avoid drowning itself when in its migration it reaches the sea. . . . There is a higher power of courage of which we know nothing. If it were not so sad a spectacle, we might find boundless humor in the fact that Europe has been, for fifty years, massing armies which it to-day trembles to behold, perfecting weapons of precision until it is afraid to use them. History knows few more disgraceful sights than the 'Concert of Europe'; civilization cowering before barbarism."

The so-called Christian governments are frankly pagan, says Dr. MacKenna, and the ultimate principles and purposes of state and church are radically different. The Christian law is: "So is the will of God, that with well-doing ye put to silence the ignorance of foolish men"; and, "It is better, if the will of God be so, that ye suffer for well-doing than for evil-doing." But there is not a cabinet in Europe where this law is accepted or dreamed of as a possible guide to national action. Dr. MacKenna continues:

"We may frankly aver that indignation is an honest impulse, that resistance of wrong, the determination to put it down, ought to have an abiding place in human action; that the call to war, because it is an appeal to common, not to individualistic, effort, may startle the selfish into warmth of heart; and that the discipline, of which the military system has been up to now the chief exponent, has trained men in the subordination of self to society. We may recognize that humane sentiment has, from the beginning, tempered the sufferings and the humiliations of war; and that, under Christian influence, regard for the wounded and tenderness toward the vanquished, individually, have come to be prevailing sentiments. And we may wish that this pitifulness may have full play when whites are in conflict with colored men as well as in what is called 'civilized warfare.' But it has become conspicuously clear that war is no instrument for the accomplishment of the highest ends; and that involves—since the highest human ends are always in the consciousness of the true follower of Christ—that it has become hard, and will become impossible, for Christian people to employ it. War may be a fitting instrument for men inflamed with the lust of possession; it fails us when we invoke its aid for unselfish uses."

THE RETIREMENT OF DR. STORRS.

THE resignation of the Rev. Dr. Richard S. Storrs, after a pastorate of fifty-three years in the Congregational Church of the Pilgrims, Brooklyn, altho hardly coming as a surprise, has called forth wide regret and expressions of exceptional esteem. Dr. Storrs has been a notable man throughout his long public career—eloquent, dignified, and conservative after the type of the older clerical school. His resignation, together with the retirement of Dr. Abbott from Plymouth Church, that of Dr. Van Dyke from the Brick Presbyterian Church, and the calling of Dr. Morgan, of London, to fill the place of Dr. John Hall in the Fifth Avenue Presbyterian Church, almost marks the end of a church era in New York and the commencement of a period in which new influences will prevail. The *New York Tribune*, referring to the active career of Dr. Storrs and the potent force he has exerted in the intellectual life of the times, says:

"He has never cared to cultivate the arts of popularity, and it may be admitted that he has appealed directly to the few rather than the many. But through those to whom he has been a model and an inspiration his influence has been widely diffused. He is among the last, as he has always been among the foremost, of the orators of the school to which Edward Everett belonged. His style is not impassioned and magnetic, but when his theme is great and he has summoned all his resources his eloquence is lofty and commanding. We recall no American orator of this or a preceding generation in whom a rare and beautiful fluency of speech was raised further above the commonplace by range and nobility of thought, and by exquisite discernment and precision in the choice of words. Those who heard his oration on the Turk and the Muscovite during the war of 1877, delivered first in the Brooklyn Academy of Music, have never outlived the impression of power and felicity which that splendid performance produced

upon their minds. We believe it was Dr. Eliot, of Harvard, who said that it was the greatest triumph in the field of intellectual expression which he had ever witnessed."

The *New York Times* says that his long and unclouded pastorate constitutes an object-lesson to the whole country, and has thus been a public service:

"Primarily that service must be said to consist in the example he has given for more than half a century of what a Christian pastor in a great and growing city should be. Not only has he won the love and respect of three generations of members of his own congregation, but he has at all times inspired that congregation to active, faithful, and fruitful work on all the lines of effort proper to the church. And on all occasions he has been and has helped his people to be the support of the highest standard of conduct in private and in public life. It has been distinctly easier for the right to prevail and harder for the wrong to gain a foothold in the society of which the Church of the Pilgrims and its

Copyright by James E. Brown, New York.

REV. DR. RICHARD S. STORRS.

pastor have been factors than it would have been without them. Purity, honesty, individual and civic moral courage have been advanced by them, and at some times when evasion or silence would have been far more comfortable. In connection with his pastoral work also it is to be said that his service has been great through his steady adherence to the best traditions of the pulpit and the fidelity with which he has devoted to his task the great gifts that would have easily earned him fame and profit outside. The ministry as he has understood and practised it has been, in the old and fine sense, a 'calling,' and to its voice he has never allowed his mind to be dulled by any distraction whatever."

The *New York Independent* (November 23) calls Dr. Storrs "the most distinguished figure in the American pulpit," and adds that "his character has been as lofty as his ability is great." It says:

"As an orator Dr. Storrs has acquired his great public fame. His address at Boston last month gives us hope that he may yet long hold the platform if not the pastorate. He is probably the most finished and acceptable orator in the country. We know not who else preserves the succession of Webster, Choate, and Everett. His style is fitted to the oration. It is never trivial; it is always noble and often grand. He has the figure of the orator—tall, strong, and massive. He represents great personal dignity. He has a clear, full voice, perfectly under control. He has a memory which is one of the wonders of all who hear him. He will proceed through a historical address of two hours, bristling with facts, dates, and figures, with never a reference to a scrap of paper, and every sentence as exactly framed and as nicely joined in its place as if the whole were written out and committed to memory, when, in fact, it has been composed only in the orator's mind. His learning, especially in historical lines, is as remarkable as his memory. In attainments he is one of the most cultivated men this country has ever produced. Then, above all this, come the higher qualities of a sound judgment, great discretion, and courage. He dares first to trust his own judgment, and then to follow it. This has shown itself on occasions in his ministry when he has taken the lead in a great contest, and in such a case he has carried the convictions of the public with him. They have known that there was nothing erratic

about Dr. Storrs; that what he said and did was deeply considered, and the weight he carried was irresistible."

The Outlook (November 25) remarks that only two pastorates of recent years have equalled that of Dr. Storrs in length. It says:

"A discriminating characterization of such a man and his work is not, in our judgment, fitting while he is still living. But it may at least be said that throughout the country he holds a well-deserved reputation of being, for polished eloquence, thoughtfulness, scholarship, and length of service, the primate of the Congregational Church. But his work and usefulness have not been confined within the limits of his parish. His active service in the anti-slavery cause, his cooperation with Dr. Leonard Bacon and Dr. Joseph P. Thompson in *The Independent* for over twelve eventful years, his public work as a distinguished citizen of Brooklyn, whose Historical Library will perhaps be his noblest monument, and his labors as a mediator in the controversies in the American Board, and his skill in leading it, tho himself a conservative, on to a broader and more liberal platform, combine to give him a position in the church and in the nation larger even than that given to him by his long and successful pastorate. One sentence in his letter of resignation deserves to be remembered, recalled, and often repeated for the benefit of young men hesitating between differing professions, and it is all the more significant since Dr. Storrs began the study of the law and subsequently abandoned it for the ministry: 'If to-day were offered me the choice of a pathway in life, the most alluring and rewarding, I should choose none other than that which has been given me—the pathway of a Christian pastor, joyfully trying to bring to men the grace and glory of the Lord's Gospel.'"

WHY DOES THE ROMEWARD TENDENCY IN THE ENGLISH CHURCH INCREASE?

IN contrast with the "Away-from-Rome" crusade in German-Austria (which within the last six months has caused more than five thousand Roman Catholics to embrace Protestantism), is the ritualistic movement in England that is aiming to "Catholicize" the established church. An attempt to analyze this movement, from the point of view of an impartial church historian, is found in the *Beweis des Glaubens* (Gutersloh, Germany, No. 10). After giving comparatively complete data, the writer assigns as the reasons for the movement the following:

As a first and probably chief reason for this Romeward trend, one must regard the predominantly aristocratic character of England's national development since the era of the Reformation. Of its two classes, the clergy and the laity, the most prominent tendencies have been toward aristocratic interests and ambitions. With the exception of the revolutionary spasms of 1643-60, democratic ideas have never been able to obtain the upper hand in England's development. The traditional character of public and church life has been aristocratic, and the external splendor of public service has ever found a warm place in the hearts of the people. In retaining the Episcopal hierarchy the English nation has also inherited from the Middle Ages a love for rich splendor of ritual, which has ever been a prominent factor in its church life, notwithstanding the brief temporary check of the Puritanic period of Cromwell. And it is no exaggeration to say that the present agitation is practically a revival of the Anglo-Catholic system of Archbishop Laud, who is thought by modern ritualists to be as much a martyr as Charles I. The German church historian, Mettgenberg, says, in his "Ritualism and Romanism in England," that the hierarchical teachings of Laud furnish the key to the present ritualistic ideas. The latter have thus an historical basis and are but a development of germs that have been inherent in the Church of England ever since the days of the Reformation.

A second reason, which, however, has become an active factor only within the last half-century, is the expansion of the Roman Catholic hierarchy on English soil, which has furnished the Ritualists with a model to guide them in their work. The establishment of this system is of comparatively recent date, having been inaugurated by Pius IX. in 1850 by the appointment of the Arch-

bishop of Westminster and twelve suffragan bishops for various sees. The remarkable success of the Tractarian movement in Oxford had encouraged the Vatican to enter upon this enterprise where only a few decades before Catholic services had been forbidden. A Catholic hierarchy was established even in a ultra-Protestant Scotland. What Newman and Manning accomplished after they had entered the fold of Rome encouraged their friends who had not followed them that far to pursue similar ideals within the state church itself; and the movement attained the character of popularity.

A third reason for the success of this Catholicizing movement has been the inactivity and the exceeding great patience of the other parties in the established-church fold. Here side by side have existed three distinct tendencies—namely, the High Church, or ritualistic party; the Low Church, or evangelical party, closely akin to the Methodist and pietistic school; and a Broad or Liberal party, closely akin to the negative Protestantism of Germany, which denies more or less even the fundamentals of traditional evangelical doctrine. The evangelical party has done excellent work in the department of practical Christianity, while the Broad Church party has developed a technical scholarship of a high degree. But both have until recently regarded with comparative indifference the hierarchical ambitions of the Catholicizing sections of the church, and have not stood for the traditional landmarks of the church of the Reformation. In fact, the Broad-Church party has in many cases made common cause with the Ritualists against the Evangelicals; and this explains why so many of the leading chairs in Oxford are occupied by rationalists, and why the Ritschl school of the continent has in recent years been able to report notable additions among the Oxford and other theologians of England.

A fourth reason is to be sought in the fact that the anti-ritualistic movement has been poorly organized, and that its leadership has been entrusted to men who are more zealous than wise. Its present head is the London publisher and book-man, John Kensit, who indeed is bold and decided, but who lacks the necessary wisdom. His interruption of the Catholicizing Good Friday services in the ritualistic St. Cuthbert's Church, when he cried out, "In the name of God, I declare this to be idolatry," aroused a good deal of excitement, but did not help the cause of historical Protestantism. A cure can be found only in the complete acceptance of both the material and the formal principles of the Reformation: namely, the doctrine of justification by faith alone, and the Scriptures as the sole source of dogma and morals, together with the legitimate practical application of these principles.—*Translation made for THE LITERARY DIGEST.*

THE PROBLEM OF THE COUNTRY CHURCH.

THE much-talked-of decay of religion in the rural districts presents a problem to the Christian churches which will probably receive increasing attention. It is believed by many that the condition is one for which the missionary societies are not responsible, and that the growth of religious life in the smaller towns and country districts must come by direct individual and congregational effort from the stronger centers. *The Christian Standard*, organ of the Christian Church, says (November 18):

"No amount of giving for general missionary interests will relieve us of the responsibility thoroughly to cultivate our own contiguous field. Where there is a strong church at a county-seat, or metropolis of a county or district, and dying churches in all the regions about, the strong church is not doing its duty, especially if the evil is a chronic one. For churches to be declining when efficient established preachers are within an hour's travel means that the strong have refused to bear the burdens of the weak and are seeking to please themselves.

"The first business of a preacher is to preach the Gospel; and certainly the delivery of two brief sermons a week should not satisfy where opportunities are many and the need is great. From the neglected and decadent congregations six or ten or twenty miles away we hear the voice of the man of Macedonia, 'Come over and help us.' We will not be held guiltless if we heed not that cry. Every strong church, with its capable minis-

ters and many helpers, should consider itself a divinely appointed evangelization society to preach the Gospel within the personal reach of its own membership. The whole problem of country evangelization is very much in the hands of the preachers themselves. The almost insane desire to go to the city which has taken possession of the people seems to be infecting the ministry as well. The exaggerated and false ideas of the greater importance of city pulpits draw young preachers from the quieter, but certainly no less fertile, country fields, to the intense but unspiritual city life. While the city is not to be neglected, the question of ministering there should not be determined by personal preference, but by what seems to be the call of the Lord through providential indications, and the unsolicited invitation of the city brethren themselves. Opportunity, and not honor, should rule in our choice between the country and the city pulpit.

"One of the most urgent needs in connection with the right solution of this same problem of the country church is a movement in the colleges in favor of country evangelization. A student volunteer movement pledging college men to begin their ministry in some country or village field is as urgent and important as that which was started in the behalf of preaching the Gospel in heathen lands. There are exceptions, but in most cases, for their own intellectual development and to secure knowledge of and sympathy with the people, our ministerial graduates should determine to spend a term of years in the country or on the frontier, before even considering a call to the big towns and crowded cities. College faculties may do much toward solving the problem of the country church, from which they draw the majority of their students, especially those who, in the years to come, are to reflect honor upon their *alma mater*. If the world is to be evangelized through America, then more attention must be paid to the preaching of the Gospel and the nurture of the churches in the country districts."

THE CIVILIZING INFLUENCE OF THE ROMAN CATHOLIC CHURCH.

A REMARKABLE feature of the Dreyfus controversy has been the attempt not only to find a religious motive for the persecution of the unfortunate captain, but to fix upon the Roman Catholic Church a large portion of the responsibility for the supposed miscarriage of justice. We have already given in some detail the allegations and counter allegations which appeared a short time ago in the *London Times*. The discussion is still simmering in England, and out of it has grown an article in *The New Century Review* (November) by Cardinal Vaughan, which is referred to by the editor as "a splendid vindication of the church." The article touches on the Dreyfus case but briefly, the cardinal taking up the wider question of his church's general influence upon national welfare, in reply to the sweeping accusation of "Verax" that the Roman Catholic Church is responsible for the backward condition of Ireland, Spain, and Italy, and has "always been inimical to the highest civilizations." Says the cardinal:

"When I assert that the Catholic Church with a free hand is well able to promote the happiness of the people, and to raise them from the pagan to the Christian level of thought and action, my statement, I believe, is amply borne out by the history of Christian civilization. I need only appeal to such names as Milman, Hallam, Froude, Lecky, Farrar, Guizot, and a host of other witnesses who are above suspicion. But when I claim for the Catholic and Roman Church now the same divine power and vitality she gave proof of in England during a thousand years of our history, I am confronted with the present state of Ireland, France, and Spain. It would be almost as reasonable to say that the degraded condition of masses of the English poor, and the causes that have led to their misery, are attributable to the Catholic Church; only that it is too generally realized here that the Catholic Church lay prostrate, bleeding, and dying under the harrow, for two or three centuries in England, for even the staunchest Protestant to cast the blame for the state of the English poor upon the Catholic Church.

"But we are bid to look at Ireland where the people have remained Catholic. Now, the sufferings of the Catholic Church in Ireland have been second only to those of the Church in England.

Archbishop Whately, accounting for his own want of success, wrote that he 'had to fight the battle (of Protestantism in Ireland) with one hand, and that his best, tied behind him.'

"The Catholic Church in Ireland has had to carry out her divine mission, not 'with one hand tied behind her,' but with both hands cut off. She was stripped of her possessions, reduced to poverty, deprived of the right to educate, the land taken from Catholics and given to Protestants, fettered and persecuted in every possible way by England for centuries. And yet, even so, she has maintained a peasantry that is singularly pure and chaste, and in ordinary times freer from crime than that of England; while, in spite of every disadvantage, she has preserved a high standard of virtue, faith, and piety among her keenly intelligent and sympathetic poor. Let any one contrast the intellectual, moral, and religious condition of the poor of Ireland with that of the lower classes in our great towns, and then say, if he please, that the cause of the irrelative conditions is to be found in the respective religions of the two countries.

"But we are referred to France as further proof against the character of the Catholic Church. Has it been forgotten that the church in France was drowned in a sea of blood a hundred years ago; that religion, revelation, and God Himself were publicly proscribed; that the church is not free to this day in France; that her bishops may nowhere meet in synod; that her religious orders are under a ban; and that whatever education the church gives is under distress and disadvantages? And yet, in spite of a century of disabilities, Catholic France produces at the present day a great multitude of as noble examples of generosity and devotedness as the world has ever seen.

"Again, we are referred to Spain; but during the century Spain also has been swept by the evil principles of the French Revolution, her religious orders have been again and again suppressed, her seminaries closed, her property confiscated, and for years her episcopate was actually extinguished. The church in Spain has had to fight with more than 'one hand tied behind her.' Yet look at the Spanish poor, and you will find in them an inbred gentility, a noble bearing, a religious sense and courtesy, that you will search for in vain in England. It is only fair to remember that the Catholic Church in Spain and in South America, as in other lands, has had to fulfil her divine mission in chains, weakened on all sides by the state, if not actually enslaved by its laws."

Turning to the reproach of "Verax" that the Roman Catholic Church was to be convicted of partizanship against Dreyfus, Cardinal Vaughan asks if this is just. He continues:

"The Dreyfus case has been torn to pieces, and all over the country has divided members of the same Catholic family. The bishops have endeavored to calm the minds of men, but it is not easy to allay a panic. But belief in his guilt has not been confined to the French Catholics; ministry after ministry, without a shred of Catholicity in its composition, was convinced of his guilt. If there has been passion on one side, has there been no passion on the other?

"If certain fiery organs of the cheap Catholic press in France have been unfortunately carried away by partizanship, do they stand alone in partizanship in France or elsewhere? France has been distracted for generations by political turmoil, and is honey-combed by unscrupulous secret societies, pledged to despoil and destroy the Catholic Church wherever they can. Can we be surprised, then, that a single incident, that the name and fate of a single case, should precipitate convictions or fears on one side or on the other? A single spark may create a conflagration. France having been living under panic for years; and it is not to be wondered at if some men lose their heads in a state of national panic."

Churches of Salt.—The city of Williczka, in Polish Austria, which has long been known as the "City of Salt," contains some wholly unique specimens of church architecture. Its salt-mines, excavated for over eight hundred years, cover a vast underground area with streets, public squares, amusement halls and restaurants, a railway station, thirty miles of underground railway, and chapels, all constructed of blocks of salt which give out a dazzling radiance in the electric light. A writer in *The Pilot* (Rom. Cath.) thus describes a scene in St. Anthony's Chapel,

which was built in 1698 by a nameless unaided miner out of solid masses of salt, and which the writer calls the most remarkable place of worship in the world:

"Several times each year the priests of the district hold services in this underground chapel, and one service in particular is annually celebrated on July 3 with considerable pomp and earnest devotion. The priests attired in full robes descend the mines in state and are accompanied by hundreds of pious people, who journey for miles from all parts of the country in order to take part in the service. A crowd of sightseers, too, attracted by ceremonies so unique in their surroundings, come specially on this day to view the mines and reverently listen. The chants of the priests and the sweet voices of the singers reverberate through the empty rooms and passages in a manner which is both solemn and impressive.

"The Queen's chapel, the second important one, also possesses a magnificent 'altar,' which has been carved with expert skill in solid salt. On the side of the chapel, too, has been carved, with almost incredible art, a view of Bethlehem.

"It is rather a curious testimony to the strong religious feeling of the people of olden times to find to the present day the majority of the rooms and corridors are still named after the saints and martyrs who have figured in the history of religion, and even to-day the religious fervor of centuries ago still seems to retain an influence over the inhabitants of this unique city of salt."

Evangelical Saint-Worship.—An extraordinary development is making its appearance in the very bosom of Protestantism, according to *The Living Church* (Prot. Episc., November 4), which says that this phenomenon is nothing less than the practise of prayer to the saints—only the saints "are not the apostles and martyrs, or the heroes of faith whom the church has placed in her calendar," but the departed friends of the devotees. It says:

"Dr. George Adam Smith, in his 'Life of Henry Drummond,' mentions as a fact within his knowledge that certain persons habitually address prayers to Henry Drummond. Dr. Joseph Parker, of the City Temple, London (not the Temple church), a doughty adversary of 'Popery and Prelacy,' has openly declared that he prayed to his departed wife every day. He said that he never came to the City Temple to preach without asking her to come with him, and, furthermore, he knew that she did come. Nor does he hold this as a mere sentiment applicable only to his own individual case, but alluding to a friend who had lost his wife, he says: 'I encourage my friend to pray to his wife, and to pray to God to ask her to come to his help. She will be more to him than twelve legions of unknown angels.' Dr. Parker evidently has no use for the 'ministering spirits sent forth to minister to them who shall be heirs of salvation.' Well may the Protestant paper from which we cull these instances say: 'All this is simply petrifying!' It mentions a Roman litany to the saints, and asks: 'Is this what we are going to come to in our Protestant churches?'"

RELIGIOUS NOTES.

A NEW YORK yellow journal which does not love Governor Roosevelt calls attention to the fact that the high personages mentioned in his Thanksgiving Proclamation are as follows:

Personages.	Times Mentioned.
Theodore Roosevelt.....	1
Governor of the State of New York.....	2
God.....	1
	0

"A Thanksgiving Proclamation with no reference whatever to a Supreme Being is somewhat of a curiosity," says this paper. "Even when all religion was banned in France during the Revolution, Robespierre had a feast of the *Être Suprême*, as Sir Henry Irving has reminded us."

THE following curiosity of English provincial verse was lately sent to Dr. William J. Rolfe from Exeter, in the west of England, and is reproduced in *The Critic* (November). A certain bishop of Exeter, it appears, was visiting a village church, when to his astonishment the following hymn was sung in his honor:

"Why skip ye zo, ye little 'lls?
Why skip? why skip? why skip?
Why? Jez becu'z we'm glad to see
His grace, the lard bish'p"
Why 'op ye zo, ye leetle lambs?
Why 'op? why 'op? why 'op?
Why? Jez becu'z we'm glad to see
His grace, the lard bish'p"

FOREIGN TOPICS.

THE SAMOAN SETTLEMENT.

SUBJECT, of course, to the approval of the United States, Great Britain and Germany have settled the Samoan question. Great Britain retires from the islands, leaving Upolu and Savai, with the nearby islets, to the Germans, who have certainly the largest interests established there. Choisi and Isabel, two islands of the Solomon group, are turned over to England, Germany also abandoning her claims to the Tonga and Savage islands. Certain arrangements in Africa, such as the extra-territoriality of the Germans in Zanzibar and the frontier delimitations of Togo and the Gold Coast, are also included in the arrangement. The Germans seem to be well pleased. The English also seem to be satisfied, as they receive much larger territory in return. Difficulties with the United States are not expected, as the Americans obtain what they most desired, the island of Tutuila with its fine harbor. The London *Spectator* says:

"Upon the whole, neither party has gained anything; but the Germans are delighted, as they believe in the value of Samoa, the Americans keep the only advantage they wanted, and the English, besides acquiring clear rights in islands where their rights were doubtful, get rid of an irritating *condominium*. The only objectionable feature in the transaction is that the Samoans would probably have elected us by plebiscite, they dreading German severity; but as we are not sovereign over them we are not abandoning attached subjects."

The *Westminster Gazette* expresses itself to the following effect:

The agreement turns over the larger part of the Samoan group to the Germans, and as it is just now thought prudent to keep them in good humor, Great Britain need not complain. Otherwise it would not do to turn over territory to the Germans, whose rule is not pleasant. England at least receives equivalents. The *Daily Chronicle* points out that the Australian colonies may not be well pleased. New Zealand has long since expressed her desire to annex the Samoan Islands on the same terms as those on which she obtained the Cooks Islands; but if England were to fulfil every whim of her colonies, she would have little peace just now.

Lord Salisbury, at the recent Lord Mayor's banquet, explained that the Germans had put much capital and energy into the Samoan Islands, and hence wanted the land. England does not want islands which have bad ports, and in Tonga she obtains a good one. The Berlin *Tageblatt* says:

The Solomon Islands are much larger than the islands of the Samoan group now ceded to Germany, but they are not healthy, and the natives are very fierce and warlike. On the whole, the Samoan Islands are not obtained at too high a price. We shall have the Americans as neighbors, but this is not likely to lead to grave difficulties such as would ensue if we had the British so near us.

The *Boersen Zeitung*, however, fears this proximity of the Americans may detract from the value of the islands to Germany. The *Kölnische Zeitung* says:

"The United States acquired Pago Pago for a coaling-station as long ago as 1878. That treaty stands good to-day, and the Americans are satisfied with the renunciation of all rights the other powers may have retained in Tutuila. Germany could not well withdraw from the rest of the group. Aside from sentimental reasons, there were many practical ones. Our withdrawal would have been regarded as a sign of weakness and an acknowledgment of England's superiority, which we were little disposed to make. Happily the German Government never thought of it. On the other hand it must be admitted that the Australian colonies made England's position difficult, for England hoped to obtain material support from Australia during the present war, and was forced to humor the Australians. That England paid

for Germany's good will as regards the South African war we are not prepared to admit. The overwhelming preponderance of Great Britain at sea is a fact, and the Samoan arrangement is merely one of exchange on business principles. The German Government is not bound by it to renounce its freedom of action in any direction."—*Translations made for THE LITERARY DIGEST.*

THE "COLORED PROBLEM" IN SOUTH AFRICA.

THE war in South Africa is remarkable in many respects, and not the least of these is the fact that a third factor may appear upon the scene at any moment. This important "unknown quantity" of the problem is the native population, which largely outnumbers the whites. Already it has been suggested to the British Government to organize native troops against the Boers; but these would have to be armed with the most effective rifles, else they would hardly face the Boers, and this would be a dangerous experiment. The tribe most likely to play an important part is the Basutos. The Paris *Journal des Débats* refers to them as follows:

"Officially, they have not been invited to play their part, for public opinion in Great Britain is, on the whole, opposed to the scheme. . . . But it is possible that the Basutos may appear upon the scene without invitation, to settle old scores with the descendants of the terrible *voortrekkers* of '36. Their intervention may be spontaneous, yet of a nature to serve British interests. For the defense of their wives and little ones the Boers may be forced to hasten north, leaving the English free to concentrate their forces."

The Boers are very bitter in their comments upon the supposed attempts to arouse the colored element against them, and the success of such attempts may lead to immediate open rebellion in the Cape Colony. The Amsterdam *Handelsblad* remarks that "it is easy to believe that England will endeavor to prevent the rising of the Basutos, as this would be answered at once by a rising of all the Cape Dutch." The Berlin *Vossische Zeitung* says:

"Officially the British Government has declared that no use of native contingents will be made. The British Resident in Basutoland declares, however, that the Boers have endeavored to tamper with the loyalty of the natives. Their threats have aroused much resentment, and it may be difficult to keep the Basutos from attacking the Boers. Despite these declarations, it is doubtful that the Basutos will attack the Boers. They know well enough that their own semi-independence would not last long if the Boer republics are crushed."

Mr. Fox-Bourne, the secretary of the Aborigines' Protection Society, expresses himself to the following effect in the London *Daily Mail*:

The natives of Northern Transvaal may be the first to rise against the Boers. In the Orange Free State there is not much danger of a rising; but there is in Swaziland. The Swazis have never forgiven the English for turning them over to the Boers. They will massacre English and Boers indiscriminately.

The Basutos never were satisfied with the annexation of their country by the Cape Colony. Since 1884 Basutoland has been declared a crown colony, and the Basutos were allowed to administer their own affairs to a large extent. But they always fear for the destruction of their semi-independence. Neither are they on good terms with the Orange Free State, which consists largely of territory wrested from the Basutos. Yet the Basutos may be prevailed upon to assist the Boers, if their independence is guaranteed.

The Pondos and Griquas also may give trouble, but they are not as warlike as the Basutos.

The Zulus and Matabele are pretty certain to rise against the English if they rise at all. According to reliable accounts, the natives in Zululand and Matabeleland are well pleased with the proclamations annexing the territory they inhabit to the Trans-

TWO PROPHECIES ON THE ENDING OF THE SOUTH AFRICAN WAR.

LONDON PUNCH: Oom-Pauleon Bcernaparte on board the *Highbury Castle* on his way to St. Joseph or any other far-off place appointed by the Colonial Secretary. (With apologies to W. Q. Orchardson, R. A.)

AMSTERDAMMER: "We suggest in all humility that the matter is likely to end with the retreat of the Imperialist Joseph and his forces." (With apologies to Meissonier.)

MR. BULL BEGINS TO BE CRITICAL.

MR. BULL: "You should have had more men out there before you bluffed."

MR. CHAMBERLAIN: "Oh, but we couldn't, sir; those dreadful Radicals—"

MR. BULL: "Don't tell me that—with your majority of 150—the fact is, you bluffed before you got your cards."

—*Westminster Gazette*.

RULE, BRITANNIA!

—*Kikeriki, Vienna*.

FOREIGN CARTOONS ON THE SOUTH AFRICAN WAR.

vaal. In rough numbers the native population is given as follows in the statistical reports of the Cape Colony :

	Whites.	Colored.
Cape Colony	400,000	1,200,000
Natal	65,000	500,000
Transvaal	300,000	600,000
Free State	115,000	130,000
Rhodesia	13,000	500,000
Basutoland	600	250,000

There is also a large native population in German Southwest Africa, against which only 3,000 whites can be placed.

Dr. Leyds, the European agent of the Transvaal, whose statements, however, are not always to be trusted, declares that the English have already armed some natives. The fact is that both armies have colored servants and camp followers, and the most trusted of these are generally given weapons to defend the cattle they take out to graze.—*Translations made for THE LITERARY DIGEST.*

A WAR CLOUD IN THE FAR EAST.

THE Japanese fleet is nearing its completion, and the Japanese are more and more inclined to demand that they shall be regarded as the predominant power of the far East. The Tokyo *Nippon* recently warned the Germans that Korea is "within the sphere of Japanese interests," probably under the impression that Prince Henry is rather more than a naval commander and a "commercial traveler," and that he is after important political concessions from the Korean Government. The Germans, however, are not likely to trouble Japan seriously. Much graver is the attitude of Russia, and there is a general impression that Japan will follow the example of the Boers, and strike before her huge adversary can bring all his force to bear. The point at issue, according to *The Japan Mail*, may be sketched as follows :

The Russian Government endeavored to obtain some land at Masanpo, as a most convenient site for a naval station between Vladivostock and Liao-Tung. The land had already passed into the hands of the Japanese, who, as might be expected, refused to part with it. Russia tried to use the influence of the Korean Government to gain her point, but without avail, as the Japanese Government remained firm. Russia now endeavors to obtain compensations from Korea in other directions, but, as Japan regards Korea as her heritage, grave complications may result.

The Tokyo *Yorodzu Choko*, referring to the action of the Korean Government, which asked the Russians to confer direct with Japan, says :

"Considering the slavish submission Korea has usually shown hitherto when dealing with Russia, this attitude of hers adopted in connection with the affair in question must be said to be pretty strong. It unmistakably shows that the Japanese Government is resolved to back the Korean Government to a considerable extent against the Russian advance. This is rather unusual, and therefore the question is doubly interesting and deserves more than casual attention. We shall now see how the affair developed. . .

"How will the Russian Government now act? Perhaps Russia will not like to deal directly with this country, and will find some excuse to shun it and renew her diplomatic maneuvers against the Korean Government. Or she will press Korea to concede some other place or interest to her by way of compensation. At any rate, certain is it that the Muscovite empire will not remain silent."

The St. Petersburg *Novoye Vremya* expresses itself to the following effect :

The irresistible march of a vigorous power like Russia can not be prevented. This holds good especially in the case of territory which is manifestly intended to form a part of the Czar's dominions, such as various parts of Asia which at one time were included in the Chinese empire, and which could not be better administered by any other power than the Russians. Korea is such territory. Its geographical position, its most vital interests, force it to seek shelter under the political protection of Russia. In a

similar way the Manchurians were bound to come under our influence.

The Shanghai *Celestial Empire* believes that Russia will consider a long time ere she forces a conflict, but, if she does, England must place herself on the side of Japan. The paper says :

"Russia may count the cost. It is not at all unlikely that she will. There are indeed endless reasons for her doing so besides the strength of the opposition she would meet with. She is poor, famine and plague-stricken, wasted by disease. Her people are ignorant, her resources undeveloped, her finances in disorder, her system of government discredited. . . . There is ample reason why Russia should at any rate 'mark time,' develop her resources, add to her trade, conciliate her rivals, and at the same time strengthen her position. . . .

"But, as we have indicated, it is possible, even if highly improbable, that Russia may strike a blow at some vital interest of Japan. In that case we do not hesitate to say that England should be found alongside her insular friend. The interests of the two nations are sufficiently alike to make them natural allies. . . . Our combined rights are great; our determination to protect them should be proportionate."

But the English think that they have quite enough on their hands just now. The London *Spectator*, at least, expresses itself to that effect, in an article which we summarize as follows :

Japan can be no ward of ours. We English, if we have all the virtues in Scripture, can not undertake the government of the whole world. We have not the force for it. It is almost an accident that we have not to fight against the Boers, the Khalifa, King Menelek, and on our Indian frontier at the same time. Half Europe is hardly able to resist the temptation of springing at our throats. We could not get men enough even if we doubled the wages of the soldiers, and our people will not have conscription. We must confine further increase of empire to such advantages as may be obtained by the fleet alone. We greatly doubt whether British rule, with its wide liberties and reluctance to inflict death, would be good for Chinamen, but even if it were we have not the force to maintain it, and should limit ourselves to securing genuine freedom of trade. With the aid of America we can secure that, and therewith we had better rest content. If we must, *en passant*, wage a maritime war with Russia—the necessity of which we can not see—so be it, but in no case would we assist a Mongolian state to defeat a white one, or to annex the limitless potential resources of the Chinese empire.

The London *Outlook*, one of the more jingoistic of the English papers, expresses some doubts as to the financial ability of Japan to wage a big war, but adds reflectively : "A nation bent upon war can indulge in war whatever be the state of the national exchequer. The counting of the cost too often comes after, not before, the outbreak of hostilities."

Kaiser Wilhelm's Visit to England.—There is no attempt in England to conceal a feeling akin to elation over the visit of the Kaiser at the present time. This feeling is obviously augmented by the recent utterances of the European press discrediting the reports of the Kaiser's intention and expressing the hope that no such visit would be made. A mass-meeting was held in Hamburg several weeks ago which passed a resolution asking the Emperor to give up the visit and applauding his attitude toward England at the time of the Jameson raid. The *Vossische Zeitung* expressed the hope that unless definite announcements of the visit had been made, the Emperor would change his mind, as such a visit might be interpreted as an exhibition of sympathy for the Briton in his war with the Boer. The *Kreuz-Zeitung* (Berlin) objected to the visit on the same ground. The Paris *Matin* saw in the near future a chance for France, Russia, and Germany to intervene by joint action in the South African war, and hoped the Kaiser would not make this impossible by an exhibition of sympathy for England. The Paris *Eclair* blames France herself for any change that has come over the Kaiser. Had France, at the time of his telegram to Kruger after the Jameson raid, backed up his action instead of abusing the Germans through her newspapers, he might not now feel that a renewal of opposition would be useless. The Amster-

dam *Handelsblad* gives an explanation of the present visit, declaring that it was announced "a considerable time ago" and could not be cancelled without difficulty.

Among the London papers, even *The Daily Chronicle* (Radical) expressed the desire that the German Emperor, despite his attitude toward Turkey during the Armenian troubles, be received "with all possible courtesy and hospitality," and predicted that he would receive from the Liberals "at least a calm and reasoned welcome." *The St. James's Gazette* thinks the visit shows that the cloud once obscuring the relations of the two countries "has entirely passed away." The significance of the visit, it thinks, is in this, that it marks the triumph of sober good sense over mere emotion, and shows that the storm of rage and scolding which burst out in German newspapers a few weeks ago is wholly unimportant.—*Translations made for THE LITERARY DIGEST.*

DELAGOA BAY.

FOR a long time past the story has been circulated from England that Delagoa Bay and the surrounding territory would be ceded to England. The reason given is that the arbitration tribunal which has to decide the case between McMurdo (a promoter who obtained a railroad concession, afterward withdrawn) would mulct the Portuguese Government in heavy damages, and that Great Britain would pay the claim and take over Delagoa Bay. The Portuguese seem inclined to give a more willing ear to the arguments of England than they were formerly. The *Frankfurter Zeitung* says:

"A pamphlet has been published in Portugal whose writer declares that the Portuguese must, with the help of Great Britain, conquer Spain. Otherwise Spain, in order to show that she is still full of life, will annex Portugal. The Portuguese navy and army should be at once increased, and an alliance, defensive and offensive, concluded with Great Britain. Both powers must bind themselves to defend each other's colonies. Mozambique, the colony in which Delagoa Bay is situated, is to be given to England for a consideration, England to take all responsibility in case France or Germany or both raise objections. This pamphlet, written by an officer near the person of the King, is regarded as a feeler."

There is, however, a strong probability that Germany and France will object—especially the former, which has as yet shown no intention to turn over its African possessions to Great Britain, and whose colonies would be menaced if Great Britain becomes too powerful. Now, Germany concluded in 1898 a secret treaty with Great Britain regarding this very Delagoa Bay. The secret has been well kept, and nothing certain is known about its provisions; it is surmised, however, that Germany permits the acquisition of Delagoa Bay by England only if the independence of the Transvaal is guaranteed. This is the view expressed by the *Kieler Zeitung*, and recent developments seem to indicate its correctness, as Mr. Chamberlain has expressly included the Portuguese as well as the German possessions in his reference to South African territory over which England, "as a matter of course," exercises no influence. The *Paris Journal des Débats* says:

"If Portugal parts with her African possessions, the north of Mozambique will fall to Germany, with a considerable slice of the Angola territory on the west coast. The south of Mozambique, the most important part, including Delagoa Bay, will fall to England. It is, of course, quite possible that Portugal will get out of her financial difficulties in some other way and retain her colonies. At any rate, France must pay close attention to this matter. It will not do to permit a shifting of the equilibrium in Africa without some recompense."

Whatever the advantages to be obtained by Great Britain in the future, she is being closely watched by Germany just now, whose "benevolent neutrality" is entirely in favor of the Boers. The official standpoint is perhaps best set forth in the white book published after the Jameson raid, in which it is declared that Germany's interests demand the preservation of the Boer republics as independent states. Attempts to prevent the landing of arms

and ammunition in Delagoa Bay for the Boers were energetically resisted by Germany just before the war, and the attempt to withhold this war material through the agency of the Portuguese authorities has also failed. The Berlin *Tageblatt* relates the following:

"The ammunition of the Transvaal is estimated at 20,000,000 cartridges. There are also 50,000 Mauser rifles. This does not include the 2,000 rifles and 500,000 rounds which the Portuguese authorities recently tried to withhold. The consignment had been addressed to Mr. Andrae, a German subject. The Mauser Company complained to the German Government that they were unjustly prevented from filling a contract. The German Government telegraphed to Lisbon, and the Portuguese Government replied that the consignment consisted of war contraband. The German authorities, however, showed that there could be no violation of the neutrality laws if no actual state of war exists, and that goods addressed to a private individual must be allowed to pass in any case. Portugal then gave the consignment right of way."

There is little doubt that a British raid upon Delagoa Bay, with or without the concurrence of Portugal, would be followed by complications which might more than neutralize the advantages obtained by England. In connection with this it should be pointed out that, unless Germany is willing to exercise special care, war contraband can reach the Boers from Damaraland, if Bechuanaland is entirely in the hands of the Boers. The view expressed by many papers that, as Walfisch Bay is the only port there, and in the hands of the British, war contraband could be stopped by England, is altogether erroneous. Walfisch Bay no longer counts. Being unable to obtain it from England, the Germans have made Swakopmund, at the mouth of the Swakop River, their port. A railroad runs from there to Otjimbingue, crossing the desert zone which formerly made all traffic impossible except at ruinous expense.—*Translations made for THE LITERARY DIGEST.*

Practical Artillery Practise.—"The German Government," says the *Revue du Cercle Militaire*, "bought, a little while ago, for the purpose of enlarging the Lockstedt field of instruction, a tract of ground of considerable size. As there were on this tract a number of buildings, including an entire village called Ridders, which it was necessary to remove, the military authorities profited by the opportunity to illustrate the effectiveness of the new German artillery. Consequently the Ninth and Twenty-fourth artillery regiments, which were in camp at Lockstedt, were ordered to destroy the village with their guns." A German correspondent of the *Allgemeine Schweizerische Militärzeitung* reports the experiment as follows: "The batteries opened with a fire whose effects demonstrated the excellent qualities of our new field-piece. At the fifth shot several houses were burning, and when rapid firing began, the whole village was in flames in a few minutes." On all this, *Cosmos* makes the following sarcastic comment: "The experiment would have been still more conclusive if the village had only been inhabited; we shall come to that by and by."—*Translations made for THE LITERARY DIGEST.*

An "Open Door" in the Sudan.—Early in December, Lord Kitchener intends to throw the newly conquered Sudan open to all comers. The *London Times* reflects at some length upon the matter-of-fact-way in which this news is announced and received, and gives the following particulars:

"It is the approaching completion of the railway that enables Lord Kitchener to open the Sudan to all comers. The construction of the line has been delayed for two months by storms, otherwise, we presume, it would by this time be possible to take a through ticket from London to Khartum. Next month, however, the delay is to come to an end, and in the mean time the Sirdar is making preparations to put his line to instant use. He has organized a tourist service between Wady Halla and Khartum with dining- and sleeping-cars for eighteen passengers. He seems also to have arranged for a small hotel to receive them. Either public or private enterprise will no doubt provide connections of a correspondingly comfortable kind between the frontier of the Sirdar's domain and Alexandria. We may assume that Mr. Cook will be prepared to take entire charge of intending tourists, and trips to Khartum ought to become a fashionable winter amusement."

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Germany has eighteen factories, turning out locomotives both for home and foreign use. Fifteen of these build both large and small engines, and three build nothing but small ones for light work. These factories can furnish annually, under normal conditions, 1,400 engines. They employ from 15,000 to 20,000 workmen—the number depending upon the orders. Germany exports locomotives to Russia, Sweden, Norway, Denmark, Turkey, South America, South Africa, and Asia. A house here sent nineteen, a year or two ago, to the Dutch East Indies. Up to date, so far as can be found out, no United States engine has entered this empire, altho England has ordered a number. A writer, whom I quote freely, writes Consul Monaghan at Chemnitz, says that work can be more effectively done in the United States, because only a few well-tried forms of engines are made. "In consequence of this," he continues, "the parts are put up and kept in supplies by all parties acting as agents of such engine-builders. This enables those buying American engines to replace broken or injured parts almost instantly." German writers say the firms in Europe could do the same in the time put down for delivery, etc., were it not for the fact that every railroad company, every engineer, wants a particular type. They go so far as to express preferences for different kinds of different parts, and every change of officials or engineers having charge of the purchase of locomotives or their parts brings change in the articles used. Consequently, Germany has found it impossible to keep a supply of parts. "This," says the writer referred to, "may keep Germans from overproduction, etc., but it has the disadvantage of delaying deliveries. An understanding among the builders of locomotives might lead to a system not only advantageous to

3¼ Cents a Day.

Only 3¼ cents a day on each \$100 the lot costs will buy you a valuable lot in a most beautiful section of New York City. All conveniences, as trolleys, sewers, city water, schools, etc. See page 2.

Reduced Prices on Suits and Cloaks

WE recently had an opportunity of purchasing several hundred pieces of fine suitings and cloakings at a figure which enables us to inaugurate the biggest Reduced Price Sale that we have ever announced.

You can now secure a stylish garment at a reduction of one-third from former prices. We expect to make thousands of new friends during this sale. It will enable you to judge of the garments which we make, and see the difference between our kind and the ready-made goods which you find in every store. Order from this Reduced Price Sale as freely as you wish; send back anything you don't like, and we will refund your money.

One-third has been cut off the price of every suit and cloak in our line, but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money.

Tailor-made Suits, former price \$5; reduced to \$3.34.
\$10 Suits reduced to \$6.67.

\$15 Suits reduced to \$10. \$20 Suits reduced to \$13.34.

Winter Jackets, former price \$5; reduced to \$3.34.

\$9 Jackets reduced to \$6. \$12 Jackets reduced to \$8.

\$15 Jackets reduced to \$10.

Separate Skirts, former price \$4; reduced to \$2.67.

\$6 Skirts reduced to \$4. \$8 Skirts reduced to \$5.34.

\$12 Skirts reduced to \$8.

Reduced prices on Capes, Newmarkets, Rainy Day Suits and Skirts, Bicycle Suits, Silk Skirts, etc.

We are also closing out a few sample garments which were made up for exhibition in our salesroom at one-half their regular prices. We tell you about hundreds of reduced price garments in our Winter Catalogue and Bargain List, which will be sent Free, together with samples of the materials, to any lady who wishes them. Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

MAKERS OF "DOLCE" FOOTWEAR

119 West 23d Street, NEW YORK

the empire, but useful to the exporters of locomotives. It would help to keep territory already captured in far-off lands and fit Germany to meet America's rapidly rising influence."

The following extracts are from a letter by Consul-General Dr. Leon, dated Guayaquil, June 12, 1899, to a New York firm, to which the original has been forwarded: "There is no electric power used in Guayaquil and no demand for electrical supplies. I believe, however, that there is an excellent opening for an electric-light and street-railway service. This is a prosperous city of about 50,000 inhabitants, and with the construction of the proposed railway to Quito is bound to increase in population and wealth. It is at present lighted by gas of poor quality, which costs the municipality a considerable sum annually. A street-car system traverses almost every street; but mules, the motive power, are costly. The finances of the municipality are in flourishing condition. The stock of the car company was at \$50 in 1895; there is now a large cash reserve equal to 50 per cent. of capitalization; 15 per cent. annual dividends are declared, and the stock brings today \$150 per share. Fuel is scarce and expensive, but superb water-power is available at some distance from the city. In 1896, the installation of an electric-light service was in progress; but the great fire, which burned eighty-three blocks of the best part of the city, destroyed the work and caused the enterprise to be abandoned. The city is almost rebuilt with a better class of edifices, and the time seems ripe for a system combining transportation and illumination."

In answer to inquiries from several correspondents in the United States, Consul Nelson, of Bergen, writes, under date of June 28, 1899, that tenders for railroad supplies for state railroads in Norway should be addressed to Styrelsen for Statsbanernes Drift og Anlaeg, Christiania.

Great Boom.—\$100,000 Sale.

Large real estate sales are being made in the Borough of Richmond, New York City. Last week one Syndicate bought \$100,000 worth of unimproved property in the Borough. This is but one of the many deals. See Holiday Club, page 2.

SLEEP IN COLD ROOM?

Most people think that cold air is pure air; every one knows that pure air is essential to good health; but cold air is not always pure; a severe chill is always bad.

The Jackson Ventilating Grate

keeps the room filled with pure air which is pleasantly warmed as it passes into the heat saving chamber direct from out of doors. The Ventilating Grate consumes less fuel than any other kind of heating apparatus, gives out more heat, can be fitted in any ordinary fireplace, burns either coal, wood, or gas, and heats several rooms on one or different floors in mid-winter.

If you want some interesting facts regarding sanitary and economical house heating, send at once for catalogue "D." It tells of the distinctly new principle in methods of house heating belonging solely to the Jackson Ventilating Grate.

Write also for catalogue of tiles, mantels, andirons, park screens, etc., if desired.

PERSONALS.

THE death of Charles A. Pillsbury, "the master miller of the world," says *Success*, adds another to the list of prominent men who have died recently at about middle age, with vitality exhausted in the accumulation of vast fortunes. Mr. Pillsbury was born in New Hampshire in 1842. He had a college education, having been graduated from Dartmouth, and went West when a young man. He saw the opportunities for the flouring business in Minneapolis, and borrowed money to obtain a one-third interest in a mill. He allowed nothing to discourage him, and gradually built up the greatest flour industry in the world. He worked even in bed. It was his custom every morning, before rising, to carefully plan his work for the day, and only when something unexpected happened did he depart from his program. He never took time for consideration when in his office, but disposed of questions as they arose and on the impulse of the moment. He arrived quickly at decisions, and promptly executed them. One morning, while in bed, he thought of introducing steam as an auxiliary to the water power. Immediately upon arriving at his office he telegraphed to several firms for estimates for a steam plant. He received prompt replies, and by noon he had ordered a

No Interest, Free Life Insurance.

It will cost you only \$1.00 a month on each \$100.00 to be the owner of a valuable New York City lot. No interest, and Free Life Insurance, and in a short time the lot will be paid for. complete steam equipment, to cost \$75,000. A feature of his mills was profit sharing, every employee having a pecuniary interest in the income of the business. He retired from active business about eighteen months ago.

ROBERT TREAT PAINE, says the *Chicago Journal*, is one of Boston's great men and one of the world's leading advocates of peace. For over a quarter of a century he has devoted himself to philanthropy and humanitarianism. He organized the Associated Charities of Boston, which has been the model for benevolent work in many cities in the United States. He has built more than two hundred small houses to be sold on easy credits, and originated a workingman's building association which has built more than one hundred similar homes. He has been a firm friend of the co-operative banks, and has done as much as any other man to promote their growth in Massachusetts. He is the author of several papers along lines of his specialty, and his essay on "The Material Advancement of European Disarmament" has been printed in every European language. Mr. Paine was born in Boston, in 1835, of an old family that has helped make Massachusetts' history. He is the father of Robert Treat Paine, Jr., who was recently nominated for governor by the Democratic Party.

MORE OR LESS PUNGENT.

Dovetailed.—Professor Charles G. D. Roberts, the poet, reads the modern languages very easily, but speaks them imperfectly. At a reception held in New York just prior to his leaving for Europe, Roberts was introduced to a distinguished French artist, who was here on a visit. The artist asked in his own tongue: "You speak French?" "No," answered the poet; "I am sorry I do not, but I understand it well when it is spoken to me." "I am so glad," replied the Frenchman; "you are the audience I have long wanted. I can talk to you all I please and you can not talk back!"—*Saturday Evening Post*.

James Whitcomb Riley's Joke James Whitcomb Riley and Nye were a peculiar pair, says the Philadelphia *Saturday Post*. They were everlastingly playing practical jokes.

I remember when we were riding together in the smoking compartments between Columbus and Cincinnati. Mr. Nye was a great smoker, and Mr. Riley did not dislike tobacco. An old farmer came over to Mr. Nye and said:

"Are you Mr. Riley? I heard you was on the train."

"No, I am not Mr. Riley. He is over there."

For Abuse of Alcohol

Take Horsford's Acid Phosphate.

Catarrh...

and the allied diseases gout, rheumatism and kidney troubles, are all largely due to retention of uric acid in the system. Hence the value of a uric acid solvent and diuretic remedy which regulates and stimulates the action of the kidneys

Tartarlithine...

is largely prescribed by physicians for these complaints.

Mr. F. J. MORRIS, New York City, writes: "I am now 55 years old, and have had catarrh since I was a child. I was also affected with rheumatic trouble. I knew enough of my case to believe that my catarrh was connected with the rheumatic condition, and as your Tartarlithine was stated to be a specific for rheumatism I concluded to try it. After using one bottle my bronchial cough left me entirely, and the catarrhal secretion was considerably less. After the second bottle I find that I am entirely free from catarrh."

Regular package \$1.00.

SOLE AGENTS FOR
THE TARTARLITHINE CO.

STRONG MEN OF SMYRNA.

The porters of Smyrna are, without doubt, the strongest men in the world. They carry upon their necks and shoulders loads heavy enough to crush a donkey. It is not an uncommon sight to see one of these porters carrying through the streets six or eight great trunks bound in a bundle with a long rope and balanced upon his back. These men live almost exclusively upon wheat or barley cakes and figs. A diet consisting of cereal foods, fruits, and a small seasoning of nuts, constitute the most natural and most wholesome bill of fare for human beings. Such a dietary is conducive to long life, good digestion, lightheartedness, clearness of mind, joyous spirits, and general well being.

The cereal products of the Battle Creek, Mich., Sanitarium Health Food Co., especially Granola and Gran-Nut, combined with Protose, or some other suitable nut product, constitute a perfect bill of fare, and have proved a godsend to thousands of persons, who through their means have been restored after suffering the pangs of miseries of chronic nervous exhaustion for many years.

Granola is a dainty, delicious, and nutritious cereal food, containing three times the food elements of beef. It is thoroughly cooked and with the addition of milk is ready for immediate use at a cost of one cent a person a meal.

Readers of THE LITERARY DIGEST who will send the name of a grocer who does not sell Granola, to the Sanitarium Health Food Co., Battle Creek, Mich., will receive a free sample.

IMPROVED BREATHING TUBE

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"I knew his father, and I would like to speak with him."
"Oh, speak with him, yes. But he is deaf, and you want to speak loud."
So the farmer went over to him and said in a loud voice:
"Is this Mr. Riley?"
"Er, what?"
"Is this Mr. Riley?"
"What did you say?"
"Is this Mr. Riley?"
"Riley, yes."
"I know your father."
"No bother."
"I knew your father."
"What?"
"I knew your father."
"Oh, so did I."
And in a few moments the farmer heard him talking in an ordinary tone of voice.

Current Events.

Monday, November 20.

—More fighting takes place around Ladysmith: the Boers occupy Campbell, in West Griqualand.
—Emperor William lands at Portsmouth, and goes to Windsor as the guest of the Queen.
—The American column under General MacArthur occupies Dagupan in Luzon, Aguinaldo and his army having fled.
—Admiral Dewey transfers to his wife the house in Washington recently presented to him, and the act arouses much hostile criticism.
—The members of the Executive Committee of the Democratic National Committee meet in Chicago to determine the party's policy.

Tuesday, November 21.

—The British campaign against the Boers is developed by General Buller on an extensive scale at Cape Town, and contemplates a speedy relief of the besieged towns.
—Vice-President Garret A. Hobart dies at his home in Paterson, N. J.; his death is announced to the country by a Presidential proclamation.
—Admiral Dewey's wife transfers the house in Washington to the Admiral's son.
—The annual dinner of the Chamber of Commerce is held at Delmonico's, New York, Thomas B. Reed and Governor Roosevelt being among the speakers.

Wednesday, November 22.

—General Methuen with a strong force crosses the Orange River, and advances to the relief of Kimberley.
—Preparations are made for the Vice-President's funeral, to take place on Saturday afternoon at Paterson.
—Members of Congress receive an appeal from the Filipino Junta in Hongkong praying for recognition of the Filipino republic.
—Dr. Von Holleben, German Ambassador in Washington, talks on international questions, declaring that all differences between this country and Germany have disappeared.

Thursday, November 23.

—General Methuen wins a victory at Belmont, and captures forty prisoners; General French also engages in combat.
—Four hundred Dervishes are killed in the Sudan by Anglo-Egyptian forces.
—Mr. Chamberlain visits the Kaiser at Windsor.
—Thomas Henry Ismay, founder of the White Star Line of steamers, dies at Liverpool.
—The Postmaster-General extends domestic rates of postage to Puerto Rico, the Philippines, and Guam.

Friday, November 24.

—The situation in South Africa remains unchanged; the Queen sends congratulations to General Methuen.
—General Otis reports that the last claim to existence of the insurgent government in Luzon has vanished; the President of the Filipino Congress surrenders to General MacArthur.
—Emperor William and the Prince of Wales visit Bismarck Palace.
—A split occurs in the Spanish War veterans, and Admiral Dewey is chosen commander-in-chief of a new society.
—A swindling swindler of Brooklyn, Wm. F. Miller, who promised "ten per cent. per week" and obtained hundred of thousands of dollars, is indicted by the King's County Grand Jury.

A New Lease of Life

is enjoyed by those who change from an impoverished diet of ordinary flour to one of life-giving, tissue-building qualities. Nature places in the wheat berry these healthful elements in abundance and wisdom requires that we use them all and do not sacrifice the best of them on account of color. In our foolish prejudice for white bread we do this very thing, and man in milling into white flour removes them nearly all, leaving little but starch

Franklin Mills Flour

A FINE FLOUR OF THE ENTIRE WHEAT retains all the mineral elements of the wheat, phosphatic and nitrogenous, and is, therefore, rich in nourishment for the whole body.

If your grocer does not have it, send us his name and your order—we will see that you are supplied. Send postal for Booklet—FREE.

MADE ONLY BY

FRANKLIN MILLS CO., LOCKPORT, N. Y.

A NEW DELICIOUS FOOD.

The most remarkable discovery in dietetics which has been made in this century is a vegetable meat called Protose. This delicious food product in odor and taste so closely resembles flesh that it is really difficult for a person eating it to convince himself that he is not actually partaking of animal food. It is absolutely pure. It contains no germs or germ poisons; no uric acids or other excretory substances, which are always found in animal meats; and is proof against all possible contamination with disease,—a condition to which the flesh of animals is always liable. Protose may be appropriately used in diabetes, Bright's disease, rheumatism, and other diseases in which flesh-meats must be rejected on account of the uric acid and other poisons which they contain. It is more delicate, agreeable, and satisfying in flavor than flesh-meats of any sort, and contains 25 per cent. more food elements than beef or mutton.

The makers, the Sanitas Nut Food Co., Ltd., 71 Washington Ave., Battle Creek, Mich., will mail a free sample for six cents to pay postage.

The Wonderful Mission of the Internal Bath.

Do you know that many of the greatest physicians of this city, including such authorities as Dr. Daniel Lewis, President of the State Board of Health, New York, Dr. Cyrus Edson, Late Chief Inspector of Contagious Diseases, New York, and Doctors Herman J. Boldt and W. B. De Garmo, both Professors at the Post-Graduate Hospital, endorse and prescribe this treatment? Do you know that it goes to the root of and eradicates scores of the most troublesome and dangerous diseases that afflict mankind? Do you know that an occasional Internal Bath is a better preventive of illness and preserver of health than any other single means?

The record of its cures and benefits reads like a revelation to those hitherto unacquainted with it. It is used (by means of the "J. B. L. Cascade," the only scientific appliance for this purpose) by hundreds of the best known people in New York, and by innumerable ministers, lawyers, actors and other persons whose intelligence gives unequivocal weight to their testimony.

It is known that seven-tenths of all disease arises from the retention of foreign matter in the human system; also that the greatest part of this waste is held in the colon, which is Nature's sewer. Hence, the flushing of this sewer removes the greatest cause of disease. While immeasurably the best treatment for constipation, indigestion, etc., there is scarcely any known disease for which the "J. B. L. Cascade" may not be confidentially prescribed.

We want to send free to every person, sick or well, a simple statement setting forth this treatment. It contains matter which must interest every thinking person. If you live in New York you are earnestly invited to call, and make an appointment for a free treatment, but if you cannot call, write for our pamphlet "The What, The Why, The Way," which will be sent free on application.

C. P. GOERZ,

52 East Union Square, New York.

The above is a reduced reproduction of a chapter heading in a new volume entitled

Heralds of the Morning.....

A Thoughtful Exposition of the Significance of the Social and Political Problems of To-day, and Increasing Natural Phenomena

That serious problems, both social and political, now confront the world, no one doubts; and that nature itself is participating in the general unrest is everywhere apparent; but that special significance can be attached to these conditions, and definite conclusions drawn therefrom, is not so generally recognized.

Actual occurrences illustrating such subjects as, The Prevalence of Crime a Sign of Our Times, "Judgment is Turned Away Backward," The Social Vice, The Earth is Filled with Violence, etc., are cited to show more emphatically the fulfilment of prophecy in current events.

The terrible condition of the poorer class in our large cities is vividly set forth by the author and emphasized by the artist, in a chapter entitled "Ye Have Heaped Treasure for the Last Days."

"And the Nations Were Angry" is the title of a fully illustrated chapter on the stupendous preparations now being made for war.

There are other chapters, twenty-two of them, but they are all devoted to the one object of presenting the true condition of the world to-day, and its meaning in the light of the Word of God.

The book contains nearly 300 pages, is beautifully and strikingly illustrated, and issued in both English and German languages.

Price in Cloth with marbled edges, \$1.25

If not entirely satisfactory the book may be returned and money will be promptly refunded. Address

Sixty Centuries of History

A Remarkable Work Embracing the Entire History of All Nations and All Peoples, and of Each Individual Who Has Contributed to the Making of Their History

MAGNIFICENTLY ILLUSTRATED THROUGHOUT

The plan of the work is ideal. It enables one to thoroughly understand the history of the entire world from the beginning to the present day.

It provides the way to become acquainted with the **Makers of History** from the world's earliest records. It also clearly defines the causes which led to the **Great Conflicts between Nations** that mark **Turning Points of History**.

The necessity for a work that would enable either the **Casual Reader** or the **Careful Student** to obtain within a reasonable number of volumes a complete and **Authentic Exposition** of the **Entire World's History** has long been apparent.

This necessity has resulted in a work that perfectly **Fills All These Requirements**. In short, with the aid of this magnificent work one may in a season's reading, or by dipping into the Library for an hour or two every now and then, acquire a wider and firmer grasp upon the history of the world and the men who have made it than could be obtained by grubbing about for a lifetime among the histories of single countries.

The complete work is delivered to readers of *The Literary Digest*, and left with them an entire week—affording an opportunity for thorough examination of the Library before deciding to join the Club.

Under the plan of McClure's History Club, through which the Library is being distributed, you may obtain the work at a fraction of the regular price and, if you wish, pay for it a little at a time.

The Club thus provides a comfortable way for you to become the owner of the finest historical library that has ever been published.

We advise that you write at once to McClure's History Club, 141 East 25th St., New York, for full information regarding the novel club plan, the Library itself, and the special terms offered to those who make application for particulars during the month of December.

HERODOTUS, THE FATHER OF HISTORY.

TO BE ISSUED MONTHLY

Charles Dickens's Novels

Complete in about 15 Volumes

Now ready (2 vols.), **THE PICKWICK PAPERS** and **NICHOLAS NICKLEBY**. These volumes are printed on the thinnest printing paper in the world; yet it is perfectly opaque and very strong. The type is long primer, and the printing is clear, so that reading it is a delight. Convenient for the pocket, only 6½ by 4¼ inches, and extremely light.

Uniform with above and issued simultaneously

Wm. M. Thackeray's Works

Now Ready, "Vanity Fair."

PRICE, CLOTH, GILT TOP, \$1.00 per Volume.

For sale by all booksellers, or sent postpaid on receipt of price

THOS. NELSON & SONS, Publishers - 37 East 18th St., New York

4½ inches

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.

CAPACITY 35,000 ACATE LINES.

Size of Book, 4 1-2 x 10 1-2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

Gray Hairs
A Crime?

Thousands of men and women are constantly turned out of their positions and many fail to secure good positions because their gray hairs make them look old. This need not be.

Hair-Health

makes age halt and keeps thousands in employment because it takes years from their apparent age. **Hair-Health** will positively restore gray, faded or bleached hair to its youthful and natural color. **It is not a dye.** Its use cannot be detected. Equally good for men and women.

April 24, 1899.
LONDON SUPPLY CO., 853 Broadway, New York.
Gentlemen—At forty my hair and mustache began turning gray rapidly. I had a friend on the road who lost his place because his gray hair made him look older than he was. Profiting by his experience, I began using **Hay's Hair-Health**, and have used it occasionally ever since, with the result that I have the same dark-brown curly hair that I had at 21, and not one of my friends suspects that I use anything to produce this effect. In a recent discharge of employees on my road I have held my position, although many men younger than myself, whose only fault was their gray hair, were summarily dismissed, although as capable as I am of active service. I have you to thank for my position.
NEW JERSEY RAILROAD EMPLOYEE.

GUARANTEE Any person purchasing Dr. Hay's **Hair-Health** anywhere in the United States, who has not been benefited, may have his money back.

FREE SOAP Offer

Hair-Health sent by express, prepaid, in plain sealed packages, by LONDON SUPPLY CO., 853 Broadway, New York, together with a 25c. cake of **Barbina Medicated Soap**, the best soap you can use for Hair, Scalp, Bath, and Toilet, all on receipt of 60 cents. None genuine without signature of Dr. Philo Hay on the outside wrapper.

Large 50 cent Bottles at leading Drug Shops.

Solution of Problems.

Solvers who sent Kt-Q 3 as the key-move overlooked Black's reply, P-B 6.

Both problems solved by M. W. H., University of Virginia; the Rev. I. W. Bieher, Bethlehem, Pa.; F. S. Ferguson, Birmingham, Ala.; C. R. Oldham, Moundsville, W. Va.; M. Marble, Worcester, Mass.; the Rev. S. M. Morton, D. D., Ethngaham, Ill.; Prof. C. D. Schmitt, University of Tennessee; W. R. Coumbe, Lakeland, Fla.; A. F. Rudolph, Duluth, Minn.; A. Knight, Bastrop, Tex.

428 only, C. F. McMullan, Madison C. H., Va.; W. Müller, New York City; "Meropé," Cincinnati; E. C. Routh, San Saba, Tex.; the Rev. A. H. H., Salt Lake City; S. the S., Auburndale, Mass.; Dr. W. M. Robertson, Warren, Pa.; Dr. G. S. Henderson, Jackson, Mo.; Dr. O. F. Blankingship, Richmond, Va.

Comments (428): "Good"—M. W. H.; "Well conceived and cleverly constructed"—I. W. B.; "Beautiful"—F. S. F.; "Simple but pretty"—M. M.; "A Knightly joust"—S. M. M.; "Excellent"—C. D. S.; "Pretty, but seemingly some surplusage"—W. R. C.; "Of exceeding merit"—A. F. R.; "Beautifully fine"—A. K.; "Well constructed"—W. M.

(429): "Excellent"—M. W. H.; "White's Pawns are placed with surpassing skill"—I. W. B.; "One of the best"—F. S. F.; "First class"—C. R. O.; "Very fine"—M. M.; "Most difficult"—S. M. M.; "Key easily found"—C. D. S.; "Exquisitely artistic"—A. K.

The Rev. S. M. M., T. R. Denison, Asheville, N. C.; W. H. H. C., Canadian, Tex.; "Meropé," got 427. Drs. G. S. H. and O. F. B. got 424.

Several solvers cannot see how R-R 6 solves 424. They write that, when Black replies K-K 4, there is no mate. How about Kt-Q 3, ch? Pawn can not take, and if it is not mate please indicate Black's answer.

No. 426 should have a White R on K R sq. No. 430 has a dual solution.

"The Refinement of a Move."

"It often happens in Chess," says Reicheim in *The Times*, Philadelphia, "that twin moves, apparently of the same value, are very different in point of value. The following 3 x 2 end-game aptly illustrates this idea. To the casual glance it appears indifferent what move is made first, but actually there is only one first move on the board which will force a win for White:

WHITE (3 pieces): K on Q Kt 5; Kt on K R 2; P on Q R 5.

BLACK (2 pieces): K on Q Kt sq; P on K R 6. White to play and win.

TIME AND TROUBLE SAVED
LAWYERS, PHYSICIANS, MINISTERS

J. W. Hyde, Brooklyn, N. Y., says: "The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the 'reaper' over the old-fashioned 'sickle'."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references, reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatments, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled. Send for price list and circulars. Mention this advertisement. THE BURR INDEX CO., Sole Mfrs. HARTFORD, CONN.

Cod Liver Oil
is a food

and the greatest care should be exercised in its selection.

Peter Moller's
Cod Liver Oil

is the best oil that fifty years of continued scientific research has produced. By the process now employed the oil is kept from contact with the atmosphere from the beginning of the process of manufacture until it is safely corked up in bottles, thus preventing contamination of any kind and excluding all impurities.

Give this new oil a trial. Ask for Peter Moller's Oil, and see that the bottle—a flat, oval one—bears our name as agnisi. Notice the date in perforated letters at bottom of the label.

Schöffelin & Co., New York.

FREE FOR TRIAL.

To prove that **Kremer's Dyspepsia Powder** is the most meritorious remedy for all forms of dyspepsia, I will send a large box for 50c. postage, the price (50c.) to be sent only in case you are benefited after a week's trial. Otherwise return powder by mail.
P. C. KINNAMAN, Mulberry, Ind.: "Have taken four boxes with great success for catarrh of the stomach."

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given**.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

WHAT SHALL CONGRESS DO ABOUT CUBA?

RUMORS of serious dissatisfaction in Cuba, caused by the fear that the United States will ultimately annex the island, have again drawn public attention sharply in that direction. It is now twenty months since Congress disclaimed any "disposition or intention" to exercise sovereignty or control over the island "except for the pacification thereof"; and declared that when "pacification is completed," independent government is to be granted. A number of Cubans capable of bearing arms now think that pacification is completed, and that our control should be withdrawn; while many prominent men in this country think that if our control were withdrawn now, anarchy would follow, and the last state of the island would be worse than the first.

There are few men whose opinion on the situation would carry more weight than that of Gen. Leonard Wood, but he has made no public utterance on the subject. It is understood, however, that on his visit to Washington last week he recommended that part of our troops on the island be withdrawn, and that the Secretary of War will adopt this course. Such a plan will be exactly opposite to the one adopted when signs of discontent appeared in Luzon about a year ago, and it will be interesting to note whether this method will work better for peace than the sending of reinforcements, especially in view of the remark which Admiral Dewey is reported to have made recently to the effect that if Leonard Wood had been in command at Manila last winter there would have been no insurrection.

Gen. James H. Wilson, commanding the department of Matanzas, recommended, in a recent report, the establishment of an independent republican government at once or "as soon as the results of the census about to be taken can be made known." This should be supplemented, he thinks, by "the negotiation of a treaty of alliance and commerce between Cuba and the United States which shall give practical effect to the Monroe doctrine,

define the rights, privileges, and duties of both the contracting parties on all subjects of common interest, and leave Cuba free and independent in all other matters."

Maj.-Gen. Fitzhugh Lee, military commander of the provinces of Havana and Pinar del Rio, says that he is not a prophet and can not tell what Cuba's future will be. "At present," he says (in *The Independent*), "all is tentative, all attempts at government are merely experimental." In another article (in the *St. Louis Post Dispatch*) he says:

"The future disposition of the island will be determined by the people of Cuba themselves. If they find that self-government is impracticable they can appeal to the United States for annexation. Then the whole question can be submitted to Congress for final adjustment."

An "officer of the army of occupation," writing in *The North American Review*, quoted in these columns August 26, declared that irritation is increasing every day that our troops remain in Cuba, and something definite must at once be done to assure the Cubans of our good will and honorable purpose. We have the alternative before us—to drift or decide. To take our troops out of Cuba at once, he said, would be the proper course. To delay and drift would mean failure to fulfil a solemn pledge and might mean eventually a revolt—and a revolt, too, that there would be no glory in quelling.

Brig.-Gen. William Ludlow, governor of Havana, in the course of an informal talk a few days ago at a reception held in his honor in New York, is reported to have said: "The present generation will, in my judgment, have to pass away before the Cubans can form a stable government. A bar to self-government in Cuba is the illiteracy of those who would vote. One in five can read and write. To give universal suffrage to such a people would be to swamp the better class. We might just as well retire and let it drift to a Haiti No. 2."

These remarks have stirred up the Havana papers. The *Disunion* refused to believe that General Ludlow had made a statement so likely to alienate the sympathies of the people of Havana. The *Patria* said that the Cubans would answer all such prophecies with the words "Independence or Death!" The *Nuevo Pais* took General Ludlow's remarks calmly, accepting them as an indication that independent government is a long time distant. The *Epoca* favors annexation. *La Lucha*, in a long editorial, says that a majority of the Cubans who favor independence are opposed to violence, and will do all they can to prevent an uprising. It adds that Cuba must convince the world that she has enough sane men to control the lunatics. In conclusion, it says that telegrams from various parts of the island show that the country is tranquil.

Secretary Root's utterances on the Cuban situation in his annual report, just issued, are of especial importance, as coming from one of the President's advisers, and written, no doubt, with the President's sanction. He says:

"Our temporary occupation of the island of Cuba involves a very simple plan of operation, with some difficulties in its application which are apt to be overlooked by those who are impatient for immediate results. The control which we are exercising in trust for the people of Cuba should not be, and of course will not be, continued any longer than is necessary to enable that people to establish a suitable government to which the control shall be

transferred, which shall really represent the people of Cuba and be able to maintain order and discharge its international obligations. When that government is established it will be its duty and right to solve for Cuba the problems above discussed in regard to Puerto Rico. Our present duty is limited to giving every assistance in our power to the establishment of such a government, and to maintaining order and promoting the welfare of the people of Cuba during the period necessarily required for that process. The conduct of the Cuban people has been admirable. There have, of course, been some agitators who have loudly voiced their discontent over not being allowed to personally conduct the government themselves, but the substantial body of educated Cubans have shown themselves to be patriotic, appreciative, and helpful, while the great body of uneducated Cubans have been patient and law-abiding. . . . The year allowed by the treaty for the Spanish population of the island to elect whether they will be Cuban or Spanish citizens will expire on the 11th of April next. It will then, for the first time, be possible to determine who are the citizens of Cuba entitled to take a part in her government. By that time it is believed that, the results of the census having been computed and tabulated, we shall be ready to provide for municipal elections, which will place all the local governments of the island in the hands of representatives elected by the people, and that when these local governments, thus elected, are established they will be ready to proceed to the formation of a representative convention to frame a constitution and provide for a general government of the island, to which the United States will surrender the reins of government. When that government is established the relations which exist between it and the United States will be matter for free and uncontrolled agreement between the two parties."

The taking of the census, which will be completed, it is hoped, by the beginning of the year, will furnish some basis for voting lists throughout the island; but the question, Who shall be allowed to vote? is another that requires an answer. According to estimates of A. G. Robinson (Cuban correspondent of the *New York Evening Post* and *Boston Transcript*), the population of Cuba is from 1,000,000 to 1,300,000, of whom about 200,000 are males of voting age. Deducting the aliens, there would be but 150,000. An educational or property qualification would cut down the number entitled to franchise to 30,000. On this phase of the problem, Col. Carlos Garcia (son of the general), who was in Washington last summer to urge an early establishment of civil government in Cuba, expresses himself as follows:

"I do not know that we shall have universal suffrage, but I do know that intelligence in the islands, like intelligence in the United States, will control. The blacks in Cuba are as intelligent, if not more so, than the blacks in the Southern States, and their number in the island has been exaggerated. The census soon to be taken will show that. Another point I wish to make is this: The people of Cuba, as a whole, are far superior in every way to those of Haiti or Santo Domingo. Universal suffrage would not make a black republic of Cuba. Have no fear on that score. When we have established our independent government the great question we will have to deal with will be that of immigration. Even now laborers from Spain are coming over in large numbers to work the mining regions of Santiago. The native Cubans are not given to mining. We want independence, and we can show the United States in a very little while that we are fully capable of self-government. But our efforts will be retarded as long as the militarism in the island continues. We will make rapid progress when the civil authorities are free to go ahead and act without first consulting the military."

Charles M. Pepper, whose work as Cuban correspondent of the *New York Tribune* and *Washington Star* attracted considerable notice, and whose new book, "To-morrow in Cuba," is receiving wide commendation, believes that the race question will cut no small figure in the anti-annexation movement. There is no such color line in Cuba as exists in the United States, and the Cuban negro knows that if Cuba becomes part of the United States he will lose caste. "The colored race in Cuba," says Mr. Pepper, "has reached a pretty unanimous decision that its future is not

promising if the island becomes a State in the Union. That is the present sentiment, and it is in itself powerful enough to dampen any annexation movement." When we test the feeling of the people on the annexation question, it is of vital importance, Mr. Pepper believes, that it should be done by universal suffrage if we would avoid future trouble. In time, he thinks, the sentiment of the whole island will favor annexation, but that is far from being the feeling at present. And those who do favor annexation have no thought of territorial government in their minds. He says:

"There should be no misunderstanding. People of the United States should not turn their thoughts to annexation when by it they understand only limited territorial government, while the people of Cuba who are turning to annexation understand only full Statehood and equality in the American nation."

For the present he believes that "whatever the outcome, every circumstance urges that Cuba be brought face to face with its responsibilities, and be left untrammelled to weigh the consequences of the destiny it may choose."

With so many men well acquainted with the situation unable to agree on a program, the discussions and final decision of Congress, so full of possibilities to a people whose welfare has already cost us no little blood and treasure, will be a center of absorbing interest.

GEORGIA'S REFUSAL TO DISFRANCHISE THE NEGRO.

THE defeat of the Hardwick franchise bill in the Georgia House of Representatives by the decisive vote of 137 to 3 came as a surprise to most of the Northern press, which considered the extension of negro-disfranchisement laws throughout the South as inevitable. "It is the unexpected," says the *New York Mail and Express*, "that has happened." The bill had provisions similar to those in force in Mississippi and South Carolina, as follows:

"That no person shall be a competent voter unless he shall be able to read and write any paragraph of the constitution of this State, and shall be able to understand any paragraph of such constitution, and to give a reasonable interpretation thereto; provided, however, that no male person who was on January 1, 1867, or at any time prior thereto, entitled to vote under the laws of the State wherein he then resided, and no lineal descendant of such person shall be denied the right to register or vote at any election in this State by reason of his failure to possess the educational qualifications provided for in this paragraph."

The two important features of the bill were the "understanding" clause and the "grandfather" clause, as the above provisions are called; the first being construed to exclude any one objectionable to the election officers, and the second to admit practically all the white voters. Prof. Booker T. Washington criticized the "understanding" clause as follows in a letter to the *Atlanta Constitution*:

"To pass an election law with an 'understanding' clause simply means that some individual will be tempted to perjure his soul and degrade his whole life by deciding in too many cases that the negro does not 'understand' the constitution and that a white man, even tho he be an ignorant white foreigner with but recently acquired citizenship, does 'understand' it. The 'understanding' clause may serve to keep negroes from voting, but the time will come when it will also be used to keep white men from voting if any number of them disagree with the election officer who holds the discretionary power."

A memorial sent to the legislature by the negroes of the State closed with these words:

"We know that there are among our white fellow citizens broad-minded men who realize that the prosperity of Georgia is bound up with the prosperity of the Georgia negro; that no nation or State can advance faster than its laboring classes, and that whatever hinders, degrades, or discourages the negroes weakens and injures the State. To such Georgians we appeal in

this crisis. Race antagonism and hatred have gone too far in this State; let us stop here; let us insist that we go no farther; let us countenance no measure or movement calculated to increase that deep and terrible sense of wrong under which so many to-day labor. May the twentieth century of the Prince of Peace dawn upon an era of generous sympathy and forbearance between these two great races in Georgia, and not upon a season of added injustice and antipathy."

Governor Candler, who has done much toward stopping lynching in Georgia, is said to have used his influence against the bill, and the only speech in favor of the measure was made by the bill's author, Mr. Hardwick. An effort to table the bill was defeated because its opponents were determined to kill it. The *Springfield Republican* calls the defeat of the measure "a very notable performance," and hopes that it will have some influence upon the other States in the black belt. The *New York Evening Post* rejoices that the vote "has shown that the spirit of fair play is dominant in Georgia." The *New York Times* says that "the State of Georgia has a right to congratulate itself and to be thanked by the country." The *Boston Transcript* says:

"It has been claimed that this action was taken to head off the movement to cut down the representation of the South, and this might have been a contributory motive; but we believe that on the abstract merits of this question alone, at this time, the result would have been the same, and that the Georgia House of Representatives deserves credit for taking high ground and deciding this very important question in an honest, intelligent, and statesmanlike spirit and manner. The State in this test, and we may say in this temptation, has risen above petty prejudice and has discharged a delicate duty honorably and righteously. When men like Candler and Washington work together great things can be accomplished for the social welfare."

Less comment on the incident appears in the Southern press than in the Northern, and where it does appear it is less optimistic. The *New Orleans Picayune*, for example, thinks that the opponents of the bill were actuated less by altruism than by "practical politics." It says:

"Georgia is overwhelmingly Democratic, and there is no effective Republican element in the politics of the State. The negroes are used by Democratic candidates and factions against their opponents in the same party, and the politicians refuse to give them up. That sort of game was carried on for a time in Louisiana, but it led to so much corruption in politics, not to speak of the ever-present danger of the negroes being able to hold a balance of power in the State, that the best people determined to free the State from such damaging and dangerous conditions, and they have done so. The Georgia politicians refuse to free their

State from such a situation because, as it stands, it is useful to their individual and factional schemes. That was the way things were done in North Carolina, where there are twice as many whites as negroes, and where negro domination was never feared; but within a year, through the contentions of the whites among themselves, the negroes got into public place and power, and became so overbearing and arrogant that their conduct was unbearable, and a bloody revolution was necessary to restore peace and order. Since then the North Carolinians have come to realize the necessity of getting rid of such a political danger. The Georgians are sooner or later bound to come to it."

ENACTING THE GOLD STANDARD.

DURING the summer and fall, rumors have been afloat that Congress in the present session will place our currency system definitely upon a gold basis. These rumors now seem to be within sight of realization. The currency bill proposed by the Republican caucus committee of the House of Representatives, and widely published last week, has as its opening section the declaration—

"That the standard unit of value shall, as now, be the dollar, and shall consist of twenty-five and eight-tenths grains of gold, nine tenths fine, or twenty-three and twenty-two one-hundredths grains of pure gold, being the one-tenth part of the eagle."

This is followed by provisions for maintaining the paper and the silver money at a parity with gold. To provide a larger quantity of money to meet the growing demand, the national banks will be allowed by the new plan to increase somewhat their issue of bank-notes. Another section of the bill restrains the Secretary of the Treasury from reissuing the paper and silver that he has redeemed with gold, except in exchange again for gold. This is intended to break the "endless chain" which was credited by some with so much trouble in President Cleveland's second Administration. The bill's provisions for maintaining the gold standard are thus presented in condensed and clarified form by the *New York Times* (Ind.):

"A reserve in gold equal to 25 per cent. of all the outstanding greenbacks and treasury notes of 1890 is provided from the gold now held in abundance by the Treasury, and this reserve is protected absolutely from all drafts on any account whatever. The Secretary of the Treasury is required to maintain this fund at all times. In order to do so he may transfer to it any moneys in the Treasury not otherwise appropriated in excess of a standing balance of \$50,000,000. He may also at his discretion, in order to maintain the fund, borrow such amount as may be necessary on 3-per-cent. gold bonds of the United States. As the fund is put

in the charge of a separate bureau, to be known as the Division of Issue and Redemption, it will be seen that it will be in fact and in the public mind entirely dissociated from all the ordinary operations of the Treasury, which in itself is a great advantage. The duties of the Secretary of the Treasury are not less clearly defined than are his powers. He is 'authorized and required to use said reserve fund in maintaining at all times the parity and equal value of every dollar issued or coined by the Government.' He must redeem in gold any legal-tender note or treasury note at the option of the holder, and when thus redeemed these notes can not be paid out again except in exchange for gold. Nor is this all. If the Secretary at any time deems it necessary in order to maintain the parity and equal value of all the money of the United States he may exchange gold for any other money issued or coined by the United States."

The New York *Sun* and *World* and some other gold-standard papers insist that our currency is already on a gold basis and that a further law is unnecessary. The New York *Journal* and other believers in bimetalism urge that the proposed bill "abolishes the double standard which, in one form or another, has prevailed for all but five years of our national existence." Where such disputes are possible, comment a number of papers, it is best to have the matter definitely settled; and the framers of the proposed law, as the New York *Evening Post* says, "leave no room for doubt as to what their bill means." "There is no occasion to quote dictionary definitions," says the New York *Times*, "to prove that this language means the gold standard." The Senate committee is said to be framing a similar plan, and with both Houses of Congress under Republican control it is confidently predicted that the bill, in its essential features, will soon become law.

A Revolution in Party Politics.—"The bill of the Republican caucus committee, which is given in full with the report in our news despatches this morning, takes a long, firm step toward putting the gold standard beyond the possibility of assault. It goes much farther in this direction than would have been believed possible a year or two ago by those familiar with the timidity which usually governs the acts of our public men. Secretary Gage was roundly denounced no longer ago than the beginning of 1898, because he declared that it was the purpose of his proposed bill 'to fasten the gold standard more firmly upon the country.' The fact that this object is now frankly declared, and that the people have sustained the gold standard wherever the issue has been squarely presented, is a more swift and gratifying revolution than often occurs in party politics. The bill presented is subject to some criticism of detail, but on the whole it puts into law in a courageous and straightforward way several fundamental requirements of a sound-currency system. Gold is declared without equivocation to be the standard; provision is made that all public and private contracts shall be executed in conformity with this standard; a gold reserve is set aside for carrying out these purposes, and the Secretary of the Treasury is armed with large powers to maintain this reserve. These are great and valuable achievements, and, if enacted into law, ought to place this country firmly by the side of the leading gold-standard countries of the world, which are at the same time the most progressive and the most prosperous countries. . . . The country will not be content, however, with the present bill as a complete solution of the monetary problem. The necessity for a more elastic circulating medium must soon be confronted if the gold standard is not to suffer in public opinion through an injurious and unnecessary deficiency of the circulating medium, but upon the proposition that gold shall be the standard of value and that the standard shall be established and protected beyond reasonable risk or doubt, the proposed bill meets in a gratifying degree the desires of the business community."—*The New York Journal of Commerce* (Fin.).

A Blow at the Greenbacks.—"The greenbacks have a strong hold on the affections of the people. No party has a monopoly of it. Those Republican leaders who are always trying to cooperate with the bankers and financiers have long wanted them out of the way so as to make a private monopoly of paper-money circulation. The greenbacks are good money. They are issued on the faith of the Government, and are based on the property of the

people. There is no better money. They are not mere notes of hand. They are not mere temporary evidences of indebtedness. They are intended, under the law, to be received and paid out as a part of the currency of the country, and the people may regard the Atlantic City scheme as a mere trick to retard their circulation, and ultimately to retire them altogether. A direct, open proposition to abolish the greenbacks, immediately or gradually, would meet with a popular storm of opposition. Any plan looking to their disparagement will be regarded with suspicion. . . . The present sporadic agitation of the question of finance in Administration circles is not necessarily on principle. It may well be suspected that it is for the purpose of embarrassing the Democrats in the construction of a platform of principles for next year. It might be well for the Democrats not to allow themselves to become prematurely excited."—*The Cincinnati Enquirer* (Dem.).

Question Not Settled Yet.—"Let it not be supposed, however, that the underlying question has been settled for all the years to come. The recent discoveries of gold have lulled the fears of the financial magnates for a season; but the pressure for the yellow metal already begins to be acutely felt, in the world's great money-markets, and the strain is quite sure to grow more and more intense with the flight of the years. A decrease in the output of gold will bring on a crisis that will shake the political and industrial world; and, in the light of universal disaster, the race will once more learn the old, old lesson, that the two noble metals together constitute the only basis broad enough for the towering superstructure of credit which is absolutely necessary to civilization in its present complex form. The friends of silver have only to bide their time in order to convince their opponents that the remonetization of the now neglected metal is the sole remedy which suffices to the perfect and permanent healing of the nations. The American people, having elected to sleep beneath the 'narrow blanket,' must not be surprised if their repose be disturbed by wasting fever and fearful dreams. Experience is the best teacher, in finance as in everything else; but the cost of tuition is beyond the means of all but the very longest purses."—*The New Orleans Times-Democrat* (Dem.).

Gold Currency is Unstable.—"There is something definite about such a measure, it is a beginning; and it seems that the Republicans are prepared to at least show their hands. It is amusing to read in the report accompanying the measure that 'when the standard shall be permanently established, all doubt of its stability' will be 'removed.' It is amusing, because the fact that the gold standard does not give stability to the unit of value is to-day demonstrated in every market of the country. If the unit of value is not a fixed quantity with respect to its value—its purchasing power—what is the use of talking about the 'stability of the standard of value'? The standard of value is also the unit of value, but if the unit fluctuates in its value, being dear to-day and cheap to-morrow, where does the 'stability' come in and what does it amount to? We regret to see our gold-standard friends cheat themselves with vague phrases. The fact is that the greenbacks in the seventies never cut more fluctuating capers than the gold dollar during the past two years. The greenback fluctuations were measured by gold, but now we have to measure gold by commodities, and the result shows the depreciation of the value of the gold dollar to an extent that should cause our gold friends to put on their thinking-caps. What profit is there in the gold standard if it is not stable enough to fix the value of the gold dollar as compared with commodities? If low prices are not to rule, and if, on the other hand, the gold dollar is to depreciate in its purchasing power, what benefit does the gold standard give to those who own gold? The Democrats contended, and still contend, that we can not have prosperity until money is cheap enough to give high prices. The result has justified the contention. We have higher prices and the result is prosperity. But, meanwhile, where is the stability of the gold dollar?"—*The Atlantic Constitution* (Dem.).

Eternal Vigilance Still Needed.—"Those who insist that the gold standard should be reaffirmed get what they want. Those who desire that the national banking privileges be extended to small towns where only a small amount of capital may be commanded for banking purposes get what they want. Banks with a capital of only \$25,000 are authorized; and all national banks are permitted to issue circulating notes up to the par value of

their government bonds deposited to secure circulation. And provision is made to prevent the employment of what is known as the 'endless-chain' method of draining the treasury of gold. The Bryanites will be disappointed in the absence of any assault on the greenbacks. They have been expecting something of the kind, tho upon what authority has not been clear. No proposition is made for substituting interest-bearing obligations for those non-interest-bearing obligations, nor is any such proposition likely to be pressed upon Congress with any sort of formidable support from any source. But, at last, this whole question will still remain with the people; and they can not afford to shirk it at the polls. What one Congress may do another may undo. If it is important for the country's credit to have a firm friend of sound money in the White House it is equally important to keep one there while the question remains acute. A sound-money Congress will not legislate on unsound-money lines. A sound-money President will not appoint an unsound-money man Secretary of the Treasury. The thing to do, therefore, is to support sound-money men on sound-money policies, and keep both the executive and legislative departments of the Government under the control of sound-money principles."—*The Washington Star (Ind. Rep.)*.

RURAL MAIL DELIVERY.

A. W. MACHEN, superintendent of the rural free-delivery department, under the supervision of First Assistant Postmaster-General Heath, has issued a report on the working of his department which seems to indicate that free rural delivery has come to stay, and that it will expand until practically the whole country will, in time, enjoy its benefits. The advantages of the rural mail routes are thus summarized from the report by the *Burlington Hawk-Eye*:

"First, a marked increase in postal receipts, many routes already supporting themselves by the additional business they bring. Second, a decided advance in the value of farm lands in communities reached by free delivery—the advance being moderately estimated at \$3 to \$5 per acre. Third, a pronounced improvement in the condition of the roads traversed by rural carriers, the construction and maintenance of good roads being made a condition precedent to the introduction of the service. Fourth, better prices to farmers for their produce because of closer touch, through the free delivery, with market conditions. To these advantages Mr. Heath adds the educational benefits derivable from speedier communication with the news centers of the world and a closer acquaintance with current events."

The Hawk-Eye relates the history of the new movement and tells its present status as follows:

"The development of the free-delivery service in rural districts has been rapid and rational. It began in 1896 with an appropriation of \$40,000, which enabled the postal authorities to establish forty-four experimental routes, and the results were so satisfactory that the system has been constantly broadened until now the routes number 383. Routes have been established in forty States and one Territory; the cost of the service for the year ending June 30, 1899, was \$150,000; during the year 9,212,927 pieces of mail matter were delivered and collected; the area traversed covered 7,567 square miles, and the population enjoying the service numbered 273,604. The total length of the routes was 8,927 miles; the number of carriers employed was 397, and the cost of the service was about 86 cents per capita of the population served. The appropriation for this service for the current fiscal year is \$300,000, which permits the establishing of 243 additional routes for the benefit of about 180,000 persons, who are now without free delivery. It is expected that with this increase in the number of routes the annual cost of the service will be less than 84 cents per capita of the population served, as against a cost of \$2.85 per capita for the service in towns of 5,000 inhabitants."

Some statistician has calculated that the farmers lose time worth millions of dollars every year by being compelled to go or send to the village for the mail. The rural delivery will save all this and make the farming class and the country at large so much

richer. The report has been received by the press with many expressions of approval. The *Chicago Evening Post* says that the report is "gratifying information." The *Philadelphia Inquirer* says that the advantages of the system "can not be disputed." The *Kansas City Star* thinks that one of its great benefits will be "the breaking up of the sense of distance and loneliness which has hitherto been the burden of life on the farm," and the *Burlington Hawk-Eye* comments: "For years there has been talk of the reduction of common letter postage to one cent. But it would not be a just thing to provide for cheaper postal rates for the people of cities and towns until we have provided the people of the back country with decent facilities for getting their letters."

IMMEDIATE FUTURE OF THE PHILIPPINES.

NOW that our forces have dispersed the Philippine insurgents and captured some of their leaders and large numbers of their men, beside quantities of guns, ammunition, and supplies, the press have turned to the consideration of the future government of the islands. Shall they remain under military control or shall Congress devise a plan of civil government? Shall they be held as colonies or territories? Will they ever be eligible for Statehood? If eligible for Statehood, will they not be eligible for independence? These and other questions appearing in the columns of the press promise discussions of considerable educative value and interest.

"Reconstruction" Now Due.—"Martial law should now come to an end, such as has existed for fifteen months in the city of Manila. That military government which McKinley announced it to be his intention to establish throughout the Philippines

AGUINALDO'S WEARY MARCH.

Looking for a place to set it down.

—*The Indianapolis News*.

should be superseded by civil government, or, if for any reason found necessary to be continued, it should rest upon some other foundation than the mere sovereign will and pleasure of William McKinley. After the close of our own Civil War a form of military government, it is true, existed for a time under President Johnson and General Grant in those States which had formed part of the Southern Confederacy. But it was not by the mere will and pleasure of the federal executive or the commander-in-chief—it was by virtue of the various 'reconstruction acts,' so-called, passed by Congress. It rests with Congress now to undertake the work of 'reconstruction,' if the name and the association with the name are thought agreeable, in the Philippines, as well as in Hawaii and the West Indies. . . . There is small likelihood,

however, that any final settlement of issues so momentous can be reached by that body in a single session, or until they have been passed upon by the court of last resort—the American people.”—*The Baltimore Sun (Ind.)*.

Philippines and Statehood.—“It is to be presumed, of course, that the Philippines can not for a long time, if ever, be fitted for admittance to the Union on terms of equality with the other States. It is well to bear in mind, however, that the adverb never is too rigid and sweeping a word to be used, except with very great caution, in American political forecasts. The improbable has happened often in United States history, and the apparently impossible has occurred more than once. When Josiah Quincy, in 1811, in the debate on the admission of Louisiana to Statehood, was paying his respects to the ‘wild men on the Missouri’ and the ‘Anglo-Hispano-Gallo-Americans who bask on the sands at the mouth of the Mississippi,’ nobody in the country dreamed that the region around the headwaters of the Missouri or along the Rocky Mountain range would ever be populated thickly enough, or with the right sort of people, to warrant its being cut up into States. Discoveries of gold, silver, or some other sort of valuable minerals may chance to be made in the Philippines after the American prospectors canvass that territory such as filled California, within two years after its acquisition, with a daring, resourceful, intelligent people, and secured its erection into a State. Many things could happen which, in the lapse of time, would send sufficient white immigration to the islands to outnumber the native races. However, Congress will be safe in acting, at the outset, on the presumption that the Philippines will always hold a different relation to the rest of the country from that which the regularly organized Territories hold. In any case the Filipinos must be ultimately granted all the home rule which can be safely extended to them, and this will have to be increased as they advance in intelligence, progressiveness, and balance.”—*The St. Louis Globe-Democrat (Rep.)*.

Must Reform Our Civil Service.—“A heavy responsibility is with the President here. This is our first experiment in colonial government. Colonial government is an undertaking that tests statesmanship. Several European nations have tried it, and few have succeeded satisfactorily to those they governed, or in bringing about the best results to themselves. . . . There is a rock, however, upon which the United States may split that must be in the minds of all people who have given thought to this subject. It is in the character of her own civil service. This could not easily be worse adapted to aid her in colonial government of alien peoples. It must be repudiated if there is to be hope of success in the Philippines, and a radically different system pursued in its place. President McKinley can hardly have failed to realize this. We find in the idea that he does so the reason for his reluctance to substitute civil for military government in the colonies. This is exactly the course that a timid and uncertain person, a politician rather than a statesman, would be expected to take. Yet it is important, and we believe, for the reasons we have above given, that it is necessary, that civil government should be substituted early for military government in our new possessions.”—*The Boston Herald (Ind.)*.

Politics Will Play a Part.—“We do not imagine that much progress toward a satisfactory solution of the problem will be made during the session about to begin. Like all other public questions, this one will be subordinate to the Administration’s interest in the next Presidential election, and that is, of course, unfortunate. Because the effort on the part of the Republican leaders will not be so much to evolve a system of colonial administration which shall be at once efficient, economical, and adjusted to the conditions and requirements of the governed, as to provide new patronage for politicians and places for their friends and dependents, as rewards for party service in the campaign of 1900. . . . After the elections of next November, the situation will be different. If Mr. McKinley were again made chief magistrate, he would not need to be so fearful of consequences, and he might even lend his influence to a colonial system so constructed that while it would be elastic under Republican *régimes*, would, at the same time, provide for the strictest civil-service reform organization whenever the Democratic Party happened to be in power. If, on the other hand, the present occupant of the White House should be elected to return to Canton, then, of course, a

Democratic government would settle the colonial and cognate questions through a Congress independent and free of executive control in both of its branches. In either case, it is reasonably evident that nothing much can be accomplished for a twelvemonth at least.”—*The Washington Times (Dem.)*.

Treat the Rebels as Bandits.—“Among the retreating Tagalos themselves it is generally recognized that organized opposition on a large scale is no longer practical, and it is said that they are planning to resolve themselves into independent companies of banditti. If they do so, and then proceed to pillage and murder, no consideration will be due them as belligerents. They should be treated like common malefactors, and after trial should be imprisoned or hanged, according to the nature of their crimes. . . . Any other course would simply invite an indefinite continuation of a situation resembling anarchy, and it would bear with peculiar hardship upon those Filipinos who had accepted American rule in good faith, believing that it would bring them protection. As they would be the principal sufferers considerations of humanity as well as of national policy demand the fate of bandits for bandits.”—*The Chicago Times-Herald (Rep.)*.

PUBLIC PAWNSHOPS IN CHICAGO.

THE municipal enterprise of Chicago, as illustrated by the city employment bureaus described in our columns last week, is also illustrated by the municipal pawnshop recently started there. In making this innovation, Chicago follows a precedent already firmly established in Europe. The *Mont-de-Piété*, or Public Pawnshop, of Paris, which loans as much as 60,000,000 francs (\$11,700,000) in one year at a rate of about 7 per cent., has been in operation since 1777. Equally venerable are the municipal pawnshops which exist in almost all the large German cities, and experiments of a similar nature have proved every successful in both Belgium and France.

The Chicago pawnshop has been established as the result of a law passed at the last session of the Illinois legislature. It is proposed to advance money on personal security at the rate of one per cent. monthly—about half the amount which the private pawnbrokers usually charge. The Philadelphia *Inquirer* says of the venture:

“This is an experiment whose success does not leave much room for doubt. Indeed, that is said already to have been assured by the number of applications which even thus early in the history of the new enterprise have been received. People who are compelled by their necessities to negotiate a small loan on a pledge of personal property will be sure to give this tardy innovation a hearty welcome. Its effect will be to relieve them from a species of petty extortion and oppression from which they have heretofore suffered, if not uncomplainingly, at least without much hope or expectation of redress. . . . In all the so-called Latin countries the pawnshop was long ago made a public institution. Even in China, which some people suppose to be beyond the confines of civilization, the pawnbroking business has for centuries been, as it is to-day, a government monopoly and an important agency in carrying on the activities of society. The Chinaman goes to the official pawnshop with no more sense of shame or humiliation than the well-to-do man in this country applies to his banker for a temporary accommodation. Here, as in England, the situation, as every one knows, has been very different. Any one with the smallest claims to respectability who is compelled by the exigencies of his exchequer to invoke the pawnbroker’s good offices does so by stealth, and if he is discovered feels very much as he might if he had committed a crime. This is no doubt highly irrational, but it is not difficult of explanation. It unquestionably arises from the fact that poverty for centuries was treated as tho it were indeed a crime, or, if that seem an exaggeration, as tho it were something to be ashamed of, something inherently discreditable to the person suffering it. The new departure which has just been made in Chicago indicates the growing ascendancy of a saner and more equitable view.”

An organization called the “State Pawners’ Society” also exists

in Chicago for the purpose of loaning money to city employees on their pay vouchers. Says the *Chicago Journal*:

"The plan of the society provides for the loaning of money at one per cent. a month on the earned but unpaid portion of the employee's salary, and only to such employees as are in distress caused by sickness or death. The application must be submitted to the head of the department in which the employee serves for certification of his statement that he is in need, and must then be approved by the controller. Loans will not be made for more than 80 per cent. of the pledged amount of earned salary. The opportunity of the city employees to secure money at 1 per cent. a month, where they have been paying 10 to 15 per cent. to loan sharks, will not be the only good results of this plan of the State Pawnners' Society. The plan sounds the death-knell of these money-lenders, who, tho their offices are in their hats, make their headquarters in the corridors of the city hall, and there solicit patronage. It is stated that each month 80 per cent. of the salaries of the city's regular employees is pledged to these loan sharks before pay-day arrives. If this scheme of the Pawnners' Society can drive these men away from the city hall, and does nothing else, the result will be more than enough to justify its inauguration."

THE RUMORED ANGLO-GERMAN-AMERICAN ALLIANCE.

WHATEVER object Joseph Chamberlain, England's Colonial Secretary, had in view in speaking of a "triple alliance" between Germany, England, and the United States, he certainly succeeded in arousing the newspapers throughout a great part of the civilized world. The cabled comments of the British and German press reveal a disbelief in the existence of any such compact, and but little desire for one. The French and Russian papers regard the speech as an idle threat. Some have expressed the belief that Mr. Chamberlain intended only to sound public feeling to find whether such a "dreibund" would be popular. After referring to the friendly relations between England and America Mr. Chamberlain said:

"The union, the alliance if you please, the understanding between these two great nations is, indeed, a guaranty of the peace of the world. But there is something more which I think any far-seeing English statesman must have long desired, that we should not remain permanently isolated from the continent of Europe, and I think it must have appeared evident to everybody that the natural alliance is between ourselves and the great German empire. I can not conceive that any point can arise in the immediate future which can bring ourselves and Germany into antagonism of interests. On the contrary, I can foresee many things in the future which must cause anxiety to the statesmen of Europe, but in which our interests are clearly the same as Germany's, and in which the understanding of which I have spoken in the case of America might, if extended to Germany, do more, perhaps, than any combination of arms to preserve the peace of the world."

Mr. Chamberlain, referring to the bitter anti-British attitude of some of the French press, hinted that "serious consequences" might result if they continued their attacks.

The Washington correspondent of the *New York Herald* has obtained from Secretary Hay a declaration that no alliance exists with England or Germany, and none is contemplated by the President. No proposition, it was further stated, has been advanced by or received from either Great Britain or Germany looking to an alliance. The *Philadelphia Press*, Postmaster-General Smith's paper, thinks that Mr. Chamberlain has simply "added another to those haphazard utterances which spangle his speeches for ten years past, which set the press of Europe, England, and America to talking, and which leave absolutely no residuum in the acts, the facts, and the contracts of nations." The *New York Times* thinks that Lord Salisbury lets Mr. Chamberlain talk too much. The *Louisville Courier-Journal* notes the fact that we are just getting out of a little alliance with England and Germany in the Samoan matter which we found productive of nothing but

continual unpleasantness, some loss of life, and much destruction of property. The *New York Journal* thinks that England and Germany have not done so much to prove their good will as some other countries, such as France and Russia. The *Philadelphia Ledger* takes a similar view:

"Without wishing to tear open the old wounds, our friendship for Great Britain, however agreeable our relations with the mother country may now be, can scarcely be called 'traditional.' With France it is different. The French sympathy in our Revolution, the participation of Lafayette in the struggle, and other incidents of our historic past have filled the American mind, taught thus from infancy, with a series of kindness and obligation to the French, tho we are not unmindful that there were 'friends of America' in England even during our Revolution and during our war with Spain. With Germany we have sustained peaceful international relations, and nothing is likely to interrupt them. A very large and influential segment of our best population is of German extraction. With Russia, too, we have been on the best of terms, and can not forget her supporting sympathy in the trying days of our internal troubles in the sixties, when she stood as a rock for us against European intervention."

LETTERS AND ART.

A CRITICAL ASSAULT ON SIR HENRY IRVING.

MISS EVELINE C. BODLEY is up in arms against the tendency of dramatists to depend more and more upon elaborate scenic effects, and against Sir Henry Irving as the leading culprit in this respect. A result of this tendency, says Miss Bodley (writing in *The National Review*, November), is that the acting, overpowered by the scenery, falls into the second place. It is not set off, it is extinguished, and the standards of dramatic talent are degraded. The actors themselves, especially the actor-managers, are responsible for this degradation of their art, she says, tho later on she lays the blame upon the audiences. Speaking of a recent revival (in England) of a Shakespearian play, in which the hero appeared in a different costume for each act, she says: "Let any one compare the effect of such elaborate masquerading with that achieved by M. Coquelin in the limited and unbecoming wardrobe of 'Cyrano de Bergerac,' and they [?] will lament that true dramatic talents should ever be confounded with those of the 'quick-change artiste.'"

Miss Bodley then applies herself to Sir Henry as follows:

"Season after season the announcement of a new production at the Lyceum draws the faithful in hundreds from their distant suburbs to sit long hours outside the doors of the unreserved places, sustained by sandwiches and expectation. And they know, from experience, that this expectation will be realized. Sir Henry Irving never disappoints his audience on these occasions. He gives them, as they know he will, a series of really beautiful tableaux, the very best stage-management, and—himself. Not Wolsey, nor Becket, nor King Arthur, nor any other comparatively uninteresting person, but the Sir Henry Irving to whom they are very justly grateful for the trouble he has taken in providing five or six magnificently artistic scenes and a crowd of well-dressed and well-drilled 'supers' to amuse them. When he has done all this they no more expect him to conceal his personality under an assumed character than they would expect to see the ring-master of a circus in spangles instead of evening dress. Why should an actor, if his only object is to please his public, think it necessary to adapt more than his dress and 'make-up' to any particular character he may be representing, when the same voice, walk, and gestures can always be made to do duty and at the same time give perfect satisfaction to a full house?

"It is in this respect that we venture to think Sir Henry Irving has not dealt quite fairly with the public. Whatever may have been the case in former years, there can be no doubt that in such plays as 'King Arthur,' 'Peter the Great,' and 'Robespierre' he has deliberately relied on the attractions of elaborate scenery to cover deficiencies in the cast and, in most cases, a total want of literary merit in the play itself. To do this is an insult to the intelligence of an audience, if we suppose them to be capable of any discrimination between good and bad. It is also, to speak plainly, sailing under false colors; for at the Lyceum we are led to expect drama in its highest form, interpreted by the leading members of the profession whose principal aim ought not to be the arrangement of *tableaux vivants*. A player who obtains his dramatic effects by means of scenery and dresses is between the horns of a dilemma. If he does not feel the inadequacy of the 'spectacular' method—especially when applied to the classic drama—he is unworthy of serious consideration as an actor; if he feels it, and yet persists in his evil courses, he breaks faith with his audience and reduces himself to the level of a charlatan. There must be many who, after witnessing fearful and wonderful triumphs of ingenuity at some frankly 'popular' theater, have turned to the Lyceum for relief; only to feel the justice of a distinguished foreigner's criticism when he exclaimed of our leading tragedian, 'Mais—c'est un farceur!'"

It is not in melodrama only, we are told, that popular success is gained by a single ingenious and gruesome scene:

"Certainly Sir Henry Irving does not bid for popularity in exactly the same style as the manager of Drury Lane or the

Adelphi. Yet his principle is much the same, namely, to work in the most deliberate manner upon the most obvious feelings of mankind. There may not be much dramatic art in causing thousands of people to marvel at a life-like presentment of Boulter's Lock or the University Match; there is scarcely more in drawing tears from an audience by a scene like that in 'Robespierre,' where the condemned victims are taken one by one from a cell in the *Conciergerie* to the scaffold. There was a similar scene in another revolutionary play of last season which did not rouse the same resentment because the strength of the situation depended on the hero himself. But in 'Robespierre' the hero was in abeyance, and we were harrowed by means wholly unconnected with the plot—a mother, led to execution, parting from her little child. Of course every one was touched, but the effect was produced by a cheap and mechanical appeal to human nature and not by the art of Sir Henry Irving and M. Sardou. The pathos of such a situation is at once so obvious and so sacred that to drag it on to the stage, independently of the essential incidents of the play, is something more than an artistic blunder—it is what Stevenson calls 'a brutal assault upon the feelings.'"

Later on, Miss Bodley admits that, after all, the fault must be laid at "our own door"—meaning the public—and not at that of Sir Henry or any other manager.

THE LETTERS AND THE PERSONALITY OF ROBERT LOUIS STEVENSON.

"THERE is but one art—to omit," says Stevenson, in one of his letters; "Oh, if I knew how to omit, I would ask no other knowledge." On two sides of the Atlantic the reviewers of his newly published "Letters" are echoing this cry, "Oh, if I knew how to omit." For the richness and freshness with which these letters reveal his singularly lovable and valiant personality make the process of selection a very trying one. Even the London *Times* speaks of their "extraordinary fascination," their "irresistible" raciness, variety, and animation, which "tempt the reviewer to break the golden rule about abstaining from superlatives," and which constitute "the truest record, perhaps, of a 'richly compounded spirit,' in its passage through the world that the literature of our time has preserved."

The title of the two volumes is: "The Letters of Robert Louis Stevenson to His Family and Friends." As he was an only child, the family letters are all to his parents. The "friends" are in most cases literary friends, most prominent among them being Sidney Colvin, keeper of the prints in the British Museum (who edits these volumes, and who is Stevenson's literary executor), W. E. Henley, Edmund Gosse, Henry James, William Archer, James Payn, and Mr. Burlingame (of our own *Scribner's Magazine*).

The letters cover a period reaching from Stevenson's schoolboy days to the very day of his death. He was during the most of this time an invalid, and one of the chief charms of his personality was his care never to obtrude his physical condition upon the consciousness of his friends. But in spite of himself the secret would occasionally peep out from his letters, and in consequence some of them are extremely pathetic. In one to Mr. Archer he wrote:

"To me the medicine-bottles on my chimney and the blood on my handkerchief are accidents; they do not color my view of life."

An idea of the valor with which he fought on and worked on despite his hopeless malady may be obtained from the following passage from Mr. Colvin's admirable introduction:

"During all the time of Stevenson's residence at Bournemouth he was compelled to lead the life, irksome to him above all men, but borne with invincible sweetness and patience, of a chronic invalid, and almost constant presence in the house. A great part of his time had perforce to be spent in bed, and there almost all his literary work was produced. Often for days, and sometimes for whole weeks together, he was forbidden to speak aloud, and

compelled to carry on conversation with his family and friends in whispers or with the help of pencil and paper."

And during this period he was at work vigorously upon no less than ten books!

One of the few letters in which he speaks without restraint of his health was written in 1880 to Mr. Gosse, from San Francisco. Stevenson was soon to be married to an American lady—Mrs. Osborne—and he had been having a hard time trying to live on his literary earnings and get a little ahead, when disease brought him down again. He writes:

"For about six weeks I have been in utter doubt; it was a toss-up for life or death all that time; but I won the toss, sir, and Hades went off once more discomfited. This is not the first time, nor will it be the last, that I have a friendly game with that gentleman. I know he will end by clearing me out; but the rogue is insidious, and the habit of that sort of gambling seems to be a part of my nature; it was, I suspect, too much indulged in youth; break your children of this tendency, my dear Gosse, from the first. It is when once formed a habit more fatal than opium—I speak, as St. Paul says, like a fool. I have been very, very sick; on the verge of a galloping consumption; cold sweats, prostrating attacks of cough, sinking fits in which I lost the power of speech, fever, and all the ugliest circumstances of the disease; and I have cause to bless God, my wife that is to be, and one Dr. Bamford (a name the Muse repels) that I have come out of all this and got my feet once more upon a little hilltop with a fair prospect of life and some new desire of living. Yet I did not wish to die neither, only I felt unable to go on further with that rough horseplay of human life; a man must be pretty well to take the business in good part. Yet I felt all the time that I had done nothing to entitle me to an honorable discharge; that I had taken up many obligations and begun many friendships which I had no right to put away from me; and that for me to die was to play the cur and shirking syharite, and desert the colors on the eve of the decisive fight."

His marriage, it may be remarked in passing, seems to have been a very happy one, his wife endearing herself very greatly, not to her husband alone, but to his parents and his friends.

At another time he writes: "I have that peculiar and delicious sense of being born again in an expurgated edition which belongs to convalescence." One of his letters to Sidney Colvin contains the following:

"I hope heartily you will survive me, and do not doubt it. There are seven or eight people it is no part of my scheme in life to survive—yet if I could but heal me of my bellowses I could have a jolly life—I have it even now, when I can work and stroll a little, as I have been doing till this cold. I have so many things to make life sweet to me, it seems a pity I can not have that other one thing—health. But tho you will be angry to hear it, I believe, for myself at least, what is best. I believe it all through my worst days, and I am not ashamed to profess it now."

The beginning of Stevenson's prosperity came in 1883 with the publication of "Treasure Island." After it had appeared as a serial in *Young Folks*, an offer was made to him of £100 for the book rights. He writes home as follows:

"My dearest people—I have had a great piece of news. There has been offered for 'Treasure Island'—how much do you suppose? I believe it would be an excellent jest to keep the answer till my next letter. For two cents I would do so. Shall I? Anyway, I'll turn the page first. No—well—a £100, all alive, O! A hundred jingling, tingling, golden, minted quid. Is not this wonderful?"

He signed this, "Your loving and ecstatic son, TREASURE ISLAND." Four years later an offer was made to him (and refused) of £2,000 a year to contribute a weekly article to an American journal.

References to his own literary work are generally made in a sportive and racy way. Mr. Colvin lost some of Stevenson's manuscript, and here is the way in which the latter wrote about the loss:

"My dear Colvin, *Fous ne me gombrennez pas*. Angry with

you? No. Is the thing lost? Well, so be it. There is one masterpiece fewer in the world. The world can ill spare it, but I, sir, I (and here I strike my hollow bosom so that it resounds) I am full of this sort of bauble; I am made of it; it comes to me, sir, as the desire to sneeze comes upon poor ordinary devils on cold days, when they should be getting out of bed and into their horrid cold tubs by the light of a seven-o'clock candle, with the dismal seven-o'clock frost-flowers all over the window."

Henley wrote him criticizing his poem on "Our Lady of the Snows," and here is Stevenson's response:

"My dear Henley—Heavens! have I done the like? 'Clarify and strain,' indeed? 'Make it like Marvell,' no less. I'll tell you what—you may go to the devil; that's what I think. 'Be eloquent,' is another of your pregnant suggestions. I can not sufficiently thank you for that one. Portrait of a person about to be eloquent at the request of a literary friend. You seem to forget, sir, that rime is rime, sir, and—go to the devil.

"I'll try to improve it, but I shan't be able to—oh, go to the devil.

"Seriously, you're a cool hand. And then you have the brass to ask me *why* 'my steps went one by one'? Why? Powers of man! to rime with *sun*, to be sure. Why else could it be? And you yourself have been a poet! G-r-r-r-r! I'll never be a poet any more. Men are so d—d ungrateful and captious, I declare I could weep."

There seems to have been a fondness in his heart—akin to his love of buccaneers and growing perhaps out of his physical weakness—for "swear-words" such as appear in the above. One of his remarks about his own work—which *The Academy* thinks might stand as his epitaph—was: "Well, I did my damdest anyhow." And as early as 1879 he was writing to Mr. Gosse from Edinburgh:

"My fellow creatures are electing school boards here in the midst of the ages. It is very composed of them. I can't think why they do it, nor why I have written a real letter. If you write a real letter back, damme, I'll try to *correspond* with you—a thing unknown in this age. It is a consequence of the decay of faith; we can not believe that the fellow will be at the pains to read us."

His comments upon his contemporaries are at times very free, but always kind and just and never betraying the slightest envy. Here is what he wrote in 1890 about Kipling:

"Kipling is by far the most promising young man who has appeared since—ahem—I appeared. He amazes me by his precocity and various endowment. But he alarms me by his copiousness and haste. He should shield his fire with both hands 'and draw up all his strength and sweetness in one hall.' ('Draw all his strength and all his sweetness up into one hall'? I can not remember Marvel's words.) So the critics have been saying to me, but I was never capable of—and surely never guilty of—such a debauch of production. At this rate his works will soon fill the habitable globe; and surely he was armed for better conflicts than these succinct sketches and flying leaves of verse? I look on, I admire, I rejoice for myself; but in a kind of ambition we all have for our tongue and literature I am wounded. If I had this man's fertility and courage, it seems to me I could heave a pyramid. Well, we begin to be the old fogies now; and it was high time something rose to take our places. Certainly Kipling has the gifts; the fairy godmothers were all tipsy at his christening. What will he do with them?"

To Barrie he writes:

"The Little Minister ought to have ended badly; we all know it did; and we are infinitely grateful to you for the grace and good feeling with which you lied about it. If you had told the truth, I for one could never have forgiven you."

And again to Barrie:

"There are two of us now that the Shirra might have patted on the head. And please do not think when I seem thus to bracket myself with you that I am wholly blinded with vanity. Jess is beyond my frontier line; I could not touch her skirt; I have no such glamour of twilight on my pen. I am a capable artist; but it

begins to look to me as if you were a man of genius. Take care of yourself for my sake."

Readers of "Margaret Ogilvy" will remember how indignant Barrie made his mother by insisting on his own inferiority to Stevenson.

Of Balzac he wrote as follows:

"Were you to reread some Balzac, as I have been doing, it would greatly help to clear your eyes. He was a man who never found his method. An inarticulate Shakespeare, smothered under forcible-feeble detail. It is astounding to the riper mind how bad he is, how feeble, how untrue, how tedious; and, of course, when he surrendered to his temperament, how good and powerful. And yet never plain nor clear. He could not consent to be dull, and thus became so. He would leave nothing undeveloped, and thus drowned out of sight of land amid the multitude of crying and incongruous details. There is but one art—to omit! O if I knew how to omit, I would ask no other knowledge. A man who knew how to omit would make an 'Iliad' of a daily paper.

"Your definition of seeing is quite right. It is the first part of omission to be partly blind. Artistic sight is judicious blindness. Sam Bough (the painter) must have been a jolly blind old boy. He would turn a corner, look for one half or quarter minute, and then say, 'This'll do, lad.' Down he sat, there and then, with whole artistic plan, scheme of color, and the like, and began by laying a foundation of powerful and seemingly incongruous color on the block. He saw, not the scene, but the water-color sketch. Every artist by sixty should so behold nature. Where does he learn that? In the studio, I swear. He goes to nature for facts, relations, values—material; as a man, before writing an historical novel, reads up memoirs. But it is not by reading memoirs that he has learned the selective criterion. He has learned that in the practise of his art; and he will never learn it well, but when disengaged from the ardent struggle of immediate representation, of realistic and *ex-facto* art. He learns it in the crystallization of day-dreams; in changing, not in copying, fact; in the pursuit of the ideal, not in the study of nature. These temples of art are, as you say, inaccessible to the realistic climber. It is not by looking at the sea that you get

'The multitudinous seas incarnadine,'

nor by looking at Mont Blanc that you find

'And visited all nights by troops of stars.'

A kind of ardor of the blood is the mother of all this; and according as this ardor is swayed by knowledge and seconded by craft, the art expression flows clear, and significance and charm, like a moon rising, are born above the barren juggle of mere symbols."

He has some severe things to say about the public and about popularity. Writing to Henry James—who, as we all know, despite his fine literary workmanship, is far from being popular—Stevenson writes: "Lord, what a silly thing is popularity." Again:

"I know that good work sometimes hits; but with my hand on my heart, I think it is by accident. And I know also that good work must succeed at last; but that is not the doing of the public; they are only shamed into silence or affectation. I do not write for the public; I write for money, a nobler deity; and most of all for myself, not perhaps any more noble, but both more intelligent and nearer home."

Mr. Cosmo Monkhouse wrote to the effect that he was in love with stagnation. In a letter in reply, too long to quote in full, Stevenson gave rein to a freak of fancy and offered to exchange identities with Monkhouse, inasmuch as he (Stevenson) was *not* in love with repose and yet had to indulge in it, being too weak to walk, too blind to read, not allowed to speak aloud, and likely soon, by lack of anything to eat, to give up eating. He speculates whether, in exchanging souls, they will have to exchange religions, wonders how they shall like each other's remorse, etc. Then he continues:

"Seriously, do you like to repose? Ye gods, I hate it. I never rest with any acceptance; I do not know what people mean who say they like sleep, and that damned bedtime which, since long ere I was breeched, has rung a knell to all my day's doings and beings. And when a man, seemingly sane, tells me he has 'fallen

in love with stagnation' I can only say to him, 'You will never be a pirate!' This may not cause any regret to Mrs. Monkhouse, but in your own soul it will clang hollow—think of it! Never! After all boyhood's aspirations and youth's immoral day-dreams, you are condemned to sit down, grossly draw your chair to the fat board, and be a beastly Burgess till you die. Can it be? Is there not some escape, some furlough from the moral law, some holiday jaunt contrivable into a better land? Shall we never shed blood? This prospect is too grey.

Here lies a man who never did
Anything but what he was bid;
Who lived his life in paltry ease,
And died of commonplace disease.

To confess plainly, I had intended to spend my life (or any leisure I might have from piracy upon the high seas) as the leader of a great horde of irregular cavalry, devastating whole valleys. I can still, looking back, see myself in many favorite attitudes; signaling for a boat from my pirate-ship with a pocket-handkerchief, I at the jetty end, and one or two of my bold blades keeping the crowd at bay; or else turning in the saddle to look back at my whole command (some five thousand strong) following me at the hand gallop up the road out of the burning valley; this last by moonlight."

In a letter to one of his closest friends, Mr. Jenkins, he touches on his religious views as follows:

"Yes, if I could believe in the immortality business, the world would indeed be too good to be true; but we were put here to do what service we can for honor and not for hire; the sods cover us, and the worm that never dies, the conscience, sleeps well at last; these are the wages, besides what we receive so lavishly day by day; and they are enough for a man who knows his only frailty and sees all things in the proportion of reality. The soul of piety was killed long ago by the idea of reward. Nor is happiness, whether eternal or temporal, the reward that mankind seeks. Happinesses are but the wayside campings; his soul is the journey; he was born for the struggle, and only tastes his life in effort and on the condition that he is opposed. How then is such a creature, so fiery, so pugnacious, so made up of discontent and aspiration, and such noble and uneasy passions—how can he be rewarded but by rest?"

He finally admits that this rest may be called God; and it is worth while rereading in this connection the prayer which he wrote a short time before his death, for the use of his Samoan household:

"We beseech Thee, Lord, to behold us with favor, folk of many families and nations, gathered together in the peace of this roof; weak men and women, subsisting under the covert of Thy patience.

"Be patient still; suffer us yet a little longer—with our broken purposes of good, and our idle endeavors against evil—suffer us a little longer to endure, and (if it may be) help us to do better. Bless to us our extraordinary mercies; if the day come when these must be taken, have us play the man under affliction. Be with our friends; be with ourselves. Go with each of us to rest; if any awake, temper to them the dark hours of watching; and when the day returns to us, our sun and comforter, call us up with morning faces and with morning hearts—eager to labor, eager to be happy, if happiness shall be our portion—and if the day be marked for sorrow, strong to endure it.

"We thank Thee and praise Thee; and in the words of Him to whom this day is sacred, close our oblation."

An Untranslated Gem from Goethe.—A subscriber in far-away Nicaragua writes to us as follows:

"*Editor of THE LITERARY DIGEST:* Oh! I could beat you with a stick! And what names I would like to call you! For printing in your issue of September 9, p. 308, a quotation by Macaulay of a most exquisite thought *in German and leaving it in German.*"

The quotation referred to is in an article on "The Vitality of Macaulay," which we abridged from an article in *The Atlantic Monthly* (August) by Mr. H. D. Sedgwick, Jr. Macaulay's rooms in Florence looked out upon a court adorned with marble

statues placed among the orange-trees. In his diary he wrote, "I never look at the statues without thinking of poor Mignon :

Und Marmorbildern stehn und sehn mich an ;
Was hat man dir, der armes kind, gethan ?

I know of no two lines in the world which I would sooner have written than those."

The words are those of Goethe's "Mignon," the dwarfish, unaccountable child whose unseemly body was the foil to a soul of rare beauty. Goethe, like Dante, was a master of the art of saying much in a few words, so that such passages of concentrated, pregnant thought as this are particularly hard to render in translation. Perhaps the following attempt may do :

And marble statues look to ask of me :
What unkind deed, poor child, was done to thee ?

A JAPANESE DESCRIPTION OF STUDENT LIFE IN JAPAN.

MR. H. S. OHARA, a Japanese student in the Leland Stanford Junior University, gives some interesting facts about the life of the student in his own land. Lafcadio Hearn has said of the Japanese : "They are less serious, they are more happy ; they perhaps remain the happiest people in the civilized world." Mr. Ohara thinks that this is in an especial degree true of the Japanese student. He writes in *The Stanford Sequoia* (Palo Alto, November 17), and we reproduce a portion of his article without verbal change, not even correcting the spelling of Mazzini's name :

"They [Japanese students] are not serious, because they are not required to be so ; they are happy, because they have hope in the future, hope in their studies, hope in the blue sky, hope in the cherry blossoms—hope in everything. For has the Japanese nation not made, and is she not now making, progress such as the history of the past speaks nowhere of? Were not many of the ministers and high officers of the government, many of the men in the great industries, and of the party leaders in and out of parliament, of humble stock, once poor students? In the democratic Japan of to-day, the man with wider knowledge and better ability has always the chance to make himself prominent, and this the student knows. The ambitious student in Europe or America is not more ambitious than the Japanese student. The student in Japan is born with ambition and dies with ambition. He is usually a hard worker, and studies in perfect faith and with Dido-like sincerity. 'Read an hundred times over, and meaning will be itself clear,' is a popular proverb among the students, and it simply teaches patience and study.

"If you will go to Kanda or Hongo, the students' districts of Tokyo, at evening, and look up at the paper windows of the boarding-houses, you will see on the paper black shadows, now stooping and now lifting. This means that the owners of these shadows are studying for to-morrow's lessons. 'Know the existence of to-day, but never think of to-morrow,' their proverb says. This means that they must finish up their studies to-day, not let them go until to-morrow. Progress is the idea of every student, and nothing is allowed to hinder that progress.

"The teacher is regarded by the Japanese student as a second parent, and the relation between them is very close and warm. Besides the class-room work, the teacher is often consulted by the student about his personal matters. To the question of importance he answers with sympathy, and to the question of lighter nature with a smile. The student goes to him without scruple, and with all manner of questions. Harmony in every way exists between them.

"The favorite studies of the Japanese students were, until about twenty-five years ago, law, politics, philosophy, and medicine ; the doctrines of Stein and Mazzini, the teachings of Montesquieu and Locke, having special fascination. But since then the greater number of the students have turned their attention to the practical sciences—especially applied sciences. Then the most favored books were Bentham's 'Philosophy,' Rousseau's 'Social Contract,' Guizot's 'History of Civilization,' Mill's 'Liberty,' and like writings ; but now, Slingo's 'Electrical Engineering,'

Ewing's 'Steam-Engine,' and Marshal's 'Economics of Industry,' are more acceptable to them. This is due to the change in the social condition of the country. The Japan of twenty-five or thirty years ago was busy to breathe the spiritual air of Western ideas, but the Japan of to-day is earnest in building up the material part of civilization.

"I spoke of the boarding-house in connection with the student's study. In the students' districts there are hundreds of them—houses of a peculiar type, quite different from those in America. Each house has a certain number of rooms of different sizes, and each house is for boy or girl students alone. Little pieces of wood, just at the entrances of the houses, are to be seen by the by-passer ; on these blocks the names of the boarders are written, affording convenience for location of the students. Each student occupies one room, which he regards as his kingdom. Here he eats, sleeps, studies, and dances 'kenbu.' These little rooms, with their closets and paper windows, differ in price according to position ; the sunny room, which the disciples of Diogenes very likely will prefer, is higher, while the dark and cold room, best fitted for the would-be hot-headed politician, is lower.

"The student is generally well treated throughout the country—is even regarded as belonging to a privileged class. Every government official, professor, man of industry, and, in truth, every man belonging to the better class of society thinks it an honorable thing to have two or three students in his house, and to help them in their education ; very often he buys their books, pays their tuition, and gives them board and room, not treating them as helpers, but as his 'Shosei,' or students. I know a lawyer in Tokyo who has fourteen students in his house, helping each of them in every possible way. His house itself is very much like a boarding-school. The students in Germany are much respected, and it is said well treated, but surely not so well as in the Flower Land. In the houses, before the shops, on the streets, even in the chop-houses, the student gets the best. This is because the people are interested in the makers of the next generation, anxious to have the coming Japan greater and brighter than the Japan of to-day.

"The German student uses a peculiar lamp, called in this country the 'student lamp.' In Japan, not the lamp only, but clothing, shoes, hats, pipes, almost everything used by the student, is different from that used by other classes. One thing which attracts the attention of foreigners is the badge worn on the hat, each school having its distinctive one. The students of the government schools are in uniform, and the uniforms again differ among the different schools.

"Curious things with the Japanese students are the Ginshi, the recital of poems, and the Kenbu, the sword dance. The poems sung are usually the patriotic ones, the dances performed the enthusiastic ones. In the lobbies of the schools very often, while the students are waiting for the next recitation, one will chance to sing an excitable poem ; whereupon the whole mass joins in at the chorus, while others of them leap upon the benches and dance the Kenbu. They lean much toward intellectual contests, and the annual debate between the six great law schools of Tokyo is a most exciting thing in student circles. In the hall of one of the law schools, amid the applause of thousands, young Ciceros and Demosthenes with black hair and almond eyes deliver senator-like orations. Usually these contests are presided over by one of the prominent speakers of parliament.

"The Japanese students are athletic ; they understand what Juvenal meant by saying, 'Mens sana in corpore sano.' Their most popular sports are wrestling, fencing, track games, and baseball ; swimming is one of the best of summer, and there are a number of swimming-schools on the bank of Okawa. But most popular of all Japanese student sports is boat-racing. Each college or academy has its boat club, and is most enthusiastic in its hope for victory."

Ouida on English Books of the Day.—Ouida, with her wonted impetuosity and strong language, takes a tilt at some of the failings of present-day literature in England. Referring to the recent talk about forming an English Academy upon the lines of the *Académie Française*, she says that the English temper is not academic, and that Englishmen are too indifferent to purity and elegance of language to make such an institution possible.

"The well of English undefiled is sadly muddy nowadays," she says (*The Fortnightly Review*, November), "and any roaring screamer of English or American slang is as welcome to those who call themselves critics as tho he wrote like Matthew Arnold or John Morley." There is an "enormous increase in the issue of rubbish of all kinds." She continues:

"The number of volumes which pour annually from the English press is, at the present hour, appalling. One house alone produces, in number, enough volumes for the whole trade. Why are these volumes, usually worthless, ever produced? Why do the circulating libraries accept them? Who reads them? Who buys them? Why does one see in the lists of London 'remainders' the announcement of volumes originally published at six, eight, ten, twelve shillings, to be sold second-hand, perfectly new and uncut, at the miserable prices of two shillings, eighteen-pence, one shilling, and even sixpence.' Among these is sometimes a work of real and scholarly worth, which it is painful to see thus sacrificed, but rarely; for it is rarely that such a work is now issued in London. Where is this to end? With whom does the fault of it lie? Some one, I suppose, must gain by such an insane method of overproduction, but I can not see who it can possibly be. One well-known publisher tells me that he must issue books thus, or starve. He is not in danger of bodily starvation, but the public is mentally starved by such a system. . . . I read few English books of the day myself, I prefer the literatures of other countries; but it pains me to see such a deluge of worthless verbosity pour from London lanes and London streets where printing-presses of yore worked for Addison and Goldsmith, Thackeray and Arthur Helps.

"If this stream of pseudo-literature, rarely defiled, is not stopped, it will carry away and swamp all true English literature under it, as a moving bog covers flocks and pastures, cottages and country seats. I have asked several London publishers why it is allowed to go on; their answers are evasive and contradictory. They assert that most of the volumes published are paid for by the authors; that they themselves must publish something, or cease to exist as a trade; and that the public does not know good from bad, so it does not matter what is printed."

WHAT IS REAL EDUCATION?

A SYMPOSIUM on the subject "What It Is to Be Educated" appears in *The Chautauquan* (October). Four college presidents, two widely known clergymen and writers, two prominent business men, and two women of national reputation are represented; and their views, while divergent in some respects, are interesting and fairly representative.

The following is President Arthur T. Hadley's reply:

"1. What do you consider the chief characteristics distinguishing the educated from the uneducated person?

"Breadth of view. A good general education should give a man broad views of life as a whole. A good technical education should give him broad views of his profession.

"2. What special advantages does the college-trained man gain over the self-made man, so-called?

"He tends to get the experience of other men and other ages in better proportion of the results of his own experience.

"3. How may a person best make up for the lack of a college training?

"By dealing with large things, whether in business, in society, in art, or in literature.

"4. How would you differentiate the education of woman from that of man?

"The general education of the two should, it seems to me, be nearly similar. The technical education will necessarily, in the present stage of civilization, be, in the majority of cases, widely different."

Dr. Edward Everett Hale says:

"1. An educated man understands the language of his time. He knows how and where to find the facts he needs. He is not, very likely, informed on many of the infinite number of facts. But he can understand those who know and he knows where to find them.

"2. As colleges go, the college-trained man has no advantage over the self-trained man, so called, unless he have had an earlier start. . . .

"4. Woman's life is more at home than man's, or should be. Her physical strength, on the whole, is not so great as his. A woman will always be glad if she can readily adapt herself to new relations in life. She has, perhaps, as things go, not so ready a choice of the place she will live in as her husband. The essential point—not referred to in your questions—is that *Education* is the important matter, and *Instruction*—the pouring in of facts—is comparatively unimportant."

Mrs. May Wright Sewall, president of the International Council of Women, Indianapolis, says with regard to the education of her own sex:

"In fundamentals I would not differentiate the education of woman from that of man at all. I think what is good for the development of mental fiber in one sex is equally good for the development of the same fiber in the other. In advanced education I would differentiate woman's education from that of man by giving her more of history and philosophy. I would give her more history because she will get less of the value of history through her contact with life than man will through his. I would give her more philosophy for three reasons: First, her habits of life will probably give her more time in loneliness, which to the untrained mind is almost certain to induce a habit of day-dreaming and mental idling. Second, the habit of mind induced by philosophical study results in larger patience and surer fortitude, qualities which women particularly need. Third, as her life is likely to be given to details, and to the details of relatively small matters, she needs the horizon and inspiration derived from considering large general questions, such as those which are the subject of philosophy. Practically I would differentiate her education by giving her more natural sciences, that her more limited contact with human life may be supplied by quick perception of the relationships and resources of nature."

NOTES.

ANENT the remarkable "Dumas Discovery," a subscriber writes that he read "Sultanetta" in French some years ago. It was published by Michel Levy, Paris.

ANNOUNCEMENT is made of the marriage of Mr. Hamlin Garland, on November 18, to Miss Zulime Taft, daughter of Mr. and Mrs. Don Carlos Taft, of Hanover, Kansas.

THE critics almost without exception recognize the remarkable ability of Mrs. Charlotte Perkins Stetson's book on "Women and Economics," which is making a decided sensation in London.

TWELVE different editions-de-luxe of "David Harum," in morocco, calf, levant, etc., are to be published this autumn. It has lately been suggested that horse-hide would be the most appropriate covering.

PROFESSOR CHARLES ELIOT NORTON calls the attention to the fact that we were in error in assuming that the recently published "Letters of Emerson to a Friend," lately reviewed in these columns, were addressed to himself, nor have any of them been previously published in the magazines.

DR. ALICE B. STOCKHAM, of Chicago, has just written and published a brochure called "Parenthood," which in smaller compass and more general language gives the outline of her interesting and elevating theory of the sex relations, dealt with more fully and specifically in that rarely fine book "Karezza."

NOTEWORTHY proof of the stability of Dickens's hold upon popular taste is to be found in the new editions of his works appearing this year—the twenty-ninth since his death. Five editions have been published or are in press. These include the "Gadshill," the "Victoria," and *The Daily News* editions, the "Temple" pocket edition, and the "New Century" edition, also of pocket size. As all of the Dickens copyrights have not yet expired, only those editions published by authority of Messrs. Chapman & Hall are absolutely complete. A new card game called "Characters from Dickens" has lately been compiled by Mrs. Olivia Dealy. Each of sixty cards bears the name of some character, and under the name questions concerning the character.

MR. JOHN BLAIR's presentation of the realistic drama of the Spanish playwright Echegaray at the Carnegie Lyceum, New York, on November 14, was the initial performance in the series of five monthly modern plays of which we have already spoken in these columns. The attempt to give plays of a high order, representing the best attainment of the modern drama in England and the Continent, deserves the support and cooperation of all lovers of the serious drama, and apparently the undertaking will be a success from the artistic and financial standpoint. The performance, while not to be compared in intrinsic interest with Mr. Blair's presentation of "Ghosts" last spring, is spoken of favorably by the metropolitan critics.

SCIENCE AND INVENTION.

THE MULTIPHONE.

THIS name has been given by a French inventor, M. Dussaud, to a simple apparatus for magnifying the sound from a telephone or a phonograph. It consists, as the description given below will show, merely of a small resonance chamber connecting directly on one side with the vibrating diaphragm of the telephone or phonograph and opening on the other into a speaking-trumpet like that ordinarily used with the phonograph. By the interposition of this resonance box, the sound is greatly increased. The inventor's loud-speaking telephone, a previous device along the same lines, was recently described in these columns. The following descriptive article is a translation from *La Nature* (Paris, November 9), to which the original was contributed by M. J. Laffargue. Says the writer:

"M. Dussaud has invented a little apparatus to which he has given the name of 'multiphone,' because it serves to multiply the sounds of the telephone and phonograph, so that they may be heard at a greater distance, or by a greater number of persons, or by persons who are hard of hearing. This apparatus was exhibited recently by M. Laborde to the Academy of Medicine.

"Fig. 2 (No. 1) shows the arrangement adopted for the application of the multiphone to the telephone. At *B* is the coil of the receiving telephone, and at *P* the vibrating plate. The sonorous receiver *M* constitutes the multiphone, which collects the vibrations of the air from both sides of the vibrating plate. These vibrations are transmitted to a point *E* where may be fixed an arrangement for applying the ear directly, or a trumpet *C*. We have been present at several experiments made under these conditions, and the sound was clear and strong. It is certain that the multiphone will enable persons hard of hearing to use the telephone.

"M. Dussaud seeks to utilize the multiphone for partially deaf persons who desire to visit the theater. It would be possible to

FIG. 1.—The Multiphone affixed to the Membrane of a Phonograph.

FIG. 2.—Applications of the Multiphone to Telephone and Phonograph.

instal in every theater a number of devices of this kind connected to the microphones of a theatrophone [theatrical telephone]. Persons hard of hearing could thus follow the play with ease.

"Fig. 1 shows us the multiphone placed on the membrane of a phonograph, and Fig. 2 (No. 2) shows the details. At *C* is the sonorous receptacle of the multiphone; it has no bottom, for the

membrane of the phonograph itself forms the bottom. This receptacle has a small opening, *O*, to allow the style of the diaphragm to pass. The multiphone is first fastened with cement under the reproducing diaphragm of the phonograph. Then the support *P* is placed on the slide *CA* with the piece *S*; the mouth *E*, connected with a second amplifying trumpet *CA*, is placed above the tube *T*, to which it is connected by rubber tubing *ca*. Now if we work the phonograph, the diaphragm, as in the ordinary case, acts by its upper face to send sound-waves into its trumpet, of which only the base is seen in our diagram. The multiphone *C*, at the same time, collects the vibrations of the lower face of the diaphragm, and sends them by way of the tube and the opening *E* into the second trumpet *CA*.

"These experiments, whose aim is to augment in a great degree the power of the sounds emitted by the phonograph, . . . are very conclusive and easy to utilize. They enable deaf people to use the phonograph. In this way M. Dussaud has added another to the series of inventions undertaken by him for the relief of this infirmity; he has succeeded in operating under the most satisfactory conditions, acoustic lenses, the microphonograph, and the loud-speaking telephone."—*Translation made for THE LITERARY DIGEST.*

THE CENTENARY OF THE METRIC SYSTEM.

ON June 22, 1799, the first standard meter was constructed in France, and the metric system of weights and measurements, which has since made such strides, was formally adopted by the French republican government. This system, whose basis, the meter, was originally taken as 1/10,000,000 of the distance from the poles to the equator, altho not in popular use in English-speaking countries, is even here the accepted standard for purely scientific work. In this age of centennial celebrations it is strange that scientific men seem to have allowed this anniversary to pass unnoticed. This neglect has attracted the notice of M. Jacques Boyer, who has endeavored to make up for it by an elaborate illustrated article in *Revue Encyclopédique* (October 7), in which he gives a thorough history of the origin and adoption of the metric system, its gradual spread through the world, and its present status.

The metric system, M. Boyer tells us, was by no means the first attempt to unify systems of measurement, at least in France. Charlemagne decreed that a uniform system of measurement should be used throughout his empire, and his example was followed by many of his successors; yet in 1611, in the east of France alone, no less than eight different kinds of standard feet were commonly in use. In 1670, Abbé Mouton, an astronomer of Lyons, proposed to use the minute, or sixtieth part of a degree of the meridian, as a rational unit of measurement; but he died without putting his idea into practise. This was done by Prof. Jean Picard, who measured an arc of the meridian near Paris. M. Boyer goes on to say:

"Above all—a remarkable thing for that epoch—he indicated the means of finding again, at pleasure, the length of the measure that he used, by referring it to that of the simple pendulum which beats seconds at Paris. Thus, he declares, 'if this measure should go the way of all the ancient measures of which naught remains but the name, we could regain it from an original, which, being taken from nature itself, must be invariable and universal.' The scientific principle on which the metric system rests was discovered. Little remained to reach the definite conception of the meter—a more exact knowledge of the earth's figure, and more perfect geodesic methods."

M. Boyer proceeds to relate at length how this knowledge was finally attained. In 1731 scientists sent by the Academy of Sciences measured an arc of the meridian in Peru; in 1790 a decree introduced by Talleyrand was adopted by the National Assembly, authorizing the appointment of a commission which in the following year reported in favor of the meter. After renewed measurements of the meridian in various parts of the earth's sur-

face, and the assemblage of an international convention called by the French Government, the length of the unit was definitely settled, and the whole system of weights and measures that depends on this unit was perfected. In 1799 a platinum standard meter was forged by the metallurgist Jannetti. The change in standards was attended with much popular interest. Rules were issued for memorizing the new metric names (the "republican measures" as they were called), and the caricaturists were busy with them as well. M. Boyer quotes a series of French mnemonic verses which he thinks may have done much to popularize the new system. The metric weights and measures, however, remained entirely French till within recent years, the aim of its originators to found an international system not being realized. Its progress among other nations is thus chronicled by M. Boyer:

"About the time when the metric system was finally established in France, it was adopted by Belgium, Holland, and Greece. In 1867 we find a proposition introduced into the House of Commons to investigate the propriety of its establishment in England. Shortly afterward Italy, Switzerland, Greece, Belgium, and France signed the Monetary Convention of 1865—a first step toward the unification so greatly desired, and in the following year the United States recognized the meter as a legal measure."

In 1867 the International Geodesic Commission advised the construction of a new international standard meter, to be used by all the countries of Europe. A conference was called by France, but it was a failure, owing to the Franco-German war. It reassembled in 1872 and at its instance an elaborate series of experiments on standards of measurement were undertaken. Finally, on May 20, 1875, the celebrated metric convention was signed at Paris by the representatives of sixteen countries: Germany, Austria, Belgium, Argentina, Denmark, the United States, France, Italy, Peru, Portugal, Russia, Sweden-Norway, Switzerland, Turkey, and Venezuela. At this meeting it was also agreed to maintain at common expense an International Bureau of Weights and Measures, with headquarters at Paris, to be directed by an international committee under the authority of a general conference. The committee has met regularly, and the conference has held two sessions, in 1889 and 1895. M. Boyer gives us some idea of the work of the International Bureau by describing some of the elaborate apparatus that it had established for the comparison and determination of standards. He closes with an account of the remarkable work of the American physicist, Professor Michelson, in connection with the bureau—a work for which he was specially selected and summoned to Paris, on account of his reputation in this particular line. Says the author:

"The American scientist has succeeded, by using ingenious processes into whose details we can not enter here, in comparing the fundamental basis of the metric system with a natural unit, the wave-length of the red light of cadmium. This unit depends only on the properties of atoms and of the ether. It seems then, according to the author's opinion, to be one of the most fixed standards in all nature. His delicate experiments have given him as an average, as the value of one meter, 1,553,164 wave-lengths of this radiation in air at 15° C. and 76 centimeters of pressure. Thus we may now assert that if all standard scales should be destroyed in a cataclysm, we should be in a position, by taking up Michelson's problem in inverse order, to reconstitute all the units of the metric system from the data given in his paper alone. The French astronomers of the eighteenth century were not mistaken, then, in regard to the future of the meter, when they gave to it this proud motto: 'For all time and for all peoples.'"—*Translation made for THE LITERARY DIGEST.*

Mechanical Appliances in the African War.—The rôle of mechanics in the present South African war is daily becoming an important one. Says *The Railway and Engineering Review*: "The South African imbroglio is developing some points of interest to the mechanic. A large number of traction engines have been shipped from England for service in connec-

tion with transportation problems. Steam-plows are also to be tried in entrenching works. Armored trains have also been given more attention than has hitherto been the custom, which, while not exactly a success, have at times been of considerable service. The question of portable fortifications is receiving most earnest thought, and will quite probably result in something new in this direction. The developments of present wars are worth the attention of the mechanic." The following description of one of the British armored trains, taken from the London *Industries and Iron*, is interesting in this connection: "Each train consists of a powerful engine, three 20-ton iron trucks, a water-tank, and van. The sides of the trucks have been raised about six feet higher than the ordinary level, with half-inch boiler-plates. The sides are loop-holed with horizontal slits, so that the men inside the trucks can either use their rifles or Maxims with as near an approach to safety to themselves as it is possible to secure. Each vehicle is calculated to hold fifty or sixty men comfortably, and the whole train is painted in the regular khaki color. The armor-ing of the engine has greatly increased its bulk, but special care has been taken to make it as impregnable as possible. Both driver and fireman will be completely covered from view, and instructions are conveyed by bell signals. The engine is fitted in front with the 'Valiant' steam-pumping engine, taking steam from the locomotive boiler. A hose is attached of sufficient length to enable water to be taken in from rivers or other sources of supply that may be passed on the journey. It may be remarked that pumping-engines of this pattern were used in the Sudan campaigns for supplying the troops with water, each pump being capable of delivering 1,200 gallons of water per hour through even three or four miles of hose pipe. With a view to allowing the troops free scope for action, the trucks are marshaled in front and rear of the engine and tender. The latter is a capacious vehicle, capable of carrying a large stock."

WIRELESS TELEGRAPHY RECOMMENDED FOR THE NAVY.

THE experts appointed by the Navy Department to test the availability of the Marconi system of space-telegraphy for use on vessels of war have handed in their report, which has just been made public. The experiments have already been described in *THE LITERARY DIGEST*. The experts, Lieut.-Com. J. T. Newton, Lieut. J. B. Blish, and Lieut. F. K. Hill, highly commend the system in spite of the fact that Marconi's instruments were brought to this country only for reporting the yacht race and were not those successfully used in long-distance naval work in Europe. We give below portions of the report as published in *Electricity*, New York. The commission reports that the system is well adapted for use in squadron-signaling under conditions of rain, fog, darkness, and speed. Wind, fog, and other weather conditions do not affect transmission, altho dampness may lessen range, rapidity, and accuracy by impairing insulation. The report continues:

"We have no data as to the effects of rolling and pitching, but excessive vibration at high speed apparently produced no bad effect on the instruments, and we believe the working of the system would be very little affected by the motion of the ship.

"The accuracy is good within the working ranges. Cipher and important signals may be repeated back to the sending-station, if necessary, to insure absolute accuracy.

"When ships are close together (less than 400 yards) adjustments easily made of the instruments are necessary.

"The greatest distance that messages were exchanged with the station at Navesink was 16.5 miles. This distance was exceeded considerably during the yacht races, when a more efficient set of instruments was installed there."

On this point the following comment is made by *Electricity*:

"It will at once be remarked that 16½ miles, the greatest distance over which a message was sent, is only about one half the distance over which despatches were transmitted during the British naval maneuvers last summer. This is accounted for by Mr. Marconi by the fact that the instruments installed at the Nave-

sink Highlands Lighthouse were of an antiquated pattern and only intended for short-distance demonstrations."

As reported in the previous article in these columns, the interference of a second simultaneous message from an outside source was shown to be a complete obstacle to the proper receipt of the first. Says the commission:

"When two transmitters are sending at the same time, all the receiving wires within range receive the impulses from transmitters, and the tapes, altho unreadable, show unmistakably that such double sending is taking place.

"In every case, under a great number of varied conditions, the attempted interference was complete. Mr. Marconi, altho he stated to the board before these attempts were made that he could prevent interference, never explained how nor made any attempt to demonstrate that it could be done."

On this point Mr. Marconi has already stated in a communication to the Department that his apparatus for preventing interference has not yet been protected by patents, and that therefore it could neither be used in these experiments nor explained to the commission. The conclusion of the report runs as follows:

"Between large ships (heights of masts 130 and 140 feet) and a torpedo-boat (height of mast 45 feet), across open water, signals can be read up to seven miles on the torpedo-boat and 85 miles on the ship. Communication might be interrupted altogether when tall buildings of iron framing intervene.

"The rapidity is not greater than twelve words per minute for skilled operators.

"The shock from the sending coil of wire may be quite severe and even dangerous to a person with a weak heart. No fatal accidents have been recorded.

"The liability to accident from lightning has not been ascertained.

"The sending apparatus and wire would injuriously affect the compass if placed near it. The exact distance is not known and should be determined by experiment.

"The system is adapted for use on all vessels of the navy, including torpedo-boats and small vessels, as patrols, scouts, and despatch-boats, but it is impracticable in a small boat.

"For landing parties the only feasible method of use would be to erect a pole on shore and then communicate with the ship.

"The system could be adapted to the telegraphic determination of differences of longitude in surveying.

"The board respectfully recommends that the system be given a trial in the navy."

DARK LIGHTNING.

MUCH popular interest has recently been shown in the so-called "dark-lightning" flashes—flashes of lightning that have the usual shape and occur under the usual conditions, but appear black or dark instead of bright. As such flashes have not only been seen with the naked eye, but have many times been photographed, it was once thought that they must have objective existence; but scientific research on the subject has now proved to the satisfaction of almost every one that they are in one case optical illusions and in the other the result of a curious photographic effect. Says Prof. Elihu Thomson, writing in *The Electrical World and Engineer*, November 11:

"Permit me to say at the outset that 'dark lightning' is a myth, due to contrast effects when seen by the eye, and to peculiarities of photographic-plate sensitiveness when photographed. The mystery as to the photography of dark flashes was cleared up a considerable time ago by Clayden's experiment. . . .

"The effect is one due simply to well-known actions of a photographic plate during exposure and development. If a plate is subjected to diffused light and then exposed to a bright flash, the flash develops and gives in the positive a white streak. If, however, the exposure to the flash is *succeeded* by the exposure to diffused light, dark flashes result. Those familiar with the more minute phenomena of the photographic plate will recognize this property as an old friend or enemy in a new rôle."

That the ordinary man is not quite satisfied with this explanation is shown by a letter from a correspondent in Wisconsin, that appears in the same issue of *The Electrical World*. The letter, which is similar to many others that are appearing in the technical papers, runs as follows:

"I am sending you herewith a photographic print of a lightning flash taken about 9:30 P.M., August 28, 1899, at Minneapolis, Minn. . . . The principal interest of the plate attaches to the very distinct records of 'dark lightning.' Near the middle of the flash a small 'dark flash' starts off to the left and continues to the earth, apparently independent of the main flash and growing heavier as it nears the earth. Also near the earth on a white flash are several dark branches showing very distinctly. . . . These dark 'branches' appear certainly to come from the white flash, and one would hardly expect the photographic image of a part of a bolt of lightning to reverse, and not the whole of it."

PHOTOGRAPH OF DARK LIGHTNING.

The whole question is very thoroughly treated in an illustrated article in *Science* (November 17), by Prof. R. W. Wood of the University of Wisconsin. Professor Wood says that Clayden's explanation, altho correct itself, needs explaining. He says:

"Mr. Clayden showed that if a plate, which had received an impression of a lightning flash or electric spark, was subsequently slightly fogged, either by exposing it to feeble diffused light or by leaving the lens of the camera open, the flash on development came out darker than the background. If, however, the plate was fogged before the image of the flash was impressed, it came out brighter than the background, as in the ordinary pictures of lightning. I refer to the appearance in the positive print in each case. This is quite different from ordinary reversal due to the action of a very intense light, for the order in which the lights are applied is a factor, and the phenomenon lies wholly in the region of under-exposure. I repeated Mr. Clayden's experiment, and obtained dark flashes without any difficulty.

"The effect can not, however, be obtained by impressing an image of a filament of an incandescent lamp on a plate and subsequently fogging the plate. Clearly there is something about the light of the electric spark which is essential to the production of the reversal. It is not intensity, however, for I found it was impossible to obtain reversed images or bright sparks with the lens wide open.

"The figure shows a series of spark images, some normal, some partly reversed, and others wholly reversed. The sparks are those of a large inductorium, with a good-sized Leyden jar in circuit. The sparks were all of equal intensity, but after each discharge the iris diaphragm of the lens was closed a little. . . . After exposure the plate was exposed to the light of a candle for a second or two and then developed.

"In this series of pictures it will be seen that the edges of the bright images of the sparks are reversed, the intensity on the border of the image being less than at the core. As the intensity of the spark becomes less and less, the bright central core dwindles down to a mere thread and eventually disappears, the spark's image being feeble enough to reverse over its entire area.

"This explains why the dark lightning flashes are usually ramifications of the main flash. The ramifications are less brilliant discharges and reverse, while the main one is too bright to cause the effect."

It occurred to Professor Wood that some peculiar radiation may be emitted by the spark, which radiation is wanting in the light coming from other bodies. He succeeded in showing that the light of the spark does not act in the same way as the light of the candle, but the peculiarity did not lie in the nature of its radiation, for he found that all parts of the spectrum acted alike in this respect. To quote again:

"Clearly the effect does not depend on wave length. It then occurred to me that the time element might enter into the problem. The light of the spark is over in about 0.00050 of a second, and it did not seem impossible that a bright light of exceeding short duration might act quite differently on a plate from a weaker light of longer duration."

This hypothesis was tested in a variety of ways, and in all of them Professor Wood obtained very strong evidence that the important element in the action is the duration of the illumination. To cite the author's detailed accounts of these experiments is of course impossible here, but we quote his final conclusion, which is interesting, as probably settling the "dark-lightning" question for good, at least in its photographic aspect:

"We are justified in assuming that *the action of an intense light on a plate for a very brief time interval decreases the sensitiveness of the plate to light*. It is curious to contrast with this effect the fact that exposure to a dim light for a moment or two appears to increase the sensibility by doing the small amount of preliminary work on the molecules, which seems to be necessary before any change can be effected that will respond to the developer. I am not prepared to say what the nature of the change effected by the flash is. Possibly some one familiar with the theory of sensitive emulsions can answer the question."

METEORS THAT FAILED TO APPEAR.

THE November meteor shower, that was expected to be unusually large this year, very generally failed to put in an appearance and thereby disappointed not only astronomers, but a very large portion of the general public as well. Elaborate preparations had been made for observing and recording it, but these could be used only in a few cases. Clouds prevented observation over a great part of the United States, but even where the sky was visible few meteors were seen, and not all of these belonged to the expected swarm, whose members are known as "Leonids," because they appear to radiate from the constellation Leo. The largest number seen was recorded at the University of Pennsylvania, where 102 meteors were observed, 69 of which were Leonids. Says *The Scientific American* (November 25):

"Nearly all the meteors observed were faint, only a few of them being of the second magnitude. Most of the non-Leonids were scarcely discernible. In no instance did a meteor leave a trail visible for more than a few seconds. The Harvard observatory counted 64, but the display hardly came up to the expectations of the astronomers. Professor Howe, of the University of Denver, reported that he counted 18 Leonids besides a large number of meteors in other portions of the sky. On November 14 many students of Princeton stayed out long after midnight to observe them, and in order that all might have an opportunity of observing them, the bells in the town rang to wake up the students at one o'clock. No photographs were taken of the few stray meteors which were seen. At McGill University photographs of 156 meteors were obtained. At Lima, Peru, at half-past twelve o'clock on November 15, there was a strong earthquake shock, but no celestial phenomena were observed. By the falling of an aerolite seven miles south of Crescent City, Ill., a residence was partly wrecked, tearing away a portion of the upper story. The aerolite buried itself in the ground about three feet from the foundation of the house.

"In England a balloon made an ascension for the purpose of observing the Leonid shower. The observers saw only five meteors, and they were obliged to make a sudden descent, as the balloon was drifting toward the sea. As a result two of the three

occupants of the balloon were injured. Generally speaking, the European observations proved a failure, except in the Austrian Alps, where, on November 15, no less than 300 Leonids were seen and photographed. One hundred were seen at Paris, and a fair display at Brussels.

"The most interesting report received from the observations in the United States on November 15 is a despatch, unsubstantiated as yet by astronomical authorities, to the effect that a large meteorite fell in the woods just east of Webster City, Iowa. The despatch said that the falling body came down with a terrific roar and, all seething and smoking, plowed out a hole in the ground 50 feet square. If the report is verified, the find will be more than usually interesting, because, while meteorites at times fall to the earth, it is not known that any of the Leonids have hitherto penetrated through the earth's dense atmosphere without being entirely consumed."

Why was not the swarm of Leonids on time? To explain this seems not to be altogether easy. Most astronomers profess to be in the dark. Prof. E. C. Pickering, of Harvard, suggests in an interview published in the *Boston Transcript* (November 18) that the swarm passed so as to be visible in the central Pacific. In this case, he says, the meteors "would probably be observed in the Sandwich Islands, and the reports could not reach here for some days yet." Reports have been received from India, however, as well as from various parts of Europe, as has been noted above, and no greater number of meteors were observed there than here.

Prof. W. H. Pickering, another Harvard astronomer, has a different theory, which is thus set forth in the same Boston newspaper. It says:

"His thesis is that the time has been wrongly computed, and that the shower is not due this year, but two years later, in 1901 and possibly three years later in 1902! To reach this conclusion, Professor Pickering went back to the year 902, when the first shower of Leonids of which there are preserved records took place. Every thirty-three and one-quarter years the shower re-occurred until 1602, that is, counting only by centuries, there were showers in 902, 1002, 1101, 1202, 1302, 1402, 1502, and 1602, and then there appears to have been a change in the orbit of the swarm, for instead of reappearing about one hundred years later, it reappeared ninety-six years later, in 1698, and since then the shower of Leonids has taken place, not every thirty-three years, as is generally supposed, but every thirty-four years. There was a shower in 1833, and then the statement has been repeated many times of late that the next was in 1866. Professor Pickering admits that this may have been true in England, but it certainly is not a correct statement for America. There was a shower visible in 1866 in America, but it was not to be compared to the shower of one year later, 1867, when it may have been cloudy in England and therefore unnoted. And since that change in the orbit of the swarm in the seventeenth century it has appeared at intervals of thirty-four years. The error that astronomers all over the world have made lies in the fact that they computed from the early records without consulting carefully all of the statistics of the centuries as Professor Pickering has just done. According to this statement the shower should arrive in 1901."

Mosquitoes and Malaria in Japan.—There is nothing new under the sun. A correspondent of *The Lancet* writes to that paper as follows: "Now that the work of Major Ross has brought the question of the connection between mosquitoes and malaria so prominently under notice, it is interesting to find that long ago the mischief wrought by mosquitoes was suspected by the acute Japanese. In a little Japanese romance written (or translated) by J. Morris, and published in 1885, the following statement occurs: 'The Japanese declare that its [the mosquito's] constant attacks bring on a kind of fever; and this is by no means improbable, having in view the fact that this pest prepares for the summer campaign by a course of training on the swamps and marshes of the neighborhood, and inoculates whole families with the essences of these odoriferous hunting-grounds. If sleepless nights combined with repeated doses of this subtle poison were not to give rise to feverish symptoms, it would, indeed, be strange.'"

THE RELIGIOUS WORLD.

EFFECT OF BIBLICAL CRITICISM ON PROTESTANTISM AND CATHOLICISM.

MR. W. H. MALLOCK, author of "Is Life Worth Living?" has just re-stated the opinions which he gave to the world almost twenty years ago, to the effect that "if the Christian religion holds its own at all in the face of secular knowledge, it is the Christian religion as embodied in the Church of Rome, and not in any form of Protestantism, that will survive in the intellectual contest." Further, he holds that "the outlines of the great Apologia which Rome, as the champion of revelation, will offer to the human intellect, instead of being wrapped in mystery, are, for those who have eyes to see, day by day becoming clearer and more comprehensive, and that all those forces of science which it was once thought would be fatal to her, are now, in a way which constitutes one of the great surprises of history, so grouping themselves as to afford her a new foundation." In elucidation of these two points he says in *The Nineteenth Century* (November):

"And now let me sum up in as few words as possible what science is tending to do in the directions that have just been indicated, firstly with regard to the Bible, and secondly with regard to Christian doctrine. It tends to annihilate completely, in the eyes of every thinking man, the two great principles which are the foundation of what is called reformed Christianity. The first of these is the principle that the Bible contains in itself a clear indication of what Christian doctrine is, and is also its own warranty that everything which it says is true; the second is the principle that, if any further guide is required, we shall find it in the beliefs and practises of Christ's earliest followers, the fundamental assumption of every school of Protestantism being that its own creed is that of the first Christians, given back to the light by the removal of the superstructures of Rome.

"Both these principles the scientific study of history is rendering, year by year, more completely untenable—indeed, we may say more completely unthinkable. While increasing the interest of the Bible in many respects, it is exhibiting the Biblical books as utterly incompetent, in themselves, to supply us with any system of coherent doctrine, or to prove it. While increasing the interest of the history of the Christian Church, it is showing us that the Christianity of Protestantism, no less than that of Rome, is, instead of being primitive, the gradual growth of centuries; and that of the simplest creed professed in the austere of Little Bethels, as truly as of that which echoes under the dome and among the incense of St. Peter's, we may say that it resembles the creed of the first Christian age only as a man of fifty may resemble a child of five."

Mr. Mallock instances three books—"Lux Mundi," by Canon Gore; "The Bible: Its Meaning and Its Supremacy," by Dean Farrar; and "The New Testament," by Professor Harnack—as representing the general drift of opinion among the Protestant churches, and agreeing in the conclusion that the Bible, taken by itself, is "no guide to true Christianity, and affords no proof that such and such doctrines are true." Mr. Mallock says:

"The Dean of Canterbury, and his school, altogether reject the sacerdotal theory of a miracle-working priesthood. Lord Halifax, and his school, maintain not only that such a priesthood was ordained by Christ, and is sustained by the Holy Ghost, but also that its existence is essential to the life of the Christian Church, and that no church is a branch of the Catholic Church without it. Canon Gore maintains that, however scientific criticism may alter, in some respects, our view of the Scripture narrative, it does nothing whatever to weaken the evidences of Christ's divinity. He gives us to understand, it is true, that when he speaks of scientific criticism, he means such criticism when uninfluenced by an animus against Christianity. We will, therefore, compare his views with those of a critic as religious as himself—a critic, moreover, who joins with Canon Gore in declaring that scientific

criticism, as applied to the New Testament, is by no means, as many suppose, 'increasingly radical' in its results. Professor Harnack (for it is he I allude to) declares that it does nothing to alter 'the main lineaments of the personality of Christ, and the true point of His sayings.' But what, when he says this, does Professor Harnack mean? He means, as we find on referring to another passage, that this scientific criticism, which he regards as so undestructive, has destroyed at all events our belief in three things—the miraculous birth of Christ, His resurrection, and His ascension. What shall we say, then, of any Protestant doctrine of agreement—of the claim that any living authority is present within the Protestant Church which preserves Christian doctrine intact amid the critical storm—when the very men who are most eager to put this authority forward are found to be contradicting each other with regard to the very rudiments of the faith which this authority imposes on them, and can not agree that it imposes on them even a belief in the resurrection of their Lord?

"Such is the condition to which, as an intellectual system, Protestantism is being reduced by the solvent touch of science; and year by year, as scientific knowledge increases, and as the consciousness of what it means becomes clearer and more diffused, the intellectual bankruptcy of Protestantism becomes more and more evident."

The position of the Roman Catholic Church, on the other hand, is affected in a directly opposite way, says Mr. Mallock:

"In the first place, the effect of science on the external evidences of Christianity being, as we have seen on the admission of Protestants themselves, to rob these evidences of their inherent doctrinal definiteness, a living authority which shall interpret and fix their meaning, and also confront objectors with some reasonable theory of itself, is now being recognized, with a clearness unparalleled in former ages, as the sole foundation on which any doctrinal Christianity can be supported. In the second place, the logical completeness with which this foundation is supplied by Rome is, in consequence of this fact, being brought into increasing prominence; and in the third place, this completeness is being emphasized yet farther by the ignominious failure of Protestantism to provide any equivalent. Who can conceive of four Catholic theologians, all claiming to speak in the name of the Church of Rome, but holding opposite views, and expressing them with equal vehemence, as to the nature of the priesthood, and of the sacraments, the authority of General Councils, and even as to the question whether Christ rose from the dead? The idea is absurd. There are many doctrinal questions as to which even Rome has as yet defined nothing; but the doctrines which she has defined she has defined clearly and forever; and she will forever stand by these definitions, or will fall by them.

"In this way it is, then, that modern historical criticism is working to establish, so far as intellectual consistency is concerned, the Roman theory of Christianity, and to destroy the theory of Protestantism. . . . Just as Rome has absorbed Platonism in the Fourth Gospel, and in the doctrine of the Trinity, and has absorbed Aristotelianism in the doctrine of Christ's real presence in the Eucharist, so we may naturally expect that it will, in its theory of its own nature, absorb some day the main ideas of that evolutionary philosophy which many people imagine destined to accomplish its destruction; and may find in the Spencerian philosophy a basis for its own authority, like that with which Aristotle supplied it for its doctrine of transubstantiation.

"At all events the whole course of modern intellectual history, in so far as it is not tending to make all religions incredible, is tending to prepare this argument for the use of the Roman apologist, and to render its use impossible for apologists of any other school; and if one who is not a Catholic may venture to give such an opinion, it appears to me that, the credibility of any religion being granted, the intellectual prospects of Christianity were never more reassuring than they are as now represented by the prospects of the Church of Rome, under the pressure of historical criticism and the philosophy of organic evolution."

Dr. Sheldon's New Covenant.—The Rev. Charles M. Sheldon, author of "In His Steps," believes that several statements in the Apostles' Creed, as at present used by the congregational churches, are meaningless and obsolete, and since each of these churches has the privilege of establishing its own creed,

he has proposed a new covenant which he thinks better adapted to the religious needs of to-day. He has not, he announces, revised the Apostles' Creed, as has been reported, but has simply laid it aside. The new covenant, which he says is so simple that children will understand it, was formally adopted by the congregation at a recent meeting. It is in the form of an address by the pastor to members to be received into the church, and is as follows:

"Dearly beloved, called of God to be His children through Jesus Christ, we give hearty thanks to God, who by His Spirit has

THE REV. CHARLES M. SHELDON.

opened your eyes to see, and your heart to receive Jesus as Lord, and who has led you to present yourselves here to confess Him and to unite with His church.

"Now, before God, your Heavenly Father, and Jesus His Son, and in the presence of His people you promise to devote yourselves during your whole life to the love, service, and obedience of Jesus Christ. You promise to walk in His steps so far as you know them now or may hereafter learn them through His Holy Scriptures, and to do

His will so far as you may be able through the help of the Holy Spirit. You do cordially unite yourself with this church of Christ, and you promise to share with us in its worship and work, by attending the services of the church, by aiding in the financial and social work of the church, and by taking upon yourself such responsibilities as you believe belong to you as a member of this church. Do you promise?"

After the reception of members, the following words are said by the pastor:

"Beloved in the Lord, you have been baptized into the name of the Father and of the Son and of the Holy Ghost; have confessed your faith in Christ before witnesses and have given yourselves to God in an everlasting covenant of grace. We therefore welcome you into this church, and do promise to aid you in your effort to live a Christian life. May God bless you and keep you and cause His face to shine upon you and give you peace. Amen.

"Now unto Him that is able to keep you from falling, and to present you faultless before the presence of His glory with exceeding joy, to the only wise God, our Savior, be glory and majesty, dominion and power, both now and forever. Amen."

THE AFRICAN WAR A DANGER TO CHRISTIAN MISSIONS.

THE interests involved in the struggle between the British and the Boers are not of political character alone, but include mission problems of considerable moment. The seat of the present war has been for nearly half a century the field of operations for one of the largest and most successful German foreign mission societies in existence, namely, that of Hermannsburg. The condition produced by the present crisis has been a source of great worry to the leaders of the society. To the *Missionsblatt*, published at Hermannsburg, we are indebted for the following particulars:

In South Africa this society has been at work almost since its organization, something over fifty years ago. A beginning was made in Natal in 1854 and from there spread in a northeasterly direction into Zululand and the South African Republic or the Trans-

vaal. Since 1858 the work has been carried on in Bechuanaland. In all, this society has twenty-nine stations in the Transvaal and seventeen in the three British provinces involved in the present struggle. In the neighborhood of Ladysmith and Colenso, there are quite a number of congregations of converts under Hermannsburg missionaries. Near Pietermaritzburg there is a colony of about 500 converts. Near Mafeking there are successful mission stations, e.g., Polfontain, with 837; Emmaus, with 1,975; Bethel, with 1,844 baptized members. In the Transvaal, Linokana has 2,012, Manuane has 2,492, Pella has 2,127, and Mahanaim has 1,090 baptized converts. In addition there are other stations, large and small, scattered throughout the seat of war, some of which are flourishing and independent Christian congregations composed entirely of heathen converts.

It can not be otherwise than that this war will seriously impair the work of the missionaries. The sword has severed families and friends. In some cases some members of a mission family are in Transvaal territory and others in British, so that they will be compelled to fight against each other. Again, the members of the mission congregations in British and in Boer territory are doubtless destined to enter the ranks against each other, as both governments are trying to secure the cooperation of the natives, which will naturally involve the native Christians. These number many times the contingent consisting of Boers, English, Germans, and other foreigners, and if these are once fired with the passions of war, the danger to the spiritual condition and to the cause of Christianity in general in this promising and successful field of Christian enterprise can not be predicted.—*Translation made for THE LITERARY DIGEST.*

THE SECULARIZATION OF MISSION-SCHOOLS IN JAPAN.

THE new regulations adopted by the imperial Government in Japan for the organization and control of private schools have met with much opposition from the Christian denominations which maintain mission-schools in that country. The instructions published by the minister of education in August of this year provide for the secularization of all private schools, from the kindergarten to college, whose course of instruction is accepted by the Government as an equivalent to that of the public schools. The ministerial instruction reads as follows:

"It being essential, from the standpoint of educational policy, to make the work of general education entirely separate from religion, in government and communal institutions and in others whose curriculum is determined by law, it shall not be allowed even at extra hours to give religious teaching or to perform religious ceremonies."

Since, by Article VIII, of the new government regulations, all private schools are compelled to become *quasi* public schools in order to secure for their students recognition from the state, and since the ministerial ruling just quoted compels schools to give up all religious instruction and ceremony in order to become *quasi* public schools, there seems to be no alternative to secularization but annihilation, unless the mission-schools are to be content to forego official recognition altogether, thus being placed at a great disadvantage. The foreign element in Japan, secular as well as religious, objects emphatically to the course of the Government. The *Japan Weekly Mail* has from the first opposed the new regulations, claiming that great injustice was done to the mission-schools which had been built up by many years of labor and at much expense, and that injustice was also done to the parent who desired to send his child to a school where religious instruction is given. It says (October 21):

"Why is religious instruction forbidden in private schools which have official recognition? Why are religious exercises forbidden in such schools? We have been told that it is not the policy of the Government to include religion in the program of state education. The celebrated Instruction of the Minister of Education

commences with the words: 'Since it is absolutely necessary that general education should stand independent of religion,' etc. That is all right. Every one of us admits that no form of religious belief should be taught in schools which are supported, partially or wholly, by taxes levied upon all subjects of the realm, irrespective of their religious convictions. But why should a private school, supported solely by voluntary payments, be subjected to such a restriction? It is a singular fact that not one of the writers who defend the Educational Department's policy has attempted to assign a reason for it."

The *New York Independent* (undenom., November 16) puts the questions at issue very plainly, as follows:

"The Japanese Government supports a system of free schools. From those schools all religious instruction or religious services, Buddhist, Shinto, or Christian, are very properly excluded. There is a certificate system by which students pass from the lowest grade to the university. The students in the high schools and universities are exempt from conscription in the army, and their certificate of graduation opens to a young man various appointments in almost every calling which others can not obtain. To all these privileges no one has the right to make any objection.

"But the Japanese Government also gives these privileges to certain other private schools which accept the required curriculum of studies and submit to inspection. Some of these schools receive government subvention, and some do not. Their students are exempt from conscription, and are granted the regular certificates on graduation with all the accruing privileges.

"Now the Department of Education has issued an order that in no such schools shall religious instruction of any sort be given, or any religious exercises observed. This applies to schools which receive not a yen from the Government. . . .

"If the Japanese Government is willing to give special privileges to institutions that maintain the grade of the imperial schools, it has no right to say that anything shall be considered except the grade of the instruction given in the required studies. If the school wishes to give additional instruction in bridge-building or rice-growing, or Buddhism, or Christianity; if it requires its pupils to wear a certain style of dress or repeat a certain form of prayer, that should be none of the business of the Government so long as it gives the school no money. It may refuse its privileges to all outside schools, but if it has the good sense to utilize the schools it should put no restrictions beyond those of the curriculum required."

The Churchman (Prot. Episc., November 25) says:

"The Minister of Education declares that even in private schools which are supported by mission funds, there shall be no religious teaching, no prayer offered, no hymn sung, no Bible instruction, no word spoken for Christ. To accept the privileges of government license and regulation at such a price, would be a sacrifice of principle, a misuse of money held and expended in trust for the propagation of Christianity.

"Public opinion in Japan and in America condemns the minister's course. If the missions stand together in refusing to accept the government license at the price of Christian instruction, there is hope that the order will be so amended as to exempt private schools from much hardship. We hear that all the mission-schools of American societies, except our own, have already resolved to stand together thus, and tho the department has issued no formal notice, it has practically postponed the enforcement of the minister's order until spring. A firm and united stand may turn this temporary postponement into a permanent abrogation."

The *San Francisco Call* (November 15) expresses astonishment that there should be any protest on the part of Americans; but its astonishment is accounted for by the fact that it assumes that the action of the Japanese Government is nothing but a "prohibition of sectarian religious teaching in the public schools of Japan." If the prohibition were limited to public schools, there would hardly be two views of the action held in this country. This assumption is supported by no evidence so far presented, and seems to have been due simply to a misunderstanding on the part of the *San Francisco* paper.

MR. ROBERTS AND THE RELIGIOUS PRESS.

MOST of the religious journals in America have been devoting considerable attention during the past few weeks to the questions raised by the election of Mr. Brigham H. Roberts to the House of Representatives. For the most part there is a disposition to be temperate in their treatment of the delicate problems involved and to recognize certain traits in Mr. Roberts himself not unworthy of commendation. *The Churchman* (Prot. Episc.) says:

"As Bishop Tuttle was careful to point out with wise charity, polygamy does not necessarily imply immorality in Mr. Roberts, of which God alone can judge. Mr. Roberts may be an immoral man. So may any Congressman. But that is not the business of Congress to determine.

"This is not a question of individual morality. It is a question of social morality, and of political necessity. It is very doubtful, as Bishop Tuttle showed, whether there is any sound legal ground for excluding Mr. Roberts from Congress. Even were he convicted of the misdemeanor of which he is accused, and which indeed he would scorn to deny, that conviction would carry no political disability. The true ground of objection to Mr. Roberts is that his presence in Congress is contrary to public welfare because it is against the ethics of good government. If it is necessary to take Mr. Roberts in, it is quite possible to put him out on the ground that he is the representative of men who in choosing him have given a new proof to a long-suffering nation that they have not kept, and do not mean to keep, any more than Mr. Roberts has kept, or means to keep, their part of the compact under which they were received into the Union of States."

The Christian Standard (Christian) takes much the same view:

"From time to time for months past we have been receiving copies of petitions to the House of Representatives in Congress to refuse to admit Mr. Roberts, of Utah, to a seat in that body to which he has been elected. These petitions we have been requested to print and to urge our readers to sign. We have not done so; first, because we do not repose much confidence in the good judgment of the prime movers in this matter; and second, because we think that if Mr. Roberts has been lawfully elected as a Representative, he ought to be seated as such. But a journalist for whom we have great respect, the Rev. Dr. Hepworth, of the *New York Herald*, after due inquiry, personally made in Utah, publishes a statement which we are bound to believe; and while we are not prepared to sign or circulate any petitions on the subject, we have a very clear notion of what it would be right for the House of Representatives to do. In our opinion Mr. Roberts ought to be seated; so much respect seems to be due to his credentials and to the Constitution of the United States. And then, if the facts charged against Mr. Roberts are found on inquiry to be true, Mr. Roberts ought to be expelled, on the ground that a perjured criminal is not fit to sit in the House of Representatives."

Mr. Carleton F. Brown, in *The Christian Register* (Unitarian) also thinks that Congress can not refuse to admit Mr. Roberts:

"If the broad ground be taken that Congress has the right to inquire into the moral qualifications of its members, there are scores of others who ought to be unseated before Mr. Roberts. The Congressman from Utah is admitted by all who know him, Gentile as well as Mormon, to be an honest man of sincere conviction in his religious beliefs and practises. It has not been shown that he has married additional wives since the adoption of the state constitution. His offense consists in continuing to maintain relations with his plural wives.

"The crusade against Mr. Roberts has been organized and led by sectarian religious bodies whose zeal is always aroused in 'fighting Mormonism.' Can the Mormons be blamed for seeing in it only ecclesiastical jealousy and hatred of their church? Every resolution denunciatory of Roberts, which is passed by church and ministerial bodies throughout the country, intensifies this feeling, and causes the Mormons to rally more devotedly around their own religious and social institutions.

"The change in Utah from polygamy to monogamy could not be a sudden one without involving the greatest hardships. It involves a social readjustment which only time can effect. But in

its outcome it is absolutely certain; not only political, but social laws are working inevitably in this direction.

"With the growth of education and social intercourse with outsiders, Mormonism is undergoing a modification which the power of the hierarchy can not resist; but against attack or persecution from without it is adamant. It is unfortunate that the era of good feeling should by this new crusade have been indefinitely postponed."

The Watchman (Baptist) says:

"The ground upon which we favor the expulsion of Congressman Roberts, of Utah, from the House differs from that taken by some excellent people. He can not be expelled because he is a Mormon. The Constitution prescribes that 'no religious test shall ever be required as a qualification to any office or public trust under the United States.' Whether or not in view of the amnesty proclamations of President Harrison in 1893, and of President Cleveland in 1894, Roberts is now a law-breaker, involves some delicate legal questions. But we hold that Roberts should be expelled from the House under the power of Congress to 'punish its members for disorderly behavior, and, with the concurrence of two thirds, to expel a member' (Art. I., Sec. 4). Granting that the Government had winked at a man's retaining wives he had married before the federal law prohibited polygamy, such a man was not a fit candidate for Congress. The nomination and election of Roberts was a direct defiance to the moral sense of the people, and a challenge to the convictions that had enacted the Edmunds-Tucker law. Utah polygamists had been dealt with quite tenderly by the proclamations of Harrison and Cleveland. It was the part of propriety and decency for them to make themselves inconspicuous. In our judgment, not because Roberts is a Mormon; not because he is a law-breaker; but because of his disorderly behavior in flaunting before the public acts that if now committed would send him to prison, and because in defiance of the principles that have given us existing law, Roberts and the people of Utah have flung out this challenge, we believe that he should be expelled from the House for 'disorderly behavior.'"

Mr. Roberts's religious views, so far as they have a bearing on the question of polygamy, may be learned from his latest book, "A New Witness for God." In speaking of the eternal state he says:

"I wish to be perfectly understood here. Let it be remembered that the Prophet Joseph Smith taught that man, that is, his spirit, is the offspring of Deity; not in any mystical sense, but actually; that man has not only a Father in heaven, but Mother also. And when I say that the Prophet taught that the resurrection is a reality, that the relationship of husband and wife is intended to be eternal, together with all its endearing affections, I mean all that in its most literal sense. I mean that in the life to come, man will build and inhabit, eat, drink, associate, and be happy with his friends; and that the power of endless increase will contribute to the power and dominion of those who attain by their righteousness unto these privileges."

In *The Improvement Era* (May) Mr. Roberts gives the following reasons for believing that God approved of a plurality of wives as practised by the ancient patriarchs and many of the leaders and prophets of Israel:

"First. When a polygamous wife deserted the family of which she was a member, the Lord sent an angel to bid her return to that family, and promised to make her seed a great nation.

"Second. The Lord heard and answered the prayers of polygamous wives, blessing their marriage by granting them children; and, in the case of Rachel, the second wife of Jacob, performing what men call a 'miracle,' making the barren fruitful, in attestation of His approval of her polygamous marriage with Jacob.

"Third. The men who practised plural marriage by no means forfeited the peculiar blessings promised to them before they were polygamists; on the contrary, the promises were renewed to them, and greater blessings added, God continuing to be their friend, and revealing Himself and His purposes to them.

"Fourth. God Himself gave unto David a plurality of wives, thus becoming a party to the evil, if polygamy be sinful.

"Fifth. God owned and blessed the issue of polygamous mar-

riages, making a marked contrast between them and illegitimate children.

"Sixth. So far as the earthly parentage of Jesus is concerned He came of a polygamous lineage, which certainly would not have occurred had polygamy been unlawful and the issue spurious.

"Seventh. The Lord gave unto ancient Israel a number of laws under which polygamy was not only permitted, but in some instances made obligatory."

THE DISCIPLES AND NON-SECTARIANISM.

IN speaking of the remarkable success of the recent convention of the "Disciples" (the Christian Church) at Cincinnati, *The Western Christian Advocate* (Meth. Episc.) attributes it to the missionary spirit of their congregations. It remarks:

"They love their church, and therefore work for it; they work for their church, and therefore love it. It stands next to them, and in building it up they seem to themselves to be most directly and effectively building up the kingdom of Christ. Methodism needs a new baptism of this denominational fervor."

Commenting on this, *The Christian Standard* (organ of the Disciples) says that "the very opposite of denominational fervor" is the secret of their success:

"They who attended the convention heard much about Christ as the Savior of sinners, as the Son in whom dwelt all the fulness of the Godhead bodily, as the chief corner-stone of the spiritual temple, and as the Head of the body, the Church. They heard good men honored, but not glorified. They were not greeted with panegyrics on 'our church,' 'our denomination,' 'our branch of the church,' 'our theology,' 'our faith and order,' 'our creed,' or any similar phraseology born of denominational life and thinking. The work of preaching the Gospel, and planting, not 'our church,' but the Church of Christ throughout the world, was constantly in view."

The Chicago *Interior* (Presb.) will not admit that the Disciples are not "intensely denominational"—indeed, it adds that they are "disposed to proselytize as well." Yet, as *The Christian Standard* says, this perhaps only shows that "like other men, they preach better than they practise." Says *The Interior*:

"That the convention was the most successful of any religious assemblage of the year is admitted on all sides. It is therefore very well worth while to inquire for the causes. We think *The Advocate's* reasons are correct, so far as they go; but that back of them is the primary reason stated by *The Standard*, that the Disciples stand for the Church of Christ universal, and are therefore receiving the benefit of the powerful current toward Christian union. We do not think they are logically entitled to it, but the people do not bother themselves about the logic. There flies a banner in protest against sectarianism and for primitive apostolic Christianity, and hence the enthusiasm."

RELIGIOUS NOTES.

THE American Revised Version of the Old and New Testaments, with colored maps and with the readings and renderings preferred by the American Revision Committee incorporated in the text, has been published by the Oxford University Press.

THE Rev. Minot J. Savage has just published a book called "Life Beyond Death," made up of records and of personal experiences in the domain of supernatural phenomena. Dr. Savage's aim is to give some of the rapidly accumulating scientific evidence relating to the question of immortality.

ONE striking evidence of the vast changes of sentiment in the Church of England which have taken place in the last half-century is given by the English correspondent of *The Church Standard* (Prot. Episc., November 18). The scene might have happened in the England of Chaucer. He writes: "An unusual ceremony took place last week in a rural Yorkshire parish, namely, the formal unveiling of a lofty crucifix in a field adjoining the village church. The following inscriptions are let into the four panels at the base of this memorial: 'This cross is erected in public homage to our Divine Redeemer, and to mark the opening of the twentieth century'; 'In pious memory of those benefactors in this parish who have fallen asleep in Christ, on whose souls sweet Jesus have mercy'; 'In thanksgiving for fourteen years' church progress in this parish amid exceptional difficulties and many severe trials'; 'In the hour of death and in the Day of Judgment, good Lord deliver us. Holy Mary Mother of God, pray for us.' The crucifix was unveiled by Miss Spedding."

FOREIGN TOPICS.

THE WAR SO FAR.

THE latest news as we go to press is that General Methuen, with a force of nearly 10,000 men, on the way to the relief of Kimberley, has forced back a smaller Boer army during the engagements at Belmont, Graspan, and Modder River. General Methuen's losses are, however, heavy, and the Boers do not seem to be disheartened greatly; so that prudent people do not expect to hear of the speedy submission of the Boers. The *Ottawa Events* says:

"It is pretty generally admitted now that the war is going to be long and bloody. When President Kruger declared that this would be the case, most of us laughed and predicted that a month from the opening of hostilities the Boer capital would be in possession of our troops. A good deal more time has passed, and the only British who have reached Pretoria are the British prisoners of war, and the only territory that has changed hands is the territory that has passed out of British control and into the hands of the Boers. These are the facts, and no amount of patriotism can change them."

The comments of the British and European papers that have reached us prior to going to press are on the situation as it appeared before General Methuen's operations. There is a strong suspicion that the enthusiasm of the British troops is not quite equal to that of the Boers, and regrets are expressed that the colors of the British regiments are not with them, as they were kept in Capetown and Pietermaritzburg. The *St. James's Gazette* thinks the Irish Fusiliers and Gloucesters would have surrendered less readily had their colors been with them. The Boers decline the risks of an attempt to storm fortified British positions, but the nearly 17,000 English are still held fast in Ladysmith, Mafeking, and Kimberley, the Boers evidently hoping that they may be forced to surrender from lack of stores. Boer accounts of the fights in Natal are coming in, and, tho belated, they are still interesting on account of discrepancies between them and British accounts already published. The organ of the Afrikaner Bond, *Oos Land*, describes the engagements at Glencoe and Elands-laagte to the following effect (the bracketed figures are inserted by us from British accounts):

About 1,000 [4,000 to 9,000] men under Lucas Meyer occupied Talana Hill October 20, where a battery of artillery joined them. They were attacked by a force of 4,000 men [3,800] and two batteries under General Symons. After a lively engagement lasting about two hours, our men withdrew in an easterly direction, as a thick mist began to settle. They were followed by some infantry and cavalry, the latter, about 100 men, being made prisoners. As we hear, the English lost 39 [43] dead and 171 wounded. Our own losses were 10 killed and 27 wounded [600 to 900].

The commando under Kock and Schiel was sent, over 1,000 strong, to destroy the railroad between Glencoe and Ladysmith, and to prevent reinforcements from reaching Glencoe. The detachment was a somewhat miscellaneous force, consisting of Germans, Dutch, and some Cape Afrikaners. It was attacked by a force of 6,000 English, and held its own until late in the afternoon, when the British got the upper hand. Our losses are heavy, at least 300, most of whom are prisoners. Luckily the darkness enabled most of our men to escape. The English lost 150 in killed and wounded. General Kock and Colonel Schiel are both wounded and prisoners.

Advices received by German and Dutch papers, and culled from private letters, convey the information that only 30,000 men are under arms at present from the Orange Free State and Transvaal. Only the first-call men, between eighteen and thirty-four years of age, had been summoned. These number about 25,000, but 5,000 more of the second-call (thirty-five to fifty) came of their own accord. With the volunteers from Natal and the Cape Colony, the Boer forces number about 40,000 men at present. Many

European papers no longer ask: Can the Boers win? but, Can England win? Charles Lourent, in the *Paris Matin*, writes:

"Punishment reaches England at the time of her greatest arrogance. The United Kingdom is safe, but there will be an end to 'Greater Britain.' The conquest of the Transvaal will never be completed, and other enslaved nations will also rise, for courage as well as cowardice is catching. Despite their ownership of the cables, the English will not be able to prevent the world from knowing the truth. Their will must bend before a patriotism which is, to say the least, as great as their own, and their wealth avails nothing against the bravery of their opponents."

Some English papers begin to speculate on the terms of peace. The *Daily Chronicle* (Radical) hopes that acceptable terms will be offered to the Boers when Sir Redvers Buller has begun to develop the strength at his command. So does *The Morning Leader*, which asserts that the war already costs more than had been expected. There is some apprehension of a financial flurry unless the war is speedily ended. The *Edinburgh Scotsman* says:

"At the moment the prevailing impression among speculators is that the struggle will be brief, and that the whole affair will be over in a few months. People who are in this sanguine frame of mind are consequently buying somewhat freely, and their operations have helped to bring about a smart recovery from the low level of prices touched just prior to the delivery of the Boer ultimatum, which in many quarters was taken as signifying the beginning of the end. This hopeful view is not, however, shared by the leading South African financial houses, which incline to the opinion that the war will be a much longer drawn-out affair than is generally supposed. They are in a very cautious frame of mind, and not inclined to omit from their calculations a possible chapter of accidents. No sort of doubt is entertained as to the ultimate outcome, but much may, it is felt, happen in the interval calculated to cause a temporary widespread anxiety among both investors and speculators, and bring about severe disturbances in the market."

The forces at the command of Great Britain are pretty well known on the Continent, and now that the Boers turn out to be as strong as their friends hoped, England is expected to show that she is equal to extraordinary demands upon her resources. In Germany, Bismarck's saying that "John Bull may turn out to be an asthmatic prize ox rather than a steer," is quoted with much merriment. The military expert of the *Frankfurter Zeitung* says:

"It is all very well to talk of mobilizing another army corps; but the thing is not easily done. Great Britain has a great number of battalions which need only men to make them as magnificent as they appear on paper. Their war strength is supposed to be 1,000 men. In time of peace they number hardly 400. An army corps has three divisions of 12,000 men; with the fifth division, which is at present being organized, there would be 48,000 men. At present, Great Britain has only 41 battalions of infantry left, with very little cavalry and less artillery. Deducting the unfit and those who are already sent or designed to be sent to fill the gaps in Africa, only 12,300 regulars of the infantry remain. The reserves will yield, at the highest, 30,000 men. If these 43,000 men are sent to Africa, England remains unprotected. If she listens to her most prudent adviser, Major Griffith, who warns her that unforeseen trouble may arise, especially in Ireland, she will not send more than the fifth division."

The *London Saturday Review* sketches the situation to the following effect:

Rumors that the Orange Free State Boers are returning to their farms must be received with extreme caution. As regards the Boers' chances against Ladysmith, it should be remembered that neither their organization nor their armament—they have no bayonets—is adapted to assault. With them it is a case of fire tactics alone. Sir George White has grand regiments, better than those now arriving, which are full of reservists. He can not be overcome by the artillery which the Boers have at their command. The first thing now is to relieve him. No attempt will probably be made to storm the Drakensberg when Natal is cleared of the

Boers. It would involve heavy losses and play into their hands. The troops which can be spared from Natal will be sent west. The Boers probably begin to realize now that they can not win in the end, even if they have scored a few unimportant successes. The campaign must ultimately end in the collapse of Boer resistance from want of ammunition, which they can not replenish.—*Translations made for THE LITERARY DIGEST.*

GREAT BRITAIN AND THE OTHER POWERS.

THE British Government has officially recognized the belligerency of the Boer republics; but in the English jingo papers which we have before us, published prior to that recognition, no concession to the independence of the Transvaal Republic is regarded as possible, and its territory is mentioned as already *de jure*, if not *de facto*, annexed as British territory. *The St. James's Gazette* says:

"As we have pointed out, there is no question of the cabinet proposing to 'annex' the Transvaal, since, by the forfeiture of their rights under the conventions, the Boers' territory has already reverted to the British crown. It is idle to describe this as a refined distinction; it is a fact which constitutionally can not be ignored even if ministers desired to do so. You can not annex British territory. Of course, it would be possible to grant a new convention to the defeated Boers, restoring their right of self-government; but Lord Salisbury's cabinet are not quite such simpletons as that would imply."

Some of the best-informed European papers continue to assert that unpleasant surprises are in store for British journals which take the same attitude as here taken by *The St. James's Gazette*. The Rome *Italie* declares that all the great powers have promised to remain neutral during the war, but that they reserve their freedom of action in case the independence of the republics is threatened. The Brussels *Indépendance Belge* says:

"During the Czar's visit in Germany he conferred with the Kaiser regarding the war, the most important question being how England is to be prevented from becoming paramount in South Africa. Assuming that in the end the republics will be conquered, the powers contemplate the necessity of interference, as the overpowering influence of Great Britain in South Africa will be exercised neither in the interest of civilization nor of European trade other than British, and as the balance of power would seriously suffer, Great Britain being already predominant in North and Central Africa. The powers would be pleased with the creation of a great and powerful Afrikander republic, should the Boers win, and they would certainly do something toward its creation."

The *Indépendance Belge*, which has a reputation to lose, asserts emphatically that this information is correct, but that, as matters stand now, interference would be premature. Meanwhile the government of each power is credited with the desire to strengthen its position in the many places where each has found England alone in the way. In England this situation is faced with a rather defiant expression. The London *Economist* expresses itself to the following effect:

The nations of the world are insanely jealous of the Anglo-Saxon race. They see that the progress of the world has great prizes in store, which are solely for England and America. They are convinced that England's wealth is largely the cause of their economical troubles. They know that this wealth must assume colossal dimensions if England annexes the Transvaal, hence their desire to arrest the march of British civilization. The governments are better informed, and more prudent, yet even the statesmen would rejoice if England were to lose, or if she were to pay too heavy for the victory. Luckily Great Britain is too strong at sea to render an attempt to rob her of the fruits of victory probable.

Dean Farrar, of Canterbury, recently said that "England, just and generous as ever, stands to-day amid the jealousy of nations and the hubbub of lies. Nothing is sadder than the proofs of

lying fury and frantic jealousy with which the foreign press, almost without exception, daily voids its poisonous rheum upon our native land." The overwhelming majority of English papers applaud this as an expression of the thoughts of England, and sound a note of defiance. England's former friends on the Continent think this neither timely nor prudent. "It will not do," says the Amsterdam *Handelsblad*, "to consider every one who does not agree with the British jingoes as either fools or knaves. *The Times*, for instance, continues to bluff and blow and to describe England's small attempts against a race of simple farmers as if this were an exhibition of her strength rather than her weakness. What will become of her if she has a powerful enemy to meet?" And the Berlin *Nation* expresses itself as follows:

"With the seventy thousand men which England will have at the Cape some time in January, she can not conquer the republics. That much is proven. Moreover, she has no men to replace the lost, for already there are attempts to recruit in Germany. That is one phase of England's precarious position. But what will she do as soon as Russia and France move? She may be able to hold her own at sea, but it is not easy to conceive how she will oppose Russia. Not a man has she to spare, either for India or for South Africa. Russia need not even 'officially' lead up to the struggle. It is sufficient for some Russian general to begin by pursuing 'bandits' on his 'own' responsibility. As long as Germany is neutral, France and Russia may not seriously interfere. But Germany will be neutral only so long as her own interests do not suffer by it. The gamblers who have caused this isolation have little reason to call it 'splendid.'"

The Madrid *Epoca* thinks Spain would be glad to take a hand in the game, in order to settle old scores with England, were the powers willing to dictate to her, and complains that the Kaiser stays the hand of Europe. The Germans deny this. The Emperor certainly has gone to England against the almost unanimous wish of the people (expressed in poetry as well as in prose), but Germany wishes to remain neutral until she is forced by circumstances to interfere. The Germans hope that the Boers will be lucky enough to prevent such circumstances. "For," says the *Preussische Jahrbücher*, "if England wins, Germany will be the next power whom England will attack on her way from the Cape to Cairo." But Germany does not trust Russia and France, and the Triple Alliance will not hold good in a war with England. "Italy hopes much for the defense of her coast from England," says the *Deutsche Wochen Zeitung*. Englishmen begin to suggest a little moderation in the tone adopted toward Germany. A correspondent of *The St. James's Gazette* writes:

"Is it not about time that Englishmen should drop the arrogant claim of the 'respect which superior wealth and civilization impose'? May it not be that the countrymen of Leibnitz, Grimm, Humboldt, Stein, Goethe, Virchow, etc., are not so ready to admit the superiority of British civilization? The respect due to wealth no Englishman of culture will claim. . . . Then there is the threat of England's disfavor in times of need. Surely this is a game that two can play at—but let who will engage in it, I for one will not; my desire is, and ever will be, to stop recriminations, which are worse than useless, and to establish hearty peace and cooperation between two kindred nations that can render each other great service."

Germany's neutrality, nevertheless, may not have prevented her from benefiting the Boers in an indirect manner. The London *Standard* officially declares that "Great Britain and Portugal share Germany's view that Delagoa Bay must remain neutral." Some of the Germans themselves assert that they will be satisfied if the present opportunity is made use of to sever all connections with England in the colonies, as they think that such connection is a precursor of trouble. Russia's hopes seem to be greater. Dr. Leyd's secretary, van Poeteren, has gone to St. Petersburg on a secret mission. The St. Petersburg *Sviat* describes how Russia may combine business with pleasure after the following manner:

"There is now a chance, too good to be missed, for placing a

Russian garrison in Herat—with the permission of the Emir of Afghanistan of course. Our Rusk railroad needs a terminal station, of which fact a good diplomat with a well-filled pocketbook may easily convince the Emir, especially as his sovereign rights would not be interfered with. The chance is really good. England will not dare to risk war with Russia; indeed, she will make her peace with the Boers to prevent further disadvantages. For her enmity we need care nothing; we have that already to the fullest extent. What we need is a good post of defense against perfidious Albion. By acquiring it we shall save a heroic race from annihilation, a race which prevents the building of British power in South Africa. And that is necessary. While we help ourselves we help the Boers."

Other Russian papers express themselves in a similar manner. The British press has as yet little to say about the matter. Even so jingoistic a publication as *The Saturday Review* hopes that Russia will be satisfied to annex parts of China rather than risk a war by entering territory which Great Britain has chosen to mark as her future sphere of influence.—*Translations made for THE LITERARY DIGEST.*

PROPOSED INCREASE OF THE GERMAN NAVY.

LESS than two years ago the German Reichstag granted over \$100,000,000 for new war-ships, and already the grant is regarded by experts as inadequate. During the coming session the legislature will be asked to pass a bill which proposes to give the German fleet nearly sixty battle-ships, besides a large number of cruisers, which would give a navy second only to that of Great Britain unless other powers make a similar spurt. The building program may extend over seventeen years, but many papers point out that the ships could and probably would be built much sooner. Some lively debates are expected to occur in the Reichstag, but the Samoan dispute has irritated the nation, and it is doubtful if the representatives will care to risk a general election with the naval bill as an issue. Some papers demand a much faster rate of building. The Berlin *Neuesten Nachrichten* says:

"We can and must have the fleet we need ready for service in 1910, or at the latest in 1912. Even so we give our diplomacy a period of ten years of great worry. The financial question does not count against the danger we run. Germany will not be mistress of her fate until she has doubled her fleet, making her more valuable to her friends and more respected by her enemies. . . . We regard it as highly dangerous to put the matter off."

The only parties which already promise to oppose the bill outright are the Richter Radicals and the Socialists, tho the latter do not seem to be quite united on this point. The moderate Radicals, whose view are expressed by the Berlin *Nation*, are inclined to favor the bill. That paper says, in effect:

It does not seem easy to deny that the Foreign Office needs the ships. The Spanish-American war and the present war in South Africa increase the feeling of insecurity among the nations of the world. Conscription has reduced the danger of a catastrophe on the European continent, but the Americans and English, with their hired troops, show strong expansionist tendencies, and Germany does not feel comfortable with an inadequate naval armament. That we are a peaceful people we have proven; but we must ask ourselves whether our friendship would not be valued more by those great nations if we were less contemptibly armed for a naval war. Public opinion and the Reichstag certainly are bound to consider seriously the proposals of the Government.

Some of the Clerical organs are dissatisfied chiefly because the Government wants the whole-outlay voted at once, which prevents the opposition parties from putting the thumbscrews on the administration. "Is the Government anxious to precipitate a conflict?" asks the *Germania*. The *Kölnische Volks-Zeitung* says:

"The demand is unparalleled. The representatives of the people are asked to agree to a scheme for naval construction which extends over seventeen years. Yet the plan accepted two years

ago, altho extended over six years only, has already been abandoned as insufficient by its proposers."

Outside of Germany, the prospect of a future powerful German navy does not arouse much concern. The English console themselves with the thought that a good many years must pass ere that fleet is "in being." The London *Speaker* says:

"For the moment the new program is more likely to influence the internal political situation than the position of Germany as a sea power. The Clericals, who hold the balance of power, seem bent on resolute opposition, and are prepared to use the question to decide outstanding constitutional issues. The failure of the Kaiser to carry his penal servitude bill against the center and the left in the Reichstag, and the Prussian canal bill against a very different coalition of the center and right in the Landtag, will make the coming struggle decisive as to the future of 'personal government.' The chief Clerical organ welcomes a conflict on this very ground. It protests in curiously outspoken terms against the dominance of the imperial factor of late years, and calls loudly for 'a stand-up fight' that would end the present 'hideous game.' It is seldom that a people has to choose so clearly between its armaments and its constitution."

The Paris *Journal des Débats* points out that these armaments can be directed against Great Britain only, or perhaps somewhat also against the United States. France and Russia would have to finish a quarrel with Germany on land. But if Great Britain, as already suggested, increases her navy to meet the Germans, France also must have more ships.—*Translation made for THE LITERARY DIGEST.*

"CUBA CUBANO" OR "CUBA YANKEE"?

RUMORS are flying about regarding the mental condition of the people of Cuba. There is said to be much dissatisfaction over the possibility of annexation, and it is quite possible that silent preparations for resistance are being made, as the people who really mean to fight would be the last to inform the United States Government of that fact. But it is doubtful that the "best elements" in Cuba would join any such movement. The Madrid *España Moderna* at least does not think so. In its ably conducted review of Spanish-American affairs, this magazine has frequently argued that Spain is the only European power under whose rule inferior races rose to a fairly prosperous condition. It predicts that everywhere throughout Spanish-America peace will be established ultimately "with the help of those two powerful agents of Anglo-Saxon civilization, whisky and wholesale slaughter," unless precautions are taken. Yet the paper does not hope for the establishment of a Cuban republic. It says:

"The march of destiny points more and more to Yankee annexation. Mr. Porter, McKinley's personal friend, who was delegated to investigate the economical situation of Cuba, has pointed out in the New York *Herald* that British capital threatens the mercantile supremacy of the United States in the island. The Havana *Pais* openly demands a permanent, perpetual protectorate of the United States, expressing its views as follows: 'We do not stand alone in this; many others hold the same view, men who are anxious for a practical solution of the Cuban problem which becomes more and more obscure since the Grand Antille has ceased to be connected with Spain.' Another Cuban periodical predicts a most somber future. 'If,' it remarks, 'universal suffrage is instituted in Cuba, the result will be a negro republic within a very short time. The fact is that the population consists of negroes with the exception of 30,000 Spaniards and 150,000 white Cubans. In fifty years there will be 2,000,000 negroes as against less than 150,000 whites. What kind of a republic would that be? The only remedy is incorporation with the United States, be it as a State, a Territory, or a colony.' When we come to consider that the statesmen of the United States hold similar views, it is easy to see what the final result of this insidious war of 'liberation' will be."

The *España Moderna* intimates that those elements which remained loyal to Spain will accept annexation without a murmur. It regards the Spaniards who go to Cuba as lost to the mother country, tho it mentions with pride that they preserve a filial affection for the land of their birth, which shows itself in the efforts of various Spanish clubs and societies.—*Translations made for THE LITERARY DIGEST.*

Reduced Prices on Suits and Cloaks

WE recently had an opportunity of purchasing several hundred pieces of fine suitings and cloakings at a figure which enables us to inaugurate the biggest Reduced Price Sale that we have ever announced. You can now secure a stylish garment at a reduction of one-third from former prices.

Order from this Reduced Price Sale as freely as you wish; send back anything you don't like, and we will REFUND YOUR MONEY.

One-third has been cut off the price of every suit and cloak in our line, but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money.

Tailor-made Suits, former price \$5; reduced to \$3.34.
\$10 Suits reduced to \$6.87.
\$15 Suits reduced to \$10.

\$20 Suits reduced to \$13.34.

Winter Jackets, former price \$5; reduced to \$3.34.
\$9 Jackets reduced to \$6. \$12 Jackets reduced to \$8.

\$15 Jackets reduced to \$10.

Separate Skirts, former price \$4 reduced to \$2.87.
\$8 Skirts reduced to \$4. \$8 Skirts reduced to \$5.34.

\$12 Skirts reduced to \$8.

Reduced prices on Capes, Newmarkets, Rainy Day Suits and Skirts, Bicycle Suits, Silk Skirts, etc.

We are also closing out a few sample garments which were made up for exhibition in our salesroom at one-half their regular prices. We tell you about hundreds of reduced price garments in our Winter Catalogue and Bargain List, which will be sent Free, together with samples of the materials, to any lady who wishes them. Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

In the front door. Fasten them to the pocket or waistband with a key chain secured by the Improved Washburne Patent Fastener. Slips on easily, grips like grim death, don't tear the fabric, released instantly. By mail, 2 cents. Catalogue of other novelties free.

AMERICAN RING CO., Box 55, Waterbury, Conn.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Aymé, of Guadeloupe, under date of June 23, 1899, says: "The Bank of Guadeloupe has again lowered the rate of exchange 2 per cent. The new rates went into effect June 21, and are as follows: 90 days' sight on Paris, 19 per cent.; 60 days' sight on Paris, 20 per cent.; 30 days' sight on Paris, 21.5 per cent.; sight not to exceed 100 francs, 22 per cent. The value of the paper franc is therefore nearly 16 cents in United States gold; actually, it is 15.34 cents, as the Treasury rate of 24 per cent. is that used in such calculations. Despite the slow but steady fall in exchange and consequent appreciation in the value of the current paper money, prices of nearly all commodities continue to rise, or, at best, remain stationary."

In reply to inquiries by the Oregon Board of Horticulture (the letter has been forwarded to the board), Vice-Consul-General Hanauer writes from Frankfort, June 5, 1899, in part as follows: The import duty of 30 marks per 220 pounds on canned fruits or preserves is an obstacle to the sale of United States fruit prepared in this way. Dried and evaporated fruit, however, can be sold at a profit. Up to this time, only dried plums have reached this market from Oregon. Large plums, packed in boxes holding 25 pounds, bring an average price, f. o. b. Portland, of from 4 to 5 cents in United States currency. The boxes should be lined with good paper and be artistically labeled. Apricots, pears, and nectarines should be packed also in boxes containing 25 pounds each. Evaporated apple rings should come in 50-pound boxes. Dried pears and apples are packed in hogsheds. Care should be taken that the fruit be dried or steamed on wooden frames, not on zinc, nor should they be bleached by the aid of metallic substances, as the law prohibits these methods.

The secretary of the legation at Bogotá, Mr. McNally, sends, under date of May 7, 1899, translation of a contract recently published in the *Diario Oficial*. It appears that the French Match Company is recognized as owning the monopoly which was adjudicated to Euripides Salgar in October, 1897. The company renounces its rights to the match monopoly, but this renunciation will not take effect until after the new sale of the monopoly, which is soon to be made, so that the company alone can introduce matches until the new adjudication. The Government acknowledges having received from the company the sum of 666,666 francs (\$158,666.54), which is to be left in the hands of the Government until the monopoly is granted. The Government fixes 600,000 francs (\$123,520) as the basis for the sale of the monopoly, which will be effected within five months. Matches belonging to private parties that have been ordered between January 11 and 24, 1899 (on which dates resolutions were passed, one declaring the importation of matches free and the other suspending the effects of the first resolution), and that have been shipped to Colombia not later than March 28, may be imported on payment of the duties.

HOLIDAY BOOKS

Trinity Bells
A Tale of Old New York
By Amelia E. Barr

A new historical romance. An exquisite love story. The year 1800 introduces a new period for historical tales. Special cover, green with silver bells. Sixteen full-page illustrations by C. M. Relyea. Cloth, 8vo, \$1.50.

Little Leather Breeches
By Francis P. Wightman

Folk-lore songs, negro rhymes, street vendors' cries, and legends. Absolutely fresh and novel. Spontaneous and genuinely humorous. Forty-eight full-page colored illustrations and cover by the author. Quarto, \$1.50.

J. F. TAYLOR & CO.

7 East 16th Street, - - - New York

Registered Trade Mark.

At Random Among the Handkerchiefs.

An interestingly beautiful collection of soft, sheer lawn handkerchiefs which the women of Armenia finish with exceedingly dainty lace, all their own in design and workmanship,—the tiniest of sheer lawn handkerchief centers, plain handkerchiefs of the same rich material, every excellent grade of plain, fine hemstitched handkerchiefs that are always ladies' standards, and for gentlemen every size of fine, elegant linen, beautifully hemstitched even to a size for the huge Falstaffian pocket. Of course they are all pure linen.

"THE LINEN STORE."

James McCutcheon & Co.

14 West 23d Street, N. Y.

LINENE Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

Reversible Collar Co., Dept. S, Boston, Mass.

Reg. Trade Mark.

The Ostermoor Patent Elastic \$15. Felt Mattress,

was used by hundreds of wise and thoughtful people last year as a **CHRISTMAS PRESENT.** For this purpose it is unique and inexpensive. It guarantees comfortable nights to your friend for twenty years. Mattresses shipped the day ordered, and

Express Charges Prepaid to Any Point.

Our handsome book, "*The Test of Time*," is yours for the asking. Send your name on a postal, whether you need a mattress now or not. It will interest you, anyway, to know about a mattress as soft as the best hair, but which will not lose its shape, and costs only one-quarter as much.

2 feet 6 inches wide, 25 lbs.	\$8.35	ALL 5 FEET 3 INCHES LONG.

4 feet 6 inches wide, 45 lbs.	15.00	

Made in two parts 50 cents extra.

One person has asked: What do you mean by saying that your mattress is always

"Sent on Suspicion."

We mean just this:

SLEEP ON IT 30 NIGHTS, and if it is not even all you have *hoped for*, if you don't believe it to be the equal in cleanliness, durability, and comfort of any \$50 hair mattress ever made, you can get your money back by return mail—"no questions asked." There will be no unpleasantness about it at all.

Take Care! Don't be Deceived!

There is not a single store in the country that carries our mattress; almost every store now has an imitation so-called "felt," which is kept in stock to sell on our advertising. *Our name and guarantee is on every mattress.* Can be bought only direct from us.

Send to-day for "*The Test of Time*."

PERSONALS.

SIR ALFRED MILNER, governor of Cape Colony, one of the most talked-about men in Europe to-day, has won his way to his present post by persistent hard work, begun in old Balliol under Dr. Jowett and in company with Sir Charles Dilke and Mr. H. H. Asquith. New College, Oxford, elected him to a fellowship in 1881, but he resigned it and took up journalism for a time. From the editorial desk he went into politics, first as a candidate for Parliament as a Radical, and later on as Mr. Goschen's private secretary. He served in the finance department at home and in Egypt under Mr. Goschen and Lord Cromer. He made budgets under Sir William Harcourt and Sir Michael Hicks-Beach. Then came his appointment to South Africa, in which he has won his chief fame.

PITTSBURG enjoys the distinction of having the only woman in this country, or even in the world, who is at the head of a large steel and iron works business. The woman who holds this unique position in industrial circles is Miss Y. R. Baumgarten, who is at the head of the Pittsburgh office of Joseph Joseph & Bros., of Cincinnati, dealers in rails, scrap iron, and railway supplies, says the Cincinnati *Inquirer*. She is in sole charge of all the business there, which, by the way, is the largest done at any of the branches of the company, and amounts to over a million dollars a year. She buys and sells, inspects, superintends the shipping, and, in fact, does everything that a man would have to do under the circumstances.

COL. ALBERT D. SHAW, the new commander-in-chief of the Grand Army, has been prominently connected with that organization since 1886. Mr. Shaw has given his country efficient diplomatic as well as martial service, having been consul at Toronto, Canada, and Manchester, England. He enlisted at the time the Civil War broke out and served until the end of hostilities. He graduated from St. Lawrence University in 1867, and was elected to the New York legislature the same year. In recent years he has been interested in the development of electric power in Niagara Falls. He lives in Watertown, N. Y.

In a chapter of reminiscence of Von Bunsen and his friends in the October *Century* John Bigelow tells this anecdote of Humboldt: "One day he was dining with Mendelssohn, the banker, and, an unusual thing with him, was very silent. His host, remarking it, observed to Humboldt that he was sure he must be ill. 'No,' said Humboldt, 'but I am in great trouble. Only ten minutes before leaving my apartment to come here I received from my landlord a note informing me that he had sold the house in which I reside and that I must move. The very thought drives me to despair. I really can not bear to move again.' Mendelssohn gradually led Humboldt into conversation, during which he found time to write a note and receive an answer to it. He then took Humboldt aside and said: 'By this note I learn that I am now the owner of the house in which you reside. The condition, however, upon which I have become its possessor is that you continue to occupy your apartment in it as long as you live.'"

Monday, November 27.

—A strong column of British troops moves to the relief of Ladysmith.

—General Young is still in pursuit of Aguinaldo; the Filipinos evacuate in great haste the fortified town of Mangatarem.

—The annual report of the Controller of the Currency is made public.

—Contracts for six 3,500-ton cruisers are awarded by the Navy Department.

—This Government disapproves the Samoan agreement, and submits draft of a new treaty.

Tuesday, November 28.

—General Gatacre occupies Bushman's Hoek, Cape Colony, the Boers retreating.

—The transport *Manauense* reaches Manila from

An Interesting Bit of History.

So familiar has become The Prudential Insurance Company's utilization of the Rock of Gibraltar in its advertisements that the Company, believing there is a widespread desire to learn more about Gibraltar than is generally known, has just issued a booklet giving the history of the famous fortress.

It tells that for more than one thousand years before England seized the Rock from Spain, this famous landmark passed through innumerable fierce and bloody struggles, being successively won and lost by Saracens, Moors, and Castilians.

There is a thrilling account of the great siege of the Rock, from 1779 to 1783, when the combined armies and navies of France and Spain attempted to regain possession of the fortress from England. Twice the English garrison was reduced to the verge of starvation, and there is probably no story in history to which can be paralleled the moral and physical courage, extraordinary human endurance and wonderful tenacity of purpose exhibited by the British in defending the Rock.

A copy of this booklet will be sent free to anyone writing to the Home Office in Newark, N. J., mentioning this publication.

A PURE ATMOSPHERE,
four times the heat of the ordinary grate, and one-half the fuel of your furnace doing the same heating. These three distinctive features place the

Jackson Ventilating Grate

first among heating apparatus. Heats several rooms on one or different floors in mid-winter. Burns coal, wood or gas, and can be fitted in any ordinary fireplace.

Write to-day for illustrated catalogue, "D," which contains our guarantee.

Libby, McNeill & Libby, Chicago.

Free, New edition "How to Make Good Things to Eat."

A VEGETABLE MEAT.

This truly wonderful food product is, without question, the most remarkable discovery in dietetics which has been made within the last half century. A vegetable food substance corresponding in composition to lean flesh, such as beef or mutton, has long been sought for, not only as a most desirable addition to the vegetarian bill of fare, but as a dietetic necessity in that very large class of cases in which flesh-foods are necessarily prohibited, or in which their use is in the highest degree undesirable, as in chronic rheumatism, Bright's Disease, diabetes, and various nervous affections, and in affections of the liver, such as infectious jaundice and sclerosis. This vegetable meat is called Protose.

It is purely vegetable in character, containing no trace of animal substance. It is original beef. Its discovery was as great a surprise to those conducting the investigation from which it resulted as it has been to all who have become acquainted with its marvelous properties. It is a delicious food product, containing twenty-five per cent. more food elements than beef, and has a taste that can hardly be distinguished from flesh-foods. Protose can be served in any manner that flesh-food can be prepared.

The Sanitas Nut Food Co., Ltd., at 71 Washington Ave., Battle Creek, Mich., will send a sample can for six cents to cover postage.

A MARVEL of all that is Desirable in a Vapor-Bath Cabinet

ONLY one allows use of hands on outside, and allows escape of foul air automatically. Double door. Substantial frame. Large and roomy. Provides luxurious bath for the well. San Francisco after narrowly escaping total disaster in a typhoon.

—The annual report of the Commissioner of Internal Revenue is made public.

—The lower house of the Georgia Legislature rejects by an overwhelming majority a bill to disfranchise negro voters.

—The old publishing house of Harper & Bros. makes an assignment to the State Trust Co., which appoints Col. G. B. M. Harvey, editor of *The North American Review*, its agent to conduct the business.

Wednesday, November 29.

—General Methuen's relief column on the road to Kimberley defeats the Boer force at Modden River, in Cape Colony, on Tuesday, after ten hours' fight, in which the losses on both sides are severe.

—Colonel Bell scatters a Filipino force in the mountains of Luzon, and captures many heavy guns.

—The German Emperor and Empress sail from England to Holland, where they are entertained by the Queen.

—The Mazet Committee resumes its sessions in New York.

—Several lives are lost in an accident on the D. L. & W. Railroad, near Paterson, N. J.

Thursday, November 30.

—General Methuen is among the wounded at Modden River; the situation remains unchanged.

—News of Lieutenant Gillmore and his companions, captured by the Filipinos, is received; Aguinaldo's intervention saved Gillmore's life.

—A new Industrial Home for Negro Waifs is opened at Columbia, S. C.

—A steel mill costing \$1,000,000 is put in operation at Birmingham, Ala.

Friday, December 1.

—A despatch from Natal announces that the Boers were repulsed while trying to blow up a bridge near Colenso; speeches of Mr. Chamberlain at Leicester, and Lord Rosebery at Glasgow, on the war situation, attract wide attention.

—The annual reports of the Secretary of War and Secretary of Interior are made public.

—The Fall River manufacturers agree to grant the operatives 10 per cent. advance in wages.

—At a conference of about twenty-five prominent House Republicans, it is decided that Congressman Roberts of Utah shall not be permitted to take the oath of office.

Saturday, December 2.

—General Methuen is joined by reinforcements at the Modder River; the President designates Adelbert F. Hay to succeed Consul Marum at Pretoria.

—The trial of Deronlede and his fellow conspirators in Paris is marked by excitement and disorder.

—Caucuses are held at Washington by Republicans and Democrats, who nominate respectively David B. Henderson, of Iowa, and James D. Richardson of Tennessee, for speaker during the coming session of Congress.

—A treaty for the partition of Samoa is signed by Secretary Hay and the ambassadors of Great Britain and Germany.

Sunday, December 3.

—Col. Kekewich makes a sortie from Kimberley and captures a Boer laager; the British transport *Insmore* goes on the rocks in St. Helena Bay, but troops are safely landed.

—After a fierce battle, the revolutionary forces of General Hernandez capture Maracaibo, the chief seaport of Venezuela.

—The Postmaster-General and the Secretary of the Navy make their yearly reports.

—John I. Blair, multi-millionaire and railway magnate, dies at Blairstown, N. J.

—Rev. Dr. R. F. De Costa is received into the Roman Catholic communion.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

THE LIVING AGE FOR 1900. During the fifty-six years of its existence this sterling weekly magazine has steadily maintained its high standard. It is a thoroughly satisfactory compilation of the most valuable literature of the day, and as such is unrivalled. As periodicals of all sorts continue to multiply, this magazine continues to increase in value; and it has become necessary to the American reader. By its aid alone he can, with an economy of time, labor, and money otherwise impracticable, keep well abreast with the literary and scientific progress of the age and with the work of the ablest living writers. It is the most comprehensive of magazines, and its prospectus for 1900, which appears in another column, is well worth the attention of all who are selecting their reading-matter for the new year. To new subscribers remitting now for the year 1900 the intervening numbers of 1899 are sent gratis. The Living Age Co., Boston, are the publishers.

YOU would like the lamp-chimneys that do not amuse themselves by popping at inconvenient times, wouldn't you?

A chimney ought not to break any more than a tumbler. A tumbler breaks when it tumbles.

Macbeth's "pearl top" and "pearl glass"—they don't break from heat, not one in a hundred; a chimney lasts for years sometimes.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

INVEST NOW

The attention of the public is invited to an exceptional opportunity to make handsome profits on a small investment in the

ZINC AND LEAD

region of Missouri. Under the proposition we are now making it will not be necessary for investors to wait for dividends to get their money back, but can realize on the enhancement of the value of their investment as our work progresses. There is not one chance in a thousand that those who

INVEST NOW

will lose their money, as the drill tests already made show large bodies of paying ore. In 1897 the Missouri-Kansas district produced one million dollars more than all Alaska. Those who

INVEST NOW

get in cheaply and the profits will be out of all proportion to the amount invested. We are establishing a

CHAIN OF MINES

so that those who become associated with us will have several strings to their bow. Let us mail you free a copy of

THE KLONDIKE OF MISSOURI

A neat pamphlet of 14 pages, telling all about the town that "Jack Built," how a woman made \$300,000, what an investment of \$14.00 realized, etc. Also let us mail you a free copy of

SNAP SHOTS IN SOUTH MISSOURI

A handsome book of 60 photo-engraved views of varied scenery in the zinc fields of Missouri. At the same time we will mail you our best proposition, with circulars describing our properties, and references as to who we are. Address

WALTER SAYLER,
171 Le Salle Street, Chicago, Ill.

This is a \$2,000 home

With plumbing all... complete

With one less room on each floor.... \$1800

If interested will send floor plans, figures and description of my six classified books for your address and two-cent stamp. Book No. 12, 43 designs, full of fine half-tones. New 75 book, right up to date, price \$1.00. Send me cost of house desired with \$1.00 and I will send the right book. Will exchange book, if not. Any two books, \$1.50.

New Books

REMINISCENCES

By JULIA WARD HOWE. With many Portraits. Crown 8vo, gilt top, \$2.50.

Mrs. Howe's long and unusually rich experience, her wide acquaintance with illustrious persons in America and Europe, and her active interest in the great questions of her time make her "Reminiscences" a book of great interest. It is richly supplied with attractive portraits.

THE QUEEN'S TWIN, AND OTHER STORIES

By SARAH ORNE JEWETT. 16mo, \$1.25.

This volume contains Miss Jewett's latest short stories, and some of her best. Two of these include scenes and characters connected with her delightful story of "The Country of the Pointed Firs."

MEMOIRS OF A REVOLUTIONIST

By PRINCE KROPOTKIN. With 3 Photogravure Portraits. Crown 8vo, \$2.00.

A book of extraordinary interest. Hardly any man of this generation has had a more varied and adventurous life than Prince Kropotkin, the famous Russian revolutionist. Aside from the fascination of the story, the book is of great value for its views of European social and political conditions.

A CENTURY OF SCIENCE AND OTHER ESSAYS

By JOHN FISKE. Crown 8vo, \$2.00.

A book of uncommon value and charm, containing papers on: A Century of Science; The Doctrine of Evolution, its Scope and Purport; E. L. Youmans; The Part Played by Infancy in the Evolution of Man; Sir Harry Vane; The Arbitration Treaty; Francis Parkman; Edward Augustus Freeman; Irish Folktales, etc.

HOW MUCH IS LEFT OF THE OLD DOCTRINES?

By WASHINGTON GLADDEN, D.D., author of "Who Wrote the Bible?" etc. 16mo, \$1.25.

A book of great value, showing how the doctrines of the Christian Church have been modified by recent thought, yet all that is essential remains unshaken.

IS POLITE SOCIETY POLITE? AND OTHER ESSAYS

By JULIA WARD HOWE. With a Portrait. Square 8vo, \$1.50.

A noteworthy volume, containing, in addition to the title essay, papers of great interest and scholarly value, on Greece Revisited, Aristophanes, Dante and Beatrice, The Halfness of Nature, The Salon in America, and Paris.

THE WIFE OF HIS YOUTH AND OTHER STORIES

By CHARLES W. CHESNUTT, author of "The Conjure Woman." Illustrated. Crown 8vo, \$1.50.

"The Conjure Woman" has produced so favorable an impression of Mr. Chesnutt's power and skill as a story-writer that this new volume of his stories will be heartily welcomed. Many readers will recall "The Wife of His Youth" as one of the strongest and most touching tales of the year.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., BOSTON

15 R-Q sq	B-Q 2		Resigns.

White's sixth is, probably, premature. The strongest move is P-Q 4. This is the move of all, or nearly all, the great "Evans" players.

Of course, White's sacrifice of Kt is unsound.

Chess and Phrenology.

To have the power of playing Chess very skillfully, the organs of number and order must be proportionately expanded. Music springs from the same source, and accordingly Chess-players and musicians will ever be found intimately mingled. Philidor was a composer of music; and at the present time we find both of these arts cultivated by the same persons to a considerable extent. The organs laid down by Combe, the phrenologist, as number and order, were largely developed in the head of Philidor. The same conformation of brow was visible in M. Deschappelles. In playing Chess with a stranger, it will not be uninteresting to compare his style of game with the superficial observation you may be enabled to make by glancing at his craniological presentment. Men possessing high, sugar-loafed heads, piercing conically the air in a point, like the Peak of Teneriffe, will, thanks to this preternatural possession of the bump of "firmness" or "obstinacy," contest the game long after hope would have ceased to draw breath in the frames of their fellow-mortals. . . . Another class of amateurs, by way of distinction, may be called, but not invidiously, the "flat-headed"; each cranium of this species being depressed at its apex, constituting a species of tableland like that whereon stands Mexico. Men thus formed are marked through life as waverers. They hesitate, and doubt, and waver, and philosophize, and dream away existence like most true gentlemen. Get them into the slightest scrape at Chess, and they reel instantly; win a Pawn, they sweat blood and water; capture a Knight, and they give up the game. To the credit of the fair sex be it said, that of lady Chess-players by far the majority display the organ of—we dare not say "obstinacy," but may write "tenacity of purpose." The same organ, or faculty, equally applies to the attainment of kindred subjects of study. Good Chess-players play all games of society better than other people, speaking wholesale; and to their honor be it said, they seldom permit their talent to prostitute itself to the baser objects of gambling. Chess-players take up Whist, Draughts, and similar pursuits; but rarely number themselves among Mammon's votaries who crowd the race courses. — *The Chess-Players, Chronicle*

The Washington and Chattanooga Limited for New Orleans, California, and Mexico. Excursion tickets now on sale. Through sleeping-cars to New Orleans from New York. Observation dining-cars. Meals a la carte. Absolutely the shortest route to New Orleans. Address the Norfolk & Western Railway, 398 Broadway, New York.

Marian Harland's Latest Work
"Common Sense in the Household"
4 vols., sent complimentary to all who send \$1 for AMERICAN HOMES, monthly, 1 yr. Add 10c. and we will also send a set of plans for \$300 cottages. Satisfaction guaranteed.

The Soul's Awakening.

An Art Gift

"THE SOUL'S AWAKENING" is a beautiful picture that steadily grows in popularity. It is a work of art with a deep and beautiful meaning. It carries its spiritual message to every heart—and one never wearies of it. It never grows old. New thoughts, new meanings are suggested each time it is studied. It is a picture that should hang in every home for the good influence it exerts. It is a constant source of pleasure and a silent force for good. We send a copy of "THE SOUL'S AWAKENING" in colors exactly the same size (13 x 15 inches) and style as are on sale for \$1.00 in art stores, to each person who sends 75 cents for a year's subscription to

Young People's Weekly

Eight to twelve pages, handsomely illustrated.

It's a paper with a purpose—a clean, helpful, enthusiastic Christian paper which wins the hearts of the young and exerts all the power it gains for good. It has an interesting message for every member of the family, and is a fascination to the old as well as to the young. Sample copies, which will be sent free to inquirers, will make you acquainted. Send 75 cents for a year's subscription, with "THE SOUL'S AWAKENING." A three months' trial without the picture for 20 cents. Mention this paper.

DAVID C. COOK PUBLISHING CO.,
36 Washington St., Chicago.

Letters Copied While Writing.

Keep a copy of all letters; no press; no water; no brush; no work. Any ink; any pen; any paper. Our Pen-Carbon never smuts; our clip holds paper firm. Write with no extra pressure, and our Pen-Carbon Letter Book produces a perfect copy. Can be used anywhere.

If your stationer does not keep it, write for free sample. Mention this paper. Dept. L.

Pen-Carbon-Manifold Co., 221 Canal St., N. Y.

CARTERIAN

Adjustable Expanding Document ENVELOPE

The simplest, strongest, and best envelope ever invented for filing legal papers or documents of any description. By means of a slot it adjusts itself perfectly to fit any enclosure from a single sheet of paper to a package an inch thick. Remove a part of the paper and envelope will adjust itself to remaining contents.

Size	Per Box 125
4 x 9	\$3.00
4 1/4 x 9 1/4	3.25
4 1/2 x 9 1/2	3.25
4 3/4 x 10 3/4	3.50
4 7/8 x 11 1/4	4.00

Sample package of 1 Dozen any size, or assorted sizes, sent postpaid for 45 cents in stamps.

Ask your stationer for them. If he does not carry them in stock or cannot get them for you send to the manufacturers.

CARTER, RICE & CO. (Corporation)
246 Devonshire St., Boston, Mass.

What is India Paper?

It is the acme of the art of paper making. Its characteristics being thinness, opacity, strength, and light weight. It is made by a secret process and enables Thomas Nelson & Sons to produce Dickens's Works in fifteen volumes, of about half an inch each volume, making the complete set to occupy less than eight inches of shelf room. It is, indeed, *The Churchman* says, "One of the most remarkable feats of modern book making."

The volumes are being published monthly at \$1.00 per volume and three volumes, "Pickwick Papers," "Nicholas Nickleby," and "Oliver Twist and Sketches by Boz" are now ready.

The favorable reception of Dickens Series has induced the publishers to issue simultaneously and in uniform style, Thackeray's Works, "Vanity Fair" being now ready.

For sale by all booksellers, or sent postpaid on receipt of price by Thomas Nelson & Sons, 17 East 18th Street, New York.

PANTASOTE

Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerously inflammable substances, and is not affected by heat, cold or climate.

Made in standard colors, plain or figured.

Enough to cover a dining chair, seat or foot-stool sent for 25 cents in stamps.

Sample Free! 15x6 inches, enough to make a Sewing Companion, sent for act. stamp with your upholsterer's name.

Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.

THE PANTASOTE COMPANY,
89 Broadway, Dept. P. New York City.

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. HYDE, Brooklyn, N. Y., says: "The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the 'reaper' over the old-fashioned 'sickle'."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled.

Send for price list and circulars. Mention this advertisement. **THE BURR INDEX CO., Sole Mfrs. HARTFORD, CONN.**

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

HOW THE PRESIDENT'S MESSAGE IS RECEIVED.

NO better opportunity is afforded, between elections, of learning what the Administration thinks about the country and what the country thinks about the Administration than is found in the President's annual message to Congress and the comments on it by the press. It can not be said that President McKinley's message contains any surprising disclosures, but some features of the Administration's policy that have been merely inferred heretofore are now declared plainly. As for the partizan press, the usual division is seen. The Republican papers heartily indorse the policies outlined in the message, and the Democratic papers score the message without mercy. The *Hartford Post* (Rep.), for example, considers it "worthy of ranking among the best of Presidential messages of the last half of the century," while the *Indianapolis Sentinel* (Dem.) finds it "filled with platitudes and ambiguous phrases, with high-sounding declarations that mean nothing."

Aside from the strictly partizan press, however, the message seems to have made a strong impression, and there is hardly an independent paper that does not find much in it to commend. The *Washington Evening Times* (Ind. Dem.) calls the message "a document which will live in history as one of the ablest as well as one of the most interesting and voluminous state papers which has ever emanated from the Executive Mansion." The *Brooklyn Eagle* (Ind. Dem.) says that it is "a wonder of industry, a proof of patient thought and study, a body of practical and righteous suggestions, and a document of sanity, liberality, sagacity and patriotism." One Republican paper, the *New York Press*, infers from the message that the President is drifting toward free trade, and urges the party to call him back.

The salient points of the message may be briefly given as follows:

Congress is urged to give the Secretary of the Treasury power and to "impose upon him the duty to uphold the present gold standard."

Congressional aid to our merchant marine is recommended. "The expense is as nothing compared to the advantage to be achieved."

"Combinations of capital organized into trusts to control the conditions of trade among our citizens, to stifle competition, limit production, and determine the prices of products used and consumed by the people, are justly provoking public discussion and should early claim the attention of the Congress." Uniform state legislation is recommended concerning trusts, and the President feels sure that Congress will take some "wise and judicious action" in regard to them.

"The great importance of an isthmian canal can not be too often or too strongly pressed upon the attention of the Congress."

Our friendly relations with France and Germany are spoken of with warmth, and, with somewhat less warmth, our friendly relations with England and with the other nations.

Action to bring about the laying of a Pacific cable is urged.

The pledge of April 19, 1898, by which Congress promised independence to Cuba, "is of the highest honorable obligation and must be sacredly kept"; but our mission "is not to be fulfilled by turning adrift any loosely framed commonwealth" that could not survive internal rivalries. No promise of an early withdrawal from the island is given.

Argument at some length is made in justification of the policy so far pursued toward the Philippine insurgents; and the declaration is made that the agreement with the Sultan of Sulu does not "authorize or give the consent of the United States to the existence of slavery in the Sulu archipelago." As to the future government of the Philippines, that "rests with the Congress of the United States." The proposition that we retain simply a protectorate over the islands "will not be found worthy of your serious attention." For the present, and "as long as the insurrection continues, the military arm must necessarily be supreme." After that the work of reconstruction "should be commenced by building up from the bottom, first establishing municipal governments, and then provincial governments, a central government at last to follow."

Hawaii and Alaska should be given territorial forms of government.

Puerto Rico should also be made a territory, and "the markets of the United States should be opened up to her products. Our plain duty is to abolish all customs tariffs between the United States and Puerto Rico."

Experience has proved that by the amendments made to the merit system during the present Administration the system "has been greatly strengthened and its permanence assured. It will be my constant aim in the administration of government in our new possessions to make fitness, character, and merit essential to appointment to office, and to give to the capable and deserving inhabitants preference in appointments."

Gold Standard.—"The President has done a most important public duty," says the *Baltimore News* (Ind. Dem.), in coming out squarely for the gold standard. His utterances on this question "are chiefly important," thinks the *Boston Transcript* (Ind.), "as affording evidence of the unity of the Administration on the subject." The *New York Times* (Ind. Dem.) indorses his currency ideas as "entirely clear and sound." The *Louisville Courier-Journal* (Ind. Dem.) says: "It is a pleasure to see that the President, who before his election was so doubtful on the money question, and who even after his election went off in pursuit of the international agreement jack-o'-lantern, has now learned that the country is in earnest in its demand for financial reform." Not all the Gold Democratic papers, however, are so enthusiastic. The *New York World* (Ind. Dem.), after pointing

out that the fine Treasury showing is due to the "special war taxes voted as a 'temporary measure' more than a year and a half ago," attacks the President's recommendation that greenbacks "when once redeemed shall not thereafter be paid out except for gold." "A combination could easily be formed in Wall Street," says *The World*, "to take \$50,000,000 in greenbacks to the Sub-Treasury and demand gold for them. It could then lock up the gold; the greenbacks would be 'impounded' in the Treasury, and the money market would be \$100,000,000 short. Would a deadlock like this

J. P. MORGAN: "Shades of Grover, but he's easy!"
—*The New York Verdict*.

be an improvement upon the 'endless chain'?" The *Atlanta Constitution* (Dem.) sees a continuation of the Wall Street control over the Government. The *Kansas City Times* (Dem.) thinks that the President's plan means "bond issues without limit," and the *Omaha World-Herald* (Dem.) characterizes the whole message as "a plea for gold and empire."

Merchant Marine.—The recommendation that Congressional aid be given to our merchant marine is, says the *Minneapolis Tribune* (Rep.), "strong and convincing." The *New York Tribune* (Rep.) points out that "not a few patriotic and intelligent citizens" dislike the word "subsidy," but their number is decreasing. "The great maritime powers of the world have built up their ocean commerce, and are still building it up, by giving pecuniary inducements and rewards to individuals," and, says *The Tribune*, "we believe the Government of the United States is more than justified in doing the same thing." The *Philadelphia Ledger* (Ind.), however, reads this part of the message with "surprise and regret." "Our great railroad systems have not grown so great, useful, and wealthy by being fed from the national treasury," *The Ledger* says, and asks, therefore, "Why should the builders and owners of ships be subsidized?" "This part of the message," continues *The Ledger*, "seems as if it might have had its inspiration from Senator Hanna." The *Chicago Record* (Ind.) says: "In view of the assertion that 'the last year has recorded exceptional activity in our shipyards and the promises of continual prosperity in shipbuilding are abundant,' it would seem that the shipping industry is not seriously in need of government aid." The *Louisville Courier-Journal* (Ind. Dem.) thinks the recommendation "indefensible."

Trusts.—The President's declaration against trusts is regarded by a number of papers as a masterly move in the game of political chess to block one of Mr. Bryan's strongest lines of attack. It "leaves the two candidates on substantially the same platform," says the *New York Times* (Ind. Dem.). "and makes a serious contest between them a little ridiculous." But the President's final recommendation in regard to trusts, that Congress give the subject "studied deliberation," "resulting in wise and

judicious action," is thought by some papers to be rather plati-tudinous. The *Times* calls it "a confession of mental vacuity" on the trust question. The *New York Evening Post* (Ind.) says: "Several witnesses before the Industrial Commission, to which the President refers, have shown that the tariff is the mother of trusts. This would seem logically to make out Mr. McKinley their grandfather, and to account for the grandfatherly way in which he deals with their little failings." The *New York Tribune* (Rep.), however, thinks that the President may well be excused for inability to suggest a remedy where so many other men have failed. The *Washington Times* (Ind. Dem.) says: "The message on this topic appears to have the true ring, and it would be hardly fair to throw doubt on its *bona fides*."

Cuban Independence.—The declaration that Cuba must be given independence, without any assurance as to when the independence will be given, allows the opposition press an opportunity for criticism. The *New York Evening Post* thinks that Cubans and annexationists alike will say, like the Irishman, that the President's words are "so ambiguous that only one construction can be put upon them." The *Indianapolis Sentinel* suspects a plot "to form a moneyed aristocracy in Cuba which will control the island for the present and ultimately annex it to the United States." The *Buffalo Express* (Ind. Rep.), however, another anti-expansionist paper, believes the declaration "high-minded and honorable," and the *Philadelphia North American* (Ind. Rep.) thinks it "a timely rebuke" to "those who advocate the disgrace of the nation by the theft of Cuba." The *Philadelphia Inquirer* (Rep.) advises the Cubans to make overtures for annexation. The *Detroit News* (Ind.) also hopes that before the day for decision arrives "a sentiment will have been created in Cuba favorable to annexation to the United States which will root out all notion of an independent government on the part of the inhabitants." The comments of the Cuban press are very reassuring to those who have feared an uprising. The *Lucha* says: "The message will pacify the country." The *Discusion* says that it "will fill the hearts of all lovers of Cuba with joy." The *Patria* cries: "Hurrah for President McKinley!" The *Cubano* sees in the message "that justice is the guiding principle at Washington. Our hearts," it continues, "hitherto bowed down by a tremendous skepticism, are now relieved."

Philippine Policy.—What both the President and the press consider the most important part of the message, if the amount of attention given it is an indication, is that part dealing with the Philippines. The *Buffalo Express* (Ind. Rep.) considers the Philippine policy "the one great mistake of the present Administration." The point that the anti-expansion press continually insist upon is that the President began the Philippine war without authority and without justification. To neglect an explanation of this "criminal aggression," thinks the *Baltimore News* (Ind. Dem.), and "to suppress the most vital fact in the whole history of our transactions with the Filipinos is to throw a cloud of doubt over the integrity of the whole statement the President makes in regard to the Philippines." The *Atlanta Constitution* (Dem.) thinks it ominous that the President does not "speak of the Filipinos as a people or recognize them as a possibility of the future." The difference may be seen, says *The Constitution*, by a glance at Cuba, where, "under the straightforward method we have pursued, . . .

THE PRESIDENT (to Congress): "Here, you hold him for a while."
—*The Chicago Record*.

Boer plan of campaign, on the western edge of the Orange Free State, now becomes very intelligible. It is to retire slowly, and doing in the mean while all the harm they can, toward the place where they shall be strongest and the invader weakest, and there to deliver the decisive battle. If we accept this theory of the campaign, it becomes evident why the Boers should have withdrawn after the battle of the Modder River. Lord Methuen reported, and doubtless in perfect good faith, that they had been 'forced to quit their positions.' But suppose they had been actuated by the desire to draw the enemy on, he all the time becoming weaker and they all the time becoming relatively stronger. In that case it seems likely that

ADELBERT S. HAY.
Son of Secretary Hay. Appointed Consul at Pretoria.

they should have abandoned the position voluntarily. It was certain that they could fight to the northward of the river at a greater advantage than to the southward after they had severed the enemy's communications by destroying the bridge, as it seems they succeeded in doing. There was nothing about the manner of their retirement to suggest defeat, and still less to suggest panic. Neither was there anything in Lord Methuen's report to suggest the belief on his part that he had passed the worst of his troubles. It can be readily understood from this latest news that the attitude of the reflective part of the British public must more than ever be one of seriousness and of anxiety."—*The New York Times*.

Our Critics See a Great Light.—"When we engaged in a war with a nation of 18,000,000 people, possessing a navy that some European critics considered stronger than our own and a million more or less trained soldiers, our friends in England were inclined to patronize us for taking the affair seriously. They laughed at

the accounts of the cheering crowds in the theaters and intimated that the fight was entirely too one-sided to be worth making a fuss about. But never, even when Cervera's fleet was expected to make a dash against the American coast or when Shafter's army was lying in the trenches about Santiago—16,000 men on an island that contained 200,000 hostile soldiers—was there an approach to the excitement into which England has been thrown by a war with two groups of Dutch farmers, numbering 150,000 men, women, and children all told, without a ship or a gun afloat and with no means of firing a shot within eight thousand miles of English soil.

"This excitement seems to have infected even the British generals, so that Lord Methuen is credited with saying that his skirmish at the Modder River was one of the bloodiest battles in the annals of the British army, and that, in proportion to the numbers engaged, it was the bloodiest battle in all history. England is said to have been 'stunned' by Methuen's losses. General Methuen lost the enormous number of 73 men killed, 372 wounded, and 7 missing, out of a force of about 7,000 men. In any of the great wars of history the engagements in which the losses were no greater than that are remembered only by specialists. Not to go back to such incidents as that of Cannæ, where 70,000 out of 86,000 Romans were left on the field, or that of Chalons, with its slaughter of 150,000 to 300,000 men, and not to speak of such modern butcheries

MAP SHOWING KIMBERLEY, THE MODDER RIVER, AND VICINITY.

(Stormberg, the scene of General Gatacre's disaster, is twenty miles south of Burghersdorp, which appears at the bottom of the map.)

as those under Frederick, Napoleon, and Grant, there have been some blood-lettings in British annals that make Methuen's look like a church sociable. For instance, Marlborough and his ally Eugene lost 20,000 men at Malplaquet. Wellington lost 22,000 at Waterloo, and when Pakenham led his 12,000 British veterans against Jackson's 6,000 frontiersmen at New Orleans 2,000 of them dropped on the field. In 1841 a British army 4,500 strong, with 12,000 camp followers, was utterly destroyed by the Afghans in the Khyber Pass, and only one man escaped to tell of its fate.

"In fact, to make a list of bloodier battles than that of the Modder River would be to write something like a complete history of war. The truth is that there have been no genuine battles in South Africa as yet. There have been reconnaissances, skirmishes, sallies, and artillery and musketry duels, but there has never been a death-grip of two armies, with one or the other

INTO THE JAWS OF DEATH.

—*The St. Louis Republic*.

WHOSE BALL?

—*The Denver Times*.

THE WAR IN CARTOON.

smashed at the end of it. When such a thing comes it will be hard to convey an idea of it to the public, for Methuen has left no words to describe it."—*The New York Journal*.

Some Painful Consular Experiences.—"The Government's painful experience with consuls in South Africa has been highly impressive. Young Mr. Macrum, the consul at Pretoria, who had an unusual opportunity to make a name for himself during the war, is 'trekking' for home in East Liverpool, Ohio, in spite of the State Department's pathetic appeals that he stay at his post. [Macrum's friends believe that he is returning with important messages from President Kruger to President McKinley, and think that he can amply justify his action when he reaches the United States.] Macrum's course has made this country ridiculous abroad, yet the nation has only itself to blame. Two or three years ago he was employed in a glass factory in Ohio, and was entirely without consular or diplomatic experience. For some occult reason known to politics and the Ohio Senators he was sent to Pretoria. Congressman Sherman, of New York, not long ago received a letter from an American in the Transvaal, Manager Bradford of the Landslaagte Deep Gold-Mine Company, in which he said of our South African consular service:

"The United States consul-general to South Africa, Colonel Stowe, who is stationed at Cape Town, visited Johannesburg recently, and he impressed me as a weak man. The consul at Pretoria, Mr. Macrum, is, if anything, a good deal weaker than the colonel."

"The upshot of the 'trek' of Macrum back to Ohio is that a young American named Atterbury is left in charge of the American consulate at Pretoria. All that *The Republican* knows about him is contained in the following interesting statement by the *New York Post*:

"Now comes the painful rumor from Chicago that a bright young American named Atterbury suddenly left Missouri for the Transvaal, three or four years ago. Incidentally he carried off \$50,000 belonging to other people, and his choice of the Transvaal as a residence was due, not to fondness for the Dutch Reformed Church or a desire to be on hand to repel the English, but solely to the fact that we have no extradition treaty with the Boer republic."

"There is a dreadful fear that he is the same Atterbury who now presides at Pretoria over American and British interests.

"The problem has finally been solved by Secretary Hay in a manner which indicates his desperation over the situation. The fact that he has sent to Pretoria his twenty-four-year-old son can not be due to any desire to exploit the Hay family, or to grasp at exceptional opportunities for the young man. Rather let us suppose that the Secretary felt it absolutely necessary to have at Pretoria in this crisis some one whom he knew intimately, whom he could fully control, and who would not 'trek' home if provisions should get low at the consulate. The younger Hay's appointment under less desperate circumstances would have been open to criticism, but what can a Secretary do when the consular system breaks down with him and in a peculiar emergency exposes its shoddy and sawdust stuffing to the derisive smiles of Europe and the world? Still, there were a number of bright and capable men available who were not in the Hay family."—*The Springfield Republican*.

TAYLOR'S VICTORY IN KENTUCKY.

THE decision of the Kentucky State Board of Election Commissioners in favor of W. S. Taylor (Rep.) for governor, thus defeating William E. Goebel (Dem.), gives Governor Bradley (Rep.) a Republican successor after a long series of Democratic governors. It was charged that the Board of Election Commissioners was to be relied upon to give the election to Goebel after all other means had failed, but the board seems to have disappointed its critics. "Mr. Goebel," says the *New York Tribune* (Rep.), "seems to have been hoist by his own elections board." The *New York Sun* says of the two commissioners who voted for Taylor:

"Judge Pryor and Captain Ellis, the commissioners who have decided that the candidate elected shall be declared elected, are entitled to respect and praise. No matter how impregnable was the case for Taylor, much courage and much strength of will were required to resist the appeals not merely of partizanship but of friendship, habit, and old associations that were made in behalf

of Goebel. The intensity of public feeling was great. It seemed more than likely that there would be some rude Kentucky phlebotomy before the trouble was over. Judge Pryor and Captain Ellis have prevented a great public wrong. They will be honorably remembered."

The *Louisville Times* (Dem.) says: "Evidently the Goebel election law is not the automatic partizan machine its hysterical opponents have painted it." The *Louisville Courier-Journal* (Dem.), one of the chief supporters of Goebel, says of the commissioners:

"Unswerved by party or personal associations or inclinations, unmoved by threats of violence and revolution, they have followed the law as they found it, and there is not a man in Kentucky to-day who does not owe them grateful acknowledgment for the manner in which they have met the unprecedented emergency with which the State, through them, was confronted."

The *Louisville Commercial* (Rep.) calls the decision "a triumph of civic virtue over the forces of corruption and disfranchisement."

WILLIAM S. TAYLOR.

SENATE CURRENCY BILL.

AT a time when the excellencies or defects of our currency system may cause the victory or defeat of the party in power, every new phase of the present effort to revise the system becomes a matter for careful scrutiny. The Senate's plan, as it appears in a bill prepared by the Republicans of the Senate finance committee, is like the House bill (considered in these columns last week) and like the message of the President in declaring plainly for the gold standard. The differences between the House and Senate measures will doubtless be settled by compromise. The *New York Tribune* (Rep.) notices and comments on these differences as follows:

"The differences between the two measures are of some importance. The first sentence of the Senate bill is the most compact and impressive part of either measure, defining the standard gold dollar, declaring that 'all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard,' and providing that United States and treasury notes shall be redeemed in gold coin of such standard. Where the House bill creates a separate division for redemption, with a reserve fund of \$100,000,000, the Senate bill makes it the duty of the Secretary of the Treasury to set apart a reserve fund of \$150,000,000 in gold coin, which shall be used for such redemption purposes only. Besides putting a larger sum behind the outstanding notes, the Senate provision seems to be more distinct and explicit regarding the steps to maintain their value, including the sales of bonds. The difference between the two measures regarding the treatment of silver certificates is perhaps more apparent than real. The object of both seems to be the gradual retirement of other forms of paper in denominations of \$10 or less, and the exclusive occupation of that field by small silver certificates. For this purpose the Senate bill provides for retirement of treasury notes and the issue of silver certificates instead, and both bills seem to leave these certificates to be redeemed in silver

MATTHEW STANLEY QUAY (REP.),
of Pennsylvania.

of Montana.

THREE CHALLENGED SENATORS.

only at ordinary times, but in any emergency to be so redeemed as to maintain them at par in gold. It would surely be safer, more readily understood by the people, and therefore much stronger, to provide explicitly for redemption in gold at the wish of any holder of every other form of money issued or coined by the Government. Both bills contain provisions which might be used for the retirement and cancelation of part of the legal-tender notes. Members of Congress are fresh from the people, and they probably know whether there is a majority of the voters in favor of any such course. If there is no majority to support a scheme which has been most persistently tried in almost countless ways by advocates of a currency entirely controlled by banks, then it would surely be wise for Republicans of both Houses to take care that no provision capable of being thus interpreted and employed should be left in the measure. The present Secretary is not a man to resort to any misconstruction of the law in order to accomplish anything, but it is easy to conceive that a secretary may be found in office hereafter who may strain a point in order to get rid of the United States notes. If there are provisions in both bills capable of being used to that end, the Republicans will serve the interests of their party as well as of their country if they examine such provisions with much care and guard them against misconstruction and misuse as far as possible."

The object of the provision in the Senate bill that all paper money of denominations less than \$10 shall consist of silver certificates, and that there shall be no silver certificates for more than \$10 face value, is a matter of some conjecture. One theory is advanced that this is intended as a concession to the silver men. Others see in it a political trap. The paper money in the pocket of the ordinary voter, it is pointed out, consists almost entirely of bills of less than \$10 face value, and the new law will make these silver certificates. The voter will be persuaded that a victory for silver in 1900 will cut the value of the money in his pocket in half, while his rich neighbor, carrying \$20 and \$50 gold certificates, will not be affected. A similar suspicion was heard when the "popular loan" of government bonds payable in "coin" was negotiated. So much for political speculations. The *New York Journal of Commerce*, looking at the business, rather than at the political, aspect of this provision, calls attention to the fact that the most widely used national bank-note is the five-dollar bill, and that the proposed law, by stopping the issue of these, will strike a hard blow at trade and defeat its own professed purpose of increasing the national bank-note circulation.

The *Journal of Commerce* prefers the Senate bill's high-gold-reserve feature to that of the House bill. The *New York Sun* (Rep.) thinks that the Senate bill "exhibits a much more intelligent understanding of the subject," because "it does not pretend

to establish the gold standard as a new departure in our legislation, but frankly recognizes its existence under former enactments." The *New York Evening Post* (Ind.) thinks the House bill by far the more clean-cut and thoroughgoing. Most of the press consider one bill about as good or bad as the other, and await the report of the compromise measure, which, it is predicted, will become law before New Year's day.

DOUBTFUL SEATS IN THE SENATE.

THE death of Senator-elect Hayward, of Nebraska, before he could take his seat; the failure of the legislatures in four States—Pennsylvania, Delaware, Utah, and California—to choose Senators; and the protests against Senators Clark, of Montana, and Scott, of West Virginia, have placed seven of the ninety senatorial seats in doubt; and altho no probable combination of results can place the Republican control of the Senate in peril, the situation makes an interesting object-lesson in the possibilities of our political system. Ex-Senator Quay's failure to secure an election in the Pennsylvania legislature, and his subsequent appointment by Governor Stone, whose right to do so is questioned, were fully discussed in these columns at the time. Many Republican papers in Pennsylvania and throughout the country have expressed the hope that the Senate will not accept Mr. Quay's credentials.

The cases of Senators Scott and Clark, who have been sworn in pending action on the protests against them, is thus stated by the Washington correspondent of the *Philadelphia Ledger*:

"John T. McGraw, who was Mr. Scott's Democratic opponent for the office, alleges Scott did not receive the votes of a majority of the members of the West Virginia legislature, and a protest signed by a majority of the members has been presented to the secretary of the Senate to be laid before that body. The point of the contention is whether the votes of the majority of the legislature or only a majority of those who participated in the election are required to elect a United States Senator. Mr. Scott had a majority of those participating in the election, but it is alleged he had not a majority of the legislature. It is scarcely probable this objection will prevent the admission of Mr. Scott. There are also objections to the admission of Mr. Clark, of Montana, the allegations being that bribery and corruption were practised in his election. It is not alleged that Mr. Clark was an active participant in this alleged corruption, but the fact that there was such practise is held to be sufficient to justify the Senate in denying him admission pending an investigation."

JOHN C. CHASE (SOC.-DEM.),
Mayor of Haverhill, Mass. Re-elected.

CHARLES H. COULTER (SOC.-DEM.),
Mayor of Brockton, Mass.

PAUL CAPDEVILLE (DEM.),
Mayor of New Orleans. Favors Municipal
Ownership.

THREE NEWLY ELECTED MAYORS.

MUNICIPAL VICTORIES FOR SOCIALISM.

THE reelection of John C. Chase, of the Social Democratic Party, as mayor of Haverhill, Mass., and the choice of C. H. Coulter, a journeyman plumber, belonging to the same party, as mayor of Brockton, Mass., has called attention to the growth of Socialistic ideas in the eastern cities of the Bay State. Mayor Chase was opposed by the combined Democratic, Republican, and Prohibition forces, but defeated their candidate by a plurality of 215. Mayor Coulter won by a plurality of over 1,500. In commenting on his election Mr. Coulter said:

"So far as I am concerned, this city will be run in the interest of the whole people. The measures which the voters have enacted into laws at this election I am heartily in favor of. I have always been a 'no' man, and I don't care who knows it, and I recognize the will of the people above all personal views. They have voted for no license. No license will they get to the letter. The Social Democratic Party, of which I am proud to be a member, declares for the cooperative commonwealth and public ownership of all the means of production and distribution. It will be my aim and that of my fellow Socialists in the city government to enter a wedge wherever possible for municipal ownership and see to it that no more valuable franchises are given away to any corporation whatever."

"The only way for us to do now," commented one of the Republican leaders of Massachusetts, "will be to adopt some of the best of the Socialist ideas, just as we have been ready to 'lift' Democratic ideas that the voters were ready to accept." The *New York Commercial Advertiser* (Rep.) thinks the growth of Socialism in Massachusetts a harmless "fad" that need cause no one any alarm. The *Philadelphia Record* (Ind.) reads in these elections an indication that the Socialists "are evidently a force to be reckoned with by the other parties." It continues:

"The proposition that everything should belong to everybody is a very attractive one, especially to those persons who have been unable to accumulate an average share of the sum total of wealth. The idea grows fairly enough from the contention that the Government is a paternal institution which, instead of insuring fair play and free movement among men and leaving every person to take care of himself, is bound to establish a compulsory equality of fortune for all. It is silly. It can't be made to work, even in the hinted form of cooperative undertakings. But none the less it is enticing. In the mouth of a demagogic dabbler like Debs, or a ponderous word-slinger like Powderly or Gompers or 'Golden Rule' Jones, of Toledo, Socialism is served up as a new Gospel for the dissatisfied and downtrodden. But it is utterly opposed to what may be called Americanism. This nation has been built

up on the theory that, protected in his natural rights, every man is able to take care of himself and is best off when allowed to take care of himself. The theory has worked so well in practise that it is not likely to be abandoned."

The election of Paul Capdeville (Dem.) (whose picture appears with those of the Socialist mayors) as mayor of New Orleans is described by the *New Orleans Times-Democrat* (Dem.) as a return to ring rule and machine politics after a clean reform administration. The *New Orleans Picayune* (Dem.), however, considers Mr. Capdeville's election a triumph for the municipal ownership principle—which is the leading principle in the Social Democratic platforms in Massachusetts.

SUPREME COURT'S ANTI-TRUST DECISION.

SOME doubt seems to remain in the minds of the economic writers of the daily press whether the decision of the United States Supreme Court outlawing the cast-iron pipe trust need disturb our more modern industrial combinations. As the cast-iron pipe trust was composed of six different corporations working under an agreement to keep up prices, while the present-day "trust" is one big corporation which has absorbed all its fellows, many papers think, with the *New York Sun*, that this case has "no relevancy to the majority, at least, of the newly organized industrial corporations of the country." To imagine, says *The Sun*, "that the Supreme Court of our country could, in this or in any other case, declare that an actual consolidation of corporations or a *bona-fide* transfer of one company to another was illegal, would be to think of them as maintaining that business partnership is unlawful." The *Springfield Republican* takes a similar view. "The decision does not affect the so-called trusts," says *The Republican*; "their relation to the law and the public welfare remains to be determined."

How the cast-iron pipe trust carried on its operations appears in the following illustration given in the Government's brief in the case:

"During the early part of 1896 St. Louis wanted about 5,000 tons of cast-iron pipe. St. Louis was allotted to the Howard Harrison Company of Bessemer, Ala. The price of pipe at Bessemer was from \$13 to \$15 per ton. The freight from Bessemer to St. Louis was \$3 per ton, so the fair price of the pipe delivered at St. Louis was from \$16 to \$18 a ton. The combination fixed the price at \$24 per ton, the Howard Harrison Company bidding that price and the other shops protecting its bid by higher ones.

As a result, St. Louis was compelled to pay from \$6 to \$8 per ton more than the defendants were selling the same pipe for in free territory, or between \$30,000 and \$40,000, which, treated as a bonus, was divided among the defendants."

It is reckoned by the *Philadelphia Press* that this trust or "conspiracy" (to use the court's term) divided \$1,320,000 in illegal bonuses in a single year.

The safety of the present-day trusts, however, so confidently assumed by the papers quoted in the first paragraph, is doubted by those who see a deeper significance in the words of Mr. Justice Peckham, who delivered the opinion in the case. He said:

"We have no doubt that where the direct and immediate effect of a contract or combination among particular dealers in a commodity is to destroy competition between them and others, so that the parties to the contract or combine may obtain increased prices for themselves, such contract or combination amounts to a restraint of trade in the commodity, even tho contracts to buy such commodity at the enhanced price are continually being made. Total suppression of the trade in the commodity is not necessary in order to render the combination one in restraint of trade."

"In that view," says the *New York Journal of Commerce*, "there can be no question that a much broader meaning has been given to the federal anti-trust law than it has yet been thought to be susceptible of, and that there has been placed in the hands of the law officers of the United States a formidable weapon for the defeat and punishment of conspiracies in restraint of trade." "If this decision is followed in its terms," remarks the *Philadelphia Press*, "the consolidated corporations, popularly known as trusts, may receive a treatment not hitherto anticipated in the Supreme Court." *The Press* continues:

"Whether a consolidation of all factories in any one industry by sale to one corporation is or is not in restraint of commerce the Supreme Court has not yet held, tho it has that one factory may be bought by a corporation owning two thirds or so of the refineries. In the present decision it holds only that a combination between separate manufacturing corporations is illegal, and this all have held as beyond question—if it could be found out. Mr. Justice Peckham's language would cover the consolidation of corporations—if its complete character and effect on prices could be proved."

The *Philadelphia Ledger* thinks that the simple removal of tariff support would cause many a trust to tumble:

"Should Congress lower the rate of duties on all products that are the subjects of monopoly in the home market, the competition of Europe would compel extortionate trusts to deal justly by the American consumer. This is an eminently practical plan, which is in complete accord with the protective-tariff principle as defined by the last national convention of the Republican Party, which condemned equally foreign control and domestic monopoly."

HOW PHILADELPHIA TREATS THE NEGRO.

THE impression that the negro fares better in the North than in the South does not seem to be confirmed by recent investigations made by writers of that race. Prof. Booker T. Washington, as quoted in these columns November 11, it will be remembered, finds the South a most encouraging field for the colored business man. Now comes Prof. W. E. Burghardt Du Bois, of Atlanta University, a negro who was graduated from Harvard with high honors a few years ago, telling us (in a social study entitled "The Philadelphia Negro") that the city which is the Northern center of negro life denies the skilled colored workman the right to earn his daily bread in his chosen field of labor. The following instances of discrimination are chosen by a writer in *The Outlook* from Professor Du Bois's review as typical examples of the treatment accorded the negro in the City of Brotherly Love:

"A girl who graduated from a Pennsylvania high school and from a business college sought work in this city as a stenographer

and typewriter. A prominent lawyer undertook to find her a position; he went to his friends and said: 'Here is a girl that does excellent work and is of good character; can you not give her work?' Several immediately answered Yes. 'But,' said the lawyer, 'I will be perfectly frank, and tell you that she is colored,' and not in the whole city could she find a man willing to employ her. It happened, however, that the girl was so light in complexion that few not knowing would have suspected her descent. The lawyer, therefore, gave her temporary work in his own office until she found a position outside of the city. 'But,' said he, 'to this day I have not dared to tell my clerks that they worked beside a negress.'

"Several graduates in pharmacy have sought to get their three years' required apprenticeship in the city, and in only one case did one succeed, altho they offered to work for nothing.

"A graduate of the University of Pennsylvania in mechanical engineering, well recommended, obtained work in the city through an advertisement, on account of his excellent record. He worked a few hours, and then was discharged because he was found to be colored. He is now a waiter at the University Club where his white fellow graduates dine.

"Even in the world of skilled labor the negro is largely excluded. . . . A—, who works at a bookbinding establishment on Front Street, has learned to bind books, and often does so for his friends. He is not allowed to work at the trade in the shop, however, but must remain a porter at porter's wages. . . . C— has been a porter and assistant shipping clerk in an Arch Street store for five years. He receives \$6 a week, while whites get \$8 for the same work. . . . D— was a bricklayer, but experienced so much trouble getting work that he is now a messenger. . . . E— is a painter, but has found it impossible to get work because he is colored. . . . G— is an iron-puddler who belonged to a Pittsburg union. Here he was not recognized as a union man, and could not get work except as a stevedore."

These and many other similar instances lead Professor Du Bois to the belief that it is just this discrimination that is giving Philadelphia its idle and vicious negro class, so that the city's wrongdoing reacts upon itself. He says:

"For thirty years and more Philadelphia has said to its black children: 'Honesty, efficiency, and talent have little to do with your success; if you work hard, spend little, and are good, you may earn your bread and butter at those sorts of work which we frankly confess we despise; if you are dishonest or lazy, the State will furnish your bread free.' Thus the class of negroes which the prejudices of the city have distinctly encouraged is that of the criminal, the lazy, and the shiftless; for them there is succor and sympathy; for them Philadelphians are thinking and planning; but for the educated and industrious young colored man who wants work and not platitudes, wages and not alms, just rewards and not sermons—for such colored men Philadelphia apparently has no use."

TOPICS IN BRIEF.

LETTERS AND ART.

MORE OF COLONEL HIGGINSON'S REMINISCENCES.

AS all Americans know, Thomas Wentworth Higginson has been a man of action as well as of thought. He has had a wide and intimate acquaintance not only with poets and romancers, but with soldiers and political reformers. His new volume entitled "Contemporaries" includes sketches of Nathaniel Hawthorne, Emerson, Alcott, Whittier, Parker, Whitman, Lanier, Helen Hunt Jackson, and of Garrison, Phillips, Sumner, Howe, and General Grant, with many side-lights on others hardly less prominent.

One of the most interesting chapters is entitled "An Evening with Mrs. Hawthorne," in which we get a description of the first reading of "The Scarlet Letter," and the surprising information that the author, after completing his masterpiece, was at first in two minds about ever publishing it.

It was not Hawthorne's habit, we are told, to read his manuscripts to his wife until they were finished, and during the whole winter when "The Scarlet Letter" was being written he seemed depressed and anxious. We quote from Mr. Higginson's account:

"There was a knot in his forehead all the time, Mrs. Hawthorne said, but she thought it was from some pecuniary anxiety, such as sometimes affected that small household. One evening he came to her and said that he had written something which he wished to read aloud; it was worth very little, but as it was finished he might as well read it. He read aloud all that evening, but as the romance was left unfinished when they went to bed, not a word was said about it on either side. He always disliked, she said, to have anything criticized until the whole had been heard. He read a second evening, and the concentrated excitement had grown so great that she could scarcely bear it. At last it grew unendurable; and in the midst of the scene, near the end of the book, where Arthur Dimmesdale meets Hester and the child in the forest, Mrs. Hawthorne sank from her low stool upon the floor, pressed her hands upon her ears, and said that she could hear no more.

"Hawthorne put down the manuscript and looked at her in perfect amazement. 'Do you really feel it so much?' he said. 'Then there must be something in it.' He prevailed on her to rise and hear the few remaining chapters of the romance.

"To those who knew Mrs. Hawthorne's impressible nature, this reminiscence of hers will have no tinge of exaggeration, but will appear very characteristic—she had borne to the utmost the strain upon her emotions, before yielding. The next day the manuscript, she said, was delivered to Mr. Fields; on the following morning he appeared early at the door, and, when admitted, caught up her boy in his arms, saying, 'You splendid little fellow, do you know what a father you have?' Then he ran upstairs to Hawthorne's study, telling her, as he went, that he (and I think Mr. Whipple) had sat up all night to read it, and had come to Salem as early as possible in the morning. She did not go upstairs, but soon her husband came down, with fire in his eyes, and walked about the room, a different man."

Colonel Higginson is a great admirer of Helen Jackson, "H. H.," regarding her as the rarest poetess that America has produced—an opinion that Emerson and many other notable writers have fully indorsed. Emerson, it is said, carried her sonnets about with him in his note-book, and pulled them out to show to his friends. But it was not in poetry alone that she distinguished herself. In proof of her versatility, Colonel Higginson declares that the editors of *The Century Magazine* talked about allowing her contributions to accumulate sufficiently to fill one number of the periodical—poetry, fiction, travels, criticism, and all—and then sending it forth as the product of one person. The scheme was abandoned, but that it was ever considered was a great tribute to her.

No two poets afford greater contrast than Walt Whitman and

Sidney Lanier. Colonel Higginson has little sympathy with Whitman, but he places the refined and chivalrous Lanier upon a high pinnacle. He writes:

"The essential fault of Whitman's poetry was well pointed out by a man of more heroic nature and higher genius, Lanier, who defined him as a dandy. Of all our poets he is really the least simple, the most meretricious; and this is the reason why the honest consciousness of the classes which he most celebrates—the drover, the teamster, the soldier—has never been reached by his songs. He talks of labor as one who has never really labored; his 'Drum-Taps' proceed from one who has never personally responded to the tap of the drum. It is because his own countrymen instinctively recognize this, and foreigners do not, that his following has always been larger abroad than at home."

Mr. Higginson considers that Grant in his autobiography achieved one of the greatest of his victories. It is rated very high. "These memoirs would have a charm," we are assured, "if the author had never emerged from obscurity except to write them; and considered as the records of one of the foremost soldiers of his time, they are unique and of inestimable value." The estimate of Grant concludes as follows:

"The claims of Grant to permanent fame will lie first in the fact that he commanded the largest civilized armies the world ever saw; secondly, that with these armies he saved the integrity of the American nation; thirdly, that he did all this by measures of his own initiating, rarely calling a council of war and commonly differing from it when called; fourthly, that he did all this for duty, not glory, and in the spirit of a citizen, not the military spirit, persisting to the last that he was, as he told Bismarck, more of a farmer than a soldier; then again, that when tested by the severest personal griefs and losses in the decline of life, he showed the same strong qualities still; and finally, that in writing his own memoirs he was simple as regards himself, candid toward opponents, and thus bequeathed to the world a book better worth reading than any military autobiography since Cæsar's 'Commentaries.'"

ZOLA VERSUS TOLSTOY.

THE critics continue to find various lessons in the spectacle of two great Continental novelists—Tolstoy and Zola—preaching at the same moment, with all the fervor of the devotee, two mutually destructive gospels. Perhaps the principal lesson derived from this curious phenomenon is that the reformer who is dominated by one idea has so lost his sense of relativity as not to be the safest of ethical guides. Such is the lesson which the critic of *The Academy* (November 11) appears to find in "Fécondité."

Throughout the book, he remarks, shines the man's invincible sincerity and singleness of purpose—even a passionate conviction; yet it is

still a book in which an extraordinary mixture of poetry and grossness, patriotic fervor and painstaking tabulation of externals, unrelieved by a single ray of saving humor in its 750 pages, makes a work which it is a trial to the flesh and a tribulation to the spirit to read. Says the critic further:

"It makes an admirable pendant to Tolstoy's 'Kreutzer Sonata,'

THE AUTHOR OF "FÉCONDITÉ."
From a drawing by Ernest Haskell in "The Bookman."

preaching, with a like conviction and fervor, an exactly opposite doctrine. All that Zola admires in marriage with extravagant passion Tolstoy condemns; and while the latter degrades marriage with his ascetic contempt, Zola bestializes it with pagan devotion. I do not use the word 'bestializes' in the conventional implication; I mean that Zola reduces man and woman to the mere state of animal; he eliminates mind and soul; heart with him is interpreted as health, while virtue is the continuous production of the species. For this new book of M. Zola's is eminently, pugnaciously virtuous, in his own strictly limited conception of the word. One would think he had striven to set himself the task of realizing the patriarch's ideal of conduct in an empty desert which it was his duty to people. All other notion of conduct, of life, escapes him.

"In fact, the novel is a monument of monomania. Long residence in France proves to me its absolute falsity. French homes are the happiest on earth, just because they are small, and the parents have space and time in which to love and care for their children. Girls are cherished and provided for, instead of being cast upon the pavements to pick up their bread as best they can. There are no mothers like French mothers, and I know no better wives. Why, then, does M. Zola persistently slander the women of his nation?"

"'Fécondité' may be described as a Biblical novel. Every second chapter, which records a fresh addition to Marianne's family, ends with the same page, repeated word for word. Every chapter announcing the advent of another child begins with the same paragraph. The end introduces us to the entire family, after the fashion of Genesis: 'Berthe was the daughter of Claire, who was the daughter of Rose, who was the daughter of Blaise, who was the son of Gervais, the son of Matthew and Marianne.'"

LITERATURE VERSUS WHISKY IN CANADA.

MR. ROBERT BARR believes that Canada, from its geographical position, its magnificent scenery, its hardy climate, and the stirring incidents of its history, should be the Scotland of America. It should be the land of great poets, he says, and it should furnish another Wizard of the North. Yet "if Scott came to Canada, to change W. T. Stead's phrase, how long would it be," Mr. Barr asks, "before he starved to death?" He proceeds (in *The Canadian Magazine*, November) to answer this question by declaring that Canada's greatest literary man would live in squalor if he remained within her boundaries and depended on her for support. Nor will he accept poverty as any excuse. He quotes statistics from "The Year-Book of Canada" for the years 1885-89, which tell a tale somewhat similar to that told by the famous document discovered by Prince Hal and Poins in Jack Falstaff's capacious pocket:

"I find that in those years Canada transformed something like a hundred million bushels of good wheat into spirituous liquor, but her production of books during the same time seems to have been so infinitesimal that the statistical Year-Book does not even mention the output.

"It will be seen by these statements that it is not the lack of money that makes Canada about the poorest book market in the world outside of Senegambia.

"The bald truth is that Canada has the money, but would rather spend it on whisky than on books. It prefers to inflame its stomach, rather than inform its brain. And yet there are people who actually hold that Canada is an intellectual country.

"My advice then to the Walter Scott tramping the streets of Toronto is: 'Get over the border as soon as you can; come to London or go to New York; shake the dust of Canada from your feet. Get out of a land that is willing to pay money for whisky, but wants its literature free in the shape of Ayer's Almanac, in my day the standard work of reference throughout the rural districts, because it cost nothing. Vamoose the ranch. Go back when all the rest of the world is acquainted with you, and you may find that Canada has, perhaps, some knowledge of your existence. Anyhow, when you return you will have a good time, for there are some of the finest people in the world in Canada.'"

Yet Mr. Barr believes that Canada "can be reclaimed from lit-

erary darkness and rye whisky," and in the December issue of the same magazine he seeks to show a remedy for this state of affairs. His plan is to build up a strong Canadian periodical magazine, mainly by subscription of money from leading people of culture; to place the magazine in the hands of all the teachers of the Dominion, to be used as a text-book of Canadian history and literature; and to encourage literary contributions from Canadian writers by offering adequate payment.

TROUBLES OF A GREAT PUBLISHING HOUSE.

THE publishing house of Harper & Brothers, which passed, November 28, into the hands of a receiver, has been the subject of sympathetic comment from all parts of the country. If this change seemed to mean the permanent extinction of the house, it would be generally regarded, to use Mr. J. Pierpont Morgan's phrase, as nothing less than a "national calamity." Hope, however, is expressed on all sides that under the readjustment of the financial affairs of the house and under the new management, a foundation may be reached on which to build up a new and solid prosperity. One of the agreeable features of the situation is the courtesy of the principal creditors, J. P. Morgan & Company, who have apparently been more willing to make further advances of money than the Harpers have been to receive them. At the wish of all concerned, the appointment of the State Trust Company as receiver was followed a week later by an application for dissolution of the present Harper corporation. The articles of incorporation date from October, 1896, up to which time the house of Harper & Brothers was not an incorporated business. The dissolution is regarded as a first step toward reorganization upon a securer basis. According to a statement in the *New York Times* (December 5), the assets of the house are estimated at \$6,282,716.55, while the liabilities amount to \$3,163,212.19, distributed as follows:

Five per cent. mortgage bonds sold.....	\$200,000.00
Mortgage on house 163 West Twenty-first Street.....	6,000.00
Floating debt.....	2,813,421.26
Due to authors, wages, etc. (estimated).....	66,000.00
Due for unexpired subscriptions, advertisements paid for but not yet printed, etc.....	77,790.93
Total.....	\$3,163,212.19

Of the item designated "floating debt," it is understood that \$1,700,000 is totally unsecured, consisting of "bills payable," commercial paper with one signature, etc. Mr. George L. Rives, acting on behalf of the directors of Messrs. Harper & Brothers, makes the following statement as to the dissolution:

"The public should understand that this is another step on the part of Harper & Brothers to protect their creditors. Eventually the firm will be reorganized, just after the fashion of railroad reorganizations. The assets have been scheduled at over \$6,000,000, on the assumption that the business of Harper & Brothers is to be continued."

It is stated that all the Harper publications will be continued with the exception of "Literature," and that Mr. John Kendrick Bangs will assume the editorial management of *Harper's Weekly*, which has been practically headless for some weeks. Colonel Harvey made the following statement (*New York World*, November 30), in answer to a question as to whether the cheap magazines had been the chief cause of the Harper failure:

"I found a certain condition existing when I took charge. What caused it I am not prepared to say. I shall know in time. I know this, however, that in advertising and circulation *Harper's* for December will be the most profitable in its history, with the possible exception of war time. This shows that there is a demand for such a publication and that it can be conducted successfully."

No editor of *The Bazar* has yet been appointed to succeed Mrs. Sangster. Mr. Page and Dr. Findlay have joined the staff of the

Doubleday & McClure Company, and from the latter firm are to be expected the new encyclopedia and the promised ten-cent magazine.

Many guesses are made in the press as to the underlying reasons for the failure, but it is unlikely that the real causes have been or will be made public. No comment that we have seen has failed in sympathy for this ancient publishing house in its difficulties. The *New York Evening Post* (November 29) says:

"It is among the oldest, if not the oldest, of our publishing-houses, and has stood for more than three quarters of a century as the representative of solid and conservative interests in the business. Happily the changes which are in progress in its ownership and management are merely preparatory to what promises to be a career of renewed vitality and increased energy, bringing it more closely in touch with modern enterprise, and extending its influence without materially changing its character. This is cause for genuine congratulation, for the house is an American institution which the public would regret sincerely to see pass out of existence."

The *New York Tribune* (November 30) says:

"The announcement of the unfortunate crisis reached in the affairs of Harper & Brothers, the famous firm of publishers, necessarily contains elements painful to contemplate. After many years of prosperity the financial burdens of the firm have become unbearable, and a reorganization is necessary in order to protect the creditors and the publishing house itself. We rejoice to observe, however, that there is nothing in the situation incompatible with an indefinite extension of those services to the public with which the name of Harper & Brothers has long been closely identified. The passage of the business into the hands of the State Trust Company and into the management of Colonel Harvey means simply that the present monetary difficulties will reach a settlement in the quickest and most satisfactory manner, and that work will go on with renewed vigor and enhanced sagacity in the familiar Franklin Square building.

"With the fortunes of every great publishing house the public is, of course, peculiarly concerned. The fact that such houses are established and carried on for purposes of money-making can never deprive them of their significance as agencies of culture in our modern civilization. They are the great centers of book distribution, to whose enterprise we owe the ready accessibility of literature, new and old, in luxurious and in inexpensive form, which is one of the most precious phenomena of the time. When a firm like Harper & Brothers, known and honored in the trade for many years, is temporarily visited by misfortune, the sympathy of those who care for books and appreciate honorable business methods is quickly and freely offered."

The *Baltimore Sun* (November 30) says:

"The cause of the trouble has not been clearly stated. There have been hints that the management has not been sufficiently progressive to meet the changed conditions of recent years. In an interview Mr. S. S. McClure, proprietor of *McClure's Magazine*, said, presumably in explanation of the failure:

"The Harpers have been proud of the old house and business that has been in the family for three generations. They have kept on their staff men past their usefulness. They have been too good-hearted and proud to discharge men practically penniless. There are chances of enormous saving in the business."

"If it is true that misfortune has overtaken the Harpers because they were unwilling to turn away men who had grown old in their service, it will add to the general sympathy for them and to the honor and esteem in which they are held. But, while it may be true that some money might have been saved by discharging men who had spent their lives in the service of the firm and had reached a time of life when it was impossible for them to get employment elsewhere, it is not likely that the small sum spent upon these faithful men caused the collapse. It is more than likely that the business of the house was undermined by cheap competition."

The *Philadelphia Ledger* (November 30) says:

"There is no exaggeration in the statement that the discontinuance of the house of Harper would be a national calamity, and every lover of literature and every good citizen will be gratified

to learn from Colonel Harvey that not only is the firm to continue business, but that it is to be strengthened in every direction and in all its activities. It is doubtful whether any other single agency has been more potent than Harper & Brothers in exerting a beneficent influence on letters and life in America. 'Sir,' said Dr. Johnson, speaking of the London bookseller, Miller, 'I respect Miller; he has raised the price of literature.' Harper & Brothers during a long career have raised the standard of literature in this country, and they have raised the tone of public life and morality. The history of literature in America may be studied in the annals of the house of Harper. They have published good books and clean books; they have supported the best and fostered it; their 'Journals of Civilization' have been civilizers for generations, and their influence, which is incalculable, has always been a leading, positive force for good government, good citizenship, and good literature. When difficulties arose they met them in a manner which does even them honor: 'We have not the moral right to incur further obligations which we might not be able to meet.'

"Such a house deserves perpetuation, and it is cause for congratulation that adequate measures have been taken to insure its continuance on a firmer and more enduring basis, to make its admirable periodicals even better than they now are, and to extend the business of the firm in every direction."

EFFECT OF LITERATURE UPON ORAL MEMORY.

PROF. MAX MÜLLER takes up anew the old question whether what we call literature could have existed in any land before the invention of an alphabet. He takes the affirmative side, and points to the custom among North American Indians of oral transmission of the tribal records, the historians aiding their memory by a mnemonic system formed of wampum beads. The late Rev. W. W. Gill found a considerable mnemonic literature in the islands of the South Pacific. Still more extraordinary is the preservation of Finland's epic poem, the "Kalevala," by oral memory alone. This system of oral tradition was brought to a still higher degree of perfection in Mesopotamia, China, Egypt, and India, and led on, in the last-named country, to a complete written literature.

After treating this question, Professor Müller passes to the subject of oral memory in modern days and says (in *The Nineteenth Century* for November):

"I have occasionally given expression to my regret that the old system of learning by heart at our public schools should have gone so completely out of fashion. Old men like myself know what a precious treasure for life the few lines are that remain indelibly engraved on our memory from our earliest school days. Whatever else we forget they remain, and they remind us by their very sound of happy days, of happy faces, and happy hearts.

"Alas! our memory has been systematically ruined, and it hardly deserves that name any longer when we remember what memory was in ancient times. We seem to be piling every day heaps of ashes on that divine light within us. Men who read *The Times* every morning, possibly *Notes and Queries*, then Blue Books, then possibly novels, or it may be serious works on such different subjects as geology, philology, geography, or history, are systematically ruining their memory. They are under the suzerainty of books, and helpless without them. I know there are exceptions, but it is difficult to verify them, and in arranging facts affecting persons we should be very careful to distinguish between what we have seen ourselves and what has been told us by others. Of the mnemonic achievements of certain Pandits and of the Panditâ Râmabâi, I can speak from personal experience. I have seen and heard them recite their tasks, and that in the presence of other people. I knew Macaulay, of whom it was said and believed that he could repeat a leading article of *The Times* after having read it once; but I never had the heart to ask him to let me hear him do so. Professor Conington at Oxford enjoyed the same reputation, but I never heard him either repeat a few pages after he had read them. Still, there is nothing so very incredible in this, for when I was at school at Leipsic and the

whole class was punished by being kept back till they had learnt two or three chapters of Cicero, I generally was off in about ten minutes. I could not do that now for my very life.

"I lately read a very interesting book by the Rev. H. C. Adams, a master at Winchester, which was, and is still, famous for its system of 'standing up.' As it was published in his lifetime, and in the lifetime of the pupils whom he mentions by name, I think he may be fairly trusted. He tells us in 'Wykehamica' (1878) that he knew a schoolfellow who never could learn his repetition, but who could nevertheless go through the whole of the scores in the matches with Eton and Harrow from the very first, giving each player his correct number of runs, and particularly the manner in which he was out. He knew another, of no remarkable capacity, able to say the whole of the English Bible by rote. Put him on where you would, he would go fluently on as long as there was any one to listen. When large standings-up were said, sometimes 13,000 and 14,000 lines were said, and were said well too. In Bishop Wordsworth's time, one boy in the senior part of the fifth took up the whole of Virgil for his standing-up, and acquitted himself brilliantly, that being only a portion of his eight lessons. I have made the reading of *The Times* every morning responsible for the gradual paralysis of our memory, but what shall we say when we are told the late editor of *The Times*, Mr. Chenery, whose death is still deplored by so many friends, knew the Koran and the Old Testament in Arabic and Hebrew by heart as well as any ulema or rabbi? Perhaps those who, like myself, knew him well, may feel a little skeptical. He certainly never mentioned this extraordinary power to me."

THE TRUE TEST OF ENDURING FICTION.

GOOD novel-making, viewed from the technical standpoint, is often said by modern critics to depend upon four fundamentals: invention or plot, construction, description, and characterization. Prof. Richard Burton thinks that of these the quality most conducive to success is the one last named. "Compared with it," he says (in *The Forum*, December), "invention and construction are secondary; description and style, important as they may be in the abstract, are as naught. A novel without salient character-drawing, whatever its merits in other directions, can never take high rank: it is almost certainly a failure foredoomed." Ability in this one quality will insure success in the face of serious deficiency in other qualities, he thinks, and will account for the firm hold which certain writers continue to have upon the public in spite of rough handling by the professional critics:

"Master improvisers like Dumas and Scott showed their genius just here. Their personages live; the robust types they created are realized to the imaginations of readers; so that to kill off the sense of their existence would, literally, leave the actual world lonelier for many of us. The folk next door are real; we know it in a perfunctory way. But they are phantoms compared with the verity of the 'Three Guardsmen,' or of 'Di Vernon,' and 'Dandie Dinmont.'

"Dickens, to take a later novelist, is perhaps the best possible example of this paramount power which excuses shortcomings in other directions. Is there any other maker of story in modern English literature—after all allowances have been made, and not forgetting that some current criticism of the man of Gadshill will have it that he is for a more careless age—who has begun to furnish such a portrait-gallery of worthies and adorable grotesques—a motley crowd whom we all know and enjoy and love? I wot not. The fact that Dickens is at times a trifle inchoate or careless in his English, or allows his exuberance to lead him into exaggeration, or fails to blend perfectly the discordant elements of comedy and tragedy, sinks into insignificance when set over against such a faculty as this. He was a veritable giant here."

Looking at the work of recent novelists in this light, says Professor Burton, we are able to understand the limited popularity of some writers much praised by the critics for their excellence of style and their powers of description:

"It may be stated boldly that where the present-day fictionist

fails above all else is in character—the sign, *par excellence*, of the creator. A few years ago it would have been in consonance with the facts to say that he was weak in invention as well. But now, with romances appearing daily, and startling plots in the very air one breathes, this lack is less felt. But character-making, yes. Nor can the blame justly be laid on the public, which is always eager to welcome a piece of veritable character-limning.

"As I write, 'David Harum' is the best selling story—and therefore book, since fiction still has a corner on literature. Why is this? Because it contains one thoroughly racy and enjoyable character; the rest is naught. The book is not a novel. It has no plot worth mentioning, and but little construction; being a purely conventional treatment of the love-motif. The nominal hero's only mortal use is, that Uncle David may have some one to talk to steadily. But the tale has a bona-fide creation in David himself; and this is enough to give it a remarkable, and deserved, popularity. Yet reflect a moment that there is not even a second-rate novel by Dickens which does not contain, I will not say one, but half a dozen, humorous character-types, any one of which might be named as an offset to the shrewd, kindly horse-trader and country banker. This is not said in the spirit of detraction, but merely to bring home the thought that we have fallen on a paucity of real character-creation, which results in an almost pathetically cordial reception for it when a modicum of it is proffered. Nor is it jingoism, by the way, to remark that the introduction of some of the Southern and Western types so saliently depicted by younger American novelists—Page and Harris, Stuart, Thanet, Wister, Garland, Chopin, Fernald, and others—is as hopeful a sign as current fiction can show, and one hardly to be paralleled in England.

"Can as much be said of Kipling? Very strong he is, of a truth, in invention, construction, description, and dialog; but where are his characters? Outside of 'Mowgli' and the 'Soldiers Three,' has he given us any? An obvious answer is that, being primarily a short-story maker, he is, by the definition of his art, excluded from triumphs in this kind, since characterization requires a larger canvas. There is something in this; but it does not affect the main proposition that Kipling's forte, thus far, has not been the delineation of personality. That he has been able, within short-story limits, to stamp Mulvaney and his commensals with so much individuality speaks volumes for his natural abilities in a perilous endeavor. Nevertheless, as the writer of a dozen or more volumes, and having in view the striking effects he has produced, it is worth noting that Kipling's contribution to fictional portraiture has not been large."

It is curious and amusing, says the writer, "to see how current novels are heralded with trumpets of prophecy and followed by columnar eulogies, when, in this article of character truly alive, they are *nil*." Professor Burton instances "Aylwin" as an example of this class—a story, he says, containing romantic poetry of a strained, fantastic, morbid kind, but in characterization a failure. He continues:

"It really seems as if, with the rapidly increasing skill in the other technical points of novelistic art, this potent, this supreme power of characterization were in danger of its life. Is it that our story-tellers lack gift, genius, or simply that, in the care spent upon analysis or construction, description or style, or all of them, they have lost sight of the most vital element in any and all fiction? Or is it again—very plausible this—that problem and principle have led our fictionists somewhat away from their straight-away actions of flesh-and-blood folk? The pessimist will incline toward the easy solution, concluding that it is all a question of ability; that we have fallen on little days, if not evil; that when the gods go, the half-gods arrive. Genius was of yore; now is the time of carefully cultivated talents. But the student of social history, and literature in its relation thereto, will prefer to see in the wonderful development of the art of fiction during the last quarter-century a more essential cause for the temporary abeyance in the power of creating salient, unforgettable characters."

A NUMBER of new books by prominent authors are promised in London shortly. There are novels by Zangwill, Wells, Mrs. Craigie, and Gissing, and a translation of Zola's "Fécondité." A timely novel is "The Colossus" by Morley Roberts, the hero of which is Mr. Cecil Rhodes.

SWINBURNE'S NEW DRAMA.

It is not often in the history of literature that so complete a reversal of an author's earlier literary principles is observed as in the case of Charles Algernon Swinburne's new play of "Rosamund, Queen of the Lombards." Swinburne, the ultra-romanticist, has here become an ultra-classicist of the school of Racine. The unities of place and time are in the main followed, while the classicism of its style appears in its courtly, calm tone, and in a sentiment which at times seems to reveal the red-heeled shoes and periwigs of the court of the *Grand Monarch*. Yet the style is not ornate; both speeches and words are for the most part short and crisp, with occasionally a lyric note. For his plot, Mr. Swinburne has gone to Gibbon. The following outline of the story we condense from the *London Chronicle* (October 26):

We are in Verona in the month of June A. D. 573; and the heat of an Italian summer parches the air. Enter *King Albovine* and his master in the art of war, now his friend and counselor, the old *Narsetes*. The King has a delicate question to propound to his Prime Minister:

I am fain
And loth to tell thee how it wrings my heart
That now this hard-eyed heavy southern sun
Hath wrought its will upon us all a year,
And yet I know not if my wife be mine. . . .
The devil and God are crying in either ear
One murderous word forever, night and day,
Dark day and deadly night and deadly day,
Can she love thee who slewest her father?

Narsetes is not prepared with a definite answer to this query, but the tenor of his discourse is reassuring:

Hadst thou slain her sire
Shamefully, shame were thine to have sought her hand,
And shame were hers to love thee. but he died
Manfully, by thy mightier hand than his
Manfully mastered.

Therefore *Narsetes* is inclined to think that *Rosamund* bears no malice, but is grateful to the conqueror for having made her his queen instead of his mistress. But *Albovine* is not satisfied:

He or I,
Her lord or sire, which hath most part in her,
This hour shall try between us.

On the words "between us," *Rosamund* enters. She wishes to arrange a marriage between her handmaid *Hildegard* and her husband's favorite warrior, the young *Almachildes*. *Albovine* has no objection in the world; and that is all we learn from the scene.

At the very beginning of the banquet which follows, the King springs upon her his test of her love, by bidding her pledge him in a cup made from her father's skull. She drinks the heady draft, and comports herself in general with a submissiveness which we can not but feel to be ominous; but this feeling depends on an outside knowledge of the theme rather than on anything Mr. Swinburne has as yet revealed to us about his heroine.

A soliloquy at the beginning of the second act, however, places it beyond all doubt that she now hates "the man her husband" and burns to be revenged. And this is how she sets about it. She summons her maid, *Hildegard*, and makes her swear a solemn oath to do whatever she bids her.

Hildegard having complied, the Queen proceeds:

Thou shalt bid thine Almachildes come
And speak with thee by nightfall. Say, the Queen
Will give not up the maiden so beloved
—And truth it is, I love thee—willingly
To the arms of one her husband loves: but were it
Shame, utter shame, that he should wed not her.
The shamefast queen could choose not. Then shall he
Plead. Then shalt thou turn gentler than the snow
That softens at the strong sun's kiss, and yield.
But needs must night be closed about your love,
And darkness whet your kisses. Light were death.
Hast thou no heart to guess now? Fear not then.
Not thou but I must put on shame. I lack
A hand for mine to grasp and strike with. His
I have chosen.

So said, so done. *Hildegard* gives *Almachildes* an assignation for that night; and the *Almachildes* is very much shocked to find her in this on-coming mood, and suspects from "the rose-

bright anguish of her face" that she is not quite a free agent in the matter, the Queen heartens him to accept her challenge.

At the end of the second act, the "bell rings softly from within," and *Almachildes* enters the chamber, where, of course, not *Hildegard* but *Rosamund* herself awaits him.

Almachildes, however, is the pink of chivalrous propriety. When he sees the trap into which he has fallen, and that *Hildegard's* safety requires it, he agrees to assassinate the King at *Rosamund's* command; altho it must be said that the logic of the situation is not so clear to the reader as to the playwright. After many delays in the course of the action, *Almachildes* stabs *Albovine*, the King, and *Rosamund* drinks a poisoned draft from the cup made from her father's skull.

The Athenæum (October 28) remarks that the most conspicuous quality in the play is a native strength less draped and concealed than in previous plays by Mr. Swinburne.

It says:

"This is the first time in which the outlines have been left to show themselves in all their sharpness. Development or experiment, whichever it may be, this resolute simplicity brings a new quality into Mr. Swinburne's work, and a quality full of dramatic possibilities. All the luxuriousness of his verse has gone, and the lines ring like sword clashing against sword. These savage and simple people of the sixth century do not turn over their thoughts before concentrating them into words, and they do not speak except to tell their thoughts. . . . As in the time of the great first volume of 'Poems and Ballads,' Mr. Swinburne is still drawn to

see

What fools God's anger makes of men.

He has never been a philosophical thinker, but he has acquired the equivalent of a philosophy through his faithfulness to a single outlook upon human life and destiny. And in this brief and burning play, more than in much of his later writing, we find the reflection of that unique temperament, to which real things are so abstract, and abstract things so colored and tangible: a temperament in which there is almost too much poetry for a poet—as pure gold, to be worked in, needs to be mingled with alloy."

NOTES.

THE new novel by Mr. Stanley Waterloo dealing with Christian Science will be entitled "The Seekers," and will appear shortly.

A NEW and complete edition of the works of Robert G. Ingersoll is in press, to be known as the Dresden Edition. It is in twelve volumes, illustrated with etchings, half-tones, and photogravures. The edition will be the only complete and authorized one, and is prepared under the supervision of Mr. Ingersoll's family from his private notes, manuscripts, and other literary memoranda.

THE failure of "The Christian" in London has been attributed to the dislike of the British for anything of a "sacred" nature upon the stage. Yet this hardly seems a true explanation, for Mr. Wilson Barrett's revival of "The Sign of the Cross" at the Lyceum Theatre last month, characterized in *The Westminster Gazette* as that "ingenious mixture of martyrs and melodrama," met a favorable, even enthusiastic, welcome.

A NEW novel by Mrs. Humphry Ward, upon which she has been occupied for more than a year, is to appear in *Harper's Magazine*, beginning with the January issue. It deals with contemporary thought in political and religious subjects, but the chief theme is a love story. The scene is to be chiefly in a vast villa on the Campagna, but the Eternal City is throughout a haunting presence. Mrs. Ward spent last winter in Rome to perfect the local color of her story.

ALGERNON CHARLES SWINBURNE.

SCIENCE AND INVENTION.

WHAT IS DEATH?—A PHYSIOLOGICAL VIEW.

TO say that death is the separation of soul and body, is to give what sounds like a theological rather than a physiological definition. Yet this is the final definition that is reached by Dr. Leon Meunier, after treating the question strictly from the physiologist's point of view. While thus acknowledging the existence of the soul, Dr. Meunier, who writes (in *Cosmos*, Paris, November 18) on "The Causes and Mechanism of Death," asserts that the soul and body can not separate until certain physiological conditions are fulfilled, and his endeavor is to ascertain and describe what the nature of these conditions is. Most modern physiologists tell us that these conditions differ, according as the organism in question is composed of a single cell or of a complex union of cells; some go so far as to deny that the one-celled organisms can properly die. With a union of cells, such as man, they tell us that the combination may die while many of its elements live on, and they recognize two kinds of death—cell-death and body death. Dr. Meunier asserts, on the authority of the most recent thought and investigation, that these are one in essence. He says:

"When we study the phenomenon of death, the only true variety—that found among living organized beings—we must first, to get an idea of its mechanism, study it among simple unicellular organisms. Some writers have asserted that these have a kind of immortality.

"Professor Weismann, of Friburg, has thus formulated this opinion: Death, he says, is not a primitive attribute of living matter; it is of secondary origin. There are animals that never die; for instance, infusoria and rhizopods and in general all unicellular organisms. An ameba divides into two almost equal parts, each of which continues to live and later divides again, so that there is never any corpse. Death appears only among pluricellular organisms with differentiated cellules [and is then] based solely on utility. . . . Used-up individuals must give place, for the good of the species, to healthy ones. Hence we must regard death as an opportune institution, not as a necessity of life."

This view of Weismann's, which has become quite celebrated among students of biology, has called forth a great deal of comment. It is asserted by a French critic, Dr. Ferrand, to be founded on an error of observation. Says Dr. Meunier, citing this author:

"M. Maupas, in his investigation of the multiplication of the ciliated infusoria by fission, has shown that the reproduction of these organisms by fission, extended tho it may seem to be, has its limits; sooner or later it gives rise only to imperfect individuals which are incapable of perpetuating themselves without recourse to a process comparable to that of fecundation among pluricellular beings, and Delbœuf, who has discussed these facts in the *Revue Philosophique*, has shown how little value must be attached to them."

In man and other higher organisms, the author goes on to say, death is a destruction of coordination among the cellular elements. These elements do not die at the same time and may even take up an independent course of life. The classical assertion that death must take place through heart, lungs, or brain is inexact, Dr. Meunier tells us. Suppression of the functions of any one of these organs may indeed cause death, but only when prolonged. As to the unicellular organisms, they die with the destruction of their correspondence with the nutritive elements in the surrounding medium. This may be lost by the action of chemical, physical, or mechanical agents. The most frequent general cause of death in animals is the poisoning of the cells by the nutritive medium. According to Dr. Barth, a recent writer, this may take place in various ways. For instance, the blood

may not be able to bring to the cells the matter for their renovation, because of inanition or indigestion; in other words, assimilation does not take place. Or, owing to lung or heart trouble, oxygen in sufficient quantities is not brought to the cells, and poisoning by carbonic oxid takes place. Again, failure of nutrition may result in the accumulation of all sorts of waste products in the tissues, preventing the throwing off of useless substance from the cells. This may result from injury to the large glands, such as the liver or the kidneys. Thus the mechanism of death can always be traced back to one source, both in the simplest organisms and in the highest, namely, cell-poisoning. Dr. Barth is quoted on this point as follows:

"Modifying the usual formula, we may say then: Death is the result of an arrest of cellular nutrition, the protoplasm either becoming incapable of giving rise to the double movement of assimilation and disassimilation, or the medium in which the cells exist undergoing modifications that render exchanges impossible.

"The arrest of nutrition is a general phenomenon that is applicable to all creatures. With all it takes place by one of the two mechanisms indicated above, but in the higher organisms it is produced in more and more complex conditions, corresponding to the increasing complexity of the apparatus charged with keeping up the activity of the protoplasm and with the renovation of the organic environment."

Dr. Meunier makes the following comment in closing:

"As the catechism teaches us, death is characterized by the separation of soul and body; but we must recognize the fact that it begins with a condition of the organs that renders them incapable of following and manifesting the will of their master. Life may be only suspended; death becomes definitive when the cellular elements, profoundly altered, are positively unable to obey any longer."—*Translation made for THE LITERARY DIGEST.*

A NEW SOUND.

WHAT the inventor describes as "a new sound" is produced by a device just patented by Prof. Elisha Gray, whose work in connection with the invention of the telephone is well known. The sound discovered by Professor Gray is produced by a new method of ringing a bell by means of magnets, and he claims that it is especially adapted to submarine telegraphy. At present, bells are always rung by the impact of a tongue, a hammer, or the like; but in Professor Gray's invention there is no blow at all on the bell. Says *The Electrical World and Engineer* in describing the new device:

"The method consists, briefly, in exciting magnets in relation to a bell, with currents of a frequency corresponding to the distinctive vibratory rate of the bell; the magnetic force thus tuned is caused by appropriate means to produce at regular intervals a deformation of the shape of the bell, thus resulting in its vibration. The receiver consists of a stretched steel plate located at a distance and tuned to respond to the vibrations transmitted through the water; a telephone attachment in turn taking up the vibrations, which may be broken in continuity to correspond to the Morse code, and rendering them audible in the ordinary telephone-receiver

"As is well known, in sounding a bell by means of a blow, much of the energy applied is expended in setting up objectionable overtones. By the electromagnetic means proposed by Professor Gray, only such vibrations will be set up as correspond to the normal note of the bell, a pure tone thus being produced which, indeed, the inventor calls 'a new sound.' The patent gives no indication as to the distances through which messages may be transmitted in the manner proposed, and practical experiments on the system will be looked forward to with much interest. . . . As applied to the purpose mentioned, the bell sounds only when the speed of the alternator corresponds to the normal vibratory rate of the bell, and a delicate governing attachment to the machine may be adjusted until the sounding of the bell indicates that the proper speed is secured, after which the mechanism is presumed automatically to maintain such speed."

REMODELING THE FACE OF THE GLOBE.

THE way in which man is altering and—as he believes—improving the physical surface of the earth, is described in a recent article by a writer who thinks that what has been done in this direction is “but an infinitesimal fraction of that which may, and doubtless will, be done.” Some of the ways in which man has been modifying or proposes to modify the physical geography of the planet on which he lives are described in the paragraphs quoted below (*Daily Mail*, London). The writer begins by predicting the future transformation of the Sahara Desert into an inland sea. He says:

“A canal, sixty miles long, connecting with the Atlantic the vast depression which runs close up to the coast nearly midway between the twentieth and thirtieth parallels of latitude, would do the business beautifully. The water would not, of course, cover the entire surface of the desert; here and there are portions lying above the sea level. These would become the islands of the new Sahara Ocean.

“What would be the results that would ensue upon this stupendous transformation? Some would be good and some bad. Among the latter may be mentioned the probable destruction of the vineyards of Southern Europe, which depend for their existence upon the warm, dry winds from the great African desert. As some compensation for this, however, the mercantile marines of the nations affected would be enabled to gain immediate and easy access to vast regions now given over to barbarism, and a series of more or less flourishing seaport towns would spring up all along the southern borders of Morocco and Algeria, where the western watershed of the Nile sinks into the desert, and on the northern frontier of the Kongo Free State.

“In a similar manner the greater portion of the central Australian desert, covering an area of fully a million square miles, might be flooded. The island continent would then be reconverted into a gigantic atoll, and would resemble, roughly, an oval dish, of which the depressed central portion would be covered with water and only the ‘rim’ inhabited. In this connection it may be interesting to note that a company has actually been formed for submerging the Yuma desert in Southern California. If the plan as at present proposed is carried out, a tract of absolutely uninhabitable territory comprising nearly 13,000 square miles, and the greater portion of which lies between 500 and 1,000 feet below sea-level, will be submerged.”

But engineering science can transform fertile land into a desert as well as accomplish the opposite feat. The same writer believes that if the French had been allowed to get possession of the Su lan they might—or at least they could—have diverted the Nile and thus depopulated Upper Egypt. With regard to diversion of the Nile he says further:

“It has even been suggested that it might be possible—by turning its waters into one of the many lateral ravines which run at right angles to the present course of the river—to find a new outlet for it into the Red Sea, and thereby to transform, in process of time, that sheet of water into a great fresh-water lake. To accomplish this it would, of course, be necessary to build a giant dam across the southern ‘neck’ near Perim, and to regulate, or rather stop altogether, the inward flow of the Mediterranean through the Suez Canal—a big task, but one not impossible of accomplishment.”

Brief reference is made to the Panama and Nicaraguan canals, and the French ‘war canal’ between the mouths of the Loire and the Rhone, which, when completed, will enable ironclads to dodge round behind Gibraltar when passing from the Atlantic to the Mediterranean, or *vice versa*. The writer then goes on to say:

“But it is the comparatively little engineering feats which have slowly but surely altered in the past and will alter in the future the face of the earth. Even so small a matter, for instance, as the proposed sea-wall at Southend will certainly deepen the estuary of the Thames, and may conceivably do away with the Goodwin Sands.

“A scheme was recently mooted to cut a ship canal through the

center of Ireland, beginning at Dublin and finishing at Galway. It would be no very difficult feat to accomplish, for most of the country through which it would pass is flat and boggy.

“But just consider the result. Ireland would no longer be one island, but two, and many of the best of Moore’s melodies would have to be rewritten. To allude to ‘Erin’s green isle’ would be a palpable misnomer. Even this, however, would be better than to have our own ‘silver Thames’ transformed into a huge ditch, with ocean ‘greyhounds’ and ‘tramp’ cargo steamers belching smoke through Cliveden woods or over Cookham village.

“Yet such an eventuality is by no means impossible, for it has already been bruited to construct a ship canal from Bristol to London by way of the Severn and the Thames.”

ANOTHER PREDECESSOR OF MARCONI?

PIONEERS in wireless telegraphy are now cropping up in various quarters. As those who have looked up the subject know, many experimenters have tried, with more or less success, almost ever since the introduction of telegraphy, to dispense with conducting wires. The transmission of waves of electromagnetic induction on a large scale being a thing of recent years, most of these early workers tried to utilize the earth, water, or atmosphere as a conductor. These attempts are now cropping out in the newspapers. For one American experimenter, Mahlon Loomis, the claim is made in *The Evening Star* (Washington, November 18) by William Jones Rhees, that he actually telegraphed by air-conduction from kites over distances comparable with those now traversed by the Marconi system. Says Mr. Rhees:

“On the 30th of July, 1872, a patent was granted by the United States Government to Mahlon Loomis of Washington, D. C., for a new and improved mode of telegraphing, and of generating light, heat, and motive power. This patent declares the invention or discovery to consist in utilizing natural electricity and establishing an electrical current or circuit for telegraphic and other purposes without the aid of wires, artificial batteries, or cables to form such circuit. It was further described as dispensing with the usual wires and in using the earth as one half of the circuit and the continuous electrical element far above the earth’s surface for the other part of the circuit. The means provided for reaching the upper stratum of electricity was the erection of towers, high poles, kites, or other apparatus on mountains or hill-tops or elevated places.

“Loomis, having procured his patent, endeavored to secure financial aid to put his plan into practical operation, but he met with jeers, rebuffs, and opposition alike from the scientist, the capitalist, and especially the telegraph companies. He succeeded, however, in enlisting the sympathy of several Congressmen and in demonstrating by actual experiment in the summer of 1872 by telegraphing between two distant stations fourteen miles apart, without wires, on spurs of the Blue Ridge, Virginia, by elevating a kite on each mountain, the string of which was a small copper wire attached to a galvanometer, each ground end lying in water.”

Mr. Rhees substantiates his statements by quotations from papers contemporary with Mr. Loomis’s experiments. The *Washington Chronicle* (November 10, 1872) said:

“Loomis’s aerial system has just been tried on lines of different lengths, with variable, but perfectly satisfactory, results. On a line of 400 miles lineal distance (500 miles circuit) the tests were perfectly satisfactory at an elevation of 2,100 feet. At a mountain elevation of 1,200 feet the tests and results were very strong at a distance of fourteen miles. These experiments were made simply by kites covered with fine, light gauze wire of copper, held with a very fine string or tether of the same material, the lower end of which formed good connection with the ground by lying in coil in a pool of water.

“Two galvanometers were in circuit connection at the two different stations, and each impulse or indication was as perfect as that of the Atlantic cable, tho requiring very nice manipulation.”

From the *Hartford Times* (no date given) Mr. Rhees reproduces the following:

"Loomis built a kind of a telescopic tower at the top of two high hilltops, about twenty miles distant, and from them put up a steel rod, by which a certain aerial current of electricity was reached. For months at a time he has been able to telegraph from one tower to another. . . . Of late he has done all his talking to his assistant, twenty miles away from him, the connection being aerial only."

Loomis asked Congress for \$50,000 to aid him in his work, but was unsuccessful. Of course it is possible that the accounts quoted by Mr. Rhees are exaggerated or untrue. If they represent the facts, Professor Loomis was hardly a predecessor of Marconi, but rather of Tesla, who now claims to be able to telegraph by upper aerial conduction.

A CANADIAN GEOLOGIST.

SIR JOHN WILLIAM DAWSON, who died on November 29 at Montreal, was not only one of the best known of American geologists—using the word "American" in its continental sense—but he was particularly noteworthy as the originator of

SIR JOHN WILLIAM DAWSON.

one of the greatest of geological controversies—that concerning the so-called *Eozoön Canadense*. This was a peculiar mineral formation discovered by Professor Dawson in 1865 and declared by him to be a fossil, the remains of the earliest form of life of which any relics have been preserved to this day. His assertion found violent opponents and as earnest upholders, and the controversy waxed hot. It can scarcely be said to be closed even to-day, altho

the weight of authority inclines to the view that Professor Dawson's "fossil" is purely of mineral origin. By the reading public, he is even better known as a voluminous writer on geology, and on the relations between science and the Christian faith. From 1855 to 1893 he was principal of McGill University, Montreal.

Sir William was born in Pictou, N. S., in 1820. The following additional particulars of his life are from a notice in *The Times* (London, November 20): Recrossing the Atlantic after taking his M.A. degree in 1842 at Edinburgh, he returned to his native province, and spent some time in scientific exploration under Sir Charles Lyell's direction. After lecturing for a time on natural history at Dalhousie College, Halifax, he was made superintendent of education for the province. The progress of McGill University, since 1855, under his guidance has been marvelous. From a poor and struggling college McGill has grown into a richly endowed university with about thirteen hundred students and a prestige excelled in America [so *The Times* asserts] by that of Harvard alone. The scientific side of the university (except the medical faculty) may be described as Sir William Dawson's creation. He retired from the principalship in 1893. His Fellowship of the Royal Society dated from 1862. Twenty years later he received the Lyell medal of the London Geological Society; in 1884 he received the honor of K.C.M.G., having been made a Companion of the Order two years before; and in 1886 he acted as president of the British Association at its Birmingham meeting. He was the first president of the Royal

Society of Canada, and also served as president of the American Association for the Advancement of Science.

Sir William Dawson was a Presbyterian of the old school, and strongly opposed to all theories of the evolution of man from brute ancestors, nor would he allow anything more than a very moderate antiquity for the species. The study of geology, too, he would have emancipated from the control of "bald metaphysical conceptions," and, "above all, delivered from that materialistic infidelity which, by robbing nature of the spiritual element and of its presiding divinity, makes science dry, barren, and repulsive, diminishes its educational value, and even renders it less efficient for the purposes of practical research." In his geological work he was always interested more in the history of life than in mere rocks and minerals.

DANGERS OF COLLISION WITH A COMET.

AN alleged prediction of Prof. Rudolf Falb, the German meteorologist, that on November 13th last the earth would collide with Tempel's comet with fatal results, caused more or less stir last month, probably more in European countries than in America, where we are now so accustomed to the sensations served up by our "yellow" journals that we pay little serious attention to them. Professor Falb's prediction, in the sensational garb in which it has since appeared, has been formally disclaimed by the author himself, who explained that he had simply announced that the earth and the comet would be due at the same point in space on November 13. As to the possibility of serious results, he asserted that he did not believe in them. This statement may be regarded as justified by the event, the date having passed and our planet being still intact. In an article in *The Fortnightly Review* (November), Edward Vincent Heward notes that this comet-collision scare is an old one. It is almost certain, in fact, that every time the earth passes through one of the great meteor swarms, it in effect collides with a comet, the remarkable shower of November 27, 1872, having been pretty well identified with one of the fragments of Biela's comet. Says Mr. Heward:

"Already seventy cases of agreement are known where the motions of comets and meteors are identical. These demonstrations led Professor Tait to embody the theory, originated by Schiaparelli, in an exhaustive treatise, showing that comets, so far as they have been minutely observed, consist of an aggregation of meteorites; and as regards their chemical constituents, spectrum analysis, conducted by Dr., now Sir William, Huggins, and the veteran pioneer in astronomical research, Sir Norman Lockyer, has yielded results precisely similar to those obtained by Dr. Flight by chemical analysis of meteor-stones; they are identical, showing in each case carbon, hydrogen, and sodium.

"Now we are free to consider what importance to attach to the learned professor's timely prediction concerning the celestial wanderer, known as Tempel's comet, whose visit, in the silent watches of the night, we are bidden to prepare for. What else can be said than that so exalted an apparition—a Lucifer shedding tears of sorrow upon a sinful world—will be everywhere greeted with uplifted admiring eyes? For, rightly considered, does it not resolve itself into the simple question of—Shall we sit up to see the meteor-shower? And 'Biela' is no longer a menacing comet; astronomers are perfectly satisfied of its disintegration—that it is broken up, scattered in the meteor-stream which pursues its track, called the Andromede."

But are all comets alike? May there not be dangerous ones as well as harmless ones—masses of rock or globes of noxious gas, as well as mere swarms of stones? It is highly probable that this is the case. To quote again:

"It may not be prudent to generalize freely where theory rather than actually assured experience is our guide. If comets exist, the substance of which seems entirely gaseous and so transparent that small stars remain visible through them, there are others which give evidence of possessing a dense, compact nucleus, since their light has been strong enough to be seen in the day-

time, even when so close to the sun as to be apparently involved in his atmosphere. This happened in the case of the great comet of 1843, when, on the 28th of February, it was visible in full daylight near the sun's limb. A similar instance occurred in 1847, with the one discovered by Mr. Hind, which shone so brilliantly that it was observed at noonday, and for several hours afterward, within two degrees from the sun."

Those who are fond of indulging in "comet scares" need not, therefore, lack material for this amusement, since, if we may credit the physicists, the earth's collision with a solid celestial body of any considerable size would probably leave its inhabitants little opportunity for reflection after the event.

CAN LIFE BE CHEMICALLY PRODUCED?

WHAT is boldly called the "chemical production of life" is announced by the daily press to have been accomplished at the Marine Biological Station at Wood's Holl, Mass., by Prof. Jacques Loeb, of the University of California. Shorn of all sensational and poetic diction, the statement is that Professor Loeb has chemically fertilized the eggs of "sea-urchins," and has hatched the eggs so fertilized. His experiments are thus described in the *Boston Herald*:

"The experiments were performed during the last summer and fall. Professor Norman, of Texas University, had already shown that the eggs of certain marine animals, when unfertilized, had tendency to develop when sodium or magnesium was added to the sea-water in which they were. Following this out, Professor Loeb began experiments with the sea-urchin, a common marine animal, the male and female of which, as of fishes, are separate individuals. The unfertilized eggs of this animal Professor Loeb subjected to a solution of sodium and magnesium, and within two hours they hatched, producing 'blastulae,' or the first larvæ. Placed in normal sea-water, these developed into 'gastrulae' and then into 'plutei,' the latter bearing the same relation to a sea-urchin as a tadpole to a frog. Further experiments convinced the scientist that only the presence of calcium and potassium in the sea-water prevented the development of all unfertilized eggs, and that all the milt deposited by the male needed to do was to overcome the effect of these chemicals.

"Professor Loeb's announcement of his experiments, and the belief to which he is forced, practically establish a new theory of the reproduction of species. According to this, the union of two elements is not necessary for reproduction, but any cell may divide and reproduce. This throws at once what may be a most important light on the subject of cancers and of dermoid cysts. It becomes possible, and indeed almost unavoidable of belief, that these are abnormal attempts at reproduction, due to local lack of that chemical element necessary to restrain the cells from dividing and developing. Scientists at Wood's Holl have taken up this side of the question with eagerness, and are making experiments to find in how large measure this is true, and whether it may not lead to the discovery of a cure."

Professor Loeb is quoted as making to a reporter the following statement regarding his work:

"The development of the unfertilized egg, that is an assured fact. I believe an immaculate conception may be a natural result of unusual but natural causes. The less a scientist says about that now the better. It is a wonderful subject, and in many ways an awful one. That the human species may be made artificially to reproduce itself by the withdrawal of chemical restraint by other than natural means is a matter we do not like to contemplate.

"But we have drawn a great step nearer to the chemical theory of life, and may already see ahead of us the day when a scientist, experimenting with chemicals in a test-tube, may see them unite and form a substance which shall live and move and reproduce itself. It will be the first protoplasmic cell, the origin of all life, which was produced in the test-tube of nature ages ago by the union, in the course of the world's evolution, of the same chemical substances with which he will have worked."

Numerous comments on Professor Loeb's discovery made by

prominent biologists are gathered into an editorial in the *Topeka Capital* (November 23). According to this paper, Professor Gage, of Cornell, speaks of it as follows:

"The development of animals by parthenogenesis—that is, without fertilization—is a well-known phenomenon in nature. It is found in animals, even so high in the scale as the honey-bee. Judging from the results of researches already made in experimental embryology, it does not seem incredible that parthenogenesis might be brought about experimentally in simple animals; but that the method will ever succeed with the higher ones and with man probably the most enthusiastic experimenter would doubt."

Professor McCloskie, of Princeton, says:

"The question is still in a tentative stage. Recent investigations have rather gone in favor of it. The unfertilized eggs of both animals and plants have been found to produce embryos, but usually the vitality of these has been short, and the real question may be one of nutrition, as it is very difficult in experiments to rear the young artificially."

Professor Loeb's results, if they are as represented, are certainly noteworthy and may even prove epoch-making, altho it does not quite follow from the chemical fertilization of a sea-urchin's egg that a human infant will ever be shaken out of a test-tube. The professor is a German, born in 1859 and educated at Berlin, Munich, and Strassburg universities. He came to this country in 1891, and, before accepting his present post, occupied chairs at Bryn Mawr and Chicago.

Nutritive Value of Fruits.—Some recent investigations on this subject by M. Ballaud, a French authority, who reported his results recently to the Paris Academy of Sciences, are described. After telling the results of M. Ballaud's analyses of different fruits and nuts, *La Nature* thus states his conclusions:

"With rare exceptions, M. Ballaud concludes, fruits have very slight nutritive value and can not be considered as foods at all. Their juices, which please us more or less by their odor, their flavor, or their acidity, play rather the part of condiments."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

SOME genius has invented an electrical horse-whip, so constructed as to give a slight electric shock to the animal. "The handle," says *Electricity*, "which is made of celluloid, contains a small induction-coil and battery, the circuit being closed by means of a push-button. The extremity of the whip consists of two small copper plates insulated from each other, each of which is provided with a tiny point. The plates are connected to the induction-coil by means of a couple of fine insulated wires."

"THE trouble with Marconi," recently said Rear-Admiral Bradford, chief of the equipment bureau of the United States navy, as reported by *The Marine Review*, November 23, "is that he will not sell his instruments outright, but wants to dispose of them at a good stiff price and then in addition wants a heavy royalty of so much per annum. His figures are up in the thousands. . . . How valuable the system would be to the navy I am not prepared to say, but Marconi asks too large a price at present for his instruments. It may be that later we can come to some understanding and secure some of his machines." With regard to the United States army, a note in *Science* states that it is "not dependent on Marconi for instruments, having developed a system of its own, and the work will be pushed with vigor when Congress furnishes the necessary means."

A VERY practical idea of the difference between city and country air has been given in a recent paper contributed to *The Transactions of the British Institute of Preventive Medicine*, as quoted in *The Sanitarian*. The author states that, "even in a suburb, the dust particles number some 20,000 per cubic centimeter in the open air, and 44,000 in a quiet room; while in the city the totals per cubic centimeter were 300,000 when taken from a roof, 300,000 in a court, and about 400,000 in a room; in other words, the air of the square mile is 600 per cent. thicker than in the suburbs, which is in accord with the general experience that fogs are both more dense and more frequent over the center than in the outskirts. But what is especially interesting in this remarkable paper is the statement that, the dust is the great carrier of microorganisms, there is only one of these per 35,000,000 of dust atoms. This being so, it is calculated that a man could live in the metropolis for seventy years and absorb only some 75,000,000 of microbes into his system from the air, or about the same number as he drinks in half a pint of unboiled milk."

THE RELIGIOUS WORLD.

A CATHOLIC'S DEFENSE OF THE CONFESSIONAL.

NO institution has aroused more deep-seated antagonism than the confessional or "sacrament of penance," as practised in the Roman Catholic, Oriental, and Anglican churches. It is regarded by its opponents as an invasion of the individual conscience, a source of weakness to the will, a desecration of the privacy of domestic life, and a dangerous tool of priestcraft. But the Rev. R. F. Clarke, of the Society of Jesus, speaking from a long and intimate experience of the workings of the confessional, says that it is none of these. It has manifold advantages to the individual and to society, he says, and has its source in a fundamental need. Writing in *The North American Review* (December), he says:

"The natural origin and fountain-head of confession is to be found in an instinct of human nature, which leads us to communicate to others any strong emotion present to the soul, any powerful influence engendering in us joy or sorrow, hope or fear, self-approbation or self-reproach. If some counter motive render concealment necessary, the suppression will be painful to us, and will aggravate our suffering, where the influence present to the soul is one unfavorable to its happiness. Now, a sense of guilt is, of all emotions which affect the soul, the one which causes the most deeply-rooted misery, and is the most destructive of all true peace. Shame, self-reproach, fear, remorse, disgust at the thought of the past, and despondency at the prospect of the future, all combine to make life almost intolerable. The desire to exterminate that which is the source of our mental suffering sometimes becomes irresistible. The story of Eugene Aram is an instance in point, as is that of the murderer who approached the cradle of his victim's infant in order that he might whisper to a human ear the crime that he could no longer bear in silence. Probably most of my readers have, in the course of their lives, listened to the confidences of some friend or acquaintance who poured forth, in the gloaming or by the dull firelight, the honest and self-accusing story of his past misdeeds. I am not concerned with the source of this curious instinct of self-revelation, but the fact of the relief that it affords to the heavily burdened soul is undeniable. It certainly is much stronger among Christians than among those who belong to other religions; and the reason of this is that the sense of the evil of sin is far more keen in those who believe in the Incarnation and death of the Son of God. Almost every revival of religion, outside the Catholic Church, has been accompanied with some form or other of public or private confession. The early Wesleyans related in public their religious 'experiences,' and the leaders of the evangelical movement at the beginning of the present century received from their disciples a 'manifestation of conscience' that was little else than a confession of their sins. The rapid growth of the practise of confession among the Ritualists is not a mere imitation of Rome, but is the natural outcome of their religious earnestness and sincerity."

Aside from its purely religious significance, says Father Clarke, the confessional furnishes practical benefits of a high order in the counsel it provides to all who are in any intellectual or moral perplexity or distress:

"In all such cases the confessional furnishes a counselor who is perfectly unprejudiced, whose one and only desire is to promote the happiness and well-being of his penitent, who speaks with the authority belonging to his office, whose long experience gives weight to his words, and who, above all, knows the severe account that Almighty God will exact of him, and the awful responsibility of the task entrusted to him. He knows that if he swerves one hair's-breadth from the law of God in the advice given, out of any human respect, or desire to please, or any other inferior motive, he will be guilty of a great sin before God. What better means than this could possibly be devised for giving peace to troubled souls, or for settling doubts and difficulties that, to those who are entangled in them, often seem insoluble? I do not mean to say that the confessor is infallible, or may not judge

the case wrongly. But there is every possible chance that his judgment will be the right one, and that he will be able to give such advice as may release the perplexed conscience from its difficulties and dangers. My own experience is that seldom have I encountered any problem as to future action, however apparently hopeless, which did not admit of a solution that was not only practically possible, but that could be carried out without any very serious difficulty by the person asking advice."

THE PREMIER OF THE JEWISH WORLD.

THE Hebrew no longer looks to the holy city of Zion—hal-
lowed as that place still is to him—for authoritative utterances relating to his religion. It is the English Jew, long foremost not only in material prosperity but in culture and in-

DR. HERMANN ADLER.

tellectual energy, who may be said to hold the first place in the Jewish race at present. That at least is the opinion of Mr. Bayard C. Dixon, of London, who writes in *The Christian Herald* (November 13) as follows:

"So it has come to pass that the real leader of the race, the ecclesiastical head and representative of Judaism, so far as such an office can be said to exist, is the chief rabbi of the United Hebrew Congregations of the British empire. No other man among the Jewish people has a following so large, so wealthy, so influential as he, and the fact is now recognized not only in England and America, but in Germany, Russia, and Oriental lands. He possesses no authority over his race, but everywhere the holder of that office is held in reverence.

"The present incumbent of that high office, Dr. Hermann Adler, like his father and predecessor, Dr. Nathan Marcus Adler, is a man eminently fitted by his profound learning and brilliant talents to exercise leadership in the Jewish world. He is not only of the priestly tribe, but is the present head of a family of rabbis, famous through many generations for erudition and piety. The early origin of the family dates from Frankfort, in Germany, where tradition credits the Adlers with descent from the famous Rabbi Simeon, who early in the eleventh century compiled the *Yalkut*, the great treasury of Midrashic literature. Dr. Hermann Adler was born in Hanover, May 29, 1839, whence, in his sixth year, he emigrated with his father to London. He received his early education under Dr. Kalisch, the renowned Biblical

scholar, by whom he was prepared to enter the University of London. His career at this institution was exceptionally brilliant. . . . For the purpose of studying the Talmud he entered the University at Prague, where he studied under the famous Rabbi Rapoport and other well-known rabbis, who, when they conferred on him his rabbinical diploma, congratulated themselves on having ordained one of the most promising Hebrew students of modern times. In 1862 he entered the University of Leipsic, where he obtained his degree of Doctor of Philosophy. Returning to England, in 1864, he was appointed minister of the Bayswater Synagog, London, and held that post for twenty-seven years. His sermons constituted the principal features of the Sabbath services there, and attracted many persons outside the community of the Jewish faith."

In 1879 Dr. Adler was appointed coadjutor to his father with the title of delegate chief rabbi, and upon his father's death in 1890 he was elected to fill the vacant place. From the high position which he holds, as well as from his native force of character, he is a weighty factor in most social, industrial, charitable, and educational movements of the day in England.

A QUAKER'S DEFENSE OF THE HIGHER CRITICISM.

AN English member of the Society of Friends, Mr. John William Graham, of Manchester, sees nothing to fear in the religious outlook from the critical and theological readjustments brought about by the teachings of physical science and of Biblical study in this generation. "Science," he says, "can no more do without a creative mind than her sister Faith can. She can not even begin without Him whom her sister holds by the hand and perceives without being told that He is there." Religion owes not a little, he thinks, to the deeper and wider conceptions of the universe which science has brought us. He says (in *The Friends' Intelligencer*, November 4) :

"We may believe that science has richly paid us back, in a larger thought of the spirit behind creation, what she owed us by taking away creation stories in Genesis. There was a time, indeed, when it seemed as tho materialism was going to be the creed of science; that was in the sixties and seventies; it was a hasty forecast; but even the great men of that time, such as Huxley and Herbert Spencer, speak of the need of ascribing all to a spiritual power behind phenomena. Your materialist of to-day is not the man of science, but the *blasé* devotee of pleasure, the narrow type of man keen only on business; or the hopeless dullard who can not taste beyond his mouth."

So also with the work of historical and literary scholars upon the Bible; the destructive has made way for the constructive stage :

"It is not too much to say that modern critics have saved the Bible; saved it from becoming an honored classic to be talked about rather than read, and restored it to our intelligent comprehension. The Bible is now more read than ever it was, and that is something.

"Over the book a change has come comparable to the process of restoration of an ancient ecclesiastical edifice, covered formerly with a uniform coat of speckless and infallible whitewash, thickened and renewed by the devotion of generations, but totally obscuring the construction of the building and its features of real architectural interest, and hindering our comprehension of its past vicissitudes and of the thoughts of its builders. The earliest effect of a process of restoration is defacement, destruction, and plentiful dust. We can not just then worship in the church at all. But that epoch is now over, the dust has cleared from our eyes, the defacement is so complete that it no longer defaces, and the destruction is found to be only of later accretion. The building, with all its rugged edges, its patched-up gaps, and its evident repairs, is before us now, composed of many styles of architecture, with the enemy's cannon balls still sticking here and there in its masonry, and with the gargoyles, past spirits of terror, gaping from its spouts. Its often pathetic humanness opens the

treasures of our sympathy, and its lavish magnificence evokes our admiration. Knowledge of the Bible as it really is has become part of the durable stock of mankind. It will never be reversed or forgotten. The clergy know it, and their flocks soon will. George Fox and Robert Barclay would have rejoiced in it all, and except some rather modern whitewash of our own Friends have nothing to modify or remove. The claim for the mechanical infallibility of the Scriptures rests on less than any other great intellectual position known to me. It rests indeed on nothing but the ill-informed dicta of the bishops of the early centuries, and from those bishops Friends are in revolt on every kind of question.

"The Bible is inspired literature, and those who fear its comparison with other literature can hardly be those who appreciate most highly its unique value. As the sole record of the life of our Lord, if for no other reason, it can never be to us as other books are.

"To the faith in immortality modern investigation has added an important contribution, in the work of the Society for Psychical Research, whose five and twenty volumes of *Proceedings and Journal* constitute a body of organized knowledge not yet generally appreciated, but not wisely ignored. To my own mind the modern, first-hand, sober, tested evidence there accumulated testifies to the reality of immortality and of spiritual communication in various forms.

"Thus, to the great centers of religion, God, the Bible, and immortality, the modern spirit has brought strength, stability, and renewal."

"THE DISAPPOINTMENT OF OUR LORD JESUS CHRIST."

AN argument for church unity of unusual quality and comprehensiveness comes from the Rev. Algernon S. Crapsey, rector of a Protestant Episcopal church in Rochester, N. Y., who has been identified with a somewhat advanced school of Anglo-Catholicism. Following the same lines as those laid down in an article quoted in these columns from *The Outlook* (see THE LITERARY DIGEST, June 17), he holds that the coming century will witness a great unification of Christendom, but that it will not be doctrinal or ecclesiastical in its basis. Christ's prayer was for unity of all His followers, says Dr. Crapsey (in an address before the Canadian Society of Christian Unity at Toronto), and "the disappointment of our Lord Jesus Christ because His great prayer has not been answered, His own chosen people are not one," may well make us pause and think. Dr. Crapsey's opinion of the present religious condition of the world is quite different from that of Count Tolstoy. The world is, in a certain true sense, Christian, he thinks: "The great fact of present history is the domination of Christendom over the rest of the world." "It is not *the world* over which our Lord is at the present moment grieving—with the world at large He has every reason to be satisfied; it is *the Church* which has disappointed Him." "The Church is no longer a center of unity to the world because it has no unity in itself." "To-day the Christian religion seems to be the one disintegrating force in the world." *The Evangelist* (Presb., November 23) thus comments on Dr. Crapsey's address :

"These somewhat unexpected propositions are supported by a rather striking historic argument, in the course of which Mr. Crapsey shows that the disunion of Christendom is the outgrowth of two erroneous assumptions: that the Church's unity centers in her own official organization, an error shared alike by papal, Episcopal, and Presbyterian churches, and that the unity of the Church centers in her own formal doctrine. The two theories are themselves harmonious and both have worked together to disintegrate the Church and to disappoint the Lord. The second principle has, however, been far more disintegrating in its tendency than the first.

"The historic argument is briefly this. In the first four Christian centuries the Church was really one; Christian unity was a fact because the main purpose of the Church was a moral purpose—to discipline life, to make men pure and just and kind. In this

she succeeded marvelously; the moral renovation of society during these centuries is something beyond all else that the history of civilization has to show. But since that time 'the main purpose of the Church has been to discipline intellect,' and here began the disintegrating process; the unity of the Church was gone.

"It would be too long to follow Mr. Crapsey through his study of the progress of the attempt to discipline the human intellect through the ever more and more precise formulation of doctrine, and of the revolt of the intellect against this discipline. That revolt has been successful since the Renaissance in the realm of art and letters, and since the dawn of science, a period in the realm of physical fact. There still remains that realm of thought which has to do with man's relation to God and to the world to come, and here the official organization of the Church, whatever its form or name, is still dominant, and here, therefore, the revolt is still active. 'Two consequences follow. A certain number of men question, and the official organization condones [condemns?] them and casts them out; the vast unthinking mass do not question, and to them the statements are as dead letters, they are received but they are not assimilated.' Up to this time the reply of the Church to this revolt has been a new attempt to control the intellect, by a more elaborate and accurate definition of the articles of faith."

The Evangelist remarks that this thought has much suggestiveness for Presbyterians, whose General Assembly has twice within a few years restated and more closely defined the doctrines of Presbyterianism, yet "its tendency was just so far divisive as its statements were more precise or more sweeping than the creed it professed to interpret." *The Evangelist* continues:

"But tho there is no hope of centering the Church in her own intellectual statements, there is still a hope of the unity of the Church in a love of truth and in a realization of God. 'Already there is a great unity in which all Christians are one. It is a union in God.' To this unity two elements must cooperate: 'absolute intellectual freedom within the Church' and 'the restoration of the Church's moral discipline as the only true basis of her spiritual life.'"

"How this moral discipline is to be exercised Mr. Crapsey does not say, but he would doubtless refer us to the example of the early Church for his reply. It was the flashing of moral light into the human soul that drove out moral darkness, and with this went the stern refusal to fellowship with those who were not in fellowship with Christ in pure and honest and upright living.

"It would be difficult to imagine what Christendom would be like if a great zeal for morality of life should suddenly displace the present zeal for conformity to doctrinal standards; whereof no man should be called to suffer for his opinions, but every man should be held to strict account for his conduct; if the right to investigate, to ascertain and correctly estimate 'the entire content of Christian tradition, both oral and written,' should be recognized, but no man of dubious morals or of questionable integrity should be reckoned a brother. Society would be as much transformed as it was in the early centuries when the Christian religion wrought so marvelous a change."

These views of Dr. Crapsey meet with warm approval from *The Outlook* (December 2). It says:

"Equally true, but still more remarkable, is Mr. Crapsey's declaration that 'the great need of the Church is not an Apostolic succession, but a succession of Apostles,' and his insistence on 'the pastoral rather than the priestly conception of the ministry.' The only true basis of the Church's spiritual life he holds to be in her moral discipline, from which she turned in the fourth century to the discipline of intellect. That pristine zeal for moral purity must now be restored; only so will unity be restored. As for Christian doctrine, Dr. Crapsey demands its restatement, so as to accord both with the facts of the universe and with the primal instincts of the heart for justice, mercy, and truth. The entire content of Christian tradition must be subjected to the trained intelligence, and there must be absolute intellectual freedom within the Church. These views, not unfamiliar to the readers of *The Outlook*, it rejoices to welcome from one who presents them so forcibly and whose presentation of them is so full of significance."

BUDDHIST MISSIONARIES IN SAN FRANCISCO.

THE Sbin-shu, or "Sect of Truth," the most influential of the Japanese Buddhists, has decided to extend its missionary work to the United States. Already it has missionaries in China, Korea, the Malay peninsula, Hawaii, and other countries, and its adherents are everywhere distinguished by great zeal. Now it has decided to "turn to the Gentiles" of the West. Says Dr. Paul Carus (in *The Open Court*, December):

"Dr. S. Sonoda and the Rev. K. Nishijima, educated at the Buddhist University of Kyoto, called 'Hongwanji Daigakurin,' have arrived in San Francisco, and as a first step in their work propose to gather round them their coreligionists in the Japanese community of that city. They have taken their headquarters at No. 807 Polk Street, and were well received by their countrymen.

"We have repeatedly expressed our strong adhesion to the principle of missionarizing. We are glad to see Christians send out Christian missionaries, and we believe that a religion without missions is dead. But we think that at the same time Christianity would be greatly benefited if missions from other religions were sent to Christian countries; for an exchange of thought on the most important subject of life can only be salutary. A competition between the different religions spurs their adherents on to develop the best qualities and to be watchful in their own conduct. A religion which enjoys a monopoly in a country is apt to fall into decay.

"Missionaries are religious ambassadors. Their duty consists not only in the propagation of their own religion, but also in the acquisition of a perfect comprehension of the religion of the people to whom they are sent, and Christians can justly pride themselves on the fact that all their great missionaries, such men as Duff, Judson, Hardy, Beal, Legge, and others, every one in his field, did an enormous amount of work which served to widen our own knowledge of the religious views that prevail in India, Ceylon, Burma, and China. Indeed, had it not been for their labors, comparative religion would have made little advance. And I should not hesitate to say that the most successful part of their work consisted, not in making a few converts abroad, but in widening the horizon of the people who had sent them. Such is the advantage of an exchange of thought on the most important questions of life, that it would be a blessing all around if the non-Christian religions also decided to send missionaries on a larger scale to Europe and America in order to have their faith worthily represented among Christians, to facilitate comparison, and invite investigation. It is pleasant to notice that the Buddhists of the Shin-shu sect have taken up again the plan of missionarizing, and we heartily welcome the two Buddhist missionaries who have recently arrived in San Francisco."

The spirit in which these ambassadors of the Lord Buddha come may be noted in the following letter received by Dr. Carus from Mr. Nishijima:

"Our intention is to spread the gospel of Buddha among the Americans who are sincere and earnest in their desire to pursue the truth, the highest truth, revealed first by the enlightened Lord Buddha Sakyamuni some two thousand five hundred years ago, in India. We are not one-sided, however; we know that there are many strong and some weak points on each side of Buddhism and Christianity. We believe that we Buddhists must learn from Christians, while, on the other hand, Christians can likewise learn from Buddhists.

"I am now very much pleased to see that our Hongwanji authorities are positively tending to the thought of spreading its religion, the true gospel of Buddha, widely abroad, by sending out not only emissaries, but also some active and able missionaries, to all important parts of the world. I have a very strong conviction that Buddhism is naturally destined to become the universal religion in the future, for the reason that there is perhaps no other religion equal to Buddhism that would satisfy the refined minds of highly educated people of the twentieth century. And, at the same time, I cherish also another conviction not less strong than the above, that Buddhism, the supreme and grand and most beautiful in its doctrines as it is, may never be taken widely among mankind as their established faith as long as its

followers themselves remain incompetent to prove its goodness before the public.

"I am now very fortunately called to the position in which I should like to devote myself to realize these two convictions. I feel very happy to become a martyr for the sake of mankind, but I find myself so poorly armed and so lamentably hindered by an imperfect knowledge of English that I should be overcome, no doubt, by bitter disappointments, if I had not an indestructible faith in my heart. I am most happy to say, however, that I have a very pious belief in the boundless mercy of the Amitabhu Buddha, who will assuredly support and protect me when I walk through the good and righteous path ordained by him. I came to America with such a belief, notwithstanding my apparent deficiency in all attainments required. My only goal is to attain myself, and help others to attain, the Maha-Nirvana, where the highest freedom and true happiness may be enjoyed, which our Lord Buddha has revealed for the first time to mankind, suffering constantly from their own passions and ignorance, inherited from previous existences."

RELIGION AND EDUCATION IN THE TRANSVAAL.

IN studying the character of the Boers, more than usual importance must be attached to the religious elements of their life. In the reliable *Lutherische Kirchenzeitung* (Leipsic, No. 45), we find a clear account of these and of their educational ideas, an account which is all the more valuable because it comes from a German and friendly source. We reproduce the leading particulars of this account:

In matters of education the Boers have not been as progressive as they could have been, nor are their ideas in this respect up to the standards of the times. A common education among them consists in learning to read, to write, and to sing the church hymns. In general, they meet educated people with mistrust. According to the law of 1892, it is made the duty of parents to provide for the education of their children. The state confines itself to aiding the schools established by private enterprise, and in general sees to it that the young people receive a Protestant training. In the middle schools, such additional subjects are taught as history, geography, geometry, and natural science, and by special request of parents one of the living foreign tongues. In 1895 there were 55 public schools in the cities and 367 in the villages, with an average attendance of 7,217 pupils, toward the education of which the state contributed about \$18,000. In the gold-fields, however, the state has undertaken to establish its own schools, and spends about \$125,000 per annum for this purpose. In Pretoria, a classical college and mining and agricultural schools have been maintained for a number of years, and in 1893 a higher school for girls was founded. The public library has about 10,000 volumes, and a museum has been maintained since 1894.

The state Church of the Transvaal is the Dutch Reformed, and to it belong the greater portion of the population, fully 50,000. The latest statistics accessible give 18,100 adherents to other branches of the Dutch Church, 6,581 to the Episcopal (the figure is now considerably higher), 3,866 to the Wesleyan Methodists, 3,000 to the Catholics, and 1,500 to other Christian denominations. These statistics are of the white population only.

Not only the President, but also the members of both legislative branches must belong to the Protestant Church. The meetings of the Volksraad, or Parliament, must, according to law, be opened and closed with prayer. With the exception of a few special kinds of labor, it is strictly forbidden to do any work on Sunday. In general, the Boers are characterized by a pronounced traditional piety of the Reformed type. It is chiefly nourished by the study of the Old Testament, especially of the historical books, and loves to employ and imitate Old-Testament examples and pictures. In a genuine Boer family the Bible lies upon the center-table, and every day is opened and closed with family prayer. A collection of sermons is taken along when on a journey, and public services are attended regularly even if at great sacrifice and trouble. As the farms are large and the people widely scattered, public services can often be held at irregular intervals only, as one pastor often has charge of hundreds of square miles of terri-

tory.* Great interest is accordingly attached to the regular quarterly meetings, when not a member of the family except the sick fails to appear. On such occasions a vast multitude of wagons surround the church, and the celebration of the Lord's Supper is frequently followed by services that last for several days. At the same time, such meetings of the whole neighborhood are utilized for buying and selling, for the consummation of marriage engagements and weddings, and dancing and other amusements are not lacking. The Boer regards himself as specially honored if the dominie, for whom he has great respect, visits his house. Then the neighbors are called in, and public services are held. The orthodox Boers are divided into two communions, the Afgeschedene or Doppers, who in their services make use of no hymns but the Psalms, and who in general are of a stricter deportment than the second sect, who make use of other hymns. President Kruger belongs to the Doppers, and there can be no doubt of his earnest Christian convictions. He is profoundly convinced of the fact that the people of God in the Old Testament have found their modern successors in his own people, and he speaks to his nation as would an Old-Testament prophet.

In general, the Boer shows little real religious depth; his religion is more of external traditional observance, strongly controlled by legalistic features. Especially to be regretted is this superficial religiousness when seen in the treatment which the Boer accords the native blacks. This is no doubt the darkest blot on the history of these people, and explains their lack of sympathy and cooperation in the mission work carried on by other branches of the Christians throughout Southern Africa. In earlier years, their maltreatment of the natives was worse than it is now, and was characterized by a deep cruelty. Their prejudice against the blacks is all-powerful. They call them all "Kafirs," and bunch them all together as the race of Ham, whose divinely appointed destiny it is to serve and to die. In support of their position, they appeal to the Calvinistic doctrine of predestination. Many of them have maintained, and still maintain, that it is contrary to the decrees of God's election to bring to these non-elect natives the word of salvation. Others look on the blacks more from an anthropological point of view as a medium between a human being and an ape. Mission efforts have been frowned upon, and the very fact that a missionary interested himself in the "goods" (for by this term—Schepsel—the blacks are commonly called among them), is in itself a crime among the Boers. Under stress of outward circumstances, matters have improved somewhat in this respect in recent years. In the constitution of the Republic it is expressly stated that all outsiders who will obey the laws will be welcomed, and that nothing will be done to prevent the spread of the Gospel. One article (the ninth) refuses to recognize the equality of the whites and the blacks, but the next article prohibits slavery.—*Translation made for THE LITERARY DIGEST.*

"AN UNDISCRIMINATING ATTACK UPON REVIVALS."

THE methods of stimulating religious excitement lately made use of by a number of religious teachers, principally in connection with the raising of large funds of money, have called forth considerable adverse criticism. Particularly prominent among these successful revivalists have been Mr. Sanford, the founder of the "Holy Ghost and Us Society" in Maine, who has raised great sums and erected extensive buildings for his religious purposes in an incredibly short time, and the Rev. A. B. Simpson, of the Christian and Missionary Alliance at Nyack, N. Y. At a recent meeting in Carnegie Music Hall, New York, Dr. Simpson, in the course of a few hours of unusual religious excitement, singing, and exhorting, during which baskets overflowing with banknotes, watches, jewelry, and pledges were passed around, raised a sum of money said to be in excess of \$150,000.

The New York *Times* says in reference to the somewhat similar scenes enacted in Maine last summer:

"Perhaps Maine, with its few large cities and the remoteness of many of its villages from centers of civilization, is more liable to outbreaks of this kind than many of the other older States, but it is scarcely worth while to consider that point, for the religious

mania produced by the method of psychological suggestion by Sanford differs in degree rather than in kind from the emotional excitement caused in religious 'revivals' conducted under auspices less dubiously religious and affecting people of greater intelligence. We have often frankly expressed the opinion that the ordinary 'revival' meeting, with its destructive effect on modesty and decent reticence, and the nervous and emotional strain it produces upon people who fall under its influence, does more harm than good; and even if that objection did not hold against the 'revival' in its purest form, conducted by persons whose sincerity is beyond question, the fact that it serves always as a precedent and as some sort of an excuse for proceedings such as these at Shiloh ought to deprive it of the support of all thinking Christians."

The Christian Advocate (Meth., New York), while agreeing with the *New York Times* in its opinion of the Maine evangelist, says that the revival meeting as conducted by Baptists, Presbyterians, and Methodists does not have the undesirable effects which that paper claims. Says the writer:

"That some revivals managed by indiscreet persons have done these things, that peripatetic evangelists of the lower grade generally endeavor to promote objectionable excesses, is true; but a wide observation enables us to testify that the great bulk of the denominations mentioned above, their ministers and laity who believe in and promote revivals, are opposed to such excesses, and that the effects in the direction indicated by *The Times* do not follow them to any extent. Those denominations, notably the Baptists, the Methodists, and in many sections the Presbyterians, have been built up by the results of revivals. If these bodies as a whole do more good than harm, the ordinary revival meeting has done more good than harm. In the opinion of all denominations not confined to liturgical forms, the meetings of Moody and Sankey in England, Scotland, and Ireland accomplished work of immense importance for Christianity and general morality. Even the Church of England countenances the establishment of missionaries, pursuing in substance the same methods, and often creating a widespread religious excitement. The authorities of the diocese of New York have not hesitated to avail themselves of some of these English missionaries, and the late Bishop Phillips Brooks publicly declared that everything that justifies the efforts of statesmen and representatives of the great political parties to concentrate public attention upon the great principles of their respective parties, and keep it fixed thereon for months before election, justifies the church of Jesus Christ in endeavoring, by similar methods—modified by the need of reverence—to produce intense religious fervor, and to maintain it until the people are willing to take the decisive steps which will identify them with the Christian profession and life.

"**Christ's Law of Unity.**"—An earnest but little known body of Christian believers, living chiefly in eastern Pennsylvania and in Nova Scotia, have for many years taken a stand similar in some respects to the non-denominational teachings of the Christian or "Campbellite" church. They call themselves merely members of the church or assembly of God's people, and teach that the only bond of ecclesiastical union should be the love which prevails among Christ's followers. The doctrine was first preached by the missionary elders Zollinger, Fauber, and others, and early attracted the attention of the Rev. Lyman H. Johnson, a Presbyterian minister and graduate of the Union Theological Seminary, who became an adherent of this faith, and for a number of years has advocated it in *The Stumbling-Stone*, Toledo. From a paragraph written by him entitled "Christ's Law of Unity," we quote the following passage on "The Nature of the Church" in illustration of his views:

"There is no statement nor intimation in the New Testament that Peter or Paul or any other men ever made a church. And without such statement no one has a right to say that the church of Bible times was a society organized by men. To suppose such a thing without Bible authority is to add to God's word, is to usurp God's place, and teach for doctrine the commandments of men. . . . Organizations are necessary for the world to secure

temporal interests. And when Christians have lost faith in God, then carnal organizations are necessary to secure preachers' salaries and sectarian houses. A carnal religion trusts the sword, money, learning, and all carnal securities. But Christ's church is wholly spiritual. As a church it owns no property. It stands by faith, kept by the power of God, controlled only by holy love. The house Christians meet in should be controlled by the congregation worshipping in it according to deeds which secure the perfect liberty of all worshipers to obey God. And the only danger is that those who hold the house cut off the liberty of God's word and His true worship."

"**Roman Catholic**" or "Catholic"?—The question as to what is the proper designation of the great body of Christians who are in communion with the Roman See is one that it is difficult to answer in a way satisfactory both to those who recognize and those who do not recognize the spiritual authority of the Roman pontiff. Several hundreds of millions of Christians who are members of the Russian, Greek, Armenian, and other Oriental churches, most Anglicans and not a few Protestants claim a right to the title Catholic; and the churches of the Orient, at least, have borne it ever since history has kept any record. Since they object to the exclusive use of the word by a single religious body, it is hardly practicable even for impartial onlookers to avoid the use of the term "Roman Catholic" to designate the Latin church. It appears, however, according to *The Casket* (Rom. Cath.) that "the proper name and title is 'the Catholic Church.'" It says:

"The church herself officially recognizes no other title. In the congress of the powers of Europe at Vienna, 1815, Cardinal Gonsalvi objected to the joint use of the terms Roman Catholic, 'but was willing that they should be separately applied to the church, which is Roman by reason of its necessary dependence on the See of Rome and Catholic on account of its universal diffusion.' Of the many qualifying words which denote essential properties of the church, one had to be chosen to serve as her proper name. The one so chosen is the word Catholic, and when we speak of Catholics, or Protestants, there can be no misunderstanding as to who are indicated. The words Roman and Catholic therefore agree in this, that they both express essential qualities of the church; and they differ in this, that Catholic has been officially adopted by the church to be her proper name or title, while Roman has never been so adopted."

Rather curiously, in the paper (Rom. Cath.) which reprints this article with apparent approval, we find the term "Roman Catholic" used over twenty times as a designation of the church to which it gives allegiance.

RELIGIOUS NOTES.

THE International Congress of Orientalists at Rome lately passed a resolution in favor of a new translation of the Sikh Bible, which represents the religious writings of the only militant section of the Hindu race. The book is of high interest to scholars both of literature and religion.

AT the convention of Freethinkers held in Boston in November, most of the sessions were devoted to appreciations and eulogies of the late Robert G. Ingersoll. One of the speakers, Mr. W. A. Croffut, in an address entitled "Ingersoll the Destroyer and Builder," denied that the great agnostic was a mere iconoclast. In return for destruction of belief in religious fables and in an endless hell of torment, said the speaker, "Colonel Ingersoll offered the proposition that the universe was governed by an order whose sequences had never been broken and that all life was part of a well-regulated system. He gave us self-reliance, knowledge, science, dignity, instead of groveling servility."

DR. JOHN WATSON ("Ian Maclaren") is not in favor of making marriage the subject of foolish jesting and annoying pleasantries. At a recent marriage service in England he reminded the company of the solemnity of the occasion, and added: "If any person could speak lightly of marriage he was cursed with an impure frivolity and was a profane person. No one ought to be able to think of marriage without a just and tender awe. It is more than a social partnership; it is the union of two souls, a union so intertwined, so spiritual, so irrevocable that it is the very sign and picture of the heavenly Bridegroom and the bride for whom He died." Commenting on this *The Congregationalist* says: "These are strong words, but surely they are also just. They carry a rebuke not only for those who marry thoughtlessly or from unworthy motives, but also for those responsible for the impertinent comments and the teasing and chaffing to which betrothed lovers are subjected, as well as for the embarrassing practical jokes which are not an uncommon feature of wedding festivities."

FOREIGN TOPICS.

COMMENT ON OPERATIONS IN SOUTH AFRICA.

THE Boers are no longer underrated by the best English papers. *The Spectator's* utmost hope is that the Boers will collapse suddenly, as did our Southern Confederacy, and it quotes Grant's saying—that the South resembled an empty egg-shell—as applying to the present case. *The Morning Post* hopes that the Boers have undertaken too much in "corralling" so many British forces, which number something like 17,000 and which ought to break their trammels. *The Saturday Review* bases its hopes entirely upon the theory that the Boers must get short of ammunition and food, and be forced to give up the struggle on that account. *The St. James's Gazette*, as do many others, hopes little from the hastily organized column under the command of Lord Methuen; but turns its attention chiefly to Ladysmith. It says:

"As Mr. J. B. Robinson points out this morning in *The Daily News*, the only thing Sir George White has to do, in order to have every reasonable chance of holding out until Sir Redvers Buller is able to complete his arrangements, is to sit tight and act on the defensive. The British forces are not likely again to be caught by a maneuver which Mr. Robinson says is a very favorite practise of their opponents, for nothing delights a Boer more than to induce his enemy to make a strong attack on nothing while the main body of the burghers is engaged in rapidly surrounding both his flanks. We have learnt, too, that a Boer may retire, but that it by no means follows that he is beaten, whether it happens to be artillery, for the moment, or cavalry which is attacking him. But he has no bayonet, and he hates to storm a town, so Ladysmith—it may be repeated—has every chance of holding out."

On the Continent, the alleged absence of knowledge and ability on the part of the British strategists calls forth expressions of surprise. Prussian and Dutch officers know the ground to some extent, and they wonder how Methuen thinks he will manage his march from Kimberley to Bloemfontein, the occupation of Bloemfontein being the minimum of advantage he ought to attain. It is well known that the Free-Staters at first thought it would be impossible to prevent the English from occupying their capital, and all stores have long since been removed. But if Methuen attempts to reach Bloemfontein from Kimberley, he will be without the necessary railroad to furnish supplies, and, according to his own accounts, English troops do not like to fight without their dinner. The *Paris Matin*, sifting all this, finds, on the authority of its London correspondent, that a good many English begin to doubt their ability to win, especially as the Boers care nothing for the British navy.

The Boer losses seem to be comparatively slight—not as heavy,

even, as they appear to be in the Boer telegrams, which also, it is alleged, are edited by the British censor. We have in our possession complete lists of the Boer losses in the engagements of Glencoe, Ladysmith, and Mafeking, giving the name and home address of every one wounded or killed. These lists are quoted from the Pretoria *Staats Courant* by such papers as the Rotterdam *Courant*, Amsterdam *Nieuws van den Dag* and *Han-delsblad*, and the Utrecht *Courant*. According to these lists the Boers lost 28 killed, 80 wounded at Glencoe, 1 wounded at Dannhauser's (where the British cavalry surrendered), over 600 in killed, wounded, and prisoners at Elands-laagte. The Pretoria *Staats Courant* regrets that, owing to the deplorable reverse encountered, it is unable to inform the families of the missing men whether they are killed, wounded, or prisoners. Colonel Schiel is reported to have been killed in the beginning of the fight, Commandant Kock killed before the British took the position.

Among the Continental criticisms of the British army's work thus far, one of the most charitable is by a Prussian officer, the London correspondent of the *Frankfurter Zeitung*, whose professional remarks are occasionally quoted by the English papers. We condense an article which has been ignored by the British press, but which has circulated widely in continental countries:

The signs that something is wrong with the British army are getting too numerous to be overlooked, especially as they explain much that has already happened and may help us to understand future events. It will be remembered that two British battalions were taken prisoners at Nicholson's Neck, altho their insignificant losses—25 killed and 80 wounded—hardly warranted their surrender. No one expects troops to rely upon the bayonet in these days, but later evidence shows that these battalions were not as yet without ammunition. Unless the authorities prefer to hush up the matter, the fact remains to be explained that two battalions surrendered against the will of their commander. What a contrast to the much less numerous Boer militia in the fight at Elands-laagte!

I have watched the British maneuvers, and they convinced me that the only British troops which possess a thorough military spirit are the Scots. The detachment at Nicholson's Neck would not have surrendered had they been Scotch. It will be remembered that two English battalions failed to do their duty at the heights of Dargai. A Scottish battalion stormed the position with losses hardly worth mentioning. Again, Colonel Schiel mentions the Scots with respect in his description of the Elands-laagte affair, while he hardly disguises his contempt for the English Lancers.

Now, I do not like to blame the English officers, and would not like to think that they failed to show courage. Even if they did, it would be well for us to remember that officers of the Prussian army, after the battle of Jena, exhibited a cowardice which we would hardly like to call Prussian. It must be the fault of the men. We hear, for instance, that a company and a half of mounted infantry, sent to attack the enemy at Kimberley, "re-

JOHN BULL: "All right, old man; beat me as much as you please, but, d—n it, say I'm your Suzerain."
—Der Floh, Vienna.

JOHN BULL: "I've such nightmares lately. Wonder whether I've eaten too much."
—Figaro.

tired" because they suddenly received the fire of the enemy. They lost their commander and one other officer killed, two officers and two men wounded. Four officers and two men! What were the men doing all this while? From Mafeking comes the report that an attack of the Boers cost the garrison two officers, two non-commissioned, and one private killed, three non-coms, and two privates wounded. One can hardly escape the impression that only officers and non-coms, in the British army possess the necessary courage to meet the enemy's fire. In that case we may expect some strange news, unless the troops arriving later possess more spirit.

The London *Standard* asks whether the British officers have forgotten the lessons learned on the maneuver field. I beg to point out that the English maneuvers teach *nothing*. They are conducted as if every opposing force were composed of savages, who know nothing of tactics and can not shoot. Hence the exhibition of bravery on the part of the officers, and their want of ability.

Father Matthew's latest version is that the two battalions to whom he was attached surrendered "because the Boers prepared to attack them with artillery." General Joubert's report on this runs as follows:

"About two hundred English were seen to approach from Dundee the morning after the engagement. We expected some of Lucas Meyer's men from that direction, and went to meet them. We soon discovered our mistake. They took up a position near a house. A field-piece which our men had near them began to fire upon them, and at the third shot they surrendered. On our side only one man was hurt, Fanie [Stephen] Minnor."

Thorough examinations to get at the actual facts hidden in the multitude of published reports are made by most of the leading continental papers. There is much facetious comment upon those English newspapers which ask the world to admit the superiority of the British army, and which compare the engage-

surpassed bravery of the British soldier. Yet the Germans were successful against a powerful enemy. The blinffing here reminds one very much of a boy who whistles in the dark to keep up his courage. For in view of this splendid bravery, this mighty

THE POWERS TRY TO GET FARMER MICHEL [FRANCE] TO ATTACK THE BULLDOG, BUT HE IS AFRAID.

—Jugend, Munich.

power, it is not easy to understand why people are afraid that a few thousand herdsmen will upset the British empire. It is the splendid bravery of the Persian who meets the Greek, and of the Spaniard who faces the Hollander."—*Translations made for THE LITERARY DIGEST.*

THE "UNEARNED INCREMENT" IN GERMAN CHINA.

A NOVEL land law, which reminds one strangely of the principles held by the single-taxers in regard to the "unearned increment," has been put into operation in the German territory of Kiao-Chou. We take the following description from the Amsterdam *Handelsblad*:

The Germans are not doing things hastily in Kiao-Chou, but neither are they doing things by halves, as their excellent regulation of the land laws shows. Originally the land, as everywhere in China, belonged to the crown, every one living on it being a tenant. Two dangers had to be avoided: 1. The danger that the Chinese tenants, who are keen business men, might take advantage of the German occupation to give a fictitious value to the land. This actually happened. In some villages ten times as much is asked for the land as before the Germans came. 2. The danger that foreign speculators should obtain the land and hold it to the disadvantage of immigrants. The first act of the Germans was therefore to forbid the sale of land until further orders. The inhabitants then were offered the equivalent of two years' taxes in cash, as a kind of premium, for which they bound themselves to sell to the German Government only, at the prices current when this agreement was made. The great majority accepted.

From time to time, parcels of land are offered for sale, the governor appointing a minimum price. The Government must be informed as to the business the purchaser intends to carry on. Six per cent. of the value of the land has to be paid in taxes. It will be noticed that this is much lower taxation than is paid in Hong-kong and Shanghai, and indeed very reasonable for the far East. The Government reserves to itself the right to purchase back the property at the lowest *bona-fide* offer made by an intending purchaser. If the Government does not make use of this right, one-per-cent. duty has to be paid by the buyer and one per cent. by the vendor. The most important clause is, however, that the Government *may* collect up to 33¼ per cent. in taxes on the *increase* of value as compared with the original price. This tax may also be imposed if no sale is made within twenty-five years, when the property will be newly appraised.

The Government argues in all this as follows: the prices offered at first will be much below the value the land will have in a short

"TO THOSE IT MAY CONCERN."

JACK TAR: "Good luck, mate! You're goin' to do the job on land. If there's anything wanted at sea—against other parties—I'm on!"—*Punch.*

ments in South Africa to great battles. The London correspondent of the Amsterdam *Handelsblad* believes that the exhibition of English enthusiasm is wanting in sincerity, and that at least the educated Englishman begins to think of the part England is playing as something the reverse of dignified. He says:

"The cultured English with whom I have spoken are not at their ease under all this braggadocio. I was in Germany during the war of 1870. I never heard anything that could be said to approach all this bluff, this continual bragging, about the un-

time. By the above regulations, the Government insures to itself a ground rent proportionate to the increase of value, without hurting the interests of private enterprise. If the value of the land does not increase, no further taxation is imposed. If, however, there is an increase in value due to good government and general prosperity rather than to individual efforts, the community must share the profits, taking one third. The main object, nevertheless, is to prevent those land speculations which have done so much harm in the far East as well as in America, and to counteract the usury which the speculators practise on their tenants. No merchant will under such rules buy land which he does not need.

On the other hand, the minimum prices are such that comparatively poor people can settle in German territory. Indeed, all the land offered at first was sold in five days.—*Translation made for THE LITERARY DIGEST.*

RUSSIA'S ANTI-BRITISH POLICY IN CENTRAL ASIA AND AFGHANISTAN.

IT is generally known that Russian newspapers are limited in political discussion to questions in which the Government is not interested or upon which it has no definite opinions. It is regarded as significant that ever since the South African war broke out, the leading journals of Russia have been urging decisive action against England in various quarters of the world. They have openly instigated the utilization of British difficulties by Russia and the accomplishment of long-cherished objects at the expense of England. "It is the duty of the Government to pursue the national welfare and take advantage of the preoccupation of Russia's chief adversary," has been the burden of their propaganda. The Government has tolerated—some believe it has inspired—these utterances, and the recent rumors that Russian troops had occupied Herat, "the key of India," have doubtless resulted from the persistent talk about the advisability of doing this in the Russian press.

A prominent writer has thus expressed himself in the *St. Petersburg Soviet*:

"A moment rare in political history has arrived of which Russia must avail herself to place a garrison at Herat, with the consent of the Emir, of course. Our railway to Kushk can not remain without a terminus, and Herat must be the terminus. A good diplomatist, with a large purse well filled, would easily persuade the Emir of the necessity of the railway extension and of the need of a Russian military force to guard it. This would not diminish the power of the Emir and would not undermine Afghan sovereignty; but it would render it vain for England to cast greedy glances in the direction of Herat. The opportunity is of the exclusive kind and will not happen again. England would not at present dare even to think of war with Russia, and the consequence would be a pause in the African war and easier terms to the Boers, who would be saved from extermination."

Other writers have been harping upon the same theme, but the *Novoye Vremya*, a hater of England, has deprecated this advice. It, too, wants a *coup de main* against that power, but not in Afghanistan. It considers editorially the whole question and concludes that nothing would be gained by the invasion of Herat. It says in part:

"Would it be expedient for us to acquire Herat in one way or another? The first question is, What would be our object? Is Herat the first halting-place in an invasion of India? But this invasion can not be in itself our object. If we are to invade, there must be some purpose in it. But Russia has long since relinquished the idea of conquering India, for the simple reason that we could do nothing with her, while the expense and the cost in energy of conquest and retention would be colossal.

"The invasion of India would be merely a method of influencing England in case she resisted the realization of our real aims in Persian Asia—the access to the Indian Ocean. Would the seizure of Herat be a means to that end? No. It would make the Emir our enemy. 'To-day, Herat; to-morrow, Cabul,' is too simple a deduction not to occur to him. . . . As a point of support in a march upon India Kushk is not inferior to Herat."

The paper develops this idea and shows that the situation has radically changed in the last two decades, and that Herat has lost all its importance. It is better for Russia to establish a permanent resident at Cabul and to prevent the English from extending their dominion to the Persian Gulf. "Out present prospects in Persia," continues the *Novoye Vremya*, "have decreased for us the value of Herat," referring to the extension of the monopoly of railway concessions in Persia recently secured by Russia. The real object of Russian diplomacy is to acquire a sphere on the littoral of the Indian Ocean, and this should be furthered without offending the Asiatic rulers or dismembering their kingdoms. Russia has no need of further territory, and she must be on good terms with Afghanistan and Persia.

The Trans-Caspian Railway now under construction is projected to run through the heart of Persia down to the Persian Gulf, and with this and other plans a forcible invasion of Herat would fatally interfere. The *Novoye Vremya* thinks this is an auspicious time to promote those projects by demanding British acquiescence as "compensation" for England's acquisitions in China and South Africa.—*Translations made for THE LITERARY DIGEST.*

BRITISH CONTROL OF CABLES AND ITS EFFECTS.

THE censorship exercised by Great Britain in the case of all telegrams coming from South Africa may cause some inconvenience, but that England is strictly within her rights in the matter is generally conceded. It creates a suspicion in Europe, however, that the news is generally unfavorable. The Amsterdam *Handelsblad* says:

"That Dr. Leyds is not permitted to receive the secret messages addressed to him shows that the British Government has much to hide. It is not the news which the agent of the Transvaal receives that bothers the English, but the fact that he may make his information public. The resolution of the British Government to prevent the other side from being heard shows that the cause of the Boers is prospering."

One result of this suspicious attitude is that all news coming from London is immediately subjected to the most searching criticism, similar to that bestowed upon it here by the *New York Staats-Zeitung*, which prints a despatch so interspersed with editorial criticism that the news of a British victory has created the impression of British defeat by the time the reader reaches the end. Another result of the censorship is that an agitation has arisen for the destruction of British monopoly. The *Paris Figaro* says:

"Not only is the loss suffered by commercial concerns very considerable, but the communication between France and her colonies is interfered with. France may be cut off from her possessions in India at any moment. This is entirely unnecessary. There need not be such great discrepancy between the number of cables owned by France and those owned in Great Britain. From a financial point of view, cables are a good investment. The British cables, which cost something over \$160,000,000, pay now \$22,000,000 to \$25,000,000 a year, hence there is ample room for competition, especially as a lowering of prices would undoubtedly increase business."

The governor of French Indo-China reports that this colony will lay a cable between Saigon and Port Arthur at its own expense. The Dutch papers propose to connect their colonies with Saigon in turn. Everywhere the desire is expressed to be free from the necessity of touching British territory. The Berlin *National Zeitung* says:

"We scruple to think of the disastrous effect upon business which the British cable monopoly would have if England were at war with a great power. A thorough change in the manner of communication would be necessary. This does not even take

account of the military consequences which must follow. It is therefore high time to break the monopoly of Great Britain, especially as regards our own possessions. A beginning has luckily been made, and that the cables would pay need not be doubted. The Government should assist private enterprise in the matter."

The Berlin *Tageblatt*, to emphasize the necessity of separate cables, mentions a number of cases (the Jameson raid is one case) in which it charges that the British Government has used its advantages even in times of peace.—*Translations made for THE LITERARY DIGEST.*

EMPEROR WILLIAM'S VISIT TO THE QUEEN.

THE majority of the German press, while acknowledging that Germany can not interfere in the South African war, object so strongly to any moral support being given to England that the Emperor's visit was officially called a "family affair," and stress is laid upon the fact that it had been promised before the beginning of the war. The *Kölnische Zeitung*, the only German paper inclined to side with England, says:

"The voyage is and remains a family affair, and we see that all attempts of the English jingoes to use it for their purposes are repulsed. . . . Moreover, the German Government has learned to conduct its affairs exclusively in the interest of Germany. And as neutrality, strict neutrality, is most to our interest to-day, this long-promised voyage had to be undertaken. Otherwise the impression would have prevailed that the German Government has taken sides against England. . . . There may be people in England who do not like this, but the Emperor will not be led into adopting a different position."

Such influential papers as the Bremen *Weser Zeitung*, the Hamburg *Correspondent*, the Berlin *Post*, the Munich *Allgemeine Zeitung* point out that Germany can do nothing for the Boers, as her navy is not strong enough to cope with the British fleet. Professor Delbrück, in the *Preussische Jahrbücher*, declares that Germany has no reason to express her good wishes for England, for if England wins quickly, her next war in Africa will be against Germany. The Berlin *Nation* says:

"It may seem petty to talk so much about this voyage [to England]; but it really is not. For a long time England has shown no wish to be on good terms with us; has, on the contrary, done her best to keep us in a difficult position. If, therefore, the very administration which did not want our friendship suddenly changes its attitude, the reason is plain. . . . We in Germany have no reason to allow ourselves to be used as a bulwark against Russia and France. It would not improve our relations with the Dual Alliance, while England would return to her policy of more or less open enmity against Germany. . . . We will, however, be pleased to hear of some substantial proofs that the English see the error of their ways."

Some English papers have become very demonstrative in their expressions of friendship and respect for Germany. The London *Saturday Review*, which for years has preached that Germany must be destroyed unless civilization and British trade are to go to the wall, says:

"We like men who are brave, and upon whose word we can rely, men, in short, who have what Matthew Arnold used to call 'the power of conduct.' The Germans have this power of conduct in a remarkable degree, and we must ascribe their unpopularity in this country partly to a want of knowledge of their national character. The Germans are industrious, frugal in their habits, obedient to authority, with strict notions about domestic purity, and, whether they belong to the Roman Catholic or a Protestant communion, unaffectedly pious. In business they are more truthful and honorable than the Americans; and their bravery and skill in war they have long ago proved. Loyalty, courage, truthfulness, love of home, and temperance, these are great qualities, which are none the less national, because there are plenty of anarchists and atheists in the cities and universities of Germany. . . . We say this from a belief that Germany is des-

tined to play no mean part in the development of Africa and the East, and that Great Britain would do better to work with her than against her."

But most papers in Great Britain realize that this sort of thing will be regarded as "cupboard love" in Germany, and they are a little more reserved. The London *Times* expresses itself to the following effect:

In form of government, in political ideals as well as in language, England and America show a similarity which does not exist between Germany and them. We stand in friendly relation to the American people, and to the German Government. In a like manner the friendship of the United States for Germany is more official than national. Moreover, great trouble is taken to remind us that nothing in the present situation can be taken to mean even a promise of friendly cooperation, except in the settlement of the Samoan question. The attitude of governments changes continually, according to the opportunity of snatching advantages. Our people can not well forget the enmity of the German press.

The *Daily Chronicle*, which is itself opposed to the South African war, remarks that: "It is the moment for complaisance; but we must not allow ourselves to suppose that the Kaiser's visit is in any shape or form a mark of German admiration for our policy in South Africa."

The London *Outlook* has a few personal compliments for the "William the Witless" of yesterday, but informs its readers that the German people are utterly ungrateful, and that the Prussian officers hate England only because the English gentleman is so immeasurably superior to them. Besides, England keeps the peace of the world, which of all things the German nobles hate most. The *Speaker* complains that Mr. Chamberlain is too much of a "lightning-change artist." It says:

"Three years ago Mr. Goschen's mock heroics flaunted our 'splendid isolation' in the face of Europe. Last year Mr. Chamberlain was 'touting for alliances in the highways and byways of Europe,' and offering our hand to a great military power. In the same speech the same Minister was explaining that America and England divided all that there was of the higher civilization and humanitarian sentiment in mankind. . . . When we claimed the right to govern the world, inferior nations displayed an intelligence, if an inexcusable, impatience. What we lost in dignity by fawning at the feet of Germany we did not gain in popularity by reminding Europe that it was only the hopeless immorality of France and Russia which had driven us into that unnatural posture. So bewildering have been the alternating moods of contempt for Europe's weakness and dread of Europe's strength, that few men have kept pace with their variations. And the advantage of bewildering Europe is, perhaps, not increased if we succeed in bewildering ourselves."

The Vienna *Tageblatt* advises England to get out of her scrape in South Africa as soon as possible, as her military success is by no means assured. "For the German Emperor's sympathies are still with the Boers," it says, "whatever course statesmanship may suggest to him."—*Translations made for THE LITERARY DIGEST.*

The Mauser Bullet.—According to the London *Outlook*, the Mauser bullet is sustaining, in the Transvaal war, the good reputation it achieved in Cuba. Says *The Outlook*:

"So long as its nickel coating is intact, it makes a small, clean, almost painless wound, without either tearing the muscles or shattering the bone; indeed, it will pass completely through the bone, leaving only a clean, round perforation as free from raggedness or splinters as if made by a drill. The results are little or no hemorrhage unless a large artery has been perforated, almost no shock, and a remarkably rapid closure and healing of the wound. To stop a savage rush at close quarters it is far inferior to the old round soft bullet which flattened on the first bone it struck, but for civilized warfare, where there is no risk of butchery of the wounded, it would seem an almost ideal weapon, making as it does either a clean and painless kill when a great vital organ is pierced, or a disabling wound, which heals with remarkable rapidity. With the assistance of aseptic surgery, the recovery rate from its wounds is very high, ranging between eighty and ninety per cent. Here we have another illustration of the absurdity of the popular delusion that war is becoming more deadly. War mortality was never in all history less than at present, and the decline still continues steadily."

And this, adds *The Outlook*, was the bullet which, because of its high velocity, was to mow down whole regiments.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Vice-Consul-General Hanauer, of Frankfort, under date of June 9, 1899, sends translation of an extract from the Berlin *Confectionair*, one of the principal organs of the German manufacturing and export trade, especially in such lines as textile goods, ready-made clothing, etc. The German people, adds Mr. Hanauer, are fully alive to the importance of not only maintaining their present position as purveyors to the world's market, but believe it essential to their standing as a "great power" to make still greater efforts to compete with England, which heretofore had the lead, and with new and energetic rivals, such as Belgium, Japan, and, last but not most to be feared, the United States. The extract reads, in part:

"WHAT DOES GERMANY DO FOR HER EXPORT TRADE?—Of late from various sides demands have arisen for the establishment of a central bureau, on the order of a commercial museum, like that in Philadelphia, in order to further Germany's export trade. In view of the mighty efforts which other nations are making to push Germany from the position which she has won in the world's markets, it seems necessary for our Government to use all methods which other nations employ in competing with us. It is a stale truth that hitherto the imperial Government has done very little in this line.

"It is a gratifying change, auguring better results for the needs of our commerce, that consid-

Reduced Prices on Suits and Cloaks

WE recently had an opportunity of purchasing several hundred pieces of fine suitings and cloakings at a figure which enables us to inaugurate the biggest Reduced Price Sale that we have ever announced. You can now secure a stylish garment at a reduction of one-third from former prices.

Order from this Reduced Price Sale as freely as you wish; send back anything you don't like, and we will REFUND YOUR MONEY.

One-third has been cut off the price of every suit and cloak in our line, but the quality of materials and workmanship is right up to our usual standard—just as good as if you paid double the money.

Tailor-made Suits, former price \$5; reduced to \$3.34.
\$10 Suits reduced to \$6.67.
\$15 Suits reduced to \$10.

\$20 Suits reduced to \$13.34.

Winter Jackets, former price \$5; reduced to \$3.34.

\$9 Jackets reduced to \$6. \$12 Jackets reduced to \$8.
\$15 Jackets reduced to \$10.

Separate Skirts, former price \$4; reduced to \$2.67.
\$6 Skirts reduced to \$4. \$8 Skirts reduced to \$5.34.
\$12 Skirts reduced to \$8.

Reduced prices on Capes, Newsmarkets, Rainy Day Suits and Skirts, Bicycle Suits, Silk Skirts, etc.

We are also closing out a few sample garments which were made up for exhibition in our salesroom at one-half their regular prices. We tell you about hundreds of reduced price garments in our Winter Catalogue and Bargain List, which will be sent Free, together with samples of the materials, to any lady who wishes them. Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

erations are pending to improve our consular system, and the fact that the modest item of 55,000 marks (\$13,000) appears in this year's budget of the Foreign Office, to be expended in sending commercial experts abroad, is further evidence that this Government is beginning to use those methods which have in the past been so successfully employed by England, France, and the United States in fostering their foreign trade.

"We have a numerous staff of consuls, who promptly and regularly send in their reports, but no one can maintain that these meet the wants of trade. It is a fact long since admitted that the immense mass of information stored up in the monthly publications *Handels-Archiv* has no direct or practical value to our merchants. How inferior our consular system is to that of other countries is evidenced by the fact that Germany has only five professional consuls in the United States, whereas the latter country is represented by eleven salaried consuls in the Rhenish province of Prussia alone. The institution of chambers of commerce outside of our own country is new to us. Austria, England, France, the United States, Holland, Spain, Italy, and Belgium have these in foreign lands, and even Greece and Turkey are about to establish them.

"It is true that our export trade is at present in such good shape that the resort to extraordinary means for its improvement might seem prompted by excessive anxiety; yet we must bear in mind that the growth of our foreign trade does not keep step with the increase of our domestic production.

"It has become generally known that while bloody contests between nations are of less frequent occurrence than of yore, struggles in economic fields are gaining in acrimony, internal trade is becoming more complicated, and the constantly growing competition makes it necessary for us to leave no means untried whereby we may not only maintain our present prominent position in the world's trade, but secure it in the future."

Consul Sprague, of Gibraltar, on the 21st of June, 1899, writes that there is a differential duty of 2 pesetas for every 100 kilograms (220 pounds) between United States and British flour entering Spain, to the prejudice of the former. The matter, he adds, is of some importance, as at present American flour can undersell other foreign importations in this line.

PERSONALS.

WILLIAM MARCONI, whose wireless telegraphic invention has made him a peer of Edison and Tesla in the scientific world, according to *The Freeman's Journal*, is not altogether an Italian. His mother is Irish of the Irish. About a half century ago an Italian of the name of Charles

William G. Justice, of Buffalo, N. Y., General Agent of Provident Life and Trust Co., of Phila., writes after using the Rochester Radiator: "If the mercury goes down to 2° below zero, I am confident our second story will be as warm as the first, and without the cost of fuel and annoyance of taking care of another stove."

STELLA MUSIC BOX?

A Most
Delightful
and
Charming
Gift for the
Home

THE STELLA is the only music box with smooth steel tone sheets, and has a sweetness, harmony, and volume of tone found in no other.

Its construction is simple and durable, and the cost of a new tune is trifling.

The Stella tune list contains all the latest popular airs and all the gems of operatic and sacred music.

THE SHEETS WILL LAST A LIFETIME

"I have tried several sorts of music boxes, but the 'Stella' is the best on the market."—Hon. Thomas Watson.

"I had no idea a mere music box could play with such expression."—Chas. E. Murray, Chardon Springs, Vt.

"All remark on its piano-like tones."—John Branch, Hendersonville, Tex.

Write for illustrated catalogue, sent free to those who mention this advertisement. Send also for booklet, "A Talk on Music Boxes."

JACOT & SON, 25 Union Square, NEW YORK
Broadway and 17th Street

Bianconi settled in Ireland. He was thrifty and enterprising. He located in Clonmel, the capital of Tipperary. He established a stage line and within a dozen years controlled nearly all the usual routes of transportation in the southern province of Ireland. In a little while—this, it ought to be remembered, was before the development of railroads—Bianconi had the contract for carrying nearly all the Irish mails. He got rich, bought an estate and a castle, and his children are now numbered among the Irish country gentry.

Bianconi had a nephew of the name of Marconi, who went to Ireland as chief veterinary surgeon for the Bianconi stage routes. This Marconi was a civil engineer as well as a veterinary surgeon. He was also an all-round sportsman. It takes a very daring rider to win distinction in Ireland, a country of daring riders, but Marconi accomplished that feat. He did something else. He captured the daughter of Power of Gurteen, one of the haughtiest of the rural Irish aristocracy, and took her to Italy on a bridal tour. The fruit of that union is the present distinguished inventor of wireless telegraphy. Marconi has lived a good deal in Ireland among his mother's relations, but he was born and educated in Italy. He considers himself fully half Irish, and many of his characteristics are more Irish than Italian. Marconi's first practical experiments with wireless telegraphy were made in Dublin Bay. The first wireless telegraphic newspaper despatch was printed in the *Dublin Independent*.

SIR GEORGE WHITE, who commands at Ladysmith, entered the British army at the same time as Lord Roberts, and, like Roberts, is an Irishman, says the *New York Press*. In his earlier years White was an example of retarded promotion. He was in the army ten years before he became a captain, and was a captain ten years before he became a major. His regimental service was principally with the Second battalion of the "Gay Gordons," the old Ninety-second Highlanders. White had been six years a major when the call came to follow Roberts to Afghanistan, and then Roberts was major general commanding the expedition marching on Cabul. General Roberts knew the Gordons, and he had not forgotten George White, and when it was discovered on the march to Cabul that the Sang-i-Nawishta Pass—the key to Charasiah—was held by the enemy in great force, White and the Gordons were detailed to a place of honor in the task of driving them out. White and his Gordons left their cover and advanced to storm the heights. The ascent was steep, the pathways rugged and forbidding, and altho the advance was covered by the fire of big guns, the artillery of the enemy gave back as good as they got, while the musketry fire directed downward at the clambering Highlanders at almost every discharge picked one and another from their ranks.

The ascent was slow—how slow may be gathered from the fact that the battle opened about

o'clock, and at half-past 4 White had not yet got to striking distance of the enemy. At this juncture he selected two companies of his command, and leaving the rest, pushed on with these. They made rush on rush from point to point, and suddenly, exhausted and breathless, found themselves unexpectedly face to face at point-blank range with a heavy and strongly entrenched body of the foe. Too blown to charge, they paused to gather strength, and their hesitation must have been fatal but for the supreme courage of the gallant major. In an instant realizing the crisis he rose to the occasion. Seizing a man's rifle without a moment's hesitation, and daring the fire of scores of weapons, he dashed forward to the barricade and deliberately shot the Afghan leader dead. In two minutes more the Gordons had carried the heights, and sweeping along the crest, White had gained the Victoria Cross. It was his first decisive step to the high place he has since attained.

THE following characteristic anecdote is told of Count Tolstoy and his family: The Tolstoy's have a large circle of acquaintances, and hardly an evening passes but there are guests. At one music party a lady's singing displeased Count Tolstoy's boys, and they adjourned to another room and made a noise. Their father lost patience and went after them, and a characteristic admonition ensued: "Are you making a noise on purpose?" he asked. After some hesitation came an answer in the affirmative:—"Y-y-yes." "Does not her singing please you?" "Well, no. Why

does she howl?" declared one of the boys, with vexation. "So you wish to protest against her singing?" asked Lyeff Nikolaevitch, in a serious tone. "Yes!" "Then go out and say so, or stand in the middle of the room and tell every one present. That would be rude, but upright and honest. But you have got together and are squealing like grasshoppers in a corner. I will not endure such protests."

ADMIRAL DEWEY has a double, says the New York Journal, in the person of Charles T. Rowe of Boston.

He likes Boston, but they drove him out of Boston—the people did. They followed him all over town, and he came on to New York to get rid of the annoyance. He brought his wife with him, and she does not look unlike the bride of the Admiral. When Mr. Rowe got there he found that his double had just come in on his wedding tour and that his troubles were only beginning. Mr. Rowe paid a visit to the Horse Show. He had scarcely entered the building before the word went round that Dewey was present, and he had to take refuge in the press-room. Every time he showed himself the band would play "The Conquering Hero" and the crowd would cheer.

In spite of constant and indignant denials of any connection with Admiral Dewey, Mr. Rowe was mobbed by enthusiastic crowds wherever he went. People thought he was joking.

The resemblance of Mr. Rowe to Admiral Dewey is rendered more striking because of the bronzed complexion of the Boston man, caused by his outdoor life. He is thinking of having his mustache shaved off until the Dewey craze dies out. "But then," he says sadly, "that may never be."

MR. JOHN BOOTH, who was employed by Prince Bismarck to supervise his great plantations of firs and larches at Friedrichsruh, has published a little book of "Personal Recollections of Bismarck." The American forester was a welcome guest at the great statesman's table in 1878 and 1879, and many of his stories relate to eating, drinking, and smoking. Bismarck, as all the world knows, was a mighty man at all three. He told Mr. Booth that on one occasion he had eaten 175 oysters at a single meal: "It was thirty-one years ago," said he, "a few days after I left England. I was at Liège, and ordered twenty-five oysters for dinner. They were so excellent that I ordered fifty more, and while I was devouring these, I resolved to make my meal of oysters, and nothing else. To the surprise and amusement of everybody in the place I then ordered another 100!" "We are almost inclined to suspect," says *The Westminster Gazette*, "that the old statesman was testing the credulity of his Yankee listener."

Moller's Oil is different

from other cod liver oils, as it is never sold in bulk. It is bottled when manufactured, thus passing direct to the consumer without the possibility of adulteration. Each bottle of

Peter Moller's Cod Liver Oil

bears on the label, in perforated letters, the date of manufacture, so that the purchaser may always insist on having oil of the latest season's production, and know that he is getting it.

Moller's Cod Liver Oil is put up only in flat, oval bottles, and bears our name as sole agents.

Schleffelln & Co., New York.

EAT

Quaker Oats

AND KEEP YOUR STOMACH SWEET

"Man has been misled by the stimulating properties of animal tissues and their extracts into an exaggerated belief in their food value. Beef tea is nearly as pure a stimulant as a glass of wine."
—Dr. Haig in "Food and Diet."

Quaker Oats PUDDINGS

PUDDINGS.—To two cups Quaker Oats Porridge add the yolks of two eggs, two teaspoonfuls sugar, half a teaspoonful salt, some grated lemon or other flavoring, and finally the well-beaten whites of the eggs. Bake for fifteen minutes in a hot oven, or, if preferred, steam one hour. Serve hot with sauce, cream and sugar, or raspberry or strawberry syrup.

A very nice fruit pudding can be made by adding peaches, apples, or other fruit to the above recipe.

EAT MORE Quaker Oats LESS MEAT

At all Grocers in 2-pound Packages

QUAKER OATS makes not only the best breakfast porridge in the world, but also delicious and wholesome Bread, Muffins, Cakes, Soups, and Puddings. Write for our Cereal Cook Book, edited by Mrs. Horner, THE AMERICAN CEREAL CO., Monroeville Building, Chicago, Ill.

MORE OR LESS PUNGENT.

The Same Thing.—"Have you ever played football?" she asked. "No," he replied, "but when I was a cowboy I was once run over by a herd of stampeded steers."—*Chicago Times-Herald*.

A Double Reason.—DEACON BLACK: "Dis ain't no pussional queschun; but if a man steals a chicking am it propah fo' him to say grace befo' he eats it?"

DEACON JOHNSON: "Shuah! Ain't he got two reasons to tank de Lawd—fo' de chicking an' fo' not gittin' cotched?"—*Puck*.

Justice and Golf.—The latest English golf story is told by Mr. Justice Lawrence against himself. He is an ardent golfer. Recently he had a case before him in which he felt it necessary to ask one of the witnesses, a boy, the usual question whether he was acquainted with the nature

TO CURE A COLD IN ONE DAY

A CENTURY CLUB.

A club has been organized in New York City, every member of which has pledged himself to do the best he can to live one hundred years. Dr. Wiley, of the Agricultural Department, of Washington, D. C., is the president of the club. Such a club ought to be organized in every city, for centenarians are getting scarce. The cause is, without doubt, the excessive use of meats and the neglect of cereals. It has long been known that vegetarians are longer lived than are meat eaters. Dogs are old and rheumatic at ten, and die at fourteen, whereas the donkey is still frisky at forty and easily lives to half a century. The nut-eating Indians of southern Carolina still live to the age of 130 years and more. Meat shortens life by hardening the arteries, which produces old age prematurely and death from apoplexy through rupture of the brittle arteries. This is the natural result of the accumulation of uric acid in the body. Meat contains uric acid in great quantities. The general disuse of cereals is due to the increasing prevalence of amylaceous dyspepsia, or starch indigestion, which is the natural result of the use of half-cooked cereal foods. Starch must be dextrinized by dry cooking at a temperature of 300 to render it readily digestible. Half-cooked starch causes sour stomach, flatulence, bloating, colic, anæmia, headache, weakness, neurasthenia, intestinal catarrh, and numerous other evils.

The characteristic quality of the Battle Creek Sanitarium Health Foods is the cooking or dextrinization of the farinaceous elements. It is this thorough cooking which renders toasted bread more digestible than ordinary bread. This crude and imperfect method, improved upon and perfected, has produced a series of health foods, which are more digestible and nutritious than any others found upon the market. The chief of these is Granola, which is unexcelled for brain- and nerve-building qualities. It has a rich, nutty flavor that is so much enjoyed by the athlete and invalid, and can be assimilated by the stomach of the dyspeptic as well as the robust. Sold in pound packages by grocers.

Readers of THE LITERARY DIGEST who will send the name of a grocer, who does not sell Granola, to the Sanitarium Health Food Co., Battle Creek, Mich., will receive a free sample.

No. 12 Moravian Church St., Bethlehem, Pa.

AUTHORS. Do you desire the honest criticism of your story, essay, poem, biography, or its skilled revision? Such work, said George W. Cirtis, is "done as it should be by The Easy Chair's friend and fellow laborer in letters, Dr. Titus M. Cohn." Send for circular L, or forward your book or MS. to the N.Y. Bureau of Revision, 70 Fifth Avenue.

of an oath. The ingenuous youth replied: "Of course I am. Ain't I your caddie?"—*Argonaut.*

Revamped.—Smith, a hotel man, and Jones, a manufacturer's agent, were talking one day about their business interests. "I say," said Jones, "however do you use such an enormous quantity of pears and peaches?" "Well," replied Smith, "we eat what we can, and what we can't eat we can." "Indeed!" said the other, "we do about the same in our business." "How is that?" "We sell an order when we can sell it, and when we can't sell it we cancel it."—*San Francisco Wave.*

What the Prisoner Said.—A celebrated judge was once trying a case where the accused could only understand Irish, and an interpreter was accordingly sworn. The prisoner said something to the interpreter, and the latter replied. "What does he say?" demanded the judge. "Nothing, my lord." "How dare you say that when we all heard him? Come, sir, what was it?" "My lord," said the interpreter, beginning to tremble, "it had nothing to do with the case." "If you don't answer I'll commit you, sir. Now, what did he say?" "Well, my lord, you'll excuse me, but he said: 'Who's that old woman with the red bed-curtain round her sitting up there?'" At which everybody present roared. "And what did you say?" said the judge, looking a little uncomfortable. "I said, 'Whist, ye spalpeen! That's the old boy that's going to hang yez.'"—*Collier's Weekly.*

Providence on their Side.—"No," said the Georgia farmer, "I ain't growin' any cotton in this year of grace—not a single row of it! In fact, I ain't growin' much of anything." "Struck it rich, have you?" "Well, not exactly, but Providence is on our side, an' the outlook is hopeful. You know I've got seven sons, an' every one of 'em is fightin' fer his country at so much a month." "Yes?" "Well, they're all good, steady boys; an' as fast as they draw their pay they send half of it home, an' so the family is gittin' in good circumstances, the children are dressin' well, an' the old lady is ridin' of a bicycle an' attendin' missionary meetin's; an' as fer me, I'm runnin' fer office an' leavin' money on the instalment plan. If the boys don't get kilt out in the Philippines, I expect to own a railroad fore the trouble's over. The war has been the greatest blessin' that has ever come my way!"—*Atlanta Constitution.*

Current Events.

Monday, December 5.

—Conditions in South Africa remain unchanged; further details from Modder River show the desperate nature of the battle.

—The Fifty-sixth Congress holds its first session; David B. Henderson, of Iowa, is elected Speaker of the House; Mr. Roberts, of Utah, is not allowed to take the oath, pending a decision on the question of eligibility.

—The Supreme Court of the United States decides that the so-called Cast Iron Pipe Trust is in violation of the anti-trust act of 1890, and this is regarded as a very important and far-reaching decision.

—The text of the currency bill prepared by Republican members of the Senate is made public.

Tuesday, December 5.

—General Methuen is still entrenched at the Modder River; Kimberley and Ladysmith continue to hold out.

—President McKinley's annual message is read in Senate and House. The House by a large majority decides to refer the case of Roberts to a special committee, meanwhile excluding him from his seat.

—Republican Representatives in Congress hold a caucus at which plans for advancing the House currency bill are considered.

—The consolidation of the Pullman and Wagner car companies is perfected at Chicago.

Wednesday, December 6.

—A message from Ladysmith reports renewed and effective bombardment, several of the British

guns being disabled; General Joubert returns to the Transvaal, leaving General Schalkburger in command at Colenso.

—The President's message is received with great satisfaction in European capitals.

—The annual report of the Secretary of the Treasury is made public.

—The President nominates Brigadier-General Leonard Wood to be major-general of Volunteers.

—A mob at Maysville, Ky., tortures and burns to death a negro rapist and murderer; no action is taken by the governor in the matter.

—In the Massachusetts city election, two socialist mayors are returned to office at Haverhill and Brockton.

Thursday, December 7.

—Generals Methuen and Clery continue in nightly communication with the beleaguered garrisons at Kimberley and Ladysmith; General Buller assumes command of the relief column for Ladysmith.

—The pursuit of Aguinaldo continues; General Young reaches Vigan, on the coast.

—Representative-elect Roberts issues an address to the American people, defending himself against the charges made.

—As the result of a meeting held by Booker T. Washington in New York, Mr. and Mrs. C. P. Huntington contribute \$50,000 to the Tuskegee Institute.

Friday, December 8.

—The Boers blow up a railway culvert, and cut the telegraph wires in the rear of General Methuen.

—In the mutiny of native police in Negros, Lieut. A. C. Ledyard is killed. General Young kills twenty-five Filipinos in an engagement.

—A demonstration in honor of Maceo at Santiago de Cuba takes the form of an outburst of anti-Americanism.

—In the House it is decided to devote the following week to the discussion of the currency bill.

Saturday, December 9.

—A British detachment from Ladysmith storms Lombard's Kop, capturing three guns.

—The Roberts investigating committee hold a session at which Mr. Roberts makes a general denial of the charges preferred against him.

—The terms of the reciprocity treaties negotiated last summer between this country, France, and Great Britain are made public.

—John Wanamaker gives his views on department stores before the Industrial Commission in Washington.

—The certificate of election as Governor of Kentucky is given to W. S. Taylor, Republican.

Sunday, December 10.

—In South Africa the British force under General Gatacre is led into a Boer ambush near Stormberg junction; 600 British casualties are reported.

—An expedition headed by the battle-ship Oregon leaves Manila for Subig; General del Pilar is killed in an engagement.

—The annual report of the Director of the Mint shows an increase in coinage for the last fiscal year.

—A loss of \$700,000 is caused by fire in the business section of Augusta, Ga.

READY REFERENCE SCRAP BOOK

For Newspaper Clippings.
CAPACITY 35,000 ACATE LINES.
Size of Book, 4 1/4 x 10 1/2 inches.

A PERFECT INDEX PLAN.

A SCRAP IS FILED by passing the top containing the caption through a slot from the back of the leaf and attaching it to the front surface which is gummed. The caption alone shows upon the leaf and indexes the article. The body, which remains in the back, is read by turning the leaf over and up to the slot through which it protrudes. The leaves are of fine linen stock, and the binding of cloth substantially put together.

THIS SMALL BOOK will file 15 clippings (from one inch to one column in length) to the page, and takes the place of the usual large volume. One of the few novelties worth investigating.

At stationers or by mail, \$1.00

Postage stamps received

I HAVE A SPECIAL OFFER

To make to "Literary Digest" Readers
I have only a few copies left of

GAIL HAMILTON'S
Life of James G. Blaine

Representative in Congress, Speaker of the House of Representatives for six years, Secretary of State under President Garfield, Republican Candidate for President, Author of "Twenty Years of Congress," Political Discussions, etc.

THE most brilliant public man of his day, Mr. Blaine was a far-seeing statesman, advocating protection to American industries by adequate tariff legislation and originating the idea of commercial reciprocity. This biography is the only authorized one, and was the last literary work of the famous writer, Gail Hamilton (Mary Abigail Dodge). It is a charming and instructive story, well fitted to arouse the ardent fervor of youth and stimulate it to high resolve and great endeavor.

I HAVE ONLY 115 COPIES LEFT

and offer them as a special bargain to LITERARY DIGEST readers, while they last, at 40 per cent. discount, expressage paid.

No. of Copies.	Binding.	Publisher's Net Price.	My Price.
18	Cloth	\$2.75	\$1.65 postpaid

The National Chess-Association.

The annual meeting of the United States Chess-Association was held on December 4 in the rooms of the Franklin Chess-Club, Philadelphia. Besides the election of officers the following resolutions were adopted: That the Association arrange telegraphic team matches for trophies given by the Association, such matches to be played on Decoration Day; that the Association bring about a national correspondence tourney. It was decided to hold a tourney in 1900 between the champions or representatives of the leading six Chess-Clubs of the country. The Governing Board is to consider the advisability of holding an international tourney in this country, to be played in 1901.

The officer elected are: President, J. Monae Lesser, Boston Chess-Club. First Vice-President, Isaac L. Rice, Manhattan Chess-Club; Second Vice-President, S. P. Johnston, Chicago. Secretary, George H. Walcott, Boston Chess-Club. Treasurer, Walter Penn Shipley, Franklin Chess-Club. Directors: J. L. McCutcheon, Pittsburg Chess-Club; Patrick O'Farrell, Washington Chess-Club; Stanley H. Chadwick, Brooklyn Chess-Club; G. Stenben, Davenport Chess-Club, Iowa; James B. McConnell, New Orleans Chess-Club; Aristides Martinez, Manhattan Chess-Club.

There is a good deal of brilliancy on White's part, and he conducted the ending in a fine manner.

A Fine Ending.

The following occurred in a game between Mr. Ruth (White) and Mr. Bixby (Black):

WHITE (10 pieces): K on K Kt sq; Q on K Kt 4; Kt on K 3; R on K B 7; Ps on K 5, K Kt 2, K R 3, Q B 2, Q, Kt 2, Q R 2.

BLACK (12 pieces): K on K R 2; Q on K sq; B on Q B 3; Kt on K B 8; Rs on K R sq and Q R sq; Ps on K Kt 2 and 4, Q 2, Q B 4, Q Kt 3, Q R 3.

White mates in seven moves.

The Woman's Chess-Club of New York held its annual meeting on November 21. The directors reported a prosperous year.

The Washington and Chattanooga Limited for New Orleans, California, and Mexico. Excursion tickets now on sale. Through sleeping-cars to New Orleans from New York. Observation dining-cars. Meals a la carte. Absolutely the shortest route to New Orleans. Address the Norfolk & Western Railway, 395 Broadway, New York.

Dr. Brown-Sequard on Rheumatism and Sleeplessness.

This renowned French physician and scientist taught that rheumatism, sleeplessness, pains in bones and muscles, neuralgia, sciatica and kindred disorders of weakened nerves and vitality were due to an excessive flow of electricity from the body to the earth. This was the thought which suggested the invention of the Slayton Insulation Treatment, by means of which this flow can be regulated or absolutely stopped. By night the patient's bed is insulated by means of the Slayton Switch Glass Caster, and by day the **SLAYTON INSULATING SPUN-GLASS INSOLE IS WORN.**

A plain theory, but does it work? Take notice. In the past eight months 10,000 sets have been sold, and **not one was paid for until after trial.** Are you open to conviction enough to take a free trial of this treatment which is so helpful to others? Read these letters and see if it is worth your while.

Mr. D. J. PRESTON, of Tipton, Mich., writes:

"The Casters are worth more than their weight in gold to me. I have tried them and know that they have cured. I was so helpless for three months at a time that I had to be lifted from chair to bed. I have not felt any rheumatism since using the Casters."

NOEL MAY of Denver, Colo., writes:

"The Slayton Insulating Insoles are proving highly satisfactory. I cannot speak too highly of them."

FREE TRIAL

FOR TWO WEEKS. We will gladly send any one a full set of the **SLAYTON ELECTRIC SWITCH CASTERS** and **SLAYTON INSULATING INSOLES** on receipt of 25c. for postage and packing, or separately, 17c. for the Casters and 8c. for the Insoles. Try them for two weeks according to directions. If they do not help you, return them by mail and no charge will be made. If they do help you (and they almost certainly will), send us \$3 for the Casters and \$2 for the Insoles. These articles can be used separately with great benefit, but to secure the **greatest** relief both should be used. Be sure to state whether Casters are to be placed on iron, brass or wooden bedsteads, and the size of shoes Insoles are to fit.

This game is worth studying as showing the weakness of the "Vienna."

Chess a Test of Character.

The game is too good to quarrel about, and hence loss of temper is rare. Yet there are times in the experience of every Chess-player when he finds himself pitted against an opponent who considers defeat as a deadly affront, an opponent who means to win—honestly, if he can, but if not, anyhow—an opponent who insists on the rights of the rules for his adversary, but is not above the acceptance in silence of a concession for himself. A man of this kind may have many acquaintances, but he will not have many friends; and whenever one chances to meet with such an opponent at the Chess-board the sternest enforcement of the rules of play is the only guarantee

What is India Paper?

It is the acme in the art of paper making. Its characteristics being thinness, opacity, strength, and light weight.

Nelson's India paper has enabled the publishers to produce Dickens's Works in the largest type and the smallest compass, the size being $6\frac{1}{2} \times 4\frac{1}{4}$ inches and only half an inch thick, complete in about fifteen volumes, occupying less than eight inches of shelf room and equally as suitable for the pocket as for the Library. *The Churchman* says, "It is one of the most remarkable feats of modern bookmaking."

The volumes are being published monthly in the NEW CENTURY LIBRARY at \$1.00 per volume, and three volumes, "Pickwick Papers," "Nicholas Nickleby," and "Oliver Twist and Sketches by Boz," are now ready.

The favorable reception of Dickens Series has induced the publishers to issue simultaneously and in uniform style, Thackeray's Works, "Vanity Fair" being now ready. For sale by all booksellers, or sent postpaid on receipt of price by Thomas Nelson & Sons.

37 East 18th Street, New York.

“**T**HERE is a vast difference between an unsupported assertion and a demonstrated fact.”

Our assertion that Pure White Lead made by the “old Dutch process” of slow corrosion is far superior to White Lead made by patent or quick processes, has been demonstrated by the experience of competent, practical painters everywhere. Comparative tests made by employees or parties interested do not prove anything.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

for a peaceable parting.—*Manchester Weekly Times.*

A man may have reason to be provoked over his own stupid play, over blunders which demonstrate his blindness, but, even then, he should accept the fact gracefully, that he is stupid, and, instead of showing irritation over his adversary's play, recognize the fact that he is outplayed. We know that some players are not gentlemen in the true meaning of the word. They not only try to take undue advantage, but they “badger” their opponents, and wait for “snaps.”

A Blindfold Gem.

Champion Pillsbury has been giving another extraordinary blindfold simultaneous seance of ten games at the Newark (N. J.) Chess Club. On this occasion he won eight games, drew two, and lost none.

The annexed partie, with P-Q 4, was the star brilliant of the occasion:

PILLSBURY. White.	AMATEUR. Black.
1 P-Q 4	P-Q 4
2 P-Q B 4	P-K 3
3 Q Kt-B 3	P-Q B 3
4 Kt-B 3	B-Q 3
5 P-K 4	Kt-K 2
6 B-Q 3	Castles.

Black's defense, hitherto defective on second and fourth move, now becomes a downright loss, which Mr. Pillsbury demonstrates in his happiest vein.

7 P-K 5	B-B 2
8 B x P ch	K x B

It would have been a shade better to play K-R sq. This would, however, been a loss equally, as White would have proceeded with Kt-Kt 5, P-K Kt 3 best, Q-B 3, etc.

9 Kt-Kt 5 ch	K-Kt 3
--------------	--------

On K-Kt sq, follows the familiar Q-R 5, altho Black can hold out for some time by R-K sq.

10 Q-Kt 4	P-K B 4
11 Q-Kt 3	Q-Q 2

12 Q-R 4 and wins, as with this move Mr. Pillsbury electrified the assembled players by announcing mate in eight moves. The modus operandi in seven moves is as follows after Black as his last reply plays B x K P:

13 P x B	R-R sq
14 Q x R	P-B 5
15 Q-R 7 ch	K x Kt
16 P-R 4 ch	K-Kt 5
17 Q x P ch	Kt-Kt 3
18 Q x Kt mate.	

The only imperfection in the announcement was that it is susceptible of demonstration in one move less, as above given. Instead of 17 Q x P ch, Mr. Pillsbury had probably in his mind's eye 17 P-B 3 ch, which would have made the eight moves.—Score and Comments from *The Times*, Philadelphia.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

MORE BRITISH REVERSES.

THE seriousness of the British situation in South Africa is now universally admitted. The news that Lord Roberts and Lord Kitchener are to be sent to the front is taken as a confirmation of the gravest views, for these two generals are considered the best that England can send, Lord Wolseley being rather old for active field service. The measures now being taken to double the British force in South Africa are accepted as further confirmation. The force already there, deducting the losses (over 7,500), number about 75,000 men; nearly 20,000 are on the way or embarking, and orders issued this week will add 50,000 more. To offset this comes the news that the northern part of Cape Colony is practically in rebellion, menacing General Methuen's line of communication and placing his whole force in peril.

With all three of the advancing British columns repulsed in their first serious encounters—and that, too, before setting foot on Boer soil—the British campaign seems to have been brought to a sudden and unexpected standstill. "Since the days of the Indian mutiny," says the *London Times*, "the nation has not been confronted with so painful and anxious a situation; plainly General Buller's advance is paralyzed for the moment as completely as Lord Methuen's and General Gatacre's. . . . We are fighting not merely for supremacy in South Africa," continues *The Times*, "but for our position as a great power; we know we have miscalculated the strength of our foe, and we are resolved to make that miscalculation good." The press of the Continent, especially in France and Russia, profess to believe that the British reverses are such a revelation of England's weakness that no great power will ever again regard her threats seriously.

What surprises not a few is the readiness with which the British forces seem to march into the Boer traps, and questions are heard on all sides as to the whereabouts of the British scouts, or whether there are any. The Boer leaders, admits the *London*

Standard, "have shown themselves able to give our generals useful, but expensive, lessons in modern tactics." Some of the American papers recall, in contrast, the closing campaign of our Civil War, when Grant and Lee each seemed to divine the other's plans and took steps to foil them almost as soon as they were formed. No one seems willing, in the face of the recent surprising developments, to predict when the struggle will end.

Despite the gloomy outlook, however, and despite the increasing probability that the war will cost England millions of dollars and the lives of a great number of her best troops, no hint of a halt is heard. *The Westminster Gazette*, which actively opposed the war before it began, now says: "We are bound to carry the campaign to a successful issue; the reckoning with the Government will come later."

Mass-meetings are reported in Dublin and other places in Ireland to express sympathy with the cause of the Boers.

The Freeman's Journal (Dublin), so the cable reports, publishes a scathing editorial on Mr. Chamberlain's career, apropos of his visit last week to Ireland to receive the degree of LL.D., entitling the article, "Iscaiot, LL.D." *The Irish World* (New York) says of England's reverses: "While she is thus

checked on all sides, the civilized world rejoices over the multiplying signs that her career of plundering is drawing to a close." In this country sympathy does not seem to be very demonstrative either with Boer or Briton. Senator Mason's resolution in Congress expressing sympathy with the Boers seems unlikely to eventuate even in a debate. The Afrikaner members of the Cape Colony Parliament have issued an appeal to the American people through Mr. George W. Van Sieten, of 141 Broadway, New York, asking for funds to provide for the Boer wounded, widows, and orphans; but it is too early as yet to determine whether any considerable response will be received. The hospital ship *Maine* has been provided for the British wounded by American women.

Britain Tastes the Common Cup.—"The British people have to taste merely of the cup which has been lifted to the lips of most other nations during the generations in which they have been able to abstain from war. There is no such bitterness as France had to choke down at Sedan, nor Austria after either Solferino or Sadowa. It is not such even as sent tears to Italian eyes when the barbaric Negus was the cupbearer at Adowa. It is no such humiliation as we tasted after Bull Run. It is almost precisely

FIELD-MARSHAL LORD ROBERTS.

To have supreme command in South Africa.

such a draft as Russia found in the Balkans, which the 'under-estimated' Turk kept her a year in crossing. It is the cup of the fortune of war. It is not lethally poisonous. It is sometimes even excellently tonic in its effects. Britons have taken it before, tho so long ago that they have forgotten the taste. As they recall it they will recall the way of taking it like men."—*The New York Press*.

It is Sobering.—"Just at present, of course, the chief effect of the British disasters and the mourning spread throughout the

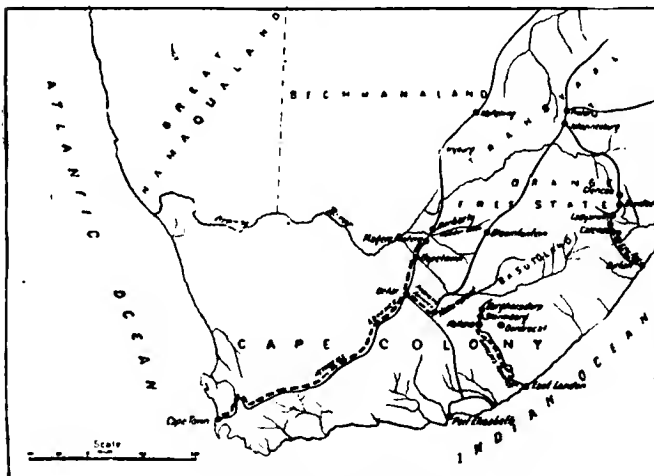

MAJOR-GENERAL LORD KITCHENER.
Appointed Lord Roberts's Chief of Staff.

kingdom is to make army and country fight harder than ever until peace be conquered. But in the future, the terrible memories of this year can not but restrain the public men who have talked so lightly about war, and help permanently to discredit the 'new diplomacy.' Mr. Chamberlain said in Parliament that he really meant to accept Kruger's offers about the franchise, and thought he had done so. Sir Edward Clarke's retort was crushing: 'You intended to accept, and avert war, yet you did not draw

up your note so as to make your meaning clear; and when you found that the Boers did not understand you to accept, you did not lift a finger or telegraph a word to clear up the matter!' It is safe to say that we shall not again see such incredible carelessness (or effrontery), with war hanging on it. The thousands of dead and maimed and captured British soldiers will make the next colonial secretary sure that his meaning is written clear, and that it is clearly against war. We did not really need the reminder, but the South African battles furnish it, that the old proverb is still true—'War is a spark dropped in the Devil's tinder-box.'—*The New York Evening Post*.

Is It Worth the Price?—"England has already lost nearly 5,000 men, and it is estimated that the war will cost at least \$200,000,000. That is more than the entire Transvaal is worth as a national possession, for the gold-mines and most other sources of wealth in the country are private property. Moreover, the position of the entire empire has been endangered. If Menelik should take the field with all the available British regular forces tied up

LINES OF BRITISH ADVANCE.
All checked by the Boers.

in South Africa, and even the militia drawn upon, and if Russia should stir up trouble on the Indian frontier, England's position would be more perilous than it has been since Waterloo. And all this trouble has been utterly unnecessary. Three months ago England's position seemed unassailable. Never had the British empire appeared so majestic or so formidable. There was no power or coalition of powers in Europe that would have ventured to attack it. And this condition could have been maintained indefinitely. England's security could be threatened by none but England herself. If the course of this war could have been foreseen, what would the English people have said to Mr. Chamberlain's management of the negotiations that led up to it?"—*The Philadelphia North American*.

British Empire at Stake.—"It is true that, as the London papers are saying, not merely South Africa, but the world-wide British empire is at stake. Perhaps that fact was not realized as clearly before the war as it is now. At the present time it is seen by all as clearly as the noonday sun. If Great Britain were defeated by the Boers she would be driven out of South Africa altogether. And what then? Why, she would be a third-rate power. India would be lost in a twinkling. The United States of Australia and the Dominion of Canada would probably reckon further connection with her a source of weakness and peril rather than of safety and strength. And the greatest and most beneficent empire the world has ever seen would become a thing of the past. That is the tremendous realization that now dawns upon the British mind. That it is which prompts the calling out of the reserves, and which impels even the bitterest foes of the Government to say, 'We are bound to carry the campaign to a successful issue.' But it may be that just one *ante-bellum* prophecy will be fulfilled. That is Mr. Kruger's threat that he would make Great Britain pay for the Boer states a 'price that would stagger humanity.'—*The New York Tribune*.

GENERAL SIR CHARLES WARREN.
Just arrived at Cape Town. It is rumored that he may succeed General Methuen.

Where the Boers are Weak.—"The real vital factor in the campaign is time, provided, of course, that, as time goes on, the English can prevent the Boers of Cape Colony and the natives both there and in the other British possessions from rising in revolt. Assuming this latter success, each added day of campaigning sensibly weakens the resisting strength of the Boers. They have every available man in the field, and decimated ranks can not be filled up by recruits from within their own territory. All industries are paralyzed within the two republics, their governments using, without the possibility of replenishment, the supplies that have been laid up in the past. There must be an end to this, and if the English adopt the policy that General Grant followed when appointed to the command of our armies operating against Richmond, of simply exhausting the enemy by continuous conflicts, even tho these are disproportionately costly to the aggressor, the Boers will be compelled before a great while to yield, because of the impossibility of replenishing their exhausted military supplies and of making good on their fighting line the men killed, wounded, or taken prisoners. This is a most unsatisfactory form of warfare to carry on, but in our own case we discovered that, expensive as it might be in the sacrifice of life and treasure, it was better than indefinitely prolonging an apparently doubtful contention."—*The Boston Herald*.

The American Scout.—"Colonel Cody's views as to the scout-

ing methods of the British army are shared by most American officers who have seen service on the frontier. . . . The American army in the Philippines has been fighting an enemy that knew the country thoroughly, but it has driven them from their strongholds and has scattered their organized force. Not once have the American troops been surprised, and, altho they have been several times attacked in front and rear, not once have they been caught in a trap or an ambushade. The American idea of employing men as scouts who have a thorough knowledge of military affairs was developed during our Civil War, and in the later Indian campaigns. In the first year of the Civil War mistakes were made through the non-employment of scouts, through negligence in the use of reconnoitering parties to develop the position of the enemy, and through the use of incompetent guides, who, while they had knowledge of roads and river crossings, had no military sense whatever. Out of this experience came the system of thoroughly scouting and reconnoitering the territory between the army and the enemy. Many British officers have seen the advantage of the system, but apparently it has not been adopted by General Buller or his subordinates."—*The Chicago Inter Ocean*.

THE PRACTICAL SIDE OF CHRISTMAS.

WHILE the poets and preachers are finding new and beautiful ideas in the Christmas-time commemoration, the great world of business, war, and politics seems likely to pass it by with little heed. Our troops in the Philippines appear to be destined to celebrate the day by chasing the Tagals up and down the mountain-sides of northern Luzon, without a stocking to a regiment that would hold a Christmas present, and with a few handfuls of rice and hardtack to do duty for turkey and plum-pudding. About three thousand British soldiers will fulfil Secretary Chamberlain's prophecy and "eat their Christmas dinner in Pre'oria," but it will be, as the St. Louis *Globe-Democrat* puts it, "under circumstances quite different from those expected for the festivities." The prosperity in the business world, however, will make the holiday a happier one in most American homes than it has been for many a long year, especially in the humble homes of the New England mill towns, where the prosperity has just reached the employees in the form of advanced wages. The recent "slump" in Wall Street causes the New York *Times* to remark that some of the victims "will approach the bird with harassing preoccupations and under a nervous strain that is simply fatal to gustatory enjoyment. But," continues *The Times*, "it must be evident to every observing person that these troubles

of the Street are strictly limited to the local field of speculation. So long as the railroads of the country continue to increase their earnings and their dividends in their present flagrant and shameless manner, and so long as the mills hum and wages rise, there is no reason why folks who are not engaged in speculation should walk the floor nights. The country is simply rioting in prosperity. That is a fundamental fact. There is a world of comfort in it."

Yet the Christmas idea is coming more and more to mean the giving of comforts rather than the getting and enjoyment of them. This is brought to mind by a recommendation given out by John W. Keller, the Commissioner of Public Charities of New York City, in which he urges that Christmas be made a time of open-handed charity to the poor. He says, in part:

"Christmas charity may be indiscriminate without being harmful. As a general proposition, indiscriminate giving undoubtedly does injury to the community; but at Christmas-time there is a spirit in the air that makes it possible for even the worthless among the needy to receive gifts without injury to themselves. The acceptance of a Christmas gift leaves the recipient more kindly disposed toward the rest of the world and better satisfied with himself. Christmas charity elevates its recipient as well as its bestower. Each becomes the better for it. Left to himself at this season of general rejoicing, a man becomes bitter; and if any criminal instincts lie dormant in him nothing will so quickly bring them to life as to feel himself cold and hungry and neglected when other people are making merry. . . . It has long ago been said that a bad man or a bad woman is never quite so bad when his or her stomach is full and there is a blazing hearth as when the larder is empty and the grate is cold. Somehow, crime—that is, petty, vicious, low crime, the crime that is most general and most degrading to society—does not flourish so well when the people are comfortable as when they lack comfort. All experience teaches that we may give on Christmas with a free hand and an open heart, and close our ears to the remonstrances of the sociological students. . . .

"It would be a liberal education to many of our good people to go among the poor—even the depraved poor if you will—on Christmas Day. They will observe that the influence of the occasion is almost as strong, if not a little stronger, than it is with those who eat their Christmas dinners in well-ordered, luxuriously furnished dining-rooms, where the winter's sun pours through the windows and is reflected in cut glass and burnished silver. The station-house blotter—that church register of the congested districts—will bear out this statement. It will be seen that on Christmas day there are fewer arrests for violence than on any other day of the year. But by all means, where such a thing is possible, give what money will buy, rather than money itself. There can be no such Christmas gift in all the world as the payment of the back rent for a distressed family that must face a night on the street with bag and baggage except for such aid. Add to this a big hamper of good, healthy, nourishing food, with a few luxuries thrown in, a warm frock for the mother and babies, and perhaps an old suit of clothes for the father; put enough coal in the cellar to keep the family warm for a few weeks, and you have followed the teaching of the Master, whose tenderest thought was for the poor."

THIS WOULD BE A PLEASANT SURPRISE.

—*The Cleveland Plain Dealer*.

A CHRISTMAS LETTER.

—*The St. Louis Republic*.

The New York *Journal*, in which Commissioner Keller's rec-

ommendation appears, believes that the spread of Christmas observance, with its gentle reminder of human brotherhood, "is the forerunner of the federation of the world." It says:

"Is it not a miracle that such a festival should have survived through so many ages and so many revolutions? Every nation in Europe or America is young compared with this ancient holiday. The peoples of antiquity died, and most of their customs and traditions died with them, but this they passed on to their successors. The barbarians fought, reveled, massacred, and were massacred; Goth and Vandal, Alan, Burgundian, and Lombard trampled the arena of history, but somehow this exquisite flower of religion, humanity, and poetry was always spared and handed on, ever fresher and more beautiful, from century to century. Beginning in a corner of the Levant, Christmas has spread over the whole world. It is the one universal holiday of Christian mankind—Christian not merely in the theological sense, but in the sense of a common civilization, regardless of individual beliefs. It has had a curious power of associating itself with extremes of climate. Originating in a land of endless summer, its earliest symbol was the palm. Then, adopted by northern races, it became identified with snowy roofs, with crackling fires, with reindeer and Santa Claus going down wide-mouthed chimneys.

nations of the earth come together on one day as brothers, will they not eventually realize the incongruity of flying at each other's throats the next? Christmas once a year as a universal festival, celebrated on the Arctic ice floes and in the Brazilian jungles, is a glorious thing, but the spirit of Christmas pervading three hundred and sixty-five days would be more glorious. The world has almost attained the one—how long must it wait before it attains the other?"

A BLOCKADE OF LAKE SHIPPING.

THE sum of half a million dollars or more, it is computed, was lost during the season just closed on the Great Lakes by two blockades in the St. Mary's River, the outlet of Lake Superior. The second blockade, shown in the accompanying illustration from *The Marine Review*, was caused by two steamers racing for the entrance to a narrow cut where there was passage-room for only one—like two railroad trains racing for the same switch—with the natural result that both steamers went aground. Another result was that one hundred and fifty or more

THE BLOCKADED LAKE FLEET.

Now it is ceasing to belong to any climate, and is taking possession of all. We can hardly say that 'a green Christmas makes a fat churchyard' when Australasia, South America, and Africa celebrate Christmas in summer. The snow, the evergreens, and Santa Claus with his fur coat and reindeer are still the Christmas features of the North, but the day is not limited by any such local accessions.

"Christmas is the forerunner of the federation of the world. Since the confusion of tongues at Babel there has been no such universal solvent. It gives the common touch of humanity that unites all nations. Where a government brings twenty, forty, or a hundred million people into mutual relations, the observance of this day brings a thousand millions. More people look forward to Christmas now than ever did at any former period of the world's history. Wherever European civilization goes the celebration of this gracious festival follows in its train. It has already extended over the whole of Europe, North and South America, Australasia, the islands of the ocean, the greater part of Asia, and much of Africa. Only China, Central Asia, and Darkest Africa remain untouched by its influences, and a few years will bring them in. Then Christmas will indeed be a truce of God, when the whole world will suspend its wrangling and come together in a common festival of good will. Is it too much to hope that this annual communion of spirit may have some effect on human conduct in the rest of the year? When all the

big ships in the closing hours of the season, carrying freights at highly profitable figures, at a time when every minute counted, had to tie up and wait until the too impatient captains succeeded in again floating their craft. The editor of *The Marine Review* says that Congress will probably be asked to take action during the present session to prevent the recurrence of such an "accident." The picture of the blockaded steamers, the temper of whose captains can be better imagined than described, was taken on Thanksgiving Day.

A Break in the Silver Ranks.—The news that the gold-standard bill which was passed by the House this week would be supported by a number of Democrats (most of them from New York and the rest from Pennsylvania, Maryland, and Massachusetts), and by one Republican from Iowa who has hitherto favored silver, has called out some comments from the Republican and Gold Democratic press. The *New York Times* (Ind. Dem.) declares that the Congressmen in question "have done a manly, honest, and highly creditable act." Men with political ambitions must make great sacrifices in breaking away from their party, says the *Providence Journal* (Ind.), and "in the circumstances their

honesty and bravery are unusually commendable." "Heaven be thanked," exclaims the *Newark Evening News* (Ind.), "that such rules of action as govern Richard Croker and his intellectual tatterdemalions do not inspire all Democrats even in this day of the party degeneracy." The *New York World* (Ind. Dem.) believes that this "will mean the beginning of the end of this nightmare of the money question." The *Baltimore News* (Ind. Dem.) thinks this defection only one indication of a general trend, and says that "the Democratic Party is put in a much worse 'hole' over the currency matter by the energetic action of the Republicans than it could possibly have been put by a policy of shilly-shallying." The *New York Evening Post* (Ind.), too, thinks that the Democratic Party is disintegrating, and considers it "a great misfortune for the country, since a strong opposition is a necessity to the best working of our governmental system."

Few silver papers comment on the matter. The *Washington Times* (Dem.) says: "The spectacle of this assault upon one of the cardinal points of Democratic doctrine by Representatives in Congress who were elected to it as, and claim to be, Democrats is an unhappy one; but it carries a fresh lesson to the leaders of the organization which they should not ignore. It is evident that, on the basis of the situation as it exists to-day, something besides the money issue will be required if Democratic success anywhere in the East is to be hoped for in 1900."

CHINA AS AN INDUSTRIAL MENACE.

MR. JOHN P. YOUNG, managing editor of the *San Francisco Chronicle*, who has had close observation of California's Chinese residents for thirty years, thinks that the commercial future to which the plunderers of China are looking forward may not prove so rosy as they anticipate. Indeed, he predicts that China's population of 400,000,000, when awakened and introduced to Western civilization, instead of clamoring for European and American products, will begin to produce these articles themselves, not for their own use, but for us, and at such ruinous prices that the labor market of the world will suffer a terrible blow. To show that he is not alone in this view, he quotes the following paragraph from a recent number of *Bradstreet's*:

"When the vast natural riches of the empire are systematically developed by foreign capital the other side of China's trade extension may become perceptible. It is, for instance, claimed that the iron and coal deposits of China are the greatest in the known world; the supply of labor is undoubtedly a vast one; and it needs but little prophetic acumen to point out that some day China will figure as a great competitor in many lines of industries in the markets of the world."

Many who are expecting great things from China's trade will be surprised at Mr. Young's belief that the Chinaman will never buy Western products. For proof he points to the Chinese who have lived in the United States, surrounded by Western products, for fifty years. He says (in *The Forum*):

"Here, if anywhere, we might suppose, would be found evidence of the possibility of impressing the Chinese with the superiority of Western habits. But there is no more striking feature in the life of the chief city of California than the utter unsusceptibility of the Chinese to their new environment. They do not alter their mode of life in the slightest degree. They wear the same dress, eat the same food, amuse themselves in the same fashion, and exhibit the same parsimony met with in the overpopulated provinces of China, where over five hundred inhabitants are crowded into a square mile of territory.

"The logical inference from this state of affairs is, that the Chinese can not be induced to adopt Western habits. This inference receives ample support when the investigator pushes the inquiry and endeavors to ascertain the views of the Chinese themselves. Thirty years of more or less familiarity with California's Chinese of all degrees, from the merchant to the man who hires himself out as a domestic, has convinced me that they one and all

look with contempt upon Western achievements; and even when compelled to employ the conveniences created by the ingenuity of Americans and Europeans, they regard them either as a necessary evil or as something to be made use of in exploiting the people among whom they live. But more significant than anything else is their intense clannishness. The few products of Western origin consumed by the Chinese in San Francisco and in the other cities and towns of the State of California are invariably bought from Chinese. Such a thing as Europeans or Americans manufacturing for Chinese consumption is never thought of; and if the idea ever did occur it would be speedily abandoned, because if the article was one which this curious people really desired they would turn to and make it themselves.

"To ignore facts such as these, and persistently to assume that what fifty years of Western environment has been unable to accomplish in California will be effected in the twinkling of an eye in China by simply making it possible to get at the Chinese, is absurd. There is every reason to believe that the causes which produce the remarkable results noticed in California will operate with much more power in China. If after fifty years of residence in California the Chinese and their descendants in that State adhere to their conventional dress and habits as closely as those such a course were dictated by religion, why should we suppose that the four hundred millions of their countrymen at home would act differently?"

China is undoubtedly a country of vast resources, admits Mr. Young. Baron Richtofen, the celebrated geologist, estimates that China has a coal-field covering 400,000 square miles waiting for the miner. Other minerals are to be found in plenty. The valley of the Yangtse River is the richest soil on the face of the earth, where three crops are gathered every year from the same land. The Chinese are thrifty farmers, too. Professor Garrett has found that in the United States the densest population that can be supported by agriculture is forty-five persons to the square mile. China is an agricultural country, yet the most thinly settled of its eighteen provinces supports sixty-five to the square mile. Lest this estimate should seem large Mr. Young cites Szechuan, with 406 to the square mile, Hupeh with 473, Anhwei with 425, Shantung with 557, and Fuhkien with 574. China's greatest product and resource, therefore, Mr. Young argues, is labor. That is what we will have to reckon with when we have succeeded in opening the country to our exploitation. And it will not be unskilful labor, either. Says Mr. Young:

"The availability of Chinese labor for manufacturing purposes will not be seriously questioned by any one who has seen the success achieved by this people in such industries as that of shoe-making by machinery, the fashioning of men's and women's garments of all kinds—in fact, in every industry which a jealous community like that of San Francisco has permitted them openly to pursue. It would be absurd to assume that what has been accomplished in an American city by the Chinese can not be imitated by them in China. Herein lies the menace to the West. It is the knowledge of Chinese adaptability that makes it questionable whether the introduction of Western habits into the empire will not result in a setback to our civilization. It may be possible for the extremists, who accept without cavil the doctrine that overproduction is impossible, to view with equanimity the opening of coal measures whose area has been estimated by Baron Richtofen, the celebrated geologist, at 400,000 square miles, and the development of stores of iron, rivaling in abundance and richness those of the United States; but the practical man, who merely takes account of the periodic depressions which result from the glut of goods in the markets of the world, may think differently. The workers of Europe and the United States may not take kindly to the prospect of China's vast stores of mineral wealth being converted by Chinese into finished articles for consumption in the Western world.

"On the whole, in spite of the weight of contrary opinion, it may be safely predicted that the opening of China to the trade of the world will not be followed by the results which are so confidently expected by people who have surplus products that they are anxious to dispose of at a profit. Instead, the effect of the opening and awakening will probably be to bring disaster upon Western industrialism, unless a barrier can be interposed to the

competition of a race whose most striking characteristic is the entire absence of those desires and aspirations which Americans and Europeans strive to gratify. This notable peculiarity, at this stage of the world's development, may give the Chinese an overwhelming advantage in the struggle for existence, and compel the Western working classes to abandon their ideals."

GENERAL LEONARD WOOD FOR GOVERNOR OF CUBA.

NOTHING but commendation is heard for the President's choice of Gen. Leonard Wood to succeed Gen. John R. Brooke as military governor of Cuba. Even the bitterest opposition papers admit that the President has done well this time. The New York *Evening Post* (Ind.) says that "to this appointment everybody who has any knowledge of the condition of affairs in

GENERAL LEONARD WOOD

the island must give a hearty assent," and the New Orleans *Picayune* (Dem.) says that in promoting General Wood the President "has made at least one appointment that the entire American people will approve." The Republican press are no less enthusiastic. The New York *Tribune* (Rep.) rejoices that "the croakers who are

sure that 'our new obligations' is only a term to cloak a Republican riot in colonial spoils will find little comfort in the appointment," and the Columbus *Dispatch* (Ind. Rep.) remarks that if the report be true that some of the army officers have taken General Wood's rapid advancement as an affront, so much the worse for them. The Philadelphia *North American* (Ind. Rep.) says that "instead of complaining of General Wood's rapid advancement, other officers ought to congratulate themselves that merit can sometimes get ahead, and try to take advantage of their opportunities themselves."

When an Associated Press reporter gave General Wood an opportunity a few days ago to talk to the newspaper readers all over the country about his plans for Cuba, he simply said: "My policy in Cuba will be to give the people of Cuba just as good a government for their own welfare as I can." The cabled comments of the Havana press fail to show much disposition either to commend or to censure the appointment, but a despatch to the New York *Sun* from Santiago says that the Cubans there "are free in their expressions of enthusiastic approval." General Wood's success in overcoming disease and disorder in the province of Santiago, and his able and efficient measures of reconstruction are already well known, but his new appointment gives them a fresh interest, and nearly every newspaper takes occasion to review them again. Almost like a parting testimonial to General Wood's heart-winning administration of his province comes the news that the mayor of Tunis, in the district of Holguin, "who was formerly a rabid Cuban politician," has voluntarily disclosed the location of three effective field-guns, ten thousand rifles, and a large amount of ammunition, which he has surrendered to the Americans. The mayor said that he had "become convinced that the possession of these arms by the Cubans was a source of danger." If General Wood can now get the rest of the "rabid Cuban politicians" into the same frame of mind, it is remarked,

there need be no more fears about the island's future. A typical example of the current comments on the new military governor is the following one from the Atlanta *Constitution* (Dem.):

"Taken altogether, it is likely that Major-General Leonard Wood will prove to be the most enduring figure of the Spanish-American war.

"Two years ago Leonard Wood was an unpretentious army surgeon, unknown to the public and without apparent special ability. Thus he might have passed through life, had he not taken advantage of a declaration of war to undertake the organization of a 'Wild Bill' attachment to the volunteer army, of which he was to be colonel, with Theodore Roosevelt as his lieutenant. The novelty of the aggregation attracted attention, and the bravery of the men under fire aroused the enthusiasm of the people. The result was glory for the Rough Riders, a brigadier generalship for the colonel and a governorship for the lieutenant-colonel.

"But the true value of Wood was yet to be tested. The conquest of new territory imposed civil duties upon military officers. While other officers blundered along in applying military methods to civil affairs, the success of General Wood as a harmonizer of antagonistic elements became marked. Altho an American born and bred, he evinced a thorough intuition of Cuban character. Questions of police, of sanitation, of finance, of municipal government, and of political economy generally found the instant solution which could only be expected from an expert. The Cubans were enthusiastic in having found a friend in the army of invaders; the Americans were gratified to find in one of their number a man who was equal to any emergency.

"The man who, under such circumstances, could secure success is no ordinary figure. Dewey had a superior naval force at Manila; Shafter had a strong army at San Juan; Schley was matched in an even game by Cervera; but Wood had insidious enemies which even accomplished statesmen have not been able to cope with. Seven hundred years of English rule in Ireland finds the people of that country as adverse and bitter as ever, and so on reference might be made to other nations. But Wood is the choice of the Cuban people themselves. He has studied their wants and understands them, and he is the man of all men who should have control of the island during its constitutional convention period."

DISQUIET AMONG THE TRUSTS.

IT was widely noticed that the "slump" in the stock market last week affected the "industrials," or trust stocks, much more than the others, and the economic writers of the press have made many conjectures to account for it. The trust stocks were "temporarily and slightly unsettled," says *Bradstreet's*, by the Supreme Court decision (considered in these columns last week); but found "more tangible reason for alarm in the portion of the President's message which related to trusts and combinations of a monopolistic nature." Whatever the cause, it is nowhere denied that "the state of the trust securities," as the Springfield *Republican* says, "is not what it was"; and "the market for new securities of this sort," it believes, "has been terribly damaged." The following quotations show the highest bids of the year for some of the chief trust stocks, as compared with the lowest prices they brought on December 11. It will be noticed that the average price is only about 69, compared with 122 for the year's highest—a shrinkage of nearly one half:

In the mean time the tobacco trust, according to newspaper report, has evolved a plan for evading the President, Congress, and the state legislatures. The federal Government can prevent a trust from shipping goods from one State to another, under that

section of the federal Constitution giving to Congress control over interstate commerce; and any state legislature can prevent a trust from doing business within the state borders. The scheme

A LICK FROM AN UNEXPECTED SOURCE.

THE TRUSTS: "Why, Bill, I wouldn't a-thought you'd a-done it."
—*The Atlanta Journal*.

of the tobacco trust to evade this power of the federal Government is thus described by the Indianapolis *Sentinel*:

"Owing to the Addystone Pipe Company decision or to anticipations of anti-trust legislation, or some other cause, the trust has decided to retire from interstate commerce. It has accordingly arranged its discount schedule on a basis of sales that can not possibly be made, and thereby has cut off jobbers from the discounts that they have heretofore enjoyed if they purchased direct, as they have been doing. But it has no intent of taking away the discount and no intent of driving away its customers. It arranges that they may obtain their tobacco at the customary

rates through an agent resident in New York. It generously names an agent who will attend to the customer's business in a satisfactory way. He is not an agent of the trust. Of course not. He is merely a good man to become agent for the customer and look after his transactions with the trust. Incidentally, he lives in the same State as the trust, and the trust can sell him all the goods it desires without engaging in interstate commerce. When sold to him as agent the goods are out of the control of the trust. It has nothing to do with them. They belong to the firms represented by the agent and he merely ships them their own goods. The object of this move is plain to anybody, and it demonstrates the necessity of a carefully drawn federal anti-trust law if any progress is to be made toward the suppression of trusts. An arrangement of this kind shuts any State off from the possibility of protecting itself by a state anti-trust law. The whole apparent business of the trust will be centralized in one State, and it is already evident that some of the other Eastern States are ready to follow the example of New Jersey and furnish homes for these organizations where they may engage in their business of systematically pillaging the public."

Whether the trepidation among the trusts is warranted must be proved by the progress of events. Several anti-trust bills have been introduced in Congress, but serious doubts have been expressed whether any of them, if made law, will prove effectual.

TOPICS IN BRIEF.

THE British will remember that General Sherman informed them what war was several years ago.—*The Chicago Record*.

SOON Aguinaldo will have to come within the American lines in order to consult with any of his chiefs.—*The Chicago Evening Post*.

EVERY cloud has a silver lining. Every time a Senator or Representative dies Congress adjourns for a day.—*The Minneapolis Tribune*.

A COMMISSION is to be appointed to pass upon the Spanish war claims. It is understood that the Democratic Party has a large bill to present for damages.—*The St. Louis Republic*.

PRESIDENT MCKINLEY calls attention to the fact that Washington has been dead 100 years. Looking at some of our modern rulers, it appears to be fully that long.—*The Chicago Record*.

WHERE CREDIT IS DUE.—If Mr. Roberts has become to some extent a national figure he can truthfully say that whatever of prominence he has attained he owes to his wives.—*The Spokane Spokesman-Review*.

POOR General Buller! Even if he escapes the sharpshooter's aim and whips the Boers, who knows but that he will be presented with a house on his return to England!—*The Kansas City Journal*.

"OUR wars," said the South American, "have one distinct advantage over the wars that are waged in other parts of the globe." "What is that?" he was asked. "When you go to war," he replied, "you make it necessary for some other country to be at war. We don't."—*The Chicago Times-Herald*.

A SCENE OVER AT THE ROBERTSES.

THE MRS. ROBERTS (in Chorus) "There, I told you so. If you hadn't married those other two you would have been a full-fledged Congressman by this time."—*The Minneapolis Tribune*.

UNCLE SAM'S OLD MAN OF THE SEA.

CURRENT CARTOONS.

LETTERS AND ART.

"BEN HUR" ON THE STAGE.

ALL who have seen General Lew Wallace's new play agree that stagecraft has done its utmost to create a splendid dramatic spectacle. Mr. Clement Scott, the English dramatic critic, thinks, indeed, that it combines considerable merit as a drama with its fine stage effect. He gives the following out-

GEN. LEW WALLACE.

line of its shifting scenes of splendor and Oriental pageantry (in the *New York Herald*, November 30):

"Every detail was so successfully worked out that the spectators saw the scenes in an Eastern story of love and hate follow each other as naturally as tho they beheld the son of the house of Hur living his life before their eyes. The world of canvas and paint and of the running artificers, of acting and of reality, was rolled away as tho it were a scroll.

"From the meeting of the wise men under a starlit sky to the dusty arena, with plunging steeds, and then to the groupings of the multitude on the Mount of Olives, those who saw and heard last night at the Broadway lived in a world ruled by the legions of Rome. Why speak of play-houses, of illusions, and of stagecraft, when they all seemed so real, so sentient with life?

"Ben Hur" realized all the expectations of those who planned for its success. Descriptions which the author gave were followed with absolute fidelity. Archeology was called to the aid of the scene-painter and research was the handmaiden of stagecraft. Every costume was true to the period which it represented. The scenes held the interest unflinching from the beginning to the end, whether the characters lived in somber vale or beneath a dazzling, sunlit sky. The dark interior of the Roman galley, the slaves chained to the banks, the din of battle overhead, and then the wild rush of the sea, caught the senses and held them enthralled. Then the wild gray waste of ocean, where, clinging to wreckage, the Roman tribune swears to confer honor and riches upon the young prince of Israel, impressed the beholder with the desolation of those who have met disaster on the face of the deep. And when the Roman trireme came over that waste of sea, the beholder felt the blood tingle with the hope which came to the wave tossed ones clinging to the raft for their lives.

"And the grove of Daphne. It is difficult to describe its classic temples, its maze of trees and carpet of green, and the blue sky above it. Here was a land of warmth and sunshine, a land peopled by those who knew no season but the summer-time, and sang no songs but those of Arcady. The Oriental splendor of the tent in the garden of palms and the soft witchery of that moonlight scene upon the lake transported one in imagination to the realm of long ago.

"The chariot race was more than realistic. It was real. The spectators were seemingly a part of the throng which sat in the great amphitheater at Antioch. The high-spirited horses raced as truly as did ever horses in the dust of the hippodrome. The straining necks, the swiftly moving legs, the foam-flecked breasts were no illusions of the sense. The rocking chariots, the wind-blown garments of the charioteers, the rumbling of the wheels, the clouds of dust caused those who witnessed that race to lean forward and almost to cry out with the multitude. The breaking of an axle, the loss of a wheel, the fall and ruin of Messala, amazed and enthralled. Then when *Ben Hur*, driver, had won,

and the populace lifted up a tumultuous cry, those who were in the theater seats joined in the cheers.

"And scenic art surpassed itself when the Vale of Hinnom faded away, and the Mount of Olives appeared to the sight, fair and filled with sunshine. Skill and stagecraft had done their part, and they had achieved a merited success

"Such stage management is a credit to any country. In America you know how to rehearse a play and never allow it to be produced until it is ready. At home many of our first performances are indifferent dress rehearsals.

"You will want to hear something of the acting. On the whole, it was disappointing. The old school and the young, or new school, came, of course, into conflict. The old school, accordingly, and in the majority of instances, overacted; the young school as conscientiously underacted. What the modern and natural actor does not understand is that there are certain plays that require a new style and method."

The Commercial Advertiser, after speaking of the success of the play as a spectacle, says of the leading actor:

"The principal burden, of course, fell on Edward Morgan, for *Ben Hur* is on the stage most of the time, and is the center of what really dramatic interest exists. Mr. Morgan, who, in the general opinion, and in ours, is, on the whole, the best male actor of his years in America, showed that in some important directions he is improving rapidly, and, altho he has some clear faults still, and misses some opportunities, he gave the essentials of his character very attractively. The dominating traits of young *Hur*—eager, good, sad, steadfast, warlike, spiritual—stood out in Mr. Morgan's face and bearing always, sometimes exquisitely. Perhaps the best feature of his performance was the weary and gentle goodness that crossed his face from the beginning of the second act to the end of the play. This did much to retain in the drama the spiritual meaning of the novel."

The *New York Times* says:

"One word as to the treatment of the religious side of this story. Deft and careful as it is, it will undoubtedly shock many persons. The scene on the Mount of Olives might at least have been spared. But reverence for sacred things is much rarer than it used to be. There is, of course, no attempt made to actually portray the Redeemer.

"Dramatically the piece rises above the level of ordinary melodrama in only two or three scenes, including the last, or the next to the last, for no words are spoken in the concluding tableau, in which the choristers sing the 'Nunc Dimittis.'

"The best of all the acting is done by Mary Shaw as *Anrah*. She is eloquent and forcible, and makes every word of her share of the text tell."

Mr. William Winter (in the *New York Tribune*) after comparing the play and the novel, and remarking that the weird mysterious atmosphere of the story can not be successfully reproduced on the stage, says:

"Mr. William Young has made a spectacle play, neither better nor worse than various old semi-religious dramas—such as 'The Christian Martyrs'—that flourished in the pious and thrifty days of Barnum's Museum. In a dramatic sense it is not comparable for even a moment with either 'Sardanapalus' or 'The Last Days of Pompeii.' On the other hand, it excels in scenery. The pic-

MR. E. J. MORGAN,
Who takes the title rôle in "Ben Hur"

tures quite overwhelm the action, and their dazzling opulence will amply suffice to hold the public favor. The chariot race alone would suffice to win the multitude. This was managed by the use of two cars, each drawn by three horses, each team being driven on a treadmill, and the two parallel treadmills with their spirited steeds in action being backed by a vast panorama of a crowded coliseum, stretched over three sides of the stage and moved with the swiftness of light. The cheers for this splendid stage effect were long and loud, and General Wallace, who was called before the curtain, briefly expressed his pleased acceptance of the public tribute.

"There is not a single essentially dramatic situation in the piece, but several of its incidents are momentarily effective. An ocean of talk could be cut out of it, to great advantage. The story is that of the broken friendship between *Ben Hur* and *Messala*, the escape of *Ben Hur* from the galleys, the rivalry of *Messala* and *Ben Hur* for the favor of the wanton Egyptian, the contest between these rivals in the arena, and *Ben Hur's* ultimate recovery of his home and his relatives, with his implied conversion from Judaism to Christianity. It is a languid story and it has been languidly told. No attempt is made to develop character, and as no exacting situations are provided there is no special draft upon dramatic resource in the actors. Mr. E. J. Morgan, as *Ben Hur*, bore the burden of the piece, and bore it well."

There is a tone of raillery in *The Evening Post's* description of the play, but it admits, with Mr. Winter, that its popular success can not be doubted.

CHRISTMAS AND NEW YEAR POETRY.

CHRISTMAS and the approaching end of the century have called out some verses of merit in the American magazines. The following (in *The Coming Age*, December) is by Coletta Ryan:

GREAT GOD IS NEAR.

God is trying to speak with me and I am trying to hear;
But the angry roar of an angry sea
Has told my soul that it is not free;
And my strange, imperfect ear
Has only caught, on the breast of day,
The strain of a song that is far away,—
So I sit and listen and humbly pray,
For God is near.

God is trying to speak with me and I am trying to hear.
Away with the gold that is won by death
Of mind and body. (O Nazareth!

O living, breathing tear!)
Away, away with the realist's hand,
Away with the tyrants that slave the land,
For the heart must sing and the stars command.
(Great God is near.)

And sooth and comfort the voice of pain,
Man's Eden must return again,
And the Christ that suffered must live and reign.
(Great God is near.)

And hush and silence the battle's din,—
And lift forever the mists of sin
That veil the wealth of the God within.
(Great God is near.)

And strive, O strive to be brave and true;
The world is dying of me and you
And the deeds undone that we both might do!
(Great God is near.)

The Critic (December) prints a poem by Miss Edith M. Thomas from which we quote three stanzas:

THE CENTURY TO THE CENTURIES.

Yonder the last of thrice ten thousand days,
Through drift of soft ethereal flame wide blown,
On phoenix plumes descends the evening haze.
And, as from embers and from ashes strown,
Rose on keen wing the Arabian wonder lone,
And shaped swift flight to Heliopolis,
And there did sleep an age-long sleep unknown;
So thou, far in the under-world's abyss,
Shalt slumber unrecalled by prayer or vow from this

O lapsing Year—of years Imperial Year!
Pass in extreme of glory to that bourne,
We who now mourn thee never mourned thy peer,
Nor one of thy great race again we mourn:

Yet—mortals of brief stay!—we have outworn
A Century's date, and *vale, vale, sigh*;
While murmurs of like greeting, half forlorn,
Faintly, and faintlier from the gulf reply—
The gulf where thou art fled, with thy dark peers toiled

O thou our Century, with yet radiant front,
Candid and fearless their tribunal greet:
To question and to answer, was thy wont,
While on this earth thou held'st a regal seat;
For thou hast seen retreat, and still retreat,
Those outposts men had deemed were fixed for aye,—
Hast seen that none might bind the flying feet
Which bear world-messengers upon their way—
That arrows aimed at Truth, do but return to slay!

KIPLING AND THE VOICE OF "THE HOOLIGAN."

LITERATURE and civilization, like the tides, says Mr. Robert Buchanan, appear to advance with periodical and partial retrogressions. Every now and then the momentum toward a higher life and a higher spiritual ideal seems to be suspended, and a great "back-wave" toward absolute barbarism seems to sweep us centuries into the past. Mr. Buchanan writes in *The Contemporary Review* (December) and says further:

"Such a back-wave, it appears to me, has been at work during the last few decades, and the accompanying phenomena, in public life, in religion, in literature, have been extraordinary enough to fill even a fairly philosophical mind with something like despair. Closer contemplation and profounder meditation, however, may prove that in all possibility the retrogression is less real than superficial, that the advance forward of our civilization has only been hampered, not absolutely and finally hindered, and that in due time we may become stronger and wiser through the very lessons hardly learned during the painful period of delay.

"It would be quite beyond the scope of the present article to point out in detail the divers ways in which modern society, in England particularly, has drifted little by little, and day by day, away from those humanitarian traditions which appeared to open up to men, in the time of my own boyhood, the prospect of a new heaven and a new earth. At that time, the influence of the great leaders of modern thought was still felt, both in politics and in literature. The gospel of humanity, as expressed in the language of poets like Wordsworth and Shelley, and in the deeds of men like Wilberforce and Mazzini, had purified the very air men breathed; and down lower, in the humbler spheres of duty and human endeavor, humanists like Dickens were translating the results of religious aspiration into such simple and happy speech as even the lowliest of students could understand. It was a time of immense activity in all departments, but its chief characteristic perhaps was the almost universal dominance, among educated men, of the sentiment of *philanthropy*, of belief in the inherent perfectibility of human nature, as well as of faith in ideals which bore at least the semblance of a celestial origin."

But sentiment has at length quite gone out of fashion, says Mr. Buchanan:

"Thus, while a few despairing thinkers and dreamers have been trying vainly to substitute a new ethos for the old religious sanc-

MR. ROBERT BUCHANAN.

tions, the world at large, repudiating the enthusiasm of humanity altogether and exchanging it for the worship of physical force and commercial success in any and every form, has turned rapturously toward activities which need no sanction whatever, or which, at any rate, can be easily sanctified by the wanton will of the majority. Men no longer, in the great civic centers at least, ask themselves whether a particular course of conduct is right or wrong, but whether it is expedient, profitable, and certain of clamorous approval. Thanks to the newspaper press—that 'mighty engine,' as Mr. Morley calls it, for 'keeping the public intelligence on a low level'—they are fed from day to day with hasty news and gossip, and with bogus views of affairs, concocted in the interests of the wealthy classes. Ephemeral and empirical books of all sorts take the place of serious literature; so that while a great work like Mr. Spencer's 'Justice' falls still-born from the press, a sophistical defense of the *status quo* like Mr. Balfour's 'Foundations of Belief' is read by thousands. The aristocracy, impoverished by its own idleness and luxury, rushes wildly to join the middle-class in speculations which necessitate new conquests of territory and constant acts of aggression. The mob, promised a merry time by the governing classes, just as the old Roman mob was deluded by bread and pageants—*panem et circenses*—dances merrily to patriotic war-tunes, while that modern monstrosity and anachronism, the conservative workingman, exchanges his birthright of freedom and free thought for a pat on the head from any little rump-fed lord that steps his way and spouts the platitudes of Cockney patriotism. The Established Church, deprived of the conscience which accompanied honest beliefs, supports nearly every infamy of the moment in the name of the Christianity which it has long ago shifted quietly overboard. There is an universal scramble for plunder, for excitement, for amusement, for speculation, and above it all the flag of a Hooligan imperialism is raised, with the proclamation that it is the sole mission of Anglo-Saxon England, forgetful of the task of keeping its own drains in order, to expand and extend its boundaries indefinitely, and, again in the name of the Christianity it has practically abandoned, to conquer and inherit the earth."

Mr. Buchanan's sad view of British politics, society, and literature is reflected in the following words:

"Now that Mr. Gladstone has departed, we possess no politician, with the single exception of Mr. Morley (whose sanity and honesty are unquestionable, tho he lacks, unfortunately, the demonic influence), who demands for the discussion of public affairs any conscientious and unselfish sanction whatever; we possess instead a thousand pertinacious counselors, cynics like Lord Salisbury or trimmers like Lord Rosebery, for whom no one in his heart of hearts feels the slightest respect. Our fashionable society is admittedly so rotten, root and branch, that not even the Queen's commanding influence can impart to it the faintest suggestion of purity or even decency. As for our popular literature, it has been in many of its manifestations long past praying for; it has run to seed in fiction of the baser sort, seldom or never with all its cleverness touching the quick of human conscience; but its most extraordinary feature at this moment is the exaltation to a position of almost unexampled popularity of a writer who in his single person adumbrates, I think, all that is most deplorable, all that is most retrograde and savage, in the restless and unconstructed Hooliganism of the time."

This high priest of this cult of "Hooliganism" is Rudyard Kipling, poet-laureate of the Anglo-Saxon empire. Kipling's faith in himself as a poet is a delusion, says Mr. Buchanan; but his faith in the public is no delusion. The Hooligans who form the scum and the undercurrent of modern society in every country hail him as their prophet. After painfully dissecting Kipling's ballads and other poems in the hope of finding some high and noble sentiment in them to account for their extraordinary popularity, and not finding it, Mr. Buchanan concludes that Kipling justly reflects the Hooligan taste of an age fed on ephemeral journalism, vulgarity, and flippancy. As for Kipling's latest book, "Stalky & Co.," Mr. Buchanan's vocabulary fails him in his attempt to find words strong enough to depict his detestation of the story, its characters, diction, and teachings. It is the epic of the young Hooligan, sung by the Hooligan prophet to an admiring Hooligan public:

"As I have already said, however, the book can not be represented by extracts. The vulgarity, the brutality, the savagery, reeks on every page. It may be noted as a minor peculiarity that everything, according to our young Hooligans, is 'beastly,' or 'giddy,' or 'blooming'; adjectives of this sort cropping up everywhere in their conversation, as in that of the savages of the London slums. And the moral of the book, for, of course, like all such banalities, it professes to have a moral, is that out of materials like these is fashioned the humanity which is to ennoble and preserve our Anglo-Saxon empire! 'India's full of Stalkies,' says the Beetle, 'Cheltenham and Haileybury and Marlborough chaps—that we don't know anything about, and *the surprises will begin when there is really a big row on!*'"

"It is no purpose of mine, in the present paper, to touch on political questions, except so far as they illustrate the movements of that back-wave toward barbarism on which, as I have suggested, we are now struggling. I write neither as a Banjo-imperialist nor as a Little Englander, but simply as a citizen of a great nation, who loves his country and would gladly see it honored and respected wherever the English tongue is spoken. It will scarcely be denied, indeed it is frankly admitted by all parties, that the Hooligan spirit of patriotism, the fierce and quasi-savage militant spirit as expressed in many London newspapers and in such literature as the writings of Mr. Kipling, has measurably lowered the affection and respect once felt for us among European nations. Nor will any honest thinker combat the assertion that we have exhibited lately, in our dealings with other nationalities, a greed of gain, a vainglory, a cruelty, and a boastful indifference to the rights of others, of which in days when the old philanthropic spirit was abroad we should simply have been incapable. But it is not here, in the region of politics and militarism, that I wish to linger. My chief object in writing this paper has been to express my sorrow that Hooliganism, not satisfied with invading our newspapers, should already threaten to corrupt the pure springs of our literature. These noisy strains and coarse importations from the music-hall should not be heard where the fountains of intellectual light and beauty once played, where Chaucer and Shakespeare once drank inspiration, and where Wordsworth, Hood, and Shelley found messages for the yearning hearts of men. Anywhere but there; anywhere but in the speech of those who loved and blest their fellows. And let it be remembered that those fountains are not yet dry. Poets and dreamers are living yet, to resent the pollution. Only a little while ago the one living novelist who inherits the great human tradition tore out his very heart, figuratively speaking, in revolt against the spirit of savagery and cruelty which is abroad; tho when Thomas Hardy wrote 'Jude the Obscure,' touching therein the very quick of divine pity, only a coarse laugh from the professional critics greeted his protest. Elsewhere, too, there are voices, not to be silenced by the clamor of the crowd; as near as our own shores, where Herbert Spencer is still dwelling, as far away as South Africa, where Olive Schreiner has sought and found human love in the dominion of dreams; and there are others, shrinking away in shame from the brazen idols of the mart, and praying that this great empire may yet be warned and saved."

THE "HAPPY ENDING" IN NOVELS.

IT is said that Charles Darwin, who in early life took a keen delight in the depths, the subtleties, and the tempestuous climaxes of Shakespeare's tragedies, confessed that with advancing years nothing in fiction but the novel with a happy ending pleased him. It is probable that there are many others like him in this respect, altho not everybody is so frank to admit it. A writer in *Literature* (November 10) points out that while a large class of readers do not object to having their emotions thrilled, or stirred, or at the least tickled, they do desire and expect to be "quieted down" again before the story ends, so that they may sink to their comfortable slumbers with an easeful assurance that since they are so comfortable the world is not such a hard place after all. The writer says:

"There is no use in getting angry about the matter; a fully developed artistic intelligence ought to take pleasure in tragedy as well as in comedy, and we feel instinctively that the tragic

pleasure ranks the higher of the two; but tragedy will never be so popular as comedy, and never has been. Literary people, and more particularly literary women, are often inclined to take literature too seriously, they resent the notion that books should be regarded merely as a means of amusement, and they would have us approach ambitious works of art in a solemn and almost a sacramental frame of mind. Yet for many of us, and those not the least devoted to literature, the greatest service books can do is to soothe rather than to elevate, to help us to forget rather than prompt us to remember. We do not always want our nerves strung to tragic issues; what we ask, and what we find, is some harmless and happy nepenthe. And for a long time novelists instinctively recognized this demand, and established a convention in consequence—'Clarissa Harlowe' is a superb exception, 'The Bride of Lammermoor' another; but one may fairly say that up till Thackeray's time the novel was the history of a courtship ending with marriage. Human nature—or the laws of art—required that a story should have an end, and that the end should accord with the beginning; if the conclusion were to be a sad one some hint of the final shadow must cloud the book from the first. On the other hand, if all were to go well in the last chapter the novelist might indulge himself in the blackest gloom at the outset—a device familiar to Dickens—on condition that there was always discernible some promise of the coming brightness. The story with a sad ending—the 'Clarissa' type—was quite as well recognized a form as the other, but it was less agreeable and, therefore, less popular. And so Fielding, Scott, and Dickens worked with a tacit understanding that somehow the happy couple were to come together in the last chapter. There might be tragedy in the incidents, but not in the end, and the atmosphere was always pervaded by a sense of the sun either breaking or about to break through clouds."

To end the story happily, with marriage, is, we are assured, just as artistic as to end it unhappily, with death. Marriage is not logically as conclusive as death; but in the consideration of all imitative art we must, to a certain extent, suspend our sense of logic. Moreover, we resent tragedy unless we see it to be inevitable, not dragged in for effect; and in the hands of a bungler it becomes "quite intolerable."

SHAKESPEARE AND MOLIÈRE.

SHAKESPEARE and Molière are the two names in literature that are bounded by neither race nor age. They belong, according to Jules Claretie, to all-world experience. M. Claretie recently delivered in London a long and brilliant lecture on the great English dramatist and the great French comedist. We summarize here the main points of the lecture:

In order that Shakespeare should be understood and admired according to his deserts—that is to say, infinitely, unrestrictedly, as the universe itself may be admired—it is essential that he be studied in his own tongue. Frankly speaking, to render Shakespeare adequately, the French language is lacking in mystery. Music alone can convey to us the especial charm, the poetry, and the terror, of Shakespeare. Victor Hugo, who cared nothing for music (many a poet is no less indifferent than he to the divine art) held that a Rossini could doubtless effectively set to music a witty and brilliant play like "The Barber of Seville," but that the musical composer face to face with a psychological drama such as "Hamlet" can not but recoil, acknowledging his impotence. "I can not," said Hugo, "conceive *Hamlet* figuring as Amleto. Amleto would be perfectly ridiculous."

Not so ridiculous; for I say again, music, the divine and universal language which gives speech to the soul, has furnished the best interpretation of your incomparable Shakespeare's poetic predominance.

M. Paul Staffer, in his excellent work dealing with Molière and Shakespeare, tells us that about the commencement of the present century, John Kemble, the actor, your illustrious fellow countryman, came to Paris. His comrades of the Comédie Française entertained him at a banquet. The conversation at table turned upon the tragic poets of both nations. With lively eloquence,

Kemble pointed out that Shakespeare was manifestly superior to Corneille and Racine. Under the influence of politeness, maybe of conviction, the French comedians were gradually giving way to him, when Michot the actor suddenly exclaimed, "So be it; we are agreed; but what do you say to Molière?" Smiling, Kemble replied, "Molière? That is another question. Molière was not a Frenchman." Those present protested vehemently. "No," continued Kemble, "Molière was a man. One day it pleased the Almighty to permit mankind to taste, in all their perfection and plenitude, the joys of which comedy is the source. Forthwith he created Molière. 'Go, depict men, your brothers, and amuse them; if you can, make them better than they now are.' Then he cast Molière earthward. On what part of our globe's surface would he fall, to the north or to the south, on this or that side of the channel? Chance allotted him to France; but he belongs as much to us as to yourselves. No people or age can claim him as its own; he belongs to all time and to every nation."

You may be acquainted with this just and humorous judgment pronounced by Kemble; but you are probably unaware that our celebrated historian Michelet cherished a theory of his own in relation to Shakespeare. Did he record it on any page of his published works? I doubt it. But one day he told me—and I quote this opinion of a gifted writer as a paradox—that Shakespeare, on his mother's side, was Welsh, that is to say, partly French; and that as all children, especially of the male sex, take after their mother, the Welsh woman's son inherited from her the French temperament and genius. I well remember the vexation of Victor Hugo when our friend Castelar, proud to recognize the Spanish inspiration in "Hernani" and "Ruy Blas," said to him: "Dear master, you are a Castilian genius." Hugo replied: "I do not know that I am a genius; but I do know that I am a Frenchman." In the land of shadows, Shakespeare may have replied to Michelet: "I am an Englishman—deeply and essentially an Englishman."

Frenchmen have been accused of an incapacity to reach a perfect understanding of Shakespeare. Do you remember that exquisite page, winged and tuneful like a singing-bird, which Heinrich Heine, the German Parisian, wrote one day, apropos of the comedies of your inimitable poet? He reproached us Frenchmen for not comprehending "with our small ratiocinating heads," the delicious poetry of those fairy tales which impart a special charm to Shakespeare's works—the language which sounds like a fluttering of wings, the idiom which he says can only be learned by dreamers. In that rare page, which characterizes two races as well as their two most eminent representative men in relation to whom I am addressing you to-night, Heinrich Heine says, "Frenchmen understand the sun, but are incapable of understanding the moon."

The saying is not absolutely correct, but it is altogether beautiful. As a matter of fact, the moon seems to enwrap and bathe in its floods of light Shakespeare's most fanciful works, to which it imparts I know not what new charm, and which we may call by the name of "mystery." Mystery is one of the greatest poets with whom I am acquainted; it is he who with his silent and shadowy hands opens to us the gates of the infinite.

But it is not fair to assert that Frenchmen have no understanding of Shakespeare's delicious fancies. The other day I recognized the seductive grace of the personages who figure in Shakespeare's comedies while listening to the Alexandrines of Corneille's "Menteur," the rimes of which pick up the verses much as a chiseled sword-hilt raises the folds of a velvet cloak. And in our eighteenth century, has not Marivaux, the author of so many miniature *chefs d'œuvre* of sentiment and grace, shed upon the satin coats of his marquises and the white caps of his soubrettes some reflection of the poetic Shakespearian moonlight which so delighted Heinrich Heine? Paul de St. Victor justly remarked that the doors of Marivaux's boudoir opened upon Shakespeare's forest. And Musset—our Musset, the Musset of "*on ne badine pas avec l'amour*," of "Les Caprices de Marianne," and of "Carmosine"—has he not dreamed under Shakespeare's moon, the moon that his Lorenzaccio execrated, reviling it as "a livid face"? If the French love brightness, light, and the sun—as Heine says—are not their nineteenth-century poets votaries of Chimæra and of the moon? Have not Théophile Gautier and Théodore de Bauville, for instance—the former in "Le Baiser," the latter in "Pierrot Posthume"—asked "L'ami Pierrot au clair de la lune," to lend them a pen to write delicious verses? This love of fantasy incur-

nate in the Pierrot of pantomime is Shakespeare's own humor equipped in French guise.

M. Claretie, after telling how Shakespeare's plays were introduced to the French stage, tells how Berlioz, the great musician who composed "Le Damnation de Faust," was inspired by Shakespeare. He tells us that Berlioz, however, felt assured that Shakespeare's drama only, not his humor, could be acclimatized in French, for he wrote: "It is more difficult for a Frenchman to gage the depths of Shakespeare's style, than for an Englishman to appreciate the delicacy and originality of Molière or La Fontaine."

AN APOSTLE OF HIGHER JOURNALISM.

ONE of the most notable events in American journalism since the death of Charles A. Dana is the retirement of Mr. E. L. Godkin from the editorship of the New York *Evening Post* and *The Nation*. Mr. Godkin, who was born in County Wicklow, Ireland, in 1831, and was graduated at Queen's College,

Belfast, in 1851, received his first journalistic experience as correspondent of the London *Daily News* in the Crimean war. Later he represented that newspaper in the United States, and studied and practised law in New York until the close of the Civil War, when he founded *The Nation* as an exponent of higher political ideals. In 1882, *The Nation* became merged in the New York

MR. E. L. GODKIN.

Evening Post as its weekly edition, and since that date Mr. Godkin has been editor of both papers, succeeding William Cullen Bryant, Parke Godwin, and John Bigelow, who were successively editors of *The Evening Post*. Mr. Godkin's retirement is said to be due to ill health which he contracted while in London last summer. By the terms of his contract, he would in any event have retired on the first of January. Mr. Godkin has probably aroused, in turn, as much animosity and as much intellectual admiration as any man in American journalism, and the estimates of his undoubted influence upon the press of this country are various and divergent. *The Critic* (December) says of him:

"During the period of reconstruction after the Civil War, and in the long-continued struggles for tariff reform, the purification of the ballot, the elevation of the civil service, the establishment of the finances of the country on a sound basis, the separation of municipal affairs from state and national politics, and, finally, the curbing of the present lust for expansion by force of arms, he has been an aggressive and persistent fighter. No one identified with journalism in New York rivals him in the length and brilliancy of his service; and on the occasion of his receiving the degree of D.C.L. from Oxford, in 1897, a leading English writer declared him to be perhaps the most distinguished of living journalists. If his withdrawal from the editorship of *The Post* should enable him to add to the body of his productions as an essayist, literature will be the gainer by journalism's loss."

Another view of Mr. Godkin is expressed by the following from *The Mirror*, St. Louis:

"He was a jaundiced, exclusive, hypercritical, unsympathetic

publicist. He was always against whatever appealed most to the common people. He saw little but the deficiencies of popular government, rarely its great merits. He had high ideals, but they were frosty. He was so pertinaciously critical of things American as to be almost entitled to the epithet of un-American. He had brains, but his character as a publicist was repellent. His brilliancy was practically nullified by his acerbity. But he made some people think. For twenty years at least, he and the men who worked with him on his papers did the thinking on public questions for nine tenths of the editors of daily newspapers in the United States. Editorials in papers of one political persuasion or another were largely devoted to amplifying and approving, or traversing and condemning the utterances of Mr. Godkin. He furnished ideas on all public subjects for the molders of public opinion all over the land. Those who used his thoughts disliked him for his contemptuous aloofness. He was one of the few American journalists who had what could truly be called a style, a style dry and hard, bitter and ungenial even in sportiveness. Bile overbalanced his brain. His intellectualism took little account of toleration for human frailty. He was a polite and graceful Thersites, as stupendously wrong-headed in his leanings toward the exclusive's view as was his great antagonist, Charles A. Dana, in mocking and perverse support of men like Tweed."

Who Is the Owner of a Speech?—Mr. John Lane, who lately published a book of speeches by the Earl of Rosebery, has been restrained from sale of the work by an injunction obtained by the London *Times* on the ground that some of the speeches were taken from copyright reports in the great English journal. The question now arises: Who is the owner of the speeches? Lord Rosebery had not copyrighted them. Could a reporter become the owner by merely taking them down? Could he [the reporter] sell his right? Mr. Justice North, who granted the injunction, sided with *The Times*; but the court of appeal rejected his decision. We summarize the opinion of the Master of the Rolls as follows:

Lord Rosebery, tho he could have done so, failed to obtain copyright. There is no evidence that he transferred his right to acquire copyright to *The Times*. Mr. Justice North took the view that altho a reporter had no copyright in the speech or address he reported, he had a copyright in his verbatim report. But the reporter is not the author, and to hold that he has a copyright in his own report would be to stretch the language of the act of 1842 to an extent which it would not bear. The act was only intended to protect authors. Perhaps reporters should also be protected, but it by no means follows that Parliament could place reporters and their employers in the same position as authors.

The Times has given notice of its intention to appeal to the House of Lords. It bases its case upon the claim that there can be no verbatim report of any speech, for all reports are more or less abridged and edited by the reporter, whose skill should therefore be protected by the law. *The Daily Chronicle*, on the other hand, finds the decision fair. It is not prepared to say, however, that the proprietor of a newspaper should have no protection whatever for accurate accounts of public events produced with special intelligence and at considerable cost.

NOTES.

STEPHEN CRANE'S new book of short tales is called "The Monster and Other Stories." The title story is an interesting study in hysteria and sinister terror. It is thought to be one of his strongest and most dramatic efforts.

It is reported on good authority that Irving's daily profit in the United States this season has been \$3,240, and that when this record-breaking engagement of twenty weeks is completed he will have realized nearly \$100,000. A supplementary season of two weeks will probably be given in New York later.

A SEQUEL to Mr. J. M. Barrie's "Sentimental Tommy" is promised, the first instalment to appear in January number of *Scribner's*. A sequel was almost imperative, but admirers of Barrie will await the result with some anxiety, for sequels are proverbially disappointing. The title of the new story is to be "Tommy and Grizzel."

SCIENCE AND INVENTION.

IS THE STELLAR UNIVERSE FINITE?

AN article on this subject from a French source was recently presented in these columns. Another treatment of it is given by Gavin J. Burns, writing in *Knowledge* (London, November 1). Mr. Burns believes that the number of stars is finite, because, as he says, observation tends to show that faint or telescopic stars are less numerous than they would be if the stars were uniformly distributed through space. In other words, the stars seem to "thin out" as they get farther from the sun. There appear to be four possible hypotheses, says Mr. Burns, as to the probable cause of this reduction in number:

1. Absorption of light by the luminiferous ether.
2. Absorption of light by a gas filling interstellar space.
3. Absorption of light by cosmical dust.
4. A progressive decrease in the density of stellar aggregation as the distance from the sun increases.

The author examines each of the first three hypotheses in detail and rejects them. As to the first, he says, we have no experimental evidence that it is possible, and, besides, it is contrary to the law of the conservation of energy. The second he denies on the ground that the extreme cold of space would congeal any known gas. The third he regards as impossible because, altho cosmical dust exists and must absorb some light, gravitation would in the course of ages concentrate it in masses, and it can not now be uniformly scattered through space. There remains, then, only the fourth hypothesis, which is advocated by the author as "the only natural and obvious one." He says:

"On the supposition that the stars are infinite in number, it follows that a straight line drawn in any direction from the eye of an observer on the earth will ultimately meet a star. Now, it is a well-known law in optics that the brightness of a body is independent of the distance, and that the quantity of light received from a sphere of constant brightness only depends on the area of its apparent disk; consequently the total light received from a number of stars is proportional to the total area of their apparent disks; but, if the number of stars were infinite, this area would be simply that of the whole sky; hence we should have the whole sky one blaze of light! Therefore the number of stars must be finite.

"It does not, however, absolutely follow that the stellar universe is finite. We may escape from this conclusion by imagining that outside the luminous stars there is an infinite number of dark bodies that are never seen, and that the visible universe is bounded by clouds of cosmical dust which conceals everything beyond; but this is unsupported by evidence.

"A reference to popular works on astronomy will show that there is a great reluctance to adopt the view here presented. 'We can not imagine such a thing to be possible' is the argument put forward. What any person thinks possible or impossible depends on his mental constitution.

"Granting that the universe is finite in space, it follows that it is finite in time, for the quantity of matter and of energy it contains are both finite; the energy is being steadily dissipated in the form of radiant heat; this constant loss of heat can not have persisted for an infinity of time past, and it must end in the future."

The author admits that his conclusion gives us still a good many hard nuts to crack. He goes on to say:

"What, for instance, is the destination of 1613 Groombridge, with its velocity of two hundred and thirty miles per second? It has been calculated that this star must pass out of the stellar universe altogether, there being no known force sufficient to restrain it. Are there other universes constructed on different principles from ours? Is the ether finite? and what becomes of the heat constantly radiated into space? Perhaps the real solution of the difficulties thus presented by a finite universe is metaphysical. The human intellect is so framed that it can only conceive space as infinite, and yet can form no conception of infinite space. Possibly space without limit is a mental illusion."

In a note at the conclusion of Mr. Burns's article, the editor of *Knowledge*, E. Walter Maunder, takes occasion to differ with him. Says Mr. Maunder:

"We fear Mr. Burns's handling of this subject is scarcely conclusive. We have no means for experimenting on the first of his four hypotheses. Mr. Burns's second argument proves too much. It would follow that the existence of matter in the gaseous state is impossible in interstellar space, a conclusion which the existence of gaseous nebulae of enormous tenuity and extent appears to controvert. Under the third head he supposes that the particles of cosmical dust would all soon fall in to some attracting body; whereas they would revolve round it in nearly all cases. While the assumption that if the stars were infinite in number, 'the whole sky would be one blaze of light,' supposes something as to their distribution. We see that the earth is small as compared with its distance from the nearest other planet, and that the solar system is small as compared with the distance separating it from the nearest star. If the same rule prevails on the larger scale; if the dimensions of star systems are small as compared with the distances between them, then 'a straight line drawn in any direction from the eye of an observer on the earth will,' in most cases, never 'meet a star.'"

THE PSYCHOLOGY OF SOME CARD-TRICKS.

THE sleight-of-hand performer, it appears, must also be a psychologist. He must be able, at a desired moment, to turn the spectator's attention by controlling his mind and will. M. Henri Coupin calls attention to this fact, and sees in the success of the prestidigitator the best of proof of the rarity of free will. M. Coupin writes in *La Nature* (Paris, November 25) by way of introduction to a report of the investigations made on this subject by the eminent French psychologist, M. Binet, and described by the latter in a recent issue of the *Année Psychologique*. M. Coupin's report runs as follows:

"He [Binet] first takes up the 'forcing' of a card. This consists in obliging a spectator, before whom a card-trick is being performed, to draw from the pack a card designated in advance, without doubting that he is making a free selection.

"When a card is to be forced, the first precaution is never to lose sight of it, so that it may not be confused with another. The card to be forced is out at the bottom of the pack, and is always kept in the same place, while the pack is apparently shuffled; then the pack is cut, which brings the card into the middle of it; this position is indispensable. The pack is not presented spread out in fan-shape, but closed. Not until the spectator reaches out his hand is the pack opened, and at the same time the cards are not held still; about a dozen of them are rapidly moved before the spectator's eyes, and in this dozen, which occupy the middle of the pack, is the card to be forced. The spectator, in this rapid succession of cards that is passed before him, has no time to choose, but he continues to extend his hand, with thumb and forefinger separated, to take a card. The performer follows his hand and holds his eye; the pack is gently advanced toward him and the card is placed between his fingers; the person mechanically closes them and takes the card.

"It is easy to analyze this trick psychologically: 1. The pack is presented closed to prevent the spectator from making his choice before the operator has spread the cards before him; 2. the dozen middle cards are moved about in order to indicate to him that he should choose from these alone; . . . 3. the cards are moved about incessantly, in the first place because this maneuver makes the spectator believe that several cards are offered for his selection, and also because the spectator can not fix his regard on any particular one. When we are on the point of choosing between several possible acts, no one of which has any particular interest, our choice is determined by facility of execution.

"There is another trick that depends on the same principle as that of the forced card; it is that of the 'thought-of card.' The trick consists in moving the cards so rapidly that only one of them can be seen distinctly, owing to its being slightly separated from the others; there are many chances to one that this card will be the one thought of. At the same time, the performer keeps

his eyes fixed on those of the person who is choosing. If he moves his eyes about uncertainly until the separated card comes before them, and at this instant fixes them on the card to the exclusion of the rest of the pack, he has surely thought of that card. But if his attention, his uncertainty, or his indifference are maintained until the last card is reached, he has made no choice, or his choice has been made from memory and not directly from the pack before him.

"Prestidigitators have wonderful skill in acting on the secret springs of the will. It appears that a person may be made to choose any desired number below ten by the way in which he is asked to choose. If we wish to make him select the number five, we run rapidly over the first numbers, dwelling a little on 'five,' and making a short pause so that the attention is directed to this number.

"There is a curious fact about this matter of the choice of numbers, that has been mentioned to M. Binet by several prestidigitators. When a person is invited to name a number lower than ten, all the numbers have not the same chance of being chosen. It has been noted that 'one' is never named, and that the one most often selected is 'seven.' M. Binet has made the experiment and finds that the magicians are not mistaken; the sevens were in the majority, having been chosen seventeen times in thirty-six. As to the number one, it was not named at all. Thus in psychology the calculus of probabilities loses its force."—*Translation made for THE LITERARY DIGEST.*

TRAIN-LIGHTING FROM THE CAR-AXLE.

AN electrical method of lighting trains by means of a dynamo attached to one of the axles of each car and operated by the motion of the train itself, is attracting attention, being now successfully employed on one of the large lines running out of New York. A description is given in *The Electrical World and Engineer* (December 2). A small dynamo is carried on one of the car trucks and is driven by a friction pulley from the car-axle. The dynamo does its work with the car running at the speed of 15 miles an hour and upward. As there are very few trains, even fast expresses, that make no stops, a liberal reserve must be provided. This is furnished by two groups of light storage-batteries which are strapped under the car body and which have a capacity of twenty hours. In an ordinary passenger coach, there are no fewer than seventeen lamps, each with its porcelain reflector, distributed along the inner edge of the eaves, so that every passenger has an equal share of illumination. The 30-volt lamps have necessarily very short filaments, but are for that very reason little affected by the vibration of the car, and enjoy a long life. The system permits also, what no other illuminant does, the use of a lamp in the toilet-room, and another on the car platform. At the end of each car the controlling and switching mechanism is concentrated in a handsome little board, cased within a box with partial glass front. Says the writer in *The Electrical World and Engineer*:

"Within the box are the automatic switches which govern the connection of the generator and the batteries, and the batteries with the lights. As the car starts, and the voltage of the generator current rises, one of the switches throws the machine in multiple with the batteries and the lamps. The dynamo then supplies current at a pressure of about 40 volts, so as to feed the batteries; but the lamp voltage does not rise above 30 volts, as a small resistance is cut into circuit at the same time; so that whether energized by the dynamo or by the batteries or both, the lamps are kept steadily at their normal pressure and candle-power. Should the dynamo, by the backing of the train or the change of direction of travel of the car, be reversed, an automatic pole-changing switch immediately reverses the dynamo connections, with reference to the battery, and thus obviates any short circuit. The reliability of the switching apparatus, concentrated at the box and all of it of easy access, is enhanced by the fact that its ingenious design enables it to break circuit at the times when no current is flowing, so that all arcs within the box are avoided.

"Nor is this all. If any car should get disabled from any of

the accidents liable to occur on a road, it can be plugged into the circuit of an adjacent car and thus supplied with light. Another feature is that the availability of current permits the use of fan motors, some of which are used with the system already, rendering it easy to shut out the cinders and dust and still be cooled and refreshed by a breeze. A few years ago this desideratum was noted by correspondents of this journal, among them medical practitioners, who said that if they could secure the use of electric fans they could often transport patients otherwise unable to endure the heat and dust of the journey."

We are told by the writer that storage-batteries used in this way last a very long time, as they can not be overcharged and all conditions are favorable to longevity. As regards cost, this is so small as to be difficult to estimate. The lamps will take, all burning, less than 2 horse-power per car. With the modern high-speed locomotive of 1,000 horse-power the total energy required to light the train of several cars is a fraction of one per cent. of the total load. The principal cost, therefore, comes out somewhere in depreciation, lamp breakage, and extra attendance, if any should be necessary. Moreover, there is the great advantage that even the insignificant effort required from the locomotive is not put upon it at the time when all its energy is needed in starting.

Several other advantages of the light are referred to, one of which, the freedom from fire in an accident, is too obvious to dwell upon.

A DEVICE FOR PREVENTING RAILWAY COLLISIONS.

A RAILWAY block system that works automatically, and so prevents collisions without the action of switchman or signal-operator, has just been perfected by a Pennsylvania firm. The system has been known, we are told, for six or seven years, but the patents on which it depends had not been placed on a safe basis until recently, so that no attempt was made during that time to develop the invention commercially. The following description of a model shown in the machinery division of the Philadelphia Bourse exhibition is taken from *The Manufacturer* (Philadelphia, December 1):

"The model in operation consists of a track of 'figure-eight' shape upon which are run two small electric engines. The demonstrator in charge runs these engines under the same conditions which prevail in nearly all accidents, and shows that where this system is used collisions are impossible. The open drawbridge, open switch, rear-end collision, head-on collision, grade-crossing accident, and a break-down of the signal system were all illustrated and in every case the model engines were brought to a standstill at a safe distance from one another.

"In this system the element of sight, hearing, and other human senses which are at times apt to fail their owners, is done away with entirely, and the trains, whether operated by electricity, steam, air, or any other power, are automatically brought to dead stop as soon as they come dangerously close to each other.

"In brief the system is as follows: Along the entire road, upon the telegraph poles, is placed a wire which at intervals is carried down the pole, through an insulated tube, to a brass or copper contact-plate placed alongside the track. Upon the poles are placed small electric boxes which operate the blocks automatically. In the form used on steam roads there is placed in the cab of the engine a completed circuit, the force of which is kept up by a very small dynamo; by the means of this complete circuit, a small armature is held up by a magnet.

"Fixed to the bottom of the engine there is a brush; when a train leaves the depot, as soon as the brush passes over the contact-plate it unlocks or breaks the circuit in the next block and the one ahead of that, so that there are two blocks ahead that are automatically set at danger, and as it passes over the road it continues to break two blocks ahead; in the same manner it keeps two blocks in the rear broken; but as it passes into the third block it releases the first block, and when in the fourth it releases the second; in other words, there are always two blocks ahead

and two in the rear of the train broken. If a train should approach in either direction to within the two-block limit, as soon as its brush touches the contact-plate it would find a broken circuit or ground, the electricity would run out, and the train would stop. This is brought about by the cutting out of the current which holds up the armature in the engine cab. The armature falls, and in doing so it lets steam into a cylinder arranged for the purpose, pushes up a piston, applies the air-brake, shuts off the steam, blows the whistle, and stops the train automatically, but as gently and gradually as it would be done by an engineer."

In this way a train is stopped not only when approaching another, but when there is an opening in the track, a misplaced switch, or a break-down of the signal system. Each section, moreover, is entirely independent, and an accident to one part does not affect the others. The construction of all the parts is very simple, and repairs are easy.

An actual test of the system was made, we are told, as early as 1892, on the Brooklyn and Brighton Beach road, which was equipped for two miles with the automatic blocks. It is said to have worked perfectly.

COALING SHIPS AT SEA BY A CABLE.

INTERESTING experiments are now being made by United States war-ships, on the Miller conveyer, an invention for coaling ships at sea by the aid of an elevated cable. The device was proposed by the inventor in 1893, but has since been modified and improved. It was accepted by the authorities for use during the Spanish war, but was not ready in time. The following paragraphs and illustrations from a paper read by the inventor at a recent meeting of naval engineers, and printed in *The Marine Review* (November 23), will give an idea of the device and its method of working:

"It is proposed, with this device, for the war-ship to take the collier in tow, or the collier to tow the war-ship, leaving the distance between ships about 300 feet; this method of securing boats at sea is recognized as being safe. The war-ship to receive the coal will erect a pair of shear poles on its deck, which, secured by guys, will support a sheave wheel and a chute to receive the load. The collier is provided with a specially contrived engine located aft of the foremast, having two winding drums. A steel cable, $\frac{3}{4}$ -inch diameter, leads from one drum to the top of the foremast, over a sheave, thence to the sheave on the war-ship, back to another sheave on the top of the foremast, thence to the other drum. This engine gives a reciprocating motion to the conveying rope, paying out one part under tension; a carriage secured to one of

THE MILLER COAL-CONVEYER FOR COALING AT SEA.

the parts passes to and from the war-ship, its load clearing the water intervening.

"A carriage of special form is provided with wheels which roll on the lower part to the conveying cable, and grip slightly but sufficiently the upper part of the cable. This carriage will carry bags of coal 700 to 1,000 pounds."

When the carriage comes in contact with the rubber buffer on the sheave-block at the war-ship, a latch is pressed in, thereby

releasing the hook and its load. As soon as the bags are dropped, the direction of the rope is reversed, and the carriage returned to the collier. During the transit of the load an elevator-car descends to the deck, bags of coal placed thereon, suspended from a bale, and elevated again to the stops on the guides, so that when the carriage has returned to the collier, the pointed hook finds its way

COALING A WAR-SHIP AT SEA.

under the bale or hanger supporting the coal bags. The instant the load is hooked on, the direction of the ropes is again reversed, the carriage takes its load from the elevator and transfers it across the intervening space to the war-ship, and drops it again into the chute.

The engine is of peculiar construction. It runs practically all the time in one direction, its speed being varied by the use of the throttle. Through the cooperation of two drums with special friction mechanism, the conveying distance between the two boats is compensated for and a practically uniform tension sustained during the transit of the load. The speed of conveying is about 1,000 feet per minute, consequently the load will be taken from the collier and deposited in the war-ship in about twenty seconds. The total tension on the rope will never exceed, say, 8,000 pounds; furthermore, should the ships pull away from each other and the tow-line part, the only effect will be to unwind the rope from one of the drums, its end falling into the water, whereupon the other drum will wind in the other end of the rope and recover the carriage attached thereto.

Intellectual Capacity of Women.—Is woman less or more intelligent than man? Less so, decidedly, says Prof. Paolo Mantegazza; and this fact lies at the basis of the whole so-called "woman question." Professor Mantegazza sets forth his views in an article in *The Humanitarian* (London, December). His general conclusions are set forth in the closing paragraphs, which run as follows:

"Woman has always been, is now, and will always be less intelligent than man, and the general characteristic of her mind is that of being infantile. In the long road of intellectual evolution she always stops at the stations nearest to the point of departure. Of course, with a better education, she will be able in the future to make a greater contribution to literature, to science, and to the

fine arts: but I believe that the distance which separates her from us will be always the same, since the progress of man will keep pace with that of woman, each sex preserving all the while his or her own brain, and the peculiar idiosyncrasies of the intellect. The oppression in which woman has been held until now is not sufficient to explain her inferiority. Oppression by the strong can only originate from surprise, but it can never last a long time. Those who stand high above others are placed there by the right, the hateful right of might, which, if not the most just

and lawful ideal, is yet the most natural and logical. Among savage tribes, woman is subjected to man because she is physically weaker; in civilized states, because she is intellectually weaker. Were she to become stronger to-morrow, she would occupy the first place, without any need of new doctrines or of new laws."

SUBMARINE CABLES OF THE WORLD.

AN account of the world's submarine telegraphs has been prepared by the Bureau of Statistics of our Treasury Department, and is published by the United States Government (Washington, 1899). The account gives in brief a vivid picture of the rapid growth and present importance of telegraphic communication, and is specially interesting in its bearing on the proposed Pacific cable. The number of submarine cables, we are told, is now 1,500, with an aggregate length of 170,000 miles. Their cost is estimated at \$250,000,000, and the number of messages transmitted 6,000,000 a year. All the grand divisions of the earth are now connected. "Darkest Africa now converses daily with enlightened Europe or America, and the great events of the morning are known in the evening throughout the inhabited world." Adding to the submarine lines the land-telegraph systems, and we have 835,000 miles of telegraph lines. The length of their single wires or conductors is 3,500,000 miles, and the number of messages annually sent over them 365,000,000, an average of 1,000,000 messages each day. We quote further from the Bureau's account:

"In the short half-century since the practicability of submarine telegraphy was demonstrated, the electric wires have invaded every ocean except the Pacific. Nearly a score of wires have been laid across the Atlantic, of which no less than thirteen now successfully operate between the United States and Europe, while three others span the comparatively short distance between South America and the African and south European coast lines. Throughout the Indian Ocean, lines connect the far East with Europe and America by way of the Red Sea, the Mediterranean, the western coast of Europe, and the great transatlantic lines. The Mediterranean is crossed and recrossed in its entire length and breadth by numerous cable lines, and the 'Mediterranean of America,' the Gulf of Mexico, and the Caribbean Sea, is traversed in all directions by lines which bring its islands and colonies into speaking relations with each other and with South America, Central America, the United States, and thence with Europe, Africa, Asia—the whole world. Along the eastern coast of Asia, cable lines loop from port to port and island to island, receiving messages overland from eastern Europe by way of the Russia-Siberian land lines and forwarding them to Japan, China, Australia, New Zealand, the Straits Settlements, Hongkong, and the Philippines, and receiving others in return. South America is skirted with cable lines along its entire border save the extreme south, where they are brought into intercommunication by land lines. Along the entire coast of Africa, cables loop from place to place and from colony to colony, stretching along the entire circumference and penetrating the interior by land lines at various points."

The art of constructing, laying, and operating ocean cables has, of course, kept pace with their use. Says the writer further:

"From a mere gutta-percha-coated wire, the submarine conductor of electricity has developed in a half-century into a great cable having a central copper core surrounded by numerous layers of non-conducting material and protected by steel wire wound spirally about it, and in turn further protected by waterproof and insect-proof wrappings. From a steamer-towed open barge, the facilities for laying have developed to a fleet of nearly fifty steam-vessels, with every facility for laying, picking up, splicing, and repairing the cable lines. From a speed rate of three words per minute, which was made on the first transatlantic cables, the speed of transmission has been accelerated to fifty words per minute, and even more than that with the automatic transmitters now coming into use with cable lines, while by the duplexing of the cables their carrying capacity is doubled. From a cost to the

sender of \$100 per message, which was originally charged on the first transatlantic cables, the rate from New York to London and the great cities on the continent of Europe has fallen to 25 cents per word. From several hours required for the transmission of a message and receipt of a response, the time has been so reduced that messages from the Executive Mansion to the battle-field at Santiago were sent and a response received within 12 minutes, while a message sent from the House of Representatives in Washington to the House of Parliament in London in the chess match of 1898 was transmitted and the reply received in 13½ seconds."

Science and the British War Department.—We quoted recently an expression of opinion that scientific and mechanical appliances were to play a great part in the South African war. *Nature* (London) takes a different view. It despairs of ever getting a British Government department to care for anything scientific. Speaking of the failure to utilize wireless telegraphy in the war it says:

"Science, and especially the latest developments of science, are the last things to interest our Government and the Government departments; they do not believe in science, they care to know very little about it, and the scientific spirit is absent from too many of their plans and doings. Hence we have now to be thankful that they have reached the level of the pigeon post, which has been the only official means, and that on the part of one or two birds, to keep us in touch with our beleaguered forces. It is stated that even the commander-in-chief, Lord Wolseley, has expressed some surprise that the so-called 'Intelligence Department' of the army allowed the Ladysmith force to go to the front with mountain guns against a Boer force which they should have known might be armed with Schneider-Canet cannons of large caliber; and it would seem that probably a terrible disaster has been prevented, not by our Intelligence Department, not by the outfit of our army, but by the apparently accidental arrival of naval guns and *personnel* at the last moment. Why is there not a scientific committee to do what it can in advising the military authorities? If they could do nothing, nobody would be the worse, but they might be able to do much to the nation's advantage."

SCIENCE BREVITIES.

WHAT the author describes as "the growth of a discharge" between points connected with the poles of an induction-coil has been studied photographically by Herr Walter, a German investigator. "It would seem," says *The Electrical World*, "that the final discharge only occurs after having been preceded by about five preliminary attempts, each of which succeeded in piercing the air a little farther than its predecessor. In other words, the spark only leaps the full distance after having first bored a hole in the air—rock-drill fashion—by successive increasing attempts."

"From time to time," says *Electricity*, "startling and wonderful electrical devices are brought out, probably the latest being an arrangement for automatically feeding a horse, invented by an enterprising resident of Youngstown, O. The arrangement, according to reports, consists of an alarm clock connected by wire to a hopper in the horse's manger. The alarm clock is set at any desired hour, the hopper filled with oats, and at the appointed time the alarm clock, by means of an electric apparatus connected with it, releases the oats in the hopper and out rolls the breakfast under the astonished horse's nose."

"THE scarcity of rubber," says *The Evening Post* in a recent number, "is a matter that attracts the attention of so many different people, in so many lines of applied science, that some facts from one of the United States consular reports bearing on the subject will not be amiss. The principal reason advanced to explain the lack of rubber is the great difficulty in securing enough men to go into the forests along the Amazon and tap the trees. There is no immediate danger of any great shortage in the supply of rubber, but conservative opinion in the Amazon district holds that there is sure to be a steady diminution of the output for two very cogent reasons; first, the trees growing near the banks of the river are naturally the first to be tapped, and as a result are now becoming exhausted, the milk becoming poorer every year; second, the river banks have all been worked inland for a distance of about three miles from their banks, and in order to reach the fresh untouched rubber-trees deeper in the forest, a much longer time and a very much larger number of men will be required. The finest rubber forests are now said to be along the Purus River, one of the large tributaries of the Amazon from the south."

THE RELIGIOUS WORLD.

THE NATIVITY IN CHRISTIAN AND PAGAN ART.

THE interrelations of Christianity, Mazdaism, and Buddhism in their doctrines, rites, and legends always furnish an instructive subject of investigation. Dr. Paul Carus, editor of *The Open Court*, traces a number of these parallelisms in the stories of the nativity of Mithras, Christ, and Buddha. He says (in the December issue) :

"That the idea of the Star of Bethlehem is due to Persian influence can not be doubted, because the Apocryphal Gospels state that the Magi had watched for the constellation of the Savior, according to a prophecy of Zoroaster (Zerdusht). We read in the Arabic Gospel of the Infancy (chapter vii.) the following account :

"And it came to pass when the Lord Jesus was born at Bethlehem of Judah in the time of Herod the King, behold Magi came from the East to Jerusalem, as Zerdusht had predicted; and they had with them gifts, gold, incense, and myrrh; and they worshiped Him and offered unto Him their gifts. Then Lady Mary took one of His swaddling bands and gave it them for a little reward, and they received it from her with great honor. And the same hour there appeared unto them an angel in the form of the star which had been the guide of their way before; and following the leading of its light they departed, until they reached their own country."

It is interesting to note, in connection with the star "which went before" the wise men, that in the ancient Iranian religion the stars were regarded as divine beings or archangels, with the power of motion. Says Dr. Carus :

"The Zoroastrian prophecy expressly connects the Star of Bethlehem with the constellation of the Virgin; and it appears that the constellation received its name from the very fact that its rise indicated the birth of the new sun at the winter solstice. Mr. Nork quotes a temple inscription of Sais which directly calls the Virgin the 'Mother of the Sun' (Procl. in Tim. i. 1) and Eratosthenes of Alexandria identifies her with Isis, the mother of Horus. Scaliger describes her as a beautiful virgin with full hair, ears of corn in her hand, and nursing a boy baby. The same author,

THE NATIVITY OF MITHRAS (alleged).

Reproduced by Nork in Scheible's "Kloster," vol. vii., part 1, p. 50.
Courtesy of *The Open Court*.

Mr. Nork, quotes Albertus Magnus as having known that with the rise of the constellation of the Virgin our Lord Jesus Christ was born, and adds that he may have had a source which is now lost; but the item is interesting, and seems to verify the other statements connected with the legends of the Nativity. Roger Bacon, the learned monk of the thirteenth century, is another important witness. He places the birth of the Blessed Virgin herself at the time when the sun stood in the constellation of the Virgin, being the emblem of her, while nursing the infant Jesus Christ.

"St. Paul says nothing about the birth of Christ, and we know that the early Christians were little concerned with the details of the life of the Savior. They clung to His doctrines and to the belief in His resurrection. The legends of the Nativity were formed under the influence of other religions which possessed aspirations similar to Christianity.

"The similarity between the doctrines of the ancient Mazdaism and Christianity is well established. The followers of Zoroaster believed in a virgin-born savior, later on identified with Mithras, whose arrival on earth would usher in a millennium of peace and happiness. The dead would rise and the world would be renewed; and the daily prayer was for the speedy coming of the kingdom. Mithras is called the God that comes from the rocks (*ὁ θεὸς ἐκ πέτρης*) and is represented as a child emerging from a rough stone. This name may have given rise to the idea that He was born in a cave, which would be the more probable, as the cave plays an important part in Mithras worship.

THE EARLIEST KNOWN REPRESENTATION OF THE NATIVITY OF CHRIST.

From a sarcophagus of 343 A.D.
Courtesy of *The Open Court*.

"Mithras worship was almost in possession of the world when Christianity came to the front and overthrew it. Judging from monuments discovered in France, on the Rhine, and on the Danube, the entire north of the Roman empire was strongly addicted to the cult of Mithras. The influence of Mithras worship on Christianity is well established. We mention especially the rites of baptism, the Eucharist, facing the Orient in prayer, the sanctification of the day of the sun, and the celebration of the winter solstice as the birthday of the Savior."

The fact that all these legends—Buddhistic, Mithraistic, Greek, and Christian—have a common source, will not, says Dr. Carus, prove a death-blow to Christianity as an ethical and religious system :

"Our knowledge of the origin of Christian legends neither establishes nor destroys Christianity; it only helps us to understand its mission better and learn to appreciate its place in the evolution of religious thought. Christianity is a new phase in the history of mankind, but it could be acceptable to the people of the age in which it originated only by literally coming as a fulfilment of the ancient religions which it replaced. Thus the fabric of its legends will appear to the historians as a new combination of older traditions; and the light of its main ideas is a collection of the scattered rays of many more ancient notions which were then focused into systematic form.

"The legends of Christianity were undoubtedly believed by many early Christians, and their religious faith was not at once freed from the pagan conceptions of pre-Christian traditions. In fact, many of these pagan conceptions continue till to-day, and it is the duty of the present generation to sift truth from error and to understand religion better than did our ancestors. The history of mankind is not yet concluded, and least of all the chapter of the development of man's spiritual aspirations, his religious ideals, and the hopes of the faith that is in him."

Zangwill's Play and the "True Judaism."—"The Children of the Ghetto" has found some admirers among Zangwill's own people; but the majority of critics who express themselves in the Jewish press regard the play as an offensive exaggeration of the merely grotesque types of the Ghetto, and as an effort to represent Judaism as tied hand and foot to an egregiously absurd formalism. Rabbi Samuel Schnlman, writing in *The Menorah Monthly* (December), says :

"We do not criticize the artist, we only deplore the unfortunate abuse of the genius of the Jew. It is not merely a question of realism, it is more a question of honor. It is not our province to lay down canons for the construction of plays, but it becomes our duty, jealous as we are of the sacred name of Jew and Judaism, to say a word against one-sided portrayals of them, which necessarily become caricatures. When it is published broadcast as an advertisement that the Jewish communal organ said that this play is a 'Triumph of Jewish Law—A Magnificent Vindication,' we are compelled to speak out what is in the hearts of many Jews, that while the author may have given some touches of the beauty

and self-sacrifice, and even sublimity of Jewish life, in the main, his play, through dramatic necessity, becomes a triumph of Jewish letter-worship and slavish legalism. And as to its being a magnificent vindication—shades of Lessing and George Eliot—we would desecrate your memories if we accepted such a pitiable defense at the hands of one of our own, from whom we had a right to expect much, when we possess as free gifts of your sympathetic genius the immortal creations of Nathan and Mordecai. A few more such vindications as the Zangwill play would only impress upon the masses that the average Christian theologian's view of Judaism is correct—'In the household of Israel the spirit is always sacrificed to the letter.' . . . It is making Judaism repulsive to say that a rabbi did not know that a mock marriage is not binding. It is said that Mr. Zangwill claims a similar incident actually happened in the Ghetto of London. We are sorry for the dense ignorance that must have prevailed some forty years ago in that Ghetto."

Zangwill has misrepresented Judaism, says Rabbi Schulman, because he has no sympathy with the enlightened movement of spiritual emancipation carried on by the leaders of modern reform—the movement which has freed woman and made her the equal of her brother and her husband in the synagogue.

CANON KNOX LITTLE ON THE CHURCH OF ENGLAND "CRISIS."

WHAT is still termed in the English press "the church crisis," arising from the conflict of views between "ritualists" and "anti-ritualists," seems to have been, on the whole, somewhat allayed by the recent ruling of the archbishops adverse to the use of processional lights and incense. The sea, however, still runs high, and there are indications that the ritualists are gathering their forces for renewed efforts to set aside the ruling or to secure its withdrawal. The Very Rev. W. J. Knox Little, for many years one of the most prominent of the ritualists, asserts that the ruling is distinctly unfair, and that, from the non-ecclesiastical nature of the court that delivered it, it is not binding upon the consciences of the English clergy. In *The Contemporary Review* (November) he speaks of the agitation that was aroused by Sir William Vernon Harcourt and others as excited "by various persons (of no weight ecclesiastical or spiritual), and apparently from different motives." The Archbishop of Canterbury's offer to hear cases where there had been doubts and disagreements was acquiesced in by some of the ritualists on the understanding that the decision was to be given without reference to secular rulings. Yet when it came, it was found that it rested "upon a strict interpretation—and that in one particular—of what was felt to be an obsolete and unworkable act of Parliament, passed some three hundred years ago."

The major portion of Canon Little's article is devoted to a rather technical consideration of this parliamentary act of uniformity of 1559, by which the crown aimed to define and limit the ceremonies and rites of the Church. The question at issue is how far the Church of England is bound by this statute at the present day. Canon Little is of the opinion that the act in the first place never took away from the Church power to decree rites and ceremonies for itself, and, in the second place, that its application was limited to the reign of Queen Elizabeth. This would of course take from the crown in this period any power to punish members of the clergy for their alleged ritual excesses, and would make the only form of ceremonial usage an official decree of the whole English Church assembled in council. He continues:

"Various reasons are suggested in the 'opinion' for the omission of incense and other ceremonies of the Church, as tending to bring our usages more into conformity with Scriptural teachings and arrangements. It is difficult to subscribe to these reasons. Indeed, they can not but cause astonishment. Scarcely any part, for instance, of the ceremonies of the original institution of Holy

Communion seems to remain in any part of the Church except the words and acts of consecration. But besides that, it is assigned as a reason that there was a desire to 'put prominently forward the supremacy of the Bible.' Now few things seem to be more prominent in the Bible than the use of incense in divine worship. Almighty God has deigned to give very careful directions on the subject, and many Christian teachers believe that, by the last of the prophets (Malachi ii. 11), God Himself has commanded its use in connection with the Eucharistic sacrifice. There would appear, then, to be a danger that to follow this 'opinion,' far from putting 'prominently forward the supremacy of the Bible,' might be to lead men to disregard plain Bible teaching."

"It is to be hoped that the archbishops will see the mistake they have made, and that no further attempt will be made to enforce a decision which has been shown by many experts, and they, too, with wide knowledge of the question, to be so mistaken. The attempt to narrow the borders of the English Church is disastrous."

The opinion can not stand, says Canon Knox Little, for its inaccuracies and mistakes are every day becoming more evident. Some of the bishops have acted with restraint, but others "have seemed to rush headlong to 'register the decree' with a haste which can only be compared to the hurry of some members of the Roman episcopate after the Vatican Council." He continues:

"The great body who are affected are loyal and hard-working priests of the Church of England. Some of them who have used incense have been so anxious, and naturally and rightly, to acquiesce in the wishes of their bishops that they have tried to modify or abandon the use for the present, to the annoyance, and very natural annoyance, of their congregations, and to their own perplexity in appearing to be unfaithful to principle; others have found themselves unable to acquiesce, feeling that they can not set the wishes of the bishop, now any more than in the past, above the authority of Catholic and primitive usage, by which bishops as well as priests are bound."

"A very large number have not been in a position to use incense, yet they are affected. Like all faithful churchmen, it is not for incense in itself (beautiful, Scriptural, excellent as it is) that they care, but for principle. It is impossible for them tamely to be, in any way, sharers in such an interpretation of the Church's rules. . . . The English priests are anxious, indeed, to be with their bishops; one can not but hope that their bishops will stand by them on Catholic principles. There can be but one way of escape from what might prove disastrous consequences of this unhappy 'opinion,' viz., to use Dr. Temple's words, by 'the widest possible toleration,' or—to employ the language of the address quoted above—by 'a distinctly avowed policy of toleration and forbearance on the part of our ecclesiastical superiors in dealing with questions of ritual,' as 'demanded alike by justice and by the best interests of religion.'"

Recent Activity of "The Catholic Apostolic Church."—The rise of the "Catholic Apostolic Church"—or, as it is more often called, the "Irvingite"—movement is one of the most curious of the many singular religious phenomena of the century. Its founder, the Rev. Edward Irving, the friend of Coleridge and Carlyle, and the most eloquent preacher of his day, taking advantage of the "prophetic movement" which stirred England so deeply between 1825 and 1840, announced a new revelation and established a hierarchy and ritual system which in elaborateness could be compared with those of the Roman Catholic Church. The *New York Sun* gives the following description of the "Irvingite" church edifice in New York, and of the startling announcements of the speedy second coming of Christ which this otherwise sedate organization has been making.

"The interior has much in common with the early Christian basilicas. Its seating capacity does not exceed four hundred. Just inside the door the visitor finds a bénitier with holy water built into the wall. The low pulpit stands in the nave, while the chancel has many prie-dieux. The seats are high-backed. Seven small incense-burners are suspended in a line from the

ceiling over the front part of the church, and a large glimmering lamp burns with a soft light over the simple altar.

"The Irvingites refuse to be placed in the same class as the Adventists and similar sects, because they do not pretend to know the hour and day of the Lord's coming. No man can know more than that the hour is drawing near. But they have not lived up to these teachings. Robert Baxter, their first male prophet, who later recanted, prophesied in 1832 that the Lord would come in three and a half years to gather up His witnesses. On July 14, 1875, when the fortieth anniversary of the institution of the new apostleship was celebrated, more than one thousand communicants assembled in their cathedral in Gordon Square, London, because some prophet had figured out that the Lord would return on that day. The present activity, which has resulted in the despatching of six evangelists to this country, seems to have been caused by the expectation that Christ's promise to His first apostles must be fulfilled before the last member of the second apostleship passes away."

DR. DE COSTA A ROMAN CATHOLIC.

DR. BENJAMIN F. DE COSTA, who after resigning from the ministry and membership of the Protestant Episcopal Church last September, was received into the Roman Catholic Church on December 3, gives as his chief reasons for the step the increasing spirit of rationalism in the Protestant denominations and his belief that the Roman communion is alone capable of defending the Christian Scriptures in their integrity and of reuniting Christendom. This is no new opinion, he says, but one toward which he has long been tending. In a statement which he gave out to the press on December 6, he says:

"The sad, fallen estate of post-Reformation belief has forced upon me a reconsideration of principles, the result of reconsideration being the conviction that the Reformation was not based upon any true foundation.

"The issue precipitated in connection with the Biblical criticism forms only one of many difficulties of the Protestant situation, and I came to recognize the Reformation of the sixteenth century as, theologically at least, a monumental failure, a revolution, in fact, against the Catholic and Apostolic Church. . . .

"The moribund theologian may not be aware of the state of modern thought, yet, nevertheless, when the curtain of the twentieth century rises, men of alert sense and ingenuous minds will recognize a new world. Living men among non-Catholics are even now somewhat conscious of the actual religious conditions. This is one explanation of the 'Higher Criticism,' which has discovered that the whole Reformation system is in peril, proposing to meet the emergency by the use of a reconstructive criticism which forms simply a sop to the Cerberus of unbelief, strengthening the appetite it would appease, creating a demand for still more preposterous propositions, and piling difficulty upon difficulty.

"I do not, however, propose to offer any apology for entering the Catholic Church. Standing in the midst of modern religious systems toppling to their fall like columns in the Temple of Karnak, no defense need be offered for accepting a firm and unshaken Catholic faith. I shall not enter upon argument, or seek to detail reasons for rendering allegiance to Rome, but will speak in a general way on one branch of the general subject, namely: 'The Position of the Holy Scriptures in the Teaching System of the Catholic Church.'

"The Church of Rome stands before English-speaking people and Protestants everywhere as the unique and solitary defender of the Bible in its integrity and entirety."

The Independent (undenom., December 7) takes issue with Dr. De Costa's statement that Protestantism has proved a failure:

"Looked at in the largest way it seems to us that Protestantism has made abler, mightier, more advanced nations than has Catholicism; that it has done more for learning during these last three centuries; that its influence has been nobler for liberty and progress, and that it is rapidly outstripping its rival in numbers and in the control of the world. We think we see a good reason for it in the independence and liberty of thought which Protestantism encourages in the search for truth. Nor do we find that Protes-

tantism has at all failed in producing saintly men and women, in elevating the conscience of the people, and in the work of converting the world.

"But Dr. De Costa leaves the Protestant fold because it ceases to provide any defense for the Bible. What has provoked him beyond endurance is the admission of Professor Briggs to the priesthood in the Episcopal Church. But there is no reason why the Catholic Church should not admit Professor Briggs if he should some time wish to join it, as people have surmised he might. The Catholic Church has no doctrine of Holy Scripture that forbids the acceptance of the conclusions of the Higher Criticism, and Catholic scholars, like Lenormant, have been among its brilliant advocates. Dr. De Costa might very possibly find himself in the very sort of company which he has fled from. There is absolutely nothing in the creeds and catechisms of the Catholic Church which would antagonize the positions which Professor Briggs lays down in the articles we publish from his pen this week and last. Indeed that Church depends not on the authority or inspiration of Scripture, but on the pronouncements of the Church. To illustrate its relation to the Scriptures we take up the Baltimore Catechism, and its 'Explanation,' approved by the whole row of American archbishops and bishops, and we find in the index 'Holy Days,' 'Holy Oils,' and 'Holy Water,' but no Holy Scripture, nor any chapter, section, or sentence given to any teaching about the Bible in the 393 pages of the volume. Dr. De Costa has perfect liberty in that Church to hold that Judith is Bible, or with Lenormant that it is all a pious novelet, or with Mivart that the Genesis story of creation is unhistorical. Nevertheless he has gone where we think he properly belongs, and we wish him all the surcease of sorrow which comes from putting one's thinking machinery under the mastership of an infallible authority."

The Rev. John Scully, a well-known Jesuit scholar, thus accounts for Dr. De Costa's change of faith (in *The North American*, Philadelphia, December 5):

"Why did he leave his church? Because it has been shown by time that the Bible is not what the Church has always said it could not possibly be, the sole rule of faith. Because, in the disputes between schools of criticism, the inspiration of the Bible has begun to be doubted and the faith of those who have been the teachers of the Protestant masses has been so shaken that there is no certainty anywhere, and in the most of this uncertainty there is no authority outside the Church to settle these doubts as they arise. Consequently, we have the chaos we see outside our Church.

"We Catholics say with St. Augustine that we not only would not, but simply could not, believe the Bible to be the inspired Word of God, unless we had the authority of the Church for it. But we not only say that, but also that, as Dr. De Costa said yesterday in his profession of faith, we believe in 'the authority . . . of the Holy Scriptures, which we must interpret and understand only in the sense which our holy mother, the Catholic Church, has held and does hold.' We can not conceive how God could make a revelation and leave it to be interpreted according to the whim of every self-appointed critic, any more than we could understand how a book of statutes could be submitted by the law-making power to the private interpretation of each individual citizen. The one is as much destructive of all coherency and common sense in the spiritual order as the other would be in the social order.

"Thus the very learned and intellectual Dr. De Costa has been taught by sad experience what Catholic faith teaches the little child who is studying its catechism. His adhesion now is the more valuable because he has been one of the most bitter enemies our Church has had in this country."

The Living Church (Prot. Episc., December 9) says:

"Tho we regard his recent sweeping attack upon the Church as unjustifiable, applying as it did tests which no working theory of a visible Church could stand in the light of history, nevertheless the secession of a man of such learning and scholarship is a real loss to the Church, and one which we can not regard as balanced by the accession of quite a different type of scholar at the opposite extreme. It is to be hoped Dr. De Costa will find in his new relations freedom from the difficulties which have troubled him. But if all accounts are true, Higher Criticism has its advocates

even in the bosom of Rome. In fact, it originated in that Communion. Every scholar knows that it was Richard Simon, a priest of the Oratory, 1678 to 1689, from whose works the Germans of the eighteenth century drew the weapons of their critical warfare. So far as we are aware, his works were not condemned, at least when they appeared. It was the French Catholic, Astruc, also, who began the criticism of the Pentateuch. Dr. Briggs has asserted that his work on the Bible, which has been received with so much question among ourselves, was warmly indorsed by certain Roman professors."

THE METHODIST CHURCH CONGRESS AND THE HIGHER CRITICISM.

NO feature of the Methodist Church Congress which met at St. Louis during the end of November attracted so much newspaper attention and comment as the attitude of members of that body toward Biblical criticism. From a despatch to the Philadelphia *Public Ledger*, we quote the following abstract of the discussion:

"The Rev. Dr. W. F. Anderson, of Sing Sing, N. Y., was the first speaker, and his theme was 'The Opportunity Secured to Evangelical Thought by Modern Theological Method.'"

"The first part of the address was devoted to emphasizing the importance of having a theological method that was strictly up to date, and that met the demands of the age. In reference to Biblical criticism, the speaker said that it was time to stop re-creation and look the question squarely in the face; that the higher critics deserved commendation for their industry and honesty of purpose. He then took up at length the position of higher criticism as to the multiform character of the Book of Genesis, also of subsequent books, calling attention to certain inaccuracies of statement.

"Further, it was stated that the ethics of God as displayed in the Old Testament differed from that in the New Testament, and the declaration was made that 'an absolutely infallible Scripture is unreasonable and impossible in the very nature of things.'"

"The second speaker on the general topic was Prof. H. C. Sheldon, of Boston, who spoke on 'Popular Biblical Teaching by the Church.' His paper awakened more than usual interest, and was frequently applauded. Professor Sheldon said in part:

"Formal discourse respecting the Bible is of secondary importance. A theory about the Bible, however good, is not armed with any special regenerating efficacy. A label can not fulfil the function of the goods to which it is attached. No great amount of nourishment can be gotten out of the label. Man's inner life is nourished only by appropriation of high and ethical and religious truth. What the people need is a message from God, not a message about the message or supposed message.

"Still an occasional message about the Bible has its place, chiefly in inciting to a more helpful study of the book. No one will deny that the normal view of the Bible makes it not an end in itself, but an instrument subservient to the great end of lifting men into communion with God. Like the Sabbath, it was made for man, and not man for the Bible.

"Again, no one will deny that a normal view of the Bible takes account of the human factors which wrought with the divine in its production, and, excluding all arbitrary assumption, keeps within the warrant of the sum total of accessible facts. In an uncritical age this position would hardly be considered, but in an age like the present, an overreaching theory is likely to be a mischievous investment."

The Outlook (undenom., December 2) remarks that there was a remarkable unanimity of opinion among the speakers in the direction of liberalism:

"These statements certainly do not hark back to a hidebound traditionalism, but they are by no means symptomatic of a declining faith. Instead of any surrender of Christianity, they are the aggressive, persistent forms of the real Christianity which adapts itself to every age. Its defenders would carry it, not only from the unthinking to the unthinking, but from men of brains to men of brains. Methodism and all other forms of Christianity

will be the larger and richer by an admixture of the 'higher criticism.'"

The New York *Sun* takes precisely the opposite view, and says that the speakers from whom we have quoted have "departed from religious faith":

"Since 'they can not formulate dogmatic finalities,' they refuse to believe in them; in other words, to believe that the Church has any 'message' for them. 'The scientific proof they demand would eliminate the supernatural from religion.

"That this agnostic exposition should have been made in so notable a Methodist assembly was very significant of a declining faith. It provoked dissent, of course, but it was not received with the alarm and indignation which so complete a surrender of the Christian position would once have aroused. Can that sort of 'culture' kindle the fire of faith which becomes a consuming flame in great religious revivals?"

A Substitute for "The One-Man Ministry."—The plan prevailing in most of the evangelical churches in English-speaking countries of having one minister to a church, whose most important function is to appear, as has been said, "twice in the same day, in the same place, and go through exactly the same order of service," is almost unknown in the Greek and Latin churches, and among the Protestant churches of the Continent. *The Evangelist* (Presb., December 7) says that common sense and the new conditions of the age are against it, and that "the times seem ripening for a radical change in the method and distribution of work in our churches."

"The system of 'the one-man ministry' should be changed for the sake of the ministers themselves. It imposes burdens on them that save in exceptional cases must soon wear them out in mind or body, if not in both. The number of clerical breakdowns, with all the damage involved to the interests of congregations, and of suffering to the families of ministers, is continually increasing.

"The system should cease for the sake of the congregations. Restlessness is the most marked characteristic of the people of to-day. They can not be satisfied with one thing at a time. Few would be attracted to a concert where there was to be an hour and a half of one singer, even tho of the first class. The very atmosphere of present-day life is against a system which 'gives to a congregation, through all its services, nothing but the sound of one voice, and the product of one brain, and that brain too often weary and overtaxed.'

"In place of the system prevailing among us to-day, we would suggest a grouping of churches and a partnership of their ministers. In a town where there are four or five Presbyterian churches, or in a section of a large city like New York, where there are the same number, these churches might enter into a definite union of ministry, of finance, of everything. Thus, in that town, or in that section of the city, there would be simply one Presbyterian church with various buildings in which to carry on its operations. The results of such a change could not but be highly beneficial to the cause of religion."

RELIGIOUS NOTES.

THE resignation of Dr. Schell, secretary of the Epworth League, has finally been brought about, chiefly through the instrumentality of *Zion's Herald* (Meth. Episc.). The Springfield *Republican* calls it a "victory for morality and religion" without which the Epworth League "could not have remained a useful organization."

THE late Major-General Sir William Penn Symonds, killed in the South African war, was what may be called a religious cosmopolitan. By descent and faith he was a Jew, but he was named after a Quaker, and a mass for the repose of his soul was celebrated by the Pope. Such evidence of faint religious barriers to sympathy would hardly have been possible a hundred years ago.

THE Rev. Samuel A. Eliot, secretary of the American Unitarian Association, states authoritatively that no organic union of Unitarianism and Universalism has been proposed, as has been asserted by a number of writers, including Dr. Edwin C. Sweetser, of the Universalist Church. What is proposed is a closer cooperation and fellowship, especially in Christian work.

FOREIGN TOPICS.

WHEN ENGLAND HAS CONQUERED SOUTH AFRICA.

LIBERAL papers in England continue to criticize the Government for allowing the nation to drift into war, and here and there a continental publication speculates on the possibility of peace if Chamberlain were used as a political Jonah. Indeed, it is hinted that the British Government acknowledged the belligerency of the South African Republic in order to have a chance for peace negotiations. The St. Petersburg *Novoye Vremya* says:

"The decision of the British Government to withdraw its former contention that no war but only the suppression of a rebellion is being carried on, must have far-reaching consequences. Not only are the powers now in a position to send officially Red Cross divisions, but also military *attachés* to the Boer camp. There is now also a justification for intervention when the moment seems fitting. Sir Redvers Buller's position is not easy, for the Cape Boers are more and more coming to the assistance of their compatriots, and England will be forced to make peace. This assures the independence of the Republics."

In England, however, nobody will listen as yet to talk of Boer independence. "All South Africa must be made British" is the cry, and the only point of disagreement between Liberals and Conservatives is the degree of liberty to be granted to the Boers when that end is accomplished. *The Spectator* says "let them vote." It adds:

"No doubt if we tried to rule South Africa from Downing Street we should soon find ourselves face to face with a Boer rising, but we shall do nothing of the kind. We shall place the Government in the hands of the majority of the inhabitants, and in the case of the Transvaal, as soon as the refugees have returned and the new influx of white people has taken place, the majority will be of a kind with which it will be perfectly possible for us to work. When men have votes and are allowed to use them freely, they may talk a good deal of rebellion, but they seldom act up to their talk. They prefer the arbitrament of the ballot-box to that of the rifle. Depend upon it, if President Kruger had given the vote to the Uitlanders there would have been no war, even if the Uitlanders had found that the vote did not give them quite all they wanted or expected. The Dutch in the Transvaal may grumble, as they have grumbled at the Cape for the last fifty years, but they will not act as long as they can vote."

The same ideas are set forth by a writer in the *Edinburgh Review*, who is confident that the British section of the Transvaal would be overwhelmingly in the majority, and that therefore no coercion is needed to keep the Boers quiet, once the country is conquered. The London *Daily News* says:

"Not British domination, but self-government, must be established. We have embarked on our present enterprise not to reduce the area of self-government in South Africa, but to extend it. The old *régime* in the Transvaal was intolerable not because the country governed itself, but because it did not. Mr. Gladstone thought he was giving in 1881, and intended to give, self-government to all the inhabitants of the Transvaal. It is that which we must establish and guarantee as one result of the war."

Other papers, mostly those which figured out an enormous British majority in the Transvaal before the war, now point out that the Dutch are numerically much the stronger element throughout South Africa, and that in the Cape Colony they know well how to handle their vote. Hence they must be ruled as subjects, or there must be a distribution of seats which makes it impossible for them to gain a majority. *The Westminster Gazette* does not like such plans. It says:

"Not a few British South African newspapers are already writing as if the settlement they desire is one in which there shall be everywhere a British *racial* ascendancy. The new boundaries, it is suggested, must be so laid down as to secure a British ma-

jority in each area. Against all proposals of this kind, and against any proposal which will inflict unnecessary humiliation or conflict with loyal cooperation and legitimate rivalry, the Liberal Party will have to fight together and fight hard. It will be no easy task and we shall need every man."

The Globe thinks there will not be over-many Dutch voters when General Buller has pacified South Africa; but on no account may the republics remain independent. It says:

"The Afrikaner states will be treated with justice; there need be no fear on that point. But justice itself—justice to South Africa and the empire—requires that their independence shall cease. There can henceforth be but one flag in South Africa, and that the sign of British dominion. This inevitable rearrangement will not be altered, but it may be made more difficult, by such utterances as those of Lord Ripon and Mr. Bryce. At the present moment, it is the duty of every patriotic Englishman not only to support the Government in carrying on the war, but to avoid any word which can be misconstrued by the enemy as implying want of unity in resolution that the objects of the war shall be effectually secured."

Lord Methuen's supposed successes aroused some exaggerated hopes in the breasts of many Englishmen, and *The Standard*, Lord Salisbury's mouthpiece, published a rumor that the Boers would give up the struggle. It promised that the Boers should not be refused quarter if they submitted, but their independence can not be restored. It added:

"If the authorities of the republics have come to the wise conclusion that they may as well make the inevitable surrender before their complete military collapse, their submission, we take it, would not be rejected. But there must be no mistake as to its character. It must be complete and uncompromising. The Boers need not believe that the status of the republics can remain unchanged after the war. The outbreak of hostilities, and a campaign which must end in the absolute triumph of British arms, have revolutionized the situation; and it must be clearly understood that no settlement will be entertained which would expose us again to the risk of further political trouble or military danger from Pretoria or Bloemfontein. On that point there can positively be no room for doubt."

The Saturday Review says:

"Provided the British flag flies at Pretoria and at Bloemfontein, we care not what form of municipal autonomy be conceded. But the Government should be pinned to Mr. Balfour's words that 'once for all we must not only show that we mean to have our own way, but must take our precautions that that way shall not be interfered with.' We quite agree with Mr. Balfour that war, with all its suffering, has its compensation. The present war has called out a vast amount of latent patriotism, and has excited a very noble generosity, not so much in the wealthy as in the middle class—but that is another story."

The Amsterdam *Handelsblad* is very bitter in its criticism of the expressions of some of the English papers. It says:

"The London *Times* declares that the Boers can not vote unless they swear fealty to the Queen. The London *Times* was the very paper which demanded that Englishmen should vote in the Transvaal without taking the oath of allegiance to the Republican Government. . . . Good government for the Transvaal! Oh yes, we know what that means. Cheap labor! The natives, who under the 'yoke' of the Boer were free to work where they pleased, must be enslaved as in Kimberley. That is what the 'tyrant oligarchy' in the Transvaal has prevented. The rich capitalists who own mines must be enabled to reduce the price of white and black labor."

In France, Leroy Beaulieu points out that England would make the gravest mistake by an attempt to subjugate the Boers. "Great Britain," he argues in the *Journal des Débats*, "may be able to win her way to Pretoria. She should then be content to annex the Johannesburg district. To prolong the war for the sake of destroying the independence of the republics means that England risks her entire empire."—*Translations made for THE LITERARY DIGEST.*

ENGLAND AND THE FOREIGN CARTOONISTS.

MR. CHAMBERLAIN'S recent speech at Leicester, in which he predicted serious consequences if the French cartoonists were not kept within bounds, had reference, apparently, to certain obscene caricatures of the Queen published in the "yellow" press of Paris. Other cartoons, tho not obscene, have been sufficiently galling. One of these, entitled "Tralala! Tralala! The English are coming, *sauve qui peut!*" shows a procession: first a typical English *dim-major*, with a short pipe between his teeth; then a squad of Salvation Army girls beating drums; next, as representatives of British civilization, a squad of music-hall girls; then follows a flag with inscriptions referring to incidents, such as the burning of Jeanne d'Arc, the bombardment of Copenhagen in a time of peace, etc.; then the missionary, with Bibles, gunpowder, and trading goods; then John Bull, with a rifle and a bag of money; last, a figure representing the plague. In the distance are telegraph poles, adorned with the bodies of natives. Another cartoon shows Queen Victoria at the feet of Kruger, who says: "Ris, madame, it is only in the esteem of honest folk that you are dethroned."

Following Mr. Chamberlain's lead, the *London Sun* says:

"This is the third warning of a definite character that has been given to the yellow press of France, and it is to be hoped that it will be taken. The gratuitously mendacious statements of the French press would be almost humorous but for the evident ill-will by which they are inspired, and when this ill-will is paraded in such an open manner the French people can scarcely be surprised if we hold them at arms' length. Let them look to their Exhibition."

The Spectator, however, thinks it is best to ignore such things. It says:

"There is an old story of an Austrian archduke which Englishmen will do well to bear in mind. While on a visit to Paris, a Frenchman who had some grievance against his Imperial Highness trod on his foot in a drawing-room. The archduke took out his handkerchief, brushed his boot of the dust, and remarked to his host, 'What an awkward person that is.' He was too highly placed in Europe to acknowledge the possibility of intentional insult. . . . A mud-storm may choke people in the streets, it can not smirch the snow on the hills. We should regret deeply to see

"SPLENDID ISOLATION!"

—Jugend, Munich.

any official notice taken of any caricaturist, however base. When the boys in the gutter throw mud, the dignified course for the coachman is to drive on unheeding."

The St. James's Gazette sees in the attitude of the French press evidence of the possibility, "that the fire which has begun round the borders of the Transvaal and the Orange Free State may yet encircle the world." It quotes a French paper, the *Rapport*, as follows: "Whatever may prove the outcome of the present struggle, it is already apparent that an anti-British combination is inevitable in the near future." *The St. James's Gazette* comments: "There is a considerable excess of smoke over fire in it all, but there is fire, too. Given a little more opportunity and a timely breeze to fan the flames, and it would be rash to rely upon it that we shall not find ourselves confronted by a considerable blaze."

The threat in Mr. Chamberlain's speech seems a little out of place just now even to jingo papers. "Serious consequences" is a somewhat awkward diplomatic phrase, at least for the days of the old diplomacy, says the *London Outlook*. A Canadian paper, the *Ottawa Free Press*, threatens France with the wrath of the German emperor. It says:

"These people are evidently no friends of France. Are they sowing the wind which will grow into a tornado? 'Vae victis,' if it be so. The grandson of Queen Victoria and the great-grandson of Queen Louisa may have to be reckoned with as well as Britain. What Satanic influence can be moving the once chivalrous France?"

The Germans, however, are far from troubling themselves about the matter. The *Berlin Tageblatt*, referring to the con-

"Tralala! Tralala! The English are coming. Save himself who can!"
—From a French Paper.

tinued insult and abuse heaped in recent times by the English upon the Kaiser, says that Germany gives protection against that sort of thing, but only in case the Government which complains is willing to reciprocate, which England never does. The *Amsterdam Handelsblad* says:

"Mr. Chamberlain's complaint sounds pretty indeed! Here we have a cabinet minister who in his official speeches personally abused the President of the South African Republic, then a friendly state, who ridiculed Mr. Kruger, accused him of corruption and grand larceny. Yet he complains about a few caricatures! Does he forget the abuse and insults to which the German Emperor has been subjected for years? The most 'respectable' Tory organs never mentioned the Kaiser by his name, but always used some insulting epithet. Far be it from us to approve of this caricaturing of Queen Victoria, even if she is to be regarded as the personification of the English people. The funny papers may use the responsible Ministers, tho they may not always serve the purpose as well. But who would notice these attacks if Chamberlain did not draw attention to them, he and—others who wish to cause trouble?"

The *Paris Journal des Débats* does not like insulting cartoons, wherever published, but believes that in reality the English only wish to pick another quarrel. After paying homage to the Queen as a sovereign and a woman, this paper says:

"The civilized nations should respect each other in the persons of their highest representatives, but this respect must be mutual. . . . We know that the President of France receives no consideration from England in such cases. . . . Still, the law of 1893 guarantees protection to the heads of foreign nations, but only in case these do not personally prefer to preserve a dignified silence. Her British Majesty must complain through her Embassy in Paris. . . . We would also ask the British press to examine themselves ere they throw the first stone at us. Our army, our courts, our public men, have been most wantonly attacked. If one is so thin-skinned, one must be less brutal to other people. But our neighbors across the Channel are not given to fair play; their idea is that they can do no wrong and we can do no right."—*Translations made for THE LITERARY DIGEST.*

SUGGESTED COMBINATIONS AGAINST RUSSIA FOR CHINA'S DEFENSE.

IT has long since been discovered by British publicists that British India's defense against the Great North Bear is much assisted by diversions that occur in the far East, and all sorts of combinations are suggested, ostensibly to preserve equal trade rights for all nations in China. Yet these plans have hardly matured as yet. The writer of an excellent series of articles on this subject in the Japan *Celestial Empire* expresses himself in the main as follows:

Russia, if her conduct be not very careful, may turn British rivalry into enmity, and Japanese jealousy into war. But these two nations do not stand alone in the matter. Germany must expect to be opposed by Russia. Germany does not use a "policy of pin-pricks" in dealing with other nations, but she is an accomplished poacher on other nations' preserves, as in the case of Shantung, a province regarded as peculiarly fitted for Muscovite dominion by the St. Petersburg authorities. Yet Germany planted her colony there without asking anybody's leave. Germany will not wantonly provoke a struggle; but neither does she fear it, for however much she may outwardly respect Russia's paper armaments, she knows well enough that Russia is no match for her. On the other hand, Russia knows that the terms would be dictated in St. Petersburg, and this renders a rupture unlikely. More improbable even is a quarrel between the United States and Russia. Yet the Americans are beginning to think that their trade in China ought to be defended. In short, a time will come when, as the rivalry between the two sides of the Pacific becomes acute, and the Union-Pacific finds that the Siberian-Pacific is beginning to get the whip-hand of the position, the United States will object as strongly as Great Britain does now to the arbitrary curtailment of their trade in the interests of their rivals. They will demand with no uncertain voice that the manufacturers of their goods, and the growers of their produce shall not be refused admission to Chinese ports because they do not wear the fur cap of Russia or speak the Gallic tongue. The English argument will be adopted in its entirety: "Your absorption of Chinese territory may not be resented too violently; but don't interfere with our trade."

Even France may be induced to join a coalition against Russia when it becomes necessary. The Slavs and the Anglo-Saxons have a right to hope that they will rule the world; but the unprolific Gaul can hardly hope for world dominion. Besides, his merchants are at one with ours in deprecating differential tariffs which do not favor them. France has got surprisingly little out of her Russian alliance. She has lent her money, her influence, her name, and got nothing in return. All the kicks and none of the halfpence have fallen to her share, and if when once more she "comes to herself" she finds that most of the guilt has gone from the gingerbread, no one need be surprised, certainly not Russia.

That other rumored combination, an alliance between Great Britain, the United States, and China for the defense of the integrity of the latter empire, is described by some of the papers in England as an excellent diversion from the South African war; but the general opinion is that it would not be wise at the present time to go beyond asserting claims on paper. The London *St. James's Gazette* says:

"Suppose the United States has really formed the resolution to defend China against further dismemberment, some facts have to be taken into account. The policy, being our policy, is naturally acceptable to us. The integrity of China and the open door are all we ask for. But, of course, there are others to be considered, and their acts may be influenced in a variety of ways by the discovery that the United States are resolved to take effectual measures to defend the integrity of the 'yellow corpse.' The most satisfactory result would be that they should see in it a sufficient reason for resigning all hopes of securing 'compensation' in those regions, if not in every other. That would be a result of the informal but genuine Anglo-American alliance, which is much to be desired. But, on the other hand, the result might be different. It is, at any rate, just conceivable that powers which have designs of their own in China, incompatible with the integrity of that country and with the open door, might be brought to see the

necessity of acting at once, by the discovery that America would be their enemy when they do act. Supposing the struggle to be inevitable between these incompatible policies, and the Anglo-American alliance also certain, there might be reasons for beginning when England is engaged, and the states are not ready."

The Berlin *Deutsche Tages-Zeitung* hints it very characteristic that the Americans, who seek to exclude all foreign manufactures from their own country, should even talk of "free trade" in China. On the whole, the German papers suggest no catchword policy. They reiterate in this as in other questions that their Government must remain free to act on occasion as German interests demand. The Berlin *Nation* says:

"The preponderance of international politics is still in Europe, and as long as this remains so there are no points of friction between ourselves and the Czar's empire. This does not mean that we intend to be drawn into a policy of open enmity to England. It simply means that we occupy a position of benevolent neutrality with regard to Russia, for as long as Russia and Germany are on good terms others are not likely to seriously disturb the peace of the world."

In this case as in others, the blunt spaking of the English newspapers and press agencies in regard to everything other nations do has produced an unwillingness to work with England. The fact that the "Central News" reported troubles on the frontier of Kiao-Chow when one had occurred, giving the *Ostasiatische Lloyd* as its source when that paper had nothing to do with the invention, has created a very bad impression in Germany.—*Translations made for THE LITERARY DIGEST.*

THE OPENING OF THE SUDAN.

WHEN the Khalifa escaped after the battle of Omdurman, it was feared that he would retire to the center of Kordofan until he could prepare himself for a more adequate defense against the Anglo-Egyptian army. These fears have not been realized. During the latter part of November he met his foe at Gêdid in his accustomed manner. His followers fought with their old bravery, but once again it was shown that any number of men foolish enough to advance in mass across an open plain can be killed by modern engines of war before they reach the enemy. The best part of the Khalifa's army was destroyed, and 9,000—including women and children—were captured. Lord Kitchener, therefore, has been justified in declaring the Sudan "open to civilization." The incident gave much pleasure to England. Recent reports had led her people to believe that the crack regiments commanded by Lord Methuen had at last impressed the Boers with an adequate idea of England's strength, and the old hopes of an all-British Africa from the Cape to Cairo revived. "England has a long arm," said the London *Telegraph*, "as the defenders of Bloemfontein will discover to their cost—how long an arm let the northeast region of Africa testify, where in the Sudan the Sirdar reports that Ahmed Fedil and his Dervishes have just suffered a crushing reverse at the hands of Sir Francis Wingate."

The Globe remarks:

"The victory is all the more notable and gratifying because of its being won by native troops alone, without any British stiffening, other than its handful of English officers. For these troops utterly to rout and destroy a picked Dervish force, with hardly any loss to themselves, must produce as excellent a moral effect in the Sudan as Lord Methuen's brilliant victory is likely to do in South Africa."

The St. James's Gazette rejoices in the destruction of Mohammedan power, so far at least as England's possessions in Africa are concerned, and says:

"If the fight between Europe and martial Mohammedanism is to go on at all, the burden must be transferred from us and from

Egypt to the French and Central Africa. So far as we are concerned the work is done. But apart from the repulse given to the revival of Mohammedanism, we have made good another step in the process of establishing a general superiority over Eastern Africa. The Sudan was reconquered for Egypt and England at the stricken field of Omdurman, and this other stricken field only completes the process. It comes at the right time to remind us that the struggle with the Orange Free State and the Transvaal, tho an important matter in itself, is after all only a part of a much greater business."

Not all Britons, however, are sure that the Dervishes were as bad as they are painted in popular British journals. A writer in the *Edinburgh Review* expresses himself to the following effect:

Much has been said and written about the wickedness of the Arab. But we must not forget that the Arabs found the country in an utterly demoralized condition. It is really the Egyptian and Turkish *regime*, which is now nominally reestablished by Great Britain. The Mahdi was cruel, but not as cruel as the Turk.

Continental papers, however, acknowledge that English rule is better than that which has just been supplanted, tho the Amsterdam *Handelsblad* remarks that it is not yet necessary to deny to other than white races the right of existence. This paper occupies a front rank in the journalism of Europe, and to its efforts is due, in a large measure, the considerate treatment of the colored races in the Dutch possessions. It points out that slavery, tyranny, oppression, cruelty, mean different things among different nationalities, and says:

"The Khalifa himself was a slave boy in his youth, belonging to Zobair. By his ability he became later a rich slave-dealer. The Mahdi then asked him to offer up his riches to 'follow the Lord.' Abdullah 'got religion,' and was promised that he should be the Mahdi's successor. He stood by the prophet, and informed the Khedive and Great Britain officially of his ascendancy to the throne when the Mahdi died. The answer was conveyed to him by Lord Kitchener at Khartoum and Omdurman."

In justice to England, it is acknowledged by many Continental papers that her yoke, however intolerable to a more fierce race, is welcomed as a relief by the Egyptian fellaheen. The men whose superior arms managed to crush the rest of the Dervishes were native Egyptians, a race almost as gentle as the Hindus. "The English do not rob them directly," says the *Ägyptische Courier*, "and their lot is not much worse than that of a European laborer. True, every Englishman expects to be treated as a superior being by them, but they do not mind that. They are used to fawn upon their masters." It is, too, of such unpromising material that Lord Kitchener has formed the force which fought England's battles in Northern Africa.—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE German Rear-Admiral von Valois in a recent work on sea-power, declares that the United States, if it continues its colonial policy, must sooner or later come into conflict with Great Britain. As Germany must also find herself opposed by the British empire, von Valois believes that it would be of advantage if Germany were to be allied with us. Without such alliance, neither country could successfully oppose British sea-power; but a combination of two small but excellent navies would command respect.

THE condition of Crete seems to be far from satisfactory. The Mohammedans refuse to live under Christian rule and they are all emigrating. "As they are the hardest workers, the country loses its best people," says a correspondent of the Rome *Tribuna*. "British capitalists buy their land, and try to work it with Italian laborers; but this does not furnish a prosperous, strong peasantry. There is a large deficit, and the Greek officials with whom Prince George has surrounded himself are not very honest or capable."

THE death of the late Cornelius Vanderbilt has attracted attention to the fact that our millionaires do not, generally speaking, interest themselves personally in politics. It is admitted, however, that the millionaires of ancient Rome did not, and those of modern England do not benefit their country by their interference. The London *Spectator* says: "Mr. Vanderbilt, tho an excellent business man, was not a man of intellectual force; he had no particular objects, and he worked every day and all day with the assiduity of a London barrister just beginning to rise. He never cheated anybody, not even his shareholders, managing his railways so as to pay regular and good dividends, and, indeed, was in all respects very like a hundred thousand other men. The old Roman millionaires were hardly so useful in their generation, but they led bigger lives."

MISCELLANEOUS.

A GERMAN WOMAN'S INDICTMENT OF THE "NEW WOMAN."

A NEW work, by Laura Marholm, a German author, has lately been translated into English. The book is a severe and elaborate indictment of what is known as the political, social, and economic emancipation of woman. It is a defense of the past, an arraignment of the present. In studying the changes in woman's position and rôle in society, Frau Marholm finds a "thread running along from the great upheaval of the Reformation to the present day." She finds that only Protestant and Freethinking women are detached, torn away from their roots, while the Catholic women still possess "the connection with nature and the power of emotional expansion, both of which are indispensable to the woman." The emancipated, the progressive woman is abnormal—ill, according to the author. "The emancipation of woman is nothing but woman's despair of herself as woman." To quote what may be considered the keynote of "The Psychology of Woman":

"Woman has become but half-woman, and this most absurd of all intermediate stages we seek by all accepted means, moral and educational, in the home and school, to maintain and make permanent. The woman of our day has no longer respect for man, no longer respect for herself as a productive organism; in other words, she has no veneration for the mystery of her existence. She is stupidly wise—unnatural. At most the woman of to-day has only fear of man."

Frau Marholm draws a sharp line of division between the women who married in the fifties, "who held the categorical imperative in high honor," and the women of the present generation, "who have already a touch of anarchism," who demand happiness and freedom and repudiate duty, who look upon themselves as disguised martyrs if they perform their marital obligations. The women of to-day are classified under these categories: the *détraquée*, the *grande amoureuse*, and the *cérébrale*. As for men, two types comprise the majority of them—the barbarians and the decadents, while some present the union of these types and are barbarian-decadents. The author describes these various kinds of women as follows:

The *cérébrale* is the woman who tries, as well as she can, to think with her own brain. Why does she do this? Because she has no man with whose brain she could think. Or because she deems herself above the man whom she has. In consequence, love has become less and less a blind instinct, and is no longer a compelling force. The cultivated woman is saturated with all sorts of man's ideas, and has imbibed men's criticisms of their fellows. On the other hand, the *détraquée* is hysterical, unbalanced, wantonly curious, cold but *piquante*. She has a fascination for men, but she is incapable of giving happiness. In marriage she is restless, dissatisfied, and rebellious. The *grande amoureuse* is passive, faithful, ardent, and devoted; but the modern men are not attracted by her.

The woman-movement, according to the author, has everywhere an economic basis. It springs from the necessity of woman's providing for herself. Women who achieve independence generally remain single. They renounce offspring and family life. They live as men, and with the result that in the labor market wages are depreciated and the middle class still more impoverished. The author continues:

"We now stand upon the verge of a displacement of men by women workers in the so-called higher occupations also, occupations where there existed already a monstrous oversupply of masculine laborers. As soon as the woman enters these occupations, she will at once effect there also a fall in wages. Hence the woman, if she would open new fields of occupation for herself, must work for man's destruction. When man is no longer the supporter of woman, she must become his oppressor. The two

parallel appearances, emancipation and prostitution, must undermine the man physically, materially, and mentally."

Meantime woman's innermost nature, her enthusiasm, her devotion, her emotions, lie fallow. The remedy, according to Frau Marholm, is in doing away with the most unnatural of all struggles, that of women against men for bread. Woman must return to her sphere, motherhood and family, while those who do not marry must devote themselves to unselfish, altruistic work, in which there is no competition—nursing, education, elevation of the poor—in fine, the service of others.

THE BOERS AND THE HUMORISTS.

MARK TWAIN and Mr. Dooley have been turning their attention to the tempting target offered by the peculiar customs and personal appearance of the Boers. Mark's observations have been recorded in "More Tramps Abroad," and the London *Academy* makes some timely selections therefrom. For one thing, he makes calculations as to the number of soldiers England needs to conquer the Boers. In the four battles fought in 1881 and the two fought by Jameson, the British loss, says Mark, was about 1,300 and the Boer loss 30. The reason for this, he concludes, lay in the nature of British methods of fighting. If these methods are to be persevered in, then the British will always need thirty times as many soldiers as the Boers, and Jameson should have taken along 240,000 men. But there are better methods, and here they are:

"If I could get the management of one of those campaigns, I would know what to do, for I have studied the Boer. He values the Bible above every other thing. The most delicious edible in South Africa is 'biltong.' You will have seen it mentioned in Olive Schreiner's books. It is what our plainmen call 'jerked beef.' It is the Boer's main stand-by. He has a passion for it, and he is right.

"If I had the command of the campaign I would go with rifles only, no cumbersome Maxims and cannons to spoil good rocks with. I would move surreptitiously by night to a point about a quarter of a mile from the Boer camp, and there I would build up a pyramid of biltong and Bibles fifty feet high, and then conceal my men all about. In the morning the Boers would send spies, and then the rest would come with a rush. I would surround them, and they would have to fight my men on equal terms, in the open. There wouldn't be any Amajuba results."

Mr. Dooley's discourse on the Transvaal war (in *Harper's Weekly*) is after this illuminating fashion:

"An' what's it all about?" demanded Mr. Hennessy. "I can't make head nor tail iv it at all, at all."

"Well, ye see, 'tis this way," said Mr. Dooley. "Ye see, th' Boers is a simple, pasthral people that goes about their business in their own way, raisin' bell with ivrybody. They was bor-rrn with an aversion to society, an' whin th' English come they lit out before thim, not likin' their looks. Th' English kept comin' an' the Boers kept movin', till they cudden move anny further without bumpin' into Kitchener's ar-rmy, an' thin they settled down an' says they, "This far shall we go," says they, bein' a religous people, "an' divvle th' sthep further." An' they killed off th' irreligous naygurs an' started in f'r to raise cattle. An' at night they'd set outside iv their dorps—which, Hinnessy, is Dutch f'r two-story brick house an' lot—an' sip their la-ager an' swap horses an' match texts fr'm th' Bible f'r th' seegars, while th' childher played marbles with di'mon's as big as th' end iv ye'er thumb.

"Well, th' English heerd they was goold be th' bucket in ivry cellar fr'm Oopencoff to Doozledorf—which, Hinnessy, is like New York an' San Francisco, bein' th' exthreme p'nts in th' counthry—an' they come on in gr-reat hordes, sturdy Anglo-Saxons fr'm Saxony—the Einsteins an' Heidlebacks an' Werners; an' whin they'd took out goold enough so's they needed raycreation, they wanted to vote. "An'," says Joe Chamberlain, he says, "be hivins, they shall vote," he says."

Here is Mr. Dooley's thumb-nail ske-h of President Kruger:

"Kruger, that's th' main guy iv th' Dutch, a fine man, Hinnessy, that looks like Casey's goat an' has manny iv th' same pecularities."

CORRESPONDENTS CORNER.

Who Believes the Doctrins of Calvin?

Editor of THE LITERARY DIGEST: When perusing THE LITERARY DIGEST of November 4, we were astonished to read the sweeping statements of the Rev. Dr. Percival about the repudiation of the faith held by the Reformers. With pleasure we note the protest of a Lutheran clergyman against what was said of Lutheranism. Permit us to do something similar for Calvinism.

Without speaking for the men and women who to-day in the Presbyterian and Reformed churches of our land really uphold the standards of their churches, we would like to say in answer to the question "Who to-day believes the doctrines of Calvin on reprobation" etc., that the entire Christian Reformed Church in North America, with perchance a few individual exceptions among the laity, heartily accepts them, unreservedly, as promulgated by the Synod of Dordrecht. The same can be said of the imposing body called the Reformed Churches of the Netherlands. And, far from these dogmas being extinct as the dod, Calvinism is very much alive to-day, and spreads out its wing farther than ever, as can be seen in the important works of theologians like Drs. Keiper and Ravinck of Holland, not to mention staunch Calvinist scholars in our own country. The truth above all!

HENRY BEETS,

GRAND RAPIDS, MICH.

Pastor Fourth Christian Reformed Church.

Objections to The Literary Digest.

AFTER reading some of the letters which have come to the office of THE LITERARY DIGEST in the last few days, we are almost ready to question the well-known law of space that a body can not at one and the same time occupy two different positions. These letters to which we refer are letters of complaint, and from them we learn that this journal is both imperialistic and anti-imperialistic, pro-English and anti-English, biased in favor of the Republican Party and biased against it, just as, a short time ago, we published letters showing that we were grossly unfair to the Roman Catholic Church and yet so very favorable to it as to compel the conclusion that we are Jesuits.

We publish extracts from these letters, but inasmuch as they were written to the business department and not for publication, we do not feel at liberty to use the names of the writers.

A letter from Norfolk, Nehr., contains the following statements:

"I want to state most frankly that I don't want your paper again, and am anything but pleased with it, for the following reasons. You claim to be non-partizan, yet I have noticed with growing concern that every issue leans more strongly toward the side of imperialism, the gold standard, and all that is Republican. This does not set well with one expecting an unbiased review. But above all this, you are rapidly taking up the Anglo-American alliance and pushing the case of England. This is the last straw; please strike my name from your list at once."

On the heels of that comes this from the same State, Syracuse, Nehr.:

"I can not do so [renew subscription] for the reason that being a political partizan, I am opposed to your system of digesting so many articles inimical to the Administration, and so few favorable to it. If they were evenly distributed I could read that portion of your DIGEST with more equanimity, but I am in favor of standing by this country, in every hour of trial, no matter what political party may be in power. Sentiments of patriotism on your part, it would seem, ought to suggest that even a "Digest" had better teach loyalty to its readers than to breed distrust in our institutions."

And from Walkerton, Ontario, comes a letter from a kind but grieved reader objecting to our anti-British attitude:

"I read the DIGEST carefully and am very much pleased with it; but notwithstanding what you say in your circular, I can not help remarking that I consider it shows a considerable anti-British bias, especially in the matter of the present South African troubles. I mean in your own summary of the result of the different newspaper articles. I do not pretend that a "Britisher" is a very lovable human being. No person who is pugnacious (and to be a progressive one has to be so) is a very amiable character, but at the same time I think as a whole they are entitled to the credit of being straightforward in their dealings and honest in their intentions."

The Yankee Christmas Club.

Editor of THE LITERARY DIGEST: Possibly some of the readers of THE LITERARY DIGEST instead of destroying current issues, as read, desire to pass them on to worthy "Shut-Ins," those who would appreciate, but who on account of long-continued sickness become impoverished and therefore unable to subscribe. It is the work of "Yankee Christmas Club" to supply, as far as funds permit, our "Shut-Ins" with yearly subscriptions; but "not running a mint," we are unable to supply the demand. If subscribers anywhere are willing to regularly mail their copy of THE DIGEST when through with it, it being still current, to an appreciative "Shut-In," will send me a stamped and addressed envelope I will place them in receipt of names and addresses of "Shut-Ins" from Maine to California, and also of soldiers in the Philippines, who will more than appreciate their weekly service.

WILLIAM T. TOTTEN,

1106 GREEN STREET, PHILADELPHIA.

Secretary.

FOREIGN POSSIBILITIES OF
AMERICAN COMMERCE.

There are no American-made shoes on sale in this consular district, writes Consul Le Bert from Ghent, Belgium, nor can I learn that there ever has been an effort made to introduce them. True, the inducement in the past has not been of such a nature as to warrant much expense in endeavoring to establish a market. Of late years, the conditions are becoming more favorable for the leather-shoe industry, as this shoe is gaining in popularity and is gradually taking the place of the wooden shoe. The wooden shoe is still in general use among the laboring class and farmers, being worn alike by men, women, and children. It is very cheap, a pair costing from 8 to 20 cents. On Sundays and holidays, the greater number wear very cheap shoes, costing from 75 cents to \$1.25 per pair, or slippers made of cloth and of leather costing from 25 to 75 cents. The middle class wear a cheap ready- or custom-made shoe, running in price from \$2 to \$3.50 per pair. The upper classes wear custom-made shoes, costing from \$4.50 to \$6 per pair. Among this class there is a strong prejudice against ready-made shoes; but this feeling can readily be accounted for, as there are no fine ready-made shoes to be had. There are few boots worn, except by army officers. A few custom shops turn out a fair-looking shoe, but they all lack the style and finish of the American fine ready-made shoe. There are no shoe factories located at Ghent; but at Iseghem, in this consular district, there are three establishments, two of them quite extensive. There are also several other large factories in Belgium. The stocks of ready-made shoes are all of Belgian make with the exception of that of one house, which carries the goods of a Glasgow firm. These are of a cheap grade, with no shape, very coarse and clumsy. In former years, German and French exporters found a market here, but the home competition has driven them entirely out of the market. I venture to say that if the American shoe were properly introduced, it would soon gain favor. In order to be successful from the start, the effort should be made cautiously. A competent salesman, familiar with the language of the country, should visit the city to obtain a full knowledge of what is required by the trade. If a display in a large show window could be made, it would materially assist in the introduction and sale of the shoe. It should be borne in mind that this would require a full stock of several varieties and styles. The city of Ghent and suburban towns have a population of 110,000. Duty on boots and shoes is 10 per cent. *ad valorem*. American leathers—sole, calf, glazed kid, and tan as well as other varieties—sell quite readily, and are kept in stock by all leather dealers. In both price and quality they compare

Women who hate rubbers and thick shoes should wear Green's "Rational" Shoes. They not only weigh less and are more flexible, but they'll keep your feet warm and dry in all sorts of winter weather. And they are strictly up to date in appearance. They are made from the very choicest kid, with a thin wool lining and insoles of the famous Dolge felt. It's like walking on cushions. The illustration shows No. 1071, which is delivered anywhere on receipt of price, \$5.00. The new catalog shows many other styles for men and women and answers all questions.

DANIEL GREEN
FELT SHOE CO.,
119 W. 23d St.

favorably with those from other countries, as well as Belgian productions. Shoemakers are well satisfied with American leather. The glazed kid, which formerly was imported exclusively from France, has found a strong competitor in the American product, which is cheaper and equal in quality and is preferred by many. The Belgian army uses exclusively a leather from Buenos Ayres, Argentine Republic. It is said the leather is stronger and gives better wear than that of any other country. Great quantities of this leather are consumed. There are no hides exported from this consular district.

When, some time ago, American competition in iron and steel was talked of in the German press, many of the technical and trade journals made light of the news. Quite different, however, is the expert opinion of the chamber of commerce of Bochum, which comprises leading manufacturers from this prominent iron and steel district of Germany. In its annual report for 1898 this body speaks as follows:

"American competition, which in 1897 arose in the continental markets, has made further progress during 1898. Pig iron exported to Germany has increased 16 per cent. as compared with the imports of the year previous, fine cast iron and wrought iron 28 per cent., and common ironware 75 per cent., while the import of bicycles and parts gained 106 per cent. The value of these American articles imported into Germany in 1897 amounted to 10,100,000 marks; in 1898, to 15,800,000 marks (\$2,380,000 to \$3,570,000). This extraordinary increase in so short a time gives cause for very serious concern, especially when it is considered that the demand in the United States has advanced enormously, so that no large stocks were available for foreign export. Consequently, we have to reckon with certainty that the import of American iron and steel will continue to increase; to prevent it will require strenuous exertions on the part of German works. Above all, we must have lower freight rates. Without these it will be impossible for the Rhenish Prussian iron manufacturers to compete in future with American goods, which gain great advantage from the astoundingly low rates of railroad freights."

Greater trade interests are being developed between Turkey and the United States. Through the activity of the United States consul-general at Constantinople, a steamer line has been established by Messrs. Barber & Co., to ply between the American and Turkish ports. Aly Ferrouh Bey, Ottoman minister at Washington for the past five years, has been working to establish better relations between the two countries. Three months ago, it was reported by the newspapers here that Ferrouh Bey's mission was to obtain the appointment of Caleb Witheat at the post of

LINENE Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

Reversible Collar Co., Dept. S, Bnston, Mass.

Reg. Trade Mark.

If You Knew
how much more healthful, economical, and easy to manage

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

general director of Turkish industry. There is also attributed to him the application made to the American Minister of Agriculture, asking that two professors, one an engineer and the other a manufacturer of much experience, should be sent to Turkey to establish agricultural schools. The fact is that Mr. Whitehead will be director of a factory, which, under the superintendency of the Turkish Minister of Agriculture, will prepare (or make) agricultural machines and implements. It is not a question of opening agricultural schools, but it seems desirable to invite men who can teach the people of Asia Minor how to handle the best agricultural machines and implements. It has not, however, been decided yet that the Americans shall have the preference in this work. A few days ago Dr. Herman Schoenfeldt, a German-American, was appointed Turkish consul-general at Washington, and that appointment was made with the view of further developing the relations between the two industrial countries. He does not accept the idea of those that maintain that closer relations between Turkey and the United States may prejudice the German interests. Aly Ferrouh Bey is a great friend of the Germans, whose activity in Asia Minor contributes much to the development of the country. The United States may compete with Germany in some things, but it is entirely certain that the industrial strength of Turkey will develop still more the Turkish-German commerce.

PERSONALS.

GENERAL ROBERTS'S CAREER.—Sir Frederick Sleigh Roberts, First Baron Roberts of Kandahar and Waterford, Victoria Cross, Knight of the Order of St. Patrick, Grand Commander of the Bath, and the holder of many other orders and decorations, is known to Tommy Atkins—as readers of Kipling are aware—just as "Bobs."

General Roberts was born at Cawnpore, India, September 30, 1832. He was only nineteen years old when he entered the Bengal artillery as a lieutenant, and went to Hindustan to serve the company. He took active part in the Indian mutiny, and was with Sir Colin Campbell at the relief of Lucknow.

THE continual breaking of lamp-chimneys costs a good deal in the course of a year.

Get Macbeth's "pearl top" or "pearl glass." You will have no more trouble with breaking from heat. You will have clear glass instead of misty; fine instead of rough; right shape instead of wrong; and uniform, one the same as another.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

an appropriate Birthday, Wedding, Christmas, or New Year's Gift. They are entirely handwoven, about 40 inches square, with 6-inch fringe, at Bethlehem by expert Saxon weavers. Warp silk and wool—rich light green, delicate pink, rich cherré red, pure white, or black color. When ordering, state color wanted.
Postpaid and registered for \$7.50.

THE SUSACUAC WEAVING CO.
No. 12 Moravian Church St., Bethlehem, Pa.

When the relieving army got close to the rebel lines outside Lucknow, Sir Colin, wishing to let Outram know of his progress, wanted a flag raised on the mess-house. Within plain view of the mutineers Lieutenant Roberts climbed to the top of the building, and, amid a rain of shot, raised the flag on the turret nearest to the foe. It was shot away, and he replaced it. Again it was shot away, and he raised it again. But it was not for this deed that Roberts won his Victoria Cross. That was done at Khodagunge, January 2, 1858. He saw in the distance two sepoy going away with a standard. Putting spurs to his horse, he overtook them. They turned and presented their muskets at him, and one of the men pulled the trigger. It snapped, missing fire, and the sepoy was cut down by Roberts's sword. The other mutineer rode away, and the young lieutenant brought the standard back to camp. The same day he rescued a wounded comrade under almost similar circumstances.

In the years that followed the mutiny Roberts saw almost continual service. He was at Umbeyla, in the frontier campaign, in 1863; in 1867 he had charge of the embarkation of the force for the Abyssinian campaign. In 1871 and 1872 he was the senior staff officer in the Lushai campaign, and from 1875 to 1878 he was quartermaster-general. All his promotions were "for merit."

It was toward the end of 1878 that the great opportunity of General Roberts's career came to him. The Ameer of Afghanistan rebelled against the authority of Great Britain, and Roberts was sent at the head of the army to subdue him. He carried the enemy's stronghold at Peiwar Kotul with a splendid rush at odds of almost ten to one. The next year the news of Sir Louis Cavagnari's murder in Kabul horrified all England, and Roberts was called upon to lead another avenging force. With 6,000 men he cut his way straight through the hostile land, and in thirty days placed the British flag above the citadel of Kabul, after routing the Afghan army, which outnumbered the British by twelve to one. Then, after reinforcements had been sent to him, he began one of the most famous marches in history—over towering mountain ranges and through hostile territory, straight from Kabul to Kandahar—300 miles in twenty days. At the end of the march he crushed Ayoub Khan, and the whole empire rang with the praises of the man who a few months before had been almost unknown.

Since then Roberts has advanced, slowly and always "for merit," to the position of commander-in-chief of the forces in Ireland. He was put in command at Madras, then in command of the army in Burma, and then was made commander-in-chief of the British army in India. In the last-named capacity he did work the value of which only soldiers can appreciate properly. He fortified the northern frontier of Hindustan with a chain of fortresses from end to end; he made both the British and native troops far more effective than ever before; he obtained better rations for the men, and he secured better equipments.

It is for this quiet work of organization that Roberts is known to the rank and file as "Bobs," and it is doubtless because of his ability in this direction he has been selected to drag victory out of defeat in South Africa.

LORD KITCHENER'S RECORD.—The exploit which gave Lord Kitchener his peerage is of recent date, and the details of the story of the campaign against the Sudanese dervishes of last year are still familiar. When the war with the Boers broke out he is said to have urgently requested the War Office to allow him to take part in it, but he was not successful.

Horatio Herbert Kitchener, first Baron Kitchener of Khartoum, was born in 1850. He is the eldest son of the late Lieut.-Col. H. H. Kitchener, and was educated at the Royal Military Academy at Woolwich. He entered the Royal Engineers in 1871, and first obtained notice for his management of the Egyptian cavalry in the campaigns of the

early eighties. In 1890 he was appointed Sirdar of the Egyptian army.

DURING my three years' residence at the Transvaal, says Mrs. F. W. Jewell in the Boston *Herald*, I became acquainted with President and Mrs. Kruger and several members of their family, and I must say that a more delightful old couple than Oom Paul and his wife I have seldom had the pleasure of meeting. There is no absurd ostentation about them. They are simplicity itself in their dignified courteousness, and whoever is the authority for the statement that they are deficient in refinement or that their house lacks appointments consonant with the dignity of their position is either wilfully misrepresenting or absolutely ignorant of the real condition of affairs. Moreover, I sincerely believe that instead of rushing into war President Kruger did all in his power to avert war, until he became convinced that bloodshed was inevitable.

I also met Mrs. Kruger, and a more pleasant old lady you would not want to see. We had a delightful chat, through an interpreter who spoke German. I have also seen the old couple on other occasions, and my first favorable opinion has been strengthened by what I have since seen of them.

Here is a little story of Mrs. Kruger, and it illustrates the kind-heartedness of the woman: Plans were being prepared to build a monument to the president, and when the drawings were completed they were shown to Mrs. Kruger. She was very much pleased with them and expressed her admiration to the architects. "But there is one thing I would like to suggest to you," she said. "The design is beautiful and the whole plan pleases me very much, but there is one thing I would like, if you can arrange it without a sacrifice to art, and that is that when you design the president's hat you will leave a little hollow in the top from which the birds can drink." This is a small thing, but it illustrates the woman's kindness of heart.

BRAVERY in a military officer, says the *Youth's Companion*, is a commonplace virtue, since no man is fit to be an officer unless he possesses it. But presence of mind in great danger is a rarer quality, and the officer who possesses it needs only opportunity to bring him distinction.

General de Gallifet, the French Minister of War, and the most eminent living French general, possesses presence of mind in a high degree. During the war of the Commune, Gallifet once found himself at the Bergeries bridge, Paris, surrounded on three sides by the insurgent national guard. He was accompanied by a lieutenant only, Bernard d'Harcourt by name. Escape was impossible. Three thousand national guards had their guns aimed at the two officers. "We shall never get out of this alive!" said the lieutenant. "Well," said Gallifet, "perhaps not, but I think we shall. Follow me!"

Gallifet proceeded to ride at a slow trot directly toward the insurgents. Presently the Communist commander, a man with a white beard, evidently not a soldier by occupation, stepped out and called: "What do you want?" Then Gallifet proceeded to make a speech in a somewhat grandiloquent manner. He pretended that he had come from President Thiers.

"Frenchmen," he said, "listen! Shall it be peace or war between Paris and Versailles? Shall we not have peace? Lay down your arms and all will be well. If you persist, it is war to death! Frenchmen, choose!"

A great clamor rose among the insurgents. The Communist leader spoke up. "Go back to President Thiers," he shouted, "and tell him it is war!" "I go," said Gallifet. He wanted nothing better, as his "mission" was a pure accident, and he was as good as a prisoner. He and the lieutenant rode away. The lieutenant's horse struck into a gallop. "Hold on!" called Gallifet. "Don't let them think we are in a hurry—they'll know what's up." So the two officers walked their horses out of range of the insurgent rifles, and rejoined their command. Two months later the gray-bearded Communist commander fell into the hands of Gallifet, who gave him his liberty in agreeable remembrance of the incident.

CARTERIAN

Adjustable Expanding Document ENVELOPE

THE simplest, strongest, and best envelope ever invented for filing legal papers or documents of any description.

By means of a slot it adjusts itself perfectly to fit any enclosure from a single sheet of paper to a package an inch thick. Remove a part of the papers and envelope will adjust itself to remaining contents.

CARTER, RICE & CO. (Corporation)

246 Devonshire St., Boston, Mass.

WILLIAM II., King of Prussia and German Emperor, says *The Verdict*, has a post-office of his own for his exclusive use, with officials detailed especially to handle the voluminous postal matter that comes every day addressed to him. All his letters are classified under the three heads, "Private," "Official," and "Immediate." Private letters are handed over to the Emperor unopened; those marked "Official" land in the civil cabinet of the Kaiser if they contain petitions by civilians, while those of a military character go to the military cabinet. Chiefs of these two departments make all the necessary inquiries regarding the communications, and then prepare the answers in accordance with the regulations for official letters. These answers are taken to the Emperor, who expresses his approval by affixing his signature. Answers are then despatched by special messengers to their destination. The messengers used in this postal service are the most trustworthy men who can be found.

THE following little story, told by the London *Chronicle* and illustrative of Mr. Gladstone's courtesy, is fresh to us. It comes to us from an old resident of Llanfairfechan. The incident occurred at Penmaenmawr, in the summer of 1890. About twelve hundred feet up the mountain is a small farmstead, Pen Penmaen, at which resided an old woman over seventy years old, who brought her weekly stock of provisions in a large basket up the steep ascent from Llanfairfechan village. One hot Saturday, soon after beginning her upward climb, she sat down to rest. Mr. Gladstone, seeing her, entered into conversation. She chatted freely, and detailed the contents of her basket. He lifted it, and, finding it heavy, offered to carry it for her. The offer was accepted, and the veteran statesman bore the basket load to the whitewashed farm cottage, near the summit. A party of tourists approaching from the Druid's Circle path respectfully saluted Mr. Gladstone, who, having set the heavy load down at the old woman's door, strode vigorously across the mountain path to Penmaenmawr. "Did you

know that was Mr. Gladstone who carried your basket for you?" inquired one of the party. "No, indeed; I don't know Mr. Gladstone," replied the old woman, "but I know that he is a kind gentleman, whoever he is."

JOWETT and Johnson, says the London *Saturday Review*, had truly many striking points of difference, but they were superficial, or related to those habits which are the result of circumstance rather than an expression of character. Dr. Johnson was a slovenly Bohemian, idle, and often intemperate. Dr. Jowett detested Bohemianism and eccentricity of all kinds, was a model of neatness in his dress, and a pattern of precision in his hours. Johnson bawled, and Jowett chirped; but the mental attitude of the two men toward the world and their fellow creatures was the same. Both had the virtue or the vice of incredulity, and the Master of Balliol hesitated as little as the Sage of Fleet Street to give the lie direct to any one whom he disbelieved. The pendant to Johnson's, "Sir, don't tell that story again: you can't think how poor a figure you make in telling it," was Jowett's favorite comment, "there's a great deal of hard lying in the world, especially among people whose character it is impossible to suspect." Both moralists had a hearty contempt for the *cui bono* school of philosophy, and a perhaps exaggerated admiration for those who, in Johnson's words, are helping to drive on the system of the world. In the presence of both intellectual pretension stood abashed, and loose talk was repressed. Both practised conversation, not merely as an art, but as a duty, and both influenced their generation a great deal more by their spoken than by their written words. We doubt, for instance, whether any one ever rose a stronger or a wiser man from reading a number of the *Rambler* or a page of "Rasselas"; but we are quite sure that no one left Dr. Johnson's company without feeling that his moral constitution had been braced up. Dr. Jowett's translations of Plato and Thucydides are models of what a crib should be, for they manage

to preserve the spirit of Greek and the style of English. But tho their public may be increased by the spread of middle-class education, it is not on those works that the fame of their author rested, or ever will rest. Jowett's influence was derived from his talk, at his own table, in his study, in the Balliol quadrangle, in his rambles round the Malvern hills, with undergraduates and with men of the world. He had as shrewd an eye for an undergraduate as a Yorkshireman has for a horse.

THE HON. CUSHMAN is a representative-at-large from the State of Washington, a circumstance which has already inspired a good joke. During his campaign Cushman stopped at a farm-house to get a drink of water. "What's the political feeling 'round here?" he asked of the farmer's wife. "I dunno," replied the good woman; "I don't go to political meetin's. They say there's a Congressman at large, and I think the safest thing for me to do is to stay at home!"

THE homeliest man in Congress is Mr. Eddy, of Minnesota, and he rather prides himself on this fact. Some of his political adversaries once accused him of deceitfulness and hypocrisy, but he rose to the occasion. "They say I am two-faced," said Mr. Eddy. "Now, gentlemen," looking mournful and homelier than usual, "do you believe that, if I had two faces, I would be wearing this one?" This did up all his critics.

TOM L. JOHNSON, the millionaire single-tax enthusiast, made his start in life as an office boy in the old Central Passenger railway office of Louisville, Ky. He was one of the first men in this country to see the value of street railways.

MORE OR LESS PUNGENT.

Worse.—"Do you think Congressman Roberts is guilty of bigamy, Aunt Melissa?" "Bigamy? He's guilty of trigonometry."—*Chicago Record*.

A Saving.—"Did ye save the country, Pat?" "How's that?" "Be your vote?" "No, begorry. But I saved the rent."—*Philadelphia North American*.

Nearly Correct.—TEACHER: "What's the meaning of 'elocution,' Harold?" PUPIL: "It's the way people are put to death in some States."—*Puck*.

An Explanation.—"You referred to your friend as a dead game sportsman?" "Yes; he always buys his birds in the market. Dead game is his specialty."—*Washington Star*.

Naturally Adapted.—BOBBS: "What has become of that stenographer you used to have—the one who took your dictation so well?"

BOBBS: "She does the dictating now—I married her."—*Exchange*.

A New Definition.—TEACHER (to class): "What is an octopus?"

SMALL BOY (who has just commenced to take Latin), eagerly: "Please, sir, I know, sir; it's an eight-sided cat."—*Life*.

Perspiration.—TEACHER: "How do you account for the phenomenon of dew?"

BOY: "Well, you see, the earth revolves on its axis every twenty-four hours, and in consequence of this tremendous pace it perspires freely."—*Tit-Bits*.

Capital Punishment.—BRIDE (throwing her arms about the bridegroom's neck): "You are my prisoner for life."

BRIDEGROOM: "It's not imprisonment for life,

For Nervous Exhaustion

THE TREATMENT OF RHEUMATISM.....

The editor of the New Albany (Ind.) Medical Herald recently published an article on Rheumatism in which he said:

"But not until lately, when Tartarilithine has been employed by us, have we attained results that were even fairly satisfactory in the treatment of gout and rheumatism. By the employment of this drug I have been able to relieve some of the most distressing afflictions of this class, and now regard Tartarilithine as the most valuable remedy at our disposal in the treatment of this class of affections. In rheumatism and in gout Tartarilithine can be administered with confidence."

THE EUCALOL CO., 108 Fulton Street, New York

WANTED.

Active and energetic men to represent us in Eastern, Western, and Southern States. Weekly salary or commissions paid. Make application by letter, giving reference, age, and previous occupation.

DODD, MEAD & CO., - New York—Chicago

love: it's capital punishment."—*Sidney Town and Country Journal*.

His Disappearance Accounted For.—MANAGER: "Where's the living skeleton? It's his turn to go on."

THE GENERAL UTILITY BOY: "Please, sir, he slipped while he was a-washing his hands an' went down th' waste-pipe."—*Tit-Bits*.

Character.—HE: "Don't you think Mrs. Van Squillerton is interesting?"

SHE: "Very! She seems like a woman who has suffered."

HE: "She has. Almost every night at her house they have chafing-dish parties."—*Puck*.

A South African Problem.—"What puzzles me," murmured Chollie, as he found the other fellow had reached the house of the adored one ahead of him and was monopolizing her attention,—"what troubles me is the question whether I am this evening more of an outlander than a bore."—*Indianapolis Journal*.

There Were Some Drawbacks.—"Did you have a good passage?" was asked of a recent traveler. "Fair; but I couldn't sleep. The first three nights I couldn't tell whether to shut the porthole and go to bed, or to close the bed and go to the porthole. And the last three I spent in reading the customs laws."—*Life*.

The Real Thing.—CAPTAIN OF THE FOOTBALL TEAM: "That man Subbs is the best tackler on the team; we discovered him in Lonesomehurst only a week ago."

FRIEND (astounded): "Why, how did he get his training?"

CAPTAIN: "Catching trains."—*The Freshman*.

No Help for It.—He was a speculator, and for a year past nothing had been coming his way but expenses. One day his daughter informed him in an unfeeling manner that if he did not give her a diamond bracelet worth at least £150 she would elope with the coachman.

"Come to my arms, my darling child," he exclaimed, as the tears course down his wrinkled cheeks; "come to my arms!"

"But shall I get the bracelet?" she asked hesitatingly.

"Of course not," he smiled delightedly. "You get the coachman. I owe him eight months' wages."

That ended it.—*Tit-Bits*.

Not Appropriate.—"I never saw such an exhibition of poor taste in my life as was shown at the funeral of poor Bingsley." "Why, what happened?" "You know he had been doortender at the Follies Theatre for the last twenty years. Well, right over his coffin they had a magnificent floral piece representing 'The Gates Ajar.'"—*Chicago Times-Herald*.

Current Events.

Monday, December 11.

—A despatch from Pretoria states that 672 British prisoners were taken at Stormberg; there is fear in London of a further uprising in Cape Colony.

—The American military and naval forces occupy the naval station of Olongapo and the town of Subig, on Subig Bay.

—In the Senate, Mr. Mason speaks in advocacy of his resolution expressing sympathy with the Boers.

—The Department of Agriculture estimates the cotton crop of the current season at 8,900,000 bales.

—The nineteenth annual convention of the American Federation of Labor is opened in Detroit, and the annual address of the president, Samuel Gompers, is read.

Tuesday, December 12.

—General White, in a sortie from Ladysmith,

Friday, December 15.

—General Buller reports a serious reverse in an attempt to force the passage of Tugela River. He loses 1,000 men and eleven guns.

—General Pando, the successful Bolivian revolutionist, is elected president of the republic.

A Matter of Taste.

If a man really prefers to wear a collar that cost 25 cts. or even 15 cts. and pays a laundry to transform it into a hideous thing of torment and tatters, he can do it of course. But think of it! A linen collar will stand the average laundry from one to three times. If it endures three times, that makes it wearable four times in all. Suppose it costs 15 cts.—a low price—when new, the three launderings at 15 cts. each brings the cost of four times wearing to about 5 cts. a time. Meantime it has shrunk or stretched or acquired a saw-tooth edge, or the button holes have torn out and much anguish of spirit has resulted. Four "linene" collars would have looked as well, felt better, and cost just half as much, to say nothing of saving in trouble. "Linene" collars and cuffs are sold by leading dealers and are made by the Reversible Collar Co. of Boston, Mass.

PANTASOTE

Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerously inflammable substances, and is not affected by heat, cold or climate.

Made in standard colors, plain or figured. Enough to cover a dining chair, seat or foot-stool sent for 25 cents in stamps.

Sample Free! 15x6 inches, enough to make a Sewing Companion, sent for 25c. stamp with your upholsterer's name. (Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.)

THE PANTASOTE COMPANY,

DWELLING house in the city of Elizabeth, N. J., built one hundred years ago, has always been painted with Pure White Lead and Linseed Oil—nothing else.

There is not a crack, blister, blemish or imperfection of any kind in the paint. Makers of mixtures, beat this record if you can!

Be sure the brand is right. Those in margin are genuine, and made by "old Dutch process."

FREE

By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

"THE REFINEMENT OF A MOVE."

The first move is K—R 6. The mate must be given by Kt—B 7. If White makes any other first move than K—R 6, Black is able to force a stalemate.

INVEST NOW

The attention of the public is invited to an exceptional opportunity to make handsome profits on a small investment in the

ZINC AND LEAD

region of Missouri. Under the proposition we are now making it will not be necessary for investors to wait for dividends to get their money back, but can realize on the enhancement of the value of their investment as our work progresses. There is not one chance in a thousand that those who

INVEST NOW

will lose their money, as the drill tests already made show large bodies of paying ore. In 1887 the Missouri-Kansas district produced one million dollars more than all Alaska. Those who

INVEST NOW

get in cheaply and the profits will be out of all proportion to the amount invested. We are establishing a

CHAIN OF NINES

so that those who become associated with us will have several strings to their bow. Let us mail you free a copy of

THE KLONDIKE OF MISSOURI

A neat pamphlet of 14 pages, telling all about the town that "Jack Built," how a woman made \$300,000, what an investment of \$14.00 realized, etc. Also let us mail you a free copy of

SNAP SHOTS IN SOUTH MISSOURI

A handsome book of 60 photo-engraved views of varied scenery in the zinc fields of Missouri. At the same time we will mail you our best proposition, with circulars describing our properties, and references as to who we are. Address

WALTER SAYLER,

171 Le Salle Street, Chicago, Ill.

The Kolisch Memorial Tournaments.

In 1889, Baron Kolisch left a fund to the Vienna Chess-Club for the purpose of providing prizes for annual national tournaments. Only one of these tournaments (1890-1891) was held, as the Baroness Kolisch objected to the use of the money for this purpose. The Baroness has changed her mind, for it is announced that a "Kolisch Memorial Tournament" is to be held in Vienna, beginning on December 17th. It is limited to sixteen players in Austria.

Lasker and Pillsbury.

Victory or defeat does not seem to have any effect on Lasker's subsequent play. He always plays about the same strength and the same style, nor does he change his tactics. This is not the case with Pillsbury. If he loses, a game or two, he is too eager to make up for his loss. He is apt to be too aggressive, or he may rely on over-conservative lines of play.—EMIL KEMENY, in *The Press*, Philadelphia.

28 R-R-K sq	R x R ch		

This game was not played well by either player. Black's 3d move is almost an absurdity. It is not only a lost move, but it gives White a speedy development, and leads to a position compelling Black to lose a piece. After this, in several instances Black had the best of the position, and while he may not have been able to have won, he might have drawn.

Blindfold Chess.

A fine specimen of Pillsbury's blindfold play is the game he won recently, in Brooklyn, from Dr. S. T. King, E. Davis, and C. Scott, in consultation.

Queen's Gambit Declined.

PILLSBURY.	ALLIES.
White.	Black.

34 P-Q 7	P-R 4
35 Kt x Kt	R x Kt
36 R x R ch	K x K

37 P queens, ch and wins.

The remarkable feature of above game is the accuracy of White's play. No one would suspect from its moves that this and eleven other games were being conducted simultaneously blindfolded. As Staunton once said of a similar performance by Morphy, "It makes one's brains ache to think of the strain."—Comments by Reichen in *The Times*, Philadelphia.

Lasker and Pillsbury.

Lasker has played, all in all, eleven games with Pillsbury, and the World's Champion is just one game ahead. This score would indicate about even strength, and it may be added that luck somewhat favored Lasker, for the very last game played between these two experts was won by him, tho Pillsbury could have drawn it quite readily. The games played between these two experts were all of a very high standard, and they show the respective merits of the players. As far as enterprising play and deep and brilliant combinations are concerned the American seems to have the upper hand, which, however, is counterbalanced by the conservative tactics and most artistic end-play of Lasker.

In individual contests the two players seem to be evenly matched, and a decisive contest between them would be most interesting. As far as tourney-play is concerned, it is pretty satisfactorily established that the method adopted by Lasker is the more successful.—EMIL KEMENY, in *The Press*, Philadelphia.

Professional Chess.

"It has been argued that the professional element is a bad thing in Chess, as it undoubtedly is

ORIGINAL BEEF.

A vegetable beef tasting like flesh-foods, containing twenty-five per cent. more food elements than beef, that can be served in the same manner as beef or chicken, is the new food product called Protose. It is purely vegetable in character, containing no trace of animal substance. It is original beef. Its discovery was as great a surprise to those conducting the investigation from which it resulted as it has been to all who have become acquainted with its marvelous properties. It is more easily digested than any flesh-food. The digestibility of vegetable proteids is always increased by cooking, whereas the reverse is true of animal proteids; hence Protose may be eaten freely without risk of indigestion, biliousness, gastritis, or any other of the grave ills which not infrequently follow the free use of flesh-foods.

Six cents to pay postage, sent to the makers, the Sanitas Nut Food Co., Ltd., 71 Washington Ave., Battle Creek, Mich., will secure a sample can.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

in some other pastimes. That is not true. Chess—the best Chess, the Chess that attracts the student of the game—is rarely fathered by amateurs. It is the work of masters, men who devote their entire time to the cultivation of those natural talents which produce the little combinations and the brilliant tactics that ultimately find their place in the classical literature of the game. If Chess is good enough to be encouraged in Europe, it is good enough to be encouraged in America, where we have native players who can hold their own with the best.”—*The Brooklyn Eagle*.

The Johnston-Marshall Match.

Sydney P. Johnston, the Champion of the Chicago Chess-Club and probably the strongest player in the Western States, and Frank J. Marshall, the young Brooklyn Champion, who took first prize in the minor tournament at the London Congress, have begun their match for \$100 a side, first seven games, Draws not counting. All the games are to be played in Chicago.

The Manhattan C. C. Tourney.

Twelve players are contesting for the Championship of the Manhattan Chess-Club, New York City, among whom are the well-known experts, Balrd, Deimar, Halpern, Marshall. Hanham wins the first place, with 9½ to 1½, and Deimar second. Hanham must play a supplementary match for the Martinez prize.

Lasker and Janowski.

It would be difficult to imagine two men more unlike than Lasker and Janowski. Nothing affects Lasker's equanimity. His linen and clothes cause him no concern. Is he hungry, he goes to the counter and comes back with a roll; he munches and continues playing. His legs are in his way, he flings them over the arm of his chair and goes on playing, smoking a strong cigar the while, and, whenever cogitation is profoundly deep, blowing the smoke with characteristic gesture through his mustache. Janowski, on the contrary, is correctness personified. Seated at the Chess-board he remains almost perfectly still; with linen dazzling white, with dainty Turkish cigarette, with iced lemon squash, to be sucked through a straw, he is the refined player, the sensitive player *par excellence*, the Sybarite, for whose loss of a game the crumbling of a roseleaf is a sufficient cause.”—*La Strategie, Paris*.

Blackburne's Games.

Mr. Blackburne, the English Champion, has lately published a book giving 400 of his games. These games are fine studies and reveal the characteristic brilliancy of the British master. The following specimens with notes by Mr. Blackburne are very interesting:

Evans Gambit.

One of eight games played blindfold at the West End Club, London, in 1876:

BLACKBURNE. MAJ. MARTIN. BLACKBURNE. MAJ. MARTIN.		BLACKBURNE. MAJ. MARTIN. BLACKBURNE. MAJ. MARTIN.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact Post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

DEATH OF GENERAL LAWTON.

NOT since the war with Spain began has the death of any American soldier caused such a sense of national loss as that caused by the death of Major-General Henry W. Lawton. President McKinley, in a cablegram to General Otis, said: "One of the most gallant officers of the army has fallen." Admiral Dewey, when informed of General Lawton's death, said: "I knew him and loved him; he was the bravest of the brave." Referring to the fact that the general was killed by a bullet through the heart while in an exposed position at the head of his troops, Secretary Root said, in a despatch to General Otis: "It was the ideal death of a soldier, as his splendid courage and devotion to duty have met the ideal of a soldier's life." General Otis says he feels as if he had lost his right arm.

The press voice similar sentiments. The *Baltimore Herald* says: "General Lawton is the most conspicuous victim yet demanded either by the war with Spain or the campaign to establish American supremacy in the East." "He had no superior among the generals in service at the time of his death," says the *Chicago Record*, "and, in some respects, no equal." The Filipinos themselves, the *New York Journal* believes, will suffer by his death: "The loss of General Lawton will be felt as much in peace as in war. He understood the Filipinos, sympathized with them, and could have helped them to build up their institutions under our flag. The man that killed him did as ill a turn to his people as Wilkes Booth did to the South." The anti-expansion press pay as warm tributes as those of opposite faith. "The entire Philippines," says the *Philadelphia Ledger*, "are not worth the death of such a man."

When Senator Beveridge, of Indiana, was in the Philippines last spring he campaigned with General Lawton several weeks, and was struck with his apparent indifference to danger. In an interview the day after General Lawton was killed, the Senator said that he once spoke to him about his strange unconsciousness

or peril. "You are certain to be killed sooner or later," said the Senator. General Lawton replied, in a simple, matter-of-fact way: "I suppose I shall be. I have worked out the law of averages as applied to my case, and the chances of my being killed every time I go into action are now very many as against the single chance of my escape. But this is a part of the soldier's profession. We who go to be soldiers of the Republic understand this thoroughly."

General Lawton's services in the Civil War, the Indian troubles, the war with Spain, and the Philippine uprising cover a period of many changes and furnish a text for much newspaper

MAJ.-GEN. HENRY W. LAWTON.

comment. The *St. Louis Globe-Democrat* points out that Lawton and McKinley were both carrying muskets in '61, and says: "Their later careers show the greatness of American opportunities to youth of sterling character." The *New York Press*, however, recalls the fact that General Lawton was a major-general in the volunteer army only, and that in the regular army, after nearly forty years of gallant service, he was only a colonel. "It is the old, old story of the regular," says *The Press*. Even the fact that he was about to be made a brigadier-general, thinks *The Press*, was but scant recognition of his services. General Lawton's property, it is said, consisted of a house with a mortgage on it; but a subscription fund is being raised for his widow and family, and a bill has been introduced in each branch of Congress granting Mrs. Lawton a pension of \$2,000 a year.

His Career.—"Trained in a hard school, he had learned all its lessons. A sergeant in 1861, he rose in three months to a commission, and fought his way up rank by rank, until he was a lieutenant at twenty-two years of age. He entered the regular army

The Lesson of His Life.—"In these days of self-seeking, it is well that we should study the lives of men who will go where they are sent and do what they are told to do, without a thought of their own interests or personal ease or safety. Any one can be loyal and faithful when the times are propitious and the skies are clear. But true loyalty and faithfulness involve the willingness to forget self, and to subordinate everything to the service of the cause to which one's allegiance is pledged. This is above all the lesson of Lawton's life. He never looked for an easy task, never hoped for promotion except as he earned it. He knew only his country and its flag, and he died, as he would have liked to die,

"These two deaths ought to make the imperialists willing to take at least two minutes off from their high emprises to stop and really think what we are doing in the Philippines. We are not arguing with them; we are only telling them. We are sacrificing our best. We are killing the Filipinos' best. Now, this may be lofty statesmanship and a beautiful illustration of the way in which states are made great and strong; but it must be admitted that it looked uncommonly like the blundering work of little minds trying to stretch themselves to fit a great empire."—*The New York Evening Post*.

"Dwight Lyman Moody was born in Northfield, Mass., February 5, 1837. He received a limited education, and worked on a farm till he was seventeen, and then became a clerk in a Boston shoe-store. In 1856 he went to Chicago, and there began his Christian work in a very simple way at first, and entirely among the poor; but his zeal was already manifest, and he soon had a Sunday-school of over one thousand pupils. During the Civil War he was interested in the Christian Commission, and after-

ward in the Young Men's Christian Association. It was in 1875 that he visited England in company with Mr. Sankey, and held those great meetings in which Henry Drummond became so interested, and with which he later identified himself. Similar meetings were instituted in the United States in 1875, and since then from time to time cities and towns have been awakened by the noble, fearless preaching of this true-hearted Christian. Aside from his so-called revival services, Mr. Moody's great works have been in Chicago, where he built an institute for the education of young men and women in Christian work, which, under the Rev. Mr. Torrey, is still doing a wonderful service, and in Northfield, the place of his birth and death, where he erected schools for boys and girls, and held yearly conferences for Christian workers. The 'summer schools' held in this quiet little town have made it famous all over the world, and have accomplished more than can easily be calculated for the growth of the Christian religion at home and abroad.

"Mr. Moody never received money for his services. It is said that a friend cared for his wants, and left him free to preach and work unhampered by the perplexing alliances which have often crippled aggressive workers. And so, fearless, and unbound by anything save the bonds of love for his Master, he labored on until the end."

Of his personal appearance the *Springfield Republican* says:

"He stood before his audiences, a stout man, with no graces of physique. His large head, with abundant hair, his always well trimmed brown beard, growing gray year by year; his bright tho not large eye, his swaying motion as he spoke, and his light, high-pitched, and harsh voice, will be brought before the memory of thousands as they read of his death. They will see him as ready as a bird to spring up at the right moment to call for the

singing of a hymn; they will remember how cleverly he would cut short a long-winded or disputatious speaker by such an intervention as the audience was wearying; they will recall his earnest and downright talk when he felt that his moment had come. Indeed, nothing was more wonderful about Dwight Moody than his sure seizure of the occasion, and his domination thereof; it was the way in which he kept his meetings alive—for he could not allow any one to destroy by futile efforts, however well meant, the effect of the evangelizing spirit."

The elements in his character are thus described in *The Republican*:

"A mind more simple in its character, a nature more single in its aims, a soul more devoted and sincere, a personality more honest and attractive—these have seldom if ever been seen combined. His simplicity and earnestness, coupled with a magnificent executive capacity and a clear judgment of men, and inspired by a rare and tremendous energy of work, made him a master, and such a man as Carlyle might have made a hero of beside his Abbot Samson of 'Past and Present.' He had, in fact, many attributes which pertain to the great man; while it can not be allowed that he might have been a Napoleon, a Bismarck, a Gladstone, a Rothschild, or a Rockefeller, as one of his admirers has said—for he had very little in common with any of these, except in one instance—the moral purpose that called forth great sympathy with Gladstone—he was great in his singleness and purity of purpose and in his influence upon his fellow men."

CAUSES AND EFFECTS OF THE WALL STREET PANIC.

THE Boer riflemen, in addition to their other feats, seem to have brought down the American trust balloon. That, in a word, is the analysis of the immediate cause and the most important effect of the recent stock-market panic in Wall Street, as made by the economic writers of the daily press. To be more specific, "our unprecedented expansion in trade," the consequent advance in prices and wages, the failure of the currency to expand accordingly, the floating of trust stocks and bonds "aggregating fully \$1,500,000,000" and "conducted upon a wildly speculative basis," the "hoarding of gold by the Government," the cutting off of the \$7,500,000 monthly supply of gold from Africa, and the British struggle to provide funds for the war, as the *New York Journal of Commerce* points out, increased enormously the demand for money and at the same time decreased the supply. Everything was ready for a general unloading of securities to obtain money. Confidence in the trust stocks had long been grow-

ing weaker. Then came a depression in the British money market, due to the disasters in South Africa, the New York market followed, a couple of failures added their weight, and the fall of prices began. Before the day was over the aggregate fall of values amounted to a hundred million dollars. The trust stocks suffered the worst, with the result that "it is pretty generally agreed," according to *The Journal of Commerce*, that the slump "will prove an effectual check upon the launching of new companies for some time to come." Had it not

MR. MOODY'S LAST PHOTOGRAPH.

Said by his friends to be the most characteristic. Taken near his home in Northfield, Mass.

been for the Boer war, it is remarked, the trust speculation might have gone farther, and the speculators fared worse in the final crash.

But while Britain's difficulties in South Africa provided the immediate cause of the panic, the newspapers agree that if it had not been for our inelastic currency system and the vast speculation in trusts, all might have gone well. "We could easily have escaped panic," says the *Philadelphia Times*, "if our stock market had not been overloaded with fictitious values." Some papers think that the shrinkage in trust stock values merely "squeezed out the water," and that it is better that it should happen when the commercial world is prosperous enough to stand it. This experience, says the *Brooklyn Eagle*, "is nothing to what is likely to happen when demand has been overtaken by supply, when factories are not running night and day, and when manufacturers cease to say that they have more orders than can be filled." The *Topeka Capital* believes that it was "President McKinley's courageous and statesmanlike words upon the trust question" that sent the "hundreds of big gamblers in trust stocks into the market to unload their watered stocks and bonds." The *Nashville American* finds in it all a useful lesson. It says:

"It is a warning to those who are bent on making money in a hurry. It shows them what the end is. There is only one safe and proper way to make money, and that is to earn it, to give in

work or goods value received for the money obtained. This is the invariable rule followed by all substantially successful men, and when a fortune is acquired in this way it is permanent and not evanescent."

The rigidity of our currency system comes in for its share of the blame. The currency, nearly every one admits, should be able to expand and contract according to the needs of the country. The present system supplies too much money when little is needed and too little when much is needed. Says the *New York Times*:

"We have all heard in the last two days the cry that there is 'not money enough,' and that there should be some easy way to get more when it is needed. But the real difficulty has been that when there was too much money there was no way of contracting it. When it was not in active use in the various parts of the country it flowed to the money centers, and especially to New York, and helped to promote the very speculation that has caused our present trouble. If the currency so congested in New York had been retired when it was no longer needed in exchanges throughout the country, the temptation to the inflation of credit that has taken place would have been far less. So far as the volume of the currency and its character are involved in the actual situation the lesson of that situation is that the currency should be made truly elastic. It should stretch to meet legitimate demands and it should shrink when these demands cease."

A correspondent of the *New York Mail and Express* says:

"Money, created for use, intended to do the work needed in the enterprises of the people, has been ruthlessly kept, like a 'dog in the manger,' in the vaults of the treasury, while business has been famishing for the need of it. Will this awful mistake of waiting until it was too late before relieving it serve as an adequate lesson in the future?"

Secretary Gage came to the relief of the money situation by depositing several millions in the New York banks. For weeks, if not months, however, the flow of gold had been in the other direction, from the banks to the federal treasury, thus causing the very stringency that the federal treasury had to relieve. The *Richmond Times* sees a great danger in this. It says:

"It is quite clear that it was in the power of the Secretary of the Treasury to 'bear' the market for weeks by permitting the drain on the banks to continue and then to 'bull' the market by stopping the drain. This is a dangerous power for any man to have. A dangerous power for the Government to have. It all goes to show how necessary it is that we put the Government out of the

banking business and put it beyond the power of Government to control the money market."

The *Chicago Journal* takes a similar view. It says: "It is not necessary to be either a 'silver crank,' a 'goldbug,' or a 'fiatist' in order to discern the manifest impropriety of a treasury system which makes the Secretary the absolute arbiter of prices of stocks in Wall Street." The *New York Journal*, however, thinks that the bankers are gaining control of the federal treasury. "The gradual and constant drift of government finances into the hands of the bankers," it says, "is not a pleasant thing to contemplate. Again we call attention to the similarity between this policy and that of pouring water down a rat-hole." United States Treasurer Roberts said, as quoted in the *Louisville Commercial*:

"I do not see why the Government should rush to the rescue of a lot of speculators who have got their fingers burned in copper and other securities. The financial squeeze is not being felt by the mass of the people. Since the 10th of this month 170,000 people in this community have had their wages raised. Prosperity is evident on every hand. You do not hear the tradesman, the manufacturer, or the workingman complain."

The silver papers were quick to notice that the panic occurred on the very day that the gold-standard bill passed the House. "Such," says the *Atlanta Constitution*, "is the immediate response to currency legislation and the adoption of the gold standard by the Republican House of Representatives. . . . The gold-standard and panic conditions," continues *The Constitution*, "are twins." The silver papers remark that stringency is a natural result of confining our financial standard to one metal. The *Columbia State* declares that "there will be no permanent safety for business until we have as our standard of value something more than a metal so limited in supply that the prospective loss of one year's production of one country will breed terror and break prices." The *Indianapolis Sentinel*, while it does not go so far as to say that the gold-standard bill caused the panic, points out that it very evidently did not prevent it.

Nearly every comment on the panic ends with a cheering word about the general prosperity of the country. The stock flurry is considered a purely Wall-Street affair, interesting to study, but of little importance to the country at large. Says *Bradstreet's*:

"The money panic of 1899 is over, and while the individual sufferers are no doubt numerous, the financial and commercial community in general is none the worse for the recent speculative spasm. There is certainly not a bushel of wheat or a bale of cotton less in the country to-day as a result of the recent severe fall in stocks; our industries are active, our railroads are busier than ever before, there is more money in the hands of the general public than at any previous time even if there is less invested in stocks, and the business community can get money enough for legitimate business purposes at fair interest rates."

The *New York Evening Post* says:

"The interior, already rich from its years of retrenchment, its series of profitable harvests, and its wholesale liquidation of debt, may look with a very unusual equanimity at the collapse in Wall

Street. The significance of this phase of the situation is far-reaching. It means that we shall not repeat the experience of 1890, when every Western borrower from the East was crippled by the sudden demands of his creditor, and certainly not of 1893, when the West was a dead weight on the whole struggling financial community. We may escape the falling commercial markets which so often follow a strain in Wall Street; for those industrial collapses have in the past been traceable largely to the pulling away of capital from the West. Possibly, after the turn of the year, we shall see New York relieving London's money-market distress, and the interior replenishing New York from its own resources—exactly as both West and East were lending money on the English and German markets at the opening of the year."

MACHINERY AND TRANSPORTATION BUILDING.

BUFFALO'S PAN-AMERICAN EXPOSITION.

WHAT was at first intended merely as a demonstration of Niagara's possibilities as a source of power has now grown to embrace the territory from Cape Horn to the Klondike, and is "designed to illustrate," as Marrion Wilcox says in *Harper's Weekly*, "the material progress of the New World in the nineteenth century, and to promote social and commercial relations between the United States and the other republics and colonies of the Western hemisphere." This rapid expansion of the scope of the Buffalo Exposition, which is to be held from May 1 to November 1, 1901, has been coincident with the similar expansion of the nation's rule. The idea, says Mr. Wilcox, "started 'a jar o' the clock' before the war with Spain, which liberated certain impulses; and since its formal title 'The Pan-American Exposition' was adopted, the term 'Pan-American,' has taken on a new significance." Hawaii and the Philippines will be reckoned as part of America at the Exposition.

The contrast between the old and the new will be brought out:

"With the object of illustrating progress in civilization and the industrial arts by a comparison of Americans of to-day with the aboriginal inhabitants, the several republics and colonies will be urged to bring to Buffalo a village of aborigines from their own territories, and place them on the grounds 'in a manner which will show their native habits of life, customs, occupations, and industries; their religious rites, their means of warfare and navigation, and such ethnological collections as shall connect the present with the prehistoric past.' Villages of the native tribes of North American Indians will also be shown."

Some of the reasons why Buffalo is the best place for the Western hemisphere's fair are summarized by Mr. Wilcox as follows:

"1. An exposition on a large scale, such as is now contemplated, as never yet been held within the borders of New York or the adjacent New England States. 2. Buffalo occupies a position so central and easy of access that more than one half of the population of the American Continent north of Mexico can reach the Exposition in a single day's journey. 3. The site of the Exposition is within forty minutes' ride of the falls of Niagara. 4. The climate of Buffalo during the summer months is especially agreeable, and the city is with very good reason regarded as one of the most healthful in the United States."

The accompanying illustrations give an idea of the style of architecture that will prevail. Mr. Wilcox gives the following forecast of the scene that will greet the visitor:

"The site actually chosen is a tract adjoining Delaware Park, lying immediately north of Buffalo's finest residence district, and including the park lake, with its islands and wooded banks. The natural features suggested the creation of beautiful and brilliant effects—a 'festive scene,' as one of those chiefly concerned has expressed it. Moreover, the view was accepted that monumental architecture, as exemplified at Chicago, Nashville, Omaha, and Atlanta, had been somewhat overdone, and the chairman of the advisory board declared, 'We decided that the buildings of the Pan-American, instead of being classical and monumental, should be treated in free renaissance.' At present the prevailing opinion seems to be that the management should have a special care for the entertainment, rather than the instruction, of all those who will come from far and near to the Fair enclosure, treating them as guests rather than as scholars, and trusting the American man-

GRAPHIC ARTS, HORTICULTURE, AND FORESTRY BUILDINGS.

manufacturer to make his display of mowing-machines (let us say) sufficiently prominent. Already the committee on plans and the advisory board of architects have promised wonderful fountains, new 'enchanted lakes,' the use of all color possible in the treatment of exterior surfaces, a great deal of sculpture, a 'Midway,' a great stadium for the games and sports of the world, and such applications of electricity as the world has never seen. Electrical power generated at the Falls and carried over cables to the Exposition grounds is to work the miracles as well as do the drudgery. Instead of a severe 'white city,' then, we are to have an *ensemble* which will suggest the luxurious South in its rich coloring and free ornamentation, even while displaying the latest achievements of the strenuous North."

THE INVESTIGATION OF TAMMANY.

THE chief value of the report of Mr. Moss, the counsel of the Mazet committee which has been investigating New York City's government, is considered to lie in its recommendation of changes in the city's charter. His exposures of Tammany's corruption fail to elicit any expressions of surprise; and the fact that the committee did not investigate the Republican machine led even the independent Republican press to despair long ago of any really good results. "Owing to the character and control of the body which Mr. Moss has served," says the *New York Press* (Rep.), "his report will remain simply a treatise on crime in politics—something in the nature of Stead's 'Despairing Democracy; or, Satan's Invisible World Displayed.'"

Yet the importance of Mr. Moss's recommendations arises from the fact that they are aimed at the power of Mr. Croker, the ruler of rulers of the metropolis. Mr. Moss says in his report:

"All the abuses that have been discovered go back to the unofficial and unelected and unsworn ruler, and the problem is to take the government out of his hands and away from the irresponsible combination that he dominates, and to impose the responsibility for good government actually as well as theoretically or sentimentally upon a mayor who can be reached by the people."

The changes in the charter which Mr. Moss believes would, in a measure, restore popular government consist in giving the mayor power to remove the various commissioners at any time, and in shortening the mayor's term to two years, with eligibility for reelection. These changes, he thinks, would give the voters more power over their public servants, the officials. Mr. Moss also recommends that the charter of the Ramapo Water Company be repealed, that a law he passed prohibiting campaign contributions by judicial candidates, and that the city police be put under state control. These changes, says the *New York World* (Ind. Dem.), "ought to be made at the coming session of the legislature, without waiting for any commission." Mr. Moss shows that where it cost but \$68,000,000 to conduct all the public business in the various communities before they were consolidated, it now costs \$90,000,000 for Greater New York as a whole; and he found that there were no pay-rolls or itemized accounts available to show how all this vast sum is spent. The *New York Times* (Ind. Dem.) points out that this lax condition of affairs was also revealed by official admissions on the witness-stand:

"The loose, confused, and demoralized condition into which the city government has fallen under the actual system was amply shown by the mayor's own testimony and by the testimony of the various commissioners. It is simply impossible to tell from their own admissions who is accountable for the extravagance, imbecility, and jobbery that are shown to prevail."

The *New York Tribune* (Rep.), referring to a widespread belief that the whole investigation was planned by Platt as a blow at Croker, says:

"This Mazet investigation was designed to lay the foundation for a scheme of revenge, but intrinsically it was a confession of guilt. It has thus far failed to accomplish the original purpose

and happily has little chance of ultimate success in that line, but it will not have been wholly useless if, as it ought to do, it strengthens and prolongs in honest and reflecting minds remembrance of the agency to which this community owes the monstrous wrongs it suffers."

IS THE TWENTIETH CENTURY HERE, OR IS IT NOT?

THE recent appearance of the Emperor of Germany and the president of Wellesley College on one side of the controversy over the date of the beginning of the twentieth century, and the appearance of the Pope and the Czar on the other, do not augur well for the settlement of the dispute before the new century begins, whenever that may be. The Czar has decreed that Russia shall adopt the Gregorian calendar, thus getting into step with the rest of the world, and has decreed that this change shall be made on January 1, 1901, which he considers the first day of the new century. The views of Pope Leo, the successor of the authority who gave us our calendar, may be gathered from the following quotation from his recent decree. He says:

"Cum insuper media nocte postremæ diei mensis Decembris futuri anni præsens absolvatur sæculum novumque habeat initium; valde congruum est, ut pio quodam ac solemnî ritu Deo gratiæ agantur pro acceptis hujus decursi sæculi beneficiis, et potiora impetrentur, urgente præsertim necessitate temporum, ad novum sæculum auspiciato ineundum."

"This," says the *New York Times*, "is clear, accurate, and explicit." Lest some may still be in doubt about the Pope's views, however, we quote the following translation of the passage, as given in *The Catholic Standard and Times*:

"Since, moreover, at midnight of the last day of December of the coming year the present century will come to an end and a new one begin, it is very appropriate that thanks be given to God by some pious and solemn ceremony for the benefits received during the course of the present century, and owing to the urgent necessities of the times that greater favors be implored in order to begin auspiciously the new era."

The Emperor of Germany, the despatches tell us, has ordered special exercises at the stroke of the bell ushering in the year 1900, to commemorate the new century's beginning. The German Postal Department, it is further announced, "will issue commemorative postal cards." The despatches fail to state what the loyal German Catholics, who wish to "fear God and honor the King" at the same time will do in this dilemma.

To overwhelm this resurgent question with the weight of educational authority, the *Boston Herald* opened its columns to a number of prominent college presidents, only to find more disagreement, no less an authority than the president of Wellesley College arguing that the new century begins with 1900. If in the midst of such counselors there is no safety for the doubtful mind, it would seem folly to turn to the daily press, where violent disagreements are the rule, and harmony almost unheard of. Yet it is here, in the arena of fiercest struggle and endless argument, that concord on this single question is found, and the old saying, that the only propositions that will never be disputed are those that involve neither money nor morals, is again illustrated. The *Chicago Times-Herald*, one of the papers owned by Mr. Kohl-saat, who claims the authorship of the currency plank in the Republican platform of 1896, alone insists, in long editorials, that the new century begins January 1, 1900; but as his other paper, the *Chicago Evening Post*, agrees with the rest of the American press that it begins one year later, it seems unlikely that the involved arguments on the currency will be further complicated in the 1900 campaign by a plank in regard to the new century.

The *Times-Herald* suggests that a simple way to solve the problem would be to begin at December 31, 1899, and count back-

ward to the beginning of the Christian era. While some one else is doing that we present the argument of the president of Wellesley, Miss Caroline Hazard, who sets forth the following reasons for her faith:

"According to my way of thinking, the twentieth century begins one second past midnight of December 31, 1899—January 1, 1900. Midnight marks the conclusion of the 1900th year of the Christian era. The 1900th year, understand, is different from the year 1900, because when we write 1900 we are not at the completion of the 1900 and first year, which we reach when we write 1901. But anything beyond midnight on the 1st of January of the coming year is time that must be reckoned in the 1901st year. The whole difficulty, it seems to me, is one of nomenclature. The first year is a different thing from the year 1. This year 1 can not be written until it is completed, when it ought actually to be the year 1 plus. But we leave out the plus and simply write the year 1. So in that way, whatever date we write—1899 for instance—it is 1899 plus eleven months and twenty-eight days, the day that I am writing upon. But these added months and days we do not reckon in ordinary usage until the whole year is completed, when we count the time by years, and go into the next year, which is 1900."

The idea of a year 0 (by which 1899 is made to complete 1900 years) has proved to be full of suggestion to the paragraphers. If there was a year 0, why not a century 000? Perhaps there are only 399 society leaders in the 400! Perhaps we should begin counting our ages one year later, making each of us a year younger than we supposed! To such a state of mind has this topic carried some of the disputants. The New York *Sun*, to dispel this idea of a year 0, presents the following "deadly paralysis" sent in by one of its readers:

Kindergarten Teacher—Now children, let me hear you count.

The reply rational.

Children—One, two, three, four, five, six, seven, eight, etc.

The reply otherwise.

Children—Nothing, one, two, three, four, five, six, seven, etc.

School Teacher—Tommy, what is a century?

Tommy—One hundred years.

Tommy—One hundred years.

Teacher—Give an example.

Tommy—From the first day of the first year to the last day of the one hundredth year.

Tommy—From the first day of the year before the first to the last day of the year before the one hundredth.

Merchant—Mr. Jones, please arrange these cancelled checks in bundles of one hundred and file them away.

Mr. Jones does so, marking the bundles thus:

Nos. 1-100.

Nos. 101-200.

Nos. 201-300, etc.

Mr. Jones seems puzzled at not finding check number zero, so with many misgivings adds check number 100 to his first bundle and is amazed that his second one begins with number 101.

Bank Customer—Will you be kind enough to let me have ones for this \$100 bill.

Cashier—With pleasure. (Counts out): One dollar, two dollars, three dollars, four dollars, five, six, seven, . . . ninety-nine and a hundred. Here you are, sir. (Customer goes away satisfied.)

Cashier—With pleasure. (Lays first bill aside, murmuring: No dollar). Then: One dollar, two dollars, three dollars, four dollars, five, six, seven, . . . and ninety-nine. Here you are, sir. (Customer does not go awny.)

One disquieting thought arises among all the "letters to the editor" declaring that the new century begins in 1900, and the patient daily replies of the press with diagrams, supposed cyclo-meters, piles of pennies, rows of apples, bricks, and matches, endless vistas of mile-posts, regiments of marching soldiers, and imaginary sheep, elephants, and grasshoppers jumping over imaginary fences. The disquieting thought is that in a hundred years it will all be forgotten, and some "letter to the editor" will start the whole whirl of pennies, apples, etc., going again.

A Conditional Pardons Act.—At the last session of the Virginia legislature a rather novel law was passed granting pardon under certain conditions to prisoners who showed by exemplary conduct and industrious habits that they were worthy of freedom. According to the Richmond *Dispatch*, about one hundred penitentiary convicts have already benefited by this act, and

the prison discipline has shown marked improvement. Says *The Dispatch*:

"So far not one of the men released by virtue of this act has been arrested for violating his pledge to observe the laws of this Commonwealth. That is a much better record than was expected. It justifies the law-making power in providing this incentive to reformation of character, and it shows that the board of directors of the penitentiary and Governor Tyler have exercised caution in bestowing pardons. The requirement of the board that each applicant who hopes for favorable action from it shall first secure employment on the outside has had much to do with this success. Prisoners who are eligible under the act are permitted to correspond with friends in order that they may find work to do when released. If they were turned out in a homeless and friendless condition, it is not to be doubted that many of them quickly would yield to temptation and become a charge upon the State again."

So successful has been the working of this law that it is intended to make its provisions even more liberal. One of the provisions of the act is that no one who has broken the prison rules is entitled to file his application for a pardon. *The Dispatch* claims that this rule is oppressive and often unjust:

"A man who comes to the prison under a long sentence is in desperate humor with the world, and is apt to think he has no future beyond the prison walls, but after a while he may change his mind, and begin to hope and work for release. If he should break the prison rules in some trifling respect in the first year of his residence there, yet be a good prisoner for years afterward, it is very hard that he should be excluded from the operations of the conditional-pardon act. Yet so it is. Hence the desirability of a change in the law.

"It argues well for the foresight and judgment of those who proposed and made this important innovation that after a trial of a good deal more than a year, the act should need no other amendment, and that its results should have proved as satisfactory as they have done."

LETTERS AND ART.

ENGLISH DRAMATIC CRITICS AND THE AMERICAN STAGE.

TWO leading dramatic critics of England have been "saying things" about the American stage. On the whole, their remarks are not uncomplimentary, tho one of them, Mr. William Archer, has so disguised his compliments that some of them are received with the same sort of suspicion that attaches to the professions of friendship made by a Tagalog newly come within the American lines. Mr. Archer writes in *The Pall Mall Magazine* (November). The American stage, he remarks, if it were interesting in no other respect, becomes, by reason of the mere magnitude of the public to which it appeals, "a sociological phenomenon of real moment." The phrase sounds suspicious, but Mr. Archer hastens to add that it would be absurd to deny our stage an artistic interest as well. He continues his observations as follows:

"Never in the history of the world has there been such a gigantic audience for any dramatic literature as that which the Anglo-Saxon race to-day affords. For the moment, the immensity of the public is a source of bewilderment, of weakness; but it rests with us and with our sons to find in it a source of strength. The problem of the future is to make our Anglo-Saxon democracies the seed-plot of a spiritual aristocracy; and in that movement the theater is predestined to a leading part. Several cultivated Americans, taking the contemptuous or despairing view of the stage which is so common in England, have asked me, in effect, 'What came you out into the wilderness to see?' I might have replied, grandiloquently but truly, 'I came to look into the future of the English drama.' We have in America a nation of playgoers, unaffected in the main by the Puritanism or snobbery which for so long held the better part of the English people aloof from the theater. This nation of playgoers is enormously wealthy, and is advancing by leaps and bounds in culture and taste. What developments may we not look for in the American theater, and what reactions from America upon the stage of our own country!"

Mr. Archer, however, thinks the American playwright's position an unenviable one, inasmuch as the whole strength of the eight or ten persons or firms who control the dramatic output of America is concentrated upon classical revivals and adaptations from the French or German stage. Nevertheless, he thinks that the American playwright will win in the long run, just as the English playwright has won or is winning in his country. He congratulates us upon having English plays acted as well as in England, and in some cases—Pinero's "Comedietta," for instance—better than on the English stage. Our taste is more catholic, because more composite, than that of England, tho it shows (as in the success of "Zaza" last year) "a curious innocence or lack of moral discrimination" which is very disconcerting. "People tell you," he writes, "that the stage is dominated [in America] by 'the matinée girl.'" This, Mr. Archer adds cautiously, with an eye perhaps upon that "Anglo-American alliance" of Mr. Chamberlain's, is "in a certain sense" true. And this matinée girl accepts without blenching "the crudest, tawdriest French realism and humor of the most questionable quality."

Mr. Clement Scott, for his part, takes issue with Mr. Archer in his guarded intimations that the "matinée girl" (that is to say, "the half-educated young woman, shop assistant, typewriter, telephone girl, or what not") rules our stage, and that New York is a theatrical suburb of Paris. Mr. Scott's opinions on these points are thus summarized by the *Hartford Courant* (December 2):

"Mr. Scott has been in New York a little over a month. During that time he says he has seen four distinctly new and original plays, which have never been produced in London or Paris. They are 'Miss Hobbs,' by Jerome K. Jerome, 'a success for the author, and for the actress, Miss Annie Russell'; 'Barbara Freitchie,'

by Clyde Fitch, 'a fine piece of dramatic work, and a delightful surprise for the best admirers of Julia Marlowe'; 'Becky Sharp,' by Langdon Mitchell; and 'Sherlock Holmes,' by Conan Doyle and William Gillette, 'a triumph of adaptation, and a brilliant actor's great success.' Mr. Scott says enthusiastically that there is no audience in London that would not be proud to welcome one and all of these plays. . . .

"He says, gallantly, that he considers the matinée girl of New York to be a highly intelligent young person, an ardent and enthusiastic playgoer, with the heart and sentiment and emotion of a warm and bright-plumaged bird. This is a noteworthy apostrophe, the last few words leading one to suppose that Mr. Scott has been sitting behind big hats in theaters, and yet has preserved his sweetness of disposition. He concludes his letter by saying that the matinée girl does not possess the bloodless characteristics of a glittering gold-fish. This is effective, altho we do not remember that Mr. Archer called her a gold-fish in his *Pall Mall Magazine* article."

HAS A GREAT DRAMATIC POET ARISEN IN ENGLAND?

POETIC drama of a high order is again possible in English, if we accept the almost unstinted praise with which most of the English reviewers greet Mr. Stephen Phillips's new play. The critic of *The Saturday Review* (December 9) says that this

MR. STEPHEN PHILLIPS.

production "unquestionably places Mr. Phillips in the first rank of modern dramatists and of modern poets. It does more: it proclaims his kinship with the aristocrats of his art, with Sophocles and Dante." The critic continues:

"Much might confidently have been expected from the author of 'The Wife' and of 'Marpessa,' but I must frankly own that magnificent as was the promise of these poems I was not prepared for such an achievement as the present work. If Mr. Phillips had, under the form of drama, given us a series of scenes, or pageants, sometimes pathetic, sometimes picturesque, sometimes richly fanciful, of fine poetic quality, recalling Dante and Milton here, recalling Keats or Coleridge there, I should not have been surprised. But he has given us a masterpiece of dramatic art which has at once the severe restraint of Sophoclean tragedy, the

plasticity, passion, and color of our own romantic tragedy, a noble poem to brood over in the study, a dramatic spectacle which can not fail to enthrall a popular audience and which would in mere stage effect have done credit to the deftest of modern playwrights. He has produced a work for which I have little doubt Mr. Alexander will have cause to thank him, and a work which would, I have as little doubt, have found favor with the judges who crowned the 'Antigono' and the 'Philoctetes.' "

The Daily Chronicle (December 1) calls the play a "live poem and a live drama, a thing of exquisite poetic form, yet tingling from first to last with intense dramatic life." "He has chosen a theme of pure passion and has steeped it in an atmosphere of pure poetry." The critic continues:

"I am easily reconciled to saying no word which shall appear to qualify my estimate of 'Paola and Francesca' as a thing unique in our day, a new and intimate blending of poetic sweetness with dramatic strength. At the lowest and least, it stands far as the poles apart from the ordinary blank-verse play of theatrical commerce. It is brief, poignant, rapid, vital, never lingering for a moment over empty rhetoric; and its verse has a delicate music of its own which will require almost a new art for its adequate rendering."

The *London Times* speaks of "the always melodious" and "sometimes extraordinary beauty" of the verse, and says that the story is developed "with perfect truth to nature" and "with a thoroughly artistic reserve."

Mr. Sydney Colvin, writing in *The Nineteenth Century* (December), devotes a long article to the play. He says:

"To my mind the result, as it now lies before us, is a thing of surprising beauty and power, free from the shortcomings of the author's previous work, and testifying to his possession of quite unsuspected gifts. To the rich poetical production of the nineteenth century, it seems to me that Mr. Phillips has added that which was hitherto lacking, notwithstanding so many attempts made by famous men; namely, a poetical play of the highest quality, strictly designed for and expressly suited to the stage."

The Westminster Gazette (December 1) remarks that this is "high testimony from a sound critic, and we pay it great deference." *The Gazette* concedes that, judged merely by the standard of the minor poets, the play "easily earns all the epithets which are commonly lavished on the best products of that kind. Graceful, accomplished, subtle, touching, charming, and even beautiful it undoubtedly is." The critic is not quite ready, however, to admit that the drama is a great work of literature. He further says:

"There is much of Tennyson and a little of Shakespeare in Mr. Phillips's version, but we can find nothing of Dante. There is beauty, but not power. Again we grant Mr. Colvin the 'sustained and modulated emotion.' It is there and a great merit. But the very smoothness and accomplishment of the rhythm defeat in some measure the stress and force of the passion."

"Let us, however, not be misunderstood. This play is a remarkable achievement, both as a whole and in its parts. It abounds in beautiful passages and beautiful phrases. . . . A man who can write like this is clearly a force to be reckoned with. But we shall do him wrong if we praise indiscriminately. . . .

"Let us repeat that, if any of this sounds depreciatory, it is only by comparison with the high standard which is invited. Mr. Phillips's poem is the best that he has given us, and a work of high promise. We predict more and better. He is yet in the stage of anxious and careful technic—a most necessary and creditable stage. When he has perfected his instrument and moves more freely he will be able to take greater liberty. Then we shall look for finer quality, more originality, greater virility. A course of Browning and Meredith would, in the mean time, be no bad thing for him. But, also in the mean time, let us be grateful for a work which as a whole is sweet and pleasant, which is constructed with rare skill, and which, now and again, contains a gem of the purest water."

The Academy is inclined to take a view similar to that of *The Westminster Gazette*. Its principal criticism is that the play is

lacking in movement. Yet, making all allowances, it says, Mr. Phillips seems to have "produced a play of much beauty, of frequent power; a play which deserves admiration and respectful study, as it will certainly obtain them."

From the *London Times* (December 1) we quote the following abridgment of the play:

"The author has presented the story of the tragedy of the house of Malatesta in its simplest form, without the accessories which various commentators of the sixteenth century have added to the story as told by Dante. The incidents are historical; the only essential innovation is the character of the widowed and childless cousin of Giovanni, Lucrezia degli Onesti, who, bitterly jealous herself, fans the jealousy of the husband and actually plans the tragic end. Lucrezia's sudden outburst of grief and rage against her lonely fate is, poetically speaking, one of the finest passages in the play:

GIO. Lucrezia! this is that old bitterness.

LUC. Bitterness—am I bitter? Strange, oh, strange! How else? My husband dead and childless left, My thwarted woman-thoughts have inward turned, And that vain milk like acid in me eats. Have I not in my thought trained little feet To venture, and taught little lips to move Until they shaped the wonder of a word? I am long practised. Oh, those children, mine! Mine, doubly mine; and yet I can not touch them, I can not see them, hear them—Does great God Expect I shall clasp air and kiss the wind Forever? And the budding cometh on, The burgeoning, the cruel flowering: At night the quickening splash of rain, at dawn That muffled call of babes how like to birds; And I amid these sights and sounds must starve— I, with so much to give, perish of thrift! Omitted by His casual dew!

GIO.

Well, well,

You are spared much: children can wring the heart. LUC. Spared! to be spare—what I was born to have! I am a woman, and this very flesh Demands its natural pangs, its rightful throes, And I implore with vehemence these pains. I know that children wound us, and surprise Even to utter death, till we at last Turn from a face to flowers: but this my heart Was ready for these pangs, and had foreseen. Oh! but I grudge the mother her last look Upon the coined form—that pang is rich— Envy the shivering cry when gravel falls, And all these maimed wants and thwarted thoughts, Eternal yearning, answered by the wind, Have dried in me belief and love and fear. I am become a danger and a menace, A wandering fire, a disappointed force, A peril—do you hear, Giovanni?—Oh! It is such souls as mine that go to swell The childless cavern cry of the barren sea, Or make that human ending to night-wind.

"The struggles of Paolo against his destiny, the half-unconscious yielding of Francesca to what was at first a mere 'drawing of youth to youth,' and the central scene in the 'place of leaves' where the book of Lancelot and Guinevere proves to be 'the Galeotto, the go-between of the lovers'—all this is told with perfect truth to nature, with a thoroughly artistic reserve, and in verse that is always melodious and sometimes of extraordinary beauty. And here is the final speech of Paolo, before the two pass together to the room where happiness and death await them:

PAO. What can we fear, we two?

O God, Thou seest us Thy creatures bound Together by that law which holds the stars In palpitating cosmic passion bright; By which the very sun enthralls the earth, And all the waves of the world taint to the moon. Even by such attraction we two rush Together through the everlasting years. Us, then, whose only pain can be to part, How wilt Thou punish? For what ecstasy Together to be blown about the globe? What rapture in perpetual fire to burn Together!—where we are is endless fire. There centuries shall in a moment pass, And all the cycles in one hour elapse! Still, still together, even when faints Thy sun, And past our souls Thy stars like ashes fall, How wilt Thou punish us who can not part?

FRANC. I lie out on your arm and say your name—

"Paolo!" "Paolo!"

PAO.

"Francesca!"

Then follows the final scene, in which servants enter, bearing in Paola and Francesca dead upon a litter:

Luc. Ah! ah! ah!
Gio. Break not out in lamentation!
 [A pause . . . The SERVANTS set down the litter.
Luc. (going to litter). I have borne one child, and she has died in youth!
Gio. (going to litter). Not easily have we three come to this,
 We three who now are dead. Unwillingly
 They loved, unwillingly I slew them. Now
 I kiss them on the forehead quietly.
 [He bends over the bodies and kisses them on the forehead. He is shaken.
Luc. What ails you now?
Gio. She takes away my strength.
 I did not know the dead could have such hair.
 Hide them! They look like children fast asleep'
 [The bodies are reverently covered over.

GREEK STUDY AND ITS RELATION TO ENGLISH.

SINCE Mr. Charles Francis Adams wrote "A College Fetish" some fifteen years ago, the question as to the proper place of Greek in the curriculum has been much discussed. Harvard's lead in dropping Greek from the requirements for the arts degree has been followed by Cornell and other institutions. There is a strong party now in favor of dropping Greek wholly from the high schools, leaving it to the colleges to offer (as has already been done at Cornell, Smith, and Oberlin) optional courses in beginning Greek for such students as desire it in preparation for special theological, scientific, or literary studies. Mr. W. F. Webster, principal of the East High School, Minneapolis, takes this position in *The Forum* (December). Greek is no longer essential to a liberal education, he says: the number of students electing it in the high schools is small: and to ask the public schools to maintain it at the expense of more important subjects such as English, science, history, and modern languages is unfair. He continues:

"If it were generally believed that the study of Greek had any such efficacy in the training of youth as is frequently claimed for it by its ardent defenders, no school could be found without it. The fact is, that in their hearts people do not believe it, and so are willing to try a chance without it. It must not be forgotten that conditions have entirely changed. When Greek was introduced into England, Dante and Chaucer had not been recognized; Shakespeare arrived just as it became established at Oxford: France and Germany had only a few wandering minstrels—barely the beginnings of a literature. At that time there was no other literature. To-day France, Germany, and England each has a literature equal to the Greek in form and far surpassing it in the criticism of life. . . .

"Now what is the fact concerning the statement that the study of the classics is the best training in English? I have no desire to say what Greek and Latin can do, for I do not know: but I have a right to say what I believe they have done. Aside from keeping English out of the schools on the ground that English can best be learned by studying some other language, the advocates of Greek and Latin are responsible for a large part of the poor English of to-day. I shall not take time to quote examples of the abominable stuff written by young men for entrance to college. Translation English has become a joke and a by-word. Its degrading influence has forced men eminent in school work to ask whether there be any compensation for it in the study of the classics. . . . English can not be learned by studying any other language than English. I do not say that English can not be learned while studying another language; but it is by looking to the English, not to the Latin or the Greek, that a pupil learns English while studying Greek and Latin. I have never been able to learn that the Greeks read the Zend-Avesta in order that they might learn to speak their own language; and I attribute a part of their perfection in language to the fact that they studied it only, and were not led to introduce into it idioms from any other language, however beautiful they may have been in their native setting. The Latin literature can not boast of any composition to match the work of Homer, Dante, or Shakespeare; and may not the reason be that they were poor mimics in literature? And

is the perfection of English inferior to the perfection of Greek? Shall we not be as proud of our inheritance from Tennyson, Chaucer, and Shakespeare as the youth who walks under the shadow of the Acropolis is that he babbles in the language of Homer and Plato? The great masters of English shall be our instructors; for the only sure way to learn to write English is to study English."

To the classicist's argument that modern literature is not fully intelligible without a knowledge of the ancient classics, Mr. Webster replies:

"Literature is above and beyond all; it has extracted the best from all; it embraces all. And down through all the broad stream of noble writing the fountains of Greece have poured their sweet waters. Our literature is full of allusions to the ancient classics; and unless the reader be somewhat familiar with the beginnings of literature, he can not hope to understand the literature of to-day. But the student does not get these elements of literature by reading classic texts. If he would know about ill-fated Troy, he reads it up in a dictionary of antiquities; if of sulky Achilles, in Smith's 'Classical Dictionary.' More of the rich life of the Greeks has been learned from the collateral readings and from history than has been gathered from the reading of classic texts. Suppose a person should read Scott's 'Marmion,' three of Burke's shorter orations, some of Landor's 'Conversations,' a hundred pages of Dickens's 'Child's History of England,' and a hundred pages of Boswell's 'Johnson,' would he then know the life and literature of the English people? And yet this is what the student of Greek does in amount and kind; and he is called a man acquainted with Greek life and literature."

ZOLA AS PSYCHOLOGIST AND MORALIST: A RUSSIAN JUDGMENT.

WHILE in England Zola's latest novel, "Fécondité," has been pronounced by many critics totally unfit for translation, and some have even denied it the right to be classed as literature, in Russia it has been translated without excision or abridgment and praised highly by the critics. Zola has always been almost as popular in Russia as in France, and in literary criticism and taste there is apparently little difference between French and Russian standards or points of view. The contrast between the treatment of "Fécondité" in Russian periodicals and its reception by English journals exemplifies the rôle of national peculiarities in literature.

F. Baulgakoff, in an elaborate review in the *Novoye Vremya*, expresses the opinion that Zola has rendered a timely service to France and to civilized society by his propaganda of the "cult of maternity" and of large families. What Rousseau did by his "Emile," Zola, as an artist-moralist, has tried to do in a newer form by his latest production. The interests of the family are identical with those of the state, and Zola has dealt with a problem which has for years challenged the attention of all earnest Frenchmen. The Russian critic, after making these general remarks, proceeds to say:

"To show how posterity is being destroyed, Zola takes representative families from the various classes of French society, and the result is a horrifying picture of perverted and violated human feelings. Naked, brutal egoism governs, and it shrinks from nothing low, vile, or criminal. It is a veritable hell which Zola paints, filled with unnatural fathers, mothers, lovers, physicians, nurses. All are greedy and eager for money and power, and for these they sacrifice born and unborn thousands. The evil emerges here in colossal proportions."

On the other hand, goodness is elevated by Zola into heroism, so the critic points out. To the filth and crime and lechery, Zola opposes the ideal life of a family which follows nature and human instincts, which quietly discharges the duties of existence and finds happiness in love and labor. This family grows, multiplies, and assumes truly gigantic proportions, but it conquers by virtue of its numbers and moral strength and health. The fate of the

"Malthusians" is terrible. They themselves perish and doom their miserable unwelcome offspring to wretchedness and destruction. The history of their extermination is related with the rigid precision of medical records. In regard to Zola's method and style, Baulgakkoff says:

"As we know, Zola never was a psychologist. He has himself acknowledged that his purpose has been to study temperaments and characters, to depict personalities governed by their nerves and blood alone, possessing no free will, no souls, mere victims of their physical organization. But Zola studies even these personalities only in their manifestations, not in their origins. His characters are incapable of development; they always remain the same, from the first to the last pages. They are like tragic and comic masks, and their traits strike one as the fixed effects of a realistic photograph. The strongest never appear as real victors in life's struggle. They seem to rise to the top as if in spite of themselves, through the sheer force of fate. Nor are there any losers in Zola's works. The victims are not defeated; they are passive playthings of forces to which they do not oppose the slightest resistance."

The critic thinks it irrational to overlook the solid substance of the novel through the prejudice aroused by the excessive realism and the clinical nakedness of the analysis. Zola shows himself a true moralist, a lover of health, purity, and humanity. He preaches delight in living and in labor, love of nature and trust in her laws.—*Translation made for THE LITERARY DIGEST.*

THE RETURN OF PADEREWSKI.

IT used to be Patti who had only to come to New York to find the town at her feet; but now, as Mr. W. J. Henderson remarks, it is Ignace Jan Paderewski who comes to his own again when he comes to the American metropolis, and is the conqueror of hearts. Mr. Henderson gives the following account of the opening night of the great pianist at Carnegie Hall on December 12 (in the *New York Times*):

"There was the same apparently slight figure seated alone at the piano on the half-dark stage. There was the same pale, thoughtful face, with the nimbus of orange hair floating around it. There were the same graceful, sinewy hands and the same broad, powerful shoulders. There were the same manifestations of public absorption in the playing of this really remarkable man.

"There were the silent and bowed heads of the reverently musical listeners, and the staring eyes and open mouths of those who went to scoff and who tarried to be amazed. There were the same unmistakable evidences of masculine admiration and the equally unmistakable demonstrations of feminine emotion. The women rushed down to the stage at the end of the recital just as they used to in the bygone seasons and worshiped at the foot of the throne. And the pianist played the piano, not, perhaps, exactly as he used to, but always as one having authority and as one who had penetrated to the heart of the instrument and to the secret shrine of music herself.

"Taken altogether, it was a curious manifestation of the potency of a personality in that art in which personality finds its widest scope. If there are some who remain skeptical as to the real musical value of it all, they are not to be blamed, altho they are radically and hopelessly in the wrong. For, when all is said and done, when every possible discount is allowed for the easily overwrought feelings of the younger women who go to hear him, when all allowance is made for the squaring, the cubing of the emotional power of music by the reaction on it of concentrated hysteria, Paderewski is a great artist, a wonderful pianist, and a power not to be resisted. The reasons of this can be told, but the process seems cold-blooded, and it has been gone through with in this paper. Perchance there may be occasion to go over the ground again, but not just now. It is sufficient to record at the present writing that Mr. Paderewski is here, and that he played in the same influential manner as of old. . . .

"We Americans are not accustomed to hearing Beethoven made so pretty, and we think that in Mr. Paderewski's reading we miss some of the austerity of the composer. But this is not a matter which the public will take seriously, and if Mr. Paderewski

knows how to sugar the nutritive pill, he will surely be forgiven.

"The Schumann fantasia was played in a manner which left nothing to be desired. The manner in which the great artist sang Schumann's poetic melodies through the instrument was simply matchless, while the breadth and dignity of his style were noble. The last movement was read with beautiful insight into its subtle content, and there was always that marvelous singing tone to send the composer's thoughts into every heart. As a Chopin player Mr. Paderewski is, in the opinion of the present writer, not equaled by any other pianist. No other certainly has shown such a wide sweep of style as he showed in his reading yesterday of the nocturne and the polonaise. As for the lace-work of the waltz of Strauss, it was wonderful in its clearness and crispness and in the beauty of the nuancing, while the playing of the octave repetitions in the rhapsody was enough to drive an ordinary pianist to despair."

The Evening Post draws an interesting lesson of the "potency of individual genius" in the contrast between the grand opera on that same evening—with its galaxy of stars, its big chorus and bigger orchestra, its three conductors, its scene-shifters, costumes, etc.—and Paderewski sitting all alone on the stage in Carnegie Hall, entertaining and delighting an audience of three thousand people, and, altho thus unaided, often bringing to his managers as much profit through the single power of his genius as the whole of that vast company in the Metropolitan Opera-House. The critic adds:

"An eminent musician remarked, after the concert: 'It was tremendous! All the things that other pianists do he does ten times better, with all his genius. If he were a little sandy man with pink eyes, let him play the way he does and the world would still go to hear him. It lifts piano-playing once more high up. And,' he added with a laugh, 'even *technically* the pianola wasn't 'in it.'"

OPENING OF THE OPERA SEASON.

THE opening of the opera season at the Metropolitan Opera House in New York on Monday, December 18, was marked by the usual enthusiasm and *éclat* of first nights at the grand opera, and on the whole it may be said that the year opened rather more triumphantly than ever before. The musical critics agree that the opera—Gounod's "*Romeo et Juliette*"—was finely sung, and that Mme. Eames, M. Edonard de Reszke, and M. Plançon were in as fine voice as could be wished. The absence of one great singer—M. Jean de Reszke—was, of course, one of the most noticeable features of the occasion, for it was he who first made Gounod's great opera popular in New York, and who has sung the part of "Romeo" in all former productions of this work. The principal event of the evening was the first appearance in New York of M. Albert Alvarez, the French tenor. The *New York Times* (December 19) says of him:

"First impressions of such artists as this are not always to be trusted, yet it seems safe to say that *Romeo* will prove not to be this gentleman's happiest achievement. A man of splendid presence, an actor of unsurpassed grace and much eloquence, an experienced *routinier*, and the possessor of a very fine voice, M. Alvarez was most effective in those scenes which permitted him to give full freedom to the volume of his tones.

"His vocal method will call for further discussion, but the first impression made by it is that it is decidedly unfavorable to the delivery of such repressed and refined music as that of the balcony scene. The duet was beautifully sung, but the soliloquies were neither noble in tone nor absolutely true to the pitch. In the duet scene M. Alvarez had his opportunity, and he sang with splendid power, arousing the audience to great enthusiasm. He was recalled many times."

The Evening Post says:

"He proved to be an interesting Romeo, yet he only confirmed the truth that there is only one Jean de Reszke, as there is only one Paderewski. *Noch ist Polen nicht verloren!* No doubt M. Alvarez has in him the material for a first-class tenor, but a faulty

vocal method has prevented his voice from being equally agreeable in all its parts. It is sometimes 'woolly' or forced, and many of the tones are produced with an effort. Luckily his shortcomings are least noticeable in the highest tones. These are clear and ringing, and these won the battle for him; for there is nothing that an audience loves more dearly than vibrant high tenor notes. Moreover, his singing improved from act to act, so that the general impression created was a favorable one."

The reappearance of Mme. Emma Calvé in her favorite part of *Carmen* on December 20 was also one of the events of the early part of the opera season. The general verdict is that Mme. Calvé not only looked this part but lived it for the hours during which the opera lasted. As one of the highest musical critics of America said: "Every action is charged with a subtle eloquence, and throws light upon the emotions of the woman. Every look is a speech, every gesture a revelation." Indeed, the general impression was that Mme. Calvé was more than herself upon this occasion, and she was greeted with royal welcome and appreciation.

A NEW FINE ART.

WOOD-CARVING has always occupied an honorable place among the arts, but within the past few months a new form of this craft has come into notice, so delicate in the high artistic effects of which it is susceptible that it is well worthy of

GROUP OF LIONS ON FUNGUS BY MISS MUSSELMAN
Courtesy of the New York Tribune.

being ranked with the distinctively fine arts. We had occasion before to allude briefly to this form of fungus-carving and to its inventor and developer, Miss Ida Musselman, of Somerest, Pa., whose work in water-colors and in black and white has been known for several years. Of the subjects which she has treated in this fungus-carving, and which are best known, are "Paul Revere," "Forgotten," "A Group of Lions in the Jungle," and "Pay Toll." The specimens now on exhibition in New York have attracted wide attention and comment from the art critics of the metropolitan papers and from those of Pittsburg and Philadelphia. From the *New York Tribune* (December 10) we reproduce the following description of the art, together with an illustration of the work:

"The fungus used for wood-carving is found on partially decayed oak- and maple-trees. It must be carefully removed in order to preserve the delicate and creamy surface, which is easily injured while in a fresh and moist state. It is also necessary to have the fungus properly cured and made as hard and durable as wood before it is worked upon.

"The selection of a subject requires careful study, as only certain pictures lend themselves to effective work. A dark object on a light background would simply be a hole with no relief—an *intaglio* instead of a *cameo*."

The subject, it appears, has to be a composite rendering of sev-

eral pictures, and this adds to the interest and unique character of the art. The artist herself says (in the *New York Tribune*):

"In arranging my work I get suggestions from several pictures, taking what I think will come out well, and then I form a complete picture, changing the light and shade to suit the material and working the background in a manner best to bring out the subject. As a false move is fatal, I must have a definite knowledge of the effect I wish to obtain before I begin to work. The peculiar shape of the fungus must also be studied and the objects grouped accordingly. Knots may sometimes be utilized in carving trees. One acquires only by experience the knack which gives character to the work."

The Doubleday-McClure Reorganization.—The most recent move in the New York publishing world, which has of late been full of surprises, apparently means the addition of a new and important firm to the already large list of American publishers located in the metropolis. It is announced that the S. S. McClure Company and the Doubleday & McClure Company, which have hitherto been closely allied in their organization and varied interests, are to be reorganized and placed upon a distinct basis. Mr. McClure, in discussing the new *régime*, thus outlines some of the proposed changes (we quote from the *New York Herald*, December 19):

"Several changes will take place early in the new year in the Doubleday & McClure Book Publishing Company, which will strengthen it in its rapidly growing business. Walter H. Page, formerly editor of *The Atlantic Monthly* and literary adviser to Houghton, Mifflin & Co., will become a partner and devote himself to the literary work of the firm. T. L. Thompson, who has been business manager since the company was organized; Henry W. Lanier, son of the late Sidney Lanier, who has been connected with the house from the first, and S. A. Everitt, who has had charge of the manufacturing department, all will be admitted into partnership. Mr. James MacArthur, formerly assistant editor of *The Bookman*, is just sailing for England, to represent the house in London and have charge of its foreign interests.

"The name of the company, it is expected, will be changed eventually to Doubleday, Page & Co., and the business will remove to Union Square, having outgrown its present quarters in East Twenty-fifth Street, also occupied by the S. S. McClure Company. The latter company itself requires more space, by reason of the development of *McClure's Magazine* and other publishing enterprises."

NOTES.

"STALKY & CO" is selling like wildfire in London, and "David Harum" is steadily gaining a hold on the British heart.

THE war poets in England are evidently not all able to dispose of their products at Kiplingite rates. Says *The Westminster Gazette* (November 10): "An interesting offer comes to us this morning from Tooting: 'Sir,—Am offering war ballads at 7s. 6d. each. Asking your kind judgment.' But the poet is several days behind the fair. Now that the major poets write poems that are ostentatiously proclaimed to be 'Not Copyright,' why should we pay even so moderate a sum as 7s. 6d. for a war ballad?"

The Westminster Gazette says of the recent performance of "Madame Sans-Gêne" by Madame Réjane at the Royal Theater, Berlin: "His Majesty invited Madame Réjane to his box, and presented her with a costly bracelet of diamonds and rubies, with the Imperial Eagle in diamonds in the center. 'Madame,' the Emperor said, 'you are even greater than your great fame.' It was much remarked that his Majesty had invited the French Ambassador to the imperial box to witness the play, and conversed very affably with him."

A USEFUL and unique work, "A Cyclopedia of Fraternities," has been written by Mr. Albert C. Stevens, associate editor of *The Standard Dictionary*. It is a compilation from the most trustworthy sources of all the attainable information relating to secret fraternities and sisterhoods in the United States. It covers the origin, development, aims, emblems, and membership of some six hundred secret societies, including the college Greek-letter fraternities. The information relating to the latter is especially full and interesting. Some of the statistics which he gives of fraternity life in the United States are very striking. More than 200,000 candidates for membership in secret societies are initiated every year—30,000 alone in the Masonic fraternity, and as many more in Odd Fellowship. One out of every three male adults in the United States is a member of one or more fraternities.

SCIENCE AND INVENTION.

IMAGINATION AND EDUCATION.

ARE we cultivating sense-perception too much in our systems of education and neglecting the proper training of the imagination? That we are doing this and that our practise needs reformation in this respect are assertions made by the author of a paper published in the Proceedings of the Illinois Society for Child Study. The phase of imagination treated of in this paper is designated as the "mechanical imagination," which "deals with real material—things and events previously experienced—and confines its activity to forming abstractions and producing combinations not experienced." The writer goes on to say:

"It is not simply the *image*-ation involved in perception and memory, but it is most solidly based upon this. Indeed, at first the images are brought into consciousness as memories of what has been experienced through the action of the senses. Repeated reproductions of this kind, with little emphasis upon the time and place in which the original sense-experiences were gained, tend to free these memory images from their connection with real material—to give them a purely ideal existence, and thus prepare them for new combinations. Thereupon, interest transforms these released images into novel and hitherto unexperienced products. Some of these products are images of actual material existences. Others have an ideal existence only. Such images as these, the results of this dissociative and recombining process carried on without any unusual or phenomenal emotional activity, constitute a very large part of the 'mind-stuff' of the ordinary mortal. These images, to an inconceivably greater degree than the pure memory images in which they had their origin, constitute the 'stock in trade' in the fundamental part of all educative effort."

The paper describes in detail experiments with deaf and blind persons, which lead the author to assert that those who are both deaf and blind excel all others in the kind of imaginative faculty described above, that the blind come next, normal men and women third, and the deaf last of all. So pronounced is the imaginative power of the blind, the author says, that he is convinced that, so far as mere mental training is concerned, their compensations are nearly equal to their deprivations. As to the powers of the deaf-blind, it is sufficient to cite the case of Helen Keller, which is regarded as typical rather than abnormal. This arrangement of the four classes of persons according to their imaginative power is exactly what might have been predicted by psychology, we are told, being in inverse proportion to what the author calls "breadth of sense-basis." This is greatest in the deaf (since the extra acuteness of sight more than makes up for loss of hearing) and least in the deaf-blind. If this represents the facts, it shows, the author claims, that imaginative power, and not "sense-basis," is what we should aim at in education. He says:

"The practical lesson that seems to me to come out of this, the lesson that might possibly in many cases advantageously modify the work now being done in our common schools, is that *we are in great danger of laying too much stress upon mere sense-perception.*

"What has been accomplished in the education of the deaf-blind class—Laura Bridgman, Helen Keller, Edith Thomas, Elizabeth Robin, Linnie Haguewood, Tommy Stringer, W. A. Miller, and many others, is at least proof positive that the human mind is capable, through imaginative effort, of constructing for itself a very large and invaluable amount of 'mind-stuff' out of a very small amount of actual sense-perception material. The wonderful and varied imagery which these minds, in silence and in darkness, have created for themselves, stands as a perpetual challenge to those teachers who are encouraging their pupils to 'revel in the endless panorama of sense-perception.'

"It is not necessary to make our pupils blind or deaf-blind; but it may be well sometimes to require them to shut their eyes, and ears if need be, and *think*. I can conceive of no more important

school exercise than that which will induce the child to bring into consciousness images of objects that are not present to the senses. This done again and again, and the dissociative process begins. Gradually each image becomes disengaged from the thing of sense that brought it into consciousness. At length it is itself a purely ideal existence. It takes its place near at hand as a part of the stock of essential 'mind-stuff,' to be easily called again into consciousness whenever it is needed in recombining, in conceiving constructively, in comparing, in discerning relation—in a word, *in thinking*. Dr. Dewey says 'it is this double process of separating and adding that constitutes the lowest stage of imagination.' Is not this, then, *the place for emphasis* in the development of imaginative power? Are there not well-defined steps that should be taken by each pupil in the cultivation of this power?

"I am confident that no more important subject in child-study could be suggested than that which would lead to a more careful consideration of *the imagining power of pupils in the lower grades*; lead to a less frequent demand that pupils shall think—discern relation—when they have not in consciousness the things related; lead to such training of the 'mechanical imagination' as will enable each pupil to provide for himself so much of related 'mind-stuff' as will make his reading a pleasure and study a delight."

THE RAILROADS OF AFRICA.

IT is reported by the United States consul at Marseilles that there is a strongly supported demand in France for the more rapid building of railways in Africa, and particularly for the construction of a trans-Saharan line. This project, according to *The*

Railway Age, is designed as a sort of offset to the British "Cairo-to-the-Cape" enterprise, and the one is not much more advanced than the other. A report of the Marseilles Chamber of Commerce contains the following statements:

"The question whether the railways will pay is not to be considered. France, having laid hands upon points 1,200 and 1,800 miles from the sea, must establish a connection or lose the fruit of its labor. While the doubtful element of future profit must not hinder actual work, it is possible that a profitable traffic can be built up. The Belgian Congo region is an example. The railway from Stanley Pool to the sea, 400 kilometers (249 miles) long, was fully completed in May, 1893, and 100 kilometers (62 miles)

were in operation as early as 1896. The total capital and bonds amount to 65,000,000 francs (\$12,545,000), and the present monthly receipts are 1,000,000 francs (\$193,000). The commercial movement has increased from 17,650,000 francs (\$3,406,450) in this colony in 1893 to 50,500,000 francs (\$9,746,500) in 1898. The principal business is in caoutchouc, a product that is firm in price and even advancing, while the general trend of prices of other products is downward. It is contended that the French colonies in Africa are veritable mines of rubber, and need only means of transportation to bring about highly prosperous conditions.

"The accompanying map shows the extent of railway development in Africa, and the table shows what has been done and what is projected:

Districts.	Completed Miles.	Projected Miles.
Tunis-Algeria	2,361	690
Senegal-Sudan	276	224
French Guinea	342
British Guinea	35	163
Ivory Coast	280
Gold Coast	42	82
Dahomey	497
Lagos	43	143
Belgian Kongo	249	1,243
Portuguese Kongo	221	...
German West Africa	72	363
Cape Colony	4,150	...
Uganda	288	644
Madagascar	249
Total	7,937	4,920

The Bureau of Foreign Commerce explains that besides the lines indicated on the map, the following have been discussed: From Suakim, on the Red Sea, to Berber; from Lake Tchad to Fashoda; from Loanda, in Portuguese West Africa, to Lake Tanganyika; and from Walfish Bay across German Southwest Africa to Bulawayo.

RANGE AND COST OF A CANNON-BALL.

THE use of artillery in the Anglo-Boer war—the most extensive and skilful, so it is claimed, in any recent contest between nations—lends peculiar interest to the following statistics of artillery-fire published in *La Nature* (Paris, December 2). The excellence of the Boer artillery is said to be largely due to their use of French ordnance, which, especially for shrapnel (which was what drove back General Buller's troops at the Tugela), is now unexcelled. The statistics given in the note are not only for French, but also for German (Krupp) guns. Says the author:

"The importance of the range of cannon in artillery combats is now well proved; the Transvaal war is a new demonstration of it, the advantage remaining generally with the side that has guns of the longest range.

"During the war of 1870, and particularly at Sedan, the German artillery covered us with a hail of shot, our own shells and balls falling 200 yards short of the enemy's batteries, and producing no effect.

"Since this time we have made great progress, and our new field artillery has reached the maximum of range for small-caliber guns. Longer ranges are, of course, reached with siege guns.

"The first rifled cannon of 16 centimeters [6½ inches] caliber could not carry further than 6,600 yards. In 1870, a range of 8,500 yards was attained. In 1875, by using steel guns, 12,000 yards was reached, and, by increasing the caliber, 15,000 yards was attained. Since this time, by using new powders and by lengthening the guns, the range has steadily grown.

"In 1888, on the occasion of the jubilee of Queen Victoria, the English artillerymen at Shoeburyness fired a celebrated round of shots under the name of the 'jubilee round,' which attained a range of about 20,000 yards. The Germans imitated the English and reached about 33 yards further under the same conditions.

"The French artillery is not behindhand. It has now a cannon of 34 centimeters [13½ inches] which, firing with an initial velocity of 900 yards a second, can send a projectile to a distance of 22 kilometers [13 miles]. A longer cannon, which is not yet in service, could, it is thought, send its shell 24 kilometers [14½ miles] with an initial speed of 1,200 yards. When this initial

speed shall have been attained with the 34 caliber, the range will reach 30 kilometers—just the distance from Dover to Calais.

"The expenses of making a cannon and of firing each shot have enormously increased of late. A German military review has just published interesting figures on this subject. There are on the other side of the Rhine cannon of 110 tons, the most powerful that the Krupp factory has turned out, which cost, every time they are fired, exactly 8,500 francs [\$1,700]. The projectile is worth 3,250 francs [\$650], and the powder not less than 950 francs [\$190].

"But this is not all, for we must add the proper fraction of the value of the gun, which can be fired only 95 times before it is completely out of order. Now a 110-ton gun costs 412,000 francs [\$82,500], and consequently at each discharge its value diminishes by 4,500 francs [\$900].

"The German navy has had recently a 77-ton gun costing 250,000 francs [\$50,000], which can be fired only 124 times. Each discharge represents the sum of 4,600 francs [\$920].

"The 45-ton guns can be fired at least 150 times. At the Essen factories they can be built for 184,000 francs [\$36,800]. The price of each shot does not exceed 2,500 francs [\$500].

"Finally, for less powerful arms, the prices fall to 850, 417, and even 325 francs [\$170, \$83, and \$65] for each shot."—*Translation made for THE LITERARY DIGEST.*

HOW OUR NERVES ARE BUILT UP.

RECENT years have witnessed some very remarkable discoveries regarding the structure of the nervous system. These support a theory which, altho not accepted by all experts, certainly furnishes an interesting explanation of many nerve phenomena, both of health and of disease. These recent investigations are briefly described by M. Capitan in *La Nature* (Paris, November 25) in an illustrated article, most of which we translate below. Says the writer:

"It is well known that each part of the human organism is formed of an enormous accumulation of very small elements called cells.

In each organ the cells have special forms; they are united one to another and are in relation with the nerves, the blood-vessels, and the lymphatics.

"The nervous system, whose rôle is so delicate, is made up of complicated cells whose constitution and relations have not been well understood until recently.

"The nerve-cell was once regarded as a small poly-

FIG. 1.—NERVE-CELLS.
Micro-photograph enlarged 125 diameters.

gonal mass with prolongations at the angles; but a few years ago the investigations of Nissl, von Lenhossek, Ramon y Cajal, Golgi, and others, showed that the nerve-cell is complicated in other ways. Very delicate methods of preparation enabled us to recognize in the nerve-cell an amorphous substance in which are distributed bundles of fibers forming a network of considerable regularity, between the meshes of which are packed grains of an amorphous substance (chromatin). From the cell rise a large number of prolongations in all directions, which may be compared to the rootlets of a plant. Fig. 1 shows this appearance clearly.

"These prolongations are very slender, as may be seen. They are roughened, on their surface, by protuberances similar to the thorns that cover certain plant stems. These are visible on the preparation that is represented in Fig. 2. What is the value of this complex arrangement? The researches of the authors just mentioned (to whom must be added the name of Prof. Mathias Duval) will explain to us.

"Following the prolongations of the cells, these scientists perceived that they are not continuous, but simply approach each other; they possess contiguity, but not continuity. This arrangement at first seemed paradoxical and incompatible with the idea

FIG. 2.—NERVE-CELLS: ENDS OF THE RAMIFICATIONS.

Micro-photograph enlarged 460 diameters.

that they give passage to the nervous fluid, this being supposed to behave like the electric current and to flow only over an uninterrupted circuit.

"But in the presence of this peculiar arrangement, this hair-like mass of cellular prolongations, and the immense number of thorny excrescences that cover them, we may understand how close contact may be made between the nerve-elements

and that the flow may thus pass from one cell to the other, just as the electric current can pass from one conductor to another when they touch."

This arrangement of nerve-elements, M. Capitan tells us, furnishes a means of explaining various physiological facts, such as those of sleep, as has already been set forth in these columns. When an animal in full activity is killed and the nerve-cells, kept in form by appropriate reagents, are examined microscopically, the cellular prolongations are observed to be in the most intimate contact, as seen in the two figures. If, however, the animal is killed during sleep, the prolongations are seen to be withdrawn, and the thorny excrescences have disappeared. In the former case the nerve-current could evidently pass easily from cell to cell; in the latter case it could pass only with great difficulty. Thus, during sleep brain action is considerably lessened, since the nerve fluid from the outside of the body can with difficulty reach the cerebral centers. When the animal is greatly fatigued the retraction of the nerve-cells is even more noticeable. Not only sleep and fatigue, however, but a multitude of the phenomena of nerve disease are explained by these discoveries. To quote again from M. Capitan:

"A neurasthenic patient, feeble, without force or courage, is so because his cellular prolongations have not the proper ramifications, or because they are retracted or without the thorny excrescences that give requisite contact between them. The nervous fluid can not pass easily, and sometimes also the cells do their work slowly, the grains of chromatin are in excess—this is the explanation of his morbid condition. With a paralytic there is no contact at all between the cells, and a cure will take place when it is renewed.

"With a nervous, irritable, or excitable subject, the cellular ramifications are too greatly elongated, the nerve-cells do too much work; the nervous influx is superabundant and passes too easily and too rapidly.

"These examples show . . . how recent histologic and biologic discoveries regarding the structure of the nervous system have brought about a real revolution in all kinds of research along these lines."—*Translation made for THE LITERARY DIGEST.*

of furnishing all a man wants to eat for a fixed price offers temptations to gormandize. Beginning his breakfast with fruit and porridge, the greedy boarder orders fish, steak, chops, eggs, and rolls, with tea or coffee. A customary introduction to his luncheon consists of soup and fish, followed by roasts and game: the waiter, anxious for fees, supplements this with a formidable array of other dishes, containing a surfeit of vegetables and 'entrées.' . . . One such meal is heavy enough to be of itself a burden; still it is sometimes repeated in the evening at dinner and followed at night by a 'light' supper, a second and a third meal being taken before the first could digest. . . . The European plan of serving at fixed prices portions of food which must be paid for as ordered saves from overindulgence at least those persons who are too economical to pay for what they do not need. Such a method would be advantageous to the hotel-keeper, who, under the present system, is compelled to serve not alone what his guests consume, but also what they leave. I know the manager of a city hotel who goes himself into the kitchen, carefully inspects what is returned from the dining-room, and sells decent-looking slices to keepers of cheap restaurants, where these leavings form '*pièces de résistance*' for guileless patrons.

ARMY TELEGRAPH IN SOUTH AFRICA AND THE PHILIPPINES.

NOTWITHSTANDING the charge against the British war office, made by some English scientific journals, that it is hostile to science and averse to the use of recent and improved methods, the claim is made that the English Army Telegraph Corps has reached a higher state of perfection than any similar body. Altho the corps has not yet used wireless telegraphy, and has thereby brought down on its head the condemnatory articles referred to just above, it seems to be very expert in the ordinary

Copyright, 1899, by the Judge Co.

STRINGING WIRES.

Reproduced from *Leslie's Weekly*. By permission.

telegraphic methods. *The Electrical Review* (November 29) has an article on the subject, from which we quote as follows:

"There is no doubt that the telegraph battalion of the British regular army is a superbly drilled and trained body of men, who

Eating "à la Carte" the Hygienic Method.—There would seem at first sight to be no particular reason why we should prefer the European method of ordering meals "*à la carte*," on hygienic grounds; but Louis Windmüller, in an article in *The North American Review*, tells us that it is the better way because it furnishes no temptation to gluttony. He says: "The practise in our best hotels in the cities and at the summer resorts

should show the highest efficiency. The battalion is partly mounted, the mounted men carrying cavalry carbines, while the dismounted members are armed with artillery carbines and sword bayonets. The horses of the mounted corps are especially trained for the difficult service expected of them. . . . The illustrations showing the mounted men are of the most interest. It will be seen that the rider stands on the back of his horse to attach the wire to the lance-like pole, whose sharp end is driven in the earth, while another illustration shows one of the well-trained horses standing on wire reels in order to gain the necessary height for his rider to make a joint in the wire."

We are told that in the Dongola expedition of 1896 the battalion kept up with the troops on the march, and that a telegraph had been laid to each camp by the time the troops had established themselves in it. The wire was carried in reels on camels' backs.

MAKING A JOINT.

Reproduced from *Leslie's Weekly*. By permission.

In South Africa the wire is carried in the usual way on light-wheeled reels or on muleback. Newspaper readers will understand the enormous importance of the operations of the field telegraph corps accompanying General Buller through Natal, where the Boers have destroyed all lines of communication. The messages from Ladysmith and Estcourt arrive either by pigeon or by a native messenger who lurks in the veldt by day and takes his chances at eluding the Boer guards at night. To quote again:

"In this connection it should not be forgotten that the telegraph service corps at present with the three divisions of the United States army, operating in the Philippine Islands, has kept well up to the front through probably as difficult a country as ever such lines were worked in. They have had to contend with deep streams, bogs, great and torrential rains, high winds, and a vigilant enemy strong in guerilla tactics and dearly loving to break up a line of telegraph communications. Their success has been most creditable, and when the full details of it arrive it is certain that the record of this corps will be one in which American engineers can take just pride."

Temperature and Photography.—Every photographer knows that certain of his processes are retarded in cold weather. This fact has been used by some French experimenters in a recent investigation which may settle the vexed question of the nature

of the action of light on a sensitive plate. They find that in the intense cold produced by liquid air photographic action is notably lessened, and they argue hence that such action is chemical, rather than physical, since a well-known effect of low temperature is to retard chemical action. M. Frédéric Dillage writes of these experiments in *La Science Illustrée* (November 18). The experimenters were Messrs. August and Louis Lumière, and they first showed that for short exposures bromid of silver is not appreciably sensitive to light at a temperature of -191° , altho if the exposure be prolonged the latent image is produced as usual. With gelatinobromid plates of the greatest sensitiveness the exposure must be 50 to 400 times as long at this low temperature as at ordinary temperatures. The plates, however, undergo no permanent change, and are as quickly responsive as ever when removed from the liquid air. Cold has no effect at all on the image after it has once been impressed on the plate. The experimenters find, however, that substances on which the effects of light are visible at once, instead of requiring development, as in the case just noted, do not become less sensitive under the influence of cold; at least, they do not as far as -200° , which is as low a temperature as was produced in the experiments. The Messrs. Lumière note that their results are in harmony with facts already observed in the case of phosphorescent substances, which cease to glow when exposed to great cold, but resume their light-giving power on a rise of temperature.—*Translation made for THE LITERARY DIGEST.*

The Morphine Habit among Physicians.—The startling assertion is made by an expert on inebriety, in a paper read before the Connecticut Medical Association, that morphinism is being spread among the people of the United States by the example and advice of medical men themselves, ten per cent. of whom are now opium-drunkards. The assertions and deductions of the author, Dr. T. D. Crothers, of Hartford, are thus summarized in the *Memphis Appeal* (December 4):

"According to Dr. Crothers, twenty-one per cent.—or one in five—of the physicians of the Middle and Eastern States use spirits or opium to excess; and he concludes that from six to ten per cent. of all medical men are opium inebriates. It is estimated that there are 150,000 opiumists in the United States; and this fact in connection with the prevalence of the opium habit among doctors presents one of the gravest problems for solution before the American people. It would seem a fair inference that the responsibility for the spread of morphinism among the people rests largely with those doctors who are addicted to its use. It would never occur to an uninformed person to contract the opium habit. This can only come from example or from constant prescription by a doctor, and if the latter is addicted to the use of the drug he is more apt to be reckless in prescribing it. Thus the spread of the habit is no doubt largely due to that part of the profession which has become cursed with morphinism. Physicians have the reputation of being very strict in the observance of the etiquette of the profession, and very rigorous in their hostility against the quacks, whose capacity for harm is readily understood. Certainly then it would seem that the medical profession ought to protect itself as well as the people at large from the opiumists among the doctors. Unless something is done to stop the growth of inebriety in its various forms among physicians, it may be necessary to invoke the aid of the law, and have doctors examined once a year to ascertain whether they are addicted to any of the habits which are so utterly incompatible with the proper discharge of their professional duties. There is no calling which makes such a demand for a clear head and a steady hand as that of the doctor."

Some Queer Inventions.—The following instances of inventive genius, unearthed by the *New York Sun* (November 29) from the records of the Patent Office, are presented collectively in an editorial in that journal in disproof of the recent assertion made by a disappointed inventor that inferiority in our patent laws is causing a decline in the number and variety of American inventions. It says:

"A Vermont man has applied for letters-patent on a mechanical device under the workings of which a bell rings automatically when

the water in which eggs are boiled reaches the ebullition point. An inventor at Helena, Mont., has patented a horseshoe-sharpener. Two ladies of Harrisburg, Pa., have patented, jointly, a 'serving-maid's stepladder,' guaranteed not to upset when in use. A Winconsin man has patented a collapsible coffin, separated into subsections and as portable as a hand-satchel. A Minnesota man has patented a disappearing visor or peak whereby mechanically a soldier's hat may be turned into a polo cap by pressing a button to be found over the left ear.

"A more practical invention is that of an ax the handle of which is held in position by a roughened metal-handle hole which makes 'slipping off' impossible, and a Rhode Islander has devised an electric nail the attractive power of the head of which gives inordinate power to the hammer. As yet we have heard of no patent for any contrivance to prevent stovepipes from separating into their customary joints when handled by a householder. Obviously, then, there has been no decadence in Americans of the patenting habit, and assertions to the contrary are no more credible than the war news of a Kafir runner."

The "Green Ray" at Sunset.—The existence of a "green ray" or "green flash," at the moment the sun disappears from view beneath the horizon, is unknown to many, but any careful observer can see the color, especially when the sun sets in the ocean. The phenomenon has been often noticed by physicists and has been thought by some to be an optical illusion. The subject was recently discussed very fully in the French Physical Society. As reported in *Science Abstracts* (November), M. Guébbard asserted that the green ray is "the gray shadow of the earth, feebly illuminated from the zenith and viewed by an eye fatigued for red; it therefore appears green." M. Pellat stated his belief, on the contrary, that "the setting yellow sun has a red lower and a green upper border, separately examinable in the telescope, and due to prismatic refraction by the atmosphere. The absorption which makes the sun's disk appear yellow makes the violet upper rim appear green or greenish-blue instead of violet. When the sun sets the upper green rim can be seen for a fraction of a second, but can be kept longer in view if the observer go up a slope as the sun sets." M. Guébbard thought this was different from the green ray following the setting of a red sun. M. Raveau said that he had seen "the sea colored green in a triangle with its apex at the point where the sun set; and the color seems to flow away toward the horizon."

Masses Smaller than Atoms.—In the old chemical philosophy, the atom (that which can not be cut) was the smallest attainable portion of matter. Some recent experimenters believe that there are phenomena that can be explained only on the assumption that the so-called "atom" may be split up into still smaller bodies. This hypothesis is advanced by Prof. J. J. Thomson, in a paper read before the British Association. "Experiments indicated," says *The Pharmaceutical Era* in an abstract of this paper, "that the charge carried by an atom in cathode discharges and similar phenomena is apparently one thousand times greater than in ordinary electrolysis, consequently either the atoms become disassociated and only a portion of their mass carries the negative charges of cathode rays, or else the atom can receive a greater charge than is assigned to it in explaining electrolytic phenomena." After describing an ingenious experiment devised to discriminate between these two possibilities, Professor Thomson concludes that the former agrees best with the facts. "It would appear," he says, "that electrification seems to consist in the removal from an atom of a small corpuscle, the latter consisting of a very small portion of the mass with a negative charge, while the remainder of the atom possesses a positive charge."

THE *Rasvetchik*, a Russian military paper, complains that Russia is not as strong in artillery as Germany. General Dragomirov replies that that is not necessary, as Russia is not likely to be attacked, and, being poorer, saves her money. He closes with this little fable: Three neighbors, Ivan, Isidor, and Peter, were very suspicious of each other. Each one engaged a man to guard his house. Ivan and Isidor, however, added to this defense until they ruined themselves. Peter did nothing of the sort. "They will not all be against me," he said, "perhaps one will be for me."

THE RELIGIOUS WORLD.*

THE "CRISIS" IN THE CHURCH OF ENGLAND.

DESPITE the declaration by a London secular newspaper that the Boers have slain the "crisis," the agitation continues, altho with less rancor. It is as yet difficult to forecast what will be the eventual outcome of the strife between Ritualist and Low Churchman. The extreme Catholic party follow the lead of

THE ARCHBISHOP'S KOPJE. WILL HE BE ABLE TO HOLD IT?

There are significant signs of an approaching bombardment of the Archbishop of Canterbury's position by the Ritualist Party.—*Westminster Gazette*.

Lord Halifax, and three London vicars have refused to give up the ceremonial use of incense in their churches. The bishops of both provinces met at Lambeth palace late in November to consider what steps should be taken in relation to these recalcitrant clergy, but as yet nothing definite has been announced as to their future policy, which some papers believe will be drastic. The London *Guardian*, referring to this rumor, appeals to the bishops to pause before entering upon what would in its opinion result in disaster to the Church. *The Church Times* thinks the horizon is "overcast and threatening," and that "notes of alarm are spreading." Speaking of the rumor that the Bishop of London will prosecute the disobedient clergy, it says: "Shall this sacred discipline be used to bolster up an opinion so doubtful, to say the least, and so unimportant in principle, as that of the archbishops in the matter of incense?" The High-Church devotee, the Duke of Newcastle, urges the "Catholic" clergy to enlist in a religious war, and "to present a united front to the enemy"—the bishops. He declares that disestablishment is the only remedy for "Puritan tyranny." *The Church Review* has organized a protest to be sent to the primate, accusing him of "not merely attempting to define by an individual and autocratic exercise of power the ceremonial practices of the Church in this land, but also to press such definition upon dioceses of which he is not the ruler." This document at once found four thousand signers. Dr. Joseph Parker, the famous nonconformist divine, urges disestablishment for a reason just the opposite of that given by the Duke of Newcastle. He says that "having considered the prayer-book for years, and considered it in all lights and aspects," he is "growingly of opinion that, taking the book as a whole, it is saturated with the very spirit of popery." The London *Daily News* replies that the Pope, who ought to be an authority, and an infallible one, upon this subject at least, does not agree with Dr. Parker; neither did Newman nor Manning when they left the Anglican establishment for what some High Churchmen are fond of terming the "Pope Church."

Coming to American comment on the situation, *The Church*

Standard does not like the vexatious and continual discussion of an alleged "crisis" in the Church of England, and thinks that it is not dangerously critical, but only one of those ailments which the English and American branches of the Anglican communion pass every year or two—in a word, a sort of recurrent ecclesiastical measles. This cheerful view of the case is not the one held by some other American church papers, however. But even tho it does not regard the malady as serious, *The Church Standard* admits that it is unpleasant, and asks how the Church is to get out of it:

"High Churchmen of all classes and most sincere Low Churchmen were agreed in these two propositions which have been conceded in respect of every other religious body in the United Kingdom: that no secular power is competent to legislate for the Church, and that no secular court is competent to exercise jurisdiction in or over the Church, in matters spiritual. Henceforth the Church's laws must be made, or must at least be approved, by the convocations of the Church; and the Church's courts must in like manner be established by the Church. The principle is sound, but it is not easy to apply to an establishment; and while it is not likely to be disregarded in the future, it discredits some past legislation and some judicial pronouncements of former years. The plain fact is that, just as things are, the Church of England has no courts of her own; and when ponderous speakers in the House of Commons laid the blame of the 'crisis' on the bishops, the bishops answered that, having no power, they could have no responsibility for anything more than the right use of their moral, personal, and official influence."

The Living Church (December 9), which is rather High Church in its sympathies, says:

"Sad it is to think of the contrast all this presents to the state of things which seemed to have established itself since the closing days of Archbishop Tait. He had tried the policy of force, and found it useless for any desirable end."

"It is not necessary to rehearse the steps by which these conditions have been so suddenly changed. That they have changed seems only too certain, and the outlook is far from encouraging. The worst feature of the case is the one-sidedness of the whole business. As *The Guardian* says, there is 'an unfortunate disproportion between the violations of ecclesiastical law which are forbidden, and the far graver violations of ecclesiastical law which are condoned or left untouched. It is this disproportion more than anything else that has led to the soreness and sense of injustice that prevail among the clergy who have obeyed the archbishops' decision.' It calls the things singled out for prohibition 'trifles,' which it is proposed to treat as 'more heinous than things which involve the essentials of faith or morals.'"

A New Christian Manuscript of the Third Century.—The manuscript recently discovered by Monsignor Rahmani, the Uniat Syrian Patriarch of Antioch, has been published under the title "The Testament of Jesus Christ." *The Independent* (December 21) says that the manuscript is a thousand years old, and is a translation of a Greek original of a much earlier date, probably of the third century. Various details of church order are ascribed by the writer to the Lord, and are represented as being spoken by him. *The Independent* says:

"The full accounts of it which we have seen do not bear out the remarkable statement which aroused our doubt, that catechumens were taught to repeat the Apostles' Creed. It makes the bishop the ruler of the church, and provides a different prayer for his consecration from that for the ordination of elders. Presbyters are of two classes, of age and of eminence. The most remarkable point is that besides deaconesses there is another order of women that stand far above them, the 'widows,' once called 'presbyteresses.' They are ordained apparently by laying on of hands, and the form of ordination is given. The bishop is chosen by the people at large, and ordained with a twofold laying on of hands. He is never to taste wine, except at communion; and never to eat meat. In the prayer of ordination of the presbyters there is nothing said about the conferring of grace to offer the sacrifice of

the Eucharist, which the Pope lately said was a fatal defect in the Anglican form of ordination. The Eucharist was to be observed as the Sabbath and on fast days. It is very remarkable that this document provides that there shall be no laying on of hands for the diaconate or presbyterate in the case of those who had been confessors in prison or in chains. They had received especial warrant by the protection of God, in the same way as the Holy Spirit gave ordination to prophets. But a bishop was to receive the imposition of hands. This does not seem to be a heretical composition, altho it may have expressed ideally the views of the writer."

ANOTHER GOSPEL RECORD FOUND?

THE researches that are being carried on in the monasteries and libraries of the Orient have resulted in another interesting find. Prof. J. Rendel Harris, in *The Contemporary Review* (December), tells of the discovery, which consists not only of a new composite gospel, but of three apocryphal books assigned to Peter, James, and John. He says:

"It was my good fortune recently to find among a pile of Syriac leaves which had arrived from the East a document which contained in itself one Gospel and three Apocalypses woven together; the Gospel being named after the twelve apostles and the Apocalypses being assigned to Peter, James, and John respectively. I fastened my hungry eyes on this curious combination much in the same way as Peter fixed his on the sheet let down from heaven by four corners and filled with all kinds of four-footed beasts and creeping things innumerable. I, at all events, was prepared to kill and eat! In such matters I have no Petrine scruples. The title was appetizing enough, in view of the fact that the early Christian literature showed an acquaintance with a Gospel which was said to be the Gospel according to the twelve, which Gospel was current at least as early as the second century. Then there was similar evidence, both by patriotic allusions and by the actual discovery of an Apocalypse of Peter; and there was also extant an Apocalypse of John in Greek, which differed from the canonical Apocalypse. So it is not to be wondered at that I attacked the new document with great zeal and fervor."

The actual manuscript appears to be of the eighth century. Mr. Harris thinks, however, that the date of composition is much earlier. The following are the opening verses describing the birth and childhood of Christ:

"THE GOSPEL OF THE TWELVE HOLY APOSTLES,

"TOGETHER WITH THE REVELATIONS OF EACH OF THEM: DONE FROM HEBREW INTO GREEK AND FROM GREEK INTO SYRIAC.

"The beginning of the Gospel of Jesus the Christ, the Son of the living God, according as it is said by the Holy Spirit, I send an angel before His face, who shall prepare His way.

"It came to pass in the 309th year of Alexander, the son of Philip the Macedonian, in the reign of Tiberius Cæsar, in the government of Herod, the ruler of the Jews, that the angel Gabriel, the chief of the angels, by the command of God went down to Nazareth, to a virgin called Mariam, of the tribe of Judah the son of Israel (her who was betrothed to Joseph the Just), and He appeared to her and said, Lo! there ariseth from thee the one that spake with our fathers, and He shall be a Savior to Israel; and they who do not confess Him shall perish, for His authority is in the lofty heights, and His kingdom does not pass away.

"Then Mariam was perturbed at this word, and was exceeding terrified, and Mariam answered and said, 'And how is it possible that this thing should be as thou hast said, since a man hath not known me, and thou announcest a son to me?'

"And the angel said to her, 'Verily, for thus the God of greatness wills it, there comes forthwith the Holy Ghost, and the Lord dwells in thee.'

"And Mariam knelt and worshiped God and said, 'My Lord, may it be unto me according to thy word.'

"And Mariam bore a son in Bethlehem of Judah, and His name was called Jesus the Savior, and the Ruler, and the God who is over all; according as the Holy Spirit spake by the mouth of David the prophet; and He hath put all things under His feet.

all sheep and oxen, also the beast of the field, and the fowls that are in heaven, and the fish of the sea, which pass through the paths of the seas; and there hath been made subject to Him, to this Jesus, all that is in heaven and all that is in the earth.

"And after a short time, viz., eight months, he fled from Herod into Egypt, in order that all things that are written might be fulfilled, and after the death of Herod there appeared an angel to Joseph, and he brought the boy back to the land of Israel; and He grew and attained to full stature, according as it is written by the four truthful evangelists (and this is the preaching of the Holy Gospel)."

PROPOSED FEDERATION OF THE PROTESTANT CHURCHES OF GERMANY.

ALTHO Germany is generally regarded as a leading Protestant power of the world, there is not in existence such an organization as the Protestant Church of Germany. The political unity of the Fatherland has not been followed by ecclesiastical unity, and there are now about forty-five Protestant state churches in the empire, about twenty more than the reare component political parts. Every state has its own separate church organization, and in some, as in Prussia, there are more than one. These state churches have no official connection with each other, nor do they in any way cooperate. So far as organization is concerned, they are as far apart as are the various denominations in American Protestantism. Naturally, the desire for a closer connection has made itself felt, and of late it has been championed by the veteran theologian, Professor Beyschlag, of Halle, the famous author of "The Life of Christ," who has sent to all the six thousand Protestant pastors of Germany his pamphlet entitled "Das Bedürfniss einer engeren Verbindung der deutschen protestantischen Landeskirchen" ("The Need of a Closer Union between the German Protestant State Churches"), which is attracting the widest attention throughout the empire. His scheme is practically the following:

There is to be no formal union of the various state churches, nor are these to lose their historical identity in the proposed new arrangement. Not a union is proposed, but a federation of the state churches, with the Prussian Church, which represents the Emperor, the *summus episcopus* of the Protestant Church of that kingdom, as the head. The confessional status of each church shall remain undisturbed.

The object of the federation is to unite the churches of the entire empire for practical purposes. Chief among these purposes is cooperation in providing for the religious needs of the Germans in the Diaspora, i. e., those who are scattered in the various foreign lands and need religious care. Then, too, the Protestant Church of the empire must have some means by which it can, as a body, be represented, just as the Catholic Church has a representative in the Pope. A further but later purpose is to secure unity in church government and polity. In other words, it is to be, with the necessary changes, a federation for the good of the church such as the organization of the empire has been for the state.

This federation is to find its expression in an imperial Protestant synod, which shall consist of representatives of the various state church governments, as also of the congregations, in such proportions shall be agreed upon. The officials of this synod shall be the representatives and the executive board.

It is not proposed to wait until all the churches of the empire have given their consent, but to do as the state did in 1866, when the North German Confederation was formed by about two thirds of the German states, followed in 1871 by all the rest. Beyschlag and his friends are convinced that such leading states as Prussia, Würtemberg, Baden, Hessen, and Weimar will be ready at once to enter into this new relation, and that the others will sooner or later follow. The Prussian General Synod, which embraces probably one half of the Protestants of the empire, as early as 1891 declared its willingness to form a federation with the other churches.

Quite naturally this ambitious and far-reaching scheme meets both with favor and criticism. Words of approval come from both liberal and conservative ranks. At the recent Inner Mission Congress in Strassburg, composed of practical church workers from all over the empire, the proposal was warmly indorsed. In the Leipzig *Kirchenzeitung* (No. 44), probably the most influential church paper in Germany, and thoroughly conservative, the plan is calmly discussed and its feasibility admitted, altho with some provisos. It thinks that there are no insurmountable obstructions to such a federation, as already a unity in essentials exists between the state churches. The general tendency in recent years has been in the direction of closer relations between the churches. They have learned to recognize each other at least unofficially, and members of one state church pass over to another state church without objection or hindrance. In some organizations, such as the Gustavus Adolphus Society, the Gottes Kasten, the Protestant *Bund*, the members of the various churches do actually work shoulder to shoulder.—*Translation made for THE LITERARY DIGEST.*

THE DISTINCTIVE MARK OF CHRISTIANITY.

AMONG the multitudinous forms under which Christianity shows itself—the magnificent pomp of Catholicism, the severe simplicity of the Quaker, the complicated creed of the historic churches, and the creedless belief of Unitarianism—it is of the utmost difficulty to pick out one mark which can be justly called the essential feature of the Christian faith. Prof. C. C. Everett, of Harvard University, finds not only that this distinctive mark can not be found in the spheres of creed and worship, but that it is not to be discovered in the sphere of moral precept. The substance of the Golden Rule is to be found on the lips of sages of almost all the great religions, and Confucius, Buddha, and Mohammed preached it with as much explicitness as did Christ. Buddhism, preeminently, says Professor Everett (in *The New World*, December), is a humanitarian religion. What then is the special mark of Christianity? The writer says:

"In my own thought the specialty of Christianity is found in the fact that it has no specialty. I find that other religions can be described more or less perfectly by certain formulas. They have certain salient points; one has one, and another has another. One emphasizes one truth and another another. One elevates a certain aspect of life, and another another. In Christianity the whole level of life is lifted. We can not put it into a formula except so far as we may wish to emphasize certain aspects of it. We can not attach a tag to it which shall describe its content. We say that it is love to God and man, but how about that personality which has been the source of its greatest power over the hearts and lives of men? Its distinction I find to lie in its universality.

"We are in the habit of speaking of religions as if they were many. In fact, there is but one religion, of which what we call religions are the more or less partial manifestations. This one religion is not to be found by seeking for what is common to all religions. The element reached by such a process of abstraction would contain nothing that is not found in the lowest form of religion. The one religion differs from the historical religions, not through being more abstract, but by greater concreteness. It is the imperfect religions that are abstract, and their imperfection is found in this abstractness. Buddhism, as we have seen, takes the humanitarian elements and holds them apart from the element of conscious relationship to God. I have tried, not to prove but to illustrate, the thought that Christianity differs from other religions in its greater concreteness, and thus in being the most perfect manifestation of the one religion.

"Christianity differs from other forms of religion, as we have seen, by its larger completeness. They open to the life of God and man in one or two directions only. Christianity is like the holy city of John's vision, with gates opening to the North and the South and the East and the West, fitted to absorb into itself what comes from every quarter, and to exert its power in every

direction for the subjugation and service of the world. There could be no more sublime vision than the rising of this city out of the earth. First come here and there the partial manifestations of which I have spoken, forerunners of the great consummation. Then Christianity appears, which has the germinant elements of development in all directions, and is the most complete revelation of the God who is manifesting Himself in all.

"Such, as I understand it, is Christianity, the religion that was revealed to the world through Jesus, and somewhat less purely through His apostles. It has been wrapped in by forms and dogmas that men have believed were essential to its very being. They have had power because the life of Christianity was within them, tho it was not from them. In these later years this life is beginning to show itself more clearly in its simple beauty, as it has been beheld now and then by some in every church, and by some also who were not recognized as belonging to any church."

LEGENDS OF CHRIST'S CHILDHOOD.

THE canonical Christian Scriptures, as has often been remarked, are singularly reticent concerning the incidents of Christ's early life. Yet when we remember that the childhood and youthful character of any great man are not only of particular interest to us but full of most valuable lessons, it is difficult to understand why the New-Testament writers should have left that period in the life of Jesus practically a blank. We know, however, that the Christians of the Apostolic and post-Apostolic age of the first and second centuries felt little interest in the details of Christ's life, but concentrated their thought upon the last years of His ministry and upon His teachings. But the later Christians of the post-Nicene period, having settled the main details of creed, canon, and liturgy, began to turn lovingly to Christ's life, and a great body of legendary story soon came into existence, of which the apocryphal gospels of Matthew, James, and Thomas, and the Arabic Gospel of the Infancy are examples. These works date from the fifth to the ninth century, and cover the period of Christ's life from His extreme infancy. He is represented as speaking immediately after His birth, as being crowned by children as their king, and as performing miracles of many curious and even grotesque kinds. In *The New World* (December), Prof. Murray A. Potter, of Dartmouth College, quotes several of these early stories. Here is one of them from an apocryphal gospel:

"When Jesus was six years old, His mother directed Him to draw some water. And when Jesus came to the fountain, there were multitudes there, and they broke His water-pot. But He took His garment, with which He was clothed, and filled it with water, and brought it to Mary His mother. And when His mother saw the miracle which Jesus did, she kissed Him and said, 'Lord, hear me and save my son.'

"Now when Jesus was five years old, there came a great rain upon the earth, and the child Jesus walked through it. He gathered it into a pool and commanded by His word that it should become clear, and immediately it became so. Again, He took of the clay which was in that pool and made of it the number of twelve sparrows. Now it was the Sabbath when Jesus did this among the Jewish children; and the Jewish children went away saying to Joseph His father, 'Behold, thy son was playing with us, and he took clay and made sparrows, which it was not right to do on the Sabbath, and violated it.' And Joseph went to the child Jesus, and said to him, 'Why hast thou done that which it was not right to do on the Sabbath?' And Jesus, spreading out His hands, commanded the sparrows, saying, 'Retire aloft and fly; ye shall find death from no one.' And they flew up and began to praise Almighty God. And the Jews who saw what was done were astonished and departed, declaring the signs which Jesus did. But a Pharisee who was there with Jesus took an olive branch and began to disperse the pool of water which Jesus had made, and when Jesus saw this, He was angered and said, 'Impious and ignorant man of Sodom, what wrong have the pools of water, my works, done thee? Behold thou shalt become as a dry tree, nor having roots, nor leaves, nor fruit.' And

straightway he was withered and fell to the earth, and died. And his parents carried away his dead body, and they blamed Joseph, saying 'Behold what thy son hath done; teach him to pray and not to blaspheme.'

"And a few days after, as Jesus walked through the town, one of the children ran against Him and smote Him upon the elbow, but Jesus said to him, 'Thou shalt not finish thy journey.' And immediately he fell to the ground and died. Now when they saw the miracles, they cried, saying, 'Whence is this child?' And they said to Joseph, 'Such a child ought not to be among us. Depart from this place, or if thou must be with us, teach him to pray and not to blaspheme.' And Joseph called Jesus and chid him, saying, 'Why dost thou blaspheme? The inhabitants cherish hatred against us.' But Jesus said, 'I know these words are not mine but thine, yet I will be silent for thy sake, but let them see in their wisdom.' And immediately they who spake against Jesus were made blind. And they walked about and said, 'All the words which proceed from His mouth have effect.' And when Joseph saw what Jesus did, he took Him by the ear in a rage. But Jesus being troubled said to Joseph, 'It is enough for thee to see me, not to touch me. For thou knowest not who I am, but if thou knewest thou wouldst not grieve me. And altho now I am with thee, I was made before thee.'"

One very important group of childhood legends is not so generally known—that of the Old and Middle English period, including the medieval stories which gradually grew up about the figure of Christ. One of these, from Caxton's "Infantia," published in 1478, is quoted by Professor Potter as affording an interesting picture of school life as it doubtless existed in Caxton's time:

"One day Jesus was brought to a certain teacher to be taught His letters. The teacher commenced in the proper fashion, saying, 'Say Alpha!' To which Jesus, 'Tell me first what Beta is and then I will tell you what Alpha is.' On account of this answer the teacher was indeed angry. 'Is that the way you answer your teacher,' and he struck Him on the cheek. Now the teacher was really severe beyond all bounds. Turning to him, Jesus said, 'Impious and cruel teacher, is it thus that you teach boys. Amen, I say unto thee, thou shalt never smite more, in that through ignorance thou smotest thy Lord and teacher.' The teacher at that instant fell to the ground from his seat and died. Jesus then returned to His mother, followed by a great multitude of boys worshiping Him and saying, 'Blessed be thou, Jesus, who hast taken away from us that vilest of masters. We beseech thee also not to restore him to life.' Jesus said to them, 'Choose for yourselves another teacher. Verily you will never have him again.' And they returned each to his home. . . .

"Such, then, are the childhood legends of Christ, curious pieces of patchwork whose heterogeneous elements were taken for the most part from the Old and New Testaments, Eastern and Western folk-lore, and perhaps also from Jewish-Christian polemic. Edifying and amusing to the Christians of a long succession of centuries, they are to most people of to-day either droll or stupid, or, to the very orthodox, profane and scandalous. It is a pity that the latter point of view should exist at all. The vast, inextinguishable laughter of the Greek gods was lacking in the Hebrew religion; nevertheless, tho the Western Aryan adopted the latter, the old smile breaks forth in these strange histories of the childhood of Christ."

Decline of Biblical Allusion.—Frequent comment is made of late years upon the popular ignorance of the English Bible. The *New York Nation* recently attributed this to the decline of systematic reading of the Bible in the family and the schoolroom. *The Churchman* (Prot. Episc., December 16), commenting on the remarks of *The Nation*, agrees with that paper in its opinion that the ordinary reader or hearer nowadays seldom knows what the writer or speaker means when he illustrates his theme with a phrase from the Psalter or a reference to the Book of Judges. Says *The Churchman*:

"It was on the query paper of the Harvard College library that an inquiring person wrote, 'Will some one direct me where to find the story of Samson?' and some informed person answered

underneath, 'Book of Judges.' The inquiring person then persisted in a further question, 'But where can I find the Book of Judges?' To which the former intelligent answerer replied, 'Bible, you fool!' That was a good while ago, but the conditions have not greatly changed for the better. It is an actual fact, incredible as it may sound, that a student in a woman's college said within the present year: 'What *are* the Ten Commandments? I find them so often alluded to in Chaucer.'

"Indeed, so ill acquainted with the content of Holy Scripture is even the ordinary student of theology, that at the Episcopal Theological School at Cambridge it has been found desirable to establish a new course whereby the men of the junior class are taken through the entire Bible in the course of the year. They are required to read the Bible through, a book or more a week, to put upon a blackboard an analysis of every book, and to answer questions which, setting aside all matters of criticism, are addressed altogether to the facts."

IS CHRISTIANITY A RELIGION OF PEACE?

DR. MAX NORDAU is not much of a religionist, and has been at some pains to make it known that the Zionist movement, of which he is one of the leaders, is a racial rather than a religious movement. He has had some hard things to say about the rabbis, and he now has some rather severe things to say about Christian preachers. In *The North American Review* (December), he considers the relation of the Christian Church to the subject of war, and finds a striking discrepancy between theory and practise.

He uses the Transvaal as a starting-point, and asks why it is that such a chorus of bitter denunciation of England's course has arisen throughout the world. His answer is that this chorus is due to "resentment because of a lost illusion." The war in South Africa follows too soon upon the heels of the Peace Conference, and the milk of human kindness is turned sour by the thunder of the great guns at Ladysmith and Modder River. The religious doctrines of the various nations require, logically, that war cease. That is what all Christians preach, and they were grateful to the Czar for taking their alleged love of peace as good coin of the realm, instead of counterfeit, and giving them a chance to pose as advocates of peace and good will. They are now vexed with England for so quickly giving the lie to these pretensions. "An unmasked hypocrite can not be expected to be in good humor."

After some time spent in this sort of reasoning, Dr. Nordau expresses the conviction that religion is by no means a necessary advocate of peace. The Judaism of the Old Testament and Islamism are frankly bearers of the sword, and Jehovah, the Lord of Hosts, like Allah, was a warlike God. But is not at least Christianity "the religion of peace"? The writer answers:

"Above the portals of the Church of Christ, the Christmas greeting of the angels, 'Peace on earth and good will to men' glows as an inscription. This is theory. The practise of the Church is quite different. She has scarcely ever prevented war and frequently pressed the sword into the hands of the faithful. In all the centuries of her sway, the Church has shed blood like water. She exterminated the Goths because of their Arianism, and she does not seem to see that it is blasphemy to ask of the God of love to look with favor upon murder and destruction; or to ask of the God of the universe to take sides with one portion of His children against another portion; especially when she knows that that other portion is turning to God with exactly the same impertinent request. Never yet has a clergyman had the common sense to say: 'I refuse to pray for the victory of our arms. From the altars in the enemy's country this same prayer is rising to heaven in this self-same hour, and to harken to both prayers, to grant victory to both hostile armies, lies beyond the pale of even God's omnipotence.' When, in the dispute over the Carolines, Prince Bismarck asked the Pope to act as arbitrator between Germany and Spain, Leo XIII. indeed declared that it was part of his office to make peace between Christian nations. But no head of a state Church has yet dared to answer the temporal authorities, who asked his blessing upon banner and host: 'You desire

war, and our God teaches peace. I can not bless the hand armed to maim and kill men. If you must shed blood, do so; but do not mix God and His religion with your devil's work.'"

NEW LIGHT ON THE DATE OF CHRIST'S BIRTH.

THE passage on which the chronology of Christ's birth has been based is found, as every student of the New Testament knows, in the first four verses of the second chapter of St. Luke's gospel, which in the Revised Version reads as follows:

"Now it came to pass in those days, there went out a decree from Cæsar Augustus, that all the world should be enrolled. This was the first enrolment made when Quirinius was governor of Syria. And all went to enroll themselves, every one to his own city. And Joseph also went up from Galilee, out of the city of Nasaret, into Judea, to the city of David, which is called Bethlehem, because he was of the house and family of David."

Numerous difficulties have been suggested by this passage, and even the place of Christ's birth has been questioned recently by Prof. W. M. Ramsay, of the University of Aberdeen, in a volume entitled "Was Christ Born at Bethlehem?" The question of the date of His birth, however, is one which is of most general interest to the world, and upon this aspect of the subject some new light has been thrown by a number of Greek papyri found in Egypt by Grenfell and Hunt, and shortly to be reproduced in the second volume of "Oxyrhynchus Papyri" by the Greco-Roman Branch of the Egypt Exploration Fund. Says *Biblia* (December):

"The one point with which we are concerned is the date of the enrolment ordered by Augustus, which brought Joseph to Bethlehem. Historians are agreed that a census or enrolment, for the purpose of levying a poll tax, was held throughout the Roman empire at intervals of fourteen years; but hitherto no evidence has been known of any census earlier than A.D. 62 in the reign of Nero. From this year down to A.D. 202, in the reign of Septimius Severus, the recurrence of the census every fourteen years is abundantly attested. The discoveries of Messrs. Grenfell and Hunt now prove that the census cycle in Egypt can certainly be carried back to A.D. 20, in the early part of Tiberius's reign; and they also raise a strong presumption that the first of these fourteen-year censuses was held under Augustus in B.C. 10-9. The evidence is too minute and complicated to be even summarized here. The arguments of the authors cover no less than seven pages of small print, and to appreciate them requires familiarity with the technical language of Roman administration in Egypt, which is almost as forbidding as the technical language of English administration in India. The important matter is that we are now for the first time put in possession of contemporary confirmation of St. Luke's statement that 'There went out a decree from Cæsar Augustus that all the world should be enrolled.' It is true that the year (A.D. 10-9) is not precisely that which we should expect. Professor Ramsay tries to place the date of Joseph's visit to Bethlehem in B.C. 6. But the actual year of Christ's birth is still a matter of acute controversy. The one point that may now be considered as settled by Messrs. Grenfell and Hunt's discovery is that the first census ordered by Augustus certainly occurred in the time of Herod."

RELIGIOUS NOTES.

A METHODIST Episcopal Church of Stamford, Conn., according to newspaper reports, recently expelled from its membership a venerable brother because he prayed in too loud a voice. Much comment has been elicited on the great change which this shows from the emotionalism of early Methodist days. One paper says in behalf of brethren of emotional piety, "If they want to 'holler' let them 'holler.'"

In a recent speech, replying to Dr. Leyds's denial of the statements of the *London Tablet* (Rom. Cath.) concerning Catholic disabilities in the Transvaal, Mr. Balfour said: "In the Transvaal no Roman Catholic can hold any office of any kind whatsoever. In Ireland, as you know, for more than two generations practically every office has been open to all Irishmen. The majority of the Irish members in the House of Commons are Roman Catholics. Many of the judges on the Bench are Roman Catholics, and, as far as I know anything about the government of Ireland, there has always been a desire to see that competent Roman Catholics should have their fair share of all administrative posts."

FOREIGN TOPICS.

GERMAN DISLIKE OF GREAT BRITAIN.

ONE of the most important psychological phenomena in international politics is the hitherto undoubted dislike of the German people for England. In view of the openly professed desire of the British Government and the assumed desire of the German Emperor that closer relations between the two nations be established, this dislike becomes of special importance just now. Its existence can not be questioned. Even the German Radicals of all shades, whose influence in the middle of this century caused the introduction of parliamentarism modeled to a large extent after the English pattern, share in this dislike. We find two interesting attempts made recently, one in a German and one in an English paper, to account for the feeling, and the conclusions reached are about the same in both papers, namely, that England's Foreign Office is to blame. The Breslau *Schlesische Zeitung*, in a long article which we condense, offers the following explanation:

Let us speak plainly: the German people come more and more to the conclusion that Great Britain is the worst enemy of Germany, an enemy all the more dangerous as she has an aptitude for biding her machinations. The basis of pleasant relations among nations, as among individuals, is confidence. But who can trust England, knowing that the chief characteristic of her policy is faithlessness? Emerson [in "English Traits"], one of the most enthusiastic admirers of English private character, points out that England's foreign policy has rarely been noble and just. Reliable as the English are in private life, their public life is marked by faithlessness. England always speaks of her "noble aims." She "liberates oppressed nations," she "fights for justice," and "aims at the preservation of the balance of power." Afterward, the deluded nations find out that the destruction of their prosperity, the prevention of their maritime development, the possession of important fortresses, highways, and territories, were the real aims. We Germans especially have been sufferers. When England had gained her point in the wars of the Spanish Succession, she deserted Emperor Joseph I. The same thing happened to Frederick the Great in the Seven Years' War. England betrayed her allies in 1814, and again after Waterloo, when she prevented Germany from obtaining her lost provinces. The never-failing cloak for such treachery is a change in the ministry, more apparent than real. Germany's regeneration was instinctively feared and retarded as long as possible. What England did in 1848, 1851, 1864, and 1871 to prevent us from becoming united is fresh in the memory of all. As a Dutch statesman has said: "England counts upon the stupidity of the others." Germany alone failed to be cheated between 1860 and 1890; but the short-sightedness of the others is actually the secret of British successes. We quite believe that the English papers mean what they say when they assert that they wish for nothing better than a continual *entente cordiale* between the two countries. What they do not say, but what we have learned by bitter experience, is that we must be the "under dog" in all dealings. England will always treat us as the sly trader treats the cavalier. Witness the Samoan affair! Financial circles in Germany may continue to be friendly to England; but the German people, in an overwhelming majority, will have nothing to do with England. The policy of the German Government must reckon with this fact, for that policy can succeed only when it has the masses behind it. The influence of the *haute finance* is to be feared, for it is international. We must always remember that British policy is shaped in accordance with the following naïve remark in *The Saturday Review*: "The Transvaal is the richest country of its size in the world; moreover, a war with it will not disturb our trade in the least."

An anonymous writer in *The St. James's Gazette* (October 19) gives a striking array of facts to show that the estrangement of the two nations is due to England's foreign policy rather than to any lack of sympathy in the people themselves. The press of both countries come in also for blame. We quote him nearly in full:

"In science and arts the two nations stimulate and complement

each other in every way. Humboldt's scientific enthusiasm kindled that of Darwin, and Darwin's influence in its turn made German scientists Darwinians. Voltaire called Shakespeare a buffoon, but the king of German critics, Lessing, placed Shakespeare on so eminent a pedestal in German literature that it is not too much to say that Shakespeare is the father of the modern German drama. In return, who is ignorant of the influence exercised by Schiller and Goethe on Coleridge, Scott, and Carlyle? In the market-place in Halle stands Handel's statue with its face directed to England, and the inscription on it records the intimate sympathy between his English and German friends and admirers. Can any one calculate the benefits conferred on England by the German Reformation? In matters educational England endeavors to follow the lead of Germany, and in politics Germany is a willing disciple of England. Thus in all the concerns that give value and dignity to our civilized society, life-giving ideas fly, like the weaver's shuttle, to and fro between these two allied races, and 'wirken der Wissenschaft lebendiges Kleid' [weave the living garment of wisdom].

"When the undercurrent on both sides of the German Ocean follows thus powerfully one common impulse, one asks with amazement: Whence come these shallow cross-currents on the surface? No doubt German journalism is to blame; but is England quite blameless? Germany's Schleswig-Holstein question of 1864 was, down to minute details, analogous to England's present Transvaal question, but with this difference, that Germany's rights in Holstein had received the sanction of international treaties, and that her action in those duchies was the first step necessary to bring about that German unity, which had been the dream and aspiration of German poets and thinkers, the passionate desire of the people, and the indispensable condition of preventing Germany from sharing the fate of Poland. Yet the press of this country assailed the two German powers with unmeasured terms of abuse, and the English Government of the day actually proposed to Napoleon an aggressive alliance against Germany. Fortunately, Napoleon declined. Again, when after Sedan the war was practically decided, France was enabled to protract the struggle through six weary, bitter winter months by the arms supplied her from this country. In more recent times, when the Triple Alliance was formed and hailed by Lord Salisbury himself as 'glad tidings,' Germany assiduously wooed England, begged her to convert the Triple into a Quadruple Alliance, and thus secure peace in Europe; but England turned a deaf ear to all these pleadings and shut herself up in her 'splendid isolation.' Can one wonder at Germany's soreness?"

The supposition that the German Emperor is well-disposed toward England finds some confirmation in the fact that, despite the bitter feeling of most German papers in regard to England's course in South Africa, papers like the *Kölnische Zeitung*, which reflect government opinion, continue to speak favorably of England, and are in consequence accused of receiving English bribes. Yet even the *Kölnische* warns the English. It complains of the partly contemptuous, partly patronizing, tone adopted by the British press—at times toward the Emperor, at times toward the German people—and says:

"English press comment in the style of the London *Morning Post* has brought it about that all sympathy for England has long since vanished. . . . We do not know that our English cousins care very much whether we wish them ill or not, and we still believe that the estrangement between the two nations is not justifiable. But we fear it can not now be removed, and are forced to lay bare its causes."

The French, in the mean time, whose exasperation with England is more recent than with Germany, are making more or less obvious overtures to the latter nation. In the *France Militaire*, which deserves special attention as the organ of the French army, is the following open bid for an alliance:

"It must be acknowledged that the emigration from Alsace-Lorraine is decreasing and the French spirit there declining. The annexed provinces doubt that they will ever be returned to us, and they know that no French Government will think again of a war of revenge. The younger generation with us knows of our

defeat only as an historical fact, and does not feel it as keenly as those who took part in the war. . . . The idea of revenge, nevertheless, has caused us to neglect our navy and our colonial defenses. It has driven us into the arms of Russia, which country has found much advantage in the alliance with us, but I am not aware that she has ever done us a service. I do not even believe that she particularly assisted us during the Fashoda trouble. If she did, her influence must be very small. . . . England is the enemy against whom we must hasten to arm. Is she not the hereditary enemy? History teaches that we have done at least as much harm to Germany as she did to us; to England we are yet considerably in debt. . . . An alliance with Germany would enable us to attend to our navy, so that we need not fear to be treated like the Transvaal. I and many others believe that we merely waste our time with our friends the Russians."—*Translations made for THE LITERARY DIGEST.*

THE MILITARY WEAKNESS OF GREAT BRITAIN.

PRINCE BISMARCK once sneered at Great Britain as "a country called a power by courtesy," and every foreign critic acquainted with the condition of Great Britain's army has in recent years held that, however strong may be her navy, the army is inadequate for purposes of conquest when opposed to a white race. The recent developments in South Africa give point and edge to these criticisms, and reveal to the general public that the confidence expressed by the British press has been creating a sort of "fool's paradise." Up even to the end of November, the British papers continued to describe the forces of their empire in superlative terms. *The Standard*, Lord Salisbury's mouthpiece, said:

"We now know that there will be two, or possibly three, divisions operating from the Cape Colony, or converging on parallel lines. Lord Methuen will march to the relief of Kimberley and Mafeking, and then, presumably, enter the Transvaal from the Bechuanaland border. General Gatacre, advancing from Queenstown, will presently clear out the Boers who are making themselves so much at home in the neighborhood of Aliwal North; and a third division is being collected at Naauppoort, just reoccupied by our men, to retake Colesberg, and then to cross the

Orange River somewhere about Norvals Pont. The march of these three fine armies upon Johannesburg and Pretoria should be mainly a question of transport and supplies. It is difficult to suppose that any opposition, which they can not easily brush aside, will be offered to the progress of such a force, provided, as it will be, with an artillery of whose power and numbers the Boers can have as yet no conception. It will be well for them if they are really so far discouraged by their Natal experiences as to shrink from the greater conflict on the veldt of the Free State and the Transvaal. Otherwise, disasters await them of which, in their ignorance of modern war and modern weapons, they scarcely dream."

To-day, many British papers realize that the attempt in South Africa is in danger of resulting in disaster to the empire itself. *The London Star* says:

"The stake which the gambler Chamberlain has risked upon a throw of the dice is not South Africa only. The whole British empire is in danger. But it is too late for us to withdraw; we will have to continue the game, even if we must risk our militia in South Africa."

There are British papers that are still, however, or were, up to a few days ago, consoling their readers with the belief that the Boers must be suffering much more than they admit, and will get tired of the struggle on that account. *The Edinburgh Scotsman* says:

"Boer statistics have to be multiplied by at least ten to arrive at the truth. The moral effect of the losses on the battle-field must be incomparably greater in the Transvaal and in the Free State than on the British side; every stroke in the war may be said to go home directly to every household in the republics, while with us it is distributed over a great empire. It would not be strange, but rather a thing to be expected, if it were found that Boer confidence and Boer resistance are approaching collapse. The signs of this are numerous, alike in Natal and in the Cape Colony. Presidents Kruger and Steyn and their generals have striven, in the dearth of other means of encouragement, to keep up the courage and zeal of their followers by hard lying and deliberate concealment of the truth. . . . But late or soon comes the inevitable reaction; and as the strain increases and the true facts appear, the Boers lose with their hopes of victory their stomach for war. It is stated that the women of the republics are clamoring for peace. This may well be; they may know but a fraction of what the war has already cost them, but they know enough to convince them that nothing can come of it that can in any wise repay them for the suffering and sorrow it has brought. It is also reported from different quarters that Transvaalers and Free Staters are at loggerheads. This, too, is a likely thing enough. The interests of the two republics are not by any means identical; in fact, the burghers of the Free State must be thoroughly persuaded by now that the head of their government has wantonly broken the peace and sacrificed their independence in a quarrel which was not theirs. . . . The victories of our troops, and the measures for warning and punishing the disloyal taken by the civil and military authorities, are cowering those Boer

against the empire and the flag are breaking up before even our commanders have completed their arrangements for dealing the decisive blow."

It is difficult to find any basis for this optimism. As the genuine Boer reports (not the Pretoria despatches which also pass through British hands) come in, it is found that they overstate rather than understate the Boer losses, many of the missing turning up later, as after the fight at Elandslaagte. We quote a typical Boer report, received at Pretoria, October 22:

"Our losses at the engagement of Dundee were 31 killed and 66 wounded, and 30 missing, mostly as the result of the British artillery fire. All the names can not yet be ascertained, but the following are reported:

KILLED.—*Kruger'sdorp*: G. Hayken, G. Hinds. *Wakkerstroom*: Veldcor-net Sassenberg, and his brother J. S. Sassenberg, L. P. Badenhorst, J. C. Greyling, J. J. Pretorius, J. P. Botha. *Vrijheid*: H. Vermaak. *Pelt Retief*: Snelage, S. Potgieter. *Bethal*: M. Greyling, W. Pretorius, C. Brits, C. Dreyer. *Utrecht*: Dirk Uys, P. L. Uys, Lang Pietzoon, Klaassen, J. Boshoff. The names of the men of *Middelburg* are not yet in.

WOUNDED.—*Kruger'sdorp*: A. Brits, H. Wolmarans, S. F. Oosthuizen, P. L. Fourie, C. Nel. *Bethal*: Jan de Klerk, another J. de Klerk, A. Smuts. *Wakkerstroom*: J. de Lange, L. Lourens, J. Dupreez, W. Moolman, D. Kemp, J. Labuscagne, D. Joubert, J. Coetzee, P. G. Smit, H. J. Botha, P. N. M. Dupreez, A. Anderton, P. Badenhorst, Jan Jan Groenveld, B. J. Erasmus, A. J. Greyling, J. Greyling, P. S. W. Coetzee, J. C. Coetzee. *Vrijheid*: B. G. Brecener, M. J. Prinsloo.

"While writing this, fifteen of the missing have turned up. Our losses are much less heavy than we expected. It would not have been surprising if a casualty list of 200 had to be reported, as the engagement was very severe."

The foregoing is from a report by Commandant Louis Botha, of *Vrijheid*, countersigned by Gen. Lucas Meyer. It is frequently asserted that the successes of the Boers are due to their "Made-in-Germany" strategy; but this statement is not accepted in Germany, where the Boer commanders are given due credit for great ability. The Boers, it is said, merely put into practise what the Germans teach.

In the London *Morning Post* Spencer Wilkinson, whose work on the German general staff received high praise from no less an authority than General Moltke, lays the blame for British reverses upon the British officers. He writes in the main as follows:

The blunders of our commanders seem inexplicable. The only explanation—which, I hope, is erroneous—is that our officers fancy they need not apply even the most elementary principles of strategy and tactics, just because the Boers are not uniformed and drilled like European troops. This would be a grievous mistake. The Boers put into practise the most up-to-date principles of modern strategy, marching in broad columns, surrounding the enemy wherever found, and isolating his armies. This is the essence of what General von Schlichting teaches in his "Tactical and Strategical Principles of To-day," a work considered one of the most valuable hand-books in German military circles. The war is a more serious affair than the public, or even the Government, are willing to believe.

Mr. Wilkinson assumed that the Boers were numerically much stronger than the British in every engagement; but even British reports tend to explode this theory. Yet the progress of the war shows that the numerical superiority of the British has not been sufficiently great to make it overwhelming, and already the naval authorities protest against the continued use of their scanty crews. The London *Times* says on this point:

"No one can think it desirable that the War Office, in estimating the requirements of national defense which it has to satisfy, should be encouraged to regard a naval contingent as in all circumstances an available military asset. Our navy, strong as it is, is by no means inordinately strong in proportion to the duties it has to perform in all parts of the world and the requirements of sea supremacy and national security which it has to satisfy at all times. It is a very serious thing that the sea efficiency of the flagship on the Cape station and of the two most powerful cruisers we possess—in fact, the two most powerful cruisers afloat—should be very materially impaired, if not positively crippled for the time being, by having to supply contingents of officers, men, and armament for military service on land at great distances from the sea. It is true that the circumstances were quite exceptional and that the emergency was grave and urgent. . . . We have acknowledged that such considerations must be regarded as paramount on the present occasion. It would be absurd, it might, indeed, almost be called criminal, to risk military disaster out of a pedantic regard for the separate functions and aptitudes of the two services. Hence the conditions on which naval brigades can be and ought to be employed in land warfare must not be too

PAUL KRUGER: "My prisoners play tennis. So do I."

—Humoristische Blätter, Vienna.

rigidly defined. In the last resort the question must be determined, not by routine or red tape, but by common sense and a due regard to the necessities and emergencies of the particular case. All that we are concerned to insist on is that the element of emergency ought to be regarded as one of the essential conditions. If in a particular case the emergency amounts to necessity, there is no more to be said. Necessity has no law, and no one in his senses would argue that for the sake of keeping our navy at all times intact we should be content to see our army worsted in the field."

IS LIFE IN THE TROPICS HEALTHY?

IT is to be presumed that the acquisition of the colonies which Spain has been forced to relinquish must sooner or later lead to the emigration of Americans, from the Northern as well as from the Southern States, to the tropics. Can perfect health be preserved among the majority of such emigrants? The prevalent impression seems to be that the men of Northern races can not be acclimated near the equator. *The Friend of India*, Calcutta, says on this point:

"It will not do to make microbes responsible for all the ills to which the human race is subjected in the tropics. There are certain European fruits and vegetables which thrive in Australia, but in India are either totally unacclimatizable or, where this is not the case, are far from prospering equally in the two countries. In some cases the vegetables do tolerably well, but the seeds are incapable of giving rise to a second crop of similar quality. Are facts of this kind to be satisfactorily accounted for by microbes, to the exclusion of all climatic influences? Is it some kind of bacillus that constitutes the difference between the magnificent Australian horse and the poor, stunted Indian breed? . . . By acclimatization we understand the physiological adaptation of an organism to new surroundings. When, in course of time, that process is completed, so that the organism is brought into harmony with its new natural surroundings, naturalization may be said to have taken place. Colonization refers, not to a single individual, but to a group of individuals of the same species, who have collectively and individually so far naturalized themselves as to be capable of cultivating and living upon the natural resources of the soil. With regard to the European in India, it may be said that he never, or hardly ever, acclimatizes himself, in the above sense, during his stay in the country, let alone attains the next stage—the stage of naturalization. A considerable part, in fact, of his attempt toward adaptation consists in adapting his surroundings to the requirements of his organism. He shuts himself up in a darkened room for the greater part of the day, in order to avoid the excessive light; he uses a punkah to cool the air as far as possible; and whenever he goes out of the house, he does so in a carriage. Suppose a man has passed in this way three quarters of his lifetime in India, can he be said to be naturalized there? And could a group of such men, women, and children ever attempt to colonize the plains of India? The very fact of his living a healthy life in India—that is to say, a life in which excessive heat, excessive moisture, rapid changes from heat to cold, and *vice versa*, are, as far as possible, avoided—prevents him from ever becoming a fit subject for naturalization, to say nothing of colonization."

Very different is the opinion of Freiherr von Brackel, who is quoted by the Berlin *Tägliche Rundschau* as saying that his long sojourn in the tropics convinces him of their being well fitted to receive white men. We summarize as follows:

The popular idea is that Germany is exceptionally healthy, but that is not borne out by the facts. Our average life is only thirty-nine, while it is fifty in Sweden, forty-five in England, and greater in Belgium, France, Austria, and Switzerland than with us. Germany has few centenarians; Spain, in her hottest provinces, has many. In the Republic of Guatemala 20 per cent. of the people are between the ages of forty and one hundred. Were our climate as healthful as that of Guatemala, we ought to have about thirty-four thousand centenarians.

Dr. Below, who has lived a long time in Mexico, said lately before a meeting of members of the "Alldeutsche Verband":

"The number of centenarians is probably exaggerated in countries where the records are not carefully kept, but there can be no doubt that people live to riper age in the tropics than here. The effects of more light are certainly beneficial, and acclimatization is less difficult than is generally supposed. Malaria is dangerous to those alone who play with fire, and the fire is in this case—alcohol. The white races are as capable of colonizing the tropics as are the yellow."—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

MR. LECKY ON MODERN LIFE AND MORALS.

UNDER the title of "The Map of Life," the historian of the eighteenth century and author of "Democracy and Liberty" traverses the whole domain of morals. "I have all conduct for my province," might be the motto on his title-page, says *The Saturday Review*. He discusses the ethics of the press, the bar, the exchange, politics, diplomacy, war, marriage, and death, and enunciates unpalatable truths about public and private life with the authority of one who has worked his way to the front rank of the historians of the century, and whose knowledge of books is probably as great as that of any other living man.

MR. W. E. H. LECKY.

Considering modern war, and the clash of nations, Mr. Lecky finds that the danger lies less in the intrigues of statesmen than in inveterate international jealousies and antipathies—in sudden volcanic outbursts of popular passion.

After professing for eighteen hundred years the creed of peace, Christendom is an armed camp. Hardly ever, in times of peace, have the preparations for war absorbed so large a proportion of its population and resources, and very seldom has its knowledge and invention been so largely employed in continuing and perfecting instruments of destruction. He writes:

"Those who will look on the world without illusion will be compelled to admit that the chief guaranties for its peace are to be found much less in moral than in purely selfish motives. The financial embarrassments of the great nations; their profound distrust of one another; the vast cost of modern war; the gigantic commercial disasters it entails; the utter ruin that may follow defeat—these are the real influences that restrain the tiger passions and the avaricious cravings of mankind."

Mr. Lecky finds pure and almost spontaneous malevolence abundant and busy in the world. An anonymous press is largely employed, systematically, persistently, deliberately, in fostering class hatreds, race hatreds, international hatreds—by falsehood or malicious provocation.

These, and the kindred crimes in the rank fields of finance, stock-jobbing, and speculation, are commonly perpetrated, says Mr. Lecky, by educated men, who are in the enjoyment of most of the luxuries of life—flattered and favored by the conditions of modern civilization, which eagerly accords to them an influence that is malign and a social prominence that is scandalous. Hence that distrust of human character which experience tends to induce, and which is one great cause of the conservatism that comes with age.

War, absolutely inevitable, in our present stage of civilization, has its own morals, which are wholly different from those of practical life. Yet there are few fields in which, through stress of

moral motives, greater changes have been brought. Once there was no distinction between piracy and regular warfare, and incursions into a neighboring state without provocation, and with the sole purpose of plunder, were not denounced. To drag the people of a conquered state or province into slavery; to slaughter the entire population of a besieged town; to destroy every village and dwelling, and to slay every prisoner—these were the common incidents of war. Yet, from a very early period a clear, tho somewhat arbitrary, code of military morals came into formation. Greek, and still more Roman, moralists condemned all unjust and aggressive, or even unnecessary, wars. Not a few of them insisted on the duty of states to endeavor, by conferences, or even by arbitration, to avert war.

In modern times, formal declaration of war has fallen into desuetude. Hostilities between England and Spain, under Elizabeth, and the invasion of Germany by Gustavus Adolphus, were begun without such declaration; and there have been many instances in later times. To quote again:

"The treatment of the conquered soldier has steadily improved. At one time he was put to death; at another he was held in slavery; then he was permitted to ransom himself; now he is simply detained in custody until he is exchanged or released on parole, or until the end of the war. . . . The great Civil War in America probably contributed not a little to raise the standard of humanity in war; for while few long wars have been fought with such determination, or at the cost of so many lives, very few have been conducted with such scrupulous abstinence from acts of wanton barbarity."

But while assassination and the use of poison or of poisoned weapons, the violation of parole, the deceptive use of a flag of truce or of the red cross, the slaughter of the wounded, the infringement of terms of surrender, the use of explosive bullets, and the propagation in an enemy's country of contagious diseases as an instrument of war, are absolutely forbidden, yet, on the other hand, explosive shells, concealed mines, torpedoes, ambuscades, are among the permitted agencies to-day. Starvation may be employed, or the supply of water may be cut off. It is allowable to deceive the enemy by fabricated despatches, purporting to come from his own side, by spreading false intelligence in newspapers, by the employment of pretended spies or deserters, and the display of false signals.

As in the army, so in the law; the same moral difficulties obtrude themselves, the same insistence of the element of moral compromise in the profession of an advocate. Swift described lawyers as "a society of men bred from their youth in the art of proving by words, multiplied for the purpose, that white is black, and black is white, according as they are paid." Dr. Arnold expressed his abhorrence of the profession of an advocate; Macaulay and Bentham denounced the ethics of the profession, as recognized in England. But Basil Montagu urges that an advocate is simply an officer assisting in the administration of justice, under the impression that truth is most surely elicited, and difficulties most effectually disentangled, by the opposite statements of able men. "altho he may profess feelings that he does not feel, and support a cause that he knows to be wrong; and altho his advocacy is a species of acting without an avowal that it is acting." Says Lecky:

"There is a kind of mind that grows so enamored with the subtleties and technicalities of the law that it delights in the unexpected and unintended results to which they may lead. I have heard an English judge say of another, long deceased, that he had, through this feeling, a positive pleasure in injustice; and one lawyer, not of this country, once confessed to me the amusement he derived from breaking the convictions of criminals in his State by discovering technical flaws in their indictments. . . . Lord Brougham probably in no degree exaggerated when he described portions of the English law as 'a two-edged sword in the hands of craft and oppression'; and a great authority on chancery law declared, in 1839, that 'no man, as things now stand, can

enter into a chancery suit with any reasonable hope of being alive at its termination, if he has a determined adversary.'"

The moral difficulties of administering such a system were very great, and in many cases English juries, in dealing with it, adopted a rough-and-ready code of morals to suit the case. They frequently refused to follow legal technicalities which might lead to substantial injustice; and they still more frequently refused to bring in verdicts according to evidence when, by so doing, they would consign a prisoner to an excessive or an unjust punishment.

There must be many things in the profession, says Mr. Lecky, from which a sensitive conscience would recoil, and things must be said and done which can hardly be justified except on the ground that the existence of this profession, and the prescribed methods of its action, are in the long run indispensable to the honest administration of justice.

So, in politics, a good man, honest and independent, *must* in an inevitable majority of cases act with his party, even along lines in some degree at variance with his own judgment and convictions; because, if the absolute independence of individual judgment were pushed to its extreme, the result would be anarchy. If party government is to be upheld at all, there must be continual compromise, in the cabinet and in Parliament.

Most dangerous of all the temptations that beset the political partizan is war—because it may be begun or prolonged to consolidate a dynasty or a party, or to divert the minds of men from internal questions which have become dangerous or embarrassing, or to efface the memory of past mistakes or crimes. A certain element of popularity is never lacking. There are large classes to whom it is by no means a calamity—to the agriculturist it means high prices; to the profession of arms, promotion and honors; to other classes it means stimulation to special industries, a rise in the rate of interest, even the increased attractiveness of newspapers.

Mr. Lecky deals with the Transvaal question and the Jameson raid. He tells us of the largest gold-mines of the world fallen, by a strange irony of fate, into the possession of perhaps the only people who did not desire them—a race of hunters and farmers, intensely hostile to modern ideas, who had twice abandoned their homes and made long journeys into distant lands in search of solitude and space, and a field for their primitive pastoral ways, undisturbed by any foreign element. Then comes the fatal gold, and they find their land overwhelmed by an influx of adventurers. The mining industry is captured by the immigrants; "and it was this which made it a main object to overthrow their government. The trail of finance runs through the whole story."

For Cecil Rhodes, Mr. Lecky does not mince his words:

"When holding the confidential position of prime minister of the Cape Colony, and being at the same time a privy councillor of the Queen, he engaged in a conspiracy for the overthrow of the government of a neighboring and friendly state. In order to carry out this design, he deceived the high commissioner whose prime minister he was. He deceived his own colleagues in the ministry. He collected, under false pretenses, a force which was intended to cooperate with an insurrection in Johannesburg. . . . He was directly connected with the shabbiest incident in the whole affair, the concoction of a letter from the Johannesburg conspirators absurdly representing English women and children in that place as in danger of being shot down by the Boers, and urging the British to come at once to save them."

Of the raid itself, remarks Mr. Lecky, there is little to be said. It was in truth, he protests, one of the most discreditable as well as mischievous events in modern history; and its character was entirely unrelieved by any gleam either of heroism or of skill.

MR. C. C. JAMES, deputy minister of agriculture for Ontario, has prepared a bibliography of Canadian poetry which shows that some 400 persons have published verse in the Dominion during the past century—not a bad crop for a new country.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul-General Stowe, of Cape Town, under date of August 23, 1899, says:

"While grafted American vines are appreciated and well known here, the Government having offered premiums on such stock, the fruit and ornamental trees and shrubs of the United States have not been introduced. A representative of a United States nursery has been here eight weeks, and he assures me he has sold more in that period than he could have sold in the United States in twenty-four weeks. He has only been canvassing this city and suburbs and is now compelled to leave for the United States. Fruit of nearly all varieties can be cultivated here, but growers must be educated. As there are no frosts, the insects and their larva are not killed as in countries where frost occurs; consequently, a large number of trees die. This can be prevented if the people would use the same care and adopt the methods and appliances that have become so necessary and so efficient in the United States. This brings me to the suggestion that the chemical preparations and spraying pumps used in the United States could be introduced into this country with profit. No agent must come here expecting to stay only a few weeks; he must come to instruct and to prove the advantages of his goods. American fruit and ornamental trees, shrubs, etc., will find a market when properly introduced."

Consul-General Patterson writes from Calcutta, September 14, 1899:

"On the 31st of August last I made a report on the railways of India, in which I called the attention of our manufacturers of railway supplies to this market for their products. I now enclose the following clipping from *The Englishman* of this city of the 13th instant, as forcibly corroborating the statements made in that report:

"The steamer *Falls of Keltie* arrived at Rangoon on the 4th instant from New York, with twenty locomotives and seventy-five railway carriages and other parts of railway machinery for the Burma railways. Mr. J. J. Ellis, of Messrs. Barber & Co., New York, has been specially sent out by this firm, which has chartered the *Falls of Keltie* and is the agent of various well-known American iron companies, to superintend the work of delivering the machinery. This is the first voyage of the *Falls of Keltie* to Rangoon. She left New York on the 24th of June and Alexandria on the 18th of July, arrived at Aden on the 3d of August, Bombay on the 13th, and Colombo on the 27th, and left again for Rangoon on the 29th. She left New York with the largest quantity of machinery that was ever put aboard one boat, viz., railway material for Alexandria, Bombay, and Rangoon, and American oil for Colombo."

Consul-General Stowe writes from Cape Town, August 25, 1899:

"I am pleased to note that during the ten months ended April 30, 1899, the increased importation of boots and shoes into South Africa from the United States was £645 (\$3,138.89). For the same period, the imports of all kinds of goods from the United States into Natal increased £198,520 (\$966,097.58), while from Great Britain and all her dependencies the increase was only £139,522 (\$678,983.81). A box-making factory has been started on quite a large scale in Natal, four machines having been imported from England. The Natal *Gazette* shows estimates for the expenditure of £218,406 (\$1,162,872.80) for building newlines of railway and cars. A sum of £73,000 (\$355,254.50) was named for locomotives, and £3,000 (\$14,599.50) for new furniture for government use. It is also in contemplation to build cold-storage plants at the principal railway depots. Demands are noted for piping for water-works."

The present absence of a good yet cheap Eng-

lish bicycle makes any comparison with American machines of that class rather doubtful. The American youth buys a wheel for from \$35 to \$50, uses it one or two seasons, and then buys a better one, with intervening improvements, for about the same price. The English lad pays from \$80 to \$100 for substantially the same machine, but he expects—and his family expects—it to last a lifetime. The first-class American wheel of \$100 grade would be worth here about \$120. The highest grade English wheel can now be bought for £18 (\$90); the free wheel and powerful Bowden rear-rim brake attachment, £20 (\$100). Next season, however, the English market will be flooded with a cheap-grade machine costing £10 (\$50). This will be really the first English experiment at making a substantial machine for a popular selling price. The Coventry and Raleigh and Humber samples stand inspection very well, and would grade from \$35 to \$50 on the American market. They are lighter than the usual style English machine, and are not so carefully finished, and the material is not first-class; but they sell well. They are practically an imitation of the American wheel designed for quick market purposes.

In true adjustment of parts and careful finish, English high-grade wheels are said to excel the American. Each machine is a special product, turned out with infinite care. No work is rushed wholesale through the shop. To build an ordinary machine to order requires, at least, ten days, while a really fine machine will not be built for delivery short of three weeks. In each case, the bearings are tested and such careful attention given to details of finish as only a British or German workman can afford to give, for his time does not count for much; yet any American machine, even if it be superior in style, to compete successfully with his product, must approach that perfection of finish. The Raleigh and Humber certainly lead the market here, while they failed to secure a substantial foothold in America; and the makers claim they can not make a machine to sell at American prices. The obvious deduction is that American makers should be able to sell successfully here. The English machine weighs 27 to 30 pounds stripped, and runs up from 29 to 35 pounds with mud guards, brake, lamp, etc. The frame is of solid material, and the parts are cast heavier all over, particularly the hub and fork crown. Durability is thought to be secured, but the result admits of dispute and is at the expense of lightness and style. At the same time, those manufacturers who are figuring upon the English market should consider that the public here has been educated to a heavy wheel and views with suspicion the light machine—and British stubbornness, in this connection, is a very stubborn thing.

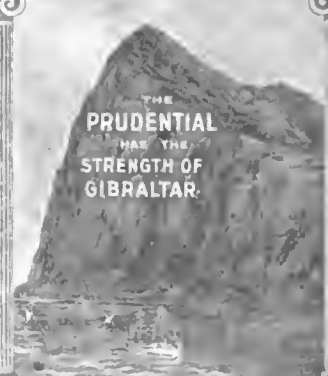

According to the Cape Town Government *Gazette* of October 24, 1899, transmitted by Consul-General Stowe, tenders are invited for the supply of the following timber required for the service of the railway department:

Eight thousand deals, 8,000 flooring boards, 700 pitch-pine logs, 240 teak logs, 943 teak planks, 87,000 superficial feet of pine boards, 1,200 cubic feet of stinkwood. Forms of tender, conditions of contract, and all other particulars may be obtained at the railway stores, Cape Town, Port Elizabeth, and East London. Sealed tenders (in original only), addressed to the controller and auditor-general, Cape Town, marked outside "Tender for timber," will be received up to noon January 11, 1900. The lowest or any tender will not be necessarily accepted.

Consul Fee sends the following from Bombay, October 13, 1899:

"A meeting of the Mill Owners' Association of Bombay has been called for the 17th instant, to consider the question of the 'short-time' working of local cotton mills. The proposition that will be brought before the meeting is that, in consequence of the failure of the cotton crops and the present high price of cotton, the local mills should be worked only four days per week. Greaves, Cotton & Co., agents for a group of seven mills, took the initiative to-day by closing them. They have resolved to work only on Mondays, Tuesdays, Thursdays, and Fridays.

Consul Milher, of Calais, under date of October 30, 1899, informs the Department that a company organized at Paris is arranging to establish an electric railway in Calais. The equipment has not yet been purchased, and the consul thinks that United States manufacturers may wish to bid. The old tram cars now in use are of American make.

Consul Ridgely, of Geneva, on October 31, 1899, writes:

"It is estimated that since the 1st of January, 1899, up to the present date, no less than 2,500,000 tourists have visited Switzerland, and that they have each left in the country an average of 80 francs (\$15.44) or a total of \$39,600,000. Inasmuch as the population of Switzerland is only 2,933,300, it is not difficult to appreciate the significance of these figures. The per capita wealth of the country has heretofore been estimated at \$14; but the influx of money above referred to suddenly brings it up to \$29.45, or from one of the poorest countries (per capita) to one of the richest. This at least would appear to be the result on paper; but as a matter of fact, the sudden increase of the country's wealth is not so great as the figures would indicate, for the reason that Switzerland buys nearly everything she sells to tourists, including the supplies for the hotels and boarding-houses, and therefore, while a great deal of the money comes into the country, a large proportion of it has to be paid out. However, the increase in the country's wealth from the tourist movement during 1899 is notable, hotel keepers being the largest beneficiaries.

Consul Hughes, of Coburg, October 18, 1899, says:

"I would call attention to the opening for American fresh beef in this consular district, in spite of the regulations against its importation. If some of the large Chicago concerns would establish proper agencies—like those in any of the smaller towns of the United States—and use them as feeders for the surrounding villages, the business would without doubt, pay from almost the start. But the same amount of push is necessary in Germany as at home to make anything a success. I have repeatedly shown persons who have written to this consulate for information how they could do a large and paying business in provisions, but they all want to send their goods c. o. d. This can not be done. German merchants wish to see the article they are buying and also to have three months' credit. The local trader is honest, but he must have time or he can not do business.

The poorer people in Thuringia live almost exclusively on potatoes, black bread, and beer. We take their dolls and china; they want our beef; why not let them have it?

PERSONALS.

THE late Major-General Henry W. Lawton, whose death in Manila last week is attributed to his reckless habit of personally exposing himself

One. Two. Three.

Have you ever noted the evolution and progress of a great trunk line, how it begins with one through train each day, then as its business increases it adds one more, and still another? It is an ascending course in numerals—one, two, three. Each figure represents a notch of progress; each indicates the high-water mark of success. Three through trains each way daily is a distinguishing mark of success in any railway.

Such has been the success of the famous "Nickel Plate Route." It began with one train; the popularity of this demanded another. And still the people increased their patronage until a third train was imperative. And now across the rich plains of Illinois, Indiana, Ohio, Pennsylvania, and New York, from Chicago to Buffalo, aye, to New York and Boston, three swift and elegantly appointed trains pass each way daily over the finely graded roadway of the Nickel Plate Route, each carrying a large contingent of happy travelers. That is the moral of the story. Remember the significance of One, Two, Three.

at the head of his troops, was born in Ohio in 1843. He was but a little over eighteen years old when his first commission was given to him, and his first hard fighting was at the battle of Shiloh, in 1862; at Corinth and Iuka, his regiment lost so severely that he obtained his captaincy just after his nineteenth birthday.

"It was a lovely day in June, 1862, that my commission of captain was handed me," said Lawton, long afterward in Arizona, relating the incident to a comrade. "I had been commanding my company for some time, and I knew I would receive the formal promotion, for my immediate superiors had all indorsed me in the most favorable terms. But I had not the formal warrant to assume the rank. When it was handed to me I would not have changed places with king or kaiser. I was nineteen years old, and, tho my upper lip was as bare as a girl's, I was a captain in a fighting regiment. It was then that I felt that if I had a 'vocation' for anything upon earth it was the life of a soldier. Then and there I determined to make the service of my country my life's work."

Lawton took active part in several Indian campaigns, and distinguished himself last year in Cuba by taking El Caney. He went to the Philippines last January.

General Lawton was a very striking man in his personality. He was six feet three inches in height, and weighed 210 pounds. His phenomenal strength and activity, his abnormal endurance, and his utter fearlessness made him a natural leader of men, and one always eagerly followed. Had he lived he would have been appointed a brigadier-general in the regular army in the next week or two, to fill the vacancy caused by General Shafter's retirement.

ONE of the most striking and romantic figures in England to-day is Prince Peter Kropotkin. The scion of a princely family older than that of the Czar himself, he renounced his wealth and position in order that he might devote his life to the cause of the poor and downtrodden. Brought up in an atmosphere intensely conservative, he is to-day a radical of radicals, openly espousing and constantly preaching the doctrines of Anarchist communism. He is much more than a revolutionist, however. He is universally recognized as one of the foremost living scientists, and is the regular scientific correspondent of *The Nineteenth Century*. His recent articles in *The Atlantic Monthly* have been issued in book form under the title "The Memoirs of a Revolutionist," and are attracting wide attention.

THE Emperor William, it seems, takes the keenest interest in the caricatures of himself which appear in the English comic journals. These were very plentiful during the period of the famous telegram which his Majesty sent to President Kruger, and it was his habit, when sitting with his family in the evening, to amuse himself by looking over *The Punch* cartoons. He would laugh at the caricature of himself until the tears ran down his cheeks. A lady who has an intimate acquaintance with the imperial household says that the Emperor entertains the deepest affection for his royal grandmother; indeed, the Queen is the one monarch of whom Emperor William stands in awe. A good thing, too.

THE late Lady Salisbury had been ill since the beginning of 1897. In that year her health became

Growing Children

When children are growing they require an excessive amount of food, not only to supply the waste due to their active habits, but to supply constructive material to their growing frames. Cereal foods are among those necessary to the best growth and wheat is the best of the cereals.

CREAM OF WHEAT

is the most nutritious of the wheat food preparation, as it is free from the indigestible husk, contains only a little starch, which is the poorest of foods, and retains all the really nutrient elements.

Cream of Wheat Co., Minneapolis, Minn.

There is
Life
in the Grain

when properly prepared. Common white flour loses in its manufacture much of the life-giving, bone-producing elements which nature placed in the wheat and, and retains too much starch.

FRANKLIN MILLS FLOUR

A FINE FLOUR OF THE ENTIRE WHEAT retains these elements, chemically unchanged; the hard, indigestible, in-nutritious outer husk only being discarded, and the gluten, phosphates and mineral elements found only in the darker portions of the berry being retained.

so precarious that she was unable to take any active part in the diamond jubilee festivities with which her husband, as chief minister of state, was so closely concerned. Retiring from London, she spent much of her time at Hatfield, driving in her donkey-chair through the old gardens and avenues, and few scenes were more touching than that of the Prime Minister, whenever he could snatch an hour from the cares of state, walking by her side, and devoting himself to her welfare. Lady Salisbury was the most devoted, the most cheering, the most supporting of wives. Her physical vigor (says the writer of a character sketch in the *Manchester Guardian*) was positively infectious. Her unconquerable spirits and almost boisterous merriment kept Lord Salisbury alive and happy and in working order, when if left to himself he would have sunk into a melancholy recluse. As a mother, too, Lady Salisbury excelled. Her method of education was rough-and-ready—great liberty and little coddling—all built on a deep and firm basis of religious teaching.

IT is not often that a man rises from the grocery to the peerage, but this honor has been won by Lord Strathcona. Strathcona, or rather Donald Smith, for that was his name, started life as errand-boy in an obscure Scotch town. When a young man he went to New York, and thence to Canada, where he was engaged by the Hudson Bay Company, then the biggest and richest corporation in North America. Young Smith grew up with Canada and the Hudson Bay Company. He lived the rough, strenuous life of the frontiersman, with his rifle ever at hand. He knew the Indians and their character, and developed into such a good trader that the company gave him charge of its far frontier posts, where Indians and pelts were numerous.

Young Smith acquired a comprehensive and valuable knowledge of Canada, its vast resources and its possibilities, in this service, knowledge that was to help make him a millionaire in the years to come. His promotion by the Hudson Bay Company was slow but sure. Ultimately he came to be the chief executive of the company, and he was, I believe, its last resident governor, with plenipotentiary powers. It was Lord Strathcona who, more than any other man, saw the value of a transcontinental line as a developer of Canada's great natural resources, and it was he who pushed the enterprise and stood by it in its darkest days.

THE following story is told of Admiral Dewey's bride: "Some years ago, Mrs. Hazen, with her mother and father, had occasion to visit Baxter Springs, Kan., and stayed at the hotel there. One night "it came on to blow," and the old residents, seeing the peculiar black clouds, began to fear a tornado. Many sought shelter in cellars. About nine o'clock the storm broke with extreme violence, and altho it did not prove to be a genuine twister, much of the country around Baxter was laid waste. In the town a church and several other buildings were unroofed. In the Hotel Bateman all was confusion and alarm. The women wept and prayed. At the height of the storm General Hazen was in his room and Mrs. Hazen was in the parlor. Suddenly the window of the General's room blew in, and the General, thinking that half the house had blown away, attempted to open the door leading into the parlor to go to his wife's assistance. But the pressure of the wind against the door was so great that he could not budge it. The walls began to tremble, and in this extremity the General called for help. At this moment the sound of music was heard coming from the parlor, and the half-distracted guests, who came tumbling downstairs, were amazed to see Mrs. Hazen seated at the piano playing a spirited quickstep. The sight of the girlish figure at the piano playing away with a smiling face, and the air of happy indifference to danger soon restored courage to the other guests. Throughout the storm the brave little woman kept up the spir-

its of the guests by rendering a variety of gay and inspiring music. Landlord Rnddy declares that it was a performance worthy to rank with Admiral Dewey's daring entrance into Manila Bay.

PRETORIA, as everybody knows, is named after Pretorius, one of the celebrated Boer triumvirate of the past. He was said to belong to the same family as a Dr. Pretorius, who in the early years of the Queen's married life was attached to the immediate service of the Prince Consort, and who in that capacity was present at all the functions of the court. *The Court Circular* of the time, after naming all the distinguished personages present, invariably concluded with the words "and Dr. Pretorius." At a banquet one evening at which Thackeray was present, after the toast of the Queen had been received with musical honors, the author of "Vanity Fair" was overheard quietly singing to himself the refrain:

"Happy and glorious,
Long to reign over us,
Doctor Pretorius.
God save the Queen."

THAT the boy King of Spain is a keen observer, and at the same time pretty much like other boys in one particular, appears from an anecdote of him related by a friend of his French tutor, says the

"A model library of reference, embracing the very widest range of topics."

Sample page which explains itself.

TIME AND TROUBLE SAVED LAWYERS, PHYSICIANS, MINISTERS

J. W. HYDE, Brooklyn, N. Y., says:
The Burr Index is a delightful relief to a weary and tired brain. It saves hours of otherwise necessary labor. Every professional man should possess one. Its advantage to the scholar, over the old methods of ready reference, is as the "reaper" over the old-fashioned "sickle."

Burr's Patent Indexes

All words and names are indexed by the first two letters with nearly four hundred combinations in thumb holes cut in the edges of the leaves. A combination for every word in use. A constant aid to professional men, business men, students and others.

A HELP TO THE BUSY LAWYER

It keeps in orderly and compact form references to reports, trials, conflicting opinions, general notes, etc.

A TIME SAVER TO THE PHYSICIAN

It enables the doctor to refer instantly to treatises, retrospects, notes on cases, observations, etc.

INVALUABLE TO THE MINISTER

The choicest gems of his library can be made instantly accessible, and handy records of sermons, etc., kept. As a library index it is unrivalled.

Curtis, is "done as it should be by The Easy Chair's friend and fellow laborer in letters, Dr. Titus M. Coan." Send for circular L, or forward your book or MS. to the N. Y. Bureau of Revision, 70 Fifth Avenue.

Newcastle Chronicle. During one of the recent tremendously hot Madrid days the tutor dictated to his exalted pupil an exercise in which occurred the phrase, "She possessed in the highest degree the distinguished manners and the grace of speech innate in royal princesses." "The man who wrote that," remarked the King, "never lived at court; that's certain." "What makes you think so?" demanded the astonished tutor. "Why, just look," returned the King; "look at these royal princesses; look at their distinguished manners!" pointing to his two sisters, who happened to be in the room. Maria de las Mercedes lay sprawling over a table, looking sleepy and intolerably overheated. Maria Teresa maintained a more ladylike attitude, but was industriously scratching her head with her left hand, apparently embarrassed by a problem in French orthography. Alfonso pinched the arm of his elder sister, and pulled the hair of the younger. "Oh, you horrid boy!" they both exclaimed. "There's your grace of speech," commented his Majesty, with a rognish glance at his teacher.

BIRD S. COLER, comptroller of the city of New York, may succeed Robert A. Van Wyck as mayor of Greater New York, and has within a year become a gubernatorial possibility in the Empire State. He is still a young man—somewhat over thirty—and is reserved, modest, but wonderfully forceful in his quiet way. The amalgamation of the five boroughs when he took office presented a perplexing financial problem, but it gave to Mr. Coler an opportunity which he has managed in a masterful manner. He has taken the initiative in a series of reforms which have saved millions of dollars for New York. He has been the watchdog of the treasury, and scarcely a week passes but from his office comes an exposure of some attempt to defraud the city. It was his hand which interposed when a combination of politicians attempted to foist upon the city the bi-partizan Ramapo fraud, which would have gobbled \$5,000,000 a year for forty years.

COLONEL SIR F. WINGATE and Major Watson, who have arrived at Cairo from Omdurman, have (says *The Daily News* correspondent) given some interesting and graphic accounts of the pursuit and death of the Khalifa. The Khalifa met his death in a really heroic manner, and eye-witnesses, tho thoroughly despising the man, admit that his end was indeed pathetic. He was in the thick of the fight, and when he discovered that all hopes of success were vain, he dismounted, and ordered all his Emirs to do likewise and rally round him. He then sat down on his sheepskin with his Emirs around him. He placed his bodyguard in front, and they were all killed to a man. The Khalifa was shot through the head, heart, arm, and leg, as (adds the correspondent) his jibbeh, which Major Watson showed to me, testifies. He was afterward buried close to where he fell by his own people, under Colonel Wingate's supervision, and thus ended the career of a man whom thousands worshiped in their ignorance. With his death it is to be hoped that the total collapse of Mahdism has been brought about.

A MARVEL of all that is Desirable in a Vapor-Bath Cabinet

ONLY one allows use of hands on outside, and allows escape of foul air automatically. Double door. Substantial frame. Large and roomy. Provides luxurious bath for the well. HEART DISEASE

Some Facts Regarding the Rapid Increase of Heart Trouble.

Heart trouble, at least among the Americans, is certainly increasing and while this may be largely due to the excitement and worry of American business life, it is more often the result of weak stomachs, of poor digestion.

Real organic disease is incurable; but not one case in a hundred of heart trouble is organic.

The close relation between heart trouble and poor digestion is because both organs are controlled by the same great nerves, the Sympathic and Pneumogastric.

In another way, also the heart is affected by the form of poor digestion which causes gas and fermentation from half digested food. There is a feeling of oppression and heaviness in the chest caused by pressure of the distended stomach on the heart and lungs, interfering with their action; hence arises palpitation and short breath.

Poor digestion also poisons the blood, making it thin and watery, which irritates and weakens the heart.

The most sensible treatment for heart trouble is to improve the digestion and to insure the prompt assimilation of food.

This can be done by the regular use after meals of some safe, pleasant, and effective digestive preparation, like Stuart's Dyspepsia Tablets, which may be found at most drug stores, and which contain valuable, harmless, digestive elements in a pleasant, convenient form.

It is safe to say that the regular persistent use of Stuart's Dyspepsia Tablets at meal time will cure any form of stomach trouble except cancer of the stomach.

Full sized package of these tablets sold by druggists at 50 cents. Little book on stomach troubles mailed free. Address F. A. Stuart Co., Marshall, Mich.

Peter Moller's Cod Liver Oil

now prepared by an improved process which is the result of years of scientific investigation, may be confidently relied upon as being of

Absolute Purity and Free From Disagreeable Taste and Odor.

MOLLER'S OIL always gives satisfactory results because of its perfect digestibility and the fact that it may be taken continuously without causing gastric disturbance.

In flat, oval bottles only, dated. See that our name appears on bottle as agents. Explanatory pamphlets mailed free.

The Other Court.—SHE: "I suppose you were presented at court while in London?"

HE: "Yes, twice, but I was acquitted both times."—*Chicago News.*

Trouble Ahead.—MRS. W.: "Did your stenographer address those 'At Home' cards of mine to the list I gave you?" "Yes, but she made a slight error. She sent them to a list of our creditors."—*Life.*

Slow and Safe.—"You are too leisurely for this office. I advise you to go into some other business." "What kind of business?" "Well, you might hunt a job to unload dynamite."—*Chicago Record.*

Appearances were Misleading.—MAGISTRATE: "Prisoner, are you married?"

"No, yer worship; those scratches on my face came from stumpling over a barbed wire fence in the dark."

He Got Invitations.—"Do you find people generally pretty civil?" asked a life insurance agent of a bill collector. "Oh, yes, indeed," answered the latter. "They nearly always ask me to call again."

An Important Distinction.—MR. CRIMSONBEAK: "Longfellow said that in this world a man must either be anvil or hammer."

MRS. CRIMSONBEAK: "Oh, I don't know. How about the bellows?"—*Yonkers Statesman.*

A Necessary Precantion.—"Ma," said a newspaper man's son, "I know why editors call themselves 'we.'" "Why?" "So's the man that doesn't like the article will think there are too many people for him to tackle."—*Tit-Bits.*

His Excuse.—"Listen to reason, m' dear," he explained, "I listen to reason. I wash—hic—held up on m'—hic—way home." "Held up!" she angrily exclaimed, "I don't doubt it! If you hadn't been held up or carried you wouldn't be here even now."—*Chicago Times-Herald.*

A Misunderstanding.—SPORTSMAN (to Snobson, who hasn't brought down a single bird all day): "Do you know Lord Peckham?"

SNOBSON: "Oh, dear, yes. I've often shot at his house."

SPORTSMAN: "Ever hit it?"—*Tit-Bits.*

Impenetrable.—O'RELL: "A Soldier was saved by a bullet striking something he had in an inside pocket. Guess what it was?"

LUKE: "His girl's picture or a pack of cards." O'RELL: "Neither! It was a paper containing a New York murder mystery."

LUKE: "How could that stop a bullet?" O'RELL: "Why, nothing could penetrate it."—*Chicago News.*

Honesty Exemplified.—"I am glad there are a few honest people left. Two years ago I sent a boy around the corner to buy a postal card. I have never seen the boy to this day." "You don't call that boy honest?" "Yes, sir! This morning I received a postal with this on the back: 'Dear Sir: Here is your postal. I started in business with the penny you gave me and have prospered. Thanks.'"—*Chicago News.*

The Bishop's Arrival.—A grand wedding was being solemnized at St. Peter's, Eaton Square. On each side of the strip of carpet that extended

Who Does Not Eat Bread?

No matter how varied may be the taste of earth's millions regarding food, there is one staple which is universally used, and that is *bread*. To be sure there are many kinds of bread beside the good and the bad, but it all essentially comes under the general classification of bread. In view therefore of the universality of its use it is a little uncomplimentary to our progress in other directions that in the effort to produce a beautiful white flour we have been throwing away the very properties of the wheat kernel most essential to nutrition; choosing as it were the pallor of the invalid rather than the ruddy glow of health.

The most perfect bread to-day is made from flour of the whole wheat, which is the special mission and output of The Franklin Mills Co., at Lockport, N. Y. Write them for their pamphlet on this subject.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

A DOUBLE FABRIC

always produces a more healthy warmth than any other texture, and a ventilated garment is desirable for persons of sedentary occupations, as well as for those who take violent exercise.

Kotedsilk

is a double fabric; pure silk knitted on the finest cotton, and its peculiar construction permits of that ventilation without which there can be no health.

from the church door to the curb was a crowd of well-dressed people watching the guests arrive. In the wake of a procession of equipages of the most aristocratic and well-appointed character came a four-wheeled cab, dingy and disreputable beyond belief.

"Here! here!" shouted the policeman in charge, "you can't stop here! We're waiting for the Bishop of —"

The cabman regarded the officer with a triumphant leer, as he climbed down from his seat and threw a ragged blanket over his skeleton steed.

"It's all right, guv'nor," he said; "I've got the old buffer inside!"—*London Spare Moments.*

The Military Obsession.—SUPERINTENDENT:

"Yes, and where did John the Baptist live?"

SCHOLAR: "In the desert."

SUPERINTENDENT: "Quite right: and what do we call people who live in the desert?"

SCHOLAR: "Deserters."—*Brooklyn Life.*

Not so Serious as it Looked.—"What is this?" exclaimed the rural editor, "'A golden head and eight ribs were found on the fair grounds last night.' Is this a mysterious tragedy?" "No, sir," responded the item-writer, "they belonged to a red parasol one of the girls waved at the prize bull."—*Chicago News.*

Happy Suburbanites.—MR. CITIMANN: "To save my neck, I can't understand why the crowds at the ferries always have such a happy look."

MR. SUBURB: "It's simple enough. After the day's work in the city, we're always glad to get out of it; and after eight or ten hours in the country, we're always glad to get back."—*New York Weekly.*

The Weather Bureau.—FUDDY: "You never can tell anything about the weather. At the time of the flood, you know, it rained forty days and forty nights."

DUDDY: "Yes; and I'll bet if there had been a weather bureau in existence at that time it would have prophesied fair weather, or at least clearing, every morning."—*Boston Transcript.*

A Satisfaction.—"What are you going to do for amusement to-day?" "I think," answered the hero, "that I'll go to a dime museum and see the

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Easy to Understand Why The Jackson Ventilating Grate

Is the Most Popular Heating Apparatus.

It burns a minimum amount of fuel and gives out a maximum amount of pure, warmed air. Its ventilating facilities make it unnecessary to open doors and windows in order to obtain fresh air. The Ventilating Grate burns either coal, wood, or gas, and can be fitted in any ordinary fireplace. Write at once for illustrated, descriptive catalogue "D," and learn of this distinctly new principle in methods of house heating.

armless phenomenon." "I didn't know you were interested in curiosities of that kind." "I wasn't formerly. But it will be a great satisfaction to meet somebody who I'm dead snre isn't going to shake hands with me."—*Washington Star*.

A Deaf Caddie.—CADDIE: "Lemme carry yer clubs, boss. I kin be ez blind and ez deaf as er post!"

GOLFER: "I don't consider that any particular recommendation!"

CADDIE: "Not if yer playin' wid yer chum er yer mudder-in-law; but w'en yer playin' wid yer girl it pays ter hever caddie wot knows his biz!"—*Puck*.

The Escape Was on Their Side.—"Now, Morton," said one of the party who had gone deep into the Maine woods in search of adventure, "we know you've been a famous hunter, and we want to hear about some of the narrow escapes you've had from bears and so on." "Young man," said the old guide, with dignity, "if there's been any narrer escapes, the bears and other fierce critters had 'em, not me!"—*Boston Christian Register*.

The Wrong Moral.—SUNDAY-SCHOOL SUPERINTENDENT (pointing a moral): "Yes, scholars, the great thing is to know one's duty and then do it. Admiral Dewey knew his duty when he entered Manila Bay and saw the Spanish ships, and the world has seen how nobly he performed it. Now, children, what is *our* duty in this bright holiday season? How may *we* emulate the great admiral? What should *we* do when we see about us the poor, the sick, and the suffering?"

SMALL-BOY CLASS (in concert): "Lick 'em!"—*Exchange*.

Current Events.

Monday, December 18.

—The British War Office decides to send Gen. Lord Roberts and General Kitchener to command the forces in South Africa.

—In the Senate, Mr. Tillmann and Mr. Bacon introduce resolutions declaring that the United States should withdraw from the Philippines and aid the natives to establish an independent government.

—In the House, the currency bill is passed by a vote of 190 to 150.

—Secretary Gage decides to increase government deposits in national banks by \$30,000,000 or \$40,000,000.

—There takes place a small panic on Wall Street; stocks decline heavily; the Produce Exchange Trust Company and Henry Allen & Co. fail.

—Bernard Quaritch, the famous bibliophile, dies in London.

Tuesday, December 19.

—The call for volunteers in South Africa brings forth a remarkable patriotic outburst throughout Great Britain; great numbers of volunteers offer themselves, including several noblemen.

—Maj.-Gen. Henry W. Lawton is killed by a Filipino sharpshooter, while attacking San Mateo, in Luzon.

—In the House, Mr. Grow, of Pennsylvania, speaks in defense of the President's policy in the Philippines.

—The Ohio Supreme Court decides to dismiss the bribery case of Attorney-General Monnett against the Standard Oil Company, on the ground that the information submitted does not connect the company with the alleged attempt at bribery.

Wednesday, December 20.

—Gen. Lord Roberts arrives in London from Ireland, preparatory to his voyage to the Cape.

—Paul Deroulede is sentenced to two years'

imprisonment by the French High Court for conspiracy.

—Tributes to the memory of Major-General Lawton are paid by the President, Secretary Root, Admiral Dewey, General Miles, etc.; his body is temporarily placed in a vault in the El Paco cemetery.

—The funeral of Lieut. T. M. Bramby takes place at Atlanta, and his body is laid beneath the soil of his native State.

—The convention of the American Federation of Labor ends a nine days' session at Detroit, and reelects Samuel Gompers president.

Thursday, December 21.

—A message from General Methuen at Modder River shows that the British general's lines of communication are still intact; General White sends word that Ladysmith can hold out.

—Major-General Wood arrives in Havana, and, amid much enthusiasm, assumes his duties as governor of the island.

—The Globe National Bank of Boston fails, and Controller Dawes appoints a temporary receiver.

—The New York Fifth Avenue Presbyterian Church extends a unanimous call to the Rev. George T. Perves, of Princeton.

—Jean Lamoureux, the celebrated musical conductor, dies at Paris.

Friday, December 22.

—Seven British soldiers are killed and fourteen wounded in a sortie from Ladysmith; more troops arrive in South Africa.

—The Duke of Westminster dies in London after a brief illness from pneumonia.

—A farewell banquet is given to General Brooke in Havana; General Wood enters upon his office as governor of Cuba.

—A great mass of rock at Amalfi, on the Gulf of Salerno, in Italy, falls into the sea, carrying with it two hotels, a monastery, and several villas, and resulting in heavy loss of life.

—Dwight L. Moody, the famous evangelist, dies at East Northfield, Mass.

Saturday, December 23.

—Gen. Lord Roberts sails from Southampton for South Africa; the American hospital ship *Maine* sails from London for the Cape.

—Agninaldo is in the mountains to the south of Luzon Island; his wife and child are both dead, owing to hardships encountered in their flight.

—The annual report of the Coast and Geodetic Survey, showing the work done in Alaska and Puerto Rico, is made public.

—Forty men lose their lives in a mining explosion near Brownsville, Penn.

—Charles H. Cole, former president of the failed Globe National Bank of Boston, is arrested in California.

Sunday, December 24.

—Buller's force retires to Chieveley camp; Gen. Lord Kitchener arrives at Malta on his way to South Africa.

—The Pope performs the ceremony of opening of the Holy Door at St. Peter's in Rome.

—The British steamship *Ariosto* is stranded near Hatteras, N. C. Twenty-one of the crew lose their lives in an attempt to reach shore.

—The report of Counsel Moss to the Mazet committee, arraiging Tammany Hall, is made public.

THE RUDOLPH WURLITZER CO.
167 East Fourth Street, CINCINNATI, O.

A GOD-SEND TO ALL HUMANITY

Invention of an Ohioan that Guarantees to Every User Perfect Health, Strength, and Beauty by Nature's Method, and Cures, Without Drugs, All Nervous Diseases, Rheumatism, La Grippe, Neuralgia, Kidney Troubles, Piles, Weakness, and the Most Obstinate Diseases.

Those Who Have Used It Declare It To Be the Most Remarkable Invigorant Ever Produced for Man, Woman, or Child.

A genius of Cincinnati, O., has placed on the market a Bath Cabinet that is of great interest to the public, not only to the sick and debilitated, but also those enjoying health.

It is a sealed compartment, in which one comfortably rests on a chair, and with only the head outside, may have all the invigorating, cleansing, and purifying effects of the most luxurious Turkish bath, hot vapor or medicated vapor baths at home for 3 cents each, with no possibility of taking cold or in any way weakening the system.

A well-known physician of Topeka, Kan., E. L. Eaton, M.D., gave up his practice to sell these Bath Cabinets, feeling that they were all his patients needed to get well and keep well, as they cured the most obstinate diseases often when his medicine failed, and we understand he has already sold over 600. Another physician of Chicago, Dr. John C. Wright, followed Dr. Eaton's example, moved West and devotes his entire time to selling these Cabinets. Many others are doing likewise.

Hundreds of remarkable letters have been written the inventors from those who have used the Cabinet, some of which, referring to

Rheumatism, La Grippe and Kidney Troubles,

will be interesting to those who suffer from these dread maladies.

Mrs. Susan Gieger, Welch, Miss., writes: "This Cabinet was certainly a Godsend to me. Has done more good than three doctors. Had sciatic rheumatism for years; could hardly move except on crutches. Received relief the very first time I used it, and in one week threw my crutches away and am today a well woman, doing my own housework."

G. M. Lafferty, Covington, Ky., writes: "Was compelled to quit business a year ago, being prostrated by rheumatism. When your Cabinet came two weeks' use of it entirely cured me, and have never had a pain since. My doctor was much astonished and will recommend them."

Mrs. S. S. Noteman, Hood River, Ore., writes: "That her neighbor used the Cabinet for a severe case of La Grippe and cured herself entirely in two days. Another neighbor cured eczema of many years' standing and her little girl of measles."

A. B. Strickland, Bloomington, Idaho, writes: "That this remarkable Cabinet did him more good in two weeks than two years' doctoring, and entirely cured him of catarrh, gravel, kidney trouble and dropsy, with which he had long been afflicted."

This Cabinet certainly has a wonderful power to eliminate uric acid and the poisons from the system.

A prominent citizen of Clarence, N. Y., J. J. Stellrecht, testifies that medicines did him no good, that he had long been afflicted with kidney troubles and this Cabinet cured and restored him to perfect health.

Hundreds of others write praising this Cabinet, and there seems to be no doubt but that the long sought for means of curing Rheumatism, La Grippe, Bright's Disease, Dropsy and all Kidney and Urinary Affections has been found. The

Well-known Christian Minister

of Una, S. C., Rev. R. E. Peele, highly recommends this Cabinet, as also do Mrs. Hendricks, Prin. of Vassar College, Congressman John J. Lentz, John T. Brown, editor of the *Christian Guide*; J. H. Errett, editor of the *Christian Standard*, many lawyers, physicians, ministers and hundreds of other influential people.

Reduces Obesity.

It is important to know that the inventor guarantees that obesity will be reduced five pounds per week if these hot vapor baths are taken regularly. Scientific reasons are brought out in a very instructive little book issued by the makers.

Another providential blessing is the fact that this Cabinet is the grandest remedy in the world for preventing and curing

Woman's Troubles.

A lady in Thurman, Pa., Mrs. Anna Woodrum, suffered for sixteen years with nervousness, weakness, kidney and woman's troubles. She writes that medicines failed to benefit her, and the Cabinet bath performed a marvellous cure in her case, and she has already sold over three dozen to her friends.

Mrs. L. Coen, of Maysville, Mo., testifies that she suffered for years with headaches, backaches and menstrual pains, and was entirely cured by this Cabinet.

By its soothing effect upon the nerves and brain it cures

Sleeplessness.

A prominent lady of Wichita, Kan., Mrs. Dora Cross, was cured of sleeplessness immediately after using the Cabinet.

To Cure Blood and Skin Diseases,

the Cabinet bath is unquestionably the best thing in the world. If people, instead of filling their systems with more poisons by taking drugs and nostrums, would get into a vapor Bath Cabinet and sweat out these poisons and assist nature to act, they would have a skin as clear and smooth as the most fastidious could desire. Vapor baths are the best blood and system purifiers known to the medical profession. Hundreds refer to their recovery from the most aggravating blood diseases.

The Great Feature

of this Bath Cabinet is that it gives a hot vapor bath that opens the millions of pores all over the body, stimulating the sweat glands and forcing out, by nature's method, all the impure salts, acids and effete matter which, if retained, overwork the heart, kidneys, liver, lungs, and cause disease, debility and sluggishness. A hot vapor bath instills new life from the very beginning, is perfectly safe and harmless, and, indeed, it makes you feel ten years younger.

It is well known that whatever has a tendency to preserve health must

Also Prevent Disease,

and the writer was informed by Dr. McClure, one of the most prominent physicians in this country, that

CABINET OPEN—Step in or out.

if people would use this Cabinet regularly at least once or twice a week there would be an end to epidemics and contagious diseases, for smallpox, yellow fever, typhoid, scarlet fever, in fact, all contagious diseases are unknown and cannot exist where the vapor bath is regularly practised. With the bath, if desired, is a

Head and Complexion Steamer

Attachment in which the face and head are given the same treatment as the body. This produces the most wonderful results, clears the skin, makes it as smooth and soft as velvet, removes pimples, blackheads, sores, skin eruptions, rough and scaly skin or diseased scalp and

Cures Catarrh, Asthma and Bronchitis.

L. B. Westbrook, Newton, Ia., writes: "For forty five years I have had catarrh, asthma, rheumatism and kidney troubles. Drugs and doctors did me no good. The first vapor bath I took helped me, and fourteen days' use cured me entirely, and I am today a well man." Whatever

Will Hasten Perspiration,

every one knows, is beneficial. Turkish baths, massage, hot drinks, stimulants, hot foot baths, are all known to be beneficial, but the best of these methods becomes crude and insignificant when compared to the convenient and marvellous curative power of the Cabinet Bath referred to above. The Cabinet is known as the

Square Quaker Folding Thermal

Vapor Bath Cabinet, made only in Cincinnati, O. This Cabinet, we find, is durably and handsomely made, best material, is entered and vacated by a door which opens wide; the Cabinet, when closed, is air-tight, made of the best hygienic water-proof cloth, rubber lined, has a strong, rigid steel frame, which supports it from top to bottom. The Cabinet is large and roomy inside, and has top curtains at top to open for cooling off. Makers furnish a good alcohol stove with each Cabinet, also valuable recipes and formulas for medicated baths and ailments, as well as plain directions, so any one can use it just as soon as received.

Another excellent feature is that it folds flat in one inch space and may be carried when traveling. Weighs but 10 pounds.

People don't need bathrooms, as this Cabinet may be used in any room. Thus, bathtubs have been discarded since the invention of this Cabinet, as it gives a far better bath for all cleansing purposes than soap and water. For the sick-room, its advantages are at once apparent. The Cabinet is simply large enough for any person. There have been

So-called Cabinets

on the market, but they were unsatisfactory, for they had no door and no supporting frame, but simply a cheap affair to pull on and off over the head, like a skirt, subjecting the body to sudden and dangerous changes of temperature, or made with a so-called door—simply a slit or hole to crawl through; others were made with a bulky wooden frame, which the heat and steam within the Cabinet warped, cracked and caused to fall apart and soon became worthless.

The Cabinet made by the Cincinnati firm is the only practical article of its kind and will last for years. The makers guarantee it to be better, more convenient, more durable than others which sell for \$12.00 or \$18.00. This Cabinet satisfies and delights every user, and the

Makers Guarantee Results.

They assert positively, and their statements are backed by a vast amount of testimony from persons of influence, that their Cabinet will cure nervous troubles and debility, clear the skin, purify the blood, cure rheumatism. (They offer \$50 reward for a case that cannot be relieved.) Cures woman's troubles, la grippe, sleeplessness, obesity, neuralgia, headache, gout, sciatica, piles, dropsy, blood and skin disease, liver and kidney troubles. It will

Cure a Hard Cold

with one bath, and break up all symptoms of la grippe, fevers, pneumonia, bronchitis, asthma, and is really a household necessity. It is the most

Cleansing and Invigorating Bath

known, and all those enjoying health should use it at least once or twice a week, but its great value lies in its marvellous power to draw out of the system the impurities that cause disease, and for this reason is really a Godsend to all humanity.

How To Get One.

Readers who want to enjoy perfect health, prevent disease, or are afflicted, should have one of these remarkable Cabinets. The price is wonderfully low, space prevents a detailed description, but it will bear out the most exacting demand for durability and curative properties. Write to the World Manufacturing Company, 1013 World Building, Cincinnati, Ohio, and ask them to send you their pamphlets and circulars describing this invention. The regular price of this Cabinet is \$5. Head Steaming Attachment, if desired, \$1 extra, and it is indeed difficult to imagine where one could invest that amount of money in anything else that guarantees so much real genuine health, vigor and strength.

Write today for full information, or, better still, order a Cabinet. You won't be deceived or disappointed, as the makers guarantee every Cabinet, and will refund your money, after 30 days' use, if not just as represented. They are reliable and responsible (capital \$100,000.00) and fill all orders immediately upon receipt of remittance.

Don't fail to send for booklet, as it will prove very interesting reading.

This Cabinet is a wonderful seller for agents, and the firm offers special inducements to good agents, both men and women—upon request.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. R. Oldham, Monndsville, W. Va.; the Rev. F. H. Johns-

ton, Elizabeth City, N. C.; F. S. Ferguson, Birmingham, Ala.; M. Marble, Worcester, Mass.; the Rev. J. G. Law, Ocala, Fla.; W. R. Conmbe, Lakeland, Fla.; A Knight, Bastrop, Tex.; W. H. H. C., Canadian, Tex.; T. R. Denison, Asheville, N. C.; G. Patterson, Winnipeg, Man.; R. E. Brigham, Schnylerville, N. Y.; R. L. Borger, Lake City, Fla.; Mrs. S. H. Wright, Tate, Ga.; the Rev. F. W. Reader, Depauville, N. Y.

Comments: "Superb"—M. W. H.; "Scheme and theme would hardly entitle it to first prize"—I. W. B.; "Comparatively easy"—C. R. O.; "A fairly well-conceived piece of work, but does not seem quite up to the mark for a first-prizer"—F. H. J.; "Splendid, except the two-move variation"—F. S. F.; "Pretty"—M. M.; "A clever combination"—J. G. L.; "An intricate, almost weird composition. Very difficult to solve by method, but key so simple it will likely be struck by accident"—W. R. C.; "Fine work"—A. K.; "A variety of surprises"—W. H. H. C.; "Difficult"—R. E. B.

Dr. G. S. Henderson, Jackson, Mo., W. H. H. C., R. L. B., and Mrs. S. H. W. got 434. The Rev. F. W. R., and B. Moser, Malvern, Ia., solved 432.

The Kolisch Tournaments.

The first tournament began on December 18. Twelve experts living in Austro-Hungary entered the lists. Several of them are Masters of world-wide reputation. The contestants are Albin, Alapin, Marco, Schlechter, Schwartz, Wolf, and Zinkl, of Vienna; Popiel, of Bothnia; Korto, of Prague; Brody and Maroczy, of Budapest; and Prock.

Inter-Collegiate Chess.

The Tournament between the representatives of American colleges is played every year during Christmas week. The list of players are as follows:

Columbia—K. G. Falk, 1901; F. H. Sewall, 1902.
Harvard—E. R. Perry, 1903; C. T. Rice, 1901.
Yale—L. A. Cook, 1901; J. M. Morgan, 1902.
Princeton—J. C. Henley, Jr., 1902; J. B. Hnnt, 1902.

Pillsbury's "Nerve."

Some one tells the following good story of Pillsbury's absolute coolness and self-possession in his blindfold exhibitions. "Pillsbury's only oversight during the entire session was the loss of a piece, which he thought was protected by one of his Pawns. When the player gathered it in Harry was a bit taken aback. 'Are you sure the position is correct?' he asked of the teller. 'Yes,' replied the latter, and added: 'It's a clear piece.' Harry pulled himself together, then studied intently for a minute, and retorted calmly: 'It will be a clear piece when he get it.' Sure enough, in a couple of more moves he had a piece in return for the one he had lost. Tho he dropped a Pawn in the transaction, he finally pulled out a winner."—Quoted in *The New York Clipper*.

We saw Harry play eight games of Chess, two of Checkers, and a hand at Compass Whist. In one of the checker games, the player made a move, when Pillsbury electrified the audience by saying, "I here make a series of moves," and he rattled off four or five moves—enough to call from his adversary the words: "I resign."

"Mr. Blackburne's Games at Chess,"

SELECTED, ANNOTATED, AND ARRANGED BY HIMSELF.

One of the most interesting events in the Chess world, recently, is the publishing of Mr. Blackburne's games. From an extended notice of the book in *The British Chess Magazine* we select the following: "We imagine that his work, as we view it, can not fail to excite an interest in Chess among very many who know nothing of the game. . . . This was what Morphy did for Chess by publishing a selection of his games some forty years ago. He amassed, instructed, improved, and created Chess-players, so to speak. . . . 'Blackburne's Games' must at once take rank with 'Morphy's Games,' or, at all events, it approximates more closely to the great American's monumental work than any other extant." There are "a most engaging sketch of Mr. Blackburne's Chess life and achievements, and 134 match,

tournament, and consultation games," covering a period of thirty-seven years. As instances of "what Mr. Blackburne can do in the way of Notes," we quote: "A fine consultation game played at the Hastings Festival, 1896, between Messrs. Blackburne and Herrington (White), and Messrs. Bird and Chapman (Black), is wound up thus: 'A curious position. Every one of White's pieces and Pawns had been moved except the King, which has been neither checked nor moved, but stands on his own square ready for the next game.'"

"Blackburne v. Winawer, Berlin, 1881. 'If White Queens the Pawn, Black draws by perpetual check or stalemate. It is a remarkable position, and I will remember the crowd that gathered round to see if I would fall into Winawer's little trap. I kept them on the tiptoe of expectation by holding my hand above the Pawn for some time as if I meant to move it, but when with a swing of my arm I suddenly took the Knight instead, there was a loud burst of laughter, in which Winawer, to do him justice, heartily joined.'"

An Inter-Collegiate League.

The Chess-clubs of the University of Pennsylvania, Cornell, and Brown have formed an Inter-Collegiate League. The first contest took place on December 27, in Philadelphia. We go to press too early to give the results.

A Short "Evans."

The following game was received from Mr. O. Somerville, Tuscaloosa, Ala. It was played in the Pillsbury National Correspondence Tourney, and Mr. Somerville calls especial attention to the fact that it presents the unusual feature (for a correspondence game) of an announced mate at the end of only fifteen moves.

Evans Gambit.

O. SOMERVILLE, O. E. WIGGER, O. SOMERVILLE, O. E. WIGGER.
Tuscaloosa, Nashv. Black. White. Black.
1 P—K 4 P—K 4 8 Kt—Kt 5 P—Q 4 (b)
2 Kt—K B 3 Kt—Q B 2 9 P x P K Kt x P
3 B—B 4 B—B 4 10 Kt x B P K x Kt
4 P—Q Kt 4 B x P 11 Q—B 3 ch K—K 3
5 P—B 3 B—R 4 12 R—K sq Kt x Q P (c)
6 P—Q 4 P—Q 3 13 R x P ch K x R
7 Castles K Kt—K 2 (a) 14 P x Kt ch K x P (d)
And White announced mate in six moves.

Notes by Mr. S.

(a) Once known as the Mead Defence, but long obsolete. It permits an immediate and dangerous attack.

(b) Of course not Castles, because 9 Q—R 5 would give White an irresistible attack.

(c) Very much better seems P—Q Kt 4 first, followed by the text-move.

(d) If K—K 3, then 15 Q—K 4 ch, K—B 3; 16 B x Kt, and Black has no resource.

(e) Black's game is irretrievable. If here R—K sq; 16 B—Kt 2 ch, K—B 4; 17 B—R 3 ch, K—Q 5; 18 Kt—B 3, B x Kt; 19 R—Q sq ch, K—K 4; 20 Q x B ch, and wins easily.

Black's 6th move is not a good defense. P x P is the move.

Chess-Nuts.

The announcement is made that Showalter and Janowski are to play another match for \$1,000 a side.

Perhaps the most artistic Chess-board ever produced, says a writer in *The Pictorial Magazine*, was that designed and executed by Prof. Vac Hier of the School of Art, No. 9 New Bond Street London. It formed a unique wedding-present for the Marquis of Bourbon, who was married on May 21 this year. Every second square is a beautifully finished oil-painting, every picture a different subject, and the exquisitely fine work of the professor is much in evidence. The size of the board is thirty inches square. The detail work on the original is exceedingly beautiful, and involved a period of three months in execution. It was one of the most valuable of the marquis's wedding presents, costing no less a figure than 250 guineas.

The score in the International Correspondent Chess-match between the United States and Canada on 100 boards now stands 35 to 26 in favor of the United States. With such a lead, Canada must do some great playing to overhaul the Americans.
